The Indian Fig is very plentiful here, and you ſhall have 50 Figs hanging on one ſtalk of a delicious odour and taſte. They have alſo Pome-citrons, Apricocks, Peaches, and Pomegranates, which grow to full Perfection. The Enſete is a Tree, which being half cut down, renews again by means of many ſhoots that ſpring from the Trunk, which being ſlic'd and boil'd, allays the thirſt, and the Leaves being bruis'd and boil'd with Meal, are inſtead of a Haſty-pudding. There is another Tree mention'd by *Godignus*, very good againſt Worms in the Belly, to which the *Abeſſines* are much ſubject, by reaſon of their feeding upon raw Fleſh.

Fig. 2.

By reaſon of the plenty of their Graſs, and the heat of their Country, their Beaſts are of a much larger ſize than in other Countries, their Bulls are ſometimes twice as big, and may be call'd Bull-Elephants, and their Horns are proportionable, being four Foot broad. Their Horſes are bold and ſtrong, but are never us'd unleſs in Battel and for Races; for their Mules ſerve for burthen, and to travel long Journeys, being ſure-footed in their rugged ways. Camels are never us'd but in the plain Countries, where they tread upon the Sand tho' ſcalding hot, without any harm to their Feet. They have very large Sheep, whoſe Tails weigh ten or twelve, and ſometimes above forty Pound, ſo that the Owners are forc'd to tye a little Cart behind them, to eaſe the Creature and preſerve the Wool.

Of four-footed Beaſts, and their ſeveral kinds. Fig. 3.

As for wild Beaſts, *Abeſſinia* breeds more and larger than any other Country; ſuch as Elephants, eminent for bulk and docility, which herd together in great numbers, ſometimes a hundred in a place. They ſhake the great Trees till they break their Trunks, or tear them up by the Roots; they eat the Shrubs and Fruit-Trees, but eſpecially certain Trees like our Cherry-trees, full of Pith, like Elder, upon which they banquet. They come neareſt to Human Underſtanding, and obſerve the Laws of Hoſpitality; for when a Female is permitted to lodge in a Corn-field with her Cub, they neither deſtroy the Corn themſelves, nor ſuffer others to do it. The Ivory is made, not of their Teeth, but their Horns, which grow out of their Head and not their Jaws, upon the Brows of the Males only. Here is alſo a Panther-Camel, as big as an Elephant, but ſo tall, that a Man can reach only to his Knees. He has a long Head and Neck, and is ſpotted all over like a Panther.

Zecora is the moſt beautiful thing in the World, of the bigneſs of a Mule, having Circles about his Body of various colours, ſome broader, ſome narrower; one of them was ſold for 2000 *Venetian* Pieces, for a Preſent to the *Mogul*.

The Lion is gentle to a Man, but terrible to all other Creatures, who tremble to ſee him. Tygers and Panthers never ſpare Mankind, and by Night make great havock of Cattle. The Hyæna is the moſt voracious of all Beaſts; for by Night and Day they deſtroy all the Men and Beaſts they meet with, and ſometimes dig down Houſes and Stables to come at them. Of Apes there are infinite flocks, a thouſand or more together, Fig. 4. who help one another to turn over the Stones for the Worms that lie under, and lick up all the Emmets they can find; and having ſent Spies before to ſee if the Coaſt be clear, they deſtroy whole Fields and Gardens: When they cannot eſcape wild Beaſts by flight, they fill their Paws with Duſt or Sand, and fling it in the Eyes of their Aſſailant, and then to their Heels again. Fig. 5. There is another Beaſt very harmleſs, call'd *Fonkes*, in *Latin Cercopithecul us*, which is particolour'd, and is ſo tender, that it cannot be brought into theſe parts, unleſs it be wrap'd very warm. Here is alſo another Beaſt call'd *Arwebaru*, with one Horn, fierce and ſtrong, of which Unicorns ſeveral have been ſeen feeding in the Woods.

Of Amphibious Creatures.

Of amphibious Creatures here is the *Hippopotamos*, or the River-Horſe, which ſeems to be the ſame Beaſt that is deſcrib'd in *Job* by the name of *Behemoth*: There are many of them in the Lake of *Tzana*, which deſtroy the Corn in the Neighbouring Fields, and ſometimes overturn ſmall Boats, but are frighted with Fire. The Crocodile his Companion is yet more miſchievous, which ſeems to be that which *Job* calls the *Leviathan*. Fig 6 Water-Lizards are very frequent, eſpecially one ſort call'd *Anguep*, which is ſhap'd like a Dragon, as big as a Cat, but has a Tail that will cut a Man's Thigh in two. But ſetting aſide theſe ſtrange Creatures, the Lakes and Rivers abound with Fiſh, and among the reſt is the Torpedo, which being touch'd with the Hand, cauſes a fearful trembling, and with it the *Abeſſines* cure *Tertian* and *Quartan* Agues, by tying the Patient to a Table, and applying the Fiſh to his Joints, which cauſes a cruel pain over all his Members, after which, the Fit never returns again; and yet if you touch this Fiſh with a Spear or Wand, the Sinews of it preſently grow numb, and its Feet, tho' otherwiſe a ſwift Runner, lie as if they were bound.

Of Birds.

In this Country are Birds of the largeſt ſize, ſuch as the Oſtrich and Caſawaw, which never flie, but are very ſwift in running, being able to out-run a Horſe at full ſpeed. The Fleſh of the Caſſawaw is a good Remedy againſt the biting of Serpents, which was found out by obſerving how greedily they devour them without harm. There is a little Bird call'd *Pipi*, which leads the Hunters to the places where the wild Beaſts lie hid, never leaving the Note of Pipi, till the Hunters follow and kill the diſcover'd Prey.

Of Serpents and Inſects.

The Dragons here are of the largeſt ſize, very voracious, but not venomous; in *India* they are ſaid to be ſo big as to ſwallow whole Infants, Pigs, or Lambs. Here are alſo venomous Snakes call'd *Hydri*, which ſend forth ſuch a poyſonous breath or ſmell, as proves quickly mortal without an Antidote, but is cur'd by drinking Human Excrement in Water, as the Panther is obſerv'd to do when he eats poyſon'd Fleſh laid for him by the Hunters. Among other Serpents the Natives walk and kill them with a crooked Stick; ſometimes they drive their Cattle into places ſtrew'd with Serpents Eggs, to deſtroy them with their Hoofs. The Locuſts are more pernicious than theſe, who frequent the beſt manur'd Places and Orchards in ſuch vaſt numbers, that like a thick Cloud they obſcure the Sun: They ſpare neither Plants, Shrubs, nor Trees, whoſe Barks they ſometimes eat, ſo that the Spring cannot repair the Damage; and then a general Mortality enſues, and Regions are laid waſte, becauſe the Natives never keep any ſtores of Proviſion; yet for ſome time they ſupport themſelves with eating the Locuſts, which are a wholſome Diet, on which *John Baptiſt* fed. The Bees ſwarm here, and make great quantities of Honey, which they ſecure under ground, wanting Stings, and ſuch was the Food of *John Baptiſt*. They have Ants of ſeveral ſorts, whereof one is call'd *Gundan*, which always march in Military Array, and have others that are their Slaves, and ſome with Wings.

Of the Nature and Genius of the Inhabitants.

The *Abeſſines* are witty and good-natur'd, not given to quarrels; but if any do ariſe, having cuff'd a while, they refer the Difference to Arbitrators, to whoſe Sentence they ſubmit, being naturally Lovers of Juſtice and Equity, and very deſirous of Learning, for which they admire foreign Chriſtians; but their Civil Broils and Wars with the *Gallans* will not allow the Nobility leaſure to mind theſe Studies. As the Natives of *Enarrea* are eminent for Courage and Fidelity, ſo thoſe of *Tigra* are faithleſs and inconſtant, bloody and vindictive above any other Nation. They are generally black, of well-ſhap'd Bodies, without blubber Lip and flat Noſe, like the reſt of the *Africans*, yet ſome of them are white, whoſe breath is counted Infectious, and therefore they are avoided by the other *Ethiopians*. Their Bodies are very ſtrong, and they live to a great Age, unleſs they fall by the Sword or wild Beaſts. Their Women are ſtrong and luſty, and commonly bring forth without a Midwife. *Mendez* the *Portugal* Patriarch found in one Province 40000, and in others 100000.

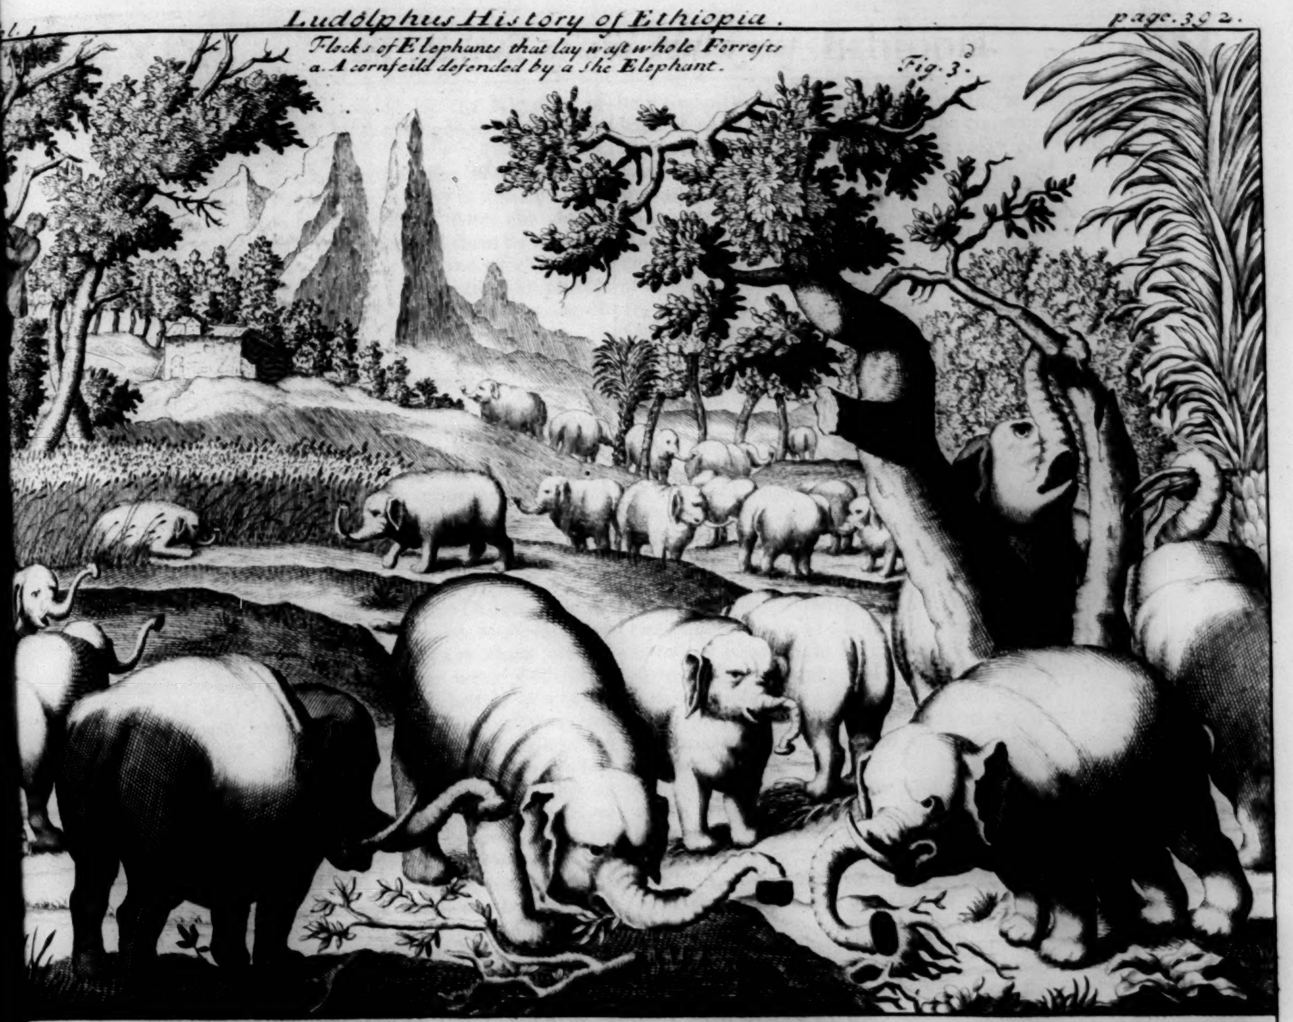
Beſides the Natives, here are *Jews*, *Mahometans*, and *Pagans* mix'd among them. The *Jews* formerly had all *Denbea*, and ſeveral other Provinces, till they were driven thence by *Suſnens*, but now they are diſpers'd, and get their living by Weaving, and working as Carpenters. The *Mahometans* live here intermix'd with *Chriſtians*, and drive the greateſt trade with the *Turks* and *Arabians*, and in all Parts of the *Red-Sea*, exchanging *Abeſſinian* Gold for *Indian* Wares. There are many other barbarous Nations, that wander about in the Sandy Deſerts, having no knowledge of God, and living without Government, or any certain Habitation, who devour Dragons, Elephants, and whatever they meet in their way. There are alſo other *Pagans*, as the *Agawi* and *Gallans* in *Gojam*.

The War of the *Adelans* againſt the *Abeſſines*, under *Grainus* in the laſt Century, ſo ruin'd their Affairs, that they could never recover their Loſſes, and gave great advantage to the *Turks* and *Gallans* againſt them; for the *Turks* having conquer'd *Egypt*, that they might ſhut up all the Ports of the *Red-Sea*, made themſelves Maſters of the Iſles of *Suaquena*, and *Matzua*, which formerly belong to the *Abeſſines*; ſo that now neither Men nor Merchandize can be admitted into the Gulf, unleſs they beg it of the Baſha with rich Preſents.

But the *Gallans* are more terrible Enemies, who have ſubdu'd many Kingdoms and Provinces, and thirſt after all the reſt. They firſt broke out in the Kingdom of *Bali*, while the King, ſirnamed *David*, was engag'd in War with the *Adelans*; and having ſubdu'd *Bali*, they over-ran the Neighbouring Kingdoms. They are a fierce and warlike People, ambitious of the Honour that is got by ſlaying their Enemies, and bringing in their Heads, and divide the plunder equally among them all. They fight with a Reſolution either to over-come or die; and have for their Weapons at a diſtance, Lances and Darts, and Hand to Hand, Clubs and Stakes, and for their Shield the Skins of Oxen. They formerly fought a-foot, but now more frequently on Horſe-back, and are commonly too hard for the *Abeſſines*, tho' they are more numerous and better arm'd. They never mind Agriculture, but only grazing of Cattle, which they drive before them as well in War as Peace, thro' the moſt fertile Paſtures, whoſe Milk they drink in Wooden Diſhes, which is all the Baggage they carry with them, and raw Fleſh they eat without Bread. Every eight Years they chooſe a Leader, call'd *Luva*, whom they obey in time of War; and his firſt Enterprize is to invade *Abeſſinia* for Honour and Booty.

They ſay that Heaven is the God that governs the Earth, and yet they give it no ſolemn Worſhip, neither have they any Idols, and but very little Divine Worſhip. They are a ſharp-witted People, and ſeveral thouſands of them were converted and baptiz'd under *Baſilides*. This is that formidable Nation which hath ruin'd the Dominion of the *Abeſſines*, having torn from their King above half thoſe Territories which his Anceſtors enjoy'd, and were diverted from making further Conqueſts by Diviſions among themſelves. They are now divided into two Nations, whereof that which lies Eaſterly encircles *Abaſſia*, and haraſs it with frequent Incurſions. They have alſo parted *Cambata* and *Enarrea* from the reſt of the Body, having ſubdued the Kingdoms between them, which makes it very difficult for the King to bring home his Tribute from theſe Kingdoms: Thus the *Abeſſines* are always in war with theſe People.

Another Neighbour Kingdom is *Zandero*, which was but lately diſcovered, whoſe Natives are but a little more civil than the *Gallans*. Their King being dead, the next a-kin retires into a Wood, and being follow'd by the Nobility, who are guided by a Bird of the Eagle kind to the place where he is, they find him ſurrounded with a Guard of Lions, Dragons, and Panthers (aſſembled there by ſome Incantation) who at firſt reſiſts the Electors, and wounds thoſe he can, that he may ſeem to be forc'd to take the Government upon him. They fight one with another, who ſhall have the Honour of ſetting the Crown on the King's Head, and ſometimes kill one another, thinking to atone the Devil with Human Blood. *Fernandez* having view'd this *Lybian* Soveraign, compares him for Colour and Geſture to a Rampant Monkey, and if their King be wounded, 'tis their Cuſtom to kill him after the manner of Monkeys, who tear a wound till they die.



Flocks of Elephants that lay waſt whole Forreſts
a. A cornfeild defended by a She Elephant.

The ſea Horſe putting up his head above the water,
thence call'd the river Horſe by the Greekes

Fig. 6th

Abeſſinia to the Eaſt is bounded by the Kingdom of *Alaba*, and to the South by the Kingdom of *Senner* or *Fund*.

Gamez brought to the Succor of the *Abeſſines* in the *Adelan* War, about 170 *Portugueſe*, who in one Age were able to muſter 1400 fighting Men. After the *Adelan* War they had certain Lands granted them by *Claudius*, which were taken way by *Menas* his Succeſſor: And in this laſt Century they flouriſh'd for ſometime in plenty, but the Fathers looſing their Credit, they were again reduc'd to extream Miſery.

Of their Political Government.

Of the Kings of the *Abeſſines*, their various Titles, Names, and Arms.

The King of the *Abeſſines* has been commonly known to the *Europeans* by the name of *Presbyter John*, which was firſt given him by the *Portugueze* upon the following Occaſion. *Peter* a *Portugal* Prince returning home from *Venice*, brought him a Treatiſe of the *Paulus Venetus* of the Affairs of *India*, wherein many great things were ſaid of *Presbyter John*, which was one great Motive to the *Portugal* Kings, to proſecute the Deſign of the *Indian* Navigation. In purſuance of this Deſign, *John* the ſecond ſent two *Portugueze*, ſkilful in the *Arabic*-Tongue, to try what they could do, and gave them a ſtrict charge to find out *Presbyter-John*, that wealthy Chriſtian Prince, as he was reputed to be, eitheir in *Aſia* or *India*: At length, one of them call'd *Peter*, after a long and vain ſearch, heard of a moſt potent Chriſtian King of the *Abeſſines*, whom he believ'd to be the *Preſter-John* ſo much ſought after, and thereupon gave Intelligence of it to his own King, who quickly ſpread the News over all *Europe*, where it was eaſily believ'd, That the King of *Ethiopia* was the famous *Preſter-John*.

This was the Orignal of that vulgar Error, which has ſo generally prevail'd; but the Truth of the matter is, There was long ago a Chriſtian Prince in the utmoſt parts of *Africa*, who was call'd by the Neighbouring *Perſians* for his eminent Sanctity, *Preſter-Chan*, or Prince of the *Adories*, i. e. *Chriſtians*, who was driven out of his Kingdom ſome Ages ago by *Cenclu* King of the *Tartars*: But the ignorant Vulgar having learned the Name from the *Italians*, who were then great Traders into the Eaſt, chang'd it into the *Italian* Name *Pretegianni*, which corrupt Name hath ſince prevail'd with all the People of *Europe*. Moſt certain it is, that the Name of the King of the *Abeſſines* is no more in the *Ethiopic* Language than *Negus* King; but his common Title is *Negula Naguſt Zaityopia*, King of the Kings of *Ethiopia*, to diſtinguiſh him from the Rulers of ſome Provinces, who are honour'd with the Title of *Negus*, upon which account he is call'd by the *Portugueze* Emperour of the *Abeſſines*. Among the ancient *Arabians* the Kings were always called *Nagaſhi*, as the Kings of *Egypt* were call'd *Pharo's*, and the *Roman* Emperours *Cæſars*. But there is a new name commonly given to the Kings of *Ethiopia* at their coming to the Crown, which generally ſignifies Reverence, as *Melech Saghead*, a Venerable Ruler, and ſometimes a *Gem*, as *Wanag Sadbed*, a precious *Gem*; which was the name of King *David*, whence his Embaſſador being ſent into *Portugal*, call'd him Precious *John*, inſtead of *Preter Gianni*. Beſides theſe, he had many other Titles, as the *Pillar of Faith*, the *Virgins Incence*, &c. which variety caus'd great confuſion in their Hiſtory, and therefore they are now quite diſus'd; for the King writing to the Pope, uſes none of theſe lofty Titles, but ſays only, *Let the little Book of the Letter of* Malec Saghed, *King of the Kings of* Ethiopia, *come to the Hands of the Holy* Roman *Patriarch*.

The King's Seal is a Lion holding a Croſs, with this Motto, *The Lion of the Tribe of* Juda *has won*; and they have a Tradition, that their Kings are deſcended from *Solomon*, which ſeems to be uncertain, but they may derive unqueſtionably their Succeſſion from *Atzbeba* and *Abreba*, two Brothers, under whom the *Axumites* firſt receiv'd the Chriſtian Religion, which equals them with the moſt ancient Royal Families in *Europe* for Antiquity.

Of the *Salomean* Family, which is ſ'id to have its Original from the Son of the Queen of *Sheba*, who came to viſit *Solomon*.

We find in Sacred Writ, That the Queen of *Sheba*, or, as our Saviour tells us, a Queen of the South came from the ends of the Earth to hear the Wiſdom of *Solomon*. The *Ethiopians* aſſert her to be their Queen, call'd *Maqueba*, who went with a great Train of Nobility and Royal Preſents to his Court at *Jeruſalem*, where ſhe learnt from him the true worſhip of God; That after her return, ſhe brought forth her Son call'd *Menilebec*, begot by *Solomon*, and named by him *David*. Some of the Fathers, as *Origen*, *Auſtin*, &c. are of opinion, that ſhe came out of *Ethiopia*; but others, as *Juſtin*, *Cyprian*, &c. think that ſhe came out of *Arabia*, becauſe Spices, Gems, and Gold, which were the Preſents of the Queen of *Sheba*, are the common Products of *Arabia*; which two Opinions are eaſily reconcil'd, if with the ancient Writers we extend the ancient *Ethiopia* into *Arabia*: For they affirm the *Sabeans* and *Homerites* to have been Nations of *Ethiopia*, which without queſtion were formerly ſeated in *Arabia the Happy*: And 'tis certain, that Region which the *Hebrews* call *Cuſh*, is by the 70 Interpreters rendred *Ethiopia*, and yet that Country is a part of *Arabia*, whence the *Arabians* are call'd *Cuſhites*: For the *Ethiopia* of the Ancients was divided into *Aſiatic* and *African*; ſo that the Queen of *Sheba* may be ſaid to come out of *Ethiopia*, tho' the *Sabeans* were a People of the South *Arabia*.

Several things are alledg'd to confirm this Tradition of the *Abeſſines*, that their Kings are deſcended from *Solomon*, as the Conſent of the Nation, the common Title of their Kings, who are call'd *Iſraelitiſh* Kings, the Motto in their Coat of Arms, *The Lion of the Tribe of* Judah *hath overcome*, but chiefly the continuation of their Officers both in Civil and Military in the ſame Family, and the obſervation of other Cuſtoms and Ceremonies us'd in the *Hebrew* Common-wealth: Yet *Ludolphus* doubts of the Truth of this Tradition, becauſe the *Iſraelitiſh* Rites might be introduc'd after *Solomon*'s time upon another account; and the Title of *Iſraelitiſh* Kings does no more prove their deſcent from them, than the Title of King of the *Romans* proves his deſcent from the ancient *Romans*: And no account can be given how the true Worſhip of God could be preſerv'd from *Solomon*'s time among them without the Sacred Volumes, which they have not either in the *Hebrew* Language or their own: why they were not more earneſt to viſit the Temple of *Jeruſalem*, and to give aſſiſtance to their Brethren, eſpecially when *Reheboam* the Brother of *Menelebec*, ſuffer'd that great loſs of the revolt of the ten Tribes, and when he was invaded by *Siſak* King of *Egypt*, whom the Kings of *Ethiopia* could eaſily have diverted; when the *Jews* were ruin'd by the King of *Aſſyria*, and carried away captive into *Babylon*; when they were ſubdu'd by the *Romans*, for then the Paſſages were free through *Arabia*, or *Egypt*, and the *Red Sea* was open: And laſtly, no account can be given why they ſhould not receive from *Solomon* together with their Religion, his Human Learning, ſince Learning and Religion generally go together; but their manner of Writing and Reading differs very much from that of the *Hebrews*, tho' ſome Letters ſeem to be borrowed from the *Samaritans*.

Of *Menilebec* and his Poſterity, till their Succeſſion was interrupted.

After *Menelebec* the Son of *Makeda*, the *Ethiopians* had ſeveral Kings, of whom we know nothing certain; but 'tis very probable, that in the 18th Year of *Baſen*'s Reign our Bleſſed Saviour was born: And ſince it was forbidden by the Laws of *Ethiopia*, that a Woman ſhould Reign after *Menibelec*, 'tis moſt probable that *Candace*, Queen of *Ethiopia*, whoſe Eunuch is mention'd Act 8. 27. was Queen of that part of *Ethiopia* which borders upon *Egypt*, and is call'd the Iſle of *Meroe*, becauſe *Pliny* teſtifies in that Iſland reigned one *Candace*, and that ſucceeding Queens aſſum'd that name for many Years. After *Baſen*, for the ſpace of 327 Years, there is no certainty until the times of *Abreba* and *Atzbeba*, two Brothers who reign'd; of whom there is mention made in the *Ethiopic* Liturgy, in their Commemoration for the dead, and in the *Ethiopic* Poet, who ſays they taught the Goſpel of Chriſt, and built him Temples. Their next famous King was *Caleb*, who reveng'd the Blood of the Chriſtians ſhed by *Dunawas*, as all Hiſtorians agree. This *Dunawas* was the laſt King of the *Sebeans*, who were afterwards call'd *Hamerites*, who being a *Jew*, perſecuted the Chriſtians moſt cruelly; for he caus'd large Pits to be digg'd, and then commanded the Chriſtians to be burnt therein in heaps: And thus 340 periſh'd together with St. *Areta*, being all entom'd in fire. *Caleb* being advertis'd of this barbarous Cruelty by the Patriarch, went with an Army of 120000 Men, and a Navy of 423 Veſſels, and croſs'd over into *Arabia*; and having vanquiſh'd *Dunawas*, he utterly deſtroy'd the Kingdom of the *Hamrites*, reſtor'd *Nagra* to the Chriſtians, and made St. *Aceta*'s Son Governour of the place. This Victory of *Caleb* and the Martyrs of *Nagra*, are celebrated by the *Ethiopic* Poet, who alſo mentions his Succeſſor *Gebra-Meskel*, or the Servant of the Croſs, to whom ſucceeded *Conſtantine Freſenna*, and *Delnoad*, who reign'd about the Year of *Chriſt* 960: After whoſe death the Scepter was uſurp'd by another race, which was the *Zagean* Family, who enjoy'd it 540 Years. Of this Race was *Newaja Chriſtos*, or the Wealth of *Chriſt*, who is prais'd by the Poet for building the Houſe of God, and empoveriſhing himſelf to adorn it. But the moſt

Of the *Zagean* Line, and the Kings deſcended from that Race.

famous was *Lalibala*, whoſe future greatneſs was portended by a ſwarm of Bees, which lighted on his tender Body while an Infant, without doing him any hurt; and after he came to rule, having ſent for Artiſts out of *Egypt*, he built ſtately Structures after a wonderful manner; for he did not cement Stones or Bricks together with Lime or Lome, nor join the Roof together with Rafters, but hollowed whole ſolid Rocks, leaving Pillars where they were requiſite for Ornament, the Arches and Walls being all of the ſame Stone. *Alvarez* atteſts upon Oath, that he ſaw ten Temples fram'd after this wonderful manner, by this magnificent King, who reign'd 40 Years. The laſt of this Race was *Naacueto Laab*, in whom the *Zagean* Family was extinct about the Year 1300.

Of the *Solomonean* Race reſtor'd again in *Joon-Imlac*, and of his Succeſſors *David*, *Claudius*, &c.

After his death, the Nobility of *Shewa* reſtor'd *Joon-Imlac*, a Prince of the *Solomonean* Race, to the Scepter of his Anceſtors, whoſe Poſterity have continued in *Habeſſinia* to our time. *Tellezius* reckons up 16 Kings to *Zar-a-Jacob*, an Emperour of great renown, who ſent Ambaſſadors to the Council of *Florence*. *Baeda Marjam* came to the Crown about 1465, and died ten Years after, leaving his Widow *Helena* behind him, who had the chief management of Affairs during the minority of *Etana Dengel*, call'd afterwards by his Inauguration name *David*, he being but eleven Years of age when he was made King. She was a Woman of great Prudence and Courage, and famous among the *Europeans* for her Letters to *Emmanuel* the firſt, King of *Portugal*. *David* was very proſperous in the beginning of his Reign, but afterwards giving himſelf up to Luxury, he was forced to fly to the Rock *Damo*, where he died in the 46th year of his age.

His Son *Claudius* came to the Kingdom when it was miſerably ſhatter'd by the *Gallans*; but by the aſſiſtance of *John* the ſecond, King of *Portugal*, who ſent the valliant *Chriſtopher Gamas*, with a ſmall band of 400 Foot, he overthrew vaſt Armies of the *Barbarians*, and laid the Foundation of regaining the *Abeſſinian* Empire. He was very learn'd and ſtout, and gain'd great Advantages againſt the *Adelans* in his Wars; but at laſt in 1559, fighting againſt them, he was kill'd. To him ſucceeded *Menas* his Brother, who was of a cruel diſpoſition, and deny'd the *Portugueſe* that liberty of Religion which *Claudius* had granted, whereupon his Subjects revolted from him, and one *Balruagaſſus* a great Captain, calling in the *Turks* to his aſſiſtance, overcome him and ſlew him in Battle; ſince which time the *Turks* have been Maſters of the Coaſt of the *Red-Sea*. *Sarza Denghel* his Son ſucceeded, who was ſtout of Hand and wiſe in Counſel: And firſt he drove the *Turks* out of *Tigra*, and would have driven them alſo from *Arkiko* and *Matrua*, but that he was recall'd to defend his Dominions from the *Gallans*, who by the Rapines of 25 Years, were now encreas'd from ſcattering Troops to compleat Armies. He was proſperous in his Wars, and ſubdu'd *Enarrea*, and caus'd the Prince of it to turn Chriſtian. He was firm to the *Alexandrian* Religion, and granted Liberty to the Jeſuits, whoſe manners he approv'd, and not their Doctrine. He left no Iſſue Male behind him, but two natural Sons, whereof *Jacob* the youngeſt and moſt beloved was but ſeven Years of age, which occaſion'd a bloody Civil War about the Succeſſion, tho' the King to prevent it declar'd in the preſence of his Nobility, that he recommended *Za-dengel* his Brother's Son to be his Succeſſor: But the Nobility being ambitious of having the Rule in their own Hands during the Minority of *Jacob*, conſpired againſt *Za-dengel*, and remov'd him from Rock to Rock, leſt any of his Subjects ſhould join to aſſiſt him, and ſet the Crown on *Jacob*'s Head. But after he came to be 15 Years old, growing impatient of any curb from his Tutors, he aſſum'd the Rains of Government into his own Hand, and, which his Guardians took ſo ill, that they choſe rather to obey their lawful King, than ſubmit to an illegitimate Infant, contrary to their Conſtitution: And therefore they recall'd *Za-dengel*, then lurking in the remoteſt Mountains of the Empire, and ſaluted him King by the Name of *Aſnaff-Sagued*. Wonderful was his Clemency at his firſt Acceſſion to the Throne; for neither did he cut off the Noſe and Eyes of *Jacob*, as is uſually done to Rivals in the Empire; neither did he puniſh any of his Enemies, as by Law he might have done; but as he was mild and gentle to a fault, ſo he behav'd himſelf with undaunted Courage in all ſorts of danger; which he ſhew'd in his firſt War with the *Gallans*, who underſtanding the Diviſions at Court, broke into *Abeſſinia* with three Armies, and ſo overpower'd the King's Forces, that he was adviſ'd to an early flight: But he diſdaining the motion, cry'd out, *Here will I die, you may fly if you pleaſe, and ſo eſcape the fury of the* Gallans, *but never the Infamy of deſerting your King*; which words ſo animated the Souldiers, that they broke in among the *Gallans* like deſperate Men, and gain'd ſuch a glorious Victory with ſuch a ſlaughter of the Enemy, as was never known before. And preſently with a ſwift March, he led his Army over Mountains and Rocks, againſt another Body of the Enemy, which with the ſame Succeſs he put to flight. The third Army not daring to ſtand againſt the Force of the *Abeſſines*, fled into their Faſtneſſes, of whom the *Abeſſines* drove 400 from their Holds, and ſlew them every Mother's Son. But at laſt by the Perſwaſion of *Peter Pays*, he embrac'd the *Latin* Religion, which he teſtified in his Letters to the Pope and King of *Spain*, *Philip* the third, and preferring the *Portugueſe* before his own Subjects, he ſo enflam'd the hatred of his own People, that his chief Miniſters, and the Nobility of his Kingdom conſpired againſt him: For the Rebels pretended, that the *Portugueſe* would eſtabliſh their Religion by force of Arms, and others take poſſeſſion of their Kingdom; and the Patriarch to encourage them, by an unheard-of-Preſident, abſolved the Rebels from their Oaths, to their lawful Prince. The King was adviſ'd by *Peter Pays* to protract the War, till the heat of the Rebels fury was cool'd: *For* (ſays he) *Sedition is like a Torrent which is violent at firſt, but abates by degrees*: But the King in the heat of his Youth being impatient of delay, join'd Battle with them, in which, though he fought bravely for a long time, yet at laſt being forſaken by his own Souldiers, he was ſlain with ſeveral Darts thrown at a diſtance; which was a ſad *Memento* to all Kings, how they change their Religion, and thruſt themſelves raſhly into a Battle, eſpecially when there is no certain Succeſſor.

Of the Kings of this Century to our times.

After his Death there was a Conteſt between *Suſneus* the Grand-child of *David*, and *Jacob* aforementioned, about the Right of Succeſſion, which was decided by the Sword; and *Suſneus* obtain'd the Victory with the ſlaughter of many of his Enemies, and particularly of *Jacob*, and *Peter* the Patriarch, who had thundred out an *Anathema* againſt *Suſneus*. The Enemy fled with ſo great precipitation, tho' *Suſneus* did not purſue them, yet many of them ignorant of the Country, threw themſelves head-long from a ſteep Rock in the Night-time: Among the reſt, a certain *Portugueſe* perceiving his Horſe as it were flying in the Air, quitting his Stirrops, left him, and by chance took hold of the Branch of a Tree, where he ſate all Night upon a Bough, and when day appear'd, he diſcover'd at a prodigious diſtance underneath, a vaſt heap of Men and Horſes, with their Limbs and Members broken all to Flitters.

But *Suſneus* to eſtabliſh himſelf in his Dominions, courted the Friendſhip of the *Portugueſe*, that he might learn of them the Art of Gunnery and Fire-Arms; and to this end he did not only kindly receive the Jeſuits, but ſet up the *Latin* Religion, and ſwore obedience to the Pope, which was the occaſion of many bloody Wars hereafter deſcrib'd. A Counterfeit *Jacob* ſtarted up the next Year after he was made King, who was by the help of two Noblemen, who pretended to be his Friends, apprehended and put to death. A little after this, another Counterfeit came into *France*, in 1631, pretending to be the Son of *Jacob*, and Heir to *Ethiopia*, who call'd himſelf *Tragax*; and having Certificates from the Monks of *Paleſtine*, he was there entertain'd as a great Prince, with a large Penſion from the King, and having a graceful Preſence and magiſtick aſpect, he gain'd great Credit to his Pretenſions, and was never detected till he kill'd himſelf with debauchery.

Suſneus was a courteous and warlike Prince, but very unhappy by his continual Wars, and the frequent Rebellions of his Subjects, upon the account of his change of Religion. He died in 1632, leaving ſeveral Sons and Daughters behind him.

Baſilides ſucceeded his Father, who baniſh'd the Jeſuits and their Patriarch, and would not allow the *Portugueſe* a Prieſt to ſay Maſs: And we know nothing more of certainty about him; for he refuſ'd any further Commerce with the *Europeans*, for fear of the Forces he heard were coming from *Rome* and *Portugal*, to revenge the Affronts put upon them: Neither do they know any thing of all the Race of Kings that ſucceeded him down to this time, ſince all Commerce between *Europe* and *Ethiopia* was broken off.

Of the Royal Succeſſion, and the Impriſonment of the King's Children or Brothers in the Rock Geſhen, now quite out of uſe.

The uncertainty to the Rule of Succeſſion to the Kingdom, is one great cauſe of the many Rebellions in *Ethiopia*; for tho' they pretend that their Monarchy is hereditary, in which no Woman or Baſtard, but only the next a-kin lawful Male-Iſſue, is to ſucceed, yet by the Cabals and Intereſt of the Nobility, and chief Officers of the Army, ſometimes the younger Brother is preferr'd before the Elder, and ſometimes an illegitimate Son before a legitimate Kinſman. And becauſe in this uncertainty the Poſſeſſor of the Throne is commonly jealous of his Rival, therefore to ſecure himſelf from any Attempts, the Rocks of *Geſhem* and *Ambaſel* were ſet apart for a ſafe Cuſtody to his Brorhers, till their turn ſhould come to aſcend the Throne. And this Cuſtom continu'd as a Fundamental Law in *Ethiopia*, for the ſpace of 230 Years, until 1590. when King *Naod* was ſent for from the Rock to ſucceed, who was ſo tenderly affected towards his Son, that he prevail'd with the Nobility to aboliſh this Cuſtom, not conſidering that private Affection is to give place to the ſafety of the Publick: For 'tis certain that thoſe exil'd Princes were kept cloſe Priſoners in theſe Rocks, and whoſoever attempted to get away or was aſſiſting to their Eſcape, was ſeverely puniſh'd; by which means the Reigning Prince was ſecured from Civil Wars.

Of the Power of the King in Eccleſiaſtical and Civil Affairs.

The Power of the *Abeſſinian* Kings is abſolute as well in Eccleſiaſtical as Civil Affairs; which Power they exercis'd, when they put forth Edicts for receiving the *Roman* Religion, and abrogating the *Alexandrian* Ceremonies, and which they aſſerted againſt the *Roman* Patriarch *Alphonſus*, when they diſpens'd with certain indifferent Ceremonies, and enjoyn'd him to keep to the Rules of the *Metropolitans* of ancient *Ethiopia*. The ſame Prerogative in Eccleſiaſtical matters, was exercis'd by making a Decree for abrogating the *Latin* Worſhip, and reſtoring that of *Alexandria*. The King alſo ſummons Synods of the Clergy, when he thinks neceſſary, ſends for the Metropolitan out of *Egypt*, exerciſes full Juriſdiction over him, and all the reſt of the Clergy, and puniſhes them according to the nature of their Offences: But in this he differs from our *European* Kings, that he never nominates to Eccleſiaſtical Benefices; but he admitted the Metropolitan ſent from the Patriarch of *Alexandria*, and the Patriarch ſent from the Pope, tho' he nam'd neither: And indeed in *Ethiopia* where there are no other Eccleſiaſtical Dignities, the Prerogative of nominating Arch-biſhops and Biſhops is of little worth.

His Power in ſecular Affairs is bounded by no poſitive Laws, but ſometimes he diſpenſes with thoſe that are counted the Fundamental Laws of the Kingdom: He has the ſole diſpoſal of War and Peace, and all the Prerogatives that a King can claim, tho' he makes not uſe of many of them, being ignorant of them, as of that in reference to Metals, the coining of Money, and the like. One thing is to be admir'd, which is rare even among the *Turks*, that no private Perſon, whether Peaſant or Lord, except ſome few, can call any thing his own; but all the Lands and Farms of the Country are held by the Subjects at the King's pleaſure, and no man takes it amiſs that his Lands are taken from him and given to another, tho' he poſſeſs them but a ſhort time. This Cuſtom makes them very ſubmiſſive to their Kings, for they ſerve him in Peace and War, and bring him Preſents according to their Ability, in hopes of obtaining new Farms, or for fear of looſing thoſe they have: Yet there are ſome ancient illuſtrious Families, who enjoy not only Lands but Prefectures, by right of Inheritance, as in *Tigra* and *Dembea*, over whom the King claims no other Authority, but to confer the publick Employments yearly upon others, ſo as they be of the ſame Family.

Of the Power and Revenue of the *Habeſſine* Kings.

The Power of the *Ethiopian* Kings, being ſo abſolute, and vaſtly great, was formerly terrible to the Neighbour Nations, as appears by their Expeditions into *Arabia*; but after the *Saracens* grew ſtronger, they relinquiſh'd *Axuma*, and turn'd their Arms againſt the Upland Parts of *Africa*, which they ſubdu'd: And in this Greatneſs they continued till they were tore in pieces by their Wars with the *Adelans* and *Gallans*: However their Power is ſtill ſo great, that they might not only conquer theſe *Barbarians*, but recover their loſt Dominions, if they would make uſe of the Arts and Arms of the *Europeans*, and encourage them by building Towns, and peopling them with Trades-men. If the King would give to his People and Souldiers ſome Inheritance in the Lands that are won from the Enemy, and ſettle out of them Dukedoms and Earldoms upon his Nobility. And to this end he ſhould be aſſiſted by the *European* Princes, not only out of Charity, but to leſſen the Power of the *Turk*, by wreſting the Dominion of the *Red-Sea* out of his Hands, and ſpoiling the Commerce of *Egypt*, which in the end will be very miſchievous to them. 'Tis a great Defect in the *Ethiopians*, that they permit the *Turks* to be Maſters of the Ports and Iſlands in the *Red-Sea*, whereby it is left to their pleaſure what Perſons and Commodities ſhall paſs in and out, becauſe they do not underſtand that no Nation can be truly great, without ſome Sea-Towns.

As for the Revenues of the King, they are not paid in ready Money, but in the natural Products of their Country; for ſome Provinces afford Gold, which they find in the Sand of Rivers, or at the Roots of Trees, or lying upon the Earth; others have Horſes, Cattle, Sheep, Corn and Ox-hides, and ſome few where the Weavers live, ſend the King Garments. *Enarrea* pays 1500 Ounces of Gold: *Gojam* pays every year 1100 Ounces, and ſome Garments to the value of 3000 *German* Dollars, together with 200 Fuſtion Tapeſtries: Out of *Tigra* the King receives 25000 Pataches: out of *Dembea* 5000, and ſo proportionably out of the other Kingdoms. The Tolls are generally granted to the Nobility for their ſubſiſtance, except thoſe of the high Mountain *Lamalmona*; over which all the Merchandize muſt paſs from the *Red Sea* into *Habeſſinia*, which the King reſerves to himſelf: His Table is ſerv'd alſo with Proviſions from his own Lands and Farms, beſides that *Dembea*, *Gojam*, and *Bagendra* find him Corn and Fleſh. But his chief Tribute is from the Graziers, who pay him every 10th Ox or Cow every three Years, *i. e.* a 30th part every Year. Every *Chriſtian* Weaver pays him yearly a Fuſtion Garment, and every *Mahometan* a Patach, which amounts to 1000 Imperials a Year. The Prices of all things there are very low; for a huge Ox may be bought for half a Dollar: The Soldiers live upon Fleſh and Fiſh, without any Bread; and Servants Wages are paid in neceſſary Commodities, and not in Money.

Of the royal City of *Axuma*, and the Inauguration of their King.

The Royal City of *Axuma* was of old adorn'd with many beautiful Structures, a fair Palace, and a ſtately Cathedral, but now there remain only ſuch Ruins as teſtify it was once a great City. It lies in 14 and ½ North Lat. and is diſtant from the *Red-Sea* 45 *Portugal* Leagues. Here the ancient Kings of *Ethiopia* were won't to be crown'd, at which time the Army being drawn up, the Foot march firſt, and then the Horſe, and after them the Courtiers in rich Habits, and laſt of all the Emperour, who alights off his Horſe near the Church of *Axuma*, and going forward on the Ground ſpread with rich Carpets, he is ſtopp'd by a ſilken Cord held croſs the Street by ſome Virgins, who aſk him thrice who he is; he replies, *I am the King of* Sion, and then drawing forth his Cymitar, cuts the Cord; whereupon the Virgins cry out, *Of a certainty thou art our King of* Sion: And preſently the Guns are fired, the Air is fill'd with loud Acclamatious, the noiſe of Drums, Flutes, and Trumpets: Which done, the Metropolitan with all the Eccleſiaſtical Orders, ſinging Hymns, conduct the King to the firſt Porch of the Church, and there ſet the Crown on his Head, which is nothing but a Hat twice doubled, with an Azure-colour'd Silken broad Brim, trim'd with Gold and Silver Plates, in the likeneſs of Lillies, with a row of falſe Stones glittering between every Plate.

Beſides *Axuma*, there are no Cities in *Abeſſinia*, and but few Towns. In *Tigra* there is *Debarva*, the Seat of the Vice-roys; and in *Dembea*, *Gubay*, the Reſidence of the Queen, and a few more not worth the mentioning; for the *Abeſſines* chooſe rather to live like Villagers, in places that are fertile and till'd, and pitch their Tents up and down the Country, where they take what they ſtand in need of, without conſideration of the damage or regard to the future. They have neither Caſtles nor Forts, and the Mountains of *Ambara* are their only Citadels, where the King's Children were formerly kept. They neither navigate their own Rivers, nor do they know what belongs to Carriage or Stores, living without any care of to-morrow.

Of the King's Court, his Titles and Court Officers.

After the Kings of *Abeſſinia* left *Axuma*, they liv'd in Tents, till *Peter Pays* built the King a Pallace after the *European* manner, in a pleaſant place call'd *Gorgora*, being almoſt ſurrounded with the *Tzanic* Lake, where the King was to take up his Winter-quarters; the Natives were amaz'd to ſee one Story above another, which they call'd Houſe upon Houſe. The King dines alone, and after he riſes, the Nobility that are invited take their places, and eat of his Leavings, which is look'd upon as a great Honour; yet the Jeſuits were admitted to dine at another Table in the ſame Room, with *Suſneus*. Inſtead of Table-Cloths or Napkins, they uſe thin Wafers made of Wheat, or Rice-Paſte, which ſerves them for Bread. They have no Trenchers, Knives, Forks, or Spoons, no Salt-celler, Pepper, or Sugar-box, and ſo in time of War they are eas'd of ſo many Kitchin-Utenſils as we carry along with us. Their Meat, which is Fleſh, and Broth of ſeveral ſorts boil'd, is ſerv'd up by Women in broad Earthen Platters, cover'd with Straw neatly woven and painted. As ſoon as the Diſhes are ſet on the Table, the Hangings are let down, left any one ſhould ſee the King eating; for both he and the Nobility are fed by Children, who take the Meat and put it into their Mouths; and if the Gobbets be too big, they thruſt them in, and if any Crumbs fall by, they put them again into their Chops, after they are ſoak'd in the Broth: But this is common to the Lord and Peaſant, that they never drink till they have done eating. Before and after Meals they commonly repeat the Pſalter, the only Book they have for daily Prayer: And the whole is read over at great Feaſts, in a very ſhort time, being diſtributed among a great many ſeveral Readers.

At the Audience of Embaſſadors, they formerly us'd a great many tedious Ceremonies, which now being humbled by many Loſſes, they are laid aſide: for now an Embaſſador is quickly admitted to ſee and ſalute the King, if he bring Preſents along with him, without which, he may not appear before the Eaſtern or *African* Kings.

The chief Miniſters of State, who manage all Affairs, were formerly two, call'd *Bahtuded*; but theſe abuſing their Power, another was appointed, call'd *Ras*, i. e. a Head, who at firſt was deſign'd only for the Command of the Army, but in a little time was advanc'd to the management of all Affairs: Such a one was *Ras-Athanaſius*; who depos'd *Zadenghel* and *Jacob*. Next to him there are two Comptrollers, whereof the uppermoſt is over all Vice-roys and Governours; the other is over the Houſhold Servants. Next to him are the Vice-roys, Camp-maſters, and Senators, who are call'd the leſſer Judges, and have an equal Juriſdiction as to all Crimes. The Captain of the King's Guard is call'd the Guardian of Fire, the King being to them like Fire, from whom they receive heat and warmth; but they may chance to burn their Fingers.

Of the King's Camp.

The firſt Camp-maſter goes before to take up a convenient Guard for encamping near ſome River, where there is ſtore of Wood and Graſs; and having ſet up a Pole with the Royal Banner at the top, the King's Proviſion is pitch'd in the middle of the Camp, with a large ſpace of Ground about it, for receiving the Horſes of the Nobility, and thoſe that bring Proviſions. Next to him the Grandees, and the reſt the Courtiers pitch their Tents; and after them the common Souldiers, every one in their Order, and at their due diſtance. When the Cryer proclaims the Day of Removal, every one knows how to pack up his Baggage, and in what order to march, and where to pitch his Tent again. Theſe Camps take up a great deal of room, becauſe they contain not only the Souldiers, but their Wives and Children, whoſe buſineſs is to bake their Bread, and make their Hydromel. The Camp-maſters carry a great ſway in matters of greateſt moment, and generally are the firſt Springs of Faction and Sedition.

Of the Military Affairs of the *Abeſſines*.

There is no making War in *Ethiopia* in the Winter, by reaſon of the great Falls of Rain, and Inundations of Rivers: But the *Abeſſines* are a warlike People, ride a Horſe well, endure hunger and thirſt beyond belief, and ſerve without pay, being content with Honour, and ſuch Lands as their King is pleas'd to give them. But the Poverty of the Souldiers empoveriſhes the Countries thro' which they paſs; for ſince they cannot carry Proviſions along with them over their rugged Mountains, they take by force what is not freely given them, and ſo lay waſte their own Countries no leſs than their Enemies: And this hinders them from purſuing the *Gallans*, becauſe they find nothing left behind them but Lands untill'd, and empty Cottages. They have about 1500 Muſquets, but not above four Muſqueteers, and theſe but bad Fire-men, and very little Powder.

The biggeſt Army that the King now brings into the Field, hardly amounts to 40000, among which there are not above four or five thouſand Horſe the reſt are all Foot. Their Weapons are Swords, and Darts, and Lances, and ſhort Javelins, with which they fight at a diſtance, and after them Hand to Hand, with their Swords and Bucklers. They ride on Mules and lead their Horſes, which they never mount till they are ready to charge the Enemy. They are commonly arm'd with two Spears, whereof they dart one at a diſtance, and maintain a cloſe Fight with the other. The fury of the firſt Onſet for the moſt part wins the Field; for they know not how to rally when once they are diſorder'd. They hate to avoid a Battle, and tire out an Enemy by delay, which has been the ruin of many of their Kings. The Country is very much infeſted with Robbers, who ſhelter themſelves in Rocks and Mountains.

Of the Wars in the laſt Century, eſpecially of the fatal War with the *Adelans*.

King *David* in the beginning of his Reign, vanquiſh'd the *Adelans* in ſeveral Battles, but after the *Turks* had conquer'd *Egypt*, and taken ſome Ports of the *Red-Sea*, the *Adelans* ſtrengthen'd by their aſſiſtance, turn'd the Scale, and were always Victors: For King *Adelis* having ſent one *Grainus* a *Mahometan* to invade *Habeſſinia* with an Army, in 1526, he ſubdued all *Fetagara*: And tho' the War was carry'd on the firſt two Years with various ſucceſs, yet for the next twelve to 1640, when King *David* dy'd, the *Abeſſines* had the worſt of it, inſomuch that they began to deſpair of their Country. The chief cauſes of theſe Diſaſters, were firſt the King's ſluggiſh humour, who was wholly given up to pleaſure: Next, the *Turks*, who furniſh'd their *Mahumetan* Friend with Fire-Arms, whoſe Thunder the *Abeſſines* had never heard before, and was very terrible to them, whoſe Bullets gave them incurable Wounds: Beſides, that the *Mahometans* in *Abeſſinia* receiv'd favourably thoſe of their own Sect, and many of the *Abeſſines* themſelves join'd with the Victor: So that every thing threatened utter diſtraction and deſolation, until *Chriſtopher Gomez* was ſent from *Portugal* with 450 Muſqueteers, whoſe Succeſs had been already mention'd in reſcuing *Ethiopia* from the *Adeluns*. In the firſt place he aſſail'd the Rock *Amba-Sanet*, which was thought to be invincible, and forc'd the Enemy to quit it, which mightily encourag'd the *Abeſſines*; and when he came to a Battle, the *Mahometans* were ſo terrified with the Field-Pieces and Muſquets, that they would not obey the Orders of their Captain; and by an Accident of a Barrel of Powder taking fire, their Horſe were firſt ſtartled and put to flight, and the Foot quickly follow'd, and their Camp was taken and plunder'd. After that he attack'd a ſteep Rock in *Samen*, garriſon'd with 1500 *Adelans*, and being conducted by a *Jew* who had formerly been Governour there, he ſlew all the *Barbarians*, took 80 Horſes, 300 Mules, and other good Plunder. In the mean time *Grainus* ſent to the *Baſhaws* of *Arabia* for Guns and Fire-arms, one of which ſupply'd him with 700 Muſqueteers and ten Field-Pieces. *Gomez* knowing nothing of this gave the Enemy Battle, but being overpower'd by the *Turks*, he was ſhot in the Thigh with a Muſquet-Bullet, whereupon he fled, accompanied only with 14, who were apprehended, and he being upbraided by *Grainus*, he gave him a ſtern Anſwer, who caus'd him to be tormented to death. *Claudius* the King being come into the Army, and hearing that the *Turks* were all return'd home but 200, by the advice of the *Portugueſe* fell upon the Enemy, and vanquiſh'd them, *Grainus* himſelf being ſhot to death, whoſe Head was expos'd to the view of the People, and they recover'd new Vigour and Courage. But the *Adelans* hearing the *Abeſſines* were ſecure, broke in and defeated them, and ſlew *Claudius*.

Of the Princes that are tributary to the Kings of *Ethiopia*, and the way of making Petitions to them.

The Kings of *Ethiopia* have ſeveral tributary Princes under them, whereof *Gregory* the *Ethiopian* knew but four, *viz*. the Kings of *Sennar*, *Dancala*, *Garaga*, and *Enarrea*: All the reſt, whether Kings or Governours, are by the King himſelf appointed to govern *pro tempore* at the King's Pleaſure, that by this dependance they may be kept more faithful to him. They are call'd and accounted his Servants, tho' of the higheſt rank, as his Brothers and his Queen; for the Word in their Language ſignifies not only Slaves, but Subjects and Domeſticks: And indeed they are little better than Slaves, who are bound at all times to ſerve the King with their Body, and have no property which they can claim; and the Ceremonies by which they teſtify their Submiſſion to the King, are no leſs ſlaviſh; for the *Bahtuded* his chief Miniſter ſtands before the King's Pavilion, naked to his Thighs, with his Head and his Right-hand down to the Ground, crying out thrice *Abete*, or, *Moſt merciful Lord, I am the meaneſt of the Court that ſaddles your Horſes.* Other Suppliants inſtead of preſenting written Petitions, ſtand in a certain place early in the Morning, crying with a loud Voice, *My King, my Apple of my Eye*; and uſing different tones, whereby their ſeveral Countries are diſtinguiſh'd: And as ſoon as day appears, ſuch and ſuch are commanded to be admitted and heard; or if it be a buſineſs of Moment, the King himſelf gives them audience, and returns him their Anſwer.

Of their Judiciary Proceedings and Puniſhments.

The manner of their Judicial Proceedings is very plain, for all Controverſies are determin'd by word of Mouth, without Writing, of which the moſt part of the Nation is ignorant. The Plaintiff produces his Witneſſes, which the Defendant may refuſe if he have any reaſon to ſuſpect them: But ſince they know not how to examine or ſift a Witneſs, Juſtice muſt be but ill adminiſtred; and tho' it is lawful to appeal to the King and Court Tribunals, yet few will do it by reaſon of their Poverty, and the little Hopes they have of redreſs; beſides, that it is counted an Affront to the inferiour Judges, who think themſelves accus'd of injuſtice by theſe Appeals.

For Capital Crimes, they uſe Beheading, or Hanging, or Stoning the Offenders to death; if the Crime be not capital, they puniſh with drubbing. The Nobility for any Offence are baniſh'd to the *Zanic-Lake*, or their high and ſteep Rocks. Homicides are deliver'd up to the next of kin, to the Party murder'd, who may either pardon them, or ſell them to foreign Merchants, or put them to death. If the *Homicide* eſcapes, the Neighbourhood are obliged to pay a Fine, by which means many Murthers are either prevented or diſcover'd. The Law of an Eye for an Eye appears to be juſt, yet becauſe ſome Men have more uſe for one Member than another, according to their ſeveral Callings, this Law is diſus'd in civilliz'd Nations; and it ſeems unjuſt to ſurrender the Offender to the fury of the Offended Party, when they have unbyaſs'd Judges to give Sentence without Favour and Affection.

Of the Religion of the Abeſſines, *and the Eccleſiaſtical Affairs.*

Of the Original of their Judaical Rites

Paſſing by the fabulous Reports of *Matthew* the *Armenian*, the firſt Embaſſador to *Portugal*, and *Damianus* a *Goez*, there are various Opinions about the Original of the Religion of the *Abeſſines*. They who admit the Tradition of Queen *Maqueda*, think that the *Abeſſines* had the true knowledge of God ever ſince the Reign of *Solomon*, and yet that their *Judaic* Rites, ſuch as Circumciſion, abſtaining from Meats forbidden, obſervation of the Sabbath, Marriage of the Brother's Wife, *&c.* had their Original from thence: But theſe things being commonly practis'd in other Nations, and ſome of them by the Primitive Chriſtians, it is not certain that they were receiv'd from the *Jews*. As to Circumciſion, it was in uſe among the *Egyptians*, *Phenicians*, and *Homerites*, and many other Nations, who only round the Skin with a Knife, whereas the *Jews* ſlit it with their Nails till the *Præputium* falls down; neither do the *Abeſſines* perform it with any Ceremony; for it is done privately by any poor Woman, without any Standers-by; and therefore King *Claudius* in his Confeſſion ſays with St. *Paul*, That Circumciſion profiteth nothing, but is us'd like Inciſions of the Face, or boaring the Ears, according to the Cuſtom of their Country: And the ſame Ceremony is uſed to Females, not only by the *Abeſſines*, but the *Egyptians* and *Arabians*, where the Women count it a Reproach to be call'd Uncircumcis'd. As to Swines Fleſh the ſaid *Claudius* tells us, That they do not abſtain from it out of regard to the *Moſaic* Law, neither do they abhor him that feeds upon it, upon a religious account, any more than we do the *Tartars* for eating Horſe-Fleſh, but that they account all kind of Meat clean; only they abſtain from Blood and things ſtrangled, by vertue of an Apoſtolick Decree, which was always in force in the Eaſtern Church, and for many Ages in the Weſtern. As to the Sabbath, they do not obſerve it as the *Jews* did, who would neither draw Water, nor kindle Fires, nor dreſs Meat on that day, but they obſerve it for pious uſes, according to the ancient Conſtitutions, call'd Apoſtolick yet; ſo that they ſtill preſerve the Lord's Day, on which our Saviour roſe from the dead before it. As to marrying the Brother's Wife, it is not enjoyn'd, but only conniv'd at by the Magiſtrates, yet ſo, that their Wives are debarr'd from the Communion. They do indeed abſtain from the Sinew mutilated, which they might learn from the *Jews* at home.

Of the Converſion of the Abeſſines.

The Converſion of the *Ethiopians* happened in the time of St. *Athanaſius*, under *Conſtantine* the Great, in the Year of *Chriſt* 330, and was begun and carry'd on by *Frumentius* and *Edeſius*, two Sons of *Meropius* a *Tyrian* Merchant, who died in a Harbour of *Ethiopia*, on the Coaſt of the *Red-Sea*. Theſe two Brothers being highly favour'd by the King for their Ingenuity and Induſtry, were by him preferr'd to be Keepers of his Books and Papers; and being very kind to the *Chriſtian* Merchants that traded into thoſe parts, they became ſo famous for their Piety and Vertue, that the Chriſtian Religion was highly eſteem'd by all. Which Foundation being laid, *Frumentius* took a Journey to St. *Athanaſius*, Patriarch of *Alexandria*, and was by him for his Parts and Conſtancy in the Faith, created the firſt Biſhop of *Ethiopia*: Whereupon returning into *Æthiopia*, he initiated the Natives by Baptiſm, and then ordain'd Preſbyters and Deacons, built Churches, and ſo introduc'd the Chriſtian Religion into *Ethiopia*. Agreeable to this, is the Relation which the *Ethiopians* have in their Book of *Axuma*, and the account given by the *Ethiopic* Liturgy and Poet, that in the time of St. *Athanaſius*, in the Reign of *Arzbeba* and *Abreha*, two Brothers, the Goſpel was firſt preach'd by *Abba Salma*, as they call *Frumentius*; which Story being well grounded, and agreed to by the *Abeſſine*, *Grecian*, and *Latin* Writers, plainly ſhews, that the converſion of the *Abeſſines* was neither ſo early as the Days of the Apoſtles, as ſome have thought, nor ſo late as the days of *Juſtinian*, as *Cedrenus* and *Nicephorus Calliſtus* affirm; whoſe account is alſo diſprov'd by the 36 *Nicene* Canon, which aſſigns the firſt Seat of Dignity in the Council to the Prelate of *Ethiopia*.

Of the encreaſe of Chriſtianity in Abeſſinia, and the Original and Manners of their Monks.

The Converſion of *Ethiopia* being thus begun by *Frumentius*, many Monks came from ſeveral Parts of the *Roman* Empire, to aſſiſt him in propagating the Chriſtian Religion, whereof nine were moſt famous, who probably came from the neighbouring Parts of *Egypt* (where this auſtere way of living was firſt practis'd by St. *Paul*, *Anthony*, and others, that fled thither from the Perſecution of the Heathen) and ſeated themſelves in *Tigra*, where they erected them Chappels. One of them call'd *Aragawi*, or *Michael*, is celebrated by the *Ethiopic* Poet for deſtroying *Arwe*'s Kingdom, which may either ſignifie the Kingdom of Satan, or a Serpent properly ſo call'd, which the ancient *Ethiopians* worſhipp'd as the ſupreme Deity: The Cells of theſe Monks are to be ſeen in *Tigra* to this Day, and particularly the Cell and Sepulchre of *Pantaleon*, celebrated by their Poet for reſtoring their dead to life again. Beſides theſe, there are ſeveral great Doctors, Martyrs, and Saints, famous for working Miracles, who mightily promoted the Chriſtian Religion; but none more renowned for Sanctity than *Gabra Menſes Kadda*, the Servant of the Holy Ghoſt, in honour of whom they keep a Holy Day every Month. Next to him is *Tecla Haimanot*, who ſucceeded *Aragawi*, the firſt Abbot of Monks in *Ethiopia*, from whom he receiv'd his Monaſtical Habit, and reſtor'd that way of living about the Year 600. He is mentioned in the *Ethiopic* Church-Regiſters, and his Life is extant in *Ethiopia*, ſtuff'd with ſeveral Miracles and Apparitions. He gave new Rules to his Monks, and order'd them to ſubmit to a Governour, who does either viſit himſelf, or ſent ſome others to reform Errors and puniſh Tranſgreſſors. The other Abbot call'd *Euſtathius*, is no leſs famous than he; but he impoſed no Governour upon his Followers, and therefore every Abbot is ſupreme in his own Monaſtery, who in caſe of death is choſen by the reſt of the Monks. Their Rules are much different from the *Greeks* and *Latins*; for neither do they wear any peculiar Habit except their Croſſes which they carry, neither do they live in Monaſteries, but in ſcatter'd Cottages near ſome Church. They place their Piety chiefly in ſaying many Prayers, and in repeating the Pſalms of *David* with ſo much haſt, that none is able to follow them. Every one manures his own Ground, and lives upon the Product of his Labours; ſo that they are rather unmarried Huſband-men than Monks. They are counted infamous if they marry Wives, nor are their Children capable of being admitted into the Clergy; yet they bear Civil Offices, and are ſometimes made Governours of Provinces. Their Villages, which are inſtead of Monaſteries, are very numerous, and diſpers'd over all parts of the Kingdom: There are alſo Nuns in *Ethiopia*, very ignorant and devout.

Of the ſacred Books of the Abeſſines.

The *Abeſſines* together with the Chriſtian Religion, receiv'd the Holy Scripture, which was tranſlated into the *Ethiopic* Idiom of *Tigra* from the *Greek* Verſion of the 70, according to a Copy us'd in the Church of *Alexandria*. They have the New Teſtament tranſlated from the *Authentic Greek* Text, which has not yet been brought into *Europe* pure and entire; for the *Roman* Edition is printed from a lame imperfect Copy, for want of the *Ethiopic* Original, as the Compiler *Teſſa Tzejon* confeſſes, and begs pardon for it, tho' it is printed in the Polyglot Bible, becauſe no other Copy could be procur'd.

They have the Holy Scripture entire, and reckon as many Books as we do, but divide them after a different manner; for they diſtinguiſh the Old Teſtament, which contains 46 Books, into four Parts, and join with them other Books; beſides, that they mix the Apocryphal with the Canonical. The firſt Tome is call'd *Oreth*, or the Law, and contains in it eight Books, from *Geneſis* to *Ruth*: The ſecond is call'd *Nagaſte*, or Kings, and contains in it 13 Books, from *Samuel* to the *Pſalms*, including the two Books of *Tobia* and *Judith*: The third is call'd *Solomon*, and contains five Books, including the Book of Wiſdom and *Sirach*: The fourth Tome is call'd *Nabijat*, or the Prophets, and contains eighteen Books, including *Baruch* and *Sophenia*, of all which there are only a few at *Rome* in MS. and a few only printed: to theſe they add the two Books of *Maccabees*.

The New Teſtament contains 24 Books, and is alſo divided into four Parts; whereof the firſt contains the four Evangeliſts; the ſecond, the Acts of the Apoſtles, the third, the four Epiſtles to St. *Paul*; and the fourth the ſeven Books of the other Apoſtles, ending with St. *Jude*'s Epiſtle, to which they add as a Supplement, the Revelations, call'd the Viſion of St. *John*.

To the New Teſtament they generally annex a Volume, call'd *Synodum*, or the Book of Synods, which contains the Conſtitutions of the Apoſtles, as they are call'd, which are very much different from thoſe diſpers'd among us: Theſe they divide into eight Parts, and add them to the New Teſtament, as if they were of the ſame Authority, and contain'd the Pandects of Chriſtianity. Next to theſe they reverence the three *Ocumenic* Councils, the *Nicene*, *Conſtantinopolitan*, and *Epheſine*, with other Provincial Councils receiv'd in the Church, till the Council of *Chalcedon*. But beſides the 20 *Nicene* Canons, which were always receiv'd in the *Greek* and *Latin* Church, they admit alſo of 84 other Canons, which are extent in *Arabick*, and were ſent by *Conſtantine* their Emperour in 440 to *Jeruſalem*, and thence brought to *Rome* in 1646. This Book of Synods contains, firſt the Synod of the Holy Apoſtles for ordering the Church, which is ſaid to be written by *Clement*, after which follow ſeven Councils, *viz.* of *Ancyra*, *Ceſaria*, *Nice*, *Gangra*, *Antiochia*, *Laodicea*, and *Sardis*. Then follow the Acts of 318 Holy Fathers, a Treatiſe of the Sabbath, a Declaration of the Doctrine of the Law, and a Decree and Canon of Penance. The Book was written at *Axumia*, with the King's Preface. To this Book is annex'd their general Liturgy for Prayers, and Miniſtration of the Communion; beſides which, they have other Liturgies proper for Holy-Days, *viz.* the Liturgy of our Lord, our Lady, the Apoſtles, and St. *Mark*, which Liturgies are ſuppoſed to be written by ſome Holy Men, as that of our Lady by *Cyriacus*. They have alſo a MS. Liturgy, call'd the Thankſgiving of Oblation, which is read at the Sacrament. But their Symbolic Book, which is call'd the Faith of the Fathers, is collected out of the Homilies of St. *Athanaſius*, *Baſil*, *Cyril*, and the four *Gregories*, &c. and is of very great Authority. They have alſo Books of Martyrs, and Lives of Saints, and Hymns in praiſe of the Virgin *Mary*, whereof that written lately by *Abba George* is highly eſteem'd. They affect uncouth Words in their *Anathema*, after the manner of the *Jews*.

Of the Religion of the *Abeſſines* at this day.

Since the Symbolical Book afore-mention'd, which contains the genuine Doctrine of the *Ethiopic* Church, is not to be found in *Europe*, and the Confeſſion ſet forth by King *Claudius*, tends only to clear them from the Charge of *Judaiſm*, we ſhall gather from their publick Liturgies, the Writings and Sayings of Perſons, the ſum of the *Abeſſinian* Doctrine.

And firſt, they own the Holy Scripture to be the ſole Rule of Faith and Manners, and delight in nothing more than the Repetition of it in their Sermons. They pay a great deference to the three firſt OEcumenical Councils, and generally make uſe of the *Nicene* Creed; for neither they nor any of the Eaſtern Churches, know any thing of that which we commonly call the Apoſtle's Creed. Whatever therefore the Catholick Church believ'd, before the Council of *Chalcedon*, concerning three diſtinct Perſons in one Eſſence, the Eternity of the Son of God, the exiſtance of the Holy Ghoſt, the *Abeſſines* admit and conſent to: Thus they declare in their Liturgy, that theſe three Perſons are one God, whereof none is elder or greater than another, but all the three are equal, having one Glory, one Kingdom, and one Power. But as to the Holy Ghoſt, they ſay he proceeded and ſprung from the Father, but never add from the Son, as was falſely printed in their Liturgy at *Rome*, tho' they own him to be equally the Spirit of the Father and the Son. They ſo abhor the Neſtorian Hereſy, aſſerting two Perſons in Chriſt, that they will not admit of his two Natures and two Wills, tho' they affirm him to be perfect God and perfect Man without confuſion and commixtion of the two Natures. They own the ſacred Merits of Chriſt to be moſt ſufficient and efficacious for the Sins of all Mankind. As to the Sacraments, they make uſe of Baptiſm, according to the Inſtitution of Chriſt, and with the Ceremonies anciently us'd by the Church; and they adminiſter the Communion to all, both Laity and Clergy, as is the Cuſtom in all the Eaſtern Churches. They have not the Word Sacrament, nor do they uſe any other beſides theſe two, being utterly ignorant of Confirmation and Extreme Unction. They acknowledge the real Preſence, when they pray that the Bread may be made the Body of Chriſt, and the Cup chang'd into his Blood, and believe that the Bread and Wine is chang'd into the myſterious Repreſentation of Chriſt's Body and Blood; but deny any ſuch change of the Subſtance as is multiplied in Tranſubſtantiation, and therefore they do not ſay at the Conſecration, *This is my Body*, which Words only, according to the Papiſts, can produce that Change; but, *This Bread is my Body*, *This Cup is my Blood*; which Words have in them no ſuch force: Neither do they attribute to the conſecrated Elements thoſe divine Honours, which the belief of Tranſubſtantiation requires.

As to the Soul, they believe that it is immortal, and was firſt inſpir'd into Man by God; but they think it abſurd, that God ſhould be ty'd to create every day new Souls for adulterous Births. As to the ſtate of the Soul after death, they have ſeveral Opinions; but 'tis generally believ'd, that the Souls of pious men ſhall not enjoy the beatifical Viſion before the Reſurrection, but remain in ſome third place, expecting that Reſurrection; which ſeems to be implied in their Prayers for the dead, ſuch as theſe, *Remember Lord the Souls of thy Servants, and releaſe O Lord our Fathers*, &c. Whence ſome have inferr'd, that they believe a Purgatory, which they do utterly deny, and affirm theſe Prayers to be only a Commemoration of the happy Eſtate of the deceas'd, after the Cuſtom of the antient Church, who were wont to read the Names of the Martyrs out of the publick Regiſters, in honour to their memory: But if they were to pray Men out of the pains of Purgatory, they ſhould rather pray for Men whoſe Lives were looſe and vain; whereas the Perſons they commemorate, were moſt innocent and holy, and died many Ages ago, and it would be a great Injury to their Memory to believe that they had been ſo long tormented in Purgatory. They deny that they give Divine Honours to the Saints departed; for they call their Holy-days Remembrances and not Solemnities; yet they invoke them, tho' they know not how they can hear them, and alſo beg their Interceſſion, eſpecially of the Virgin *Mary*, whom they honour exceedingly, but erect no Statues to her, being contented with her Picture. They invoke alſo the Angels, becauſe they are ſaid to appear to good Men and Women, and hear their Prayers: Of theſe they reckon nine Orders, whoſe Names they take from Holy Scripture.

In their Catechiſm they firſt teach their Youth to believe three Perſons, equal in all things in one God, which they illuſtrate by the Sun, which being one in ſubſtance, has three diſtinct things, *viz.* Rotundity, Light, and Heat: Then they inſtruct them as to the Perſon of Chriſt, that he was begotten of his Father without time, and born of the Virgin his Mother in time, that he is both God and Man in one Perſon, and as to his Baptiſm, his Faſting, his Paſſion and death, and the other Articles contain'd in the Apoſtle's Creed.

Of the Rites and Ceremonies of the *Abeſſine* Church, and of the *Abeſſine* Temples.

As the Churches of the Primitive Chriſtians were built after the form of the Temple at *Jeruſalem*, having a wide Porch, where the Excoriate Penitents and Novices tarried, and the Body of the Church, in which were the Faithful, and a ſecret place ſkreen'd with a Curtain, call'd the Sacrificatory (to which the Choir now anſwers in our Churches) ſo were the more famous of the *Ethiopic* Churches, built after the ſame manner: But whereas none but Eccleſiaſtical Perſons were admitted into the Choir, at the entry whereof the Laity receive the Communion, the *Ethiopians*, by creating their Nobility and their Children Deacons and Sub-deacons, admitted them into the Choir, and their King's Children aſſumed the Dignity of courſe, carrying a Croſs as the Badge of it, even after they come to the Crown, which may be one reaſon why the King is call'd *Presbyter-John*. They neither ſit nor kneel in their Churches, but always ſtand during Divine Service, but they are allowed to lean their Bodies upon Crutches. They have ſo great reverence for their Churches, that when they come near one of them, they alight from their Mules, and walk afoot till they are paſt them; and when they enter, they put off their Shoes at the Door, and never ſpit upon the Pavement. They admit Pictures into their Churches, but abominate Statues; and it is counted a heinous offence for any one to carry about him a Picture of *Chriſt* crucified, tho' their Clergy bear Croſſes in their Hands, which are reverenc'd by all who meet them with a Kiſs; and they often ſign themſelves, and the things that belong to them, with the Sign of the Croſs, as the ancient Chriſtians us'd to do.

As to Baptiſm, the Prieſt being to Baptiſe an adult Perſon, begins with the 52 Pſalm, and then having perfum'd him with Incenſe, he enquires his Name, and after the recital of certain Prayers, he anoints ſeveral parts of his Body with Holy Oil, and lays his Hand upon his Head. Then the Neophites lifting up their Right-hands and looking towards the Weſt, abjure Satan; but turning towards the Eaſt, and lifting up their Right-hand, they make a Vow to Chriſt, and then ſay over the Creed, and anſwer the Prieſt that they do believe it: Which ended, the Party is again anointed, and ſome pieces of Scripture read out of St. *John*'s Goſpel, the Acts, and the Epiſtles: At length the Oyl is ſo pour'd into the Water prepar'd for Baptiſm, as to reſemble in falling the Sign of the Croſs; and the Prieſt having deſcended into a Pool, whether the Perſons are conducted by the Deacons, plunges them three times over head and Ears, ſaying, *I baptiſe thee in the Name of the Father, Son and Holy Ghoſt*: After which, they are aſſiſted by their Friends in going out of the Pool, who were therefore call'd Suſceptores or Upholders by the Ancients. Being thus waſh'd, and once more anointed, they are firſt cloath'd with a white under Garment to ſignify the Purity of their Mind, and over that with a red Veſtment, in token of their Salvation purchas'd by the Blood of Chriſt; and ſo introduc'd into the Church, where they partake with other Chriſtians of the Holy Communion: At their departure they are preſented with Milk and Honey, and ſo the Prieſt laying his Hand upon their Heads, diſmiſſes them with this Benediction, *Son of Baptiſm go in peace*.

The Ceremonies of Baptizing Infants are much ſhorter; for they are not plung'd in Water, but only ſprinkled and dipp'd, and the Goſſips make anſwer in their behalf: And leaſt Infants ſhould be in a worſe condition than thoſe of riper Years, they give them two or three drops out of the Sacred Cup, having crumbled a little piece of the Holy Bread into it before. Many have believ'd that the *Ethiopians* were branded with a Mark after Baptiſm; but they diſown any ſuch Cuſtom, and the burning of the Temple-Veins of Children newly born, to preſerve them from Catarrahs, which is uſed in *Africa*, may be the occaſion of the miſtake.

As to the Story of their Anniverſary Baptiſm, the truth of the matter is this: Upon the 11th, which is our 6th of *January*, being the midſt of their Summer, and the Feaſt of *Epiphany*, they keep a joyful Feſtival in commemoration of our Saviour's Baptiſm: The Clergy begin by break of day with loud Hymns, and before Sun-riſe, the King, Nobles, and Vulgar, young and old, with the Metropolitan and his Clergy, throng into Rivers and Ponds, and dive over Head and Ears; and if any meet a Prieſt, they crave a Bleſſing of him, to whom he ſays, *God bleſs thee*. Hence many have thought that they renew'd their Baptiſm every Year, whereas the young People by their Sports rather make it a day of Jollity than a Chriſtian Feſtival.

Of the Rites and Ceremonies of the *Abeſſine* Church, and of the *Abeſſine* Temples.

They make no queſtion but Sinners are reconcil'd to God after Baptiſm upon their Repentance and Confeſſion; but they do not commonly confeſs particular Sins, but only ſay in general, *We have ſinned*; and then the Offender is abſolv'd in a few Words with ſome gentle ſtripes upon the ſide with an Olive twig: But when any of them confeſſes Adultery, Homicide, or Theft, they are ſeverely ſcourged, unleſs ſome of the Laſhes be remitted at the Interceſſion of the Standers-by. One of them being urg'd by the Metropolitan, confeſſed publickly he had ſtolen Oxen, and the Owner of them being there preſent, he was oblig'd to reſtore them again, and was ſeverely puniſh'd beſides: As ſoon as they commit any notable Offence, they preſently run to their Confeſſors, and confeſſing they have ſinned, they deſire to receive the Communion for the quiet of their Conſciences; but this they do not till they are 25 years old: for all the Years before that are reckoned a time of Innocence.

The Divine Service of the *Ethiopians* is compleated by the adminiſtration of the Sacrament, after they have read their Liturgies and Homilies of the Fathers, and ſome parcels of Scripture out of the New Teſtament; for they neither make uſe of Sacred Hymns nor Preaching like ours. In the Canon of the *Meſs*, all their Ceremonies are to be found, with all their ſeveral Prayers, and the manner of ſanctifying their Inſtruments and Veſſels. In the Sanctuary ſtands the Holy Table, covered with a Canopy, ſuſtain'd with four Pillars at each corner; upon which they place firſt the Tabot or Cheſt, which is made in the Faſhion of a Bier, and therefore ſeems to be a Cuſtom derived from the ancient Chriſtians; for the three firſt Ages, who being forc'd to meet in Caves or Church-yards, in the Night-time, did probably carry the Bread, and Wine, and Utenſils, to the place of meeting, in Coffins or Cheſts made like a Bier, under pretence of carrying forth their dead: And when they were met, this Cheſt ſerv'd inſtead of a Table, about which the Communicants ſate and receiv'd the Communion; into which, they alſo put any Bones of the Martyrs that they found. After the time of Perſecution, theſe Cheſts were brought into Churches, where by degrees they were made like Tables, and at length were quite laid aſide in ſome Churches, where they have only a conſecrated Table or Altar; but the *Ethiopians* ſtill retain both, tho' they have alter'd the form of the Cheſt into a Table. Theſe Cheſts were at firſt made of Wood, but afterwards of Stone, of which ſort was a Marble Monument dug up in a Church-yard, being like an arched Bier, covered with a Linen Cloth, in which there were the ſacred Loaves for the Communion, ſigned with a Salter-Croſs, which the *Ethiopians* uſe to this day; and of the ſame form is the Wooden Cheſt at *Rome*, on which none but the Pope may celebrate. The other Holy Utenſils are the Diſh, the Cup, and the Spoon, call'd the Spoon of the Croſs, becauſe the Handle ends in a Croſs, wherewith they diſtribute the Wine. They have alſo conſecrated Urns and Cenſers, which they uſe to perform with Incenſe, as the ancient Chriſtians were forc'd to do in their Caves. They commonly uſe leaven'd Bread, mark'd with a Croſs, which they bake new every day; but on the 5th Holy-day of the great Week, they uſe unleaven'd Loaves in memory of Chriſt, pieces of which the Prieſt diſtributes to the Communicants: And inſtead of Wine they uſe a Liquor made of the bruiſed Stones of Raiſins ſteep'd in Water, which the Deacon gives in a Spoon to all, as well Laity as Clergy; after which, the Sub-deacon pours a Spoonful or two of Water into the hollow of the Communicant's Hand, wherewith he firſt waſhes his Mouth, and then ſups it up. The time of receiving the Sacrament is left to every one's liberty; ſome receive every Week, ſome every Month, but all within the Church; for they hold it a great Sin to receive the Holy Myſteries in private Houſes, which is not allowed to the King himſelf. They always receive Faſting, and never ſpit on that day they have received. When they give the Communion to full Churches, the Prieſts are aſſiſted by Sub-preſbyters and Sub-deacons, in reading the Prayers, and recommending both the living and dead to God, which they call receiving the Diptych; and then ſome bring Bread, Oil, Tithes, Firſt Fruits, *&c.* which are given among the Poor. They keep the *Saturday* in commemoration of the Creation, but more ſolemnly the Lord's Day: They have no Bells of Braſs or mix'd Metal, but only hollow Veſſels of Iron, Stone, *&c.* which make a noiſe. Their Church-Muſick both Vocal and Inſtrumental is very harſh; yet they ſkip and dance in imitation of *David*, to their Cymbals and Kettle-drums, which they call rejoycing before the Lord. Faſting-Days are very ſtrictly kept, without Meat or Drink, ſometimes till the third Evening, and every Week they faſt the fourth and ſixth Holy-Day, and all the forty Days of *Lent*, except on *Sunday*; but after *Eaſter* for 50 Days they indulge themſelves in Feaſting and Mirth. They obſerve alſo all the other Feſtivals of the ancient Church, and particularly the Nativity on the ſame day with us, which with them is the 28th of *December*. Tho' Polygamy is tolerated by the Magiſtrate, yet it is not allow'd by the Church; for thoſe that marry to more than one, are debarr'd from the Communion; neither are ſuch married in the Church, but before the Doors of it, or at home; but the Laity are divorc'd from their Wives when they pleaſe, which the Clergy cannot be, unleſs they renounce their Function.

Their dead Bodies being waſh'd and fum'd with Incenſe, are wrap'd up in proper Garments; but if the party deceas'd be of a noble Family, he is laid upon a Bier covered with a Bull's Hide, and then the Clergy carry him to the Grave laden with Croſſes, Cenſers, and Holy Water, into which he is not let down, but thrown, after the reading of a Paragraph out of St. *John*'s Goſpel.

Of the Form of Eccleſiaſtical Government in *Ethiopia*, and of the Priviledges of the Clergy.

The ſupreme Power in all Affairs being veſted in the King, all Eccleſiaſtical Cauſes, except in very ſlight matters, are determin'd by the King's Judges; neither can the Clergy or Monks plead any Exemption, but they are puniſh'd as well as Lay-Perſons for their Offences, by the ſecular Judges. As to what concerns the Dioceſan Law, thoſe things are left to the Clergy, whoſe chief Head is the Metropolitan, ſurnam'd *Abuna*, i. e. our Father. He by ancient Cuſtom is conſecrated at the King's deſire, by the Patriarch of *Alexandria*, and ſent out of *Egypt*; tho' now he and his Clergy being Slaves to the *Turks*, are very poor and ignorant, it being ſufficient to qualify him for that Office, that he can read *Arabic*: And ſuch are the Patriarchs he ſends into *Ethiopia*, who, as they know little, ſo they do as little, only in a ſet form of Words they ordain Under-Clerks juſt as wiſe as themſelves: But in none of their Kingdoms or Provinces have they Biſhops or Arch-biſhops; ſo that the whole care of their Church lies upon the *Icege* or Abbot, and his Monks, without whom, their Church had been long ſince ruined.

As to their Cathedrals, they have their Over-ſeers, who are to take care of the ſecular matters of the Church, and to compoſe the Differences between the Clergy. They have alſo Canons, who are particularly employ'd in thoſe Offices which require Hymns. The *Nebrat* ſeems to be their Dean, under which are the Presbyter and Sub-Presbyter, Deacon and Sub-deacon. All their Clergy marry once, except their Monks, but if they marry twice they are degraded.

Of the Separation of the *Abeſſines* from the *Greek* Church in the time of the Council of *Chalcedon*.

The *Alexandrian* Church remain'd in Unity with it ſelf and with the *Greek* Church, till the Council of *Chalcedon*, call'd by us the 4th general Council, wherein the Hereſy of *Eutyches* was condemn'd, who aſſerted there was but one Nature and one Will in *Chriſt*, whoſe Followers were therefore call'd *Monothelites*: But the *Abeſſines* reject this Council, as believing they went about to divide the Subſtance of *Chriſt*, and contrary to the Council of *Epheſus*, to make two Perſons of one, which they think is the juſt conſequence of aſſerting two Natures and two Wills in *Chriſt*; for which reaſon they extol *Dioſcurus*, as a Martyr, who was ſcourg'd, had his Teeth pull'd out, and was baniſh'd for ſtanding to this Truth: Yet they condemn *Eutyches*, and applaud *Timotheus*, by whoſe Doctrine the Followers of *Eutyches* were convicted. They own the Divinity and Humanity to be in *Chriſt*, and that he is true God and true Man, which is in effect to acknowledge two Natures in him, tho' in Words they deny it: So that the Diſpute ſeems chiefly to be about ſome equivocal Words, which the *Ethiopians* us'd to expreſs Nature and Perſons, and by what name the Divinity and Humanity in *Chriſt*, which they own, are to be call'd; for Nature with them is commonly applied to created things, and therefore they are afraid to attribute it to God.

Of the Differences which had been between the *Abeſſines* and the Church of *Rome*.

In the former Century *Alvarez* a Prieſt to the *Portugal* Embaſſadors, ſent into *Ethiopia*, brought Letters from King *David* to *Clement* the ſeventh, which he deliver'd to the Pope in a publick Aſſembly of Cardinals, *Charles* the fifth being alſo preſent, promiſing obedience to the See of *Rome* in the name of the King of *Ethiopia*, as they underſtood it, tho' the *Abeſſines* made another Interpretation of their King's Intention; whereupon *Paul* the third did not only tolerate the *Abeſſines* at *Rome*, who printed the New Teſtament with their Liturgies in the *Ethiopic* Language, but aſſiſted them at his own expence. And ſo great appearance of Friendſhip there was, that *Julius* the third ſent one *Barret* a Jeſuit, with the Title of Patriarch, with one *Oviedo* to be his Succeſſor in caſe he died; who ſent Envoys from *India* to *Claudius*, who had now ſucceeded his Father *David*, to whom the King gave no great Encouragement, fearing, leſt the *Portugals* under pretence of Religion, ſhould pour into his Country a great Force of Souldiers, with Fire-arms, and ſubdue it: However he promis'd, that the Perſons from whom they were ſent, ſhould have a fitting Reception at *Matzua*, and be conducted from thence to his Court: Whereupon *Oviedo* was diſpatch'd with five Aſſociates (leaving *Barret*) who were kindly receiv'd by the King; only he took it ill, that they ſhould talk to him of yielding Obedience to the *Roman* Pontif, which the Biſhop not content with the free exerciſe of his Religion, continuing ſtill to urge the King, permitted frequent Diſputes not yet made publick, wherein *Claudius* himſelf did many times argue againſt *Oviedo*, as he did alſo in his Writings againſt him. At laſt *Oviedo* impatient of his ill Succeſs, out of indignation left the Court, and publiſh'd a Writing, wherein he branded the *Abeſſines* with ſeveral Hereſies, which gave great offence to *Claudius*, to ſee his Subjects traduc'd for Hereticks within his own Dominions.

Not long after *Claudius* being ſlain in Battle, his Brother *Menas* ſucceeded, who revok'd all the Indulgences granted to the Papiſts, and publiſhed many ſevere Edicts againſt them; and having ſent for *Oviedo*, he drew his Cymetar in a rage, and had like to have kill'd him, if ſome of the Nobility had not prevented him: Whereupon the Biſhop fled to *Freniona*, and there taught the *Portugueſe* 30 Years, without further trouble, *Menas*'s Succeſſor being more mild to the *Portugueſe*. But at length all the Avenues into *Abeſſinia* being ſhut up by the *Turk*, and the Fathers that were ſent thither being all taken and ſlain, there was none remain'd alive to officiate to the *Portugueſe*.

Of the new Miſſion and its Succeſs, till the coming of the *Roman* Patriarch.

The Archbiſhop of *Goa* hearing that the *Portugueſe* in *Abeſſinia* wanted a Prieſt, about the beginning of the 16th Century, ſent to them one *Peter Pays*, a Man of a quick and ready wit, well ſkill'd in the liberal and mechanick Arts, and famous for his happy way of inſtructing Children, who being invited by the King *Zadengel*, came to Court in 1604, and was honourably receiv'd. The King having heard ſome Diſputes about Religion, and Maſs ſaid after the *Roman* manner, and a Sermon preached, was ſo taken with them, that he declar'd to ſome of his Friends, his Reſolution to ſubmit to the Pope, and reveal'd it as a Secret to *Peter*; which he quickly made publick by ſetting forth an Edict, That no Perſon ſhould any longer obſerve the Sabbath as a Holy-day; and by writing Letters to *Clement* the eighth, and *Philip* the third, of *Spain*, wherein he offered his Friendſhip, and deſir'd ſome of the Jeſuits to inſtruct his Subjects; which things being known to ſome of the Nobility, they conſpired againſt their Prince, and ſlew him in Battle. *Suſneus* who ſucceeded, receiv'd *Peter* kindly, and finding his own Metropolitans very ignorant and negligent, and the Jeſuits very diligent in inſtructing Youth, eloquent in their Preaching, and holy in their Lives, he wrote to the Pope and King of *Spain*, for the aſſiſtance of the *Portugueſe*; and having receiv'd an Anſwer from *Paul* the fifth, in a Letter dated *January* the 23d, he promis'd him obedience as Univerſal Paſtor, and that he would admit a Patriarch from *Rome*: The King's Brother and many of the Colonels and Captains in the Army publickly profeſs'd the *Roman* Religion; and there were few that oppos'd it except the Monks, who are ſtill baffled in their Diſputes. However the King to ſhew that he had not raſhly given way to a new Religion, appointed a publick Diſputation about the two Natures in *Chriſt*, at which the Jeſuits obtain'd an eaſy Victory; whereupon the King publiſhed an Edict, requiring all Perſons to hold, That there were two Natures in *Chriſt*, but united in one Divine Perſon. *Simeon* the Metropolitan having complain'd to the King of theſe Diſputes which were held in his abſence, another was appointed, wherein he was baffled; and then the King put forth a more ſevere Edict, making it death for any one to deny the two Natures in *Chriſt*; which ſo incens'd the minds of the People, that *Simeon*, with one of the Kings Brothers, ſome of the Nobility, and all the Clergy and Monks, combin'd together to live and die, for the Defence of their ancient Religion; and *Simeon*, to ſhew his Zeal for it, fix'd an Excorication upon the Doors of the great Church, againſt all that embrac'd the Religion of the *Franks*. The King being highly offended, publiſh'd an Edict, giving liberty to every Perſon to embrace the *Romiſh* Religion; which ſo little terrified *Simeon*, that he thundred out his Anathema's againſt all that maintain'd the two Natures in *Chriſt*.

The King's Mother and ſeveral great Perſons foreſeeing that theſe things would end in ſlaughter, together with *Simeon* and many Monks, came and implor'd the King, that he would deſiſt from what he had begun, and not innovate any thing in Religion; which Requeſt they renew'd again after a fruitleſs Conference for ſix days; but the King being immoveable, at laſt the Sword was unſheath'd, and ſhed much Blood. The chief Conſpirators were *Jamanaxus*, *Ælius* the King's Son-in-Law, and the Eunuch *Calfo*; and to give the better colour to the Rebellion, *Simeon* once more publickly excoricated all that were of the *Latin* Religion. But the *Jeſuits* relying upon the King's favour, tranſlated *Maldonat* and other Commentators into the *Ethiopic* Language, while the *Alexandrians* purſued them with bitter Invectives: At laſt *Ælius* by an Edict, commands all the *Franks* to depart out of *Tigra*, and having muſter'd up his Army, he openly rebels, reſolv'd to fight his Father-in-Law, and being drunk with fury, having only a ſmall Troop about him, he leap'd into his Father's Camp, and rode up to his Pavilion, where the Alarum being taken, he was ſton'd and ſtabb'd to death; after which, the Souldiers fled, and *Simeon* being known, was ſlain; the Eunuch *Caſlo* was beheaded, and *Jamanaxus* pardon'd. The King embolden'd by this Victory, by an Edict, prohibited the Obſervation of the Sabbath as Judaical, and commanded the Huſbandmen to plough and ſow on that day; which occaſioned *Jonael* the Vice-roy of *Bagemdra*, to revolt, with all thoſe who were diſguſted with the Edict; and then the chiefeſt of the Court, both Men and Women, beſought the King with Tears to take pity upon the poor ignorant People, and not diſturb their Minds with unreaſonable Changes: To whom the King made anſwer in a grave Oration, ſetting forth the Reaſons of his paſt Tranſactions, and upbraiding them for their Sedition: And after that, a Letter being brought him from *Jonael*, containing haughty Demands, and among the reſt, the Expulſion of the Jeſuits, he preſently commanded the nimbleſt of his Army to march; whereupon the Rebels fled for ſhelter to the inacceſſible Rocks, whom *Suſneus* had block'd up at a diſtance: So that *Jonael* being weakned by Deſertions, was forc'd to flee to the *Gallans*, who kept their Faith to him but a ſhort time; for being under-hand tempted by Rewards from the King, they ſlew him to whom they had promis'd protection.

Yet this bad ſucceſs did not terrify the Inhabitants in the South of *Gojam*, who upon the news of profaning the Sabbath, with all their Hermites ran to Arms; tho' *Ras-ſeelax* their Lord exhorted them to continue their obedience, which they refus'd, unleſs he would burn the Books tranſlated into *Ethiopic*, and hang up the Fathers; whereupon *Ras-Seelax* reſolv'd to fight them, knowing his Souldiers more experienc'd and better arm'd; and indeed the Victory fell to the King's Party, but it coſt dear, becauſe about 400 Monks having devoted themſelves to die for their Religion, fought moſt deſperately, of whom 180 were ſlain. And now the King being encourag'd by ſo many Victories, laid all fear aſide, and publickly renounc'd the *Alexandrian* Worſhip, confeſſing his Sins after the *Roman* manner to *Peter Pays*, and diſmiſs'd all his Wives and Concubines, except the firſt, to which he was lawfully married; and not long after ſignified his Converſion to the *Roman* Religion, to his whole Empire in a *Manifeſto*, declaring, That he now reverenc'd only the *Roman* See, as infallible in Faith and Manners, and exhorted his Subjects to do as he had done: But neither his Example nor Exhortation could prevail upon many; for his Son *Gabriel* began to foment Sedition, but was forc'd to fly to the Rocks, from whence he was allur'd by the fair Promiſes of a well-brib'd *Gallan*, to a neighbouring Wood, and there ſlain.

Of the coming of the *Roman* Patriarch into *Abeſſinia*, and how he manag'd his Affairs there.

Suſneus, in his Letter to the Pope, having made publick Profeſſion of the *Romiſh* Religion, and requeſted him to ſend a Patriarch; *Alphonſus Mendez*, a *Portugueſe* Jeſuit, being created Patriarch, ſet ſail from *Lisbon* in *May*, 1624, and arriv'd at *Goa*, from whence he went to *Dios*, and being forewarn'd by the King not to come near *Suaqena* or *Matzua*, he made to rights for *Bayluz*, a Port of *Dancala*, where he arriv'd in *April* with four Fathers and three Friars, beſides thirteen Servants, who at laſt with much difficulty, arriv'd upon the Confines of *Tigra*, where they were met by ſome *Portugueſe*, who furniſh'd them with Proviſions and all things neceſſary. In *December* they came to *Gorgora*, where, upon a day appointed, the Patriarch entred the Camp, and after Maſs ſaid, was conducted to the King's Pavilion, and commanded to ſit down by him in a little Chair, where it was agreed, that upon the eleventh of *February* the King ſhould publickly ſwear obedience to the Pope. On which day the King, with his eldeſt Son *Baſilides*, his Brother, the Vice-roys and Governours of Provinces being met, the Patriarch ſitting on the King's Left-hand, made a lofty Penegyrick in praiſe of the Pope: to whom the great Chamberlain made anſwer, That it was now the King's Intention to fulfil the Promiſes of his Anceſtors, by yielding obedience to the Pope of *Rome*; whom the King interrupted by ſaying, This was not the firſt day of his Intention, for he had long ago promiſs'd it to the Superiour of the Jeſuits. Whereupon the Patriarch opened a Book of the four Evangeliſts, and the King kneeling upon his Knees, took the Oath of Obedience to the Pope in the uſual form. After the King had done, his Son *Baſilides*, the King's Brother, all the Viceroys and Peers, and all the Clergy and Monks then preſent, took the ſame Oath; to which *Ras-Seelax* added this Clauſe, That he would be faithful to *Baſilides* as long as he protected the *Romiſh* Faith, otherwiſe he would be the firſt of his Enemies; and to ſhew his Zeal, he drew forth his Cymetar, and ſaid, *Wooever for the future ſhall not keep his Oath, ſhall feel the weight of this*: And ſo the Solemnity concluded with an Anathema upon all thoſe who ſhould break their Oath. Immediately after, ſeveral Edicts were publiſh'd, that none for the future ſhould ſay Maſs, or exerciſe the Prieſtly Office, except ſuch as were licens'd by the Patriarch: Thereupon the *Alexandrian* Orders being accounted unlawful, moſt of their Prieſts were conſtrain'd to receive new Ordinations, upon this condition, that they ſhould obſerve the *Roman* Forms of Worſhip, and not give any Succour to Rebels. It was further enjoyn'd, That *Lent* and *Eaſter* ſhould be obſerv'd according to the Canons of the *Romiſh* Church; and the Ladies alſo were requir'd te take the Oath of Supremacy to the Pope. In the next place great care was taken for building a Seat, and ſettling a Revenue ſuitable to the Dignity of the Primate; and Reſidences were built in ſeveral Provinces of the Empire, to ſtock it with Jeſuits. In the mean time they were buſy in baptizing the Converted, and ordaining Eccleſiaſtical Perſons, many of whom had been already baptis'd and ordain'd: Sermons were alſo preach'd after the manner of *Europe*, by which means the Jeſuits made a great progreſs; ſo that the number of Converts to the *Romiſh* Religion amounted to many thouſands. About two Years after, the Patriarch made a Viſitation, wherein ſome were rebaptiz'd, and many confirm'd with the great applauſe of the King and his Peers, tho' others ſought Occaſions of Diſturbances, and the Country-people ſtill lik'd their old way beſt. Beſides all this, a Seminary was ſet up for the Education of the *Abeſſine* as well as *Portugueſe* Children; and the young Lads being taught to act a Comedy, wherein the Devils were brought upon the Stage, the ignorant People thinking them real Spirits, run out of the School in a great fright, crying out, *O dear they have brought us Devils*. But the wiſer ſort were more terrified with the real Tragedies that follow'd; for *Tecla George*, one of the King's Sons-in-Law, conſpir'd with two Noble-men, and declar'd for their ancient way of Worſhip againſt the *Roman*: And to ſhew that he was in earneſt, he caus'd all the Crucifixes and Roſaries to be publickly burnt, and *Jacob* his Popiſh Chaplain to be put to death: Whereupon the King ſeut *Kebex* Viceroy of *Tigra*, with an Army, who defeated the Rebels, and took him and his Siſter Priſoners, who were both hang'd on a Tree.

After this, ſeveral Accidents concur'd to render the Jeſuits odious; for the Patriarch to ſhew his Authority, thundred out an Anathema againſt the Captain of the Guards, for taking poſſeſſion of certain Farms which the Monks laid claim to, and refuſing to reſtore them, who was ſo frightned with the Curſes, that he fell into a Swoon, and lay for dead; but the King by his Mediation quickly obtain'd his Abſolution: However, it was taken heinouſly by the Nobility to ſee their chief Counſellors ſo enſlav'd to a foreign Prieſt, for the ſake of a Farm, which the King might take from the Monks when he pleas'd. This Flame was fed by more Fuel; for the *Icegue* or Abbot being dead, and buried in a Church conſecrated after the *Roman* manner, the Patriarch pronounc'd the Church profan'd by the burial of a Heretick in it, and that Maſs could not be ſaid there. The Rector dreading the diſmal Thunder-bolt, preſently caus'd the Carcaſe to be dug up, and thrown by; which gave occaſion to the *Abeſſines* to cry out, That the *Franks* were more cruel than their bittereſt Enemies, to deprive their dead of decent burial; and that by this the Living might ſee what they were to expect.

Thus the minds of the People being generally incens'd, the King began to look upon theſe Acts of the Patriarch as Diminutions of his Prerogative, which made him give ear to his Adverſaries, who at firſt deſired only that the ancient Forms might be mended, where it was neceſſary, without abrogating the whole; for ſo the People's Minds would be more quiet, who could not diſtinguiſh between the old and new form of Worſhip. This being granted by the Patriarch, the Report was ſpread about, that the King was return'd to his old Religion; and the Courtiers were daily whiſpering in his Ears, that he would be in great danger, unleſs he forſook the *Roman* Religion, which was grown very odious to the People. Theſe Whiſpers were back'd by an Accident which gave occaſion to ſeveral Reports; for an Enthuſiaſt came into the Palace one day, and cry'd out, that unleſs the King forthwith return'd to the ancient Religion, he ſhould within a Fort-night be ſeverely puniſh'd: And tho' the Fellow was laugh'd at and drubb'd, yet the Vulgar reported, that an Angel was ſent from Heaven to the King, to admoniſh him to turn to the ancient Faith: In the mean time the hatred againſt the Jeſuits was encreas'd by the Envy of the Courtiers, who incens'd the King againſt *Ras-Seelax*, the chief Friend of the *Portugueſe*, upon a Jealouſy leſt he ſhould invade the Royal Dignity, which was encreas'd by his putting *Lecanax* to death for his Slanders againſt himſelf, which they ſaid was done to remove him out of the way, becauſe he was privy to his Conſpiracies: Whereupon the King depriv'd him of a great part of his Lands, and his Military Commands. But tho' *Tecla George* had ſuffer'd, yet the Rebellion ſtill continued; for the *Agawi* had not yet laid down their Arms, but choſe one *Melcax*, a Youth of the Royal Blood, to whom all that were diſaffected to the King, and hated the *Roman* Religion, reſorted, who were call'd *Laſteneers*, from *Laſta*, an invincible Rock, the chief Seat of the Rebellion. Againſt theſe the King march'd in Perſon with an Army of 27000 Men, but with ill ſucceſs at firſt; for the Country-People being in a ſecure place, rowl'd down whole Quarries of heavy Stones upon the Heads of the Royaliſts, which put them into ſuch diſorder, that the King's left Wing being ſurrounded by the Rebels, had like to have been cut to pieces, if *Kebax* with 300 Men had not come in to their Relief. The King leaving part of his Army, went home and recall'd *Seelax*, who drove the *Laſtaneers* back into their former holes, after they had ravag'd the Country, and quell'd another Rebellion in *Bagemdra*, by deſtroying *Luca-Marjam* that headed it. But the ſame good fortune did not attend *Kebax*, who finding the Avenues ſlightly guarded, thought he had a fair opportunity, and march'd in, but was preſently beſet before and behind by his Enemies, who after a great ſlaughter of his Men, at laſt ſlew himſelf.

This bad ſucceſs furniſh'd matter for new Arguments, to preſs the King to forſake the Jeſuits, and ſo puffed up *Melcax*, that he aſſum'd to himſelf the Titles and Prerogatives of a King, being daily encreas'd with numbers, and encouraged by the Nobility of *Tigra*, to whom he ſent a Vice-roy, with a ſelect Band of Souldiers for a Convoy, who being ſurpriz'd in their Jollity, left 4000 of their party ſlain upon the ſpot; whoſe death the *Laſtaneers* reveng'd by killing an equal number of the Royaliſts; for which ſlaughter *Ras-Seelax* was accus'd of negligence, in not ſending timely Succors, and condemn'd; and his Lands and Offices were granted to *Baſilides*. This gave a new opportunity for complaint againſt the Jeſuits, that as they had ſubjected the Empire in Eccleſiaſtical Matters to the Pope, ſo they intended to bring it under the Dominion of the King of *Portugal* in Seculars; and to this end, they built inſtead of Temples and Reſidences, Caſtles and Forts, from which they could not be driven by Spears and Arrows; to which Complaints, the King growing jealous, begun more eaſily to liſten: Yet ſtill he carried it fair to the Jeſuits, and receiv'd kindly a Biſhop ſent from *Rome*. But when he granted Indulgences for the Jubilee in 1625, ſome ſaid, *Who can forgive Sins but God only?* To whom the King anſwer'd, *That the uſe of the Keys given to* Peter, *belong'd to the Pope.*

However, the Succeſs of the *Laſtaneers* encourag'd the Vice-roy of *Gojam* to revolt, but being taken, he was drubb'd to death, and many of his Complices were executed, which made the *Laſtaneers* deſpair of Pardon, and more reſolute in their Rebellion: Whereupon the King march'd againſt them with all his Forces, but could not ſubdue them, becauſe they fled to the Holes in the Rocks, where they lurk'd, till they fell upon a ſelect Party of the King's Forces, and deſtroy'd them. After which, the King fearing to be clos'd up, retired in haſte to *Dembea*.

And now the *Jeſuits* Enemies redoubled their Complaints, That there would never be peace in *Ethiopia*, ſo long as the *Romiſh* Religion bore ſway; and that it would be more expedient to retain the ancient Ceremonies which were not contrary to Faith: By which, and ſuch-like Suggeſtions, the King was at laſt prevail'd upon to preſs *Mendez*, to remit as far as he could; which to ſave all, he conſented to, but upon condition, that nothing ſhould be remitted by publick Acts, but by tacit Connivance. But when the King put forth an Edict granting the uſe of all ancient Ceremonies not repugnant to Faith, he was ſharply reprov'd by *Mendez* for meddling with Spiritual Affairs: At laſt it was agreed by ſome of the Fathers, That the ancient Liturgy, but corrected, ſhould be read in the Maſs, that their Feſtivals ſhould be kept at the uſual time, except *Eaſter*, and thoſe that depend upon it: That any one inſtead of the Sabbath, might faſt on the fourth Holy-day: And the King anſwer'd *Mendez*, that his Religion was not introduc'd by preaching and Miracles, but by his own Edicts, and therefore he had no reaſon to complain of his Edict. But theſe Conceſſions did not pacify the *Laſtaneers*, nor any other of the diſcontented Parties.

Of the decreaſe of the *Roman* Religion, and Reſtoration of the *Alexandrian*.

We have ſeen the great Progreſs of the *Roman* Religion in *Ethiopia*, the Authority of the Patriarch advanc'd to the higheſt pitch, the Jeſuits favour'd by the King, his Brother, and many of the Nobility, exerciſing their Worſhip in ſeveral Provinces, building many Churches and Chappels, encreaſing their number to 21 Companions, and converting many thouſands of the People: But while they were thinking of abrogating all the ancient Rites, behold a ſudden change enſued, upon which they were baniſh'd, and their Religion ſubverted: For the King, tho' otherwiſe moſt addicted to them, yet being weary with the Complaints of his People, and the Importunities of his Friends, troubled with a Jealouſy of his Brother, the Contumacy of the *Laſtaneers*, the Diminution of his Prerogative, and the dread of loſing his Kingdoms, at length began to think of abrogating the *Roman* and reſtoring the *Alexandrian* Worſhip: And which was to be admir'd, a proſperous Fight againſt the *Laſtaneers*, was that which ſettled his wavering thoughts; for having given them a total rout by killing 8000 upon the place, he was carried by ſome of the Favourers of the old Religion, to ſee the multitude of the ſlain, who thus beſpake him.

> ‘These Sir are neither *Heathens* nor *Mahometans*,
> ‘whom you ſee here ſlain, but *Chriſtians*, once your Sub-
> ‘jects and our dear Country-men, and with the ſame
> ‘Sword that ſlays them, you ſtab your own Bowels, for
> ‘they bear no hatred to you, but only are averſe to that
> ‘Worſhip to which you would compel them: Therefore
> ‘forbear we beſeech you, to conſtrain them to Novelties
> ‘for which we are call'd Apoſtates.

To theſe Importunities the Queen join'd her powerful Charms, conjuring him by the common Pledges of their Love, not to ruin his Kingdom, himſelf, and his Family, with whom his eldeſt Son *Baſilides*, and his Brother *Jamanax*, join'd by their earneſt Prayers. At length the King's Mind being mollified, *Baſilides* ſummon'd a Meeting of the Nobility and chief Councellors, wherein it was concluded, that there was no other Remedy for the preſent Diſorders of the Kingdom, but by reſtoring the *Alexandrian* Religion; and the better to perſwade thoſe of the contrary Opinion, they gave it out, that the *Romans* and *Alexandrians* agreed in points of Faith: That both affirm'd Chriſt was true God and true Man, and the Difference about one or two Natures, was only a Queſtion about words, and not worth the ruin of a mighty Empire; whereupon the King gave liberty to every one that pleas'd, to return to the *Alexandrian* Worſhip. The Patriarch with the chief of the Fathers hearing of theſe things, came and deſired Audience of the King, which being granted, he rebuk'd him for abuſing the Victories he had gain'd by the *Portugueſe*, to the prejudice of the *Romiſh* Religion; for granting Toleration to the *Alexandrian* Worſhip; for Apoſtacy from that Religion which he had freely embrac'd, and threatned him with the Indignation of God, the Pope, and the King of *Portugal*. To all which the King ſaid, That he had done what he could, but never intended a total Alteration of Religion, but only a Conceſſion of ſome Ceremonies.

On the 24th of *June*, the Favourers of the old Religion addreſs themſelves to the Emperour, and beſeech him, That by a publick Edict, he would give his Subjects leave to return to the Religion of their Anceſtors; the King aſſented, and ordered certain Commiſſioners to ſignify his pleaſure to the Patriarch; who return'd anſwer, That a Difference ſhould be put between thoſe who had not embrac'd the *Romiſh* Religion, who might be connived at, and thoſe who had embrac'd it, to whom the liberty of returning to the old form of Worſhip could not be granted without Sin. By which means *Mendez* thought to put a Bar upon the King and all the Court who had profeſs'd the *Romiſh* Religion. But the King made no other anſwer than this, *How can this be done, I am now no more Lord of my Kingdom*: and preſently the Drums beat, Trumpets ſounded, and Proclamation was made by the Crier. We firſt propounded to you the *Roman* Religion, eſteeming it the beſt: but an innumerable multitude have periſh'd thro' diſlike of it; and therefore we grant you the free exerciſe of the Religion of your Anceſtors. This Edict was receiv'd with an univerſal joy among all ſorts of People, and henceforth the old Ceremonies were made uſe of in the Communion, and Grape-ſtone Liquor inſtead of Wine. A few days after a general Circumciſion was appointed, and the ancient manner of waſhing upon the Feaſt of *Epiphany* was us'd by ſome to cleanſe them from *Romiſh* Superſtition.

Of the Expulſion of the Patriarch, and Baniſhment of the Jeſuits

After the King's Edict was publiſh'd, the Jeſuits Churches were taken from them, and they were forc'd to leave their ſtately Cathedral at *Gorgora*, from which they carried all their ſacred Furniture, having ſpoil'd their Sculpture and Pictures. *Suſneus* dying in *December*, 1652, *Ras-Seelax*, the chief Favourer of the *Romiſh* Religion, in which he continued firm, was baniſh'd, and his Goods ſequeſtred, and all that favoured the Jeſuits were either ſent into exile or put to death. But ſtill the *Laſtaneers* would not be quiet until the Fathers were all turn'd out of *Ethiopia*; and therefore they were firſt ſent to *Fremona*, where their Goods and Arms, eſpecially their Fire-arms, were taken from them; and after that, being commanded by the King to remove from *Fremona*, they lurk'd for a while in a private Houſe, till they were pull'd out thence by the Ears and deliver'd to the *Turks* in *May*, 1634: For the *Abeſſines* had heard, that they had ſent for a Military Power from *India* to ſettle their Religion, which ſome of them had imprudently threatned, and therefore their Removal was haſten'd.

Of what hapned after the departure of the Patriarch and Jeſuits out of *Ethiopia.*

Tho' the King's Command to depart was general, yet *Mendez* left behind him ſeveral Jeſuits, who lurk'd for ſome time, but at laſt were taken, and moſt of them hang'd. *Mendez* ſpent a whole Year among the barbarous *Turks* at *Suaquena*, in great anguiſh of mind, which was encreas'd by ſeeing the new Metropolitan paſs by, who had in his Train one *Peter Heyling*, a *Lutheran*, of great Learning and Probity: When he met *Mendez* at *Suaquena*, he oppos'd ſeveral Opinions of the *Romiſh* Church, and expounded in *Arabic* to the Standers-by, what was ſaid on both ſides; and being come to *Abeſſinia*, he was very acceptable to the King, who gave him a Tent and all things neceſſary. The Patriarch, after a long Captivity, redeem'd himſelf and his Companions with 4000 *German* Dollars, and at laſt got ſafe to *Goa*; from whence he ſent one *Lobo* into *Portugal*, to give an account of the ſad eſtate of *Ethiopia*, and deſired a Military Aid to reſtore him to his loſt See. But all his Negotiations prov'd ineffectual, becauſe there was no conſiderable Party in the Kingdom to aſſiſt any Forces that ſhould be ſent; for the King put all to death that favour'd the *Roman* Fathers; which occaſioned the ruin of many of the Nobility, and ſeveral Prieſts; and fearing leſt the *Portugueſe* ſhould invade his Dominions, he brib'd the Baſha's of *Suaquena* and *Matzua*, to deny entrance to any of the *Franks*. The Congregation for propagating the Faith, hearing that the *Portugueſe* were generally odious, ſent ſix *Capuchin* Friars, all *French-men*, with Letters of ſafe conduct from the Emperour of the *Turks*, whereof four being kill'd in their Journey to *Abeſſinia*, the other two that ſtay'd as *Matzua*, choſe rather to return home than ſuffer Martyrdom to no purpoſe. Yet three other *Capuchines* ventured to go to *Suaquena*, whence they ſent a Letter to the *Abeſſine* King, to congratulate him, and he in requital wrote to the Baſha to ſend him their Heads, whoſe Skins being flea'd off, he ſent, that by their colour he might know them to be *Franks*, and by their ſhaving to be Prieſts. *Mendez* died in *India* in 1656, ſince whoſe death we have no certain Relations out of *Abeſſinia*: But the Report of *Tellez* that their King had embrac'd *Turciſm*, appears to be a Fiction, ſince his Letters of the laſt date to *Batavia* begin with a Chriſtian Preface, after this Report was rais'd.

Of the private Affairs of the Abeſſinians.

Of their Books and Learning.

Beſides ſacred Books, they have but very few others, one of which is call'd the *Glory of Kings*, which ſeems to be that which is highly eſteem'd as a ſecond Goſpel, and is preſerv'd in the Palace of *Axuma*, wherein is recorded the Hiſtory of the Queen of *Sheba*. They have alſo a Chronicle cited by *Claudius* in his Confeſſion of Faith; a Book of Philoſophy, which is much eſteem'd; and a Vocabulary, wherein the difficult Words are expounded in the *Ambaric*, or *Arabic* Tongue. They meddle with no Studies, but thoſe of their own learned Language and ſacred Matters. Moſt of them think it enough if they can read or write, which Children learn either from their Parents, or the Monks, for a ſmall Stipend. Their manner of adminiſtring Phyſick is very ridiculous: They cure the Yellow-Jaundies by applying a red hot Iron to the upper-end of the Arm. In moſt Diſtempers every one uſes ſuch Herbs as he has learn'd from his Parents to be uſeful. If the King be ſick, they aſk him what he ails, and if any one has been ſick of the ſame Diſeaſe, he tells him what did him good; for they value not Phyſicians and Apothecaries. If a Plague breaks out, they fly from the Contagion with their Herds into the Mountains. *Tertian-Agues* they cure by applying the Cramp-Fiſh, which is an unſpeakable torture to the Patient. Wounds they cure by Myrrhe, which is very plentiful. They have little ſkill in Logick and Natural Philoſophy, as appears by their *Organum*; but they believe the Soul immortal, becauſe it proceeds out of the Mouth of God, who breath'd it into the Face of *Adam*. They deny *Antipodes*, fancying that ſuch People would drop into Heaven; and when the Sun riſes and ſets, they think that he goes and comes thro' a certain kind of Window; but how it gets under the Earth they are not ſollicitous. As to the liberal Arts, they love Poeſy above the reſt, but only that which is Divine; for all prophane Verſes they hate, which treat of Heathen Fables, as being the Foot-ſteps of Idolatry. They covet Learning, and were earneſt with the Jeſuits to teach their Children the *Latin* Tongue; but they generally learn Languages by Converſe, eſpecially the *Arabic*, in which Language the King writes his Letters to foreign Princes. Private Perſons ſeldom write Letters; but if they have a mind to write, they go to the Scribe of the Province, who writes an Epiſtle for a ſmall matter.

Of their Marriages, Diet, Clothing, Habitations, and Funerals.

The *Abeſſines* marry every one of their Wives after the Chriſtian manner, neither is Polygamy prohibited by the Civil, but the Eccleſiaſtical Law, which does not admit thoſe who have more Wives to the Communion; and the ſame liberty they take to put away their Wives as to marry them. They have no nuptial Ceremonies worth the mentioning, only the Sacerdotal Benediction is neceſſary to every Wedding. Their Diet is very different from ours, for they feed either upon raw Fleſh, or that which is half boil'd. Inſtead of Sauce they uſe Gall, which pleaſes them better than Honey. They covet, as a Dainty, the Graſs and Green Herbs which they find in the Maws of the Beaſts they kill. Their Bread they bake upon Embers, made in the faſhion of thin Pancakes. Many of them live only upon Grazing; their Flocks and Herds are their only Riches; they eat their Fleſh and drink their Milk. When they retire to the Rocks they carry with them three or four Goats, on whoſe Milk they ſubſiſt. Their Women grind their Corn with a Wooden Peſtle, and make Bread of the Flower; and where the Air is temperate they have good Butter and Cheeſe. After Dinner they fall to drinking, and never give over till the Drink be all out. They make excellent Hydromel, by reaſon of their plenty of Honey, and for their Families they mix Water with it. They have another ſort of Liquor, made of their Fruits, which is like Ale, being white and ſweet.

Their Apparel is very mean and poor; their Princes only wear Silk, the Clergy and richer ſort only make uſe of Cotton, the poorer ſort cover themſelves with Skins, which hardly hide their Privities, which is common alſo among ſome of their Nobility and Prieſts, who think it no ſcandal to appear in Church or Chancel without Breeches. The Boys and Girls go ſtark naked, till riper Years calls upon them to hide their Shame. They are very curious in dreſſing their Hair, for they not only curl it, but anoint it with Butter, and leſt it ſhould be rumpled in the Night, they reſt their Heads on a forked ſtick, preferring their Pride before Pain. Nor does their Poverty appear leſs in their Houſes; for they that follow the Camp, live either in Tents or Huts made of Reeds and Rubbiſh, daub'd over with Clay or Lome, and covered with Straw or Sedge, which they leave behind them, when they remove their Camp, and their Villages are built after the ſame manner.

They make a doleful Lamentation for the dead; for when they hear of the Death of any great Perſon or dear Friend, they proſtrate themſelves on the Ground, and knock their Heads againſt it. Their King and great Men are buried with much pomp, and every one uſes all means to excite Tears, and the Relations are clad in tatter'd Habits inſtead of Mourning. They uſe no peculiar Service before the Body is laid in the Grave, only ſome Monks ſtanding before the Church-door, read a few of *David*'s Pſalms.

Of their Mechanick Arts and Trades.

They want very much Handycraft-Trades, whereby they are deſtitute of many Conveniences of human Life, which we enjoy. The *Jews* are almoſt the only Weavers of Cotton, and the beſt Smiths among them, who make the Heads of Spears and ſeveral other things, of Iron. As for other things, every one takes care to ſupply his own Wants, either by his own, or the Pains of his Servants, which is eaſily done where they uſe ſo little. They have no Guilds of Tradeſmen among them, but whatever any one profeſſes, that he teaches his Children, and ſo the Trumpeters and Horn-winders are all of the ſame Family, and live apart by themſelves. They were formerly ſkill'd in Architecture, as appears by their magnificent Temples, and the King's Palace at *Axuma*; but ſince they were engag'd in Wars, this way of building is quite diſus'd. But the Jeſuits, having brought Architects with them from *India*, built many Churches and Chappels of Stone and Mortar, to the great dread of the *Abeſſines*, who look'd upon them as ſo many Forts and Caſtles, and *Peter Pays* built an admirable Palace for the King.

Of their Journeys and Travelling.

The *Abeſſines* care not to ſtir out of their own Country, being ignorant of foreign Languages, and the ways of Exchange and keeping Correſpondence. Formerly they us'd holy Pilgrimages to *Jeruſalem*, and ſo back again to *Rome*, when the *Mamalukes* were Lords of *Egypt*; but ſince the *Turks* were poſſeſs'd of it, they ſo oppreſs'd Travellers with their Exactions, that the *Abeſſines* very rarely viſit *Jeruſalem*. In their travelling they only make uſe of Mules, for no other Creature can climb over the craggy Rocks and Mountains; but their Horſes they preſerve for War and Racing. The Great and and Rich carry all their Houſhold Stuff along with them, and when Night overtakes them, they pitch their Tents and kindle Fires about them to ſcare the wild Beaſts. The poorer ſort when they travel, beg upon the Road, for there is neither Inn nor Cook's Shop to be found, which gave occaſion to a pleaſant Paſſage at *Rome*. When the *Abeſſines* newly arriv'd from the Eaſt, they were invited by a Cook into his Shop; who believing all Invitation to be made *Gratis*, went into the Shop, and cheerfully accepted what was ſet before them; but at length, when they were going away, they conſulted how to return thanks to ſo kind an Hoſt for his noble Treat, which one of them did with a very good grace in a ſet Speech: To which the Cook liſtned a while, but hearing nothing of Money, without any reſpect to their ſmooth Language and graceful Delivery, *Gentlemen*, ſaid he, *who pays?* the *Abeſſines* like Men aſtoniſh'd made anſwer, *That they came not into his Shop of their own accord, but by his Invitation, and that when he ſet his Wine and Meat before them, he never bargain'd for any Money, for that was the very thing they wanted.* But all this would not ſatisfy the Cook, who forc'd them to leave their Cloaks in pawn, which were afterwards redeem'd at the Pope's Charity. The *Abeſſines* themſelves are very hoſpitable; for in their Villages they appoint the chiefeſt of the Inhabitants for relief of the Poor; which Cuſtom was anciently us'd in ſeveral Chriſtian Countries.

The way from *Egypt* to *Abeſſinia* is troubleſome to Travellers, and ſubject to many Dangers by the Extortions of the *Turks*, and the Robberies of ſeveral vagabond Nations thro' which they muſt paſs: Yet there are ſeveral Troops of Merchants, who ſetting out from *Grand Cairo*, are carried up the *Nile* againſt the Stream as far as *Monfallot*, and thence travelling in Caravans, firſt come to *Sijut*, and ſo in order to the following Towns, *Wach*, *Meks*, *Scheb*, *Sellim*, *Moſchn*, *Dungala*, which laſt is accounted the Metropolis of *Nubia*: Then they come into the Kingdom of *Sennar*, under a *Mahometan* Prince. From *Dungala* therefore they travel to *Kshabi*, *Korti*, *Trere*, *Gerri*, *Helfage*, *Arbatg*, *Sennar*. In travelling from *Wacha* to *Sennar*, the Merchants ſtaying in many places about the Affairs of their Traffick, commonly ſpend three whole Months, tho' it might be done in a far ſhorter time. From *Sennar* in 14 days they arrive at the Confines of *Abeſſinia*, into which they enter by *Tſhelga*: But the ſafeſt and ſhorteſt Cut is thro' the *Red-Sea*, if you can agree with the *Turks*; which Paſſage is two-fold; for either the Merchants ſet out from *Cairo* to *Sueſſo*, a Port upon the *Red-Sea*, from whence they ſail to *Gidda*, another Port, and thence they ſail again for *Suaquena* and *Matzua*; or if they cannot endure the Sea ſo long, they ſail againſt the Stream from *Cairo* to *Girgea*; then by Land they travel to *Gidda* in two Days, and thence to *Alcoſſir* in four days, where they take Shipping for *Gidda*, and ſo to *Suaquena*. This is the way the Metropolitans take, with whom is the ſafeſt travelling, if any *Europeans* deſire to viſit *Abaſſia*. A Man may reach from *Guendra* to *Suaquena* in a Fort-night, and from thence in 40 or 50 Days to *Grand Cairo* by Land; ſo that to travel from the Royal Camp to *Cairo* will take up three Months.

Of the Merchandize and exchange of Merchandize in *Abeſſin.*

The *Arabians* who inhabit the Ports of the *Red-Sea*, eſpecially the *Mahometans*, are the chief Merchants in *Abeſſinia*; for being of the ſame Religion, they have the free liberty of all the Ports of the *Red-Sea*: Next to them the *Armenians*, who do not much differ from the *Abeſſines* in their Worſhip, have the greateſt Trade, as being the great Dealers in all parts of the World. They import ſundry ſorts of Commodities, but carry out all the Gold: And becauſe there is no Money coin'd in *Ethiopia*, the ſilly ignorant ſort of People, finding their Gold among the Sand, or at the Roots of Trees, let it go again at low rates; for if the Merchants deny it to be good, they exchange it for as much as they can get, without queſtioning the Merchants Exception. But the Nobility and richer ſort carry a Touch-Stone always about them, with which they try their Gold, weigh it out, and pay it by the Ounce; which in *Ethiopia* amounts to the value of a *Spaniſh Pattacoon*, or an Imperial Dollar. The Exchange in *Abeſſinia* is made with Iron ſometimes, but chiefly for Salt hewn out of the Mountains, with which you may purchaſe all things; and in the remote parts you may buy a good Mule for two or three Bricks of Salt.

The Commodities imported are *Babylonian* Garments of all ſorts, Velvet, Silken, but chiefly Woollen and Fuſtian, which the great Men wear inſtead of Purple, having now loſt the ſkill of dying it. Spices, and eſpecially Pepper, they covet to ſeaſon their inſipid Diet. Wares for Exportation they have few beſides Gold, Skins, Hides, Wax, Honey, and Ivory; many more they might have if their Kings did encourage Traffick and Merchandizing; for which end they ſhould learn the *Latin* Tongue, with the Addition of our Arts and Handicraft Trades, which would advance the Affairs of theſe poor Chriſtians to a more flouriſhing ſtate, and weaken the ſtrength of the *Barbarians*.

Sir *Thomas Herbert* Baronet, his Travels, begun in 1626, into divers parts of *Africa* and *Aſia Major*, in which the two famous Monarchies of the *Mogul* and *Perſian* are principally deſcrib'd, with what is remarkable in thoſe places from other Authors in *Purchaſs*, &c.

CHAP. XX.

Sir Thomas Herbert's *Travels from* England *to* Goa *in the* Eaſt-Indies.

His ſetting out.

SIR *Tho. Herbert*, Bar. with five Ships beſides his own, embarked at *Deal* near *Dover* on *Lady-day* (famous that Year for being the Feaſt as well of the Son as Mother) in the Year 1626. In a few Hours coaſting the Iſle of *Wight* (in *Brittiſh*, *Gwidth*, i. e. cut off or ſeen at a diſtance, and by *Pliny Vectis*, as it is by *Eutropius* call'd *Vecta*) they came to the *Lizard's Point*, which is the utmoſt Promontory of *Cornwall*, from whence to the Cape of *Good Hope*, they compute their Longitude, and not from the *Azores*, which is the firſt Meridian.

Porto Santo deſcrib'd.

On *April* the third, they got ſight of *Porto Santo*, or the *Holy Port* (call'd *Cerne* by *Ptolomy*) commanded by the *Spaniards*, and lying in 33 Deg. as alſo of the *Madera's* (i. e. *Iſles of Wood*) twelve Leagues S. W. from *Porto Sancto*, and 70 from the *Canaries*. *Porto Santo*

was diſcover'd by *Pereſtrallus*, *Anno* 1419, and given him to people; but he found it difficult to build there, becauſe the Coneys had ſo caved the Ground. It is 25 Miles in compaſs, and fruitful in Wheat, Rye, Rice, Oxen, Sheep, Boars, Coneys, Sanguis Draconum, Fruits, Flowers, and Grapes.

The *Canaries* deſcrib'd.

The *Canaries*, ſo call'd from the Multitude, *Magnorum Canorum*, ſaith *Pliny*, *L.* 6. *C.* 32. were firſt diſcovered by one *Machan*, an *Engliſh-man*, by whoſe Directions it was conquered two Years after by *Lewis de Cordezo*, in 1330, ſent thither by the Commiſſion of *Pedro*, King of *Arragon*; but *John* II. King of *Caſtile*, ſoon wreſted them from him, and loſt them a little after to the *French*, from whom *Don Henrico*, *Infant* of *Spain*, took them, and united them to the *Spaniſh* Monarchy, in whoſe ſubjection they ſtill remain. Theſe Iſlands (call'd by *Plato*, *Ariſtotle*, and *Plutarch*, *Atlantiades*, and by *Pliny*, *Heſperidæ*) are from the *Morocco*, or *Libyan* Continent 20 Leagues, and from *Spain* 200. They are commonly numbred ſeven, and were anciently called *Canaria*, *Capraria*, *Nivaria*, *Junoma*, *Ombria* or *Pluvialia*, *Apoſita*, or *Fracta Lancea*, and *Caſperia*, or *Fortunata*; but now they are denominated, *Canaria*, *La Palma*, *Teneriffa*, *Lancerota*, *Hierro*, *La Gomera*, and *Forteventura*. In ancient times the People knew no God but Nature, were ignorant of the uſe of Fire, ſhaved with Flint-ſtones, gave their Children to be nurſed by Goats, tilled the Earth with Ox's Horns, hated the ſlaughter of Beaſts, uſed Women in common, had no property of Goods, lived in Woods, eat nothing but Herbs; yet ſome had glimmerings of the Immortality of the Soul, for they waſhed their Dead, and put them in a Cave, with a Staff in one Hand, and a Pail of Milk and Wine ſet by them to comfort and ſupport them in their Journey to Paradiſe. They are now civilized, and profeſs Popery, and the Inquiſition keeps all Proteſtants from them. The Grand Inquiſitors Reſidence is at *Grand Canary*, whether all the other Iſles uſually repair for Juſtice. This Iſle abounds with Goats, Beefs, Aſſes, Hogs, Barly, Rye, Rice, variety of Flowers, Grapes, and other excellent Fruit, as alſo Ingenio's, or Sugar-houſes, where they grind their Canes, and make Sugar. It is about 50 Miles Diameter, and has at the South end a large Bay called *Maſpalomba*, which yields freſh Water. It is 13 Leagues from *S. Crux* in *Teneriffa*, 20 from *Forteventura*, and 18 from *Lancerota*.

The Popiſh Inquiſition. Grand Canary deſcrib'd.

Teneriffa.

Teneriffa is 50 *Engliſh* Miles in length, and equals the *Grand Canary* for Inhabitants. Its chief Towns are *S. Crux* and *Linagona* or *Laguna*, which ſtands at the bottom of the Hill called *Garachica*. This Town exceeds all the reſt in all the Iſles for abundance of excellent Grapes, yielding yearly, as ſome ſay, 28000 Butts of Sack. The Mountain is ſaid to be 15 Miles high by moſt, but by *Scaliger* 60, and by one *Nichols* an *Engliſhman*, who lived there ſome time, 47, but they muſt mean by the oblique Aſcent; for *Varennius* ſays, 'tis but four Miles 15 Furlongs perpendicular. Nevertheleſs it lifts up its lofty top, *Teyda*, ſo high, that it is ſeen in clear weather 120 Miles. At the bottom of it is plenty of Wood, in the middle Snow, and on the top Flames, the Veins of Brimſtone burning, which the People call the *Devil's Cauldron*. It is about thirteen Leagues from *Grand Canary*, and 20 from *La Palma*, five from *Gomera*, 75 from *Africk*, and 70 from *Madera*. In old times they uſed to embalm their dead, and lay them in deep Caves, ſome ſtanding, others lying, and in ſuch like different Poſtures. Their Dormitories were reputed very venerable, and rarely ſeen but by permiſſion.

The Pike of *Teneriffa* deſcrib'd, See Fig. 1.

Hierro.

Hierro or *Ferrain* bears S. S. W. from *Grand Canaria*, and appears very high to the Ships that paſs by. It is ten Leagues from *La Palma*, and not above ſix Leagues in compaſs. It is famous for one Tree, call'd by the Natives *Garro*, and by the *Spaniards Santo*, which affords freſh Water to all the Inhabitants: It is darkenned with a cloudy miſt ſome part of the day, which caſts ſuch a plentiful Dew upon the Leaves, as diſtils in Streams of clear ſweet drops into large ſtone Ciſterns, capacious enough to furniſh not only the People, but all the Cattle in the Iſland with water; ſo that they never drink of Rivers or Ponds. This ſeems miraculous, but in *S. Thomas*'s Iſland, which lies under the Line, moſt of the Trees have the ſame property.

The miraculous Tree.

La Palma.

La Palma is very high and woody.

Forteventura. *Teneriffa.*

Forteventura is 15 Leagues long and 8 broad, and near *Lancerota*, which is leſs than *Teneriffe*. Theſe two Iſlands were taken by the *Engliſh* in 1596, and the other by the *Dutch* after, which has occaſion'd them both to be better fortified.

Gomera.

Gomera is ſix Leagues from *Teneriffa*, and eight long. 'Twixt *Lancerota* and *Forteventura*, is another little Iſle called *Lobos*, and by *Lancerota*, two other ſmall Iſles called *Gratioſa* and *Alagramæ*.

Iſles of *Lobos*, *Gratioſa*, and *Alagrama*.

On the Eaſt of theſe Iſles ly *Fezz* and *Morocco*, which are part of *Mauritania Tingitana*, ſo call'd from *Tangier*, a conſiderable Town upon the *African* Coaſt, oppoſite to *Gibraltar* in *Spain*, which reſemble *Dover* and *Callis*, and have a like influence upon that narrow Streight.

The Tropick of Cancer.

The ninth of *April* they croſs'd the Tropick of Cancer, which is of like diſtance from the Æquator, as the utmoſt Limits of the Temperate Zone from the Pole. It is ſo called from the Sun's returning from that ſign in *June* like a Crab, which goes backward.

Cape Verd.

On the 14th they came under the Sun, being in 14 Degrees North, and on the 18th were in ſight of Cape *Verd*, called by *Pliny*, *Heſperion Cornu*, or *Heſperi Keras*, and by the *Ethiopians*, *Biſecar* and *Mandangar*.

On the 21ſt, he came ſo far in the Torrid Zone, that the Sun darting out its fiery Beams, the Air ſeemed to be inflamed, the Sea warm, and Ships ſulphureous, ſo that they all ſweat and broiled, and were unable to ſleep, reſt, eat, or drink, which continued ſeven days, and then an abortive Cloud ſent down a ſtinking Rain, not in moderate Drops, but ſo impetuouſly, as would ſink a Ship, if it came under the Dint of it, and immediately as ſoon as it came into the Sea, a Whirlwind aroſe, which much endanger'd their Ships, but a proſperous gale ſoon poſted them out of harm's way, and carried them beyond the Equinoctial: under the Line the heat is not ſo unſufferable, as in many places more remote, becauſe here are conſtant Breezes toward Sun-ſet, and the Nights being equal to the Days, are ordinarily very dewy, which much abates the heat of the day; beſides, they have two Winters, and in their hotteſt Weather they fail not of other Breezes at nine in the Morning, and four in the Afternoon, and rain at Noon.

Santo Croix.

May the 6th, they came to *Santo Croix*, where they enter into the *Manzoon*, or Anniverſary Wind, which blows for ſix Months together conſtantly from one Point, beginning exactly from the Sun's entrance into a ſign of the *Zodiack*, and ſo continuing, till it enters into the contrary Degree, when it begins to blow the contrary way, and holds as long.

The *African* Coaſts, and People on them. See Fig. 2.

May the 8th, they came into eight Deg. Antarctick Latitude, having the *Monomotapan* Coaſt on the one ſide, and the *Braſilian* on the other: The *Africk* Shoar runs on in divers Names, as *Congo* in ſix Deg. *Angola* in nine; *Manicongo*, *Loanga*, *Monomotape*, *Benomotapa*, and *Caffana*, full of black Wretches, without Law and Religion, but rich in Earth, abounding with the beſt Minerals and Elephants, living upon Rapine and Villany, and worſhipping Mokiſſes, Feteſiors, and deformed Idols of Devils, in ſhapes of Dragons, Goats, Owls, Bats, Snakes, Dogs, Cats, and whatever their Witches urge them to, in the moſt infernal poſtures, gaping, hooping, groveling, ſoiling and diſcolouring their Carkaſſes with Juice of Herbs, Rice, Roots, and Fruit. The Women defie the New-Moon every Month, by ſhewing their naked Bums to her, and the Men complying with them, ſhoot their Arrows againſt it. A Dog was of that value once with them, that 20 Negroes were exchanged for one: but now they make a better Market of them, to ſend their Slaves to the *Charibee* Iſlands, and other parts of *America*; a Trade by which 'tis to be feared Chriſtians will make but little gain, ſince they have no care of converting their Souls, ſuch Merchandize being a great Sin among Chriſtians, tho' practis'd by *Jews* and *Gentiles*. Their Coin is a ſort of *Wampom*, or Shells, Glaſs, Beads, Stones, and ſuch like traſh. They marry not, and bury thus: They waſh, paint, and apparel the Dead, and lay them in a ſpacious Dormitory, with their Armolets and Bracelets. They circle the Grave with mimick Geſtures and Ejaculations, concluding with the Sacrifice of a luſty Goat.

The trade of ſelling Slaves.

The Man Eaters.

In *Loanga* and *Anzigui*, which lie under the Æquator, the People are, as in Colour, ſo in Condition little other than Devils incarnate; for not ſatisfied with the Food Nature has provided for them, they devour Man's Fleſh with a Vultur's Appetite, killing their Neighbouring Nations; and if they fail of them, ſlaughtering their Friends, who ſometimes to eaſe themſelves of Troubles or Diſeaſes, will offer themſelves to the Knife; and as they delight in it themſelves, ſo they offer it to their Gods. Nothing is ſo commendable in them as their Archery, in which they excel; for they'll ſhoot up a dozen Arrows before the firſt falls to the Ground. Their other Arms are Clubs and Darts, long and ſmall, barbed with Iron, very ſharp and bright, and ſometimes poiſoned with the Sap or Juice of the *Quacumbarez*-Tree, which is like Milk, but very venomous.

Their Archery and other Arms.

The *Miconda*-Tree.

The Miconda-Tree is high and thick, twelve Fathoms about, yet ſo porous as to be of no uſe for building. The only Ornaments they have is to ſlaſh and pink their Faces and Skins. The Sun and Moon are reputed Man and Wife, and the Stars their Children, in their Religion; the Devil is their Oracle. They have ſtore of Gold, but uſe Shells for Coin, which they call *Simbo.* They are found near the Iſland of *Loanda*, in eight Deg. South, and tho' they are of ſmall value elſewhere, yet here they are of great price.

The Tropick of Capricorn.

May ult. They croſt the Tropick of Capricorn, in 24 Degrees of South Latitude, and were driven upon the Coaſt of *Braſil.*

Boobyes, *Vide* Fig. 3.

Caſtor and *Pollux.*

In a ſerene Air, a Bird called a Booby, pearched upon the Yard-arm of the Ship, and ſuffered the Men to take them, which makes their ſimplicity a Proverb; but they ſoon came under a Storm, in which the Lightning hung about the Yards and tackling of the Ship. Of old, the *Greeks* called ſuch Fires *Caſtor* and *Pollux*, and believ'd, that one or three of them betokened Storms and Shipwrack, but two foretel Halcyon Weather, and ſafety; but little can be gathered from ſuch Exhalations, which are natural.

June 24, they raiſed the Pole Antartick 36 Deg. at which time their Longitude from the *Lizard* was 25 Deg. within three Min. In *England* it was then Midſummer, but there Mid-winter, being near the *Antipodes.*

Coney-Iſle.

July 7. Betimes in the Morning they diſcovered by the *Sargaſſo*, or Sea-Weeds they ſaw afloat, they were near the Cape, which they diſcried next Morning, tho' 60 Miles diſtant, being an high Land: but the Wind not favouring them, they could not reach it, but caſt their Anchor 14 Leagues ſhort of *Soldania*-Bay, before a ſmall Iſle call'd *Coney*-Iſle, ſo called from the abundance of thoſe Creatures found there, and that larger than Cats, but ſtrong Meat. Here are alſo found about this Iſland an abundance of Pengwins, or white Birds from their Colour. Theſe Birds of all other go the moſt exact in their motion, their Wings or Fins hanging down like Sleeves, covered with down inſtead of Feathers, their Legs being of more uſe to them than their Wings; they feed on Fiſh at Sea and Graſs on Shoar, and have Holes in the Earth to live in like Coneys. They are a degenerate Duck, uſing both Sea and Land, the one to breed in and the other to feed in. They are very oily and fat, and ſome adventure to eat them, but not wiſely.

Pengwins for their ſhape, *Vide* Fig. 4.

Seals, or Sea-Calves.

On theſe Coaſts are alſo great numbers of Seals or Sea-Calves, called *Piſces Marins*, as big as the greateſt ſort of Maſtives, and ſomething like them in viſage, but their barking is like the bellowing of Bulls. They alſo are amphibious Animals, and equally uſe the Land and Water; and tho' they are eaſily kill'd if one interpoſe between them and the Sea, yet being paſt one, they have ſuch an Art of caſting back Stones upon their Purſuers, that they endanger them. They are too oily to be good Food, but their Skins being tanned, are very uſeful.

Whales.

Leaving this Iſle, they came to another called *Pengwin*-Iſle, from the multitude of thoſe Birds. In their way they ſaw many Whales ſporting in the Ocean, and in wantonneſs fuzzing up the Water thro' their Pipes and Vents, which nature has placed on their Shoulders: Some they gueſſed to be 60 Foot long from head to tail, their Heads being well neigh a fourth, their Mouths being little leſs than ten Foot wide, and their Tongue proportionable; but their Eyes no bigger than an Apple: their Body is thick and round, and the Savages eat them, but Merchants covet them for profit, one uſually affording twelve Tun of Oyl. They engender by applying Belly to Belly, and bring forth but one at a Birth, like Elephants.

Soldania Bay deſcribed.

July the firſt, they came to an Anchor in *Soldania-Bay*, ſo call'd from *Antonio Soldania*, a *Portugueze*: It is 12 Leagues ſhort of the Cape of *Good Hope*, of a ſemicircular form, both large and ſafe, and affords good Anchorage: The Land near the Shoar is low and fruitful, but five Miles from the Cape it is mountainous and barren, and from the Hills 'tis eaſy to ſee to the end of the Cape, as alſo the Capes *Falſo* and *D' Aguillas*, which are ſeparated from each other by large Bays, but inconvenient to anchor in. From theſe Mountains deſcends a ſmall but pleaſant Stream of ſweet Water into the Bay of *Soldania*, which is very refreſhing to the Bowels of the Sea-men in theſe hot Countries.

Africa deſcribed.

The original of the name.

The whole Country of *Africk* is a Peninſula, join'd to the Continent by an Iſthmus of Land of 20 Leagues, which divides the *Red-Sea* from the Mediterranean. The Equinoctial-Line divides it into two parts, the inward and outward, as *Homer* calls them, but as others, the greater and leſſer, which are either of them near as big as *Europe.* In length it runs from North to South, from *Tangier* (called anciently *Julia Traducta*, and *Tingus Cæſaria*, from whence that part of *Mauritania* is called *Tingitana*) to the Cape *de Bona Speranza*, from the 35 Deg. 50 Min. Northern Latitude, to the 34 Deg. Southern, 4200 Miles; and in breath, from Cape *Verd* in the Atlantick Ocean, to Cape *Guardefu* in *Ethiopia* near the *Red-Sea*, 2000. The name *Africa* is taken either from *Apher*, one of the poſterity of *Abraham*, by *Keturah*, or from α. & φρίκη, cold, becauſe it feels no Winter, as other Countries do. The *Hebrews* call it *Cham* and *Chus.* *Leo* divides it into four parts, *Barbary*, *Numidia*, *Libya*, and *Nigritarum terra*: To which we muſt add *Ethiopia*, which contains the biggeſt half of *Africa*, as well as *Aſia*; for it comprehended the three *Arabia's* and *India.* That in *Africke* is divided into the Superior, which ſtretcheth from the Æquator to *Egypt* on the North, the *Red-Sea* on the Eaſt, and *Libya* on the Weſt; and the Inferior, which extends it ſelf from the Æquinoctial Southerly to the Cape of *Good Hope*, being on the Eaſt and Weſt circumſcribed by the Ocean.

The Cape of *Good Hope.*

This famous Cape elevates the Antarctick Pole 34 Deg. and 3 Min. Latitude, 28 Longitude, from the Meridian of the Lizzard, and 48 from the Azores. From the Land's-end of *Cornwall* 'tis 6600 *Engliſh* Miles, from the greater *Java* 5550, from *Surat* 5400, and from St. *Helena*, which is S. E. from it, 1800. This Cape was firſt diſcovered by *Vaſco de Gama* or *Bartholomeos de Dyes*, an eminent *Portugueſe*, in 1497, ſeveral Years before *Columbus*'s Expedition.

The Herbs.

The Soil about it is exceeding good, being covered at all times with Graſs, and diapered with Flowers and Herbs, as Agrimony, Betony, Mint, Calamint, Sorrel, Scabious, Spinage, Thyme, Cardus Benedictus, Coloquintida, and many others.

Fiſh.

The Rivers yield variety of Fiſh, as Trouts, Pyke, Pickerel, Tench, and Eels; Shelfiſh, as Crabs, Lobſters, Rock-fiſh, Craw-fiſh, Cockles, Muſcles, Lympit, and Tortoiſes, which are ſmall, but curiouſly coloured, very good Oyſters, Thorn-backs, Gudgeons, and other Sea-fiſh, which are taken at the Flood in the freſh Water.

Minerals.

The Mountains are not without Marchaſits and Minerals, but they are to be gained only by cloſe ſearch.

Beaſts.

The Country affords alſo plenty of Beaſts of divers ſorts, as Buffalo's, large Cows with bunched Backs, Sheep with long Ears like Hounds, red Dear, Antelopes as large as Stags, Apes and Baboons of extraordinary ſizes and colours, Lions, Panthers, Pards, Jackalls, Wolves, Dogs, Cats, Hares, Zebræ or Pide-Horſes, Elephants, Camels, Unicorns.

Birds.

Paſche-Flemingo's, *Vide* Fig. 5.

Great ſtore of Birds, as Hens, Geeſe, Turkeys, Pengwins, Crows, Gulls, Thruſhes, Pheſants, Pelicans, Storks, Oſtriches, Pintado's, Altatraces, Vultures, Eagles, Cranes, Cormorants, or Sea-Crows, which have ſo quick a ſmell, that after Battles they will ſcent the Carkaſſes many Miles. Here are alſo ſtore of thoſe beautiful Birds call'd *Paſche-Flemingo's*, but by the *Arabians* *Rachama*,, whoſe Feathers are crimſon and white, as pure as can be imagined.

The People, *Vide* Fig. VI.

Their Ornaments.

Their Cloathing.

The Natives are propogated from *Cham*, and inherit his Curſe; their Stature is mean, their Colour blackiſh, their Faces very thin, but well proportionate in their Limbs, which they pink and cut in ſeveral ſhapes, as their Fancies lead them for Ornament; their Heads are commonly long, their Hair wooly and criſp. Some ſhave all their Heads, others half, and others leave only a Tuft on the Crown for ornament, but moſt adorn their Heads inſtead of ſhaving, with Spur-rowels, Braſs Buttons, pieces of Pewter, Beads of ſeveral ſorts, which they get of the Saylers for Mutton, Beef, Herbs, Oſtriches Eggs, and Tortoiſe-ſhells. About their Arms and Legs they wear Chains of Copper, Braſs, and Iron, with pieces of Ivory, and about their Necks they wear the raw Guts of Beaſts, which they alſo eat; the reſt of their Body is naked, ſave that about their Waſte they have a Thong of Leather, which like the back of a Glove, ſerves to cover their *Pudenda.* The better ſort wear Lions and Panthers Skins, as alſo Leopards, Baboons, Calf or Sheep Skins, with their Hair turned inward: Upon their Feet they wear a Sole, or piece of Leather tied with a little ſtrap, which they hold in their Hands while they ſit, that they may ſteal with their Feet, which they will do very dextrouſly, while they look you in the Face, and think it no Crime. Some of them are Semi-Eunuchs, and ſome Women uſe Exciſion.

Their Habitation and Diet.

They live in Caves, eat Locuſts with Salt, and will rifle the Graves to feed on the dead Bodies: They ne ther roaſt nor boil any thing, but devour every thing raw, as dead Whales, Seals, Pengwins, Geeſe, and raw Puddings, which they eat for great Dainties. Such as thro' old age or ſickneſs, are notable to provide for themſelves, they leave them upon the Mountains deſtitute of help, where if Famine and Cold do not deſtroy them, the wild Beaſts do. Their Women are delivered without any trouble or pain, and they give their Children ſuck over their Shoulders.

Their Language is rather apiſhly than articulately ſounded, and 'tis thought they have unnatural Copulation with thoſe Beaſts, with whom and Baboons their Women familiarly converſe.

They have no knowledge of God, nor any ſpark of Devotion, no ſymptome of Heaven or Hell, no place ſet apart for worſhip, nor any Sabbath for reſt.

They have little Art in War; their Weapon is commonly an Azaguay or Javelin, headed with Iron, directed by Feathers, which they can take on and off at pleaſure. They have no Letters, Faith, or Law, living like wild Beaſts for Ignorance, like Devils for Miſchief, and like Dogs for Poverty.

The Devil's Bird.

July the 19th, they weighed Anchor, bending their Courſe to *Madagaſcar*; but in doubling the Cape they met with a ſtorm, (foretold by the flight of a ſmall long-winged black Bird (unjuſtly by Sea-men called the Devil's Bird) which being a kind of natural Aſtrologer, ſeldom appears, but againſt ſtormy Weather, of which it has ſo quick a ſenſe, that it foretels the leaſt alteration of the Air) that they could not arrive at it till the 28th day.

Madagaſcar deſcribed.

Madagaſcar, which by the *Arabians* is called *Sazandib*; by *Ptolemy*, *Menuthyas*; by *Mercator*, *Do Cerne*; and *Inſula Santi Georgii*, is queſtionleſs the greateſt Iſland in the World, being in length, from Cape *Roma*, in the S. S. W. to St. *Sebaſtian* in the N. N. E. no leſs than 1060 Miles, and in breadth, in the narroweſt place, 100.

The Soil.

The Air is temperate, ſave when the Sun is in or near the *Zenith*. The Soil is in moſt places luxuriant, becauſe they have Rain every Week, and Winds continually, either from the Mountains in the Morning, or Ocean in the Afternoon, by which means the Ground is fitted for Seed and Fruit.

Wood.

It produces much Wood, and particularly Ebony, and 'tis thought that there is Gold in the Inland parts of it.

Fiſh.

The Rivers abound with Fiſh, and it wants not reaſonable good Roads and Harbours for Ships to ride in; pity it is that ſo noble and populous a place ſhould be ſtill uncivil, and corrupted with Heatheniſm and Mahometaniſm.

The Towns known.

The maritime Towns are only known to us, as *Roma*, *Auguſtine*, *Antabaſta*, *S. Jacobo*, *Matatana*, *Angoda*, *Ferendo*, *Formoſo*, *Antongil*, and *Jangomar*; but *Auguſtine* Bay under the Tropick, and *Antongil* on the Eaſt ſide, afford the beſt Anchorage. It was lately governed by four Kings, who were very jealous of each other's greatneſs. The maritime Towns profeſs the *Mahometan* Religion, and the mid-land Heatheniſm.

Their Puniſhments.

They puniſh Murder with death, Adultery with publick ſhame, and Theft with baniſhment. Thoſe that live by the Sea love fiſhing more than Tillage. The People are generally ſtrong, active, and couragious, and the Men delight much in warlike Actions, uſing Targets to defend their naked Bodies, and for offenſive Weapons, a long *Azaguay* or Launce, barbed with Iron, kept bright, and poiſoned, which they know how to throw as well as any People in the Univerſe.

Their Complexion.

They are black, never ſhading their Bodies from the parching Sun, only anointing them with Greaſe and Tallow to keep them from cracking; proud to ſee their Fleſh ſhine, and never being offended at the ſtink: Their Hair is black, long, and curled, the length is an ornament. They have only a few Leaves plated together about their Waſte, otherwiſe they go naked. Their Ears are bored, and wide enough; they pink and cut their Fleſh; the Men ſeek Prey abroad, while the Women ſit at home and ſpin.

Bigamy.

Bigamy is allowed, and they marry very early; the Youth at twelve, and the Maids at ten Years old. They are delighted with Sports and Novelties, Hunting, Hawking, Fiſhing and Dancing, in which the Men uſe divers windings and turnings, beating and clapping their Breaſts and Hands, while the Women with ſavage harmony, play with their Hands and Eyes, and obſerve a meaſure.

Their Learning.

Till of late they knew not Letters, but now neceſſity has taught them a little Arithmetick. Their Language ever ſince they have embrac'd the *Mahometan* Religion, is mix'd with *Arabick*, but moſt on the Sea-Coaſt. This Iſle is rich in Minerals and Marchaſites, Gold, Silver, Iron, and Copper, Agates, Heliotropes, and Jaſpers, are good Commodities in this Iſle, but that which is more valuable with them, than the Diamonds and Pearls are in *India*, are long, red, Cornelian Beads, *Hanangua* they call them: they hang them in their Hair, and as Chains about their Necks, being then ſo brave in their own Opinion, that all other Ornaments ſeem needleſs to them. They have alſo a great eſteem for Bracelets, Copper, Chains, Bells, Babyes, and Triangular Glaſſes, for which they'll give you in exchange big-tail'd Sheep, Buffalo's, big-boned, fat, and Camel-back'd Antilopes, red Deer, Leopards, Pards, Goats Milk, Hens Eggs, Wheat, Barley, Rice, and Cuſcas, with what Fruit you like, as Oranges, Limons, Lymes, Pome-citrons, Plantanes, Sugar-Canes, Ginger, Toddy, Coco's, &c.

Cornelion Beads.

Their Beaſts.

Cameleons.

Here are alſo Lizzards and Cameleons, which is a lean deformed Beaſt. It is an old opinion, that it feeds upon the Air, but it is an errour, for they lick up Flies, Beetles, and the like, very dextrouſly.

Salamanders.

Salamanders alſo are found in this Iſle; they are a ſort of Lizard, extream cold by Nature, and will like Ice endure the Fire for ſome time, yet put it out if it be little, but a great fire will burn them, as we know by experience: they lie in moiſt and ſhady places, and ſeldom appear but before a Storm; their Teeth and Tongues are venomous, but their Fleſh may be eaten without danger.

The Shark, his nature deſcribed.

Departing from *Madagaſcar*, they ſteered N. E. E. with a deſign to reach *Mohelia*, and nine Leagues from it, one of their Men took a Shark nine Foot and half long. This ravenous Man-eating Fiſh (which is alſo called the *Hayen* or *Tuberon*). is armed with a double row of venomous Teeth, directed by a little Rhombus or Muſculus, variouſly ſtreaked and painted with blew and white, that ſends to and fro to bring the Shark intelligence of a Prey, for which ſervice the Shark will ſuffer him to ſuck when he pleaſeth. Theſe Fiſh are very noxious to Sea-men, who in calms love to ſport and refreſh themſelves in the Sea with ſwimming, and are ſometimes devoured by this greedy Monſter, and ſometimes ſuffer the loſs of a Member. This Fiſh has a peculiar Nature: tis reported of it, that it doth not ſpawn like other Fiſhes, but whelps like Bitches, and their Off-ſpring is very numerous; for in this they found when it was opened, 55 young ones, every Fiſh a foot long, and in Storms and dark Nights they will receive their young ones into their Bellies to ſecure them.

A Caribdis.

In their way they paſſed by a Charibdis, in 21 Deg. variation 13, and 17 Min. called *Maſcarenas*, and were caſt upon the Shoals of *Mozambique*. Experience teacheth us, that from the Cape of *Good Hope*, the Current ſets ſtrong Weſtward; and that from the Cape *Corientes* to the Equinoctial Line, the *African* Shoar is for the moſt part called *Melinde*. Upon the Coaſt are ſtore of Fruits, Corn, Minerals, Flowers, Plants, Herbs, and Cattle of all ſorts, and in plenty.

Wild Hogs.

Among the reſt are ſtore of wild Hogs, which the Natives, if not *Mahometans*, hunt and eat, for their Fleſh is exceeding dainty, and in their Maw they often find a Stone, which is in great requeſt, becauſe it is a very ſoveraign Medicine againſt poyſon, and many other Maladies; this Virtue (as is ſuppoſed) proceeding from their feeding on the Herbs and Drugs, which the Earth brings forth there in great plenty and variety.

Mozambique.

Dolphins.

As they paſſed along, they met with ſeveral dangerous Iſles, as *John de Nove*, *Primere*, and others. Under the 17 Deg. 17 Min. Latitude, and 20 Deg. 20 Min. Longitude, the Current ſets South-weſt, and they came to the Peninſula of *Mozambique*, which is a Port of the great Kingdom of *Zanquebar*, and not far from the Cape or Promontory, call'd by *Ptolemy Praſum*, between which and the Cape *Raptum*, the People in his time were Man-eaters, as the Negroes are at this day. This Country affords the beſt of Merchandiſes, as Gold, Silver, Elephants-Teeth, and Ambergreaſe: The *Portugueſe*, who have conquer'd all theſe Coaſts as far as the *Eaſt-Indies*, have a Fort of good ſtrength here, as they have many Towns and fortified places all along thoſe Coaſts, where they have ſeveral Colonies. In theſe Seas are great numbers of Dolphins, which is a Fiſh incredibly ſwift, and quick-ſighted, but no bigger than a Salmon. It glitters in the Ocean with variety of beautiful Colours, has few ſcales It much affects the Company of Men, and are always conſtant to their Mates. They generate by Sperm, and are nouriſhed like Men; embrace, join, and go with young ten Months; ſo tenderly affected to their Parents, that when they are 300 years old, they feed and defend them againſt hungry Fiſhes, and when dead, to avoid the Shark and other voracious Fiſh, carry them aſhoar and bury them: they were glad of the company of theſe Ships, and purſued them many hundred Miles.

The Iſles of *Chumro.* Six Leagues from this Land, N. E. is one of the Iſles of *Chumro*, called *Meyottey*, ſeated North of *Madagaſcar*, and by it are four more, which bear the ſame name, but are call'd particularly *Meottir*, *Joanna*, *Mobelia*, and *Gazidia*. Each of them is very ſerviceable for refreſhing Sea-men, in that they abound with delicate Fruits and Cattle, which they ſell at eaſie rates. None of them are above an hundred Miles in compaſs.

Chumro. *Chumro* is the higheſt and beſt Land, and is full of Palmeto-Trees; but the People are perfidious; for ſome *Engliſh-men* being invited a-ſhoar by them out of the Ship *Penelope*, for Water and other Refreſhments, were treacherouſly ſlain by the Inhabitants.

Joanna. *Joanna* is inhabited by a better People, that may be truſted, and governed by a King, tho' ſomething tyrannical. Sea-Tortoiſes. About this Iſle are Sea-Tortoiſes, which differ not much from the Land, but their Shells are ſomething flatter: By overturning them they are eaſily taken, but their Fleſh is wateriſh, and cauſes Fluxes. They have neither Tongue, nor Teeth, ſuperabound in Eggs, ſome of them having near 2000, pale and round, and not eaſily made hard by much boiling. They cover their Eggs by the Sand, and the Sun hatcheth them; ſuch as have ſtrong Appetites will eat them, but there can be no prevailing motive to it but famine or novelty.

The *Mannatee*, or Cow-fiſh. The Mannatee, or Cow-Fiſh, is alſo found in theſe Seas: It is good Meat, becauſe uſing the Shoar it hath a fleſh taſte, reſembling Veal, which alſo it ſhews like; the Face is like a ſhrivelled Buffalo or Cow, the Eyes are ſmall and round, and has hard Gums inſtead of Teeth; the Intrals alſo are like a Cow's: there is a Stone generated in the Head, which is very valuable, being a ſoveraign remedy (as ſome report) againſt Cholick, Stone-Cholick, and Dyſentery, being beat ſmall, infuſed in Wine, and drunk faſting: A Phyſical Stone. the Body of this Fiſh is three Yards long and one broad, thick-ſkinned, and without Scales, narrow towards the Tail, which is very nervous, ſlow in ſwimming, becauſe it wants Fins, in liew of which it has two Paps, which it can uſe either to ſuckle its young withal, or creep aſhoar, where it grazes, and where it delights to lie and ſleep; for it can't keep half an Hour under Water. It is very teachable and apt to be made tame, being famed like the Lizzard for their love to Man, whoſe Face they delight to look upon, and in weakneſs have refreſhed them.

The Carvel or Sea-Spider. The Carvell, or Sea-Spider floats upon the Surface of the Ocean like a Foam, is of a globous form, throw abroad her ſtrings like ſo many Lines, which ſhe can ſpread at pleaſure, and angle with them for ſmall Fiſh, which by them ſhe catches; when ſhe finds her Web too weak, ſhe blows an infectious breath, and ſeems armed with ſuch a Sting, as if ſhe had borrowed it of the Scorpion.

Mabelia deſcrib'd. *September* the 11th, they came to an Anchor on the Weſt ſide of *Mabelia*, a Bow-ſhot from a ſmall Village of Straw, called *Merianguy*, governed by a *Sha-Bander*, named *Alicuſary*, a black big-boned Man, and a *Mahometan* by profeſſion, ſly and crafty in bartering Victuals and Fruits for Commodities. *Mobelia* lies in 12 Deg. 15 Min. Southern Latitude, and 24 Deg. Longitude from the Meridian of the Cape of *Good Hope*: It is about 60 Miles in compaſs: the Coaſts riſe gently, but the Inlands are mountainous and woody. The Houſes and Inhabitants. The Villages lie diſperſed up and down the Country, but the Houſes are thatched with Reeds and Straw, fitted to the Torrid Zone. The Inhabitants are a mixture of *Mahometans* and *Gentiles*, who worſhip the Sun chiefly. The *Portugueze* have lately preached Chriſtianity here, but have but few Proſelytes: they call their King *Sultan*: their Language is a mixture of *Arabick* and *Portugueze*: the People are perfectly black as a Raven, which proceeds, as ſome think, from the heat of the Sun, drawing the Blood to the outward parts; others from the Soil, and others from the Seed, which they ſay, is black; but whether from any of theſe or no, is uncertain. The *Mobelians* have big Lips, flat Noſes, ſharp Chins, and large Limbs.

Their Cloathing. They content themſelves with *Adam*'s Guarb, a few Leaves to cover their ſhame, but cut and pink the Skins of their Face, Arms, and Thighs for ornament, ſtriving to exceed each other in variety. Our Habit and white Complexion is as ſtrange to them, as their blackneſs and nakedneſs is to us.

Moskes. The *Meccan Zealots* have here a few poor Moſkes, made of Straw and Bambo's without, but matted neatly within, and none may enter them with their Shoes on.

Magick. They deal ſome of them at leaſt in Magick, as we had a proof in one, who in a ſtorm of Thunder and Rain, ſtood trembling, and now and then lifting up his Hands and Eyes, muttered certain words, then leaping up in a kind of rapture, unſheathed a long Knife, and having brandiſhed it about his Head ſeven or eight times, and muttering ſome words every time, put it up again, then kiſſed the Earth three times, and then he aroſe, and on a ſudden the Sky cleared, and there was no more Rain.

The Kings. Two Kings command this Iſle, called *Phancomal* and *Synal-bey*, the one a Native, the other an *Arabian*, both made great by their Wives, the Daughters of *Sultan Sheriph Booboocharee* and *Nannagalla*, who with their Huſbands, live in continual defiance of one another. The People are long-liv'd, the Fruits are excellent, and the Air tolerable.

Tobacco. Tobacco grows here plentifully, and is of good account, tho' weak and leafy, they take it in long Pipes of Canes: As the *Iriſh* and *Spaniards* uſe ſneezing Powder, ſo do theſe Savages *Arcua*, which reſembles the Nutmeg, and being rowled up in Leaves of Betel, which are like our Ivy, and mixed with a chalky ſubſtance, made of burnt Oyſter-ſhells, they chew it almoſt continually, and find it very good in the operation; for it diſcolours their white Teeth to a pure crimſon, perfumes the Breath, kills Worms, intoxicates the Brain, dries Rheums, helps Nature, and begets an Appetite.

This Iſle produceth many uſeful things, as Buffalo's, Goats, Turtles, Hens, huge Bats, Cameleons, Rice, Peaſe, Cuſcas, Honey, and the Sea Breams, Cavallo's, Oyſters, Mother of Pearl, and good Pearl, Toddy, Coco's, Plantain, Oranges, Limons, Lymes, Pome-Citrons, Anana's, Cucumbers, Sugar-Canes, Tamarinds, and red *Indian* Dates. In fine, 'tis always verdant, the daily Rains and Breezes cooling their Heats, and making a perpetual Summer.

Three ſorts of Fruit are very remarkable in this Iſle: The Plantan Tree. Firſt, The Plantain is a Fruit in taſte and odour ſecond to none, and covered with a broad Leaf. It hangs in cluſters like Beans upon a Branch or Stalk; the ſhape is long and round, much like a Sauſage. If you peel off the Rind, the Fruit appears of a Gold yellow, and is reliſhed like a *Windſor* Pear, ſo delicious, that it melts in ones Mouth, leaving a delightful guſt. 'Tis good for Urine, but bad for Fluxes, if it meets with crude Stomachs; and if liberally eaten, deſpoſes to Dyſenteries. The Coco-Tree. Secondly, The Coco, another excellent Fruit, is covered with a thick Rind, and is equal in bigneſs to a Cabbage: the Shell reſembles a dead Man's ſkull, a mark of Eyes, Noſe, and Mouth being eaſily diſcerned on it: It yields a quart of Liquor, coloured like new White-wine, but of a far more aromatick taſte: the Meat or kernel, like other Nuts, cleaves to the Shell, and is not eaſily parted; the Pith or Meat is above an Inch thick, and better reliſhed than our Philberts; and one of them affords enough to fill the Bellies of two reaſonable Men. The Tree, which is ſtreight and lofty, having no Branches, but a Plume at top, beautified with theſe large Nuts, is good timber, and of it they make Canoes, Maſts and Anchors. The Rind is dreſſed like Flax, and ſerves for Sails, Mats, Cables, and Linen; the Shell for Furniture, as Diſhes and Veſſels, the Leaves for covering of Tents and tiling Houſes. Thirdly, The Toddy-tree is like the Date or Palm; The Toddy-Tree. the Wine called Toddy is got by wounding and piercing the Tree, and putting a Jar or Pitcher under it, ſo as the Liquor may drop into it. At the top it has a Pulp, which being boiled, eats like a Cauly Flower, but being cropped, the Tree dies, becauſe the Life of the Tree ſeems to conſiſt in it. Theſe Trees (like Dates) thrive not, except at ſome certain time the flowering Male and Female be united, or grow near to each other. Toddy for colour reſembles Whey, but taſtes like Rheniſh; at the firſt drinking 'tis unpleaſant, but ſeems to taſte better and better every draught: A little makes Men merry, and much inebriates: In the Morning it is found laxative, in the Evening coſtive, and at Mid-night dangerous. Theſe Fruits and all other things are eaſily purchaſed; they'l give 30 Oranges or Limons for a Sheet of Paper, ten Coco-nuts for two Sheets, an Ox for a Piece of Eight, and a Goat for ſix pence.

Ships and Boats they have none, but Cano's, hewed out of one Tree, yet capable to hold three Men; if they ſink, they help themſelves by ſwimming. Fig. 7.

September the 15th, they took their leave of Mobelia with a fair Gale, and in four days came within four Deg. of the Æquinoctial.

On September the 19th, at Night the Sea about them ſeemed as white as Snow, contrary to the uſual colour, which is azure or blew, but from what cauſe our Author could not gueſs. The next day they had the Sun on their Zenith, and coaſted along the rich and famous part of South Africa, called Soffala, part of Ægyſimba, where the Portugueze have a conſiderable Fort and Caſtle to awe the Negro's: this Country has ſtore of Gold.

Soffala and the Iſles of it.

Preſter-John and his Power deſcrib'd.

Upon theſe Coaſts lie the Iſles of Mombaſſa, Megadoxo, Zanziban, Pata, and Brava, places very hot ſometimes, becauſe the Equinoctial cuts them. The Shoar from them tends to Barnagaſſo, a Port, once under the great Neguz, who till of late, held all that tract of Land from Cape Guardefue to Suachem in the Red-Sea. This Prince, who is called by the Chriſtians generally Presbyter-John, by the Moors Aſic' Abeſſi, and by his own People Aceque or Neguz, is ſuppoſed in power not to be inferiour to the greateſt Prince of the World. He is ſaid to be able to raiſe 100000 Men for War, and to be of ſuch Wealth, that he offered the Portugueze a Million of Gold to aid him againſt his Adverſaries. His Dominion extends as far as Nubia and the Confines of Egypt Northward; to the Red-Sea and Barlarick Gulph, as far as Ajaman and Dangali Eaſtward; Kingdoms of Æthiopia Exterior, to the Montes Lane, Southward; and as far as Nilus, Niger, and Manicongo, the two greateſt Rivers of Africa, Weſtward: So that this Empire conſiſts of 70 tributary and ſubordinate Kingdoms, and reaches from one Tropick to the other. He is ſaid to be deſcended of Maqueda, the Queen of Sheba, which gave Solomon ſo kind a viſit, and brought home to her Subjects the Jewiſh Religion, in which they continued, till Queen Candaces Eunuch, brought them home the Chriſtian, in which they were farther inſtructed and confirmed (as is ſaid) by Thomas the Apoſtle, and continue in that Profeſſion to this day. His Country is in the moſt unpleaſant and ſcorching part of Afrike, of which the greateſt part is rowling Sands, which permit no Foundations of Towns or long Stations, and therefore he and his People lead a vagrant courſe of Life, and dwell in Tents after the old Numidian manner, which makes ſome queſtion his Power or Courage, that he will be penn'd up in ſo bad a Country, and not by his Arms make way for a better Habitation for Himſelf and Subjects, or at leaſt preſerve his Ports for Traffick and Correſpondence with other Chriſtian Princes, which he has not of late done; for the Savages have taken from him all his Ports, and command upon the Ægiſymbar Coaſts in Ethiopia Interior, from the Kingdom of Adell to Cape Guardefue; and Sultan Solyman has expelled him from Ercoao and Suachem, his only Ports upon the Red-Sea.

Coming under the 8 Deg. the Manzoon became adverſe to them, and their Ships cut their way ſlowly, tho' ſecurely, thro' the Waves, till at length paſſing by the Cape of Babelmandel, they came to the Iſle of Soccotora, in the Mouth of the Red-Sea, where they waited for a favourable Gale.

Socotora an Iſle deſcrib'd.

Socotora is an Iſle well known to former Ages, to ſome by the Names of Dioſionda and Succaba, but Pliny calls it Topazo from the great plenty of Topaze found there. It lies in 13 Deg. Northern Latitude, and is about 15 Leagues long and ten broad: It lies neareſt Afrike, but belongs to Arabia Felix. It affords plenty of all things for the ſuſtenance of the Inhabitants, as Corn, Fruit, and Cattle, as alſo Olives, Coco's, Dates, Piſtacho's, Oranges, Limons, Pomegranates, Pomecitrons, Melons, Sugar-Canes, and the like Fruits. It produces alſo the beſt Aloes, called by the Spaniards Semper vivum, and Sangus Draconum, or Dragon's Blood, which is a Gum produced by a ſmall Tree, at certain Sciſſures made in it for that end. Civet-Cats are alſo bred here, and tho' they ſell the Civet cheap, yet the plenty of it enriches the Owners. The Inhabitants are a mixture of Chriſtians and Mahometans, their Complexions black, the Sun twice every Year darting his Rays perpendicularly upon them, and then no place in the World is hotter. They are reaſonably civil by Nature, and are ſaid to be a Colony planted there by Alexander the Great, by the advice of Ariſtotle his Maſter, who met him there, when he was returning from Judea to Babylon.

That they were early converted to Chriſtianity, tho' by whom is not known, is certain by Eccleſiaſtical Hiſtory, but they were infected with the Errors of the Neſtorians and Jacobites, which laſt uſe both Circumciſion and Baptiſm. Their Churches expreſs no leſs, being built in the form of a Croſs. They had a Patriarch reſident among them till of late, and now they have other Clergy, whom they reverence, and chearfully pay their Tyths to them, by whom they are inſtructed in the worſhip of God, and how to obſerve both Faſts and Feſtivals: they highly reverence their Elders: Humility is both commended and commanded. Second Marriage (except where there is no iſſue) are diſallowed. In Baptiſm they uſe the ſign of the Croſs, and partake of both Elements the in Sacrament. They waſh their Dead, and being wound up in clean Linnen, bury them, with their Heads towards Jeruſalem, but ſhew little ſigns of Mourning. John de Caſtro for many Days found it high water here at the Moon's riſing, and as the Moon aſcended, the Tides decreaſed; ſo as it was low water when the Moon was higheſt, contrary to the Effects of it obſerved in other places.

Aden in Arabia.

Aden, a Town upon the Arabian Continent, lying in 12 Deg. 35 Min. Northern Latitude, may be ſeen from this Iſle: 'Tis likely to be the place called Eden in Ezekiel, c. 27. 23. This, tho' it be a much frequented Road, is none of the beſt; for at the Change it flows not above eight Foot water, tho a S. E. or N. W. Moon makes a full Sea. The Town is low in its ſituation, and ſulphuriouſly ſhaded by the high and barren Mountain of Cobelarra, whoſe brazen Front miſerably ſcorches the Country. The Sea ſo compaſſes it, as to make a Cherſoneſe. The Circuit of the Town is large enough, but built thinly; and the Inhabitants ſhew a diſcontent at their Turkiſh ſlavery. Oſorius and Munſter deſcribe it as a place of great Commerce and Magnificence, but now no ſigns of either are to be ſeen. The Caſtle is the moſt noted Building in it: It is built near the Sea to command the Road, and the ſituation of it is ſtrong, which is alſo much augmented by thoſe many Pieces of Cannon which are planted on the Bulwarks, having withal a large Graft and Counterſcarp, only to be entred by a very narrow Path; ſo that one would think it prepared to ſecure all the Treaſure of Aſia, whereas within are nothing but Souldiers and Ammunition to ſecure the Turkiſh Government, and extort Contributions from all thoſe South Parts of Ajaman.

Cobelarra a Mountain.

The Red-Sea.

Being now in the Red-Sea, our Author gives us this account of it, and ſays, That tho' 'tis probable that it might take its name either from the Country of Edom, on which it borders, for Edom ſignifies Red; or from an ancient King named Erythreus, who reign'd and had a long Reſidence hereabouts, tho' his Tomb is erected near Ormus in the Iſle Tiaria, at the other end of Arabia Felix; yet that Derivation which ſome give it from the red Sand, or Sea-weed, called Sargaſſe, floating there, is not without ſome colour or ſhew of reaſon; for the Sand, eſpecially when the Sun viſits the Antipodes, gives a ruddy Reflection; and it is obſerved, that from Suachem (a noted Town on the Ethiopic ſide) to Aleozar, which is an hundred Leagues, the Water is ſhoal, and by reaſon of the plenty of red Coral found there, ſeems to have a reddiſh tincture. It is accounted 1000 Engliſh Miles from Cape Guardefu to Suez in length: but 'tis narrow; for at Guardefue 'tis but 80 Miles broad; and at the Streight between Aden and Zeila, the breadth is but 18 Miles, where 'tis ſaid the Ægyptian Monarchy of old hung a Chain a-croſs to ſtop the Paſſage into the Gulph, as Strabo relates: but the Red-Sea in its largeſt uſe, extends to the Indian Shore. 'Tis a ſhoal and dangerous, except in the middle of the Channel, where the greateſt Veſſels in fair weather may ſail boldly.

Towns by it.

Formerly there were upon the Shore of it, ſundry famous Ports and Harbours, Zybt, Sabar, Aleozar, Suachem, Maſuæ, Daliaqua, Old Phileteras, Theram, and Zeyla, on the Ætheopick Shore, and Tore, Elana, or Eloth, Petra, Eziongeber on the Arabian; yet now Mecha is moſt traded to.

Pihabiroth.

At Pihabiroth, which is between Toro and Suez, is yet ſhewn the places where Moſes firſt entred into the Red-Sea and Petra, which the Hebrews call Jackſbut, now Arach is the place where Ruth was born, and is branded for baſe ingratitude to their Princeſs Cleopatra, becauſe the People ſet on fire thoſe Ships, which ſhe had with great pains haled to Suez from the Nile, in order to make her eſcape with M. Anthony by the Red-Sea into the Eaſt-Indies, after the Victory of Naupactum or Actium. From Suez to the Nile is not above 25 Leagues; from Grand Cairo to Toro five days eaſy travel. The Iſthmus between the Mediterranean and Red-Sea is not above 80 Miles; and tho' ſeveral Kings of Egypt, as Seſoſtris I. then Darius, and after ſome of the Ptolemyes made ſeveral Attempts to cut a free Paſſage for Ships thro' it, and ſhorten the Voyage to the Indies, yet they could not effect it, tho' the Country is low and very fit for it; but God, who has ſet the Ocean its bounds, would not ſuffer Man to enlarge its Limits.

Æthiopia Interior deſcribed.

The warm part of *Æthiopia Interior* being the neareſt of the *Troglodites* Country, by moſt called *Æthiopia ſub Ægypto*, and lying on the Weſt-ſide of the Red-Sea, was (as ſome ſay) firſt planted by *Chus* the Son of *Cham*, after his departure out of *Arabia*, but (as others hold) by *Sheba* the Son of *Rhegma*; the air is extremely hot while the Sun is vertical, which inſtructs the Inhabitants to ſeek that ſhade, and take up their Habitations under ground, for their Country extends 20 deg. on each ſide the Line. From the Red-Sea towards the Weſt, for above 600 Miles, 'tis full of Hills, and towards the Eaſt barren, the Midland being covered with a looſe Sand, which makes it unpaſſable.

The Ports.

Upon the Banks of the Red-Sea, on this ſide theſe Towns, have formerly been Ports, *viz.* *Zoyley*, *Suacher*, *Maſua*, *Toeran*, and ſome others, and were much frequented by the *Ægyptian* Merchants, and others; but ſince the principal Marts have been tranſlated to *Goa* and *Ormus*, *Mortia* and *Aden*, on the oppoſite Coaſt, are moſt frequented.

Never ſubdued

This Country, whether through its poverty, or Natural ſtrength, was never ſubdued either by the *Ægyptian* Kings their Neighbours, or any of the four great Monarchies; *Cambyſſes* indeed, and *Nebuchadnezzar*, ſent them Earth and Water by their Embaſſadors, as Symbols of their Subjection to them, but they returned them with ſcorn, as knowing that thoſe Monarchs could not enter their Countries with any advantage to themſelves.

The Trade to Ophir for Gold.

The firſt Commerce that we find upon the Red-Sea was began by *Solomon*, who traded from *Ezion-geber* to *Ophir* for Gold, but the King of *Edom* revolting from *Rehoboam* this Trade was diſcontinued, till *Jehoſhaphat* ſubdued it again; and then he built a Navy to renew that Traffick, but it was ſhipwrack'd in the Haven, becauſe he took *Ahaziah* King of *Iſrael* for his Partner, and *Amaziah* loſing *Edom* again, this trade for Gold was laid aſide for above 300 Years, till *Ptolomy Philadelphus*, about 270 Years before Chriſt, revived this *Ophirian* Trade, which continued under his Succeſſors to their great advantage, for the *Ægyptian* Fleet was uſually 120 Veſſels great and ſmall, and tho' it was a two Years Voyage, yet the return was ſutable, for the Fleet brought in ſeven Millions of Gold, and the gain to the Exchequer was *communibus annis* 1200000 Crowns.

When *Julius Cæſar*, and after him *Auguſtus*, had reduc'd *Ægypt* to a Province, 'tis probable the Golden Trade was ſtill continued: but when the *Arabians* and *Goths*, from adverſe Quarters, like Inundations overflowed moſt part of the Univerſe, and eclipſed even the *Roman* Greatneſs, the *Indian* Trade ceaſed, and was little uſed by the *Conſtantinopolitan* Emperors; being wreſted from them by *Omar* the firſt Caliph of *Babylon*, it was removed from place to place, till being brought to *Damaſcus* and *Aleppo*, the *Venetians* Monopoliz'd it for ſome time, to the great enriching of their Seigniory. But *Vaſco de Gama*, in 1497. having diſcover'd a paſſage into the *Indies*, by compaſſing *Africk*, the *Venetians* were forced to leave it to the *Portugueſe*, *Dutch* and *Engliſh*, who now enjoy it.

The hotteſt Countries in the World.

October 18. the Wind being fair, they found themſelves by Obſervation in 17 deg. Northern Latitude, and 19 Longitude, from *Mohelia*. The Weather here is extremely hot, ſo that it puts Men into Calentures; for in the Summer Solſtice, the places about the Red Sea and *Perſian* Gulph are the hotteſt in the World, for the Earth equally inflames as the Air.

Flying Fiſhes, *vide* their form, Fig 8.

October 26. being in 20 deg. Longitude, the Calm Weather increaſing the heat, they diverted themſelves in viewing large ſhoals of flying Fiſhes, which by their multitude riſing together out of the Sea, darkened the Body of the Sun. 'Tis a Fiſh beautiful to the Eye, but the Body is no larger than that of a ſmall Herring, but having large Fins, it makes uſe of them as Wings to avoid the purſuit of Sharks, Dolphins, Boneto's, Albicores, and other ravenous Fiſhes. They can fly no longer than their Fins are wet, but in that time will mount up 40 foot high, and fly 200 paces. But while they eſcape their Water-enemies, they often fall into the mouths of others, which they meet with in the Air, for uſually Oſprays, Sea-Vultures, and other Birds of prey, purſue, and ſometimes take them. True Emblems of Miſery, who no ſooner eſcape one danger, but they fall into another.

A Rainbow in the Night.

Here they ſaw a perfect Rainbow in the Night, which tho' not ſo common as Solar by Day, yet *Ariſtotle* mentions two that he himſelf ſaw; and *Vicomercatus*, in his Comment on him, tells us the like happened in *Germany*. Howbeit, the Colours of the Lunar are not ſo freſh as thoſe in a Solar Rainbow.

Goa in the *Eaſt-Indies* deſcribed.

November 17. they came in ſight of the *Indian* Coaſt, and ſaw Land in 15 deg of Latitude, and 32 of Longitude, the very place where *Goa* (of Old *Barigaza*) is ſeated. It is the braveſt and beſt defended City in the Eaſt, the Magazine, Refuge, and Seat of Juſtice of the Victorious *Portugueſe*. The City is not viſible at Sea, being three hours Journey within Land. Of Old it was the Seat of the *Canarins*, and ſtands in an Iſle called *Tiſſoar*, 30 Miles in compaſs, a ſweet place ſurrounded by a freſh River, which fall from the mighty Mountain *Bellaguate*, encompaſſed with a ſtrong and beautiful Wall, beautified with Turrets, and armed with many ſorts of roaring Cannon. Her ſtrength and beauty was began by the *Decan* Kings *Zabaym* and *Idalcan*, from whom *Albuquerque*, the Victorious *Portugueſe*, took it in 1509. and after defended it againſt 70000 Foot, and 3500 Horſe, which *Idul-cann* brought againſt it to reduce. It was much enlarged and beautified by the *Portugueſe*.

The Bazar.

The great Bazar, or Market-place, which is in the heart of the Town, is gallantly and regularly built; many of the Streets, which are built after the *Indian* Mode, are narrow, and ſufficiently naſty, but the Buildings are generally ſpacious, and not uncomely, thick and dark within, and terraſſed above, ſutable to ſo hot a Climate. It is Watered with a delicious Stream, which refreſhes the Fields, and cloaths the Earth with Flowers. The Gardens are filled with variety of delicious Fruits, and the whole Iſle abounds with Graſs, Groves and Corn, Cattle, Fruits, and all delights which Man can reaſonably require. Above 20 little Towns, all planted by the *Portugueſe*, are ſeen within 30 Miles compaſs, as alſo the Ruins of 200 Idol-Temples, which the Vice-Roy *Antonio Norogna* utterly demoliſhed, that no Memory might remain, or Monuments continue of ſuch groſs Idolatry.

Idolatry deſtroyed.

At *Salſette* alſo were two Temples of Prophane Worſhip, one of them (by incredible toil cut out of an hard Rock) was divided into three Iſles or Galleries, in which ſtood many deformed Figures of their Pagods, which would have affrighted an *European* Spectator: Nevertheleſs this was a Celebrated place, and ſo abundantly frequented by Idolaters, as induced the *Portugueſe*, out of a meer Zeal, with a conſiderable Force, to Maſter the Town, that they might demoliſh the Temples, and break in pieces their monſtrous Deities.

In *Goa*, the moſt obſervable now are the Fortifications, the Viceroy's and Archbiſhop's Palaces, and the Churches. The Palaces are very ſtrong built of good Stone, furniſhed and adorned within with rich Arras and Paintings; the Churches are large and neat, and of them, the beſt and fineſt are thoſe dedicated to the Virgin *Mary*, (in which tis ſaid that the Bones and Skull of St. *Thomas* the Apoſtle, brought from *Meliapore*, are kept) St. *Paul*, St. *Dominick*, St. *Katharine*, and St. *Saviour*, in which the Great *Albuquerque* lies, who died at *Goa* 1516. as do alſo the Bodies of *D'Acugna*, Don *Franciſco*, and the *China* Saint *Francis Xavier* the Jeſuit, who died *December* 4. 1552. aged 55 Years, and Canonized by Pope *Gregory* XV. *March* 12. 1622. The City is compaſſed with a thick Stone Wall, flanked and moated about, having withal a Counterſcarp, and 300 Pieces of Braſs Cannon, ſo mounted upon the Bulwarks and Ravelins, as renders the place Impregnable.

Chap. XXI.

Sir Tho. Herbert's *Travels in* India, *containing a Deſcription of the People, Cities, Government and Product of it; with an Account of the Great* Moguls, *their Kings, and ſeveral Changes in the Succeſſion to the Crown.*

Swalley-Road.
Euroclydon.
Snakes in the Sea.
Dabul, or *Dunga.*
S. John de Vacas.

DEparting thence they haſted towards *Swalley-Road*, keeping the *Indian*-ſhore in view all along, and were overtaken by a furious Wind called in the *Acts* Euroclydon, a kind of Hurrican or vaſt Tumour in the Air, which cauſes ſo terrible a Tempeſt, that Houſes and Trees are but like Duſt before it, and Ships by its violence are blown aſhore and broken. Once in 9 Years it uſeth to Thunder thus here, and it is preſaged 3 or 4 Days before by the Birds and Beaſts, who with ſtrange noiſes run about and hide themſelves, as if the World were to be overturned: but Providence favoured them with an eſcape, only the Storm drove them out of their way ſo, as they were a little puzzled to find it, till obſerving many Snakes ſwimming about their Ships, they found they were near the ſhore, and ſoon after they deſcried Land in 19 deg. 35 min. Latitude, and 29 Longitude, which they found to be *Dabul*, or *Dunga*, by the high Land, and then they came in ſight of St. *John de Vacas*, a Town likewiſe ſubject to the *Portugueſe*, at the South-end of which is St. *Valentine*'s Peak, from whence the Land continues high to *Gundavir*, an Hill 6 Leagues ſhort of *Swalley-Road*.

Chaul.
Daman.

November 27. after long toil, they came to *Chaul*, and from thence to *Daman*, a lovely Town inhabited by the *Portugueſe*, and famous for being the utmoſt extent of the *Macedonian* Conqueſts. At the North-end of *Daman* is a large and ſtrong Caſtle, built of a white Chalky Stone, flank'd with Ordnance, mounted to play at advantage; and at the South-end is a fair Church, with white Battlements of the ſame Stone, as are alſo ſome of the Houſes, but others are of unburnt Brick; and alſo three other Temples, affording pleaſure both to the Eye and Heart.

November 29. they came to an Anchor near the Bar at *Swalley-Road*, which is from the Æquator 20 deg. 56 min. North, and is in the 28 deg. Longitude from *Mohelia*.

December 1. with ſome Pe-unes, or Olive-colour'd *Indian* Foot-boys, (who can prattle *Engliſh* very prettily) they rode to *Surat* in a Chariot drawn by two Buffaloes, who by Cuſtom are made managable and nimble in their trot, paſſing through *Swalley*, *Batty* (a place famous for good Toddy) and *Damkee* in the way thither.

Surat deſcribed.
Unwholſome ſhowers.
Mogul's Tribute.

Surat, called by *Ptolemy Muziris*, is a City at this day no leſs great and rich than populous and famous: It is the chief Factory of the *Eaſt-India* Merchants, whoſe Preſident has his Reſidence there. The Air and Soil are troubleſome to ſtrangers, the one being inflamed with the torridneſs of the Zone, and the other being Sandy and Sulphureous. The Artick-Pole is here elevated 21 deg. 3 min. and in *September* the Clouds ſhower down continually an unwholſome dew, and that in ſuch plenty as cauſes great Floods, and turns Summer into Winter. It is accounted the third beſt Town in *Guzurat* Kingdom, *Amadabad* and *Cambaya* having the precedence. The whole Province is ſubject to the *Mogul*, and is ſo profitable to him, that the Annual Tribute of it amounts (as Merchants ſay) to an 150 Tun of Gold. 'Tis of late become a Town of the greateſt Note and Trade in *India*; tho' 'tis ſcarce 100 Years ſince *Antonio Sylverio*, a *Portugueſe*, with 200 Men entred into it and burnt it; but 'tis now much increaſed in Buildings and Inhabitants.

The River Tindy.
The Walls and Caſtle.
Bazar.
Meidan.
A Magazine of Water.
Worſhip of the Sun.

In 1566, and of the Hegyra 946. by the Valour of *Kan Azem* it was made ſubject to *Echar* the *Great Mogul*. Now it is under a quiet Government, water'd with a ſweet River called *Tappee*, or *Tindy*, (as broad as the *Thames* at *Windſor*) which riſing in the Mountains of *Deccan*, runs through *Brampore* in a Courſe of 220 Miles, and waſhing the Walls of *Surat*, glides through the Country for 22 Miles in divers Windings, and at length falls into the Sea a League from *Swalley-Road*. 'Tis encompaſſed with a Mud-Wall, and hath a large Caſtle of Stone built on the S. W. ſide, planted with Ordnance, and ſtrengthned by a Garriſon, who will hardly admit any ſtrangers to ſee their Fortifications. The Weſt opens on, to the *Bazar* through a fair Stone Gate, where the Toll-gatherers are daily buſie to gather the *Mogul*'s Tribute. The *Meidan* is of no great beauty, nor do the Shops make any great ſhow, the *Banians* chuſing rather to be thought Poor than be accounted Rich. The Houſes are indifferent beautiful, ſome of Carved Wood, others of Brick dried in the Sun. The *Engliſh* and *Dutch* Houſes exceed all other in largeneſs and furniture. The Suburbs have three Poſterns leading three ſeveral ways, one to *Variaw* and *Cambaya*, the ſecond to *Brampore*, and the third to *Nanſary*. The Town affords no Monuments nor Moſques of note. The *Engliſh* have a Garden with pleaſant Walks, and great variety of Flowers, but is inferiour to another there for proſpect. By the *Nanſary* Gate is a Frank or Magazine of Water, an admirable Work: It is of Free-ſtone, has above 100 Angles and Sides, which are 28 Ells long between every Angle; ſo that it is near a thouſand ordinary Paces in compaſs. It is leſſen'd to the bottom by 16 Steps, and receives a great quantity of Rain-water, which the *Indians* prefer much before their River, which they chiefly uſe to waſh themſelves in while they adore the Sun in its riſing, a form of Worſhip much uſed in the Eaſtern Parts of the World, and it ſeems to have crept in among the *Jews* by the reproof which is given to ſuch Idolaters by the Prophet *Ezekiel*, c. 8. v. 16.

Indoſtan deſcribed. Its Inhabitants.

Indoſtan, as it is a fruitful Soil, ſo it abounds with People, and that of divers Nations and Languages, who differ much one from another in Habit, Manners and Religion: For beſides the Natives of the Country, there are *Jews*, *Turks*, *Arabians*, *Armenians*, Chriſtians of St. *Thomas*, *Tartars*, and others, of which the *Banians* are the greateſt for number, but the *Moors* command.

They have a peculiar Language of their own, but the *Perſian* Tongue is underſtood by thoſe of the beſt rank, and is looked upon as moſt Courtly.

The Language.
Soldiers.
The Inhabitants.

The Indian *Mahometans* are People not leſs Crafty than Valiant; the Soldiers by Profeſſion are either *Reſhboots* or *Perſians*, and delight to go armed with Sword, Buckler, Bow, Arrows, and Dagger. Their Habit is a Quilted Callico Coat, tied under the Left Arm, a ſmall Saſh upon their Heads, and large Stockins; but ſome wear Sandals. The other ſort of People are Merchants, *Bramins*, *Gentiles* and *Perſees*; which laſt are the Original Inhabitants. When any Ships ride at *Swalley*, which is commonly from *September* to *March*, the *Banians* pitch their Booths all along the ſhore like a Fair, to ſell Callicoes, *China*-Sattin, Porcellan, Scrutores, Cabinets of Mother of Pearl, Ebony, Ivory, Agates, Turquoiſes, Hiliotropes and Cornelians; as alſo Rice, Sugar, Plantains, Aroca, &c.

Boys.

There are alſo many little Boys or Pe-unes, who for two pence a day are ready to ſerve you, either to Interpret, run, go of Errands, or the like. Theſe will not eat nor drink with a Chriſtian, nor out of the ſame Leaf they drink their Toddy.

Women.

The *Bannian* and *Indian* Women, according to the Eaſtern Cuſtom, are ſeldom ſeen abroad, being mewed up by their Jealous Husbands.

Beaſts.

Here are Elephants and Horſes, but Oxen do the moſt Labour, for from Town to Town they ride in Chariots drawn by Oxen, but in the Towns upon Palankins, with Sambrero's *de Sol* over them.

Money.

The Current Money here is *Pice*, which is an heavy round piece of Braſs, 30 of which make our Shilling. The Mamoudy, which is of good Silver, round and thick, ſtamped after the manner of the *Saracens* (who allow no Images) with *Arabick* Letters, only importing the King and *Mahomet*, is in value one Shilling of our Coin; and the Roupee, which is made alſo of like pure Silver, is 2 *s.* and 3 *d.* and a Pardow 4 *s.* The Dina is a piece of Gold worth 30 *s.* and *Spaniſh* Rials and Piſtolets, and *Perſian* Larees, Abyſſees, and *Engliſh* Gold, are here Current at 26 *s.* apiece, tho' in *Perſia* they will go but at 20 *s.* An hundred thouſand Roupees make a Lecke, an hundred Leckes make a Crou, ten Crou's (or Carron) one Areb. Again, in Silver 14 Roupees make a Maſs, 1150 Maſſes make an hundred Tolls, ten Tolls of Silver make one in Gold. In Braſs, 30 Taukes, or Pieces, make a Roupee in Weight; the Batman is 82 *l.* *Engliſh*, but only 55 of their Pounds, and the Maund as much.

The *Banians* Art and Habit. *Vid.* Fig 9.

The *Banians* (as Crafty as the Devil, according to their Proverb) by their moderate outſide, exceſs of Superſtition, ſmooth Dealing, or rather Hypocriſy, and Moral Temperance, put great Cheats upon the unwary and credulous Trader; they are of a tawny Complexion, and for the moſt part ſpare of Body. They let their Hair grow long, and yet, according to their Country Mode, wreath a ſmall white Saſh about their Heads: their Habit is a long Coat of white Quilted Callico, of the *Dalmatick* ſort; their Shoes of ſeveral colours and faſhions according to every Man's fancy, without Latchets, ſharp and turning at the Toe, thin Soaled, high Heel'd, ſurrounded with Steel, faſt and durable.

The Women.

The Women are of a whiter colour than the Men, becauſe they are kept more from the Sun, but wanting a mixture of Blood, ſupply it with a Vermilion Dye. They likewiſe wear their Hair long, and covering it with a thin tranſparent Lawn make it ſhew lovely. Their Noſes, Ears, Arms and Legs, they load with Manillio's, or Rings of Braſs, Gold and Ivory. Their Behaviour is ſilently modeſt, but Speech laſcivious.

Marriage.

Marriage is in ſo great Honour, that they moſt times Contract at ſeven Years old, and are Parents at ten; and they will not let any die unmarried, tho' they hire a Wife only for a Night.

Polygamy odious.

Polygamy is ſo odious to them, that they vilify the *Mahometans*, as People of impure Souls, for having many Wives. They burn their Dead to aſhes in an holy Fire, compounded of all ſorts of coſtly Wood and ſweet Spices; the Wife alſo (in expectation to enjoy her Husband amongſt incomparable pleaſures in another World) throws her ſelf into the Mercileſs flames, for which affection ſhe obtains a living Memory.

The *Brahmins* and their Tenets.

Their Prieſts are called *Brahmins*, or *Brachmini*, the ſame with the ancient *Gymnoſophi.* Their Tenets in Religion are, ‘That the whole Frame, or Body of the World, had a beginning, being created by a God of Immenſe Power, Eternal and Provident.

The firſt Man.

After he had made Man, he created Woman to aſſociate with him, and ſympathize with him both in Body and Diſpoſition. Theſe he named *Pourous* and *Parcaity*, a Couple ſo innocent, that they reputed it a Crime to cut any thing that had a Senſitive life, feeding only upon Herbs and Fruits, and the like Vegetables, agreeing with thoſe who believe that *Adam* had no liberty to kill any Creature, but lived upon the Herbs and Fruits only of the Earth, which all Mankind followed, till God enlarged his Grant to *Noah* of all Creatures for Food, excepting the Blood.

His Children.

This abſtemious Couple had four Children; *Brammon*, whoſe Conſtitution being melancholy, he became a Prieſt. *Cuttery*, who being Cholerick, was a Soldier. *Shuddery*, who being flegmatick, loved Merchandize; And *Wiſe*, being Sanguine, betook himſelf to Husbandry. And from theſe proceeded the four chief Vocations of Men: but becauſe ſuch an holy Generation ſhould not deſcend from Inceſt, therefore (their Shaſter, or Book of Law) ſays,

Their Wives and Poſterity.

That God revealed to them, that he had formed four Women for them, on whom to propagate, and order'd *Brammon* to travel to the Eaſt, *Cuttery* to the Weſt, *Shuddery* to the North, and *Wiſe* to the South, to find the Wives deſtined for them; which being done, they propagated Mankind, and filled the World with Men and Arts at once. When theſe four had ſpent ſome time in thoſe contrary Quarters of the World, where fate directed them, they all became equally mindful of returning home, deſirous to viſit their Parents, and people their Native Soil; and accordingly, with large Troops of their Children, returned home, and were received with great joy.

Their Sin.

Some Ages they lived with their Parents, but in proceſs of time began to loſe their Virgin purity, Diſcord, Pride and Rapine, mingling amongſt them; ſo as Brotherly-love being laid aſide, there was no appearance but of Violence and Voluptuouſneſs, for *Brahman* grew careleſs of Devotion, *Cuttery* Inſolent and Aſpiring, *Shuddery* Diſhoneſt and Unjuſt, and *Wiſe* Unthrifty and Riotous,

The Flood.

at which God being provoked, lets forth the Sea upon all Mankind, to purge away the naſty ſmell of their Pollution, and reſolves to fill the Earth with a more perfect and pure Generation. To this end, God deſcends upon the high Mountain *Meroparbatee*, and commands *Bremaw* to riſe up out of the Earth, which was accordingly done, and he immediately worſhipped him: He had power given him to create other Creatures.

The World reſtored.

Then God called up *Viſtney* and *Ruddery*, and to the former he gave a power to preſerve, and to the latter a power to deſtroy his Creatures by Death, Plague, Famine, Diſeaſes, War, and the like Miſchiefs, appointing them a certain time to live upon the Earth. From *Bremaw*, who falling into a deep ſleep or trance, his Body ſwelled, and became full of anguiſh, he brought forth two Twins of each Sex, who by Miracle immediately grew up to the perfect ſtature of Man, and were miraculouſly furniſhed with Language and Education.

Sin of Man.

Bremaw named them *Manaw* and *Ceteroupa*, whom after he had bleſſed, he ſent Eaſt to the great Mountain *Mounderpurvool*, where ſtraightway *Ceteroupa* brought forth three more Sons, and as many Daughters, who going to ſeveral Quarters, ſoon Peopled the Earth; but multitude produced ill actions, and Mankind fell into all ſorts of Sin, which God obſerving, left Heaven for a while to give them directions how to live virtuouſly, and avoid temptations; and calling *Bremaw* to the top of the Mountain *Meropurbatee*, ſpake to him many things out of a dusky dark Cloud, now and then flaſhing glympſe of his Majeſty,

The Law of God.

and delivered to him the Book of his Laws called Shaſter, which was divided into three Tracts dedicated to three great Caſts. 1. Containing Moral Precepts. 2. Containing Ceremonies of Worſhip. And 3. Containing peculiar Inſtructions to the three Caſts.

The Moral Law of the *Indians*.

The Moral Law has eight Commandments, agreeing for the moſt part with thoſe ſeven which *R. Solomon* ſays that *Noah* taught the World in his time, *viz.* ‘1. Thou ſhalt not deſtroy any living Creature, for thou and it are both my Creatures. 2. Thou ſhalt not ſin in any of thy five Senſes, in thy Eyes by beholding Vanity, thy Ears by hearing Evil, in thy Tongue by uttering any Filthineſs, in thy Palate by drinking Wine, eating Fleſh of living Creatures, in thy Hands by handling any filthy things. 3. Thou ſhalt daily perform ſet-times of Devotion, as Praying, Waſhing, Elevating, Proſtrating, &c. 4. Thou ſhalt not Lye nor Diſſemble. 5. Thou ſhalt not be hard-hearted, but helpful unto others. 6. Thou ſhalt not Oppreſs or Tyrannize. 7. Thou ſhalt obſerve Feſtivals and Faſting-days. 8. Thou ſhalt not Steal.

The *Brahmins*.

Theſe 8 Precepts (as we may plainly ſee they are derived from the Bible, the Names and Story being only a little corrupted in delivering them, ſo they) are ſubdivided into four Parts according to their ſeveral Caſts. The *Brahmins* and *Banians* are tied to a more ſtrict obſervance of them than the Soldiers and Mechanicks.

Their Habit.

The *Brahmins* are of 82 Caſts or Tribes; the *Vertaes* are of an higher degree, but fewer in number, their Habit is a Girdle of *Antelope*'s Skin about their middle, a Thong of the ſame Hide reaching from the Neck to the Left Arm, being elſewhere naked. Some of them wear a threefold thread, reaching from the Right Shoulder to the Left Arm, others three ſmall ſtrings of Silk upon their Fleſh, as low as their Waſte, which ſerve as a Badge of their Profeſſion. Upon their Heads they wreath ſome fine white Callico, in which their Hair is neatly plaited; in their Ears they wear Gold Rings, ſometimes ſet with precious Stones.

Their Marriages.

They Marry but once, Faſt ſtrictly, and Drink moderately, Waſh very often, and are much reverenced by the other Sects.

The *Banians*.

The *Shudderies*, or *Banians*, are Merchants, and contrary to their Name, which ſignifies harmleſs, are the moſt crafty People throughout all *India*, full of flegmatick fear and ſuperſtition.

Their waſhings.

They waſh often, as they are commanded, and as is obſerved in all the Pagan Religions of thoſe hot Countries, firſt dawbing their Bodies with dirt, as an Emblem of Sin, and then diving three times in the Water to waſh it off, their faces being turned to the Eaſt, and adoring the Sun, and ſhaking a few grains of Rice into the Water, as an Euchariſtical Offering to the Element for purging them.

Their Mercy to Beaſts.

They are indeed Merciful, grieving to ſee other People ſo hard-hearted as to feed upon Fiſh, Fleſh, Radiſhes, Onions, Garlick, and ſuch things, as either have Life, or a reſemblance of Blood. They, for their parts, will not kill ſo much as a Louſe, Flea, Kakaroch, or the like, but on the contrary, buy their liberty of ſuch Sailors and others as of neceſſity muſt cruſh them; yea, they have Hoſpitals for old, ſick, lame, or ſtarved Creatures, Birds, Beaſts, Cats, Rats, or the like, and have no worſe Men to overſee them than the *Puſhelans*, the beſt reſpected ſort of *Brahmins*.

Tranſmigration of Souls.

They hold *Pythagoras*'s Doctrine, believing the *Metempſycoſis*, or Tranſanimation,

Why invented by *Pythagoras.*

tion, or Paſſage of Souls into Beaſts, *viz.* The Souls of Drunkards, or Epicures, into Swine; the Luſtful and Inceſtuous into Goats and Dogs; the Diſſemblers into Apes, Crocodiles and Foxes; the Lazy into Bears, the Paſſionate and Cruel into Tygers, the Proud into Lions, the Blood-thirſty into Wolves, Ounces, Snakes; the Perjur'd into Toads, and the like; but the Souls of good Men, abſtemious, pitiful and courteous, into Kine, Buffaloes, Sheep, Storks, Doves and Turtles. *Pythagoras* invented this Fiction, only to perſwade Men that the Soul was Immortal, and to ſhew that there was a Puniſhment and Reward for Men after this Life.

Their Idolatry and Pagods.

Their Idolatry to Pagods (or Images of deformed Dæmons) is very obſervable: They place them in Chappels commonly built under the Bannian Trees (which the *Portugueze* call *Arbor de Rays*, or the Tree of Roots; Sir *Walter Raleigh*, *Ficus Indicus*; *Cardan*, *Ciba*; and the *Spaniards*, *Gorda*, in the *Weſt-Indies*) a Tree of ſuch repute among them, that they count it impious to abuſe it, either in breaking a Branch, or otherwiſe defacing it, and adorn it with Streamers of Silk and Ribband of divers colours. Their Pagods are of divers ſhapes, ſuch as Satan appears to them in, ugly-faced, with long black Hair, goggle Eyes, wide-mouthed, forked Beards, every ways as horrible as the obſcene forms of *Priapus.* To theſe Idols under theſe Trees, they pay their Devotion, Tyths, and Offerings, receive Unction and Sprinklings of divers coloured Powders, perform Ceremonies, notice being given them by a little Bell, repeat their Prayers, make Proceſſions, ſing and perform many Miſteries; and ſo numerous were their Idol-Temples grown before the *Turks* came among them, that almoſt every Village had a different Pagod, and many of them are ſtanding to this day. Two of the chief in *India* were at *Varicuo* near *Surat*, and at *Negricot*, where they are ſealed and paved with Gold, and yearly viſited by many thouſands of *Banyans*, who by way of Devotion, have uſed to cut out part of their Tongues for a Sacrifice, and thereby to ſpeak the *Sibboleth* the better ever after. In *Jagannot*, a Town in *Bengal*, is another of their Idolatrous Temples, where for ſeven days together, a Feſtival is yearly obſerved, when the Pagod is by the *Toguers* expos'd to publick view, and in triumph carried thro' the Streets in a Chariot with eight Wheels, drawn by above an hundred *Indians*, who flock thither in great multitudes for Devotion, and ſome of them out of zeal, caſt themſelves in the way, and are cruſhed to death, as a voluntary ſacrifice to the Devil.

Their Worſhip.

Their chief Idol-Temples.

Their Waſhing in *Ganges.*

At *Tanaſſa* ſometimes an hundred thouſand *Indians* go naked into *Ganges*, and bowing their Bodies, they throw the Water up with their Hands, as an Offering to the Sun, whom they worſhip. Other places of note are at *Bannaras* upon *Ganges*, *Eibarpore*, *Jallanexa*, *Elabas*, *Sibah*, and other places. Part of their Religion conſiſts in invocating Holy Men famed for their Virtue. Howbeit, the Cow is of moſt eſteem with them. They have the *Cyrenian* or *Ægyptian* Goddeſs for an Example, the Image of a Cow, which ſignified the Tillage, that preſerved them, by the Prudence of *Serapis*, i. e. *Joſeph*, from the memorable Famine mentioned in *Geneſis.* In Wars the *Cutteries* or *Radieas*, only call upon *Bemohem*, the Rich upon *Mycaſſar*, the Poor upon *Syer*, the Labourers upon *Gunner*, and the Married upon *Hurmount*, &c. Moreover they effect Pilgrimages to Rivers, eſpecially *Ganges*, becauſe they ſay *Bremaw* frequented it, and it has an Head in form of a Cow, which they worſhip for her fruitfulneſs, and in imitation of the *Ægyptian Apis.* They waſh often, and thereby ſuppoſe themſelves purified from all Sin. When they are ſick, they deſire their Mouths ſhould be waſhed with the Water of *Ganges*, which they value as much as if it flowed out of Paradice.

A Cow worſhipped.

Pilgrimages to Rivers.

Baptiſm.

In Baptiſm the Prieſts or *Bramins* anoint their own Children, and the *Banians* or Merchants with Oil, and cleanſe them with Water; but to thoſe of the prophaner ſort, as Men of War, and Mechanicks, they apply Water only with the Point of a Penſil to their Forehead, wiſhing that God would write good things there, to which the Company ſay *Amen.*

Their Marriages and Ceremonies uſed at them.

Their Marriages are at ſeven Years, but cohabit not till ten. If any die unmarried, they conclude him unhappy; ſo that oftentimes they marry them when dead, before they are buried; an Opinion probably borrowed from the *Hebrews*, who hold from *Gen.* 1. 28. *That the Unmarried have no Portion in the World to come.* The Marriage Ceremonies are not many nor frivolous: The Boy rides about the Town one day, and the Bride the next, attended with trains of Children of the ſame Age and Sex, with Kettle-Drums, Trumpets, and Pageants, being diſtinguiſhed from others by Coronets. The Bride has no Money-Portion, becauſe they hold it contemptible, only ſome Jewels and Dina's of Gold in her Attire.

The Wedding how celebrated.

The Wedding is thus celebrated: A Fire is put between them to ſhew the Purity and Heat of their Affections; a Silken String circles both their Bodies, as the Hieroglyphick of Wedlock; then a Linnen Cloath is put between them, in token, that till then they were unknown to one another in nakedneſs; this done, the *Brahmin* bleſſeth them, and prays that ſhe may prove as gentle and fruitful as a Cow; the Cloath is pulled away, and the String untied, and they are one anothers for ever. They never marry out of their own Caſts; for *Brahmins* marry the Daughters of *Brahmins*, *Cutteryes* the Daughters of *Cutteryes*, *Shudderyes* the Daughters of *Shudderyes*, and *Wyſes* the Daughters of *Wyſes*, and theſe in their ſeveral Trades, Taylers with Taylers, *&c.* and, contrary to the Cuſtoms of the *Mahometans*, their Wives live not under much ſubjection.

Their ſickneſs and death.

In ſickneſs they call upon *Marrawn*, the God of Mercy, and when they perceive a Man a dying, they open his Hand, and moiſten it with the Water of *Ganges*, which they count holy; and when he is dead, they waſh his Carkaſs, and carry it to the Water-ſide ſilently, and having uttered two or three Words to the Element, burn the Body with Sweet-wood and Spices, and having thrown the Aſhes into the River, think they have done their duty to the Dead, and depart well ſatisfied.

Mourning.

When this Ceremony is finiſhed, the Prieſt preſents the Son of the Deceaſed with a Roll of his dead Fore-Fathers, and bids him fulfil the Ceremonial Law of deploring ten days, in which time he is neither to uſe his Wife, laugh, eat Opium, or Betel, put on any clean Cloaths, or anoint his Head with Oyl, but that day-month yearly ever after, make a Feaſt, and pay a complemental Viſit to that River which drank his Father's Aſhes. Oftentimes the Wife to expreſs her love to her dead Huſband, burns her ſelf with his Body. They affect no ſecond Marriages, the *Rajea's* and *Wyſes* excepted.

Burning their Dead, and the Reaſons of it.

Now the reaſon why they burn their Dead, is either from an ancient Cuſtom recorded in Scripture, *Amos* 6. 10. or becauſe if the Body were buried, it would breed Worms, which (for ought they know) may ſtarve when the Body is conſumed, and that they look upon as an inexpiable Sin.

The *Cutterye.*

The *Cutteryes* aſſume a greater Liberty, for being Men of War, they ſcruple not to ſhed Blood, eat Fleſh, appear lewd; They are for the moſt part called *Raja's*, or great Men, and have 36 Caſts, of which all of them are deſcended. They have of a long time been Owners of *Indoſtan*, but of late *Aladin*, a Potent King of *Delly*, wreſted *Guzarat* from them, and moſt of the reſt hath been taken from them by the Poſterity of *Tamerlain.*

Raſhpoots.

At this day they call themſelves *Raſhpoots* (or Sons of Kings) and live lawleſs to the *Moors*; and the chief of them at this day are *Rana Redgee Mardout*, *Radga Surmul Gee*, *Raja Berumſha*, *Mahobet Chan*, *Radia Barmulgee*, *Redgea Ramnegur*, *Radgia Joob'*, *Jeſſingh*, *Tzetterſing*, and *Manſigh*, &c. All theſe being for the moſt part Mountaineers, are rude, and of a more warlike diſpoſition than thoſe civiliz'd *Indians*, who dwell in Cities, and inhabit the plain Countries, and value not the *Potans* or *Bulloches*, who are the moſt warlike of the *Mahometans.*

The *Wyſes.*

The laſt Sect or Caſt of the Gentiſes, are the *Wiſes* or Labourers: They are of two; firſt, the *Wiſes*, properly ſo called; ſecondly, the *Kolees*: The firſt agree with the *Bannians* in Abſtinence, the other of late eat any Creature that is fit for Food: The purer ſort of theſe is divided into 36 Caſts. All theſe four Caſts in time grew ſo impious, that God required *Ruddery* to ſend a blaſt of Wind to ſweep away that Generation, which he accordingly did, and all periſhed ſave a very few honeſt Men and Women: This was the ſecond confuſion.

Ducerat and *Ram.*

Soon after God gave them a King propagated from the Seed of the *Brahmins*, called *Ducerat.* He begat *Ram*, a Man ſo famous for Piety and high Attempts, that to this day his Name is honoured, inſomuch, that when they ſay *Ram, Ram*, they wiſh all good to you. In proceſs of time the World again grew abominable, and then *Ruddery* commands the Earth to open and ſwallow up the ungodly, a few only excepted to people the Earth. Then *Viſiney*, the Mediator of Mercy, aſcended into Heaven, and left *Ruddery* to over-rule the Iron Age, at the end of which he alſo ſhall be wrapt up into Paradiſe.

Viſiney the Mediator of Mercy.

Theſe four Ages they call *Curtain, Duauper, Tettayoe*, and *Coolee.* Touching the laſt Judgment, they hold it ſhall be more dreadful than the other, the Sun ſhall ſhed his Light, and the Moon look red as Blood, and the four

Elements ſhall maintain a dreadful fight, till all things fall into confuſion.

The Souls of good Men *Ruddery* ſhall tranſport into Heaven, but the Wicked ſhall periſh; but the Bodies of either ſhall never riſe again, for they believe not a Reſurrection. The *Bramins* honour Angels, keep a *Monday*-Sabbath, love Chaſtity; or if they marry, ſeldom repeat it. Forbear Swearing and Blaſphemy, ſhun Pleaſures, drink Water, offer Money in all Sacrifices, drink not in a Pot, but pour into their Mouths at a diſtance, touch no Unclean; which Rites ſhow, that tho' they pretend that their *Shaſter* or Book of their Law came from God, yet it is patched up from Tradition, the Holy Scripture, *Jewiſh* and *Gentile* Hiſtories.

No Reſurrection.

The *Perſees* deſcribed.

About *Surat* and *Guzurat*, there are another ſort of *Gentiles*, whoſe Religion and Life is different from the former, called *Perſees*, who are a People deſcended of the *Perſians*, and upon the Death of Valiant *Jezdgird* the *Perſian* King, who died *Anno* 635. fled into *India* to avoid *Mahometaniſm* and *Circumciſion*, to which they feared that they ſhould be forced to ſubmit by the *Turks*, who then under *Omar*, ſecond Caliph after *Mahomet*, ſubdued *Perſia*. They came into *India* in five Junks from *Jaſquez*, and arriving at *Surat*, upon a Treaty with the *Rajas* and *Banians*, obtained Leave to ſettle themſelves, and living peaceably, to exerciſe their Religion; which they had derived from one *Guſtaſp*, who lived 500 Years before our Saviour. [The Account of it our Author takes not only from his own Obſervation, but * from the Account of Mr. *Lord*, a Miniſter, who reſided many Years in the Factory of *Surat*, and carefully ſelected their Opinions, as they are written in their *Zundavaſtaw*, or Law-Book to this purpoſe.]

* Printed 1630.

Zertooſt their Lawgiver, his Birth and Life.

Such time as *Guſtaſp* (who was the fourteenth King of *Perſia* from *Kuymarraz*, who is by ſome thought to be *Noah*) reigned in *Perſia*, *Eſpintaman* and *Dodoo*, two poor People of *China*, with their Son *Zertooſt*, whom the King of *China* thought to deſtroy, becauſe he feared ſome great alterations in his Kingdom from him, whoſe Birth had been attended with ſo many rare and fearful Dreams, fled into *Perſia*, and there *Zertooſt* giving himſelf up to Meditations, an Angel appeared unto him, and asked him what he would have? He replied, The preſence of God, that he might receive from him his Will and Directions how to Inſtruct his Nation in them. His Deſire was eaſily granted, and his Body being purged, and his Eyes ſealed and wrapt up, he was taken up into the Heavens, and preſented before the Supreme, who was arrayed with ſuch refulgent Glory, that he could not behold his Majeſty, till he had Angels Eyes put into his Head. There he received his Laws, written in a Book called *Zundavaſtaw*, uttered by the Almighty; ſuch Laws and Secrets, as are ſome of them not to be promulgated, and having Worſhipped, he took the *Zundavaſtaw* in his Left Hand, and ſome Cæleſtial Fire in his Right, and was again ſet down upon the Earth by his good Angel *Bahaman Umſhauſpan*. *Zertooſt* being again returned to the Earth, armed himſelf againſt all temptations, and travels to publiſh his Laws. Satan ſeeing this, with envy laboured to ſeduce him, telling him, That the other Angel had deluded him: That God was in no wiſe pleaſed with his deſign: That his Travels to reclaim the World would be in vain, and his Book was ſtuffed with Lyes; but if *Zertooſt* wou'd depend upon him, he would furniſh him with all Delights and Honours, give him a power to work Miracles, ſo that he ſhould be worſhipped as God. *Zertooſt* perceiving this Tempter to be *Lucifer* bad him avoid, and told him, That as by his Impiety he had himſelf loſt Heaven, ſo through Malice he was deſirous to draw others into the like Damnation, and that his Book ſhould condemn him; whereupon the Fiend vaniſhed. *Zertooſt* then coming to his Parents, and declaring what had befaln him, *Dodoo* his Mother publiſhed her Dreams and Viſions about his Conception, and *Zortooſt* preached his Law, which the People admiring, *Gaſtaſp* the *Perſian* King heard of them, and deſired to ſee the Man, and after ſome Diſcourſe with him embraces his Doctrines; and tho' the Arch flamen oppoſed them, yet he confirming them with Miracles, the King reſolved to adhere to his Religion, and his *Zundavaſtaw*, or Law, was opened and accepted.

His Law and Cæleſtial Fire.

Zertooſt tempted.

The Contents of the *Zundavaſtaw*.

The *Zundavaſtaw* is divided into three Parts: The firſt treats of Judicial Aſtrology, called *Aſtoodeger*, and is committed to the care of thoſe they call *Jeſopps*, *i. e.* Sages. The ſecond contains Natural Philoſophy, and is ſtudied by the *Hackeams* or Phyſicians; and the laſt is compounded of Religion, named from the Author of it. The *Zertooſt* is kept by the *Daroo's* or *Predicants*, and conſiſts of Precepts for the Archbiſhop, Clergy and Laymen. The Precepts given to the *Behedins*, or Laymen, are five: 1. To cheriſh Shamefacedneſs as a Vertue, that keeps Men from all ſorts of ugly Vices, as Pride, Revenge, Theft, Adultery, Drunkenneſs and Perfidiouſneſs. 2. To cheriſh fear. 3. To premeditate what they have to do, that they may reject the bad, and obſerve the good. 4. That the firſt thing they do every day, be to remember God's love, and thereby quicken their gratitude. 5. To pray daily to the Sun, and nightly to the Moon, as the two great Lamps and Witneſſes, which be moſt oppoſite to the Devil, who delights in darkneſs.

The Precepts for the Laity.

The Laws for the Clergy.

The Laws enjoyn'd the *Herboords* or Clergy are eleven, (nor is the practiſe of them to excuſe them from thoſe of the Laity) 1. To be conſtant to that form of Worſhip preſcribed in their *Zundavaſtaw*. 2. Not to covet what belongs to another. 3. To abhor Lyes. 4. Not to be Worldly minded. 5. To learn the *Zundavaſtaw* by heart. 6. To keep themſelves free from Pollution. 7. To forgive Injuries. 8. To teach the Laity how to behave themſelves in all Religious Worſhip. 9. To licenſe Matrimony. 10. To be frequent at Church. 11. Upon pain of eternal Fire to believe in no other Law than their own, which they are neither to add unto nor diminiſh.

The Rules for their Pope.

The Rules given the *Diſtoore*, or Pope, (for they have never more than one) are thirteen more than the reſt, becauſe as he precedes the reſt in Dignity, ſo is his Life to be moſt ſtrict, for he is obliged to obſerve not only his own, but alſo the Precepts of the two former degrees. 1. He muſt not touch any profane thing, no not the Laymen, or *Darooes* of his own belief, without waſhing, or purifying after. 2. He muſt do every thing that has relation to himſelf with his own hands, as planting, ſowing, cooking, &c. 3. He is duly and truly to receive the Tenth of all the Laity poſſeſs. 4. He is to avoid all Vain-glory, and with his great Income to exerciſe Acts of Charity. 5. His Houſe is to joyn to the Church, ſo as that he may be often there, and go and come without being taken notice of. 6. His waſhings are to be more frequent than others, his food purer; and he is to refrain his Wives company during her pollution. 7. He is not only to be perfect in the *Zertooſt*, but of the greateſt knowledge in Judicial and Natural Philoſophy. 8. That his Diet be moderate. 9. That he fear none but God. 10. That he tell every Man his faults. 11. That in Viſions he diſtinguiſh between falſe and true, and give a right Judgment about them. 12. That whenſoever God manifeſts himſelf to him by night Viſions, he ſhould admire his Goodneſs, and keep them ſecret. 13. That he always keep the Fire which *Zertooſt* brought from Heaven alive, that it never go out, till Fire deſtroy all the World.

Their Rites and Ceremonies about Meats.

They have certain Rites and Ceremonies alſo by which they are differenced from other ſorts, particularly about their Meats, Faſts, Idolatrous Worſhip of Fire, Baptiſm, Marriages and Burials. They are allowed to eat any ſort of Meat almoſt; nevertheleſs, that they may not diſpleaſe the *Banians* and *Moors*, among whom they live, they abſtain from eating Beef and Hogs-fleſh, but the *Raſhbeots* eat the laſt. They ſeldom feed together, leſt they ſhould participate in one anothers impurity, but every one has his own Cup; and if any one of his own Caſt chance to uſe it, he waſhes it three times, and forbears to uſe it a while after.

Feſtivals.

They obſerve ſix ſolemn Feſtivals yearly, in memory of the ſeveral parts of the Creation, *viz.* *Meduſerum* on *Fere*, or *Feb.* 15. 2. *Petuſaban*, *Apr.* 26. 3. *Tatrum*, on *May* 26. 4. *Medearum*, *Aug.* 16. 5. *Homeſpetamadum*, *Oct.* 30. And 6. *Meduſan*, *Dec.* 11. The ſecond is kept in memory that God made Hell, to be a place for the Devil and his Angels, to put Men in mind of avoiding that evil that will bring them thither.

Faſts.

After every one of theſe Feaſts, they obſerve a five days Abſtinence, eating but only one ſparing Meal every day; and whenſoever they eat any Fowl or Fleſh, they carry ſome part of it to the *Eggaree*, or Temple, as an Offering to appeaſe God, becauſe for the Suſtenance of their Lives they are forced to take away the Lives of thoſe his Creatures.

Fire-worſhip.

As to their Worſhip of Fire, 'tis in memory of that Fire which they Fable that *Zertooſt* brought down from Heaven, in which they imitate the Veſtals, or rather the Jews, who were commanded, *Lev.* 6. 13. to preſerve continually the Fire that came down from Heaven upon the Altar, and never let it go out. This ſort of Worſhip was very anciently uſed in *Perſia*, and 'tis probable both the *Romans* and *Greeks* had their Veſtal fire from them. In *Perſia* there are ſtill many *Pyree*, tho' *Heraclius* the Emperor deſtroyed many of them in his Wars with *Ceroes*, in which Army *Mahomet* ſerved; and they ſay, ſeveral of them have not been extinct for a thouſand Years.

What Fire they Worſhip.

In *India* the *Perſees* have an *Eggaree*, or Temple at *Nancery*, whoſe Fire has continued this 200 Years. This their God-fire is not compoſed of common Combuſtibles, as Wood, Straw, Coals, or the like, nor blown by any Bellows, or breath of Man, but compounded of ſparks flying from an hot burning temper'd Steel, and kindled by a Burning-Glaſs, or Lightning from Heaven. If the Fire have need of cheriſhing, the *Diſtore*, or in his abſence the *Heerbood*, at 10 or 12 foot diſtance, with an Aſſembly of Laymen, ſurround it, and the Prieſt having added ſome ſort of fuel, returns to the People, who fall to their Worſhip, beſeeching them to give due reverence to it, as a part of God, who is of the ſame Subſtance, and love all things that reſemble it, as the Sun, Moon and Stars, yea, and common fire, which they have ſo Divine an eſtimate of, that they hold it an impious thing to ſpit upon it, throw water into it, or put it to any vile uſe, and reverence Wood, and all ſuch things as give it life; and if by chance they caſt any filthy thing into it, they pray to God that he would forgive them.

Baptiſm.

Their Baptiſm, or naming their Children, is thus performed: So ſoon as a Child is born, they ſend for the *Daroo*, or Churchman, who being informed preciſely of the hour of the Childs birth, caſts the Nativity, and with the conſent of the Parents names the Child, and then haſtning to the *Eggaree*, or Temple, the Prieſt having put ſome Water into the Bark of a Tree, called *Holm*, (which they ſay *Zertooſt* bleſſed for that end) pours ſome Water on the Child, and prays, that by it it may be cleanſed from all impurity.

Confirmation.

At ſeven Years old the Child is Confirmed by the *Daroo*, and taught to ſay his Prayers over the fire, yet with a Cloth over his Mouth, that his breath may not defile that holy Element. Then the *Daroo* gives him Water to drink, a Pomegranate-Pill to chew, waſhes him in a Tanke, cloaths his Body with a fine Shuddero, or Caſſock, and ties a Girdle of Camels-hair, called Cuſhee, woven by the Prieſt's own hands, like Inkle, upon his Loins, (which he is ever to wear about him) and then utters this Prayer: 'That God make him a true *Perſee* all the days of his life, of which theſe Garments are the Signs. That he may believe no Laws but *Zertooſt*'s. That he may continue a Fire-worſhipper. That he may eat of no Man's Meat, nor drink of any Man's Cup, but in all things obſerve the Cuſtoms and Rites of the *Perſees*; and ſo he is ever after reputed a true Believer.

Their Marriages of five ſorts.

Their Marriages are diſtinguiſhed into five ſorts, 1. *Shaulan*, when two young Children are married by their Parents without their own knowledge. This they attribute much to and hold, That if either of them die in this eſtate, they go to Heaven. 2. *Chockerſun*, which is the Marriage of a Widow. 3. *Codeſhebaraſan*, which is, when the Woman chuſeth her Husband. 4. *Eckſan*, when a dead Body is married to a Perſon alive. 5. *Coterſun*, when a Father adopts his Daughter's Son, that he may marry him, as his own; for they account that Man unhappy, who has not a Son to marry.

The Rite of Marrying.

The Rite or Ceremony is thus performed: The Parties agreed being met in a Houſe, (for they marry not in their Churches) are placed upon a Bed together, and over-againſt them two Churchmen, with each Rice in their hands, who put their finger firſt on the Bride's, and then on the Bridegroom's Forehead, and ask them, Whether they will have one another for Husband and Wife? To which, when they have anſwered *Yea*, the Man promiſes to enfeoff her in a certain number of *Dina's*, (which are each of 30 *s.* value) and the Bride replies, That ſhe and all hers is his; and then the Prieſts ſcatter the Rice on their Heads, praying, 'That they may be as fruitful as Rice, live in Unity of Mind for many Years in Wedlock. Then the Woman's Parents pay her Dowry, and the Marriage-Feaſt is celebrated for eight days with jovial Merriment.

Burials, 1. The Place. Vid. the form of it, Fig. 10.

In their Burials two things are obſervable, 1. The Place where they bury their Dead. They have two Tombs built of a round form, a pretty height from the ground, and ſufficiently capacious and large; within they are paved with Stone ſhelving, and in the middle is an hollow Pit, to receive the Bones conſumed and waſted. About by the Walls are laid the Carkaſſes both of Men and Women naked, expoſed to the Air and Sun, and left to be torn and mangled by ravenous Birds in an ugly manner (for they neither burn nor bury their Dead.) The two Tombs are at ſome diſtance one from another, and the one of them is for ſuch as have led a commendable Life, but the other is for ſuch as are notorious for ſome Vice, or infamous Action.

2. The Ceremonies uſed in burying their Dead.

2. The Ceremonies uſed in their Burials: When any one is ſick unto Death, the *Herboord* or Churchman is ſent for, who prayeth with the ſick Man in this manner; 'O Lord, thou haſt commanded that we ſhould not offend, but this Man hath offended; and that we ſhould do good, but this Man hath done evil; and that we ſhould worſhip thee, but this Man hath neglected it; Lord forgive him all his Offences, Evils and Neglects. When any Perſon is dead, they firſt put his Body into a Winding-ſheet, and the *Herboord* or Churchman appoints his Naceſſelars or Bearers, who are to carry his Body upon an Iron Bier to the Burying-place. All the way that the Corps is carried, the Kindred, who attend it, beat upon their Breaſts, but with little noiſes, till they come within 50 or an 100 paces of it, where the *Herboord* meets them, who is uſually attired with a yellow Scarf, and wears a thin Turbant on his Head. The Neceſſelars, or Bearers, bring it to a little Shed, and then the Churchman ſtanding at a diſtance from it, utters the words of Burial in this manner: 'This our Brother, while he lived, conſiſted of the four Elements, and now he is dead, let each take his own, Earth to Earth, Air to Air, Water to Water, and Fire to Fire, and then pray to *Sartan* and *Aſud*, who have command (as they believe) over *Lucifer*, and all the evil Spirits, that they would keep the Devils from their deceaſed Brother, when he ſhall repair to their holy Fire to purge himſelf, as alſo that God would pardon his Sins, &c. And theſe Prayers they continue for three days, Morning, Noon and Night, becauſe they believe that the Soul wandreth upon the Earth thoſe days, and in them is determined to Reward or Puniſhment. When theſe days are expired, they make a Feaſt, and ſo conclude their Mourning.

The form of Burial.

Indoſtan deſcribed, 2. in its Cities and Regions.

The Country of *India*, which is ſo called from the River *Indus*, that bounds it on the Weſt, is one of the mightieſt Empires of the World, being the greater part at leaſt of *Aſia*, if not, as ſome ſay, a third part. *Strabo* ſays, *Lib.* 55. that it had 50000 conſiderable Towns. *Ganges* divides it into two parts, which are therefore called *Intra* and *Extra*, within and without *Ganges*. The Soil is for the moſt part very good, except where the Sun exhales its vertue, and that laſts but three Months; for the reſt of the Year, by reaſon of the long Nights, frequent ſhowers and breezes, the Trees, eſpecially in the Southern parts, are ever green, and hung with Fruit, which ripen twice a Year; and for Minerals of the beſt ſort, Gems of richeſt luſtre, Silk and Spices of greateſt uſe and value, no Country in the World yields ſo great plenty. It abounds with Cattle of moſt kinds; Arts are in perfection, as they are in *China*. It has excellent Horſes and Elephants, larger and more docible than thoſe in *Africk*. Innumerable Iſlands ſurround it. It has an abundance of fair Towns, which furniſh the World with all ſorts of Merchandize almoſt. Its Mines and Treaſure is infinite. It is a vaſt, but well-compacted Monarchy, extending from 20 to 43 deg. of Northern Latitude. It is 2000 Miles ſome ways in Diameter, and above 5000 Miles in Compaſs. It has 38 large Provinces, which were Kingdoms of Old, and of which the moſt conſiderable are *Guzerat*, *Pengab*, *Malua*, *Bengal* and *Decan*, which together comprehend 30 large Cities, and 3000 Walled Towns and Caſtles for natural Defence, which ſeem impregnable. *Noah* 'tis thought firſt inhabited this Country, being near the Mountains of *Ararat*, tho' his Name is changed into *Bacchus*, or *Boacchus*. It was ſo well inhabited in *Alexander*'s days, that when that Conquerour overthrew *Porus*, and entred his Country, he ſaid, He found greater Cities, and more ſumptuous Buildings there, than he had met withal in any part of the World beſide.

Its Product.

Its Extent.

Noah dwelt in it.

The Emperor's Revenue.

The Emperor's Revenue is counted 50 Crow of Roupies, every Crow containing a Leck, which is an hundred thouſand Roupies, value 2 *s.* 3 *d.* and ſometimes 2 *s.* 6 *d.* of which *Cambaia*, in which is *Surat*, is ſaid to pay 200000 *l.* Sterling; but his Charge is ſutable to his Income, maintaining 300000 Horſe, and 2000 Elephants, beſides the Sums he pays to his Lieutenants of Provinces, and Governours of Towns and Forts.

His Power and Strength.

The Power of it appears by the Army which *Badur*, King of *Cambaia*, carried to aſſiſt the King of *Mandao* against the Tartar *Mamud*, being no leſs than 130000 Horſe, 400000 Foot, 200 Elephants and 500 Wagons, which carried as many Cheſts full of Treaſure to pay his Forces. He is in continual Wars with his Neighbours.

The Pedigree of the Mogul from Cingis-Chan.

The Deſcent or Pedigree of the Moguls, or *Magors*, ſo called either from the *Mogli*, or the *Brachmans* Country, called *Gens Magorum*, is reckoned from *Cingis-Chan*, or *Cam*, a Prince of *Tartary*. He was (as *Haithon*, and other his Contemporaries ſay) by Profeſſion a Blackſmith, but being choſen General of ſome of the chief of the *Hoords*, he with a Troop of *Mogli*, one of them, marched South, and ſubdued the Countries as far as the Mount *Belgian*, part of *Imaus*, and ſo became King of South-Eaſt *Tartary*, and ſignalized himſelf by many Victories againſt the *Ruſſians*, and other *Tartars*.

His Sons.

Manchu-cawn.

Ulakuc cawn.

His Sons and Succeſſors.

Habkay-cawn.

Argon-cawn.

He died at *Ketoa-Katan*, *A. D.* 1228. and of their Hegira 608. and divided his Conqueſts between his four Sons, *viz.* *Tuſha-chan*, to whom he gave *D'haſt*, *Capecha*, *Rhoz*, and *Abugharr*. *Chagatay-cawn*, who had *Mairrenabar*, *Aygor*, and *Chorazan*. Theſe two died without Iſſue, and their Seigniories deſcended to the third Brother, *Ogg* or *Ogtaw-chawn*, who had before from his Father part of *Bactria*, and Mount *Caucaſus*. He gained part of the *Perſian* Monarchy, as far as *Babylon*, but dying in 1552. his Son *Gayuc-chan*, an Infant under the Tuition of *Minihonna* his Wife, ſucceeded him, but he living not above three Years, the Sovereignty fell to the younger Brother *Tuli-chawn*'s Son, called *Manchu-chawn*, whoſe Father was Heir only to *Cingis-chan*'s Jewels and Treaſures. This Prince perceiving divers Conſpiracies againſt him, tho' armed with Integrity and a Juſt Title, he contracts an Alliance for Defence with his neighbouring Princes, to whom he entruſted the Command of ſeveral Provinces of his Empire, on condition, That they ſhould hold of him in chief, and be at all times ready to aſſiſt him; but not living to try their Fidelity, he named *Ulakuccawn*, one of them, for his Succeſſor. He delighted in Arms, and having quieted all Domeſtick Broils, he conquered *Babylon*, a great part of *Arabia*, and *Aleppo* and *Damaſcus* in *Syria*, which he ruled with great Prudence to the Year 1270; when finding Death approaching, he called his three Sons, and having exhorted them to Unity, divided his Lands among them, *viz.* To his Eldeſt Son *Habkay-cawn* he gave the Provinces of *Hierac*, *Mozendram* and *Korazan*, which comprehend the ancient *Media*, *Parthia*, *Hyrcania*, *Bactria* and *Sogdiana*: His ſecond Son *Hya-ſhawmet*, had *Aro* and *Adarbayon*, part of *Armenia* and *Iberia*, which has *Salmas*, *Coy*, *Nazivan*, *Marava* and *Merent*, Cities of Note in it. To *Tawdon-Kawn*, were bequeathed the Seigniories of *Diarbecke* and *Rabaion*, or *Meſopotamia*; and that part of *Syria* which lies on the Banks of *Euphrates*. To his two Sons by a ſecond Venter, *Nicador-Oglan*, and *Targabe-cawn*, he gave Money-Portions. *Habkay-cawn* died the ſame Year at *Hamadan* in *Perſia*, and left his young Son *Argon-cawn* to the care of his Brother *Nicador-Oglan*, who ſeeking the Life of his Pupil, obliged him to ſave himſelf by flight. *Nicador* eſtabliſhes himſelf in his Nephews Right by the Name of *Hameth-cawn*, but Divine Vengeance purſued him ſo faſt, that he died Mad in 1275. and was buried at *Caſhan*, and *Argon-cawn* returning from Baniſhment recovered his Right; and being joyfully accepted by the People, was crowned by the Name of *Tangadar-habkay Zedda*, *i.e.* Son to *Habkay-cawn*. This Man ruled five Years tyrannically, not only Maſſacring *Nicador*'s Sons and Relations, but many other innocent Perſons; for which he became odious to all his People, who ſtirred up the *Parthian* againſt him, by whom being overcome in a Set-Battle, he was upbraided with his Cruelty, greatly tormented, and his Belly being ript open, his Guts were given to the Dogs. To him ſucceeded his Brother *Giviator-chan*, who in the fourth Year of his Reign was ſlain by *Balduc-chan* his Uncle, who after five Years Reign died without Iſſue.

Badu.

Gazun-chan.

Badu the Son of *Targabe*, youngeſt Son of *Ulakucchan*, came to the Throne with the Aſſent of the whole Nation, and ſo well anſwered their Affections, that he was beloved, and honoured above all that were ever before him, but declaring himſelf a Chriſtian his Peoples love abated, and many Treaſons were hatched againſt him through Satan's malice; ſo that he was ſlain at laſt (or rather Martyred) by *Gazur-chan*, Couſin to *Tengadar*, whoſe treachery God permitted ſpeedily to be revenged, for when he leaſt ſuſpected Treaſon, he was wounded to Death in *Carbin* by his own Houſhold Servants, and no cauſe is aſſigned in Hiſtory for their ſo doing, but it ſays his Body lay for a long time unburied. This happen'd *A. D.* 1305. Heg. 685.

Aliaptu-Abuſaid.

His Brother *Aliaptu Abuſaid* (or *Mahomet Ben-Argon*) obtained the Throne by his Valour, and to him ſucceeded *Hobaro-Mirza*, or *Abuſaid Bahador-chan*, who ſpending his time in Lewdneſs, and dying without Iſſue, his Kingdom became a Theatre of War, no leſs than 30 Perſons contending for the Sovereignty at once.

Tamerlane.

Things being in this Confuſion, the People were forced to look out for help, and invited *Tamerlane*, Lord of *Samarchand*, a Prince famous for Juſtice and Succeſs, againſt the *Samiatique Tartar*, *Precopenſe* and *Chineſe*, with Gifts and Remonſtrances of their miſery. The *Seythick* Prince promiſes them ſpeedy Aid, and accordingly with 50000 Horſe enters *Perſie*, and having conquered the Tyrants, ſettled them in Peace within three Months. The People, thankful for this Deliverance, urged *Tamerlane* to accept the Crown, which he did, and managed it honourably 27 Years, in which time he ſubdued all *Aſia*, took *Bajazet* the *Turk*, whom he put in an Iron Cage, and conquered more Kingdoms and Provinces in eight Years, than the *Romans* did in eight hundred, *viz.* From *Samarchand* to *Thrace*, which was the extent of the *Macedonian* Conqueſt.

His Succeſſors.

This great Monarch of the *Aſiatick* World was yet forced to ſubmit to Death, and was buried *Anno* 1405. at *Anzar* in *Cathayo*, leaving his Sons and Grandchildren to Inherit, *viz.* *Jean Gwyr*, *Hamath-Cheque*, *Myram-Sha*, and *Myrza-Sharocke*, by ſome called *Soutochio*, and *Letrechio*. *Jean Gwyr* died much about the ſame time with his Father in *Paleſtine*, leaving two Sons, *Mamet* Sultan, and *Pyr-Mahomet*, who was made Governour of *Gazuchen* and *Indeſtan* by his Grandfather, and ruled over them, till he was perfidiouſly ſlain by *Pir-Ally*. *Hamethcheque* was ſlain in *Laureſtan*, in his Fathers laſt Battle with *Bajazet*. *Myram-ſha* was ſlain in fight, *An.* 1480. by *Chara-Iſſuſt* the *Turk*, in *Aderbayon*, but left Iſſue Sultan *Mahumed*, Father of Sultan *Abuſaid*, from whom the preſent Great *Mogul* is lineally deſcended.

Myrza-ſharcc.

Babur.

Hamayon.

Myrza-ſharcc, the youngeſt of *Tamerlane*'s Sons, ſurvived the reſt, and held moſt parts of the Empire till his Death, which happened *An.* 1447. when he left *Aderbayon*, or part of *Media*, to *Myrza Jeon-ſha*, Son of *Chara-Iſſuſt* the *Turk*, who was new entred *Perſia*. *Myramſha*'s Iſſue to this day enjoys the *Tartarian* Empire, and tho' it has been diſturbed much by the Invaſions of the *Perſian*, and Broils among themſelves, yet flouriſhing under the Reign of *Babur*, it made ſome attempts upon the Conqueſt of *India*, and tho' that Prince could not compleatly ſubdue it, yet his Son *Hamayon*, by the help of *Tamas* the *Perſian* King, made himſelf a perfect Maſter of it, *A. D.* 1550. Heg. 960. He died not long after by a fall down Stairs, and was buried at *Delly*.

Ecbar, King of Indoſtan, his Reign.

His Conqueſt.

He built the Caſtle of Agra.

His eldeſt Son *Abdul-Fetta-Geladin-Mahomet*, called *Ecbar*, who had been educated under the care of *Byrangano-chawn*, a Perſon of great Parts and generous Endowments, ſucceeded him by the help of his Tutor, and his Son *Chawn-channa*, and was crowned with all due Ceremony at *Delly*. From his very entrance on his Throne, he bent all his Endeavours to enlarge his Territories, and thereby proved himſelf to be the great Grandſon of the Victorious *Tamerlane*. He revenged himſelf in the firſt place of *Hemow*, a turbulent Prince, and gained his Province, and then by *Ally Collichan* ſubdued *Doab*, or *Sanbal*, a Province ſurrounded by *Jeminy* and *Ganges*, the nobleſt Rivers in *India*. At that time *Byſangano-cawn*, the King's Tutor, being tired with the troubles of the World, and Old Age, begged Leave of his Prince to ſpend the reſt of his time at *Mahomets* Sepulchre in Contemplation, but in his Way he was ſlain by an obſcure Slave, whoſe Father he had before put to Death, and by his Son *Abdal Radgee*, and the reſt of the afflicted Company, brought back to *Agra* to be buried. *Ecbar* laments his Death, at leaſt ſeemingly, (for by ſome he is ſaid to have been an Actor in it) and to divert his grief, he pulls down the Caſtle of *Agra*, which was then built of Mud, and rebuilt it of durable Stone well poliſhed, and much larger, being made ſo fine and ſtrong, that it admits ſcarce of any compariſon in *Aſia*, and is ſo ſpacious, that it takes up three Miles almoſt in Circuit, being built upon the Banks of *Jeminy*, compaſſed with a Stone Wall, Moated, and ſo to be entred by many Draw-bridges, having four ſtrong Gates, and ſome Bulwarks and Counterſcarps to make it Defenſive.

Agra deſcribed.

The Caſtle of Cytor taken by Ecbar.

Agra lies Eaſt of *Surat* 755 Miles, in the Navel of *Indoſtan*, and is the Empreſs of all the Cities in the *Mogul*'s Territories. It is ſituate in 28 Deg. 38 Min. North Latitude, and is Watered by the *Jeminy*, which runs from *Dely* hither, and mixing with the *Ganges*, flows into the Gulph of *Bengal*. It is in form of an Half-Moon like *London*, the Streets are many, long and narrow, but very naſty. It is 7 Miles about, part Walled, and the reſt fenced with a Ditch. *Radgee-Rana*, a noble and potent Prince of *India*, deſcended of King *Porous*, loſt his ſtrong Caſtle of *Chytor* to him upon this Occaſion. *Zemet Padſhaw*, one of *Ecbar*'s Captains, fled to *Radgee* upon a diſcontent, and was entruſted by him with an Important Garriſon, from whence he made many Inroads into *Gazurat* to vex and provoke *Ecbar*. This was a fair Occaſion for *Ecbar* to ſecure himſelf, and invade *Radgee*'s Dominions, and thereupon marches againſt *Zemet* with 50000 Horſe; ſome Months he attacked the Fort by force in vain, which obliged him to undermine it, and blow up the Walls, which he did ſo effectually as to make a breach, at which he himſelf, and 20000 Men, immediately entred, driving *Zemet* into ſo much deſpair, that he gather'd his Family to him into one place, and burnt himſelf with them, but took the Fort which *Aladin* had endeavoured 12 Years in vain; a Victory ſo great, that *Ecbar* cauſed it to be Engraven at *Agra*, which is ſtill to be ſeen in remembrance of it.

Ecbar ſuppreſſes a Rebellion raiſed by his Brother, and enlarges his Dominions.

Ecbar had no time to rejoyce at this Victory, tho' ſo ſignal, becauſe immediately upon it he received Letters from *Raja Bagwander*, Viceroy of *Labor*, that *Mirza, Mamet Hegze* his Brother, with 30 thouſand Horſe of *Kabul*, had ſeized his Country. *Ecbar* delays no time, but ſo ſuddenly offers himſelf to the Enemy to give him Battle, that *Mahomet* was ſurprized, and leaving his Camp, it became a prey to *Ecbar*'s Army. This Occaſion drew the King's thoughts to attempt the Conqueſt of other places, and going himſelf to *Pang-Ob*, he ſent *Badur-kawn*, *Allekooli-cawn*, and *Zemaen*, againſt the *Patanians*, whom they vanquiſhed at *Doab*, *Sambel*, *Lacknown* and *Jompore*, and got all the Provinces to the *Mogul*, between *Ganges* and *Ttatſa*; but being puffed up with theſe Conqueſts, they reſolved to ſet up from themſelves, and ſubdue all *India* for themſelves. *Ecbar* was acquainted with this deſign by his Mothers Letters from *Agra*, and with ſpeedy Marches ſo ſurprized them, that they fled at his approach; but being taken, *Allekooli-cawn* was trampled to Death by Horſes, and *Badur-cawn* Strangled at *Ecbar*'s Command.

Mandee a Prophet.

Things being thus a little ſettled, *Ecbar* fancies that a Pilgrimage to *Aſmeer*, to Invocate *Mandee*, a Reverent Scholar of *Mahomet*'s, might procure him Male-Iſſue, and accordingly performed it, altho' 200 *Engliſh* Miles, and there barefoot entreats *Mandee* for Children. This Prophet is of great Fame in thoſe Parts, and through the Liberality of ſome devoted Princes, lies there Entombed in a ſtately Monument, graced with three fair Courts; each of which is paved with Stone, and the outſide, after the *Perſian* Mode, is plaiſtred and poliſhed in *Moſaick* Order.

Aſmeer.

Aſmeer lies in 25 Deg. 15 Min. Northern Latitude, the Caſtle is ſeated upon an high Hill, and City lies below it; the Houſes are well built, and the Walls are of ſolid Stone, but not of great ſtrength.

Godah.

Not far from it is *Godah*, once the Seat of the Valiant *Raſhboot* Princes. The Country is large and fruitful, and affords the Ruins of many ancient Magnificent Buildings, which Time has buried in Duſt. Theſe *Ecbar* had added to his Empire; and now having ended his Oblations, he viſited an holy *Derine* in his return, named *Siet Selym*, a Man in great Repute among the People,

Siet-Selim's Prophecy.

who took it for ſo great a favour, that he foretold that the *Mogul* ſhould have three Male Children in a ſhort time, as it came to paſs. Upon this account he named his firſt-born *Selym*, (who was afterward *Mogul*, and called himſelf *Shaw-Selym*, and to whom Sir *Tho. Roe* was ſent Embaſſador) the other two were named *Chan-Morad*, or *Amurath* and *D'haenſha*, or *Daniel*. The Propheſy was ſo grateful to *Ecbar*, that in gratitude he erected a very magnificent Moſque in the Town he lived, then called *Tzicherin*, or *Sycary*, and having Walled it in, and enlarged it, he built himſelf a Palace in it, and a Bazar for Trade, as noble a one as any in the Eaſt, and intending to make it the Seat of the Empire, he called it *Fettipore*, *i. e.* a place of Pleaſure; but after finding the Water unwholſome, he forſook it, and from that time it fell to decay, and now lies in Ruins. It is 18 Miles diſtant from *Agra*.

Fettipore.

Hoſſen's Rebellion.

While *Ecbar* was thus buſied at *Fettipore*, News was brought him that another Rebellion was began in *Guzurat* by *Ebrahim Hoſſen*, *Mirza Cawn*, *Mahomet Hoſſen*, and *Joon Cawn*, who had Forraged as far as *Baroch*, and were marching to *Amadabad* to make a prey of that Wealthy City.

Amadabad.

Amadabad ſeems to be the *Amacaſtis* of *Ptolemy*, and *Amadaviſtis* of *Arrian*: It takes its Name from *Hamet* the King, who in the Year of *Mahomet* 275, enlarged and beautified it. It lies in 23 Deg. 18 Min. Northern Latitude, and is at preſent the Metropolis of *Cambaia* or *Guzurat*. It is watered by a ſweet River, and circled by a ſtrong Wall, well and orderly built, with pretty Towers, and twelve Poſterns, which none are allowed to go through without a Paſs. The Streets are many, pretty large and comely, and their Shops are well ſtored with Aromatick Gums, Perfumes and Spices, Silks, Cottons, Callicoes, and choice of *Indian* and *China* Rarities, which are ſold here by the *Banians*, who are the moſt numerous Inhabitants. The Bazar is of moſt Note, being rich and uniform, and the Caſtle is ſtrong, large, and moated, being the Habitation of the *Cambaian* Governour. The Houſes are generally of Sun-burnt Bricks, low, but large and terraſſed. Near it is the *Mauſoleum* of a certain School-Maſter, whom King *Sha-Recr* loved ſo dearly, that he ſought to render him Immortal by this ſtately Monument. The Building is arched, and the Pavement is of well poliſhed Marble. It hath three Courts, and in one of them are 400 *Porphyrian* Pillars formed in the *Corinthian* way. Joining to it is a Tanke of Water, compaſſed with Cloyſters, adorned with ſpacious Windows, which afford a delicate proſpect.

Caſtle, Houſes, & a ſtately Mauſoleum.

The Sepulchres of the Cambaian Princes.

At *Seſques*, or *Sarkeſſe*, an hours Riding from this City, are the Sepulchres of many *Cambaian* Kings, and *Raſhboots*, the Nobility of the Country, in a ſtately Temple, much reſorted to by the *Bannians*, who deſcended from them; and two Miles nearer the City, are the Gardens and Palace of *Chawn-Channa*, who was the Son of *Byranchan* the *Perſian*, which *Ecbar* built, and gave him in memory of the Victory his Father gained over the laſt of the *Cambaian* Kings, and added his Kingdom to *Ecbar*. The Intelligence of *Hoſſen*'s Rebellion no ſooner came to *Ecbar*'s Ears, but he, with incredible haſte, marches to give him Battle, and having in four days paſſed 300 Miles, falls upon him, and his Complices, early in the Morning, and after a ſmall reſiſtance routs them. Many were ſlain in the purſuit, and among them *Ebrahim Hoſſen* and *Mirza Chawn*; *Mahomet Hoſſen* was taken Priſoner, and forthwith Beheaded.

Surat and Guzurat conquered by Ecbar.

This Victory not only recovered *Amadabat*, and cauſed it to be better fortify'd, but made *Surat*, and moſt part of *Guzurat*, ſubject to *Ecbar*. As a Monument of this Victory, *Ecbar*, upon his return, began the famous Caſtle of *Agra*, which now deſerves the Title of the Princeſs of *Aſia*. It is built of large and good Stone, and coſt twelve Years to finiſh, tho' 1200 Labourers were commonly employ'd about it. It is ſaid to have coſt 2500000 Roupees, tho' at the ſame time he ſpent 1500000 Roupees about the Walls and Palace at *Fettipore*.

The Sepulchres of the Moguls.

At *Tzekander*, or *Secandra*, five Miles from *Agra*, is the *Mauſoleum*, or Burial-place, of the Great *Moguls*, which *Ecbar* began, and his Son *Jangheer* continued, but is yet ſcarce finiſhed, tho' there has been expended on it 14 Millions of Roupees. The place where it ſtands is called *Scander*, *i. e.* *Alexander*, becauſe 'tis ſaid that that *Macedonian* King ended his Conqueſts there. It has four large Squares, each ſide being 300 paces long. The Walls are Free-Stone, and at each corner is a Tower of Chequered Marble. Ten foot higher is another Tower, beautified on every ſide with three others, which reſemble the famous *Septizonium* of the Emperor *Severus*, or the famous Tower of *Babylon*, built by *Semiramis*, and dedicated to the Memory of *Jupiter Belus* her Husband's great Anceſtor; at the top of it is the Mummy of *Ecbar*, who is there laid in a Coffin of Gold. This Structure is built in a ſpacious Garden, ſurrounded with a Wall of red coloured Stone, and much ennobles thoſe Parts, as well as keeps the Founder in Memory.

Ecbar's Tomb.

Ecbar conquers Bengal.

While theſe vaſt Buildings were erecting, an opportunity was given to *Ecbar* of adding *Bengal* to his Empire, by the Succeſſion of *Sha-Dowet*, a *Pathan* Prince, both Effeminate himſelf, and hated by the People; whereupon he ſends an Army of 50 thouſand Horſe, 200 thouſand Foot, and 600 Elephants, againſt him. *Sha-Dowet* had no notice of the march of this Army, till it had paſſed over the *Ganges*, but being aſſured of it, he diſpatched *Radgee B'han* with 20000 Horſe to encounter them. He met them between *Ziotſa* and *Moheb-Alli-poor*, where he maintain'd a Skirmiſh with them for 3 hours, but *Ecbar* over-powering him with Numbers got the Maſtery, and forced them to retreat into *Pathan*, which *Dowet* had fortified. *Ecbar* purſues them, and laying Siege to the Town, neither provoked them to Battle, nor attacked the Town for three months, but in the fourth violently aſſaults and enters it, takes the King buried in Drink, and beheaded him.

Several other Conqueſts made by his Captains.

Ecbar, after this good fortune, returned to *Fettipore* himſelf to Overſee his Buildings, but employing his Captains and Army to enlarge his Empire, who by their Valour and Vigilancy made conſiderable Additions to it; for *Raſtan-cawn*, and *Zadoc-cawn*, took the Caſtle of *Rhantipore* in *Malva* from the *Rhadgees*, who had held it 400 Years. *Mohebally-cawn*, a Wiſe and Daring Captain, gained the Caſtle of *Reta*, or *Roughtaz*, called of old *Orcophanta*, by this Stratagem: He pretended to be on a Journey to *Bengal* with his Seraglio of Women, and being in haſte, ſhews a Raja his Concubines, who were in 200 Doola's or Cajua's, and Bribes him to procure leave of the Lord of the Caſtle, that he might leave his Concubines in the Caſtle till his return. The *Radgee*, who kept the Caſtle, loved Women, and readily entertained the motion, but *Ally-cawn* cauſed the Women to change their Garments, and as many young Men to put them on, who being managed by a prudent Eunuch, ſeized the Caſtle, beheaded the *Radgee* himſelf, and ſo became Maſters of that Fortreſs, which was ſo ſtrong, that all the force of *India* could not have taken it. *Ecbar* was much delighted with the pleaſant management of the Matter; and ſo much the more, becauſe of the great Maſs of Money taken in it.

Gidney-cawn alſo, an Apoſtate *Mahometan*, betrayed the Invincible Caſtle of *Jeloor* to him, tho' to his own Brother's confuſion. The fame of theſe Succeſſes afflicted many of the Neighbouring Raja's, moſt of them ſeeking to defend themſelves againſt this Invading *Tartar*; but ſome were ſo bold as to attack his Greatneſs, and endeavour to ſuppreſs him by force, among whom was *Roop Mathij*, a Lady both Fair and Valiant. She, tho' of Beauty enough to conquer *Ecbar* ſooner than by Arms, confided rather to the latter, and fell vigorouſly into his Dominions, but was oppoſed in the midſt of her career by *Adam-cawn*, an expert Soldier, with a Body of Horſe, who ſlew moſt of her *Pattans* in the fight, and took her; but ſhe, rather than endure the ſhame of Impriſonment, the aſſaults of her Chaſtity, and the ſcoffs of a Victorious Enemy, poyſoned her ſelf.

Roop-Mathij oppoſes his Succeſs, but is conquer'd.

Meſoffer-cawn's Rebellion ſuppreſſed.

Meſoffer-cawn, in the mean time, *Anno* 1588. Heg. 968. being in *Guzurat*, raiſes a Rebellion againſt *Ecbar*, and having ſtrangled *Gotobdas*, *Mamet-cawn* the King's Vice-Roy in *Amadabat*, and ſome *Omra's*, ſeizes upon all the Important places in the Province, but being oppoſed by *Abdal-Radgee*, (*Byrangano-cawns* Son) he was vanquiſhed, and deſpairing of pardon he killed himſelf, as the late named *Amazon* did.

Ecbar obtains *Cabul.*

Soon after this, *Mirza-Mahomet-Hackim*, *Ecbar*'s Brother, died; by which means he ſecured to himſelf *Cabul*, which was impoſſible for him to do while *Hackim* was alive, for uſing his Wives and Children with all due reſpect, and conferring on *Chaber-cawn Hamet-beg*, and *Mamet-Maxuen-cawn*, Stipends and Commands in *Meſulipatan*, *Orixa*, and other places, ſuitable to their Merit, he made *Zibber-cawn* Vice-Roy of that Province, and ſo made it ſubject to him.

Elabaſſe built.

This growing Greatneſs of *Ecbar*'s raiſed ſo much terror in the Minds of the little *Gentile* Kings, that bordered on his Conqueſts, *viz.* *Radzia Thormiel*, *Radgee Ramgiend* Lord of *Bando*, and *Radgee Bhyrmiel*, with ſeveral others, that they preſented themſelves to *Ecbar* at *Fettipore*, and Enrolled their Countries, as Members, or Appendixes of the *Mogul*'s Empire, obliging themſelves Yearly (as a Symbol of their Subjection) not only to preſent him with Earth and Water, but their Daughters to be his Concubines; which was ſo grateful a Tribute to the *Mogul*, that he built a Triumphant Palace to Court them in at *Paije*, upon a Promontory, where the *Jeminy* empties it ſelf into *Ganges*, of hard Stone, very artificially poliſhed, and called it *Elabaſſe*. And that it might be more venerable and famous, he repoſited in a dark Cave ſome deformed Images (as Sacred Relicks) of *Babba Adam*, *Mamma Evah*, *Seth*, *Enos*, and *Methuſelah*, (whom they affirm to have lived thereabouts) to which innumerable *Banians* from moſt Parts of *India* reſort Yearly for a Benediction, having firſt purified themſelves in *Ganges*, and ſhaved off their hair, as an unclean Excrement, ſuppoſing that they merited thereby. *Ecbar* ſpent a Myriad, and 200 thouſand Roupees, on this Building. Near it is the ſtately Tomb which *Janghee* erected for his firſt Wife *Raja Meniſengh*'s Siſter, who poyſoned her ſelf as ſoon as ſhe heard of her Son Sultan *Guſhro*'s Rebellion.

Ecbar projects new Conqueſts.

Ecbar's Affairs going on thus proſperouſly, he harbours new Projects of conquering *Purop*, *Patan*, *Cormandel*, and all *Bengal* to the South, and ſo ſtretch his Empire as far as *Tartary*. This deſign was ſoon put in execution, by the News he heard that *Mirza Sharephin Badaxan* had been injured by the *Uſbeg-Tartars*, whom he reſolved to Revenge; but firſt, as more conſiderable, he bends his march towards *Orixa*, that he might at once command entirely over *Ganges*. At *Attirk* he Muſters his Army, and gives the Van to *Raja Bymiel*, and takes the other himſelf, and *Jehan-cawn*. *Byrmiel* outſtripping the reſt of the Army, falls furiouſly upon the *Patania y*, who being led by *Zell-Ally*, their Valiant General, received them with ſuch Bravery, and fought them with ſuch Succeſs, that *Byrmiel* was forced to retreat with loſs; but *Ecbar* having quick notice of it by ſuch as fled, rallies his Men again, and with ſome freſh Supplies renews the Fight. *Zell-Ally*, and his Victorious Party, received him with a ſharp Charge, and maintained the fight for ſome hours cloſely, but being over-powered with Numbers loſt the Day. *Zell-Ally*, and *Tarcoſt* his Lieutenant, were ſlain, and 15000 of his Army left dead upon the place. *Ecbar*, by this Victory, made all *Bengal* ſubject to him, which to this day remains a Member of the *Mogul*'s Empire; but *Abas* the *Perſian* not liking his Enlargement that way, wreſted it from him within a little while after, tho' he held it not long.

His Army routed.

Ecbar conquers *Zell-Ally.*

Ecbar's Ambition ſtopp'd not here, but carries him on ſtill to Conquer, tho' he cares not how, nor where, for hearing of the old King of *Maurenabar*'s Death, he deſires to be his Succeſſor; and to that end, to diſcover his Son's ſtrength, he ſends his Embaſſadors *Tzedder-cawn*, and *Hackeem-cawn*, under a pretence of Friendſhip, to condole and comfort him for his Father's Death, and they returned at the Years end well Inſtructed.

Ecbar proceeds in his deſign, and becauſe *Caſſimir*, which lay between, was not in his power, he ſends *Ally Mirza* in an Embaſſy to *Juſtoff-cawn*, a fearful King, with this Meſſage, 'That if he would do him Homage, 'he ſhould have his Kingdom eſtabliſhed to him, and 'himſelf his Friend to defend him; but if he obliged 'him to wage War againſt him, he muſt expect perpe'tual Slavery. *Juſtoff-cawn* being of a timerous Spirit ſubmits, but *Jacob-cawn* his Son, diſdaining the Vaſſalage of his Family, ſhook off the Yoke for a little time, till *Ecbar*, by his ſtronger Forces, having ſubdued and taken him, obliged him to accept a ſevere Bondage.

King of *Caſſimir* ſubmits to him.

Caſſimir deſcribed.

Caſſimir is part of the Ancient *Sogdiana*, which was a part of *Scythia intra Imaum*. It lies in 41 Deg. 9 Min. Northern Latitude. The Province is generally Mountainous, Barren, Cold and Windy. The Metropolis of it is *Shyrenakar*, watered by the River *Behat*, or *Phat*, which ariſing in the Mountains of *Caucaſus*, empties it ſelf into *Indus*. In this Province is a Lake 15 Miles in compaſs, which has an Iſle in the middle of it, where is a Palace ſeated moſt deliciouſly for variety of Sports, in Fiſhing, Hawking, Rowing, *&c.*

King of *Tutta* conquered by *Ecbar*.

Ecbar having done this, he aims at *Tutta*, and the Countries lying on the Eaſt-ſide of *Indus*; (deferring the Conqueſt of *Baltria* for a time) *Mirza-Jehan*, King of *Tutta*, was grown odious to his Subjects by reaſon of his Tyranny, which he knew would make his Attempt to conquer it more eaſie, whereupon he ſends *Ganganna*, his Favourite, with 12 thouſand Men in Boats to ſurprize it. Neverthеleſs, the King of *Tutta* having Intelligence of it, maintained his City ſix Months againſt them, but in the ſeventh was forced to Surrender upon Conditions, which tho' favourable, yet *Ecbar* got all *Syndee* into his power.

Tutta deſcribed.

Tutta is one of the moſt celebrated Marts of *India*, ſo encompaſſed with the River *Indus*, that it makes a Peninſula. *Loor Bander* is the Port to it, but the Ships that lie there are ſubject to the Worm, as at *Swalley*, *Dabul*, *Goa*, &c.

Ecbar's deſign on *Decan*.

About the ſame time died *Nezamſhaw*, the Old King of *Decan*, and *Melec Amber* his Son ſucceeded him: *Ecbar*, whoſe Ambition catched at all Opportunities of enlarging his Dominions, reſolves upon a War with the New King before he was ſettled, and to that end ſends *Ganganna*, a Choſen General, with 30 thouſand Horſe for *Lahor*, and Orders *Radgee Ally-chan* to meet him with five thouſand more at *Brampore*; where having made all neceſſary Proviſions for his Expedition they march to *Decan*.

Decan deſcribed.

This Kingdom is large, and has many Cities of Note in it, as *Decan* the Metropolis, which is diſtant about ten Miles from the Diamond-Mine, *Oner*, *Batticala*, *Mangalir*, &c.

Ganganna invades *Decan*.

Tziard Bieby, Daughter to the laſt King, hearing of the *Mogul*'s approach, firſt fortifies *Amdanagar*, a Frontier Town, and having gotten ſome Auxiliary Forces of forty thouſand Horſe, from the Kings of *Viſapa* and *Golconda*, which ſhe gave to be commanded by *Godgee Shubel*, a faithful Eunuch, meets the Enemy upon the Confines. After ſome Skirmiſhes a furious Battle begun, and continued with doubtful Succeſs 18 hours, till *Ganganna* coming in with a freſh Reſerve, forced the *Decans*, after three hours fight more, to give back, their General *Godgee* being left ſlain on the ſpot. The *Moguls* purſue the *Decans* 15 Miles, but the Princeſs *Bieby* oppoſing them with ſome freſh Horſe, they were obliged to retire out of *Decan*.

Ecbar having notice of what paſſed, Orders his Son *Sha-Morad* to reinforce his Army with a new Levy of fifteen thouſand Horſe, and make a new Invaſion into thoſe Southern Provinces from *Brampore*. The Youth merrily undertakes the Charge, but indulging himſelf in Venery and Drink too much, while he lay there, died, and *Abdul Fazel* is put into his place. He in a ſmall time ſubdues the Provinces of *Sanda*, *Berar*, and many other Wealthy Places, giving the King hopes by Letter of conquering *Decan*, *Viſcapore*, *Golcunda*, and other Parts of

India,

Sha-Selim ſent againſt *Raja Rana Mardout.*

India, in a ſmall time. *Ecbar* in the mean time Orders his Son *Sha-Selim* (afterwards called *Jangheer)* with fifteen thouſand Horſe, to fall upon *Raja Rana Mardout*, the only Succeſſor of *Porus*, and the moſt potent of the *Radgees*, ſeveral *Omra's* and *Mancebdars* attending him with what Forces they could gather, and for quicker Intelligence, *Ecbar* himſelf removes his Reſidence from *Agra* to *Labor*, where he was received with all demonſtrations of Joy, as if he came to ſettle among them, and enrich the Town.

Labor deſcribed.

Labor is a great and famous City, vying with *Agra* for the Honour of the Metropolis of *Meguliſtan*. It is ſituate in 32 Deg. 15 Min. Northern Latitude. The Air for 8 Months is very pure and reſtorative, the Streets are graceful and well paved, moſt of them being cleanſed, and ſerved by the River *Ravee*, a branch of the *Indus*. The Caſtles, Palaces, Moſques, Hummums, Tanks, Gardens, *&c.* are very obſervable: The Caſtle is large, uniform, and nobly ſeated; 'tis built of white poliſhed Stone, and is entred by twelve Gates. Within is a Palace with two Courts. On the Walls are pictur'd ſundry Stories and Paſtimes about the *Moguls*, and their Atchievements; and upon ſome of the Doors is a Crucifix, and the Image of the Bleſſed Virgin. It was a famous City in *Porus*'s Time. The Province about it, which is called *Pengab*, is watered with five Rivers, which makes it as fruitful as any part of *India*. From hence to *Agra* is a continued Walk, ſhadowed with Elm, Aſh and Mulberry-trees, and at every eight Miles end an Inn for Strangers to repoſe in *gratis*, tho' theſe Cities are 300 Miles diſtance. *Aſafœtida* abounds here.

A Crucifix and Image of the Virgin.

Badurſha Rebels.

Ecbar being returned to *Agra*, reſolves to proſecute the War in *Decan* in Perſon, and having made ſuitable Preparations for it, *A.* 1597. Heg. 977. ſets out towards it from *Brampore*, but, contrary to his expectation, as ſoon as he had paſſed the River *Nerebede*, he had News that *Badurſha*, a couragious *Radgee*, had fortified the ſtrong Caſtle of *Haſſer* againſt him. The *Mogul* not thinking it ſafe to leave ſo conſiderable an Enemy behind him, ſits down before it, reſolving to take it by force or famine; and to that end blocked it up cloſe. The *Radgee* not knowing any, that either would, or could either raiſe the Siege, or ſupply him with Proviſions, thought it his beſt way to treat betimes, and beating a Parley accordingly, came to a Treaty with *Ecbar*, who granted him his Life and Goods upon Articles, and upon the ſurrender of the Caſtle made them good to him. The *Radgee* accepted a Command in *Ecbar*'s Army, who himſelf marched more cheerfully at the thoughts of this Succeſs, till ſuch time as News was brought him, that *Sha-Selim* having poyſoned *Tzebber-cawn*, and ſeized his Treaſure, with which he made the Soldiers firm to him, was marching to *Agra*, intending to Depoſe him. *Ecbar* was ſo amazed at this unexpected Rebellion, that what with fear of his Son's popularity, and what with grief to leave *Decan* unconquered, he fell into a deep Melancholy, till *Abdul Fazel* reviving him with ſeaſonable Encouragements, he left his Son *Sha-Dhaen*, with *Abdul Fazel*, and other *Omra's*, to proſecute the Wars in *Decan*, and returned to *Agra*. *Sha-Selim* was got thither before him, with hopes of ſeizing his Father's Treaſury, but miſſing his aim, he marched to *Elabaſſe*, by *Reben* and *Annewars*, many Towns and Provinces ſubmitting to him in the way.

Sha Selim Rebels.

Ecbar endeavours to reduce him by Letters.

The King being returned to *Agra*, where he was made more certain of his Son's Conſpiracy, firſt attacks him with kind Letters, telling him the ſhame and danger he was in, and that the Curſe of *Mahomet*, as well as deprivation of his Birthright, would fall on him, unleſs he deſiſted, promiſing him Pardon if he would ſubmit and come in. *Sha-Selim* was deaf to ſuch perſwaſions, and firſt derides the Meſſenger, and then over-runs the Empire as far as *Bengal*, hoping that *Radgee Manſingh* would ſide with him, tho' in vain.

Decan taken.

In the mean time *Dhaen*, or *Daniel*, refreſhed him with the good News of his Succeſs in *Decan*, for he having entred the Country, beſieged *Gandetzin*, a conſiderable Caſtle, into which *Bieby* and her Nobles had ſhut themſelves, with two Years Proviſion, and all ſorts of Warlike Inſtruments, reſolving to hold out the Siege to the laſt; but the fortunate Conqueror took it by Storm in the ſeventh Month. Moſt of the Defendants loſt their lives, *Bieby* poyſoned her ſelf, and the reſt fell into the Enemies hands, with all the Treaſure.

The Kings of *Golcende* and *Viſſapor*, fearing to oppoſe a Victorious Army, made ſome Acknowledgments to him, and ſo he returned to *Brampore* loaden with Triumph and Treaſure.

Brampore deſcribed.

Brampore is a Seminary of *Bramins*, *Jogues*, *Culans*, or *Gymnoſophiſts*. It lies in 28 Deg. 3 Min. Northern Latitude, in the Province of *Chandys* or *Sandee*, which is fruitful where it is watered by the River *Tappee*, but elſewhere is barren and ſandy. The City ſtands upon low ground, and ſo is unhealthy, being Inhabited moſt by *Bannians*. The Streets are many, but narrow, and the Houſes high, but not beautiful. At the North-Eaſt ſide ſtands the Caſtle by the River's ſide, which is large, and in the River is an Artificial Elephant, admired by Strangers, but reverenced by the *Bannians*. It was anciently the Seat of the *Decan* Kings, but now the moſt memorable things are *Chan-channa's* Houſe and Gardens, adorned with all ſorts of Trees and Flowers, with Water-Works, which may afford Pleaſure and Delight.

Sha-Selim ſubmits, but again Revolts.

Ecbar no ſooner underſtood how fortunately *Daniel* had proceeded Southward, but *Godgee Jehan* preſents him with a Penitential Letter from *Sha-Selim* (who doubtleſs was frighted into this Submiſſion by his Brother's Succeſs.) *Ecbar* in a little time ſends *Jehan* back with Promiſes of Pardon, provided he would diſmiſs his Army, and make a ſpeedy Submiſſion. His ungracious Son holding faſt his former Impiety, and being at the head of an Army of ſeventy thouſand Men, upon whom he had conferred many Commands, refuſed to do it, unleſs he would give a General Amneſty to all the Conſpirators, whoſe Lives and Well-beings were as dear to him as his own. This Anſwer incenſed his Father to a Denial, whereupon he diſlodges his Army, and marched to *Elabaſſe*, where he commanded all ſorts of Coin of Gold, Silver and Braſs, to be ſtamped with his own Name and Motto; which, to vex his Father, he ſent to him, and beſides, Courted his Father's Wife *Anarkale*.

Ecbar enraged at it.

Ecbar, enraged at theſe things, Curſes him, and then acquaints *Abdel Fazel*, his Chancellor, with it. He laboured all he could to moderate his Maſter's paſſion, and with 3000 Horſe haſtes to do his Maſter ſome Service. *Sha-Selim* having Intelligence of all that paſſed, writes to *Radgee Bertſingh*, (Lord of *Soor*) through whoſe Country he was to paſs, promiſing him a Gratuity, and a Command of 5000 Horſe, if he would ſend him his Head. The *Radgee* promiſes his beſt, and with 1000 Horſe, and 3000 Foot, lays an Ambuſh for him near *Gwaler*. *Abdul Fazel* not ſuſpecting any thing marches ſecurely: The *Radgee* falls upon him, and having the advantage both of Men and Surprize, ſlew moſt of his Men, and taking him Beheaded him, and carries his Head to *Selim*, who received the Preſent joyfully. *Ecbar*, who loved *Abdul* dearly, fell into ſuch a paſſion at the News of his Death, that he withdrew three days from all Company, and refuſed to be comforted.

Abdul Fazel ſlain.

Sha-Daniel's Death.

This affliction was ſoon followed by another, *viz.* the Death of his Son *Sha-Daniel*, who killed himſelf by Intemperance, ſo that he was at his Wits end. But neceſſity obliging him to put a ſtop to his Son's Rebellion, he marches againſt him with thirty thouſand Horſe; but before he would bring things to extremity, he reſolves to try once more what perſwaſions would do, and to that end ſends a pathetick Letter to him by *Myrad-Zedda* the Princes Tutor, who ſo wrought with him, that he brought him to *Agra* to *Ecbar*, who received him with fury, and Thunder-ſtruck him with a Storm of words, ſtrikes him with his Fiſt upon the Mouth, calls him Fool and Aſs, that commanding ſeventy thouſand Men, would forſake them to truſt the Sugar'd promiſes of any Man, and then ſends him to Priſon, with all the *Omra's* that attended him, except *Radgee Batſo*, who made his eſcape. In this Impriſonment, *Sha-Selim*, contrary to his Cuſtom, abſtains 24 hours from Opium; but *Ecbar*, fearing he would thus make away himſelf, went the next day in Perſon to perſwade him to take it. The third day, by the Interceſſion of his Ladies and Concubines, *Selim* was freed, and ſent to his own Houſe, where he behaved himſelf very dutifully, viſiting his Father every day, till *Ecbar*, upon ſome new Jealouſies, reſtrained him again, but this Rancour had little effect, for the King taking a diſtaſte againſt *Mirſha-Gaſhaw*, his Favourite, for ſpeaking a word which he ill Interpreted, reſolves to have his Life for it, and to that end ordered his Phyſician to make two Pills of like ſhape, but contrary Operation, which *Gaſhaw* bringing to *Ecbar*, he takes one himſelf, and orders *Gaſhaw* to take the other. *Ecbar*, by miſtake, takes the poyſon'd one, and tho' he uſed all endeavours to prevent the effects, it proved in vain; ſo that after 14 days torment he died, in the 73d Year of his Age, and 52 of his Reign. He was buried with all imaginable Solemnity at *Tzekander*, in a Monument he had prepared for himſelf, and *Sha-Selim* (not without ſome oppoſition from *Radgee Manſingh* and *Chan Aſem*, who endeavoured to raiſe his Son *Cuſhroe* to the Throne, becauſe they pretended *Ecbar* had nominated him his Succeſſor) was with due Ceremony crowned at *Agra*, by the Name of *Jangueer*, in the Year 1604, Heg. 984.

Sha-Selim ſubmits, and is Impriſon'd.

Ecbar poyſoned, dies, and *Sha-Selim* ſucceeds.

Jangheer's Reign.

Jangheer being ſettled on the Throne, began his Reign with Acts of Grace, and by the Mediation of *Morteza Chan*, *Cooly Mametzhan*, and others of his Council, receives his Son Sultan *Cuſhroe*, and his Aſſociates *Radgee Manſingh*, and *Chan Aſem*, into favour; but *Cuſhroe*, ſuſpecting his Pardon to be Counterfeit, fled to *Haſſenbeg*, Vice-Roy of *Cabul*, his Old Friend, being certain, that if he ſtayed long at Court, he ſhould be put to Death. *Jangheer* had immediate notice of his Son's flight, and fearing the danger of it, firſt Orders *Godgee Melec Allebeg*, Captain of his Guard, with his Forces, to purſue him, and then followed himſelf with 50 Elephants, and 8000 Men.

Cuſhroe's Rebels and is routed.

The poor Prince being thus purſued, was afraid he ſhould be made a Priſoner again; but ſuch was the haſte of *Haſſenbeg*, that they could not overtake him by fifteen Courſes, and on the 9th he got to *Labor*, intending to enter the Caſtle, but *Ebrahim-chan*, the Governour, kept him out. The Prince, having twenty thouſand Men with him, laboured to take it by force, and ſpent three Weeks about it, but all in vain; whereupon he leaves *Labor*, and reſolves to meet his Father, and give him Battle nearer home. In his march, he pitched one night where *Mortoſa-chawn* lay in Ambuſh with 600 Horſe, who fell upon him, but by the care of *Haſſan* he was routed, and had not *Godgee Melec*, with the King's Standard, come into his Aid, proclaiming that the King was at hand, the King's Army had been quite ruined; but the King's approach begat ſuch terrour, that *Abdul Raja*, who bore the Prince's Colours, cowardly threw them away, and fled, whoſe Example the reſt of the Army following, the Prince was left defenceleſs, and his Baggage ſeized by the Country People.

Fettipore built as a Monument of the Victory.

Jangheer was ſo ſenſible of this good hap, that in memory of this Deliverance he built at *Tziekerry* a Caſtle, and names it *Fettipore*, adding, after a fair Bazar, a ſtately Moſque and Palace, and railing it in; ſo that had the Water been good, it had by this time triumphed over all the Cities of *India*.

The miſerable Prince, after this defeat, being accompanied with *Haſſenbeg*, *Abdul Radgee*, and *Chan Baderſha*, fly to *Labor*, where *Radgee* ſtaid, but the Sultan, with *Baderſha*, croſſing the River, labour to arrive with ſafety at *Rantas*, a Caſtle reputed Impregnable; but as they paſſed the River *Tzenob*, the treacherous Watermen kept them between Decks, and brought them into the Power of *Caſſem-chawn*'s Sons, who, without delay, conveyed them to *Jangheer*. The King, over-joyed with this good fortune, returns to *Labor*, where he firſt put to Death many *Omra's*, the Prince's Followers, Impriſoned *Haſſenbeg*, *Bedaſha*, and *Abdul Radgee*, after he had publickly Diſgraced them, and committed his Son to the Cuſtody of *Zemanacbeg*, called after *Mahobet-chan*, *i. e.* The Beloved Lord.

Another Rebellion of his Lords diſcovered.

But his Tyranny would not ſuffer him to live long without Enemies, for ſome of his Nobles of the higheſt Rank, *viz.* *Mirza Cheriefe*, (Brother to *Aſſaph-chan*) *Mirza Nouradin* his Couſin, *Mirza Fetulla*, *Mirza Shaffenbeg*, *Lollabeg* and *Murdoph-chan*, conſpired to murder him as he paſſed over the Mountains to *Cabul*; but the King, tho' ſuſpecting no ſuch deſign, was ſo well guarded, that they durſt not attempt their Villanous purpoſe. Yet were they diſcovered to *Jangheer*, by *Godgee Vebes*, and *Ethaman Doulet*, the King's Treaſurer, was accuſed of aſſiſting them with Money out of the King's Treaſury. The King was ſtruck with fear at the News of it, but throwing it off by *Mirza Ombrave*'s Advice, he apprehended the Conſpirators, and without delay commands them to be Executed. *Ethaman Doulet* was ſpared upon the payment of 200000 Roupees to the King for his Life, but diſcharged of his Place, and confined to *Dianet-chan*'s Houſe.

Sultan Cuſbroe's Eyes put out.

Jangheer remembring his danger in going to *Cabul*, which he believed to proceed from his Son *Cuſbroe*, commands his Son's Eyes to be put out with Juice of *Aeck*; but one Eye, through the favour of the Poyſon, retain'd a little ſight. He alſo ordered *Chan-Aſem*, *Cuſbroe*'s Father-in-Law, to be clad in loathſome Rags, and being brought into the *Guzel-chan*, that all the *Omra's* ſhould ſpit on his Beard, to be manacled and caſt into Priſon, where he remained two Years cloſe Priſoner, till by the importunities of his Wives he was releaſed.

Curroon's deſigns to obtain the Crown.

In the Year 1609, *Currown*, another of *Jangheer*'s Sons, with his Friends, to ſecure his way to the Crown, prevailed with his Father that his Brother's Sons might be Chriſtned; which was accordingly done by the Jeſuits at *Agra*. Soon after, *Mirza Ombrave* being Apoplectick left his Office, and *Tzalamchan* was made Vice-Roy of *Bengal*, in the room of *Catopdy*, with an Order to ſend up *Affen-chan*'s Family Priſoners to him, which he accordingly did. In the Way, the young Widow *Mehermetzia*, *Ethaman Doulet*'s Daughter, and Siſter to *Aſſaph-chan*, was met by a Wizard, who told her many Stories of her enſuing greatneſs, which ſoon after came to paſs; for being arrived at *Agra*, they were welcomed by *Rockia Sultanna* the Mother Queen, and ſhe being one day in the *Mahal* with her little Girl, *Jangheer* in merriment lifted up her Veil, and became on a ſudden ſo raviſhed with her Beauty, that he ſought all means to ingratiate himſelf in her Affections. He advances *Ethaman Doulet*, her dejected Father, and asks his good-will for her; gave Honour, Wealth and Command, to her Brother *Aſſeph-chan*, and her other Kindred, and married her with all Solemnity, changing her Name into *Nourſha-Begem* or *Normahal*, *i. e.* The Light or Glory of the Court. In his Amours with this lovely Princeſs, he ſpent ſome Years without regarding any Publick buſineſs.

Jangheer falls in Love.

Radgee Rana Rebels.

In 1610, Heg. 990. and 6th Year of *Jangheer*'s Reign, Sultan *Sherryar* the Prince was ſent Vice-Roy of *Guzurat*, under the Tuition of *Morteſa-chan*, and *Chaw-Jehan* to *Brampore*, and *Mahobet-chan* with an Army againſt *Radgee Rana*, or *Rabanna* of *Mandon*, who at that time was broke out into Rebellion againſt him. *Mahobet-chan* went on Victoriouſly, and forced many ſtrong Holds and Caſtles from thoſe untameable *Indians*, but through the envy of ſome at Court he was recalled, and *Abdul-chan* made General in his Place, who proſecuted the War with the like Succeſs, for he beat *Rana* in a pitched Battle at *Siſs-meer*, and took *Syavend*, his ſtrongeſt Caſtle, from him, wherein he found ſtore of Proviſion, and many Pagods, which had ſtood there, and been Superſtitiouſly adored for above a thouſand Years. Theſe he cauſed to be burnt, and reared in their place a Stupendious Moſque for the *Mahometan* Devotion.

Jangheer deſtroys the Robbers of Guzurat.

Jangheer hearing of this News, ſent *Abdul-chan* particular thanks, ordering him to ſtay a while in *Guzurat*, to extirpate the Raſcally Race of *Cooly*'s and *Bielſgrates*, who robbed the *Caſtila's*, and lived upon the Spoil of Paſſengers. *Abdul* diligently obeys his Maſter's Orders, ferrets them out of their Holes, ſlew their Captain *Eder*, after ſeveral Skirmiſhes, and happily finding them aſſembled one time, falls upon them, and ſlew half their Rabble, with *Lael-Cooly* their Ring-leader, whoſe Head he ſent to *Amadabat*, where, as a terror to ſuch Rebels, it was ſet on a Pinacle. But *Chan-Jehan* in *Decan*, tho' he waited all opportunities of Conqueſt, was diſappointed through the Diſcord and Envy of ſome *Omra's* in his Army, and therefore acquaints the *Mogul* with it, deſiring him to ſend one of his Sons down to him, that the Army might be awed by his Preſence.

Sultan Perwees ſent into Decan.

Jangheer, after conſideration, ſends his Son Sultan *Perwees*, but after obſerving the Prudence of *Melec-Amber* and his Power, he ſpeeds *Chan-Aſem* after him, with 4000 Men more, to reinforce his Army. *Chan-Aſem* was no ſooner come to *Brampore*, but he intreats *Ganganna*, Lieutenant of *Khoor*, to joyn with him; and ſo with an Army of 600000 Men, and 600 Elephants, penetrates into the heart of *Decan*, burning and plundering as they liſt without reſiſtance. The *Decan* King, aſtoniſhed at theſe Numbers, and unable to reſiſt, flies to and fro, and having had ſome ſmall Skirmiſhes in vain, as his Ambuſhes alſo proved, he fled to the Caſtle of *Daltabat*, contriving to rid his Kingdom of them by Stratagem, which he thus managed: He writes ſome Counterfeit Letters from the *Radgees* about *Jangheer*'s Court, containing a private Advertiſement of the *Mogul*'s Death, and *Curroon*'s Advancement to the Throne. Theſe he gave to a Crafty *Bannian*, who travelling as if he came from *Agra*, was taken as a Spy. His Letters being read, ſo aſtoniſhed the General, that he immediately divides the Army without any Conſultation, quits ſuch places as had Garriſons put in them, and with confuſed haſte marcheth back into their own Country, Sultan *Perwees* to *Brampore*, *Abdul-chan* to *Surat*, and *Aſem-chan* towards *Agra*, giving *Amber* an eaſie re-admittance into his Towns and Caſtles, which otherwiſe he could never have recovered.

King of Decan's Stratagem.

Mahobet-chan Invades Decan.

As ſoon as *Jangheer* heard of the Trick, he was angry with them for their Credulity, and ſends *Mahobet-chan* Governour to *Brampore*, where being received joyfully, he employed his Forces in ſubduing *Berar*, and then Invades *Decan* as far as *Kerchy*, where *Abdul-chan* had been with his Army the Year before, returning loaden with Spoils and Victory to *Brampore*. This Succeſs made amends with *Jangheer* for laſt Year's failings. About the ſame time *Rana Radjea*, tired with many Battles and purſuits, preſents himſelf, Son, and many Gifts, unto him; among which was an Elephant valued at a hundred thouſand Roupees, ſubmitting all he had to his Diſpoſal. The King, by *Curroon*'s Mediation, accepts him, and heartily forgives him, embraces him, offers his Daughter in Marriage to his Son, and returns him the Government of *Pormandel*, (*Porus*'s Country) *Oodepore*, and other places, but he ſoon after died, and was buried in the Sepulchres of his Progenitors at *Chytor* with much Ceremony.

Abdul-chan made Governour of *Calpi* and *Khoor*.

Jangheer having ſpent 18 Months in Pleaſure at *Mande*, departs to *Amadabat*, where he remov'd *Abdul-chan* from that Government, and ſent him Vice-Roy of *Calpi* and *Khoor*. He alſo diſplaced *Chabeey* Governour of *Candahar*, and made *Badar-chan* Commander there. *Tzediat-chan* was alſo ſent to ſucceed *Tzalam-cawn* in *Bengal*, at what time *Ozman-chan*, a *Puttanian*, with a numerous Army, beſieged *Daecke*, the Metropolis of it. He and *Ethaman-cawn*, with 15000 Men, gave *Ozman* Battle, but by reaſon of a Mad Elephant on which *Ozman* rode, *Tzediat-cawn* was diſmounted and maimed, and the *Mogul*'s Forces diſcomfited; but by a ſtrange chance, a wounded Man thruſting *Ozman* through with his Lance, as he paſſed by, the *Puttans* being diſheartned fled, and the *Moguls* not only recovered *Daeck*, but invade *Ozman*'s Country, and taking his Wife and Children Captives return to *Agra*, loaden with his Wealth. *Abdul-cawn* being arrived in 7 Weeks in his Government of *Khoor* and *Calpi*, firſt quieted and deſtroyed thoſe ſwarms of Rebellious *Raſhboots*, which till that time had infeſted thoſe Parts, ſelling ſo many of them as paid the Charges of the War, and levelling the moſt defenſible Places to the ground.

Chan-Aſem ſent Embaſſador into *Perſia*.

Chan-Aſem at the ſame time went Embaſſador to *Abbas*, the Emperor of *Perſia*, bravely attended, and diſpatch'd with Gifts of great value, *viz.* 12 Cheſts of choice Linen, 2 of rich Saſhes, and Daggers with Hafts of precious Stones. *Abbas* entertain'd him nobly, with Feaſting and Sports, and diſmiſs'd him with Honour, preſenting the *Mogul* with 500 Horſes, 20 Mules, 500 Aſſes, 150 Dromedaries, 18 Cheſts of choice Carpets and Bezars, 20 Camels load of *Schyras* Wine, and 8 of Conſerved Dates, Piſtacho's, &c. which were acceptable to *Jangheer*, who that Year took a progreſs for his Pleaſure to *Caſſimire*, having firſt removed *Mahobet-chan* from *Brampore*, to the Command of *Cabul* and *Banges*.

Cabul deſcribed.

Cabul, called by *Ptolemy Chabura*, is bounded on the North by *Caucaſus*, on the South with *Multan*, on the Eaſt with *Caſſimire* and *Kakar*, and on the Weſt with the River *Indus*. It is a cold, windy and barren Country, except where the River *Nylob* (called by *Ptolemy Coa*, and by others *Cophis*) waters the ground. The City *Cabul* is Inhabited by *Banians*. The Houſes are low, and there are no Buildings remarkable in it, but ſome Inns and two Caſtles; in one of which King *Babur*, the Great Grandfather of *Jangheer*, was born. Sultan *Cuſhroe*, at his Father's departure, was taken from the Cuſtody of *Aſſaph-cawn*, and truſted to *Cawn-Jehan*, but ſoon after, by the perſwaſion of the Queen and *Aſſaph-cawn*, he was put into the keeping of *Curroon*, his Emulous Brother, to whom he gave alſo the Command of 40000 Horſe, and being attended with many *Omra's*, haſtens him to the Conqueſt of *Decan*, with Orders alſo to harraſs the Kingdoms of *Golconda* and *Viſcapore*, for neglecting to pay their Yearly Tribute of 3 pound weight of Diamonds.

Curroon ſent to conquer *Decan*.

About the ſame time *Jangheer* made *Cheq' Caſſem* Lieutenant of *Bengal*, and ſoon after *Ebrahim-cawn*, Queen *Normall*'s Couſin, was raiſed to the ſame Poſt.

In 1619, Heg. 1029. *Abdul-Azies-cawn* ſucceeded *Bador-cawn* in the Command of *Candahor*; *Cawn-Jehan* was conſtituted Lieutenant of *Multan*, Sultan *Parwees* of *Pathan*, and *Radgee Bertſingh Bondela*, and *Abdul-cawn*, Governors of *Calpi*. Theſe Governors aſſiſt *Curroon* in his Expedition into *Decan*, which they managed with ſuch Care and Succeſs, that they ſoon reduced *Berar* and *Ehandyes*, burning and ſpoiling all the Country as far as *Kerki*, where ſtood the King of *Decan*'s beſt Palace, which they demoliſhed, and enriching themſelves with Spoil and Treaſure. *Curroon*, exalted with this good fortune, commands his Army to call him *Sha-Jehan*, *i. e.* King of Hearts; and being Emperor in his own Opinion, caſts his Eyes upon his Father's Diadem. His Impriſoned Brother became a grief to him, and he feigns Sickneſs and Melancholy, that he might ſtir up ſome to inquire into the Cauſe, and forward the Cure: *Ganganna* was forwardeſt in this piece of Flattery, and by acquainting the *Mancebdars* with the Diſeaſe, eaſily put *Rajca Bandor*, a notorious Villain, upon the Undertaking. This Ruffin, at Midnight, goes to *Cuſhroe*'s Chamber, and pretending a Meſſage from his Father for his Deliverance demands admittance, but the Prince ſuſpecting the Treaſon refuſes, but he broke in, and after much ſtruggling Strangles him. *Cuſhroe*'s Wife, *Cawn-Aſem*'s Daughter, coming to viſit him in the Morning, finds him dead, and by his bruiſed face knew he had been Murdered; at which ſhe filled not only her Houſe, but the City with ſorrow, for this horrible Treaſon. *Curroon* was ſuſpected, but being removed out of the City for his health, and returning at the News of *Cuſhroe*'s Death, ſhewed ſo much grief, that many were induced to believe him Innocent. *Jangheer*, who ſtill retain'd ſome Fatherly Affection, entertain'd the News of *Cuſhroe*'s Death with much anxiety, and wrote a Letter to *Curroon* and his *Omra's*, that he would make a ſtrict inquiry into the cauſe of it, and if any Treaſon were found, would revenge it on them, when he leaſt ſuſpected it. He withal commands the Body to be dug up again, and be brought to *Elabaſſe*, to be Interred in his Mother's Monument. He alſo ſent for *Chan-Aſem*, and his afflicted Daughter, and takes them for his conſtant Companions; of whom having learned how *Curroon* was acceſſary to *Cuſhroe*'s Death, he forthwith entails the Imperial Crown upon Sultan *Bullochy*, or *Blochy*, *Cuſhroe*'s Son, gives him the Command of ten thouſand Horſe, and commits him to the Tuition of *Chan-Aſem* his Grandfather. *Curroon* perceiving the Murder diſcovered, and himſelf diſregarded, burſt out into open Rebellion. *Abdul-cawn* ſeeing his deſign, leaves the Army, and flies to his Government at *Calpi*, but the *Mogul* was angry with him, and made him to return; yet within a little time he was recalled, and ſent to the Relief of *Candahor*, which was beſieged by *Abbas* King of *Perſia*, who pretended it was a Member of his Empire, but tho' *Azief-cawn*, the Governour, defended it bravely, the *Perſians* were ſo briſk and reſolute, that they took it before he could get thither, and ſo he returned to *Lahor* to *Jangheer*, who received him kindly notwithſtanding the loſs.

Cuſhroe is Strangled.

Curroon calls himſelf *Sha-Jehan*.

Jangheer entails the Crown on *Bullochy* *Cuſhroe*'s Son.

Candahor deſcribed.

Candahor lies in 34 Deg. of Northern Latitude, and 98 of Longitude. It hath *Aria* on the Weſt, *Arachoſſa* on the South, *Segatbai*, of Old called *Bactria*, on the North. The Country towards the South is reaſonably Fruitful, and abounds with moſt things neceſſary; but by reaſon of the many Caravans that travel backwards and forwards from *Lahor* to *Perſia*, all ſorts of Proviſion is dear, and the paſſage, by reaſon of the thieviſh *Puttans* and *Arabs*, both chargeable and dangerous. The City is not large but ſtrong, partly by Walls on the South and Eaſt, and partly by the Hills on the North and Weſt. The Suburbs are large, and add beauty to the City, and nothing is wanting but good Water; for that there, and all the way to *Spahawn*, or *Iſpahan*, is brackiſh.

Aſſaph-cawn's Treachery to betray *Jangheer*'s Treaſure to *Curroon*.

Jangheer, infatuated by the Crafty perſwaſion of *Aſſaph-cawn*, ſends him with a peremptory Command to the Treaſurer of *Agra*, to remove his Treaſure to *Lahor*, where he then reſided, and intended to continue for a time. *Ethabar-chan*, the Treaſurer, conſidering the length and danger of the Way, would at firſt hardly Credit his Maſter's Letter, but at length being ſatisfied of the truth of that, fell to diſſwade *Aſſaph-cawn* from urging it, but in vain, the Order muſt be Obeyed, and ſo the Treaſurer ſubmits. While things were preparing, *Aſſaph-cawn* Poſts away a ſwift Meſſenger to his Son-in-Law *Curroon*, adviſing him to lay an Ambuſh between *Agra* and *Deli* to intercept it. The Prince joyfully received the News, and ſending for all his Officers thro' his Government, with their Forces, which made an Army of ſeventy thouſand Horſe, marches towards *Mande*.

Mando deſcribed.

This City is ſeated on the ſide of an Hill, on which ſtands a very ſtrong Caſtle, which is as well the Ornament as Defence of it. The Wall that encompaſſes it is near five Miles in Circuit, and the Palaces, Fortreſſes and Temples, are freſh and beautiful. In one of the Temples four Kings lie Entombed, of whom *Chan-Jehan* was the Founder. It has a Tower, which is elevated 170 Steps, ſupported with Maſſy Pillars, and adorned with Gates and Windows very obſervable. *Curroon* having ſtayed two days at *Texapore*, marches with great haſte to *Fettipore*, and that before *Ethabar-chan* knew he was in the Country; but now drawing nearer him, the watchful Treaſurer ſoon had notice of his approach, and eaſily ſuſpecting the danger, unloads his Camels of their precious Burdens, conveys it into the Caſtle, and having fortify'd it, ſends *Jangheer* word of his Son's Traiterous intention.

Curroon aſſaults *Agra*.

The King was aſtoniſhed at the News, and preſently ſends every way for Aſſiſtance, while *Curroon*, with his whole Army, preſents himſelf before *Agra*, making ſuch a Bravo, as if it were eaſie to conquer it, ſetting *Raagee Bickermanſe* to aſſault the Caſtle; but *Ethabar-chan*, deſirous to Sacrifice his beſt Endeavours to expreſs his Loyalty to the King, afforded him ſuch an Entertainment, that after three hours diſpute, he was forced to retreat with the loſs of 500 Men. But to revenge himſelf upon the Place for this Diſgrace, he plundered the Houſes of ſuch *Omra's* as had any Booty in them, and took above 60 Leek of Roupees from *Aſſaph-chan*, *Laſchar-chan*, and *Noutradin Cooly*.

Curroon reſolves to fight his Father.

Curroon being diſappointed of his Father's Treaſure, was not yet without hopes of getting his Kingdom, and hearing of his Father's march towards him, with an Army from *Aſſaph-cawn*, reſolves to give him Battle, and to encourage his Soldiers, doubles their Pay, with proteſtations of extraordinary Reward if they continued faithful to him. Within five days they came near each other, between *Pherrybaud* and *Dely*, and *Curroon* ſeeing it now no time to dally, commands *Radgee Bickermanſe*, with 8000 Horſe, to engage his Father early the next Morning. *Jangheer* having, by *Mahobet-chan*'s Advice, divided his Army into three Brigades, commanding one part himſelf, with *Radgee Bertſingh*, and giving a ſecond part to Sultan *Sheryer* his younger Son, with *Mahobet-chan* his Lieutenant-General, and the third to *Abdul-chan* and *Zadoc-cawn*, Perſons of undoubted Loyalty, ſent to each Commander ſome token of his Reſpect to wear that day for their better Encouragement.

Bickermanſe attacks *Jangheer*.

Bickermanſe, purſuant to *Curroon*'s Orders, with a ſmart Body of Horſe, charges *Bertſingh* and the *Mogul*'s Wing furiouſly, as did alſo *Ganganna* and *Curroon Mahobet-chan*'s part, and *Ruſtan-cawn*, with *Tſeſſaly*, *Abdul-cawn*'s. For three hours the Battel was continued with equal hopes and reſolution, till the Victory at laſt inclined to *Curroon*, for *Rajea Bickermanſe* having made a terrible Slaughter of the *Mogul*'s Party, and entring *Jangheer*'s Royal Seat, arreſted him as his Priſoner; but a *Mancebdar* being then in preſence with his Battel-Ax, gave the *Radgee* ſuch a blow, that he fell down breathing out his Soul with a Curſe. His Death ſtruck his Followers with ſo much terror, that not conſidering the Advantage they had they fled, and gave the *Mogul* opportunity of rallying his ſcatter'd Men, and after a ſhort Diſpute to regain the Victory. *Curroon*, in this unexpected change, did all he could by promiſes and threats to keep his Men together, crying aloud, That tho' *Bickermanſe* was dead, he was alive, and many as good Officers as he, but all his endeavours were in vain; they were ſeized with ſuch a pannick fear, as it was impoſſible to revoke them.

Jangheer overcome.

Curroon flies.

Curroon, in this diſtreſs, not knowing whether he had better put an end to his Misfortunes, by ſlaying himſelf, or fly, at laſt accepts *Ganganna*'s advice to retreat; and ſo leaving his Baggage and Treaſure to the Enemies, he, with ſome few Friends, flies into the deſolate Mountains of *Mewat*. The old *Mogul* being ſo Victorious goes to *Batzol*, where Sultan *Perwees*, with a glad heart, meets him, to congratulate his Succeſs, which ſo cheered his Spirits, that he became fearleſs, freed his Seraglio's, open'd the Caſtle-gates, and begins to Solace himſelf with *Normal*, the Light of his Eyes, if not the Object of his Devotion.

Curroon is reconciled to his Father.

This Voluptuous humour of the *Mogul*, gave a fair opportunity to *Aſſaph-cawn* to mediate a Reconciliation for *Curroon*, and ſo prevailed with the *Mogul*, deſirous of Eaſe, that Letters of Love and Forgiveneſs were diſpatched from *Aſmeer* to the Prince, who, reading them with joy, went with *Ganganna*, *Abdul-cawn*, *Darab-cawn*, *Beyram-beg*, and others, to *Aſmeer*, and throwing himſelf down at his Father's feet, upon his Repentance and Vows never more to fly out, is pardoned; but his Submiſſion proved counterfeit, for *Curroon* having conſtituted *Abdul-cawn* Governour of *Guzurat*, *Armadavad*, *Soret* and *Cambaia*, who delaying to repair thither, that he might free *Curroon* out of trouble, ſent *Baffadar* his Deputy. This Man growing Inſolent in his Command, quarrelled with *Nadal-Saffin-chan*, an eminent Officer of the *Mogul*'s, *viz.* the Chancellor of thoſe Parts, and was Impriſoned by him, with his Aſſociates *Mirza-Madary*, *Metzal-cawn*, and *Mamet Haſſen*. *Curroon* having had quick notice of this paſſage, firſt vents his paſſion in great Anger, and then breaks out into freſh Rebellion, tho' *Abdul-cawn* made but ſport of it, as not worthy of *Curroon*'s paſſion; nevertheleſs, knowing that he could not obtain Satisfaction without blows, he calls together his *Omra's*, and relating to them the Prince's diſhonour, and his own vexation, draws together an Army of 7000 Horſe, and 10000 Infantry, to chaſtize *Soffi-chan* and his Aſſociates, who were nothing troubled at it, but throwing off all fear Forraged the Towns, and Plundered Sultan *Curroon*'s Exchequer and Throne, newly ſet up at *Amadabat*, and with the Money he raiſes an Army of 20000 Horſe, 500 Muſqueteers, and 30 Elephants for War; and having by Proclamation ſatisfied the Country of the Reaſon of his making ſuch preparations, *viz.* to defend the King's Right againſt Rebels, by which means above 20 *Omra's* of Quality came to his aſſiſtance, he encamped at *Boubantalow*, 6 Courſes from *Amadabat*, and Courageouſly attended the coming of the Enemies.

Curroon Rebels again.

Abdul-cawn vanquiſhed.

Abdul-cawn received Intelligence of their Encamping at *Anamogery*, and in ſcornful manner acquaints them of his coming; but after hearing how ſtrong the Enemy was, endeavoured to attack them in the Rear, but in vain, for they diſcovered him. Next day he reſolved to fight, and accordingly having divided his Army into three Parts, one to *Amet-cawn* and *Tzalibeg*, another to *Tzardi-cawn*, *Maxatbeg* and *Mamet-Cooly*, and the third to himſelf, he marches to *Zietelpore* and *Phettibeg*, where *Nahar-cawn*, his five Sons, two Sons-in-Law, with 3000 Horſe begun the fight, and charged *Abdul-cawn* ſo hotly, that they forced him to retire, put their Cavalry into diſorder, and wounded his beſt Elephant, which in his rage turned upon his own ſide. *Tzazibeg*, in the mean time, was unhorſed and ſlain, and *Amet-cawn* taken Priſoner and Beheaded; all which things ſtruck ſuch terror into *Abdul*'s Army, that each Man fled whither his fancy led him, and *Abdul-cawn* himſelf was forced to fly to *Baroch*.

Baroch deſcribed.

This Town lies in 21 Deg. 55 Min. Northern Latitude, in the Province of *Guzurat*, and is a place of Note. It is ſeated in a fruitful Soil, watered by the River *Narvar*. It ſtands upon an high ground, which makes it not only viſible at a diſtance, but gives ſuch an advantage to its Works of Art, that it is almoſt Impregnable. It is well Peopled, hath a good Trade both by Land and Sea, but the Buildings are low. The *Mogul* hath from this Province yearly a Tribute of one Million, two hundred and ſixty thouſand Mamoudyes (or Shillings.)

Polly Medina's Tomb.

'Twixt *Baroch* and *Amadabat*, lies Entombed *Polly-Medina*, a *Mahometan* Saint, highly reputed by the People, who make their Pilgrimages thither loaden with Chains and Stones to obtain Children, Health, Wealth, and whatever they deſire. *Jangheer*, during the former Broils raiſed by *Curroon* and *Abdul-cawn*, lay at *Fettipore*, and being much diſpleaſed at them, called Sultan *Purwees* his Son, and Orders him to levy new Forces, to proſecute his Brother *Curroon*, and the *Omra's* his Accomplices. *Purwees* having prevailed with *Mahobet-chan* to joyn with him, moves againſt *Curroon* with fifty thouſand Horſe, by the way Impriſoned *Mirza-chan*, *Abdul-chan*'s Son. *Curroon* had early notice of theſe endeavours to reduce him, and leaving *Aſmeer*, flies to *Mando* to recruit his Forces, reſolving to bid him Battle.

Sultan *Purwees* purſues *Curroon*.

Purwees purſues him with the ſame deſign, and having, after a long march, overtaken him, aſſaults him, and after a ſhort diſpute vanquiſhes them, *Curroon* flying to *Brampore* his old Receptacle, and from thence into *Decan* to *Melec-Amber*, who gladly welcomed him, and ſeated him in *Naſſier-Throm*, his Elephants and Men being ſent to *Daltabat* to be Quartered there till he had further uſe of them.

The *Uſbeck-Tartars* ſpoil *Cabul*.

Sultan *Purwees*, and *Mahobet-chan*, after this Rout, give *Jangheer* notice of their good Succeſs, which was entertained by him with no leſs joy, than if he had triumphed over the moſt dangerous Enemy; but this pleaſure proved but ſhort, the News being brought him that *Iben Thouz*, an *Uſbeck* Tartar, was entred the *Mogul*'s Territories with thirty thouſand Horſe, and was plundering the Country of *Cabul*. *Jangheer* was driven into a great paſſion by the account, but ſoon recollecting himſelf, ſends Poſt to *Zaed-cawn*, (*Mahobet-cawn*'s Son) at that time Vice-Roy of *Bange*, to oppoſe the Tartar with what force he could get together. This young Gallant having raiſed twenty thouſand Horſe, haſtens to find the Enemy without delay, and coming upon the Tartar's Camp before he was aware, gave him ſuch a furious Charge, that after a ſhort Engagement he fled, and being loaden with prey, which they were loth to part with, gave the *Indians* an opportunity to overtake them, by which means they loſt not only their rich Spoils, and other Baggage, but were above half of them ſlain. *Zaed-cawn* proſecuted his Victory ſo far, as to purſue the Tartar into his own Country, burning and ſpoiling all before him as far as *Gaſſany*, and returning back with great Wealth, and many Elephants, to *Cabul*, he rewarded his Soldiers well to encourage them, and was received with wonderful Acclamations of Joy at *Cabul*. *Jangheer* was ſo well pleaſed with this Action, that he ſends *Zaed-cawn* thanks, and enlarged his Command with 5000 Horſe. And being in Peace again, he bethinks himſelf of Solacing his Mind with Sports, and his beloved *Normal*, and to that end makes his Progreſs into *Caſſimire*, a Country, tho' remote from his buſineſs, yet moſt ſuitable for that end.

Zaed-cawn routs the *Tartars*.

Curroon [illegible] *Decan*.

Curroon obſerving this Advantage, with ſpeed forſakes *Decan*, and paſſing through *Golconda* and *Orixa*, advances with 4000 Horſe, and 300 Elephants, into *Bengal*, where preſenting his Forces ſuddenly before *Debaka*, *Abraham-cawn*, the Governour of the Province, fled to *Meſulipatan*. *Curroon* laughs at his fear, and ſeizes his Treaſure; with which, and fair words, he drew moſt of the *Omra's* of the Country to ſerve him, with unexpected Recruits of Horſe and Arms. Over-joyed with this good hap he breaks into *Purop*, whoſe Governour alſo, *Makolidiſchan*, wanting Courage to oppoſe him, fled to *Elabaſſe*, and ſo gave him a free paſſage over the *Ganges*, to accompliſh his deſign of conquering *Kerry*, which he did not doubt of. But in the way, at *Radgee Mahal*, he was aſſaulted ſo furiouſly by *Abraham-chan*, from an Ambuſh, that had not *Abdul-chan* interpoſed he had been routed, and by him, after a long fight, was delivered, with the loſs of 3000 of his Men; but *Abraham-cawn*, out of an eager deſire to recover his Honour, loſt his Life.

Curroon's cruelty.

Curroon, tho' ſenſible of his Deliverance, was not leſs forward or cruel in acting Hoſtilities, ſpoiling and robbing that Wealthy Province; and paſſing *Guenga*, he forced all the Towns upon the *Ganges*, and in *Oryxa* and *Bengal*, to become his Subjects, requiring Oaths and Hoſtages from them, raviſhing their Women, and taking away their Gold and Jewels. Then he marched to *Pathan*, where *Radgee Uſiam*, with 5000 Horſe, and 20000 Foot, came to his Aſſiſtance.

Purwees purſues *Curroon*.

Purwees hearing of his Brother's extravagancies, commits *Brampore* to the Care of *Ruſtan-chan*, and *Laskar-cawn*, and with fifty thouſand Horſe reſolves to find him out. In the way *Lala Barſingh* meets him, as he paſſed his Territories, and joyns him with 7000 Horſe, offering him a Preſent of 3 Leeks of Roupees.

Jangheer alſo being alarmed with his Son's Rebellion, awakens from his Pleaſure, and after Advice with his Council, commands *Chan-Jehan* to raiſe a conſiderable Force out of *Multan*, *Buckar* and *Guzurat*, with the Tribute of thoſe Provinces, and haſten to joyn with *Purwees*, that he might be the better able to Encounter the Rebels. *Chan-Jehan*, forgetful of his Maſter's Commands, loyters at *Fettipore* and *Agra*, while *Curroon* takes *Rantas*, *Tzimur Bonarce*, and other Towns, and draws an abundance of Treaſure out of them; and hearing of his Brother's approach, obliged *Abdul-chan*, *Radgee Rhyhem*, and *Byram-chan*, to aſſault *Elabaſſe*, which *Ruſtan-chan* had well fortify'd, and as violently defended. Sultan *Purwees*, and *Mahobet-chan*, haſtened all they could to relieve it, but *Ruſtan* had acted his Part ſo well, that they were forced to retreat with loſs, and fly to *Curroon's* Army at *Bonarce*, or *Banaras*.

Ganganna joins *Purwees*.

Ganganna in this time had joyned himſelf to *Purwees* Army, but found no kind welcome, being Impriſoned for his Treachery; and tho' *M'hia Fehiem*, his Servant, endeavour'd his Releaſe, yet being diſcovered, his Caſe became worſe, for he was more ſtrictly guarded, his Eſtate confiſcated, and his Wife, Son and Family, ſent Slaves to *Agra*. *Purwees*, *Mahobet*, and their Army, after long marches, arrive at *Elabaſſe*, and were welcomed by *Ruſtan-chan* according to their Dignity, but not finding the Enemy, *Mahobet*, eager of a Battel, could not be enticed to ſtay, but paſſing the *Ganges*, faces *Curroon's* Army, which obliged that Prince to prepare for a fight.

Mahobet-chan forces *Curroon* to a fight.

Radgee Rhiem, with his Elephants, was ordered to Charge *Mahobet*, and being a brave Soldier, did it with ſuch Courage, that had *Abdul-chan*, or *Dena-chan*, ſeconded him as they were appointed, *Curroon* had gained the Victory; but *Abdul* hated *Rhiem*, and ſo neglecting his Duty, *Mahobet* recovers his loſs, wounds and enrages *Radgees* Elephants, which thereupon turn upon their own Party, and diſorders *Radgee's* whole Body, himſelf being ſlain. Upon this, *Purwees*, with the *Radgees Ziſimg*, *Ziand*, and *Bertzing*, and the whole Army, enter; *Curroon* falls on, and does what was in the power of Man, and *Abdul-chan* found it not ſafe to look on. The Battel endured five hours, with a great deal of Bravery ſhewn on both ſides. *Curroon* was hurt in the Arm, *Purwees*, tho' upon his Elephant, was wounded in the Side by *Derra-chan*, and had periſhed but for the ſtrength of his Mail.

Curroon vanquiſhed flies.

In the end the King's Army vanquiſhes, the Rebels fly, and *Curroon*, unable to prevent his Deſtiny, flies to the inexpugnable Caſtle of *Rantas* with 4000 Horſe, leaving the reſt to the Mercy of the Enemy, the Honour of the Field to his Brother, and the Spoil of his Camp to *Radgee Bertſingh*, who found plenty of Gold, Silver, Jewels, Elephants, Horſes, &c. The Sultan *Curroon*, now in his ſtrong Caſtle, ruminates in Miſery and Diſcontent, and hearing of *Mahobet-chan's* approach towards him, diſmiſſes his Seraglio, and flies to *Potan* with *Aſſaph-chawn's* lovely Daughter only in his Company, ordering *Darab-chan*, by Letter, to levy more Forces in *Bengal*, and meet him at *Radgeo-Mahal*. *Mahobet-chan*, and Prince *Purwees*, keep on their purſuit of him; but hearing that he was fled to *Radgee-Mahal*, and that *Darab-chan* was levying Forces for his Aſſiſtance, they perſwade *Ganganna*, whom they kept under a Guard, to diſſwade his Son *Darab* to deſiſt from his Enterprize, and promiſe him the King's thanks if he would joyn with them; but *Darab*, incenſed at the ill uſage of his Father, and ſuppoſing his Letters counterfeit, continued his Levies to ſupport the Rebellion. Prince *Purwees* hereupon proclaims him a Traytor, and promiſes a Reward of 4000 Roupees to any that ſhould bring him to his Camp alive or dead. The Multitude knowing that *Curroon* was fled, grew eager of the gain, and ſeizing *Darab-chan* and his Children, ſtrike off their Heads, and ſend them to *Purwees*, who having by *Mahobet-chan's* perſwaſion preſented them to the miſerable *Ganganna*, diſpatched them to *Agra* to be ſet on Poles.

Purwees purſues *Curroon*.

Curroon flies to *Oujea* in *Bengal*.

Curroon, at the News of this accident, left *Radgee-Mahal*, and fled to *Oudee*, or *Oujea*, in *Bengal*, and ſo eſcaped *Mahobet-chan's* hands, who purſued him as far as *Meden-pore*. During theſe Inteſtine Broils, *Melec-Amber*, King of *Decan*, thinking it a fit opportunity to recover what he had loſt, Levies an Army of fifty thouſand Men, and ſo unexpectedly fell upon *Laskar-chan*, *Mirza Mametſheir*, and *Ebrahim Hoſſen*, the *Mogul's* Governours in his Forts, that they ſurrendred the Forts, and were taken Priſoners, with the loſs of 15000 Men; and ſo *Melec* recovered all his Forts and Garriſons. *Curroon*, in the mean time, being purſued by *Bacher-chan* to *Oujea*, tho' he had an Army of 5000 Horſe, and 300 Elephants, durſt not give him Battel, tho' not much ſuperiour to him in Numbers, but fly for fear to the King of *Golconda*, where he had but a cold reception, becauſe he knew he came with a deſign to inſpect the Intrinſick value of his Diamond-Mine; and therefore he doubled his Guards in *Cunda-ver* and *Canda-poly*, two Caſtles where he commonly put his Diamonds, with much other Treaſure.

The Diamond Mine at *Golconda* deſcribed.

This famous Diamond-Mine is diſtant from *Muſulipatan* about 90 *Engliſh* Miles. The neareſt Town is *Morcanda*. It is a large Rock under part of that Mountain, which extends towards *Belleguate*. The Soil for many Miles round is Barren and Sandy, but near the Mine 'tis of a reddiſh colour, and the Vein it ſelf is of a pale Yellow. No part of the World affords greater plenty of Diamonds, or of a better Water, than this Mine doth, thoſe of *Socodania* in *Borneo* not excepted, altho' many be yellow. The Quarry has alſo many other tranſparent Stones of value, as Topazes, Amithyſts, Spinels, Hiliotropes, Agates, Garnats, Chryſtals, and the like. The digging in it is a kind of Lottery, the Adventurers finding Stones ſometimes to their advantage, but other times to their loſs. In digging, if a Diamond exceed 20 Caracts, (*i. e.* 30 Grains) it is by Law reſerved for the King; the reſt are for the Adventurers, who both in digging and travelling back, are forced to maintain ſufficient Guards to defend them from the Mountaineers, who will rob the Caravans.

Melec-Amber unites *Curroon* to him.

While *Curroon* remained with the King of *Golcanda*, *Melec-Amber* ſends an Embaſſador, with affectionate Letters, and a large Sum of Money, with other Neceſſaries, to invite him into *Decan*, where he aſſured him all things ſhould be at his Command. *Curroon* perceiving himſelf no welcome Gueſt at *Golconda*, and finding his Deſign upon the Diamond-Mines fruſtrate, accepts the Invitation, and departs with him to *Decan*, where he ſtaid three Months; and then projecting the recovering his old Eparchy of *Brampore*, preſents himſelf with an Army of 10000 Men before it. *Radgee Ruſtan*, who was made Governour of it by Sultan *Purwees*, refuſed to give him entrance, at which *Curroon* was ſo enraged, that he aſſaulted the Walls with violence, but *Ruſtan* as churliſhly anſwered him; ſo that after ſeveral attempts, all in vain, hearing of Sultan *Purwees* march to relieve it, he was obliged to retreat again to his Old Friend *Melec Amber*, then in *Kerki* in *Decan*.

Haſſer deſcribed.

In his way he attempted *Haſſer*, a ſtrong, and one of the beſt defended Caſtles in *Chandis*, becauſe it is built on the top of a ſteep Mountain, is well Walled by Nature, hath Springs of wholſome Water within, and the Soil is ſo fruitful, that it will feed as well as lodge 40000 Men, and were not to be taken, were it not that ſuch Worms breed in the Thighs and Legs of ſuch as drink the Water as often prove Mortal; by which means alone *Ecbar* took it.

Jangheer prefers *Mahobet-chan's* Son.

Jangheer being pleaſed with the Victories of *Purwees* and *Mahobet-chan*, to ſhew his kind reſentments of them,

takes

Mahobet's Loyalty, and *Ganganna's* Malice againſt him.

takes notice of the Valour and Loyalty of *Ganna-zied-cawn*, *Mahobet's* Son, late made Vice-Roy of *Cabul*, calls him to Court, and adds 5000 Horſe to his Command; makes him Governour of *Bengal*, the richeſt Province of *India*. *Normal* and *Aſſaph-cawn* caſt a Squint-eye upon this new Favourite; and in the firſt place, to affront *Mahobet*, they prevail with the *Mogul* to command him forthwith to ſend Impriſoned *Ganganna* to him to *Agra*. *Mahobet*, tho' he ſaw the Plot to work his Ruin, yet would not ſhew any inclination to Diſobedience, and ſo ſends him. *Ganganna* was no ſooner arrived at Court, but he ſpits his Malice againſt *Mahobet*, accuſing him of putting his Son and Kindred to Death, after they had left *Curroon* to ſerve the King; with many other grievous Complaints. Theſe Accuſations ſomething moved the Credulous *Mogul*; and being further heightned with *Purwees* Character of *Mahobet*, by Letter, That he was an Ambitious Man, and ſought to Eclipſe his Honour with the Army, ſo incenſed him, that forgetting his good Services, he condemns him unheard, and gives his Command to *Cawn-Jehan*, and calls him Home.

Mahobet goes to Court.

Mahobet admires at this Change, but reſolving to clear his Innocency by a Dutiful Behaviour, goes to take his Leave of *Purwees*, but finds him Coy and Stately, which ſtruck him with amazement; ſo that he left the Camp with a ſad Heart, tho' with the love of all the reſt of the Army. From *Brampore* he goes to Court, but being Adviſed by his Friends not to venture thither, where he muſt expect to be treated as a Traytor, he ſecured himſelf in his Caſtle of *Rantampore*, reſolving there either to reconcile himſelf to *Jangheer* by Letter, or ſecure himſelf from the Spite of his Enemies.

Curroon reconciled to his Father.

Mahobet's reſolution to clear himſelf.

Mahobet defies the Queen *Normal*.

Conquers her Army.

The *Mogul* and *Normal* taken Priſoners.

This Diſcord between *Purwees*, *Mahobet* and *Normal*, was grateful to *Curroon*, who hoped to advance his Ambition by their Diviſions, and to that end ſends *Godgee-Jehan*, his Son's Tutor, with a Preſent of rare Coins, a hundred choice Elephants, and ſome fine Pictures bought of the *Portugueze*. The Old King, as an Indulgent Father, accepts his Preſent, invites him home, and aſſures him of Pardon; of which he Ordered *Aſſaph-cawn* to give him notice, who alſo adviſed him to come to Court, while his Father was in this good humour. In the mean time *Mahobet-chan*, at his Caſtle of *Rantampore*, receives a peremptory Command from *Jangheer* to deliver up his Caſtle to the Queen, who had given the Command of it to *Bachor-cawn*, no Friend of *Mahobet's*, and ſhould forthwith go to *Orixa* to his Son, who was the King's Lieutenant there. *Mahobet*, careful to preſerve himſelf, but yet loth to offend his Maſter, ſends him back this Anſwer, 'That he was ready to manifeſt himſelf a Duti-'ful Subject, and ſerve him with his Life and Goods, 'but would not expoſe himſelf to the Malice of his Ene-'mies, of which he was ready to give him the Reaſons 'in Perſon, provided he might repair to Court, and re-'turn to *Rantampore* again ſafely. *Jangheer* received this Anſwer, and wonders at *Mahobet's* Preſumption; but *Mahobet*, as much admiring at his Miſ-apprehenſion of his words, reſolves with 5000 Voluntary *Raſhboots* to go to *Labor*, and make his Defence in Perſon. The Queen and *Aſſaph-cawn* having notice of his Deſign, and fearing his Force, as well as his Reconciliation, perſwade the *Mogul* to admit *Mahobet*, with a few of his Confidents only, to make his Defence. But *Mahobet*, ſenſible of *Normal's* Deceits, would not adventure his Perſon, but ſent his Excuſe by his Son-in-Law, who gladly undertook the Office; but as ſoon as he came to Court, and was alighted from his Elephant, was ſtript of his Bravery, and being Cloathed in Rags, chabrect upon the Soles of his Feet with Rattans, and ſet bareheaded upon a Jade backward; was led through the Army with Kettle-Drums, and made a Scoff to the Multitude by *Normal's* Order. *Mahobet* had quick Intelligence of this uncomely Entertainment, and bore it the more patiently, becauſe he believed it proceeded not from his Maſter, yet ſaw the hatred of his Enemies, and what he muſt have ſuffered, if he had truſted himſelf to them; whereupon he reſolves to bid *Normal* Defiance, and having withal due Zeal to his Maſter, declared in a ſhort Manifeſto *Normal's* and *Ganganna's* Abuſes to the Crown, and the Indignity offer'd his Son by them. He acquaints his Friends and Fellow-Soldiers with his Deſign, who promiſed to live and die with him; and ſo with 20000 Valiant *Raſhboots* he advances to find out *Normal's* Army, and the *Leſcar*, which then conſiſted of fifty thouſand Men. By accident, when he approached them, her Army was parted, the better half being paſſed over the River *Phat*, and the reſt marching after; of which *Mahobet* being advertiſed by his Scouts, and knowing the Advantage, falls upon the part on this ſide the River, Commanded by *Bradet-cawn*, which in two hours they utterly Diſcomfited, ſlaying above 6000, and putting the reſt to flight, who many of them periſhed in the River. The other part of *Normal's* Army ſtood ſtill, and could hardly be perſwaded to oppoſe the Victorious Rebels; but being cheared up by *Aſſaph-cawn*, *Abdul-Haſſen*, and other *Omra's*, they prepared for an Encounter, *Mahobet* being come in view. The Battel was very fierce for five hours, each ſide ſtriving for Victory, but at length *Normal's* Army gave back, and were ſoundly beaten. *Aſſaph-cawn* the General was taken, and ſhackled in Silver Fetters, twelve thouſand Men were ſlain, and the Old *Mogul*, Queen *Normal*, and many *Omra's* of Note, made Priſoners, and carried to *Kabul*. *Mahobet* thus ſeated in the Triumphal Chariot of Fortune, reſolves to detract as little as poſſible from his Maſter, and only to clear his own Reputation, and vindicate the Diſgraces and Wrongs done to his Friends for his ſake, *Normal* was condemned to loſe her Head by the Advice of his Council, which ſhe patiently ſubmitted to becauſe unavoidable, only deſiring to take her farewel of her Lord. *Jangheer* ſeeing her ſorrow melts into compaſſion, and deſires her freedom; and *Mahobet*, not willing to diſcontent his Maſter, grants it. And *Normal*, contrary to the Advice of his Confederates, is ſpared; not to thank the Merciful Conquerour, but revenge her ſelf, as ſhe ſoon did. The other Priſoners were treated honourably, and *Mahobet* holds for a ſmall time the Sway of *Indoſtan*.

Curroon's deſign to make himſelf King.

Curroon was all this time in *Decan*, watching an Advantage to recover his loſt Credit, and hearing of the incredible change of Things in the Empire, *viz.* That his Father and Father-in-Law, Brother Sultan *Bulloch*, Brothers Sons, and his own Children, were Priſoners to *Mahobet*, he gives *Melec Amber* a thouſand thanks, and with *Radgee Rhiem's* Son, and twelve thouſand Horſe, paſſes with leave through *Rana's* Territories to *Aſmeer*, intending to ſurprize *Agra*, and proclaim himſelf King: But the *Radgee's* Death, which drew away half his Forces, cauſed him to alter his Reſolutions, and ſo with the reſt he haſtned to *Tatta*, hoping by the Conqueſt of that City to command all *Indus* and *Cambaia*. *Curroon* being ſet down before *Tatta*, ſends the Captain of it, *Xeriff Melec*, a Summons to deliver it; but he told him, That he had a particular Order to defend it againſt them, and if he attacked it, he ſhould find the Entertainment of an Enemy. *Curroon*, enraged by this Anſwer, Storms it in ſeveral places, but was ſo warmly received by *Melec*, that he was forced to draw off with loſs; and the Beſieged, by a Sally, falling upon his Camp, killed *Dorra-chan*, with 300 of his Men, and forced *Curroon* himſelf to fly to *Dely*.

Dely deſcribed.

Jemini a River.

This City, which gives Name to the Circumjacent Province, belonged of late to the *Potan* Kings, who were the Original Inhabitants, but now is ſubject to the Crown of *Indoſtan*. It is an ancient, large, and pretty beautiful City, having the ancient Monuments of above 20 Kings, and other Perſons, who lie Entombed in it; which draw Travellers to uſe it, and the *Banians* to adore them. About three Miles from it is a famous Pyramid, the Tomb of King *Hamayon*, who was Grandfather to *Jangheer*, ſuppoſed to be built by *Alexander* by the Frame and Inſcription. It is Walled about, Watered by the *Jemini*, over which lies a Bridge of twelve Arches, which you muſt paſs over into the City. This River riſes in the Mountains of *Jenba*, and having paſſed *Agra*, after a great increaſe of her Channel at *Prage*, flows into *Ganges*, and with it falls into the Gulph of *Bengal*, at two huge wide Mouths, near 100 Miles aſunder, in about 22 Deg. Northern Latitude.

Ganges deſcribed.

Ganges, by Coſmographers, is reputed one of the Nobleſt Rivers in the World, running about 1000 Miles in length, and has many Rivers that flow into it, falling into the Gulph of *Bengal*. The *Banians* count it Sacred, and becauſe they have a great reverence for a Cow, they ſay the Rock, from whence it flows, reſembles a Cows head. *Curroon* found no welcome at *Dely*, and ſo haſtes away with his chafed Troops to *Bekar*, a Fort betwixt *Labor* and the Sea, that he might breathe there a while. *Melec Amber*, as ſoon as *Curroon* was marched out of his Country, to procure favour from *Purwees*, gave Liberty, without Treaty or Ranſom, to *Laskar-Cawn*, *Ebrahim-Haſſem*, and *Mirza-Manoutſhir*, and with a ſafe Convoy ſends them to *Brampore*.

Normal's reſolution to deſtroy *Mahobet*.

Jangheer removing his Court from *Cabul* to *Labor*, by *Normal's* perſwaſion condeſcends to the Slaughter of ſuch *Raſhboots* as *Mahobet* had mixed with his Guards, and after declared, That ſhe could not be ſatisfied without the deſtruction of *Mahobet*, and that before he received any Supplies from his Kinſmen *Chan-Alem*, and *Radgee Ruſtang*, who were advancing towards him; and to that end, emptied all her Husband's Coffers, to hire Men from all places to ſerve her. *Mahobet-chan* had notice of the Queen's projects, and new preparations, but not being at all diſheartned at them, draws up his Forces into a Body to meet her, who was at the ſame time haſtning towards him. *Ganganna* was made General of *Normal*'s Forces, and *Mahobet-chan* was not troubled at it.

Purwees Death.

While theſe things were doing, *Purwees*, who had contracted an intimate Friendſhip with *Mahobet-chan*, dies, and his Death was ſo afflicting to him, as well as to his Father *Jangheer*, that he bid the World adieu, and contracting himſelf to privacy turned Anchorite. *Normal* ſuppoſing even his Eaſe to be in contempt of her, was unſatisfied ſo long as *Mahobet*, whom ſhe had devoted to ruin, was alive, and therefore projects ſeveral ways for his Deſtruction; and tho' the Indignity lately done his Son, by taking his Government from him, ſomething pleaſed her, yet 'twould not ſatisfy, but calling *Amir-chan*, *Nuradin-Cooly*, and *Hemyrbeg*, her Minions, ſends them with 15000 Horſe to fight with him.

Aſſaph-cawn, who had ſo generouſly been diſmiſſed by *Mahobet*, was ſorry for his Siſter's Lunacy, and ſince he could not effect his Reconciliation, (as he often laboured) he was loth ſo Brave a Man ſhould periſh through the Malice of a Woman, and ſo ſends him a Letter, diſcovering his Siſter's Reſolution, and ſolicits young *Rana Radgee* to preſerve him. *Mahobet* having received *Aſſaph-cawn*'s Letter, was much troubled, and leaving his Cell in *Zirmol*, flies to *Geſſmeer*, and ſo to *Radgee Rana*, who loved him well; but being purſued with Letters full of threats, as well as intreaties, from *Normal*, the *Radgee* thought it not prudent to retain him, or protect him, and ſo adviſed him to fly to *Curroon*, who would, without all doubt, entertain him gladly.

Mahobet-chan having received a Packet from the *Radgee Rana* to *Curroon*, ſpeeds to *Decan* with 500 *Raſhboots*, and 1000 other Men, led by *Wazir-chan*, with him, and finds *Curroon* at *Guyneer*, in *Niſamſha*'s Kingdom, who was amazed at his coming, till having read the *Radgee*'s Packet, he embraced him with unſpeakable Joy, and entred into a firm Friendſhip with him. *India* admires at this Agreement, *Normal* too late repents her Folly, and *Jangheer* grows ſo afflicted at their Conjunction, that he falls into a deep Melancholy, and ſoon after a fatal Sickneſs, of which in three days he died, in the 23d Year of his Reign, in the Year 1627. Heg. 1007. having named on his Death-bed his Grandſon *Bullochy*, Son of Sultan *Guſhroo*, his Succeſſor, and ſworn his principal *Omra's* to ſee him crowned, and ſhew *Curroon* no favour, till he had ſubmitted to *Bullochy*.

The dead Body of the *Mogul* was Entombed at *Tzecander* in *Ecbar*'s Monument, and Sultan *Bullochy* being 13 Years of Age, was crowned at *Dely* with all Royal Joy. *Normal* being of an active Spirit, and having all *Jangheer*'s Treaſure in her hands, arms her ſelf with Confidence, and a pretended Title, reſolving to ſet her Son *Sheryer* on the Throne: To that end ſhe hires 15000 Horſe, and ſends to her Son to levy as many more at *Jengapore*, intending to Strangle *Aſſaph-cawn*, and King *Bullochy*, who were advancing towards her. The young King underſtanding this, turns away to *Labor* to meet *Sheryer*, who had lately been baffled by *Godgee-Abdul-Huſſan*, and was encamped only with 4000 Horſe. Here they aſſail him in extreme rage, (tho' by the expence of 90 thouſand Leek of Roupees he had trebled his Army at their arrival) and in two hours, by the treachery of *Amir-chan*, and *Sheir-Godgee*, get the Victory, and force him into the Caſtle, which in three days they took, with much Treaſure, and *Sheryer* himſelf, whoſe Eyes *Bullochy* ordered to be put out, but ſpared his Life.

Normal's Submiſſion.

Normal, at the News of theſe Misfortunes, lets fall her Spirit, complains of her Brother's perfidiouſneſs, and her own folly, in proſecuting *Mahobet* with ſo much rage, and ſubmits to *Bullochy*'s Mercy, who, like a Noble Prince, forgave and comforted her, promiſing her ſafety by Oath; and accordingly, during his Reign, he gave her ſuch reſpect and freedom as became her Character. But not pleaſing the People as he ought, by ſhewing himſelf often in the *Durbar* and *Jarneo*, he enjoyed his Sovereignty but a little while, for *Aſſaph-chan* giving *Curroon* Intelligence by Letters of his Father's Death, *Curroon* immediately ſets out from *Decan* with *Mahobet-chan*, *Zulpeckar-chan*, and 7000 *Raſhboots* and *Mancebdars*, and paſſing through *Guzurat*, after three Weeks march he came to *Agra*, where he claims the Imperial Dignity, and by the *Kutwall*, and his Favourites, was proclaimed King by the Name of *Pot-ſha-Jehan*. *Curroon* being thus ſettled on the Throne, Orders the *Gazal-chan* to give notice of it to *Aſſaph-chan*, who forthwith Poſts to *Labor*, and making *Radgee Bandor* of his Council, ſends him into the Hummums, where he Strangled *Bullochy*, with Sultan *Sheryer*, *Sha-Ethimore*, and *Sha-Haſſen*, the two Sons of Sultan *Purwees*, and the two Sons of Sultan *Morod*, not ſuſpecting any danger, and ſent their Heads to *Curroon*.

Curroon made King by the Name of Pot-ſha-Jehan.

Curroon crowned.

Theſe Murders aſtoniſhed the Empire, but *Curroon* ſoon quieted it by his Incantations, and then Orders his Coronation at *Agra*; which was accordingly performed, in a General Aſſembly of *Omra's*. Then he turned to the Affairs of the Empire, placing and diſplacing at his pleaſure. He ſhut up his Father's Seraglio, confined Queen *Normal* and her three Daughters. *Aſſaph-chan* was made ſecond in the Empire, and *Mahobet-chan* next him; and *Channa-Zied-chan* was re-eſtabliſh'd Vice-Roy of *Bengal*. Ambaſſadors from *Perſia*, *Arabia*, *Tartary* and *Decan*, bring him Preſents, and Congratulate his acceſs to the Crown. Divers *Radgees*, and all the principal *Omra's*, reſort to him, who affectionately received them, pardoning all Offences committed during his Rebellion. After which he proclaims a Jubilee, which was Celebrated with all manner of Sports and Pleaſures imaginable; but *Curron*, tho' in the higheſt Dignity, can't be happy, Divine Vengeance purſuing him for his Sins by taking away his Wife, and ſending the Arrows of Plague and Famine into his Kingdom. The Sword threatens on all ſides, the *Perſians* having taken *Kermaen* and *Candabar*. The *Tartar Cabul*, *Sheuph Almuch*, endangers *Tutta*; and *Leur Bander*, and *Radgee Joogh*, troubles *Brampore*; and two Counterfeit *Bullochyes* ſtir up Rebellion in the Bowels of his Kingdom. He himſelf lives in the higheſt Inceſt, having married his own Daughter, and 'tis to be feared God's Hand will give a fearful Event to theſe things, as a juſt puniſhment of his former and preſent Sins, as they deſerve. This is what he gathered and obſerved while he lay at *Surat*.

Curroon's unhappy Reign.

CHAP. XXII.

Sir Tho. Herbert's *Travels into* Perſia, *in which he gives an Account of the People, Cities, Towns, and Products of it.*

LEaving the *Mogul*'s Country, Sir *Tho. Herbert* and his Company came to *Diu*, or *Dewa* Town, ſeated on the *Cambayan* Gulph, and ſo incompaſſed with a branch of the *Indus*, that it is made a kind of Peninſula. The Haven is as good for Anchorage as *Swalley*, or any of the Havens thereabouts. *Alexander* returning from the Conqueſt of *Porus*, built a City on the Banks of the River *Hydaſpes*, one of the branches of *Indus*, called *Bucephala*, in memory of his Horſe killed in that great Battel; and coming to this place, commanded *Nearchus* his Admiral to repair his Fleet, and ſail to *Ormus*. This City is large, but the Chriſtians are not ſo well loved here as in many other places, becauſe of the moroſe humours of the *Portugueze*. 'Twas a Town of good Trade, when it afforded Opium, Aſſafœtida, which were brought thither from *Labor*; Puchio, Cotton, Indico, Mirabolans, Sugar, Arack, Agats, Cornelians, Diaſpries, Calcedons, Amathyſts, Pearl and Elephant's Teeth, but ſince the *Dutch* and *Engliſh* have traded at *Surat* and *Cambaya*, her Traffick is inconſiderable. It has no Buildings remarkable but the Caſtle, built there by *Albuquerque*, the famous *Portugueze*

The River *Indus* deſcribed.

Captain, in 1515. The River *Indus*, called by *Pliny Sandus*, and *Arrian Sinthus*, is now called *Sinde*. After a Courſe of 3000 Miles from the *Caſnirrian* Mountains, part of *Caucaſus*, it empties it ſelf into the Ocean at two great Oſtiums. It is accounted by ancient Geographers one of the moſt famous Rivers of the World, and gives Name to one of the moſt noble Parts of the Univerſe. The Rivers *Bohat*, *Ravore*, *Damiadee*, *Obchan*, *Waihy*, or *Hydaſpes*, *Aceſines*, *Cophis*, *Adris*, &c. all flow into it. Here it is worth Obſervation, that at the Mouth of *Indus* 'tis full Sea at the New Moon, but at *Calecut* at the Full Moon, and at *Secotora* at the Firſt and Laſt Quarters.

Muſcat deſcribed.

On the other ſide of the Gulph in *Arabia Felix* is *Muſcat*, not far from Cape *Raz al gate*, anciently called *Corodamam*: It is the beſt Town, Port and Haven, which the *Portugueze* have in theſe Parts, being conquer'd by them when they took *Ormus* in 1507. from *Zerfadin* an Infant King of it. The Town is ſeated in a Plain between two riſing Mountains, a Ditch and Parapet drawn from one Hill to the other, ſo environing it, that to ſome it ſeems inacceſſible. The Caſtle is large, well Manned, and ſtored with great Ordnance.

Gambroon.

Dec. 17. they ſailed for *Gambroon* in *Perſia*, coaſting on *Arabia*, where thoſe ſweet Spices and Gums do grow, whoſe Flowers ſo perfume the Air, that it ſmells ſweet at Sea, when no Land can be diſcerned.

Arabia deſcribed.

Æthiopia in *Aſia*.

Jaſques deſcribed.

Arabia, denominated from *Arabus* the Son of *Apollo* and *Babylonia*, was anciently a Seminary of very famous Men, Phyſicians, Mathematicians and Philoſophers, as *Galen*, *Hypocrates*, *Avicen*, *Albumazar*, &c. but now is obſcure and barbarous. It was of Old famous for the delivery of the Holy Decalogue, but now 'tis as Infamous for the Alcoran. It is divided into three Parts, 1. *Deſerta*, or *Aſpera & humilis*. 2. *Petræa*, or *Petroſa*, from *Petra* the Metropolis of it, built by *Patraſim* the fifth Son of *Mizraim*, *Gen.* 9. 14. It is alſo called *Inferiour*, and *Nabithæa*, by *Strabo* and *Ptolemy*. 3. *Fœlix*, called *Sabæa*. All theſe Parts were firſt called *Æthiopia Aſiatica*, to diſtinguiſh it from that in *Africk*. *Herodotus* diſtinguiſh theſe *Æthiopians* by their Hair, for the *Aſiaticks* may be combed, the *African* not. In the Deſart *Arabia* is *Kedar*, in *Petræa*, *Horeb*, *Sinai*, *Jathrip* and *Mecca*, places of Account among the *Saracens*; and in the *Happy Arabia*, now called *Mamotta*, *Medina*, *Saba*, and many other Towns of Note. All this Country was Peopled at the Diviſion of Tongues, by *Seba*, *Raamah*, *Sabbata* and *Sabbatheca*; and 'tis obſervable at this day, that whereas the *Hebrew*, *Greek* and *Latin* Tongues, are no where ſpoken purely, the *Arabick* is ſpoken in three parts of the World. Leaving *Arabia* they croſſed the *Perſian* Gulph, and paſſed near Cape *Gwader*, and in ſight of Cape *Goadel*, an Infamous Port, inhabited by a People who make a prey of ſtrangers. On the *Carmanian* Coaſt ſtands *Jaſques*, in 28 Deg. 58 Min. Northern Latitude, diſtant about 40 Leagues from *Ormus*; *Albuquerque* ſubjected it to the Crown of *Portugal*, built a large Caſtle in it, and furniſhed it with 17 Braſs Cannon, but the *Engliſh* took it from them in 1623. becauſe they killed Captain *Shilling* in it, but put it into the hand of the *Perſian*.

Carmania deſcribed.

Carmania is twofold, the Greater and the Deſart: The Deſart extends from this Town to *Aria*, and the Greater is confined by *Gedroſia* to the N. W. Near this is a ſmall Iſle called *Aphrodoſia*, from a Shrine ſtanding in it Dedicated to *Venus*; 'twas famous in *Alexander*'s time for Sword-Blades, accounted better than thoſe of *Damaſcus*, and for the *Orgies* he celebrated here. Then paſſing the Streights of *Ormus*, in view of *Riſhmy*, where the *Portugueze* have another Fort, they came to Anchor at *Gambroon*, the beſt Port the *Perſian* has.

Ormus deſcribed.

Kings of Ormus.

Ormus is a Kingdom in *Carmania Major*, and an Iſle about one League from the Continent, and fifteen Miles in Circuit, lying in the 27 Deg. of Northern Latitude. The Soil is barren, but the chief City is ſo elegant for Buildings, ſo populous for Inhabitants, and ſingular for Trade, that it allures Merchants and Travellers to it from all Parts of the World, and by its Marine Power derived from *Goa*, gives Laws to all its neighbouring Potentates. The City is not large, but compact, and the Streets narrow to avoid the heat of the Sun, which otherwiſe, through the Sandineſs of the Soil, would be intolerable there. The Iſle hath two Havens in it, one in the Eaſt, and the other in the Weſt parts of it. In the middle of it is an Hill, which gives a delightful proſpect on the top, and affords Sulphur on the one ſide, and Salt on the other, in great ſtore. The City is well built, and the Houſes within exceedingly well furniſhed with gilded Leather, and *India* and *China* Rarities: The Bazar is rich and beautiful, the Churches ſplendid within, and the Caſtles ſo regularly built both within and without, and ſo well fortified with deep Trenches, a Counterſcarp and great Ordnance, commanding both the City and Haven, that none exceeds it in all the Eaſt. The Kings of this Iſland were,

1. *Mir Bahedin Ayaz*, or *Ben-Seiſin Ben-Cabadin*, who being a Servant to *Seidfadin Nocerat*, an Infant *Arabian* King, ſlain by his Brother *Morad*, or *Maſad*, oppoſed *Morad* in his ambitious Deſigns, and kept him from the Throne, forcing him to fly to *Kermaen*, where *Morad* obtaining Aſſiſtance of the *Turks*, brought ſo great an Army againſt him, that he was forced, with many of his Friends, who hated the Tyrant, to remove to *Riſhmy*; but not well liking that place, he departed, and ſettled upon the Iſle *Gerun*, which he fortify'd and named *Ormus*, in 1312. Heg. 692. To him ſucceeded,
2. *Emir-Azadin-Gourdan-ſhaw*, a Perſon of a Noble Extraction, whoſe Son,
3. *Maberazadin-bahron-ſha*, a Brave Prince, inherited the Throne, but was treacherouſly ſlain by,
4. *Mirſha-Bedin-Iſſuff*, who enjoyed his wicked Purchaſe but a little while, for,
5. *Mirza-Codbadin*, his Predeceſſor's youngeſt Brother, retaliated his treachery upon him, and tho' for a while his Couſin *Melec Nozamedin* forced him to fly the Kingdom, yet at his Death he recovered it, and left it at his own to,
6. *Paca-Turanſha*, a Victorious Prince, whom nothing could conquer but Death, which ſtripping him of his Regal Power in 1488. he had theſe Succeſſors,
7. *Mozad-ſha Bedin*.
8. *Salger-ſha*.
9. *Shawez*. And
10. *Saffadin*, whom *Albuquerque* ſubdued in 1507. and cauſed him to be ſtrangled.

Nordine, *Cojeature*, and *Dalamſha*, ſeverally attempted the Sovereignty, but *Mahomet*, in the ſpite of them, was crowned King, being the Right Heir; and to him ſucceeded his Son *Seid-Mahomet-ſha*, in 1622. who was ſubdued by the *Engliſh* and *Perſians* when they took *Ormus*, which being a remarkable Conqueſt, it will be worth our while to take the particulars of it.

Conqueſt of *Ormus* by the *Engliſh* and *Perſians*.

Sha-Abbas, the Emperor of *Perſia*, reſolving to ſubdue *Ormus*, commanded *Emangoly-chawn*, Governour or Duke of *Shyraz*, to undertake it, who advances toward *Gambroon* with 9000 Horſe and Foot, at ſuch a time as he expected to meet the *Engliſh* Fleet there, whoſe Aſſiſtance he obtained upon theſe Conditions, which they firſt ſettled under Hand and Seal: 1. That the Caſtle of *Ormus*, if it were taken, with all the Ordnance and Ammunition, ſhould belong to the *Engliſh*. 2. That the *Perſians* might build themſelves another in any part of the Iſle, if they pleaſed. 3. That the Spoil ſhould be equally divided. 4. That the *Engliſh* ſhould have the *Chriſtian*, and the *Perſian* the *Pagans*, their Priſoners. 5. That the *Perſians* ſhould pay for half the Victuals, Wages, Shot and Powder. 6. That the *Engliſh* ſhould be Cuſtom-free in *Gambroon* for ever. Theſe Articles being Signed and Sealed, each Party prepared for fight.

The *Portugueze* Valour in defend *Ormus*.

Jan. 20. 1622. they became Maſters of the Fort with ſmall difficulty, and then played upon the Caſtle with a dozen pieces of Cannon, but to little effect, till the *Perſians* ſprung a Mine, which blew up a great part of the Wall. The *Portugueze* were not ſurprized at it, but making a Sally at it, maintain'd an obſtinate fight with the *Perſians*, and when they retreated, ſo plied the *Perſians* who purſued them, with Hand-Granadoes, Fire-Balls, Powder-Pots and Scalding Lead, that they loſt above 1000 Men.

The Per Cruelty a Falſh

The *Perſians* Courage was much cooled by this Skirmiſh, and little was done for ſome time; but *March* 28. the *Portugueſe* being humbled by Neceſſity, *viz.* the Plague, Famine and Fluxes, were forced to move for a Ceſſation of Arms, promiſing to pay the Duke down two hundred thouſand *Tomans*, and a Yearly Tribute of an hundred and forty thouſand Rials, but not being accepted, they held out to *April* 18. when the *Portugueſe* agreed to ſurrender the Caſtle to the *Engliſh*, and ſubmit themſelves, and all they had, to their Mercy, upon Condition that they might have their Lives, and a ſafe Convoy to *Muskat*, which was perform'd on the 23d, ſo far as lay in the *Engliſh*, for the *Perſians* not only intercepted 300 *Arabs* and *Portugueſe*, and cutting off their Heads ſent them to *Gambroon* as a Trophee, but violated the Women, defiled the Temples, and defaced the Houſes, and becauſe an *Engliſhman*, contrary to Order, was found pillaging a Monaſtry, they broke their Articles with the *Engliſh*, ſeize on all, and gave them only twenty thouſand pound, beſides their part of the Cannon of the Caſtle. The King of *Ormus*, *Seid-Mahomet-ſha*, was made Priſoner to the *Perſians*, and is a Priſoner at *Schyraz* at this day, under an Allowance of five Marks *per Diem*; and ſo *Ormus* is now the moſt Diſconſolate Place in the World, which was latterly the Glory of the Eaſt. This happened after the *Portugueſe* had been ſixſcore Years Maſters of it.

Gambroon or *Bander.*

On *Jan.* 10. 1627. they came to *Gambroon*, called by the *Perſians Bander*, i. e. the Port Town, becauſe it is the beſt Port the *Perſian* has: It is ſituated upon a level Ground near the Sea, having no Hills nigh it by fifteen Miles. It ſtands in *Carmania*, and before the Fall of *Ormus* was a ſmall Town, but ſince is ſo increaſed in Buildings and Inhabitants, that for Grandeur it may be ranked with the Towns of beſt Note in *Perſia*, becauſe being frequented by Merchants from all Parts, it is become a City of great Commerce for raw Silk, Carpets, Cotton, and other Commodities brought thither by Land, and all ſorts of Merchandize by Ship.

Tho Trade.

Buildings.

The Buildings are for the moſt part of Brick baked in the Sun, which will ſo harden them, that they appear as well and laſting as if they were burnt. They are built low, and moſt of them with ſmall Courts and Belconies, terraſſed a top, where they ſleep in the cooler Weather upon Carpets, and pargetted with Plaiſter, as hard as that of Pans.

Windows.

The Windows are Letticed, and made to ſhut or open as they pleaſe.

Summer.

In Summer the Air is ſo hot, that the Inhabitants are forced to remove to *Lar*, and other neighbouring Villages, for cool Streams and Shades. Their Summer laſts 9 Months, and in that time 'tis rare to ſee a Cloud in the Sky; ſo that 'tis intolerable hot, inſomuch that ſome, that ſtay in the Town, lie naked in Troughs of Water to cool themſelves, which yet parboils their Body, and makes them apt to catch cold.

Shyraz-Wine, Coffee, and the Vertues of it.

Here is the beſt *Shyraz*-Wine in all *Perſia*. They drink Coffee or Coho much; it is a black Drink, or Broth, made of Bunny-Flowers, or Coava-Berries. It is not toothſome, being ſomewhat bitter, but very wholſome, (the People ſay) for it comforts raw Stomachs, helps Digeſtion, expels Wind, and removes Drowſineſs.

Sherbet.

Sherbert alſo is much valued for its coolneſs, being a Drink made of Water ſweetned with Syrrup of Limons, and mixed with Roſe-water, tho' they refuſe not Arack or Strong-water, qualified with Sugar, as a Cordial in the hotteſt Seaſons, eſpecially where their Diet is coarſe, and Stomachs are crude and raw through diffuſion of heat.

Arack

Fruits.

They have plenty of Fruits, but moſt of them Imported, as Oranges, Limons, Pomegranates, Pomecitrons, Figs, Dates, Currans, Myrobalans, Apricocks, Almonds, Piſtacho's, Apples, Pears, Quinces, Sugar; as alſo Flowers and Nuts in great variety and quantities.

Meats.

Nor have they leſs abundance of Carbarito's, and Mutton, Hens, Eggs, Rice, with Oyſters, and many kinds of Fiſh, which make the place more pleaſant to live in. The beſt Houſes in the Town are the Sultans, the Shaw-banders, and the *Engliſh* and *Dutch* Agents. The *Engliſh* is allowed to diſplay a Flag from the top of his Houſe, in memory of their good Service done at the taking of *Ormus*, and for ſome time they had half the Cuſtoms for Goods Imported.

Caſtles.

At the North and South-end of the Town are two Caſtles, which have 30 Pieces of Braſs Ordnance planted; they were brought from *Ormus*, but the Gunners are unskilful.

Hummums.

The *Mahometan* Moſques, and *Jewiſh* Synagogues, are few and inconſiderable, but the Hummums are more conſpicuous, and much reſorted to. The Town is unwalled, and badly ſupplied with freſh Water, and the Streets are narrow. It is well furniſhed with Camels, *Perſian* and *Arabian* Horſes of the beſt ſort, Mules and Aſinego's, but much infeſted with Jackals, which invade the Town by Night in Troops, and tear the Dead out of their Graves, howling in a dreadful manner. The Inhabitants hunt them with Swords, Lances and Dogs, but they are too many and daring to be conquered.

Infeſted with Jackals.

Naughty Women, *Vid* the Fig. 11.

When the Merchants flock to this City for Trade, in *November*, *December* and *January*, here are great numbers of Women, comely in their Body and Dreſſes, having their Hair neatly plaited, Faces painted, and Cheeks hung with Pearl, Ears with Rings, and Noſes with broaches of Gold, but Lewd, and intolerably Impudent.

The *Bannians.*

Among the Traders, the moſt obſervable are the *Bannians*, an unſociable ſort of Men. They eat no Fleſh, Eggs or Roots, of a red Colour, nor drink Wine or Wine-Vinegar. They believe the Tranſmigration of Souls into Beaſts and Vegetables. They are healthy, through their Abſtinence, but of weak Bodies and ſmall Courage. About three Miles from *Gambroon* is a Tree called the *Bannian*-Tree, which ſpreads 209 paces, and will afford covert to ſome hundreds of Men without crowding. It is adorned with Ribbands, and Streamers of Taffata of divers Colours, and neatly trimmed within in Arches. Within them is a Pagod, with three Images in it, of grim Viſages and deformed Shapes, repreſenting their three Forefathers, *Cuttery*, *Shuddery* and *Wiſe*, whom theſe Idolaters formally Worſhip. He tarried 24 days at *Gambroon*, and then departed with the *Engliſh* Embaſſador, Sir *Dudmore Cotton*'s Caravan, of 12 Horſe and 29 Camels. The Sultan furniſhed them with both, and they were of the beſt ſort.

A *Bannian*-Tree.

Their Pagod and Images.

Camels.

The Camels were of that ſort called *Cozel-baſh* Camels, a Beaſt abounding in *Perſia*, and of great uſe. They are long-lived, gentle, patient in travel, and of great ſtrength, for they will carry well near a thouſand Weight; content with little Food, and leſs Drink, from which they will abſtain near four days. The Embaſſador hearing that *Sha-Abbas* the *Perſian* Emperour was at *Aſharaph*, upon the Sea-ſhore of the *Caſpian* Sea, ſet forward thither for Audience, and came firſt to *Bana-Ally*, a Village five *Pharſangs*, or 16 Miles *Engliſh* from *Gambroon*, travelling moſt part of the Way by the Sea-ſhore.

Pharſangs, what.

The way of counting Diſtances in *Perſia* by *Pharſangs* is ancient, and ſtill continues; the Word comes from *Perſa*, which ſignifies three Miles, both in the *Hebrew* and *Arabick* Language.

Band-Ally.

At *Band-Ally* are neat Caravan-Serrays, or Inns, for the Caravans, built by charitable *Mahometans* for the uſe of Travellers, where they may reſt ſweetly and ſecurely. At the Gate of ſome of them is a Bazar, or Sutlers Tent, to furniſh them with Proviſions. They are furniſhed with Water from certain Tanks, or Ciſterns, which are ſo plaiſtered as to preſerve the Rain-water ſweet a long time; and being ſo preſerved, 'tis the wholſomeſt of all Water.

Gacheen, *Coureſtan*, *Tangby-dolen.*

From hence they travelled the next day to *Gacheen*, five *Pharſangs*, and the day following to *Coureſtan*, ſeven *Pharſangs*, and the next day to *Tangby-dolen*, thro' a narrow way, where is a neat Caravan-Serray with Cupulo's; a neighbouring Hill ſupplies it with Water by a Spring, which in its courſe renders all the Valley fruitful, but the Country about it is barren and ſandy, yet produces plenty of Dates.

Warmoot.

Their next days Journey was four *Pharſangs* to *Warmoot*; in the way they ſaw three gray-headed *Arabians* ſitting croſs-legg'd in a black Tent, ſinging a doleful Requiem to their dead Brother with ſighs and tears, according to their Cuſtom, ſeven days. Nigh *Whormoot* are *Duzgun*, *Laztande*, and other Towns, where is got the beſt *Aſſafœtida* in the Eaſt. The Tree which produces it exceeds not the Briar in height, but the Leaves reſemble thoſe of Roſes, and the Root the Radiſh; the ſmell is offenſive, but the taſte ſo good, that the Natives, who are accuſtomed to it, like no Meat, nor Sauces without it. The next day they got to *Ourmangel*, five Pharſangs, and in another to *Lar*.

Aſſafœtida.

Lar deſcribed.

Lar is both a City and a Province, within three days Journey of the *Perſian* Gulph. The Province is about an hundred Pharſangs a-croſs. Great part of the Country is barren and ſandy, but where there are Rivolets or Springs, the People live and improve it, and have Oranges, Limons, Pomgranates, Figs and Fruits, and variety of Grain. Dates and Palms grow in the barrenneſt Soil, and 'tis thought there are Mines and Sulphur in the ground. The City of *Lar* is in the middle of the Province, and ſtands in 27 Deg. 40 Min. Northern Latitude. It was founded or increaſed by *Laangebeg*, Son of *Phyroe*, who was Prince of it, and had 18 Succeſſors, of which the laſt, *Ebrahim-cawn*, was conquered by *Emangeby-cawn*, Duke of *Shyraz*, and his Kingdom added to *Sha-Abbas*'s Dominions. *Ebrahim* had his Life, and a Penſion promiſed him, which he enjoyed a while, but *Sha-Abbas* not being eaſie, he was put to Death. It is ſeven days Journey from *Gambroon*, fourteen from *Shyraz*, and twenty from *Babylon*. It is but meanly Water'd by a few Springs, which they uſe to Water their Gardens, where they ſhade themſelves in their hot Seaſons

Subject to Earthquakes.

It is ſubject to Earthquakes, by which it hath ſuffered the loſs of 500, and ſometimes 3000 Houſes, which overwhelmed many of the Inhabitants; and the Caſtle in one, tho' founded on a Rock, was in very great danger. It is unwalled, becauſe defended on the Eaſt and North with lofty Rocks. The Caſtle is brave and ſtately, awing the Town, as well as threatning the Enemy. It is built of good Stone, and the Walls are well furniſhed and beautified with Battlements and Platforms, on which are mounted 12 Braſs Cannon Pedro's, and two Baſilisks.

The Caſtle.

In it are Huts for the Soldiers, and an Armoury ſufficient to furniſh with Lance, Bow and Gun, 3000 Men. It is uſually well Victualled, Armed and Manned, to Command the City and Country, and defend them againſt any Invaſion.

The Bazar.

The Bazar is a Noble and Elegant Fabrick, built of white Chalky Stone, and covered over. The Circumference from the Center is about 80 paces; 'tis full of Shops of ſeveral Trades.

The Moſques.

The Moſques are many; the moſt remarkable is round, varniſhed within with *Arabick* Letters, and painted with Knots, and beautified with *Moſaick* Work. Their famous Prophet, *Emir-Ally-Zedday-Ameer*, whom they greatly reverence, is buried here, with ſome others of leſſer Note.

The Fruits.

The Country about it affords variety of Fruits, as Dates, (which being Male and Female, the latter will not bear, unleſs a flowred Bough of the Male be applied to it) Oranges, Limons, Melons, Pomgranates, and moſt excellent Pomcitrons; and Flowers, as Jaſmins, Roſes, Tulips, &c.

Beaſts.

Here are alſo Goats, Hens, Rice, Barley; Rack and Aqua-vitæ are ſold at eaſie Rates. But the Musketto's are very troubleſome here, and Water bad, their Tanks ſtinking; Neceſſity indeed obliges the People to drink of it, but it cauſes Catarrhs, breeds ſore Eyes, putrefies the Guts, and breeds long Worms in the Legs, by no Ointment or Medicament to be prevented.

The People.

The Inhabitants are a mixture of *Jews* and *Mahometans*, moſt of them Blear-ey'd, Rotten-toothed, and Mangy-legged, cauſed by the violent heat and unwholſome water. Their Habit is a Wreath of Callico about their Heads, a Girdle of Plad of divers colours, and Sandals on their Feet, being naked on the reſt of their Body; but ſome few have golden Saſhes on their Heads, Robes of Sattin on their Bodies, and Rings on their Fingers. They delight much in Archery, and in rich Swords.

Their Learning.

Here are ſome Proficients in Philoſophy and Mathematicks, but they pleaſe themſelves moſt in Aſtronomy; but in Mechanick Arts it equals any in *Perſia*.

Jaarown.

Weſt of *Lar*, about 60 Miles *Engliſh*, is a Town called *Jaarown*, inhabited chiefly by *Jews*, which ſome repute at leaſt one thouſand, but others five thouſand; 'tis probable that this place is the *Kirjak-Jearim*, mentioned

Ezr. 2. 25.

Neh. 7. 29. from whence ſome of the *Jews* returned to *Jeruſalem* to build the Temple by *Cyrus*'s Edict; but moſt certain that they were the Captive's Children, which *Salmaneſſar*, or *Enemeſſar*, carried from *Samaria*, 2 *Kings* 17. 6. *A. M.* 3220. In, or near this place, is a precious

A precious Mummy.

Liquor or Mummy growing, they call it *Mumnaly-koob*, which is carefully preſerved for the King's Uſe only; it diſtils from the top of the Mountains in *June* about five Ounces. It is a moſt odoriferous Gum, and Soveraign againſt Poyſon, and a Catholicon for all ſorts of Wounds. This Balſam the Emperor preſents to other Princes in ſmall quantities, when they ſend him coſtly Preſents of Gold, Pearl, &c.

Alexander.

Alexander, after he had Pray'd and Sacrific'd at *Suſa*, endeavour'd to lead his wanton Army over the Hills of *Jaaroun* to *Perſipolis*, but being beaten by *Ariobarzanes* and his little Army, was forced to find another way.

They left *Lar Feb.* 11. under the Conduct of an Old *Coozelbaſh*, who, out of hopes of a Reward, provided

Great Rains.

them good Quarters every Night. In this Journey there fell ſome Rain, which ſtopped their progreſs by an immoderate Flood, for Rain falls here but ſeldom, but when it does, it comes ſometimes with ſuch a Deluge as ſweeps away Men and Houſes; yea, whole Caravans.

Di-achow.

On the 14th day they arrived at *Di-achow*, or *Tocheo*, where they ſaw many Tombs, moſt with Grave-ſtones, and an *Arabick* Memorial. The Alcoran commands, That none be buried in Cities, for fear the Dead infect the Living; and that no Grave ſhall be made in the place where another hath formerly been buried. A Mile from the Town they ſaw about 60 long Pavilions, which were black without, but within were full of Female Beauties. The *Perſians* call them *Vlockes*, and the

Vlockes or *Nomades.*

Ancients *Nomades*. They live in Poverty, but content, free from Care, Envy, Tumult and Riot. From hence they paſſed forward to *Berry*, having obſerved nothing remarkable in the way, but a thick Wall of great length and height, cut out of the Rock, as a Boundary of Old between the Kingdoms of *Lar* and *Shyraz*.

Berry deſcribed.

Berry is but a Village, yet famous through all *Perſia* for the Immunities granted it by a Learned *Syet*, and for an *Arabick* School, where is taught Civil Law, Aſtrology and Phyſick, and a *Pythagoras*'s Silence, to Diſcourſe by Signs. Near it is the Tomb of their great Doctor

A famous Saint.

Emawn-Zeddy-a-Meer-a-Maddy-Ally, which they have in great Veneration, covering it continually with a white Linen Cloth; it ſtands in a Chappel, on the top of which is a Steel Mirrour, in which, they ſay, they ſee the deformity of their Sins. None may enter it with Boots or Shoes on; and all may find Satisfaction to their Deſires, by preſenting large Offerings to it.

From *Berry* they travell'd to *Barnarow*, where they were Entertained with Feaſting and Muſick, and ſo paſſed to *Gcyoone*, a Town which brags of a thouſand, but

Gcyoone.

they are but ordinary Houſes. Here *Melec Mahomet*, a Man famous for enlarging the Authority of his great Prophet, lies buried. From hence, through a deſolate Wilderneſs inhabited only by Oſtriches, Storks and Pelicans, they came firſt to *Cut-bobbo*, and then to *Mobacke*. Here lie buried *Mahomet*, *Hodgee*, *Iſhmael* and *Ally*, four *Muſſel-men* Doctors, whoſe Tombs, ſaid to be of 400 Years ſtanding, are reſorted to with much reverence. Next day they went to *Coughton*, and ſo through *Unghea*, *Moyeehaw*, and *Pully-pot-ſhaw*, to *Sheraz*.

Sheraz deſcribed.

This City is one of the pleaſanteſt in all *Aſia*, lying in 29 Deg. 20 Min. Northern Latitude, and 88 Deg. Longitude: It probably derives its Name from *Sheraba*, a Grape, which abound here, and thoſe of the moſt generous ſort. It is watered by *Kur*, a River, which riſing in the *Tapirian* Mountains, after a Current of 200 Miles, mixes with *Coaſpes* (now *Tab*) and *Vlay*, loſes it ſelf in the Gulph, which diſcharges it ſelf into the *Indian*

Compaſs of the Walls.

Ocean. The City is about ſeven Miles in compaſs, Walled in by *Vſun-Caſſan*, the famous *Armenian* Prince, in 1470, ſeated pleaſantly on the N. W. ſide of a ſpacious Plain, 20 Miles long and 6 broad, incloſed with lofty Hills, defended by Nature, enriched by Trade, and made lovely by Art; the Vineyards, Gardens, Cypreſſes, Sudatories and Temples, raviſhing the Eye and Smell, ſo as in all places appears Delight and Beauty.

Things it is famous for.

Here 'tis ſaid Magick was Invented, *Nimrod* lived, *Cyrus* was born, and lies Entombed all but his Head, which is ſent to *Piſegard*; the firſt Sibil that propheſied of our Saviour's Incarnation: and from hence 'tis thought the *Magi* ſet forth to Worſhip our Saviour at his Birth. The Houſes are of Sun-burnt Bricks, yet hard and durable, terraſſed above, but not very lofty. Their chief Furniture is Carpets, and few are without Gardens of high Chenaers and Cypreſſes.

The Moſques.

There are in it 15 brave Moſques, round, and tiled with a Plaiſter made of Lime-ſtone burnt, which being dry, becomes ſo hard, that it reſembles true Stone. The top and outſide is pargetted with Azure-ſtone reſembling Turquoiſes, and the inſide is lined with black well poliſh'd Marble. The tops are beautified with many double gilded Creſcents or Spires, which reflect the Sunbeams moſt delightfully to ſuch as behold the City from the neighbouring Mountain. The Steeples of two of them, of which the one is ſquare, and the other more round, riſe to a vaſt height, being adorned with Gold, and blue Varniſhed with Knots and Poeſies. Moſt of

Tombs in them.

them are rendred Venerable to this Superſtitious People, by the Tombs of ſome or other of their Alcoraniſm Doctors, which are ſo adorned, as if Art were at a loſs to expreſs the Exceſs of their Devotion to them. A little out of the Town lie interred two of their famous Poets, *Maſtadini Sadds*, (who wrote the *Roſarium* tranſlated into Latin by *Gentius*) and *Hodgee Haier*, whoſe Poems are in great eſteem through all *Perſia*.

A College.

Here is alſo a College, wherein is read Philoſophy, Aſtrology, Phyſick, Chymiſtry, and Mathematicks, which makes it the more famous in *Perſia*. The Gardens are very large and beautiful, well Walled, and abounding with Oaks, Cypreſſes, Chenaers, and the like

Fruits.

Trees for ſhade; and Oranges, Limons, Pomgranates, Pomcitrons, Piſtacho's, Apples, Pears, Peaches, Cheſnuts, Cherries, &c. for Fruits. As alſo rare and ſweet Flowers, and Phyſical Herbs. The Earth is dry, but green, the Air a little ſharp, but wholſome. And indeed, as the Eaſtern Parts are more warm, ſo they are more pleaſant and refreſhing than the Weſt, and produces better Fruits, Plants, Grain, Spices, Drugs, Herbs, Gems, Minerals, and other things.

Swinging.

The moſt uſual Paſtime uſed here is Swinging upon Ropes ſtretched from Tree to Tree, eſpecially during the *Birane*. They have a ſcarcity of Water, becauſe there is only a ſmall Rivolet near it, but it ought to be imputed to the lazineſs of the Inhabitants, ſince within fifteen Miles there is a gallant River, which might be brought thither by Pipes, or Aquæducts.

The keeping of the *Nevrouz*.

The Inhabitants of this City, at the *Nevrouz*, or Spring, turn Epicures, ſending Preſents one to another, and ſpending their time in Drinking, Singing and Playing. The Gardens are all open to walk in, and the Women,

men, for 14 days, have the liberty to appear in publick, and they will not loſe their time, but conſume it in a Labyrinth of wanton Sports. Chaſtity is no Virtue at this time, when Pleaſure is to take its ranges. This Feaſt was begun by King *Shalelladyn*, Son of *Ulp-Arſlan*, and is commonly celebrated when the Sun enters *Aries*, with a greater Solemnity than any other.

The Duke of *Shyraz.*

The Duke of *Shyraz*, who at preſent is *Emangoly-cawn*, a *Georgian* by deſcent, and *Muſſul-man* by Profeſſion, is one of the Tetrarchs that Rule the *Perſian* Empire; his Territories reach near 400 Miles round, and afford him the Titles of *Arch-Duke of* Shyraz, *Sultan of* Lar *and* Jaarown, *Lord of* Ormus, Maqueroon, Kermoen, Chuſiſtan, Sigeſtan *and* Farſiſtan, *Prince of the Gulph of* Perſia, *and Iſles in it, the Great* Beglerbeg, *Commander of* 12 *Sultans,* 50 *thouſand Horſe, Slave to* Sha-Abbas, *Protector of* Muſſul-men, *Nutmeg of Comfort, and Roſe of Delight.* His Revenue is ſaid to be four hundred thouſand Tomans, (every Toman being five Marks Sterling) but out of it he is to pay fifty thouſand Horſe upon Muſter. This Duke, in his Seraglio's, has above 300 Concubines for his Pleaſures at home, while he Exerciſes himſelf in more Manly Sports abroad, as chaſing the Lion, hunting the Tyger, diſlodging the Boar, unkennelling the Jackal, &c. at which he raiſes whole Countries, not leſs than twenty thouſand Men ſerving to rouze that kind of Game. *Shyraz* was the Seat Royal of the Kings for near 700 Years, and they are lately removed from thence. The Lineal Deſcent of them is as follows:

The Succeſſion of the Kings of *Shyraz.*

Abuzvez Deilamſhaw, deſcended, as they ſay, from *Adſher*, laſt King of *Perſia*, the hundredth in deſcent from *Adam* according to their Pedigree.

Deilamſhaw, Surnamed *Boja*, or *Mebeca*, who had three Sons, *viz.*

Ally, who died without Iſſue, and left his Territories to his ſecond Brother

Huſſan, who had Iſſue, but they were deprived for a while by

Zedda-Mobel, a ſtranger brought in by *Muſtapha* the *Babylonian* Caliph. He was ſucceeded by

Eyna-duddaul, who having no Iſſue, the Succeſſion fell upon *Huſſan*'s Son

Rocnadaul, who being poſſeſſed of his Father's Seigniories died peaceably, *A. D.* 980. He left three Sons, who lineally inherited their Father's Juriſdiction, *viz.*

Sherfa-daule, who died Iſſueleſs, *A. D.* 990. Heg. 370.

Shams-daule, who ſoon after his Coronation was diſpatched by Treaſon.

Babao-daule, who reigned 12 Years, and at his Death commanded that his Eldeſt Son,

Sultan-daule, ſhould ſucceed him. This Prince was bred up in Warlike Exerciſes, and wanted not Courage to enlarge his Empire, yet could not defend himſelf againſt his reſtleſs Brother *Hocem-Maſharaf-daule*, but was forced to yield him a part of his Kingdom. He died *A.D.* 1025. and was buried in *Shyraz* with great Solemnity, leaving his Kingdom to

Abdul-cawn his Son, who was by the unnatural practiſes of his two Uncles, *Abulfavar*, and *Gelaladaul*, firſt troubled and diſturbed, and after diſpoſſeſſed of his Dominions; but at length, by the Death of the former, recovered his Right again, and was received joyfully by his Subjects. He lived not long, but bequeathed his Royalty to

Aben-Melec-Rabim, who dying without Iſſue, the *Mobeyan* Race ended in him.

Abumanſer, the pretended Son of *Gelaladaul* abovementioned, ſucceeded. He married *Daute*, the Daughter of *Foſhal-beg*, by whom he had five Sons, *viz. Abumanſer*, *Chozroe-pheruz*, *Abubcer*, *Abuzeddai*, and *Aboally*. He died at *Kermoen*, when he had reign'd five Years, and was buried in *Hurkawn*, not far from *Jaſqus*. The Kingdom came to

Abumanſer his Eldeſt Son, who enlarged *Shyraz*, and ſpared for no Coſt to make it beautiful; but while he buſied himſelf thus at home, his ambitious Brother

Coſroe-pherus unexpectedly took poſſeſſion of his Territories, but Revenge purſued him, for going to ſee his Grandfather *Toſhal-beg*, he was Impriſoned for his Cruelty to his Brother, and died there with Stench and Famine. Yet this did not diſcourage

Abuzeddai, the fourth Brother, from uſurping his Eldeſt Brother's Right, till the Injur'd *Abumanſer* diſpoſſeſſed him by a Battel, in which *Abuzeddai*, and moſt of his Aſſociates, were ſlain: Yet could not *Abumanſer* long keep his Right for

Fazele, his Lieutenant, unawares ſeized him, and ſecuring him in a noiſome Priſon, adorned his baſe Head with his Maſter's Diadem; but his Brother

Aboally, not able to bear this treachery, took an advantage of *Fazele*, and having pulled the Crown from his Head, ſet one better becoming him upon it, *viz.* of flaming Iron, and tranſplanted the Regal Diadem upon his own Head, which he held ſeven Years, and then dying without Iſſue, in the Year of Chriſt 1100. Heg. 480. the Scepter fell to

Mahumed-Abutalip-Togralbeg, Son of *Michael*, Son of *Salguein*'s Son of *Didacus* a *Turkoman*, in whoſe Family it continued till *Mahumed-Abul-caſan* died, *A. D.* 1220. Heg. 600. without a Succeſſor, and then it fell to a Race of *Tartars*, of which

Cingis-cawn, Lord of *Ketoa-cawn*, *Maurenahar* and *Gazneben* was the firſt. He died *A. D.* 1228. and

Tuki-kawn ſucceeded him, and after him

Chagatay-cawn, from whom deſcended *Tamerlane*, whoſe Iſſue now Rules all the *Indies* within *Ganges*. After the *Tartar*, the *Turks* planted themſelves afreſh here, led by

Chara-Mahumed, *A. D.* 1415. Heg. 795. whoſe Poſterity enjoyed it till 1470. Heg. 870. when they were baniſhed by

Acen-beg, otherwiſe called *Uſan-Caſſan*, an *Armenian*, whoſe Grandſon

Alvan was, *A. D.* 1504. Heg. 884. utterly deſpoiled of all, by his ambitious Kinſman

Iſhmael-Sophy, Great Grandfather to

Abbas, the *Perſian* King, that now reigns, and is of the *Ben-Allyan*, or *Sophian* Stem.

Perſepolis deſcribed. *Vid.* as it lies in Ruins, Fig. 11.

From *Shyraz* they travelled to *Perſepolis*, 30 Miles N.E. of it. The Way is ſandy and hilly; about Mid-way is the River *Cyr*, or *Cyrus*, over which lies a well-built Stone-Bridge called *Bynd-Emir*, *i. e.* the Prince's Bridge. *Perſepolis*, as it is called 2 *Macch.* 9. 2. or *Elamis*, 1 *Macch.* 6. was the Metropolis of the World, under the Reigns of the *Perſian* Kings from *Cyrus the Great*. The Founder of it is thought to be *Soſarmus*, Grandſon of *Belochus*, but being enlarged by *Cyrus* and *Cambyſes*, it was made the Royal Seat of the *Perſian* Kings. In its moſt flouriſhing condition it was (as *Curtius* ſays) the richeſt, nobleſt, and lovelieſt City in the World. The Buildings were moſt beautiful and ſtately, being moſt of Cedar and Cypreſs Wood; but that which gave it the greateſt Luſtre, was the Palace of the *Perſian* Monarchs, which for its Situation, Proſpect, rich Materials, and curious Art, was incomparable. It was built at the Eaſt-end of a ſpacious Vale, upon a Rock, 400 Paces from the City, the Platform containing 50 Acres of ground, or thereabouts. The Walls of either ſide were Elaborately carved with Men and Beaſts. The ſecond Story was of Porphyry mixed with Marble of ſeveral Colours well poliſhed, and imbelliſhed with coſtly Stones in *Moſaick* Work. Towards the Eaſt was an high and ſtately Tower encompaſſed with a triple Wall of Marble well poliſhed, and ſo battlemented, that the King could from the top have a delightful proſpect all over the City. Adjoyning to it was a Mountain, on which was a ſtately *Mauſoleum*, in which were the Tombs of the Kings. The Roof and Caſements were of Gold, Silver, Amber and Ivory. The Temple of *Diana*, called *Anaia* by the *Perſians*, and *Nanea*, 2 *Macch.* 1. 13. joyns to it, and is built more exquiſitely, and with extraordinary Coſt, *viz.* of the beſt ſort of Marble of ſeveral ſorts, intermixed with precious Stones; nor was the Furniture leſs admirable. When the *Macedonian* Conqueror entred it, for in the entrance was a Throne of pure Gold, thick powdered with ſparkling Stones, in the Bed-Chamber, among other Curioſities, was an Artificial Vine preſented by *Pytheus*, the Stalk of which was of Burniſh'd Gold, and the Cluſters of Orient Pearl, mixed with Rubies of great price; and no leſs rich was the Bed, for the Bedſtead was of Gold thick ſet with Gems, the Bolſter was worth 5000 Talents, and the Footſtool 3000, each Talent containing 4500 *l.* Sterling, but this Palace and City was fired by *Alexander*, at the inſtigation of *Thais* a lewd Strumpet, and all its gallantry conſumed, yet there are ſeveral Remains of it to this day. It was built upon part of a Mountain, and the Foundation is of dark-coloured Marble. The Aſcent, which is on the Weſt-ſide of the Hill, is by 95 Steps, every ſtep being 20 Inches broad, 3 Inches high, and 36 Foot in length from one ſide of the Stair-Caſe to the other, which is ſo contrived as to lead both ways. Every Stair has an half-pace very large and ſquare, flagged with Porphyry, and a bright coloured Marble: At the Stair-head are ſome Relicks of the Gate into the Court, which is about 20 Foot wide. On the Left Hand of which ſeems to have been a large Garden-plat, and Eaſtwards are the Figures of four ſtrange Beaſts carved in Stone, which with four Pillars, which interpoſe, ſerv'd to ſupport a Gallery. The main

The Founder of it.

The Palace of the *Perſian* Monarchs.

The Tombs of the Kings.

The Temple of *Diana*.

The Furniture of the Palace.

The Remains of the Palace.

The Gate.

Four Beaſts.

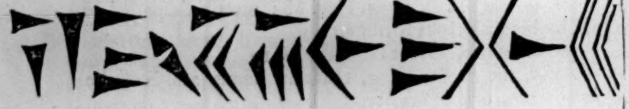
Structure ranges all along towards the South to the top of the Stairs. A little diſtance from the Beaſts, is a large ſquare Ciſtern 12 Foot in Diameter, and 12 Inches thick, near which are ſome broken Pillars, but ſo demoliſhed, that it can't be conjectur'd of what uſe they were. Flanking this is a Marble-Wall running from Eaſt to Weſt, about 9 Foot thick and 30 high; and in the middle of it are another pair of Stairs of 30 or 40 Steps.

A Proceſſion.

The Wall on each ſide is Engraven with ſeveral Figures in Relief, in rows, reſembling a Proceſſion, with their faces toward the Stairs; and having Spears in their hands, ſome leading Horſes, Elephants and Camels, and other Mules, Oxen and Sheep, with long Ears, which makes ſome think it the Pourtraiture of a great Sacrifice to the Sun, and the rather, becauſe not far from thence is a Sculpture of their Prieſts and Magi.

A Marble Table.

Adjoyning to theſe toward the Weſt, is a Jaſper or Marble Table about 20 Foot from the Pavement, well poliſhed, and inſcribed with 20 lines of Characters, every line being a Yard and half broad, or thereabouts, of a ſtrange and unuſual ſhape, neither like Letters nor Hieroglyphick, and ſo not legible. A Specimen may pleaſe the Curious, and therefore the ſeveral varieties are here inſerted:



Adjoyning to this Table is a ſpacious Room, which ſome think was a Temple, in it are 19 Pillars almoſt perfect, where the Storks build their Neſts, and are never diſturbed, becauſe the People have them in Veneration; they are 20 Cubits high, and about 3 Yards round.

Storks reverenced.

Aſcending a few Marble Steps is another large ſquare Chamber, 80 paces long on each ſide, having 8 ſeveral Doors; it ſeems to have been a Room of Preſence. Out of this you go into another large Room contiguous with 7 Doors, and from thence into a leſſer, where the Walls are of black Marble, ſo bright and reſplendent, that Men may ſee their faces in it; and the gilding of the Cornices, and Verge of the Veſts (of the Figures) are as freſh as if it had been newly done, which ſhews the Excellency of the Artiſts, who laid it ſo, that it continues above 2000 Years.

Rare Gilding.

The Images on the Walls, which are ſomething larger than the Life, repreſent Princes ſeated in their Chairs of State, with their Officers about them. Upon the Treez, over the Heads of the Images, are ſome Characters ſomething like the ancient *Georgian* Letters, which were corrupted from the *Greek*. Near 40 paces hence is a large Room, and in the middle of it an hole, which leads into a Vault through an Entry ſeven Foot high, and five broad, paved with large ſquare Marble Stones, and arched above, into a fair Chappel, ſupported by four large Pillars, on the Wall whereof is graven their Grand Pagod, with ſeveral other Images of Men and Beaſt.

The Image of their Grand Pagod.

Near this is a ſecond Subterranean paſſage into another ſquare Chappel, ſtrongly arched and ſupported with four well-wrought white Marble Pillars, each about ſeven Yards high; in it are the Figures of a Prince ſitting in a Chair of State, guarded with ſeveral Pike-men, and Officers of State attending him. There are alſo ſeveral heaps of Rubbiſh, which doubtleſs bury many rare pieces of Art, and among others the famous Temple of *Diana*, called by them *Anaya*, reputed the moſt curious piece of Art in the World, except *Diana*'s at *Epheſus*; at the Eaſt-end of which riſes an Hill, on which ſtands the Image of a King, who with erected Hands ſeems to adore the Riſing-Sun, and by him is the Figure of Fire, and a Serpent engraven, tho' it is much worn by Wind and Weather. Scarce ten Yards diſtant from theſe, and upon the ſame declivity of the Mountain, ſtands the Image of their great Pagod, a Dæmon of a very uncouth and ugly ſhape, of a Gigantick ſize and magnitude, with a moſt dreadful Viſage between Man and Beaſt. He has ſeven Arms on each ſide of his Body, and inſtead of Hands he hath Claws like a Vulture.

Jamſheat the greateſt Prince of *Perſia*.

They tell us that this Image repreſents *Jamſheat*, the greateſt Prince *Perſia* ever had, both in reſpect to his Extent of Empire, and the Power he had over Infernal Spirits, which he could Bind and Looſe as he pleaſed by his Magick Spells. According to their Stories, he lived about 100 Years after *Keyomarraz*, or *Kedar-laomer*, whom *Abraham* vanquiſhed. On the Left Hand of this Image ſtand a Guard of Pike-men, and below theſe 20 Flamens. Many other things very remarkable, both for Art and Story, might be obſerved by the Curious, and exact from this unparallel'd piece of Antiquity, which, *as it is undoubtedly* without Impoſture, ſo it exceeds all the Miracles of this Nature upon Earth, and 'tis pity a perfect Draught of it is no where extant, eſpecially ſince the People near it have no value for it, but are every day defacing it, becauſe they are now and then forced to give free Quarter to ſome *Soldats*, and others, who repair thither to ſee it out of meer Curioſity, tho' the Dukes of *Slyraz*, now called *Chilmynar*, puniſh them for it.

Mardaſh, the Superſtition of the Inhabitants.

Little more than a Mile from *Slyraz* is *Mardaſh*, a Village of near 200 Houſes; the People of which are ſo tranſcendently Superſtitious, that if any Chriſtians come among them, they Sift aſhes and duſt upon the places they tread on, apprehending that the Earth is polluted by them. This, and the neighbouring Villages, being watered from the River *El-chyr* by Aquæducts, are very pleaſant at moſt Seaſons, the Gardens and Fields being rendred fruitful in Flowers, Fruits and Corn, but they draw the River very low. Northward, about three Miles from *Shyraz*, at the foot of a Mountain verging toward *Perſepolis*, ſtands carved the Figure of a Giant, which the *Perſians* ſay is one *Ruſtan*, an Hero much celebrated in their Annals for his Romantick Wonders and Acts.

Ruſtan's Image.

He is thought to have lived about the Reign of *Artaxerxes*, or the Great *Ahaſhuerus*, who married *Heſter* the *Jeweſs*, in whoſe Wars 'tis likely he was a great Commander. Near him ſtand ſeveral Images of Women and Maidens carved; one of which they ſay is the Figure of *Ruſtan*'s Earthly Goddeſs, for love of whom he, like a Knight Errant, performed many brave Adventures.

Two Giants on Horſeback.

Not far from thence, in a place where the Mountain is made ſmooth, are two large Figures of Giants on Horſeback, facing each other, and contending for a Ring, on which they both lay their hands. This Symbol poſſibly repreſents the great Conteſt for the Monarchy of the World, which happened between *Darius* and *Alexander*, *Cyrus* and *Artaxerxes*. There are ſeveral other Images carved in this Mountain, which are worth a Travellers notice. Upon either ſide of this Mountain are cut, or pierced, ſeveral holes, ſome of a larger ſize than others, which are thought to be the Sepulchres of the *Perſian* Kings, who, as *Diod. Siculus* tells, were not buried in *Cæmeteries*, but in the Marble Mountains.

Pieces of Perſpective.

Beſides theſe, upon the ſame Mountains are ſome pieces of Perſpective elaborately and regularly cut out, reſembling the nobleſt ſort of ancient Structure, and embelliſhed with ſome few Pictures of Men, which ſerve for Ornament. About 300 paces Southward from *Chilmanor*, is a ſingle Column entire from top to bottom, but ſo low, that 'tis hard to conjecture for what uſe it was. Some ſpace from the Mountain towards the Valley, are ſeveral Coffins or Troughs of Stone, ſome whole, but moſt broken, in which one may preſume dead Corps have been laid. There are alſo ſome Relicks of Tanks, or Conſervatories of Water, towards which one may perceive the Aquæducts cut through the Mountain to lead.

Mayown Iſhmael's Town.

March 28. they came to a Town called *Mayown*, a place very delightfully ſeated, and well accommodated with ſweet Water, excellent Wine, plenty of Wood, and ſtore of Graſs; it belongs to their highly honoured Prophet *Iſhmael*, whoſe Tomb in a well built Machit, called *Emoom Iſhmael*, is here ſeen, and is endowed through the Liberality of many Princes and great Men, with the Yearly Maintenance of twelve thouſand Mawnd-ſhaws of Rice, and four thouſand of Barley.

O-jone.

Next Night they Lodged at *O-jone*, a Village conſiſting of 30 Families, moſt of them Prophets, or Prophets Children, which makes it a place of bad Entertainment, becauſe they drink no Wine, nor are allowed any Grapes, nor is their Water good, tho' they have good Tanks.

Tartang.

Over craggy and ſteep Hills they travelled to *Tartang*, a ſmall Town remarkable for a Meſchit, in which is the Tomb of the King's Great Uncle covered with Violet-coloured Velvet, and came the next Night to *Aſſepaſe*, which has nothing obſervable but an old Caſtle, ſometimes a Garriſon, in and about which inhabit no leſs than 4000 *Georgians* and *Sarcaſſes*, who are by profeſſion Chriſtians, but live in Captivity, and great Temptation, for if any of them turn *Mahometan*, they are immediately preferr'd beyond vulgar Merit. The Villages which followed in the way had nothing remarkable till they came to *Gombazallello*, where there is a good Carravansraw, and the beſt Wheaten-bread in *Perſia*, but in the Road is a Mountain of black Marble, where doubtleſs are alſo Quarries of Serpentine and Porphyry if the Earth were examined.

Gombazallello.

Out of this part of the *Perchoctrian* Mountains the River *Rhogamana* ſprings, which having watred *Shyraz* runs into the *Perſian* Gulph. The next Night they lodged at *Yezdecawz*, a Town which ſtands

Yezdecawz.

ſtands pleaſantly in a narrow Valley, and the next day paſſing through *De-Moxalbeytra* veſted to *Amnobaut*, or *Boyal*, a Village of 30 Families, but moſt Apoſtate *Georgians.* It is incloſed with an high, ſtrong and round Wall, with Battlements, which makes it reſemble a Caſtle. It is commanded by *David-chawn*, Brother to the Duke of *Shyraz*, who for his Apoſtacy was made an Eparch. Here is a neat *Carravans-raw*, with Banqueting-Houſes, and well ordered Gardens. From *Amnobaut* they rode to *Commeſhaw*, or *Caumaxa*, which boaſts in a thouſand Houſes, where the memorable Battel betwixt *Artaxerxes*, and his Brother *Cyrus*, was fought; and the next day came to *Mayeor*, a Town of about a thouſand Houſes, which tho' they are neat, are not comparable to their Dove-Houſes for curious Outſides. Which Bird they much reverence, partly in memory of *Semiramis*, who, as *Beroſus* relates, was in her Infancy nouriſhed, and at her Death transformed into a Dove; and partly from thoſe, which being taught to feed at *Mahomet*'s Ear, communicated to him (as the People believe, and he pretended) Intelligence from ſome Angel. The next Night they came to *Spahawnet*, a Village ſix Miles South from *Spahawn*, where having remained a day or two, till the Governour could provide for the Reception of the *Engliſh* Embaſſadour, who was with them, they were conducted to *Spahawn*, *April* 10. by the Viſier, Sultan *Meloyembeg*, and *Hodge-Nazar*, the *Armenian* Prince, with a Cavalcade of about 4000 Horſe, and innumerable Foot, Men, Women, Children, and *Bannians*, who lined the Way and Bridges for above two Miles, and welcomed them with the Acclamations of *Hoſhomody*, *Soffowardy*; and the better ſort, *Hoſhgaldom*, *Soffogaldom*, *i. e.* Welcome, Welcome, heartily Welcome. The ancient Inhabitants of this Country are *Georgians*, intermixed with other Nations; and there is a Suburb of this City inhabited by *Georgians* and *Armenians*, called from thence *Jelphelius*, as ſome think. The Soil is for the moſt part Mountainous, much reſembling *Helvetia*, where the *Switzers* live. From the tops of ſome Hills, the *Caſpian* and *Euxene* Seas may be diſcovered. They derive their Name from St. *George* their Patron, and from the *Gordian* Hills, which they inhabit, tho' the *Greeks* derive their Name from Γεωργοὶ, Husbandmen, becauſe moſt of them are of this Profeſſion. Theſe People, through the goodneſs of God, with their Neighbours the *Carcaſhians* and *Armenians*, hold faſt their Chriſtian Profeſſion, notwithſtanding they are ſufficiently threatned by *Turk*, *Tartar* and *Perſian*, which ſurround them, and tell them that all *Natolia*, where once were the famouſeſt Churches in the World, is now overſpread with *Mahometans.* They were interdicted the Communion of the Orthodox, by *Dioſcorus* Patriarch of *Conſtantinople*; nevertheleſs, under *Sapores*, twenty thouſand of them ſuffered Martyrdom. By Profeſſion, they are now moſt of them *Neſtorians* and *Jacobites*, and more inclinable to Arms than Trading, as their Neighbours the *Armenians* be. For comelineſs of Body, height of Spirit, and faithfulneſs in Truſt, they are in ſuch repute with the *Perſians*, that they are employed in the greateſt Commands againſt the *Turks*, and the King has the greateſt number of his *Cooſelbaſhes* from them, it being ſeldom or never heard that any of them prove falſe, or having ſerved the *Perſian* will turn *Turks.*

Doves honoured.

Spahawn deſcribed.

Their Conſtancy to Chriſtianity.

Now concerning the *Armenians.* They have their Name from their Country, *Armenia*, which is divided into *Major* and *Minor.* The leſſer is part of *Natolia*, and the greater lies between *Tartary* on the North, *Media* and *Aſſyria* on the South, and the *Euxene* and *Caſpian* Seas on the Eaſt and Weſt. It included anciently *Colchis*, *Albania*, *Iberia*, *&c.* which are now ſwallowed up in the Names of *Zuria*, *Mingrelia*, *Turcomania*, *&c.* The chief Cities of it are *Baranii*, *Arſenica*, *Carcathiocerta*, *&c.* and in the leſſer *Nicopolis*, *Cæſarea*, *&c.*

The *Armenians* deſcribed.

They have two Patriarchs who reſide, the one at *Jeruſalem*, and the other at *Sinah* in *Arabia.* They have 12 Titular Biſhops, who are very poor, tho' that ought not to render them deſpicable. They honour much the three firſt General Councils. They read the Old and New Teſtaments in their Mother Tongue, and have a Litany, part of which they Expound every Lord's-Day in the Church. They allow of two Sacraments only, and adminiſter the Lord's Supper in both kinds, and deny the real Preſence. They celebrate Baptiſm after the *Eutychian* ſort, as *Jacobus* Father of the *Jacobites*, and *Joannes Philoponus* miſtaught them; and moſt of them follow the condemned Opinion of *Neſtorius*, encouraged by *Cozroes* in hatred to *Heraclius* the Emperour. The Proſelyte *Gentiles*, or *Mahometans*, they ſign in the Forehead with a burning Croſs, but others they ſign only with the Croſs, as glorying in that Hieroglyphick, which the *Jews* and *Mahometans* eſteem ſo ignominiouſly of. They are great Lovers of Tradition, and do not pray for the Dead, believing that they come not either into a State of Happineſs or Torment till the laſt Judgment. They abſtain every Year five Sabbaths from Fleſh, Fiſh, Cheeſe and Butter, in memory of theſe five Ages, in which their *Gentile* Forefathers ſacrificed their Children to the Devil.

The Croſs uſed in Baptiſm.

They faſt on *Wedneſdays* and *Fridays* every Week, except between *Eaſter* and *Aſcenſion*, and are ſtrict Obſervers of *Lent*, refraining from their Wives, as well as Fleſh, Fiſh, Milk, Eggs and Butter, feeding upon Oil, Honey, Dates, Cucumbers, Herbs, *&c.* and drinking only Water; but at other times eat Fleſh of all ſorts, Pork it ſelf not excepted, which they account a dainty Fare. Before the three great Feſtivals they faſt twelve days.

Their Faſts.

They marry often at 9 or 12 Years old, the Laity twice, and the Clergy but once; but Trigamy is hated by all. They honour their Elders. They allow of no Images in Churches, and condemn the *Greeks* for doing the contrary, but have Images in their Houſes. They reſpect the Croſs, but worſhip it not. They do not believe a Purgatory. Their Churches are but mean. They pay Obedience and Reſpect to their Superiours, and puniſh Theft and Adultery. Yet they have ſome Idolatrous Cuſtoms among them, for at their Burials they lead a Lamb without blemiſh about the Church, which they after kill, and give to every one a bit, as a Symbol of Charity. On *Good-Friday* they repreſent the Burial and Death of Our Lord theatrically, with ſorrow in their faces; and on *Eaſter-day* they joyfully celebrate the Reſurrection, with a repreſentative Body, uſing the old Salvo which the *Greeks* do, in the Morning, *He is riſen indeed*, which they call an Angelical Note, and after celebrate it as a great Feſtival, the *Mahometans* and *Jews* not being allowed to mix with them. They faſt upon the Nativity. The *Jeſuits* have been very induſtrious to bring them over to the *Roman* Communion, but in vain. They inſiſt much upon Antiquity, and have a Catalogue of 200 Biſhops ſince their Converſion, and ſome of them were noble Martyrs. The *Armenians* at this day are the greateſt Travellers, Eaſt and Weſt, of any of the *Aſiaticks*, through a deſire of Gain, and affectation of Novelties, their Country lying convenient for Navigation upon the *Caſpian*, *Euxene*, and *Mediterranean* Seas, and the *Palus Meotis*; and tho' the *Turk* and *Perſian* often cauſeleſly quarrel with them, and domineer over them, yet they are averſe to War.

Their Marriages.

Their Antiquity.

Learning is not now in ſo great repute as it was formerly, yet they have Schools and Univerſities. They have *David*'s Pſalms, and ſome other parts of H. Scripture, which were tranſlated into the *Armenian* Tongue by S. *Chryſoſtom*, during his Baniſhment from *Conſtantinople* into that Country; as alſo the Works of *Gregory Nazianzene* and *Cyril*, tranſlated out of *Greek* into their own Language. Their Alphabet conſiſts of 28 Letters. They write from the Left Hand to the Right. Their Language is very difficult to learn, by reaſon of the harſh Aſpirations.

Their Schools and Univerſities.

Their Language.

Spahawn (now called *Iſpahan*) is ſeated in the 32 Deg. 39 Min. Northern Latitude, and 86 Deg. 30 Min. Longitude. This City is ancient, and in ſeveral Ages has changed her Name. Two thouſand three hundred Years ago it was called *Dura*, then *Hecatompulos*, after *Nymzamena.* *Ben Jonas* calls it *Aſphahen* and *Aeſpachan*, and *Cluverius Hagiſtan*, and the *Arabian* Geographer *Asbahawn.* At this day it is called by the Natives *Sphawhawn*, but by Writers *Spaha*, *Spachen*, *Acbahan*, *Aſpahan*, *Izpaan*, *Spahan*, and *Hiſpahan.* This City is the Metropolis of the *Perſian* Monarchy, and ſeated in the *Parthian* Territory (now called *Ayrac*) in the middle of the Empire: It is in compaſs about 9 Miles, including about ſeven thouſand Houſes, which contain about two hundred thouſand Souls; of which, beſides the Natives, there are Merchants of many Nations, as *Engliſh*, *Dutch*, *Portugueſe*, *Poles*, *Muſcovites*, *Indians*, *Arabians*, *Armenians*, *Georgians*, *Turks*, *Jews*, and others, drawn thither by hopes of Gain. The Situation of it is pleaſant, the Buildings neat, of which the Mydan, Meſquets, Hummums and Palaces, are moſt obſervable; rich in Trade, and very full of People, as being the place of the uſual Reſidence of the Court. The Air is pure, quick and healthy, and the Soil is fruitful, being Watered by the River *Sindery*, which tho' ſo wide in rainy Seaſons as to require a Bridge of 35 Arches, yet in Summer is ſo low and ſhallow, (being drained by little Rivolets to water the Gardens) that Children can wade over it; and after it has gone a few Leagues further, it is drunk up by the thirſty Valleys, and never arrives at the Ocean.

The Names of *Spahawn.*

The Mydan.

The Mydan is as ſpacious and pleaſant as any in the Univerſe ; it is a thouſand paces from North to South, and above two hundred from Eaſt to Weſt. The Building is of Sun-dried Brick, and full of Shops within fraught of ſundry ſorts of Wares, arched above in Cupulo's terraſs-wiſe, and pargetted with blue Plaiſter, and being the nobleſt part, is placed in the heart of the City.

The King's Palace.

The King's Palace, called *Chonna Poſthaugh*, joins it on the Weſt-ſide, which poſſeſſes a large ſpot of ground backward, but is even with the other Buildings in the front ; it is pargetted and painted with blue and gold, embroider'd with Poeſies of *Arabick*, which after the *Groteſco* manner makes it ſhew very pleaſant. Within the Rooms are Arched, enlightened by Lattices, emboſſed above, and painted with red, white, blue and gold, and on the ſides with Sports and Landskips ; the Floors ſpread with Carpets of Silk and Gold, without other Furniture, terraſſed above, and garniſhed with a Tower over-topping many Moſques. The Garden, or Wilderneſs, fragrant with Flowers, and full of Birds.

The Hippodrome, *Vid* the form of it, Fig. 13.

Within the Hippodrome many of the Cavalry uſe to ride, from whence they repair to the Court-gate with their Lances in their Hands, and Swords and Quivers by their Sides, to attend the King, if he pleaſeth to go abroad ; if not, after they have waited a while, they depart. The North Iſle of the Mydan hath 8 or 9 arched Rooms, uſually hung with Lamps and Latten-Candleſticks, which make a great ſhew. Hither the *Potſhaugh*, and others, repair frequently for Paſtime, as Tumbling, Slight of Hand, dancing Girls, and painted *Catamites*.

The Mint.

At the fartheſt end North is the Mint, where they Coin Gold, Silver and Braſs, and by it are Cooks Shops : Before the King's Doors are 31 Demi-Cannons, and 12 Iron Culverins, brought thither from *Ormus*, or *Babylon*.

The Moſques.

Oppoſite to the Palace is a fair Temple, or Jewma-Machit, built round, but within diſtinguiſhed into Iſles. The outſide is Stone, and the inſide is lined 15 foot high, with white poliſhed Marble-Cupulo's, and compaſſed with Walls, and open to the Air, the Iſles excepted, which are covered. In the Center is a large Tank of pure Water, and at the Portal another. The other Moſques are much of the ſame form, tho' leſs ſumptuous ; and ſome have ſlender high Steeples, or Towers, terraſſed near the top.

The Hummums.

The Hummums in the City be many and beautiful, ſome 4 ſquare, but moſt round ; they are built for the moſt part of white Stone well poliſhed, the Windows are large without, but narrow inwardly, and the Glaſs thick and dark. The Roof is round, Tiled with counterfeit Turquoiſes, which is perfect blue, beautiful and laſting. The inſide is divided into many Cells, ſome for Delight, others for Sweating ; all for Uſe, for Bathing with the *Perſians* is as familiar as Eating and Drinking, and almoſt as neceſſary, becauſe they uſe much ſitting, and little Exerciſe. The Baths are of pure Stone, paved with black and chequer'd Marble. Men frequent them in the Morning commonly, and Women in the Afternoon. The price for Bathing is very ſmall, which makes them uſe it oftner ; ſo that the Gain is great.

The Baths.

The Uſe of Bathing.

The City deſcribed.

Bathing is accounted a Catholicon againſt moſt Diſeaſes, eſpecially Colds, Catarrhs, Flegm, Aches, Agues, the *French*-Pox, and the like. The City is built upon a Level ground, and in an Oval form, having many Streets, and ſcarce any Houſe but is accommodated with large Gardens full of Cypreſs-Trees. The City Wall is of no force againſt Cannon, but of uſe againſt Horſe and Lances. Some Parapets and Bulwarks it has, but more for Ornament than Uſe, the *Perſian* being ſo Magnanimous, as to Die rather than be Beſieged. It has 12 Gates, but 4 of them are lately ſhut. The Palaces are few, low built, pargetted and painted without, and gilt within, and ſpread with Carpets. They have all large Gardens beautified with Flowers, and plentifully Watered.

The Seraglio.

The Royal Seraglio is famous for the Treaſure and Beauties it contains ; but ſince 'tis dangerous to inquire into them, little can be ſaid of them. The Caſtle is large, ſtrongly Walled and Moated ; made Defenſive with ſome Pieces of Braſs, but more by the Troops of Eunuchs who guard the Ladies. The Gardens, for Grandeur and Sweetneſs, excel all others in *Aſia* ; ſo that you may call it another Paradiſe.

The King's Garden.

At the Weſt of *Spawhawn* is the King's Garden, called *Nazar-Fareeb*, which is very famous. From the Mydan you go to this Garden by *Cherbaugh*, through a Street two Miles long, moſt of the Way on both ſides being Garden-Walls, here and there adorned with Summer-Houſes, and planted all along with Chenaer-Trees, which ſerve both for Shade and Ornament. Being come to the Garden *Nazer-Jareeb*, you find it encompaſſed with a Wall about three Miles in Circuit, wide and well-built. From North to South 'tis about a thouſand paces, and from Eaſt to Weſt ſeven hundred, the Walks in 9 eaſie Aſcents paſſing through it both ways. In the middle of the Garden is a ſpacious Tank, having twelve equal ſides of 5 foot long ſet out with leaden Pipes, which ſpout up the Water in variety of Conceits. At the North-Gate is a Summer-Houſe erected for Proſpect and Pleaſure, garniſhed without, and within divided into 6 Rooms. The lower Rooms are adorned with Tanks of white Marble, and the higher Rooms are beautified with variety of Landskips, which repreſent their Manner of Sports, Hawking, Fiſhing, Riding, Shooting, Wreſtling, Courting, and other Fancies. The Roof upon the Parget is gilt and painted with blue, and other Colours. This Garden is repleniſhed with Trees of all ſorts for Medicine, Shade and Fruit, which are all ſo green, ſweet and pleaſant, that it may be termed the King's Paradiſe.

The Tank and Summer-Houſe.

Monuments of Antiquity.

Monuments of Antiquity, in or about this City, are only theſe few, *viz.* *Ruſtan*'s Tomb almoſt ruined, and only preſerved by *Gowers Cabala* : *Darius* (or *Xerxes's*) Mount, a riſing Hill, where *Xerxes* ſtood when he viewed his innumerable Army, and conſidering that none of them ſhould be living in a few Years, wept : *Demaund* Hills, through which *Abbas*, by the unſpeakable toil of 40 thouſand, and ſometimes 100 thouſand Men, in 20 Years time forced a River to *Spawhawn* : A Column or Pillar of Heads of Men and Beaſts, ſlain by *Abbas* for their Rebellion againſt him ; it exceeded the Steeples of many Moſques in *Spahawn* at firſt, but now is much ruin'd. The Heads of Beaſts are mingled with Mens, becauſe the Mufti perſwaded *Abbas* to ſpare the Men, that ſurvived the heat of his fury, and ſlay Beaſts inſtead of them.

Vid. the Fig. 14.

The Suburbs of Spahawn.

1. Jelphey.

Spahawn has many Suburbs, *viz.* *Jelphey*, *Gower-abaut*, *Abbas-abaut*, *Chanz-abaut*, *Azan-abaut*, and *Cheigh-Saban* : *Jelphey* is Governed by a peculiar Poteſtate, an *Armenian* Chriſtian Prince, ſtiled by them *Hodge-Nazar*, a Merchant by Profeſſion, but having a Superintendency over them. He and his Subjects enjoy freedom of Conſcience, but for Money Matters, and Publick Taxes, are at the ſole diſpoſition of the King. The Inhabitants of this Suburb are reckon'd 10000, and theſe in *Azen-abaut* 4000 Families. They are habited like the *Perſians*, but have greyer Eyes, and brighter Hair. They are for the moſt part Merchants, Factors for the King, who generally ſeizeth their Eſtates at their Death, if they are rich. They profeſs Chriſtianity, taught them erroneouſly by *Jacobus*, the *Syrian* Monothelite, and have two Patriarchs, one reſiding in *Jelphey*, the other at *Sis* near *Tharſus*, and ſometimes at *Ecmeaſin*. *Gower-abaut*, ſo called from the *Gowers*, who are Relicks of the ancient *Perſians*, and inhabit there. The other *Perſians* contemn them, partly becauſe they are more ancient, and partly becauſe they ſhame their Idleneſs by their Induſtry. They are Idolaters, and worſhip the Sun, whom they call *Mythra*, but build no Temple to it, becauſe they ſay no place is ſufficient capacious enough for it. Their Lawgiver was *Zertooſt*, or *Zoroaſter*, who firſt taught the *Perſians* Magick and Judicial Aſtrology. Their Flamens are a ſort of *Platoniſts*, for tho' they acknowledge many Creatures to be excellent, yet they ſay they are no way comparable to their Creator, who is the Center of all Perfection. Nevertheleſs they Deify an Elemental Fire, which they ſay doth never extinguiſh. Their Marriages are the ſame with the *Indian Perſees* above related. In reverence to the Fire they forbear to burn the Dead, as being Unclean things, but put them into the hollow of a Tree, ſtanding upright, till their Obſervation releaſeth them ; for if the Vultures pluck out the Right Eye, then they conclude that the Party's Soul is in Paradiſe, but if they pull out the Left, than an Evil Spirit vexes him, and ſo they Feaſt or Faſt as they think they have cauſe. Theſe People are for the moſt part Mechanicks, or Husbandmen, and very few Scholars or Merchants. Their Habit differs little from the common Mode, ſave that their Head-attire is after the *Hyrcanian* faſhion. The Women ſhew their Faces, and their Apparel and Hair is tinctur'd with yellow, and their Scarf is Flame-coloured, reſembling the Sun their Deity. Many of them, either out of Zeal or Poverty, go barefoot, uſing neither Shoes nor Sandals.

2. Gower-Abaut.

Portugueſe Friers among them.

The *Portugueſe* Friers, *Carmelites* and *Auguſtinians*, have two Houſes here, and their Chappels are neatly gilt and adorned with Organs, Altars, Crucifixes, Images, Candles, and other like Ornaments, with which they endeavour to convert the People to Popery, but the *Armenians* are rather Spectators than Auditors, and hate all Innovations, and the *Perſians* by their Principles contemn Images, yet are theſe Religious of great uſe to ſend Intelligence to *Goa*, and other parts of *Chriſtendom.*

Reig.

Leaving **Spahawn**, *May* 1. to go towards the Court, which lay at *Aſharaff* in *Mozendram*, 400 Miles diſtant Northward from it, they came to *Reig* on Horſe-back, and finding the weather intollerable hot, travelled the reſt of the way by Night, refreſhing themſelves by Day in Garavans-raws, where the Gnats were not too troubleſome.

Sardahan. Whoomg.

From *Reig* they travelled firſt to *Sardahan*, which is 16 Miles; then to *Whoomg*, 27 Miles, where they reſted.

Tawghtbaut.

Next they came to *Tawghtbaut*, an Houſe and Garden of the King's, which for beauty and ſweetneſs, equals any in *Parthia*, tho' 'tis planted in a barren Soil; for it not only abounds with moſt ſorts of Trees familiar to the Climate, but with *Perſian* Fruits and Flowers, *viz.* Pomegranates, Peaches, Apricocks, Plums, Apples, Pears, Cherries, Cheſtnuts, damaſk, red, and white Roſes, Tulips, and other Flowers in great variety, watered with Streams, beautified with artificial Grots, and having alſo Hummums of Stone, paved with white Marble.

The Summer-houſe.

The *Mohul*, or Summer-houſe has a dozen Chambers, delightful to the view, being emboſs'd with Gold, and painted with various Colours.

Bawt. Obigarmy.

From hence they paſſed firſt to *Bawt*, and then to *Obigarmy*, two of the King's Houſes, over an hoſpitable and ſandy Deſart, ten Miles broad, but an hundred long. The Ground is covered with a looſe and flying Sand, which being agitated by the Wind, moves like Waves of the Sea, and overwhelms Paſſengers, but the dryneſs of the Soil makes theſe Vapours not very common.

Suffedaw.

The next Night they rode 21 Miles to *Suffedaw*, and the Night following 30 to *Syacow*, as a good Caravanſraw, as the other was a bad one, made of white poliſhed Stone. This laſt Nights travel was upon a Stone Cauſey, broad enough for ten Horſes to go a-breaſt, built by extraordinary labour and expenſe, over a part of a boggy great Deſart, which will not bear Horſe or Camel, unleſs on the Cauſey, which thro' drifts of Sand and Salt, Travellers ſometimes miſs of, and ſo periſh. They had the like Cauſey further in their Road for 22 Miles, till they came to the Borders of *Old Parthia*, where they pitched, and the next Night came to *Ghezz*, which is 18 Miles, a pretty Lodge belonging to the King.

Ghezz.

The Nomades.

Here they met with ſome of thoſe Creats, or wandring Herds-men, called *Nomades*, who have no fixed Habitation, but for Profit or Delight, remove from place to place, as Fancy and good Paſturage invites them, with all their Families and Subſtance in Waggons of ſix Wheels, two Stories high, covered with Felt.

The Pylæ Caſpiæ.

Part of this Journey lay thro' the *Pylæ Caſpiæ*, or Valley of Mount *Taurus*, which is not more than four yards broad, and eight Miles long. This Paſs a Thief with 500 Horſe, undertook to keep againſt all Commers in *Abbas*'s Reign, to the great ſorrow of the King of *Larry-Joon*, and even *Abbas* himſelf, but an *Armenian*, with ſome few *Cooſal-Baſhaws*, undertook the conqueſt of them, which he effected by ſingle Combate with the Thief, whom he overcame and killing, by the help of the *Cooſel-baſha's*, ſcattered his Followers. *Abbas* was pleaſed with the bravery of the Action, and rewarded him, but not being able to bear the Glory of it long, commanded *Lollabeg* to cut off his Head.

Halvary.

Their next Night's travel was to *Halvary*, 18 Miles from *Ghezz*, a Village pretty well built, and delightfully ſeated by a ſweet Rivulet, and on a pleaſant Soil, which is uſually green, and produceth plenty of Olives, Wallnuts, Wheat, Wood, and other things.

Periſcow.

From hence they rode the next Night to *Periſcow*, 20 Miles, where the King has an Houſe, and ſometimes reſides here for the conveniency of Hawking, becauſe Pheaſants and other Game more abound here, than in moſt other parts of *Parthia*. This Town has very ſweet Water, and ſtands upon the Brow of a Hill very well wooded, but at this time was governed by a corrupt Man, one *Mahumed*, who ſought always to extort Bribes ever from Strangers.

Gheer.

After two days ſtay in *Periſcow*, they travelled to *Gheer*, 24 long Miles, and the next Night to a Village abounding ſo with Frogs, that their abode was unpleaſant there thro' their loathſome noiſe.

Aliavar.

Aliavar, 21 Miles further, was their next Manſion, a very pleaſant place for Earth, Water, and Wood: Here they found ſtore of Pheaſants, a Bird abounding in theſe *Hyrcanian* Towns, but originally proceeding from the River *Phapis* in *Mingrelia*, which empties it ſelf into the *Euxine* Sea, near *Trapezond.*

Necaw.

From thence they went to *Necaw*, 25 miles, where the King has an Houſe, and the other Buildings and Churches are like ours in *Europe*. Here, as in ſome other parts of *Hyrcania*, they are exceedingly peſtered with Flees and Gnats in Summer-time. The Fields alſo are much peſtered with Snakes, which will wind about the Horſes Legs as they travel, but do no other harm.

Aſharaff deſcribed.

Next Night they got to *Aſharaff*, a City upon the *Caſpian* Sea, where the Emperour of *Perſia* was at that time, expecting the *Engliſh* Embaſſador. The Sultan of the Town with 50 *Cooſal-baſhaes*, met the Embaſſador three Miles from the Court, and brought him with his Attendants civilly into *Aſharaff*, but the Ceremony was far below the State of ſo great a King, and the Perſon of the Embaſſador. *Aſharaff* is diſtant about two miles from the *Caſpian* Sea, ſeated in a low Ground, ſurrounded with many ſalt Marſhes, and but meanly watered, with a ſmall Spring only from the Mountains of *Taurus*.

The Soil.

The Ground is reaſonably fat, but not well cultivated, the greateſt part of the Inhabitants being Souldiers. There are about 2000 Families in this Town, but doubtleſs muſt increaſe, becauſe the King begins to affect the place, and has newly built him a Palace there, but not very large. The King has two other Palaces near, *viz.* at *Farrabaut* and *Abaſſabaut*, where there is a Summer-houſe, excelling all his others for Proſpect, Paintings, Hummums, Water-works, and a Forreſt ſtored with all ſorts of Game. The Palace here is not very regular, but rather confuſedly divides it ſelf into four Mohuls or Banqueting-houſes, which be gorgeouſly painted; and were they united, they would more delight the Eye. From them you have a pleaſant proſpect into the *Caſpian* Sea, and may ſee Mount *Taurus* at a diſtance. The Palace looks into very pleaſant Gardens.

The Bazar is but ordinary, and the Machits not to be admired: The Chambers of the Palace are large and ſquare, the Roofs arched and richly guilded, the Ground is ſpread with Carpets of Silk and Gold: In the midſt are Tanks full of ſweet water, and round about them Flagons, Ciſterns, and other Veſſels of Maſſy-Gold, which are ſometimes, upon ſpecial Occaſions, filled with Perfumes, Wine, Roſe-water, Flowers, &c.

Hyrcania or Mazendram.

This City lies in *Hyrcania*, or, as the *Perſians* now call it, *Mozendram*, which is a Country in moſt places of a good Soil and Clime, abounding in Graſs, Fruit, Corn, Flowers, &c. and having Cattle in great plenty; moreover for their manner of Huſbandry, Buildings and Civility, more reſembling *Europe* than any other part of *Aſia*. The Goodneſs of the Soil is much bettered by the many Rivers and Rivolets, which ſpringing from Mount *Taurus*, water the whole Country, and empty themſelves into the *Caſpian* Sea, ſuch as *Cyrus* and *Cambyſes*, which gave two Kings their name, *Araxy*, *Obſel*, *Connec*, *Mazeras*, *Bundana*, *Hydiro*, *Aragus*, and others. This Country in ancient times ſo abounded with Wood, that it was called *Sylva Hyrcania*, and nouriſhed ſeveral ſorts of noxious Creatures, as Snakes, Lions, Foxes, Wild-Cats, Boars, and Tygers, inſtead of which, now there is plenty of Cows, Buffalo's, Horſes, Camels, Sheep, Mules, Deer red and fallow, Antelopes, Hogs, Goats, and other Beaſts, as alſo Birds, Hens, Pheſants, Patridges, Nightingales, Pouts, Quails, Wood-cocks, Thruſhes, and other Birds: and Fiſh, as Sturgeon, Mullet, Muſſels, Dog-fiſh, Tunnyes, and others: It produces all ſorts of Grain, and Fruits, and Roots, in great variety.

The Grain and Trees.

Among the Trees that grow here, which are Oak, Elm, Aſh, Mulberryes, and the like, there is one that diſtils a Juice ſweet like Honey, which is called *Occbus*. The chief Towns of this Country are *Farrabaut*, *Aſheraff*, *Abaſſebaut*, *Periſcow*, *Omoal*, *Barfruſhden*, *Chacopero*, *Caban*, *Baldith*, *Baedz*, *Darabgier*, *Dengee*, *Sumachy*, *Erez*, and *Bachu*, nigh which laſt is a Spring of that rare kind of Oyl, or clammy Subſtance, called *Neft* or *Nephti*, which will take fire from the Sun-beams, or other heat. If it be not the ſame mentioned 2 *Macch.* 1. 36 'tis much like it. Near *Chacoporo* alſo is a Spring, whoſe Water is ſweet and profitable for eleven Months in the Year, but one Month is ſo brackiſh, that it is unfit both for drinking and dreſſing Meat. The Natives here for the moſt part are exceeding courteous to Strangers, and hoſpitable, induſtrious in Huſbandry. They have a Dialect of their own, but ſpeak *Perſian* for the moſt part, tho' imperfectly.

Nephti a rare Oyl.

The Tapiri.

The *Tapiri* inhabited here of old, who had a Cuſtom after they had three or four Children, to lend their Wives to their Neighbours to breed on, to which the Women as willing condeſcended; a Cuſtom now abrogated,

gated, but not wholly left. The Country is Champion, but incloſed near the Towns. The Paſtures are full of Snakes, and Woods of large Mulberry-Trees, which feed the Silk-worms, about which the People employ themſelves. This Worm came into *Perſia* from the *Seres*, or *Regio Serica*, in *Scythia*, towards *Indoſtan*: Theſe Worms produce the *Perſian* King 7600 Batmans of raw Silk yearly, which, they ſay, will be of that colour you lay before the Worm commonly, tho' it is uſually white, green, yellow, or Sand-colour.

Silk-worms.

Terrabaut deſcribed.

Upon *Whitſunday* they left *Aſheraff*, and came to *Terrabaut*, five Miles from it, and lying South-Eaſt of the *Caſpian* Sea. The Situation of this City is flat, the Soil rich, and beautified with Gardens full of Fruit, watered with a River of ſweet water 40 Paces broad, which ſpringing from Mount *Tauris*, incorporates here with the *Caſpian* Sea. The Air is not ſo pure here as it is higher up the Country. Inſtead of Walls it has a deep Moat, the Banks of which are planted with Willows and other Trees for Shade and Ornament. The Houſes are not flat above, according to the *Perſian* way, but the Roof is ſharp, and tiled as ours in *England*, and the Windows are glazed. This Town has about 3000 Families, the Streets are broad enough, but not regular. The Moſque is but ordinary, and the two Buzars not ſingular. Moſt Houſes have their Gardens, and ſome reach down to the *Caſpian* Sea. The King's Houſe at the North end of the Town is of moſt note. From the Balconies of it you have a fine proſpect on to the Sea. It has two large Courts, diſtinguiſh'd into Knots and Graſs-plats, which ſo abound with Flowers and Trees, as if they would ſurfeit the Senſes with delight. The Houſe is ſpacious, but low, the Rooms are high, but ſo long, that they reſemble Galleries. Three of the Chambers are moſt richly furniſhed with Seilings well painted, and emboſſed with Gold, Looking-glaſſes on the ſides, and *Muſcovian* Glaſs in large clear Panes, cemented with Gold. The Floors new laid with Velvet, and Carpets of Cloath of Gold.

The *Caſpian* Sea. *Vide* Fig. 15.

The *Caſpian* Sea, which lies near this City, is deſervedly reckoned one of the Wonders of the World: for greatneſs, taſte, and colour it reſembles the Ocean, but has this wonderful in it, That tho' it receives many great Rivers into it, and has no viſible vent, yet it never overflows the Banks. It is 3000 Miles in circumference, and the ſhape and figure of it is oval: from North to South 'tis 600 Miles in Diameter: 'tis ſhallow by the Shoar, and full of quick-ſands; but more off at Sea, 'tis deep and unfathomable. Upon the North it has a part of *Tartary*, called *Nagay*, on the Eaſt *Nagathas*, on the South *Hyrcania*, and on the Weſt *Media* and *Armenia*, ſurrounded with lofty Hills, furniſhed with Fiſh, and upon the Shoar hath many Towns well-peopled, and traded to by many Nations. 'Tis thought that it hath ſome ſecret courſe with the *Euxine*, and ſo much the rather, becauſe that Sea hath a Current Flux running from the Eaſtern Shoar, which is nigheſt the *Caſpian*, towards the *Thracian Boſphorus*. The ebbing and flowing, if any, is ſcarce diſcernable in this Sea. Ships in eight days will croſs this Sea from *Forrabaut*, or *Derbent*, to *Aſtracan*, if the Winds be favourable.

Aſtracan deſcribed.

This Town and Iſle lies in 47 Degrees of Northern Latitude, is ſeated upon a riſing Ground, and has a Line about it for defence, and upon the Works ſome Pieces of Cannon mounted. The Houſes are not many, nor well built, but ſufficiently peopled; for altho' the Soil be barren, and Air bad, yet ſuch is the Deſire of Gain, that it is much reſorted to by the Merchants of ſeveral Countries, who trade thither for Furs of Foxes, Sable, Woolverin, Ermyn, Luſern, Miniver, Bever, Otter, Squirrel, and the like, which are brought thither out of *Ruſſia* and *Tartary*, as alſo for Fiſh, which the Sea produces in great plenty, and eſpecially for Caveare and Potargo, which are made, the one of the Row of Sturgeon, and the other of the Mullets, and for Salt, which they make there of the Salt-water, and vend in great quantities.

Volga deſcribed.

Six Leagues from *Aſtracan* runs the great River *Volga*, or *Wolga*, which ſprings out of a Mountain about an hundred Miles from *Teraſlave* in *Ruſſia*, in 60 Deg. Northern Latitude, and after 2000 Miles Courſe, diſgorges it ſelf at ſeveral Mouths near this Iſle into the *Caſpian*. Were the depth of this River anſwerable to its breadth, it would afford an eaſie Paſſage into *Perſia* and the *Indies*.

Derbent deſcribed.

Derbent is a Poſt-Town upon the *Caſpian*-Shoar of great ſtrength, and no leſs Antiquity, being founded, as is ſaid, by *Alexander the Great*, who alſo erected the great and ſtrong Caſtle of *Kaſiow* adjoining. This Town for trade, is not inferiour to any other upon that Sea, which makes it rich and populous. It is a Garriſon, and made defenſive by regular Fortifications: the Circuit of the Wall is three Miles, and affords a proſpect to the *Caſpian* Sea. It is ſituate in that part of *Armenia* the Great, which is now called *Ziuria* and *Myral*, but *Albania* of old, in 41 Deg. 15 Min. Northern Latitude. It ſtands in the Confines of the *Turkiſh* and *Perſian* Dominions, and ſo has been often the Subject of Contention between thoſe two mighty Princes.

Araſh.

'Twixt *Aſtracan* and *Derbent* is the noted Emporium called *Araſh*, becauſe the River *Araxes* waters it, where ſuch an abundance of Silk is bred and ſold, that ſome think it the *Regio Serica*; and indeed many Camels load are carried from here unto *Caſhan*, where the Manufactures of Carpetting and other Silken-ſtuffs are made in perfection, much to the advantage of the Town. At this place alſo is ſtore of Cotton-wool and Galls, which Merchants value, and of Piſtachoes, Pomegranates, Grapes, Melons, Oranges, and other Fruits liked by Travellers, in great abundance.

Bactin.

From hence to *Bactin*, a ſmall Town, yet thought conſiderable enough by Geographers to give the *Caſpian* Sea the name of *Mare de Bactin*, is 18 *Engliſh* Miles. Near this place is a Spring, out of which the Inhabitants fiſh a blackiſh Oyl, which ſerves for Lamps and other Houſhold-uſes, and has no offenſive ſmell.

Oyl fiſhed out of a Spring.

Thence to *Bildith* is 14 Miles, thro' a level and fruitful Country, watered by *Araxes* and *Cyrus*.

Chacoporo.

From hence the way lay by the Sea-ſide to *Chacoporo*, 12 miles from *Ferrabaut*. This Town lies by a Beat of the Sea, which coſts the Inhabitants ſome charge to guard themſelves againſt. Here is a River which is ſalt one Month in the Year, but the Reaſon is not known.

Barfruſhdea.

The next Town they came to was *Barfruſhdea*, a large Town, well built and peopled, trading in Silk-worms, and having plenty of Wood and Water. The Inhabitants delighted much in Archery, an Exerciſe long uſed here; and then they travelled to *Omoal*, a large Town, built on the North ſide of Mount *Taurus*, and inhabited by 3000 Families, but a mixture of ſeveral Nations, *Armenians*, *Scythians*, *Perſians*, and *Jews*, *Curds*, *Banyans*, *Indians*, and *Maſcovites*, who tho' they make a Babel in Languages, yet live friendly together, all tolerating their own Forms, and having among them ſeven ſeveral Sabbaths; for the *Bannians* keep *Thurſday*, the *Perſians* *Friday*, the *Jews* *Saturday*, the *Armenians* *Sunday*, the *Peguans* *Munday*, the *Gowers* and *Curds*, or Fire-worſhippers, *Tueſday*, and if the *Scythians* beyond *Bochar* were there, they might compleat the Week. The Town is built in a large Level, but withal upon a very pleaſant and fruitful Soil; the Buildings are ruinous, but ſhew ſome ſigns of Greatneſs. The Caſtle is fair and ſtrong, being fortified with a deep Moat or Trench, full of Waters, which ſerves to defend them from Inſults of the Mountaineers of *Taurus*. Moſt of the Houſes have Gardens to them. The Cathedral or *Jeuma Mechit*, is moſt noted, in which they ſay, there are 444 Princes and Prophets entombed, which raiſe veneration among the People, and admiration among Paſſengers, eſpecially that of *Meer Agowmadeen*, to which they cheerfully offer the Myſteries of their Religion, and perform their Funeral Rites.

Omoal.

Seven Sabbaths in a Week.

Larry-Jon.

From *Omoal* they travelled to *Larry-John*, or *Joon*, 30 Miles, where Mount *Taurus* bounds the Kingdom of *Hyrcania*: This Mountain is reputed the greateſt in all the World, both for length and height; for it reacheth in length 3000 miles, from the leſſer *Aſia* to the fartheſt parts of *Eaſt-India*, and it is ſo high, that its top mounts a good way up into the middle Region, leaving the Clouds a great way below, as ſuch who have aſcended it, do witneſs. From the top of this Mountain you have a Proſpect Northward of a part of *Tartary*, which is ſo large a Country, that it not only contains a third part of *Aſia*, but extends it ſelf Eaſtward a great way in *Europe*. It is divided into *Sarmatia*, *Aſiatica*, *Scythia*, and *Cathaia*; or as others, into 1. *Tartary* the old, 2. *Zacathai* within *Imaus*, 3. *Cathai* without *Imaus*, 4. *Sarmatia Aſiatica*, and 5. *Tartary* the leſs. Their Name in *Hebrew* imports a Remnant or ſcattered Generation, as they really are, for they have no certain Habitation, but are ever wandring to and fro, they ſcarce know whither, their wealth wholly conſiſting in their Cattle.

Mount *Taurus*.

Tartary divided and deſcribed.

Polygamy allowed.

Polygamy they allow, and in their Marriages abſtain only from Mothers and Siſters: A fierce, perfidious and crafty People, expert in Riding, Darting, and Running, altogether barbarous, unleſs at *Zagathai*, where Commerce has taught them a little Civility. They ſeldom eat Bread, for Mares Milk, Fleſh half boiled, ſoure Milk and Herbs are the greateſt Dainties.

Mahometans and Chriſtians.

About the Year 1200 they received *Mahomet*'s Doctrine, yet have many *Jews* among them, and ſome *Hoords* profeſs *Chriſt*, tho' infected with Neſtorious Hereſy about two Natures in him. The *Muſcovites* have introduced Image-worſhip amongſt them, yet only in paint, and not in Sculpture, which laſt they think violates the Commandment only. The reſt are Gentiles.

Zagathai comprehends *Mergiana*, *Sogdiana* and *Bactria*.

Mergiana deſcribed.

Mergiana is a Country ſo fruitful for Corn and Wine, that as *Strabo* reports, one bunch of Grapes preſented to *Alexander*, filled a Baſket a Yard round. The Patriarch *Noah* is ſaid to have planted here after he forſook the Ark, and in his Memory was the City *Nyſſa* or *Noyſſa* built, and from hence *Nimrod*, and the reſt of the Builders of *Babel* being defeated in their Attempt by the confuſion of Tongues, diſperſed themſelves into ſeveral parts of the Earth.

Sogdiana deſcribed.

Sagdiana adjoins this Province, watered by the River *Orcus* or *Nycaphtae*: It was the Boundary of the *Perſian* and *Aſſyrian* Monarchy. From it at ſeveral times have iſſued out ſuch ſwarms of the People, as have well-nigh over-ſpread the Univerſe.

Bactria.

Bactria has *Mergiana* on the Weſt, *Sogdiana* and the River *Oxus* on the Eaſt and North, and *Aria*, with part of *Paropomiſſa* on the South, and is now known by the Name of *Corazan*.

Samerchand.

Samerchand in former Ages was not only famous for being the chief Mart both of this and all other Countries thereabouts, but for being the birth and burial-place of *Tamerlane*, that great Victor, who ſubdued more Nations in 8, than the *Romans* did in 800 Years, but 'tis now a poor place, and gives precedence to *Bochar*, the Birth-place of the great Naturaliſt *Aricenna*.

Aria deſcribed.

Aria, now called *Heri*, had a Governour of its own, *Sha-Abbas*. *Eri* is the principal Town of it, and is three Miles about. It abounds ſo much with Roſes, that it furniſhes all the Country round about with Roſe-water, much excelling ours in *Europe* for ſweetneſs, which they uſe in Sherbets, Banquets, and Entertainments, to perfume the Floors they ſit on, and places.

Tochariſtan.

The Turks, whence.

The Turkiſh Empire, how raiſed.

In theſe parts alſo lies *Tocchariſtan*, from *Tochara*: It is the Original Seat of *Torcis*, the Poſterity of *Togarmach*, the Son of *Gomer*, a People not appearing in the World till rouſed by *Heraclius*, in his long and fierce War with *Coſroes* the *Perſian*, and not till 200 Years after, breaking thro' the *Caſpian* Streight, ſome *Hoords* of them ſettled themſelves in part of *Armenia*, called *Turcomania*, where they ſerved *Mahomet*, Sultan of *Perſia*, againſt the *Calyph* of *Bagdat*, but being abuſed by his Captain *Tangrolipix*, made themſelves Maſters of *Perſia*. *Rabbi Ben Jonas* ſays, that the *Jews* carried captive by *Salmaneſſer*, aſſociated themſelves with theſe Forces of *Niſapire*. They were not heard of in *Europe*, till the Year 1200, and the Foundation of their vaſt Empire was not laid till 1300, when *Ottoman*, the Head of the *Oguzian* Family, having conquered *Pontus* and *Bithynia*, now called *Burſia*, and other parts of *Natolia*, left ſo great an Army to *Orchan* his Son, that he ventured over into *Europe*; and ſince, his Succeſſors under three Princes and eleven Emperours, within the ſpace of 300 Years, have enlarged their Dominions over much of *Africk*, more of *Europe*, and moſt of *Aſia*. The moſt conſiderable Towns are *Tuzz*, the great Birth-place of *Nazarradyn*, the great Mathematician, Tranſlator and Commentator upon *Euclid*, *Sarchas*, *Gelack*, and others, bounded by *Nycaphtac*, a Branch of *Imaus*. There is a part of this Country called *Maurenabar*, which hath to the South the River of *Gihon* or *Jehun*, and to the South-eaſt *Garneben*, a large, but deſolate Country now, tho' once ſo well governed by the *Gentiles*, that they puniſhed Murder, Theft, and Adultery, and diſallowed Idol-worſhip.

The Scythians

More North the *Scythians* beyond *Imaus* inhabit. Their Country was of old called the *Regio Serica*, by reaſon of the abundance of Silk and excellent Tapeſtry and Carpeting there found.

Mount Taurus deſcribed, and the things memorable in it.

Concerning Mount *Taurus*, the things moſt memorable are, 1. The *Pyree* of Idol-fire, which (according to their Tradition) has continued unextinguiſhed for full 50 Generations. The Fane is round, repreſenting Eternity, in the midſt an Altar raiſed 5 Steps from the Ground, under which the Fire was placed within a Trench, which they worſhipped with Divine Honour, and ſacrificed not only Children, but Men in it. 2. The *Meleike Bahaman*, who commanded many Hills and Dales in that Mountain, with mutual Love between him and his Subjects, tho' envied both by *Tartars* and *Perſians*. *Abbas* having conquered *Mazendram*, reſolved to be no longer bearded with this Mountainous King, who pried, as he pretended, into his Affairs, and to that end ſent *Methiculibeg* with 30000 Men againſt it, but when all warlike Attempts proved in vain, by Falſeneſs, Oaths and Treachery, he drew the Old King, and his three hopeful Sons, to a Banquet, where they periſhed; and ſo *Abbas* gained his Poſſeſſions and Kingdom. 3. The high Peak of *Damoan*, whoſe top, like a ſhaped Pyramid, ſurmounts all other parts of *Taurus*, from it the *Caſpian* Sea, tho' at Eightſcore Miles diſtance, is very viſible. At the top it is compoſed of Shulphur, which cauſes it to ſparkle like *Ætna*, and yields a pleaſant Object to the Eye, tho' it offends the Noſe. Moſt parts of *Perſia* and *Aſia* are furniſhed with Brimſtone from hence. The Sulphureous Veins in this Mountain produce hot Baths, which are wonderfully flocked to in *Auguſt* by diſeaſed People, not only from ſeveral Parts of *Perſia*, but of other remote Countries, and they receive from them notable Cures. Three of them are compaſſed with Walls for the Nobility, and the other two are open for all.

The *Jews* inhabit about this Mountain in great Multitudes, aſſerting, That they were ſettled here by *Salmaneſſer*, *A. M.* 3220. as is ſtoried, 2 *Kings* 17. 6. Theſe *Jews* will needs have it, that *Noah*'s Ark reſted upon this Pique of *Taurus*, and not upon that which is nearer *Armenia* called *Baris*, which ſignifies a Ship, as if it retained the Name of that Accident; for as to the Name of *Ararat*, that and *Caucaſus*, and *Taurus*, are all the Names of this Ridge of Mountains, which environ the *Caſpian* Sea.

Nova.

Damaont

Eaſt of this high Peak is a Town called *Nova*, in which are about an hundred Families, and hard by is *Damaon*, by the *Jews* called *Jehud*; it is a Town of good repute among the *Perſians*. It is ſituate in 36 Deg. 20 Min. Northern Latitude, and 88 Deg. Longitude. It is included in a Skirt of *Taurus*, and is the utmoſt Limit of *Media* to the North. It is watered by a branch of *Gozan*. Here are 200 Families of *Jews*. The Bazar is built high, and Wine and Fruits are ſold there at eaſie prices, becauſe very plentiful.

Bomahecm.

From hence they went to *Bomaheem*, in the ancient *Media*, a Province ſituate in the Center of *Aſia*, and accounted a rich and noble Country.

Media deſcribed.

The *Greeks* ſay it takes its Name from *Medus*, the Son of *Jaſon* and *Medea*, but the *Hebrews* more truly from *Madai*, *Japhet*'s third Son. It was anciently divided into the Greater and Leſs, but now into *Gheylan*, *Deilan*, *Vaaz-pracan*, which are the Leſſer *Media*; and *Aderbayon*, *Harran*, *Sultania* and *Trabriztan*, which is the Greater *Media*. It has Mount *Taurus* on the North, *Parthia* on the South, *Bactria* on the Eaſt, and *Armenia*, and part of *Aſſyria*, on the Weſt: A rich and puiſſant Country in the World's Infancy, but now barren and miſerable, yet Camels and Dromedaries make a ſhift to live upon the Sandy Plains, upon the Boughs of Trees and Shrubs, which they rarely meet with.

Theſe Beaſts are of one Deſcent, and vary according to the Countries they breed in. In *Bactria* and *Perſia* they have but one bunch, but in *Arabia* two. In Rutting-time the Males are mad, yet will not Couple with any but their Conſort, and this they do backward. The Female carries her Burden 20 Months, and Suckles her Young one (for they commonly have but one at a Birth) two Years, not loſing her Milk by a ſecond Conception. They live 60 Years, labour much, eat little, refrain Drink three days, but then drink immeaſurably. Their Milk is cordial, and their Fleſh rank and lean, yet in *Aſia* preferr'd before Beef, Veal, or Pork, becauſe the Alcoran commends it to them.

Tyroan.

The King's Garden. V. Fig. 16.

From *Bomaheen* they travell'd to *Tyroan*, a Town of ſome Greatneſs and Antiquity, ſeated in the midſt of a large Plain. The Air is temperate in the Morning, and at Night, but at Noon very hot. The Houſes are made of white Bricks hardned by the Sun, and are computed to be about 3000, of which the Bazar and Duke's Palace are the faireſt, but neither of them to be admired. A Rivolet in two Branches runs through the Town, making the Groves and Gardens very verdent and fruitful. The King has a Garden near the Town as large as the City. The Maſters of Families lodge with their Concubines, ſome 3, ſome 6, upon the tops of their Houſes. The Caravans-raw exceeds the Moſque for elegancy. The Inhabitants are ſtately, and the Women lovely, both deſirous of Novelties. *Tyroan* ſtands in 35 Deg. 40 Min. Northern Longitude, and 80 Latitude.

Charah.

From *Tyroan* they travell'd to *Charah*, a place for the ſcalding Sand and frying Sun Inhoſpitable, nevertheleſs, heretofore of ſome repute, when called *Kyr*, or *Chyr*, and gave Name to the Country round about. Here the *Aſſyrian* Prince *Tiglath-Pyleſer* ſettled the Inhabitants of *Damaſcus*, 2 *Kings* 16. 19. From hence to *Tauris* is two days riding. This City is the Metropolis of *Media*, ſituate in that part of it which is called *Atropatia*, now *Taberiz*, or *Teveris*. In Scripture it is called *Achmetha*, and *Ecbatan*, by which Name it was moſt famous, and was 16 Miles about, having Walls ſtrong and ſtately, 70 Cubits high and 50 broad, beautified with many lofty Turrets and Battlements. In it were many noble Palaces, and the chiefeſt of them was that which *Daniel* built, made afterwards the *Mauſoleum* of the *Median* Kings; and next the Palace of *Darius*, built of Cedar, the Roof being ſtudded and plaited with burniſhed Gold, but now there are no Remains of them. Now it is a City large and populous, famous for an In-land Trade, and ſo well governed, tho' there is a Garriſon kept in it, that Merchants may traffick there without fear or danger. It is ſituate near a part of *Taurus* called *Baronta*. It is compaſſed with a Mud Wall 5 Miles about. The Houſes after the common Mode are flat a top, and built of Sun-dried Bricks. The Bazar is large, and Gardens lovely, eſpecially that planted by King *Tamas*, which is now turned into a Paſture for Horſes. It is badly ſupplied with freſh Water. It was a long time a Seat of War, between the *Turks* and *Perſians*. *Selim*, *A. D.* 1514. ſent an Army againſt it under a Baſha that ranſack'd it; and *Solyman*, in 1530. pillaged it, and burnt it; and when it began a little to revive, *Ozman*, in 1585. utterly ruined it. But *Emyr-Hamze-Mirza*, Elder Brother to *Sha-Abbas*, recovering it from the *Turks*, to whom he gave a notable Overthrow betwixt this City and *Ardavil*, rebuilt and fortified it, and *Sha-Abbas* compleated its Grandeur in 1619, which it now enjoys under the *Perſian* Government.

Daniel's Palace.

Sumachy deſcribed.

Three days Journey from hence is *Sumachy*, or *Shamakie*, a Town conſiſting of 4000 Houſes, well Peopled, and much reſorted to by the *Ruſſian* and *Armenian* Merchants: It lies in 39 Deg. Northern Latitude. Near the Town is a Fountain, or Spring, which ſends forth a Liquor thick and clammy like Tar. From hence they travell'd to *Sanguirabaut*, a Town of about 100 Cottages, and ſo to *Shaw-dee*, *i. e.* the King's Town. The People dwell here in Cottages like Ovens, to ſhelter themſelves from the ſcalding Sun. In probability, this was the Land of *Nod*, *i. e. Cain*'s baniſhment from the preſence of the Lord, being Eaſt of *Eden*; and tho' the City of *Enoch* is not now to be found here, yet the Mountains *Enochi*, a part of *Taurus*, ſhew ſome footſteps of it.

The Land of *Nod*.

Casbyn deſcribed.

Rages.

From hence they haſted to *Casbyn*, or as the *Perſians* pronounce it, *Kazvin*; it was anciently called *Arſacca*, from *Arſaces*, the Founder of the *Median* Empire. It is likely this was *Rages*, mentioned in *Tobit*. It lies in 36 Deg. 15 Min. Northern Latitude, and 85 Deg. 30 Min. Longitude. It was made the Metropolis of the *Perſian* Monarchy by King *Tamas*, to confront the *Ottoman* Kings. It ſtands in *Media*, in the Province of *Sheirvan*. It is at this day, for multitude of Buildings and Inhabitants, the chief City in *Media*, and equals any other City in the *Perſian* Empire, except *Spahawn*. It is ſeated in a large Champion, which yields ſtore of Grain and Grapes, but little Wood. Here *Epheſtion*, *Alexander*'s Favourite, was buried, but his ſumptuous Monument is devoured by Time. It is watered by a ſmall River, which helps the Induſtry of the Inhabitants, ſo that the Soil produces an abundance of Rice, Roots, Fruits and Flowers, in variety, for they have an Art here of drawing Rivers into Subterraneous Channels. Here are many pleaſant Gardens, which bear many ſorts of Fruit, as Grapes, Oranges, Limes, Limons, Pomecitrons, Musk, Water-Melons, Plums, Cherries, Peaches, Apricocks, Figs, Gooſeberries, Pears, Apples, Piſtachoes, Filberds, Hazle-nuts, Wall-nuts, Almonds and Pomgranates. This City is compaſſed with a Wall about 7 Miles in circuit, which contains about twenty thouſand Families in them, and near 200 thouſand People. The Bazar is large and pleaſant, the Meidan uniform and beautiful, and the King's Palace and Haram low, but built of raw Bricks, varniſhed within, and painted after the *Perſian* Cuſtom, the ground being ſpread with rich Carpets. Near the Palace-Gate is a great Tank of Water made at the Common Charge. The Hummums are many, and handſomly adorned with azure Tiles and pargetting. The Common Buildings content the Inhabitants, but have nothing of admiration. The Gardens are many and large, but not to be compared with thoſe of *Spahawn* and *Siraz*. The Moſques are neither ſo high, nor curious in Architecture, nor glorious within, as in many leſſer Towns, tho' they exceed in number. The Air in the Spring is temperate and pleaſant, but in the Summer exceeding hot, and in Winter as cold. Sir *Robert Sherley*, and Sir *Dudmore Cotton*, the two *Engliſh* Embaſſadors, with whom Sir *Tho. Herbert* travelled, died, and were bury'd in this City; ſo that his Retinue were forced to get a Phinnan, or Paſs-port, for their ſafe paſſage homeward, before they could travel farther, which by Importunity, and dancing a long Attendance upon *Mahomet-Ally-beg*, the King of *Perſia*'s Favourite, they hardly obtained, and it was to this effect:

Epheſtion's Tomb.

The form of a Paſs-port.

'The High and Mighty Star, whoſe Head is co-
'vered with the Sun, whoſe Motion is compa-
'rable to the Firmament, whoſe Imperial Ma-
'jeſty is come from *Aſheraffe*, and hath diſ-
'patched the Lord Embaſſador of the *Engliſh*
'King, &c. The Command of the Great King
'is, That his Followers be Conducted from
'Our Palace of *Cazbin* to *Saway*, by the *Dara-*
'*guod* of *Saway*, to the City of *Coom*, and by
'the Sultan of *Coom* to the City of *Caſhan*, &c.
'through all my Territories. Fail not my Com-
'mand. I alſo Command them a Safe travel.
July *Bahmen* Heg. 1008.

With this Leave, Sir *Tho. Herbert* and his Company left *Casbyn* by Night, to avoid the heat of the Sun, and came by *Periſſophoon*, *Aſaph* and *Begun*, where there is a Royal Caravans-raw, or Hoſpital of Charity, built by King *Tamas*, in every thing convenient, but wanting good Water, to *Saway*, a Town both great and fruitful, of Old called *Meſſabatha*, or *Ortacana*. It lies in 35 Deg. 7 Min. Northern Longitude. It is pleaſantly ſituated upon a riſing Hill, having twelve hundred Houſes, and refreſhed with a pleaſant Rivolet from the Mountain *Baronte*, which makes the Earth fruitful in variety of Grain, as Wheat, Rice, Barley, Figs, Pomgranates, Olives, and Honey. The Birds here make ſuch ſweet Muſick, eſpecially the Nightingales, that they much advance the delight of the place. From hence they paſſed over certain Plains full of Artificial Mounts and Trenches, where *Lucullus* and *Mithridates* encamped their Armies, but the Learned King became a Captive to the *Roman*, and came to *Coom*. This City is ſituate in 34 Deg. 40 Min. Northern Latitude, and is at this day a City of great Note in *Perſia*. It was anciently called *Arbacta*, and was one of the four beſt Cities of the Empire, equal to *Babylon*, if their Tradition be true, being at leaſt 50 Miles in compaſs, whereas *Babylon* is ſaid to be but 60, and *Rome* 50 Miles round. It has ſeveral Names, as *Coim*, *Kom*, *Kome*, *Como* and *Comm*. It is ſituate in a large and delightful Plain, the Country round about, for ſome Miles, being very fruitful, and air ſweet, never over hot or foggy, refreſhed with continual Breezes, and cool Gardens, which not only afford ſhadow, but delicious Fruits, *viz.* Grapes, Pomgranates, Melons of all ſorts, Pomcitrons, Apricocks, Plums, Pears, Piſtacho's, Almonds, Apples, Quinces, Cherries, Figs, Wall-nuts, Small-nuts, Peaches, Berries, and the beſt Wheat in *Perſia*, except that of *Gumbazellello*. It has about 2000 Houſes, moſt of them more than common Structures, well built, formed and furniſhed, and Streets ſpacious. The Bazar is beautiful, but the City is unwalled. The Moſque is famous and venerable, richly adorned, and beautified by the enſhrining of the Body of *Fatyma*, *Mortis-Ally*'s Wife, and their Prophet *Mahomet*'s Heirs. The Moſque is of the *Epirotick* form, the Tomb is three Yards high, covered with Velvet, and the Aſcent is by three or four ſteps of refined Silver. From *Coom* they rode to *Zenzen*, of Old called *Zoara*, and ſo to *Caſhan*, which is 36 Miles; the Way is eaſie and plain, tho' ſandy.

Saway deſcribed.

Coom deſcribed.

Caſhan ſtands in 34 Deg. 7 Min. Northern Latitude. It may worthily be reputed the ſecond City in *Parthia* for Grandeur, Wealth and Beauty. It is a City both great, lovely and ancient, well ſeated, comely built, and abundantly Peopled, but very hot, and incommoded with Scorpions, which breed in great Numbers hereabouts. It is a little Serpent, a Finger long, which alone ſtings with the tail, but ſo venomous is its Sting, that many die of the wound, and few eſcape Madneſs for a day at leaſt. The beſt Remedy againſt it is Oil of Scorpions applied to it, and Bleeding. This Noble City is about as big as *York*, and contains near 4000 Families. The Houſes are fairly built, pargetted and painted without; the Moſques and Hummums curiouſly adorned with Cupulo's, blue like Turquoiſes. The Bazar is ſpacious and uniform, furniſhed with Silks, Damasks, and Carpets of Silk and Gold, and ſtore of Spices, and other Merchandize. The People are Induſtrious, Civil, Active, trim and neat in their Attire, yet being never Idle, work abundance of Sattins, Silk, and Cloth of Gold. They have a ſingular Art in Dying Silks with curious Colours, ſtaining Linen Cloths like the *Indian* Pantadoes, and making lively Flowers and Knots upon Leather. Nor are places for Pleaſure wanting, having Gardens which abound with Fruits, and Fields yielding plenty of Corn, being Tilled by the Laborious *Tymars*.

Caſhan deſcribed.

Scorpions, their Sting, and a Remedy againſt it.

The Caravans-raw in this City is the Nobleſt in all

The Caravans-raw.

Perſia, being large enough to lodge the Court of the greateſt Prince in *Aſia*. The Foundation, riſing 6 foot above ground, is Marble, and the Superſtructure dried Brick pargetted, and adorned with knots and fancies in *Arabick* Characters, in azure, red, and white Colours, laid in Oil, after the manner of the *Romans*. It is a perfect Quadrant, and every ſide is 200 paces, and has in the middle a ſquare Tank of excellent Water, and to it are added noble Gardens. The People here have a Tradition, that the three Wiſemen, who went from the Eaſt to adore Chriſt in the Manger, came from this City; and tho' it wants not probability, yet it doth certainty.

Bizdebode.

Natane.

Aug. 23. they came to a Village called *Bizdebode*, 18 Miles from *Caſhan*, and reſted there that day; they came in the next Night to *Natane*. Here *Diana* has a Temple, and is called from thence *Nanea*. There is a Tradition, that *Darius* was here ſlain by *Beſſus*. It ſtands between two Hills, from whence there is a delightful proſpect into the adjoyning Country.

Reig.

From hence they went to *Reig*, and ſo to *Bagdat*, or *Babylon*, paſſing through many ſmall Towns, in which is nothing worthy of Note, ſave that 'tis ſaid, that at *Coromon-ſhaboom* was decided that famous Conteſt for the *Perſian* Crown, betwixt *Artaxerxes* and *Cyrus*, recorded by *Xenophon*, and in memory of which, there are in the Concave of the adjoyning Mountain ſeveral Pictures of Men, Elephants, and other Beaſts.

Bagdat or *Babylon.*

Of *Bagdat*, or *Babylon*, ſince there are many things memorable of it under both Names, I ſhall deſcribe it under them. *Babylon* was of Old a City, ſtanding in the Country of *Shinar*, *Gen.* 11. 2. a Vale watered by *Euphrates*, one of the Rivers of Paradiſe. The Country was afterwards called *Chaldæa*; and laſtly, *Babylonia*. To the Eaſt it had *Suſcaria*, to the Weſt *Meſopotamia*, and the South the *Perſian* Gulph. The Name was taken from the Confuſion of Languages, which God ſent among thoſe preſumptuous Builders, who, under *Nimrod*, their audacious Leader, reſolved to ſecure themſelves an Aſylum againſt all Dangers, by building a Tower which ſhould reach up to Heaven, which tho' God permitted them to carry on by 30 Years labour, to an height of 5000 paces, as ſome ſay, yet by this Accident it was left unfiniſhed.

The Tower of *Babel.*

Nimrod the firſt King and Idolater.

But *Nimrod* ſettling by it 56 Years, increaſed it into a large City, and ſet up a Sovereignty over his conquered Neighbours. He firſt taught his People Idolatry, and dying, was Deify'd by the Name of *Sadormyn*, which the *Romans* afterwards changed into *Saturn*.

Belus.

Ninus or *Amraphel.*

Semiramis.

Obeliſks.

Two Palaces.

The Temple of *Belus.*

Belus, Surnamed *Jupiter Babylonicus*, ſucceeded in his Government, *A. M.* 1800. he was worſhipped under the Name of *Baal*, or *Bel*. His Son *Ninus* (called *Amraphel* in Scripture) ruled after him, and having conquered *Libya*, *Arabia*, *Media* and *Bactria*, became the firſt Univerſal Monarch. He enlarged *Niniveh the Great* upon *Tigris*, begun by his Great Grandfather *Nimrod*, and after by *Nebuchadnezzar* made the Capital City of *Aſſyria*. After his Death and Burial in the Temple he had built, and dedicated to *Belus* his Father, *Juno* his Mother, and *Rhea* his Grandmother, whoſe Statues he had erected in it to be worſhipped, *Semiramis* his Widow reigned. This Virago ruled 40 Years, and in that time enlarged the Empire from *Æthiopia* to *India*. She alſo made elegant Gardens in *Media*, but more eſpecially made one at *Babylon*, upon many high Pillars of Stone, and brought water out of the River *Orontes* into it. She alſo contracted *Euphrates*, and built the nobleſt Bridge over it that we read of in any Story. She raiſed two Obeliſks in *Babylon*, the leaſt of which was 134 foot high, and 25 in thickneſs, hewn out of *Ararat*, and brought down the *Tigris* thither. She alſo erected two incomparable Palaces on the Eaſt and Weſt-end of *Babylon*, the one extending 30, the other 60 Furlongs, and each encompaſſed with a ſtately Wall. But that which tranſcended all, was the noble Building erected in the middle of the City, of black poliſhed Marble, being a thouſand paces on every ſide at the Baſis, and having 8 Towers ſet upon one another, each 9 Furlongs high, and diminiſhing as they roſe. At the top was a Chappel, in which was a ſumptuous Bed and Table of Gold, in which were placed three golden Images, repreſenting *Jupiter*, i. e. *Belus*; *Ops*, i. e. *Nimis* her Husband, and *Juno* her ſelf, each Statue being 12 Cubits high, of pure Maſſy Gold; and theſe thoſe Idolaters worſhipped for many Ages, till the whole was demoliſhed by *Xerxes*, when he was beaten out of *Greece*. *Semiramis*, at her Death, was Interred at the bottom of it, and her Heart put in an Orb of Gold above. She alſo much enlarged the City it ſelf, and built a Wall about it more than 300 Furlongs in length, in height 50 Cubits, and in thickneſs 40 Foot, and ſo Battlemented on both ſides, that ſix Chariots might drive a-breaſt on the top of it, and not fall. It was alſo compaſſed with a broad Trench full of Water, and entred by an hundred Gates of Braſs. *Semiramis* began it, but it was perfected by *Amytis*, *Nebuchadnezzar's* Wife, as ſome ſay, but others ſay by *Nitocris* his Daughter. *Nebuchadnezzar* alſo built a Palace ſo magnificent here, that it extorted this impious Boaſt from him, *Is not this Great* Babel *that I have built?* This City, for many Generations, was the Reſidence of the Monarchs of the whole World, honoured with the Court of 49 Emperors, from *Nimrod* to *Belſhazzar*, for about 1600 Years; a City ſo beautiful and ſtately, that *Pauſanias* calls it the moſt Glorious that ever the Sun beheld, and the Scripture the Golden City, *Iſa.* 14. 4. The Princeſs and Glory of Kingdoms, *Iſa.* 47. and the Praiſe of the whole Earth: A City ſo large, that *Ariſtotle* ſaid one part knew not that the Enemy was entred, for three days after it was taken by *Cyrus*. A City ſo rich, that when *Alexander* took it, he found a Treaſure of 200000 Talents of Gold. But this great City, according to the Propheſies of Scripture, is fallen, and become a deſolation, *Jer.* 50. 51. *Rev.* 17. nevertheleſs, as her riſe was, ſo was her deſtruction by degrees. The greateſt blow given it was by *Seleucus Nicanor* in 3645, and 360 Years before Chriſt, who building another City 50 Miles North of it, at the place where *Tigris* and *Euphrates* meet, where *Chalne*, mentioned *Gen.* 10. 10. ſtood, which he called *Seleucia*, partly by perſwaſions, but principally by menaces, forced ſix hundred thouſand Souls out of *Babylon* to People his new City, and ſo laid it waſte.

Nebuchadnezzar's Palace.

Seleucus ruin'd *Babylon.*

Bagdat.

Bagdat is raiſed out of the Ruins of Old *Babylon*, and lies in 36 Deg. 20 Min. Northern Latitude; firſt at *Bugia*, for the Caliph's Charge, who disburſed two Millions of Gold to re-edify it, but it enjoyed not this Splendor long, for *Chyta* the *Tartar* ſacked it.

The beſt Buildings are, 1. The Bridge.

2. The Moſque.

1. The Sultan's Palace.

4. *Panch-Aſſy.*

5. The Coſio-Houſes.

6. The Bazar.

Almanſor the 23d Caliph, having by Magick found out a lucky time to reſtore her, as he thought, built a fine Moſque, and repaired the City, and ſeveral Caliphs perfected her beauty, tho' ſince ſhe has often changed her Governours, having ſometimes the *Turks*, and ſometimes the *Perſians* its Maſters; it is under the *Turks* now. At this day it ſcarce equals *Briſtol*, either for bulk or beauty, including about fifteen thouſand Families. It is watered by *Tigris*, which there is ſomewhat broader than the *Thames* at *London*, but not ſo Navigable, or Gentle. The Buildings moſt remarkable in it are, 1. The Bridge, which reſembles that at *Roan* in *Normandy*, being made upon 30 long Boats, which are boarded and chained one to another, and made to be parted at pleaſure. 2. The Moſque, which is large, round, and pleaſantly raiſed of white Free-ſtone brought down the *Tigris* from *Moſul*. 3. The Sultan's Palace, which joins the Bazar or great Market-place, is large, but low, and near it are ſome Braſs-pieces, which the *Turks* brought thither, or the *Perſians* took from *Ormus*. 4. A little Chappel called *Panch-Aſſy*, memorable for an Impreſſion of 5 Fingers, which they ſay *Morti-Aſſy* made in the ſolid Stone there. 5. The Coſio-Houſes, or Houſes of good Fellowſhip, where towards Evening many *Muſſulmen* commonly aſſemble to drink Coffee, and fuddle themſelves with Arack and Tobacco. Coffee is moſt eſteemed, becauſe they hold that *Mahomet* ſipp'd no other Broth ſave this, and that *Gabriel* invented it. 6. The Bazar is large and ſquare, the Houſes are comely, and Gardens ſweet, yet all put together are much inferiour to many later built Towns about her, tho' for her Antiquity ſhe is much honoured by Travellers. Twelve Miles lower towards *Euphrates* is ſeen a confuſed Mount, which ſome imagine to be the rubbiſh of *Nimrod's* Tower, but I rather ſuppoſe it to be the Ruins of *Belus's* Temple, built by *Semiramis*. *Bagdat* is diſtant from *Aleppo* 40 days Journey by the Caravan, and in the way 'tis worth our while to ſee Old *Suſhan*, which gives Name to the Province of *Suſcaria*.

Suſhan deſcribed.

Now called *Valdac* or *Baldach.*

Suſhan was one of the famous Palaces of the Kings of *Media*, where they ſpent three Months in the Spring, as they did the two Summer Months in *Ecbatan*, and the ſeven Winter Months at *Babylon*. It was built by *Darius* the Son of *Hiſtaſpes*, *A. M.* 3444. as *Pliny* relates. *Athenæus* derives the Name from the plenty of Lillies growing there, which in *Hebrew* are called *Suſhan*, but I rather ſuppoſe it derived from *Chus* (*Noah's* Grandſon) being called from him *Chuſiana*, from whence it ſtill retains the Name of *Chuſiſtan*. At this day 'tis called *Valdac*, or *Baldach*; it is watered with the River *Choaſpes*, which ariſes in the Mountains of *Jaare*, and falls into the *Perſian* Gulph near *Balſora*. The Water of this River was of ſuch account of Old with the *Perſian* Kings, that they would drink no other, as they would eat only the Wheat of *Aſſes*, and Salt of *Memphis*. *Shuſhem* was in compaſs 120 Furlongs; the Wall was Quadrangular. In Buildings, Walls, Houſes and Temples, it reſembled *Great Babylon.*

The Palace.

The Royal Palace is ſaid to be built by *Mordecai*; the Outſide and Pavement were *Moſaick*-work, made of ſmall pieces of Chequered Marble, arched alſo, and ſupported with Pillars richly gilded, and ſet with Stones of luſtre. The Roof is painted in the reſemblance of the Sky, and in all parts as rich and fine as Art or Nature could make it. It was alſo famous for its clear Springs, and more eſpecially for *Naphta*, an Oily liquid Subſtance, which being ſet on fire will inflame the very air. It had ſome form and beauty, till *Moſes*, Surnamed *Azkar*, *A. D.* 641. Heg. 21. depopulated it, but now 'tis like *Nineveh*, or *Moſul*, nothing but Ruins.

Naphta.

Paradiſe here.

Near this place was *Paradiſe*, or the Garden of *Eden*, where *Adam* was placed immediately after his Creation; for tho' there are found many wild Conceits in ſeveral Authors about the place where *Paradiſe* is, ſome ſaying 'tis in the middle Region of the Air, others in the Mountains of the Moon, others in *Happy Arabia*, and the like, yet the Rivers between which the Scriptures ſay it lay, and by which it was bounded, determine it to have been in *Meſopotamia*, in the place ſtill called *Eden*, for queſtionleſs it was watered with *Euphrates* and *Tigris*, which in their ſeveral Courſes, the one from *Periardo* in *Armenia*, and the other from Mount *Libanus*, divide themſelves into four branches, of which *Piſon* and *Gihon* are two; and tho' *Piſon* is ſaid to compaſs *Havilah*, 'tis not that in *India*, but in *Suſiana*, ſo that all things occur to fix the place here.

CHAP. XXIII.

A Compleat Succeſſion of the Perſian *Kings, from* Nimrod *to* Abbas *now Reigning.*

The Succeſſion of the *Perſian* Kings.

SIR *Tho. Herbert* having thus given us an account of his Travels, by his Chorographical Deſcriptions of the Countries he paſſed through, to make his Hiſtory compleat, adds an Hiſtorical Account of the Succeſſion of the Kings of *Perſia*, ſo far eſpecially, as they had relation to the places taken notice of in his Travels, and tracing them from the firſt Original, ſays, That *Noah* having forſaken the Ark, and in the ſpace of 130 Years peopled the Eaſt, ſent out ſome of his Children to plant the more Weſtern Parts, who accordingly travelling from the Eaſt, pitched in the Vale of *Shinar*, and began to build a City, and a Tower which might reach up to Heaven, God abominating their impious Deſign, deſcended to them, and confounded their Language; ſo that they were forced to diſperſe themſelves upon the face of the whole Earth.

Nimrod.

Nimrod, with a certain number of theſe Builders, remained ſtill in thoſe places, and being found a Perſon active, courageous and aſpiring, was choſen their Governour, and having ſubdued the neighbouring Plantations, became the firſt Monarch of the Earth, and the beginning of his Kingdom was *Babylon*, *Erech*, *Accad* and *Calneh*, in the Land of *Shirar*. For his Tyranny he became a Proverb, *As* Nimrod *a mighty Hunter before the Lord*. He ruled 25 Years as King, and dying about the Year of the World 1844. was buried at *Babylon*.

Belus.

Belus his Son ſucceeded him, who is ſtiled *Jupiter Babylonicus*, *Baal* and *Bel*, which in *Chaldee* ſignifies the Son, or Sovereign Lord. He at 60 Years of Age gave place to

Ninus.

The Original of Idolatry.

Ninus his Son, who imitating his Anceſtors, added to his Empire *Arabia*, *Armenia*, and the Countries that verge upon *Bactria*; and to Deify his Father *Belus*, erected his Statue of Gold, which he commanded his Subjects to worſhip. This was the Riſe of Idolatry. When he had reigned 50 Years, his Wife *Semiramis*, an *Aſcalonite*, on whom he doated, ſo captivated his Reaſon, that ſhe prevailed with him to leave the Supreme Command in her hands for five days, which ſhe ſo managed, as to deprive him both of Power and Life; and ſo ſhe ſwayed the Scepter without Competitor.

Semiramis.

Semiramis was a Woman of a Maſculine Spirit, and ſo enlarged the *Aſſyrian* Empire, that ſhe added to it not only *Æthiopia* and *Bactria*, but alſo ſeveral Parts of the *Eaſt-Indies*: *Quo præter illam & Alexandrum nemo intravit*, ſays an Old Hiſtorian, but at laſt met with ſuch a misfortune as made her Victory inglorious, for *Staurobates* forced her to an haſty and confuſed retreat over *Indus*, which ſwept away all her Army but 20 Perſons, *viz.* three Millions of Foot, ten hundred thouſand Horſe, and an hundred thouſand Chariots. Her other memorable Actions are above related in the Deſcription of *Babylon*. Her Death, after 42 Years reign, is variouſly reported; ſome affirm it to have been Natural, but others ſay ſhe was ſlain by her Son

Ninias.

Ninias, or *Ninus* II. by others called *Zanes*, *Mars*, and *Amraphel*, to revenge his Father's Death; but however that be, he ſucceeded her in the Kingdom. He is ſuppoſed to be the Prince whom *Abraham* overthrew with *Keder Laomer* King of *Elam*, or *Perſia*, near *Damaſcus*, to Reſcue his Nephew *Lot*, whom they had carried away Captive from them. He began his Reign in the 2000th Year of the World, and reigned 38 Years.

Arius.

Arius, by ſome called *Thuras*, ſucceeded him, and after him followed 37 Emperours more, of whom we have hardly ſo much left as their Names, till * * *

* * * * * * *

Sardanapalus.

Sardanapalus, who began to reign over that Monarchy, *A. M.* 3124. Hiſtorians repreſent him to have been a Prince ſo degenerated from the Warlike Spirit of his great Anceſtors, that he is ſtiled, *Vir muliere corruptior*, A Man more effeminate than Woman, for he ſequeſtred himſelf from the Company and Buſineſs of Men, and gave himſelf up wholly to the Society of his Wives and Concubines, imitating them both in their Habit and Employments. In this Dreſs *Arbactus*, his Lieutenant of *Media*, having obtained admiſſion to him, with difficulty found him; and when he ſaluted him with all due Reverence, ſaying, *Salve Domine Imperator*, he anſwered, *Ne die me Dominum precor, Ego enim ſum Domina*, Call me not Lord, but Lady. The Lieutenant, aſhamed that ſo vaſt an Empire ſhould have ſo weak an Head, immediately rebelled; and having drawn *Belochus*, the *Babylonian* Governour, into the Conſpiracy, haſted to beſiege *Nineveh*, and depoſe him, but by the vigilancy and fidelity of the Governour it was ſo well Victualled, Manned and Defended, that it bid defiance to the Beſiegers, and at divers Sallies forced them to retreat. And thus it held out near two Years, till by the overflowing of the *Tigris* ſuch a breach was made in the Wall, for 20 Furlongs, that there was no way to keep the Enemy out. *Sardanapalus* being thus driven to deſpair, retired with his Wives and Concubines into his Palace, and ſetting it on fire, was conſumed with them in the flames. Thus the Succeſſion from *Nimrod*, which had continued for 1350 Years, ended, and the two Conſpirators divided his Empire to themſelves by agreement.

His Effeminacy.

His Death.

Arbactus.

Belochus.

Arbactus arrogated to himſelf *Media* and *Perſia*, with the adjacent Provinces, (tho' ſome ſay *Perſia* fell to *Achæmenes*, who aſſiſted them, and of whom *Cyrus the Great* was deſcended) but *Belochus* had for his ſhare *Babylon*, and the Eaſt of *Aſſyria*, *Nineveh* being included.

Arbactus having thus raiſed himſelf by *Sardanapalus*'s Fall to the Sovereignty of *Media*, died, and was ſucceeded by

Mandanes.

Mandanes, as ſome, or

Soſarmus.

Soſarmus as others. He ruled thirty Years, and by Death gave place to

Medidus.

Medidus, who reigned 25 Years, as ſome hold, or 40 as others, and then left his Kingdom to

Cardicas.

Cardicas, who, after 13 Years rule, bequeathed his Royal Scepter to

Diocles.

Diocles, or *Dejoces*, whom ſome repute to have been that *Arphaxad* whom *Nebuchadonoſor* ſlew in the Mountains of *Ragau, Judith* 1. 15. but the diſtance of time between *Nebuchadonoſor* and *Diocles* being 80 Years, it is not probable that *Arphaxad* was *Diocles*, but ſome of his Succeſſors; for *Diocles* dying *A. M.* 3291. was ſucceeded by

Phraartes. *Phraartes*, a Prince of great Courage and Succeſs. He died before the Walls of *Nineveh*, as he was beſieging it, and left the *Median* Crown to his Son

Cyaxares. *Cyaxares* I. He proſecuted the *Aſſyrian* War, begun by his Father, and laid cloſe Siege to *Nineveh*, but was forced to raiſe the Siege, upon the News that a great Body of *Scythian* Horſe had invaded his Country, and there reſted. This was an unexpected Chance of War, which he was forced to endure ſome Years, till by inviting the moſt conſiderable of their Officers to a Banquet, and picking a quarrel with them in their Cups, upon a Signal given by *Cyaxares* all their throats were cut, and ſo he recovered his Right; for this Accident was of that dread to the other *Scythians*, that they willingly departed into their own Country with this Character, that they were overcome more with their own Drunkenneſs than War. He reigned 40 Years, and then gave place to

Aſtyages. *Aſtyages* his Son, who was proclaimed King after his Father's death, and crowned with all due Ceremony. He is mentioned in the Apocryphal ſtory of *Bell* and the *Dragon.* He is memorable in Hiſtory, not for his Warlike Actions, but his neat Apparel, in which he excelled all the Princes of his time. His Daughter *Mandane*, whom he had by *Ariana* his Wife, he gave in marriage to *Cambyſes* the *Perſian*, Father of *Cyrus* the Great, whom fearing, becauſe the Aſtrologers had foretold by ſome Dreams of his, that he ſhould over-run all *Aſia*, and out-ſhame all his Poſterity, he endeavoured to make him away, but in vain. To him ſucceeded his Son

Cyaxares. *Cyaxares*, who is thought to be the ſame Perſon, who in Scripture is called *Darius* the *Mede*, who left this Kingdom, *A. M.* 3406, to

Belochus ſettled himſelf in the *Aſſyrian* Empire about the Year of the World 3146. and left it to

Pul Aſſer, called *Figlath Pileſer*, who is ſaid, 2 *Kings* 15. 29. to have over-run *Galilee*, one of the three Provinces of *Judæa*, and carried all the Inhabitants of *Naphtali* and *Damaſcus* Captives into *Aſſyria*. He reigned 23 Years, and

Salmanaſſar, by ſome called *Narbonaſſar*, who proſecuting his Father's Deſigns, plundered *Samaria*, and made the King of *Iſrael* to pay him Tribute; which becauſe *Hoſhea*, King of *Iſrael*, neglected to do, he again beſieged *Samaria* three Years, and taking it, carried away the ten Tribes into *Media*, and ſettled them in *Halah* and *Habor*, by the River *Gozan* (God permitting it for his Peoples ſins.) This Prince, after ten Years reign, was ſucceeded by

Sennacharib, who going againſt *Tirhakah*, King of *Æthiopia*, ſent a blaſphemous Meſſage to King *Hezekiah* by *Rabſhakeh*, thinking to fright him to ſend him a great Preſent, but *Hezekiah* commending his Cauſe to God by Prayer, God ſent his Angel and deſtroyed his numerous Army of 180000 in one night. *Sennacharib* frighted with this diſaſter fled to *Nineveh*, and as he was worſhipping his God *Neſroch*, was ſlain by his Sons *Adrammeleck* and *Sharezer*, who fled into *Armenia*, and his Son (after he had ruled 7 Years)

Eſarhaddon reigned in his ſtead. He revenged his Father's Death upon his two Brethren, but they oppoſing him, in the confuſion gave opportunity to

Merodach, or *Berodac Balladan*, Governour of *Babylon*, to rebel, and ſucceeding in his Attempt depoſed him, transferred the Seat-Royal to *Nineveh*, and reigned in his ſtead 40 Years, and left the Throne to

Ben-Merodach his Son, who after 20 Years left his Kingdom to

Nabopullozar, who vanquiſhed *Pharaoh Nectio*, King of *Ægypt*, and at the end of 25 Years, left his Government to his Son

Nebuchadonoſor, who by reaſon of his many Victories, was called the *Hercules* of the *Eaſt*: He was the Golden Head, to which God gave a Kingdom and Power both over Men and Beaſts: He made *Ægypt* a Province, burnt *Jeruſalem*, and carried the *Jews* Captives, ſubdued *Syria* and *Arabia*. In a Word, extended his Dominion to the Confines of the habitable World. He abaſed *Nineveh*, and beautified *Babylon*, erected a ſtately Wall and noble Palace for himſelf, of which he was ſo proud, that God ſo humbled him, cauſed him to dwell with Beaſts; yet at length reſtored him to his underſtanding again, and after 44 Years rule, he left his Throne to

Evil-Merodach, who was a Friend to the Captive *Jews*, and particularly to *Jehojachin*, *Jer.* 52. 31. yet being a Prince of no courage, *Amaſſi* revolted from him in *Ægypt*, *Aſtyages* in *Media*, and *Cyrus* in *Perſia*. Theſe raiſed an Army and marched againſt him, and in the end deprived him of his Life and Kingdom.

Belſhazzar ſucceeded him, a luxurious and tyrannical Prince, who tho' in a beſieged City, could not forbear carouſing in the Veſſels of the *Jews* Temples, and ſo by God's decree, was ſentenced to Deſtruction, which immediately befel him, for that Night the City was taken, and he ſlain. *Cyaxares* obtained his Empire two Years, and then left this, with the Command of *Media* and *Perſia*, to

Cyrus the *Perſian.*

Cyrus.

He was the Son of *Cambyſes* and *Mandane*, the Daughter of the King of *Media*: *Cambyſes* was Son of *Cyrus*, Son of *Darius*, Son of *Achemenes*, Son of *Perſes*, who gave his Name to *Perſia*. *Achæmines* was a Prince of that virtue and repute, as gave his Race for many Years the name of *Achemanidæ*. *Cyrus* (whoſe Name is derived from *Chyr Sherez*, which in *Hebrew* ſignifies the Sun) calling to mind ſome Years before, the Deſtruction intended him by his Grandfather *Aſtyages*, Ambition predominating over all parental Reſpects, marched againſt him with a gallant Army of *Perſians*, under the Conduct of *Harpagus*, who had preſerved *Cyrus* from his Grandfather's cruelty, and having ſubdued him, ſent him Priſoner into *Hyrcania*, where he died ſoon after of grief. *Cyaxares* was old when he ſucceeded, and the *Chaldæan* Emperour, knowing that *Cyrus*, whoſe ſucceſs he diſliked, was his Heir, both by Birth and Conqueſt, proclaimed War againſt *Cyrus*, and drew *Crœſus* King of *Lydia*, into a League with him. *Cyrus* knowing the deſign of the *Babylonian*, with a Body of Horſe, quickly marched into *Cappadocia*, to prevent their conjunction, and engaging the *Lydians* firſt, forced them to retreat into *Sardis*, which he aſſaulted and took, with their King. The *Chaldæans* apprehending their Danger by this Overthrow of their potent Ally, and fearing that *Cyrus* would make their Country a Seat of War, victualled *Babylon* with Proviſions of all ſorts for 20 Years ſiege. But *Cyrus* was preordained for the Conqueſt of that City and Empire, *Iſa.* 44. 28. 45. 1. by God, and tho' the *Babylonians* could out-brave Force, they could not withſtand their Fate; but while they ſecurely truſted to their Walls, which were inexpugnable, the crafty Enemy drains their River, and gains an eaſy entrance into the City, which being ſurprized, became a Prey to the Conquerour, the People flying, the King buried in Wine and Sleep, and all defenceleſs, and ſo the Miſtris of the World ſubmitted to the *Perſian* Yoke. The Fame of this Conqueſt ſerved to ſubdue the reſt of *Aſia* with little trouble, but *Cyrus* giving the Reins to his reſtleſs Deſires, muſt be conquerour of *Scythia*, and accordingly marched with a numerous Force againſt the *Scythians*: *Tomyris* was Queen of the *Scythians* at that time, and oppoſed him with an Army of equal number and reſolution: Both ſides were deſirous to engage, but *Tomyris* after a ſharp Conflict, was Victor, and having *Cyrus* in her Power, who had before ſlain her Son *Spargapizes*, ſhe commanded his Head to be cut off, and throwing it into a Bowl of Blood, ſaid, *Cyrus! now drink thy fill of Blood*, as *Herodotus* and *Juſtin* relates of his death, but *Valerius Maximus*, and *Strabo* report, that he died in peace at the Age of 70 Years, and in the 29th of his Reign, and was buried royally at *Paſargada*, a City in *Suſcana*, and his Son

His quarrel with *Aſtyages.*

Aſtyages Death.

Babylon, how taken.

Cyrus ſlain by *Tomaris.*

Cambyſes. *Cambyſes* ſucceeded him: He was infamous for Cruelty and Luſt, but his Reign was ſhort and turbulent: He ſubdued *Ægypt* and *Æthiopia*, as far as *Elephantina*, and on a jealous Humour murdered his Brother *Smerdis*, by the Hands of that Villain *Prexaſpis*, for which being afterward grieved, he was almoſt enraged with a Frenzy, when he heard that 50000 of his Men whom he had ſent to burn the Temple of *Jupiter Ammon*, were buried in the Sands. He alſo demoliſhed the Temple of *Anubis* at *Memphis*, and broke the Neck of their beaſtly God, and at *Damaſcus*, attempting the ſame Impiety, he was caſually wounded by his own Sword ſo mortally, that he could not be recovered, but in extremity died frantick and unpitied, when he had reigned not quite nine Years. The Deputy whom *Cambyſes* had left to govern *Perſia* in his abſence, had a Son, which reſembled

His Impiety.

Smerdis [illegible] *Smerdis*, whom *Prexaſpes* had ſlain, and bore the ſame Name: Him he veſted with the Imperial Robe and Crown which *Cyrus* left, and the Impoſture paſſed well enough (becauſe *Prexaſpes* denied that he had ſlain *Smerdis*) till *Ottanes*'s Daughter diſcovered it to her Father, that he had no Ears, by which he was know to be *Smerdis* the *Magician*. This begat a Conſpiracy againſt him among the ſeven Princes that governed the Realm, and they ſoon found a way to deſtroy him, when he had worn the Diadem eight Years. Theſe Princes after his Death not finding any right Heir to the Crown, agreed, That he ſhould reign whoſe Horſe neighed firſt the next Morning at the riſing of the Sun, which *Darius*'s Groom effected for his Maſter, by cauſing his Horſe in the Night to cover a Mare in the place where he was to come in the Morning; for coming there again, he neighed couragiouſly, and ſo his Maſter was crowned King at *Perſagard*, by the Arch-flamen, by the Name of

Darius Hiſtaſpis. *Darius Hiſtaſpis* (from his Horſe, which in the *Perſian* Tongues is called *Aſp* or *Aſpis*). During the Interregnum *Babylon* revolted, and by the Faithfulneſs of *Zopyrus*, was reduced. He was very kind to the *Jews*, who minding him of *Cyrus*'s good Intention to rebuild their City and Temple, obtained leave to proſecute that Deſign. The *Rabbi's* will needs have him to be *Ahaſhuerus*, who married *Heſter*, and preferr'd *Mordicai*. His Embaſſadors, which he ſent to *Amyntas* King of *Macedon*, being ſlain for their laſcivious behaviour to the Women in their Cups, he took it for a Breach of the Law of Nations, tho' he much diſliked their Conduct, and marching with a great Army over the *Helleſpont*, he haraſſed *Greece* as far as the Plain of *Marathon*, where *Miltiades* with a ſmall number of *Athenians*, oppoſed his Progreſs, and gave him Battle. The *Perſians* it ſeems had been much afrighted with Apparitions before the Fight, and joining Battle, were ſo ſhamefully routed, that they never durſt rally, till they were got over the *Helleſpont*. This Defeat encouraged *Ægypt* to revolt, which together with the Diſcentions among his Sons for the Crown, broke his Heart with grief, ſo that he died ſoon after, when he had reigned 36 Years. He nominated for his Succeſſor (notwithſtanding *Arta Baſhanes* was his eldeſt Son) his ſecond Son, but firſt born after he came to the Throne, named

Xerxes. *Xerxes*, for his Succeſſor: He firſt reduced *Ægypt*, and then made mighty Preparations for the War with *Greece*, raiſing 180000 Foot, 80000 Horſe, and 1000 Ships, which is the moſt moderate computation. With this vaſt Army, which at a review extorted Tears from him, when he thought they muſt all die in a few Years, he marched into *Greece*, having made a Bridge with 600 Boats, coupled together, and planted over the *Helleſpont*: At the *Thermopylæ*, a narrow Paſs between the Mountains that ſeparate *Theſſaly* from *Greece*, not exceeding half an Acre, *Leonidas* the *Spartan* King, with 300 *Lacedæmonians*, oppoſed his Paſſage, and hindred his further progreſs, till they were all ſlain, with a great loſs to the *Perſians*. *Xerxes* having maſtered this Difficulty, kept on his march to *Athens*, which being abandoned by the *Athenians*, he fired it. In the way his Army plundered the Temple of *Delphos*, which was much enriched by the Gifts of many Princes and Kings. This Sacrilegious Act (for ſo it was thought, becauſe he acknowledged *Apollo* to be a God, tho to excuſe it, he ſaid, 'twas impious to confine the Celeſtial Gods to Earth) cauſed many Calamities to purſue him; for his firſt *Armado* was beaten and ſunk by *Themiſtocles*, the *Athenian* Admiral, which put him into ſuch a fright, that he fled into *Aſia*, and left *Mardonius* to manage the War in *Greece*, which he did with like Succeſs, being overthrown at *Platæa* by Land, and at *Mycale* by Sea in the ſame day. Theſe Defeats put him into ſuch a Frenzy, that he impriſoned *Neptune*, *Boreas*, and *Proteus*'s Images, and commanded their Hands and Legs to be loaded with Fetters, becauſe they had favoured the *Greeks* againſt him, and chained the *Palladium*, and fired *Minerva*'s Temple, becauſe ſhe was the Titular Goddeſs of the *Athenians*. Being arrived at *Babylon*, he pulled down part of the Walls, to ſhew that he put no confidence in their ſtrength, and demoliſhed the Temple of *Belus*, the nobleſt piece of Antiquity then extent in the World, taking away from thence the Statue of *Belus*, which was twelve Cubits high, of maſſy Gold, and ſlaying the *Flamens* that endeavoured to reſcue it. He alſo exerciſed the like Tyranny againſt Men, for he ſlew *Maſiſtis* the *Bactrian* Lieutenant, with his Wife and Children, which Fate *Artabazus* his Uncle fearing, conſpired with *Mithridates*, an Eunuch, his Chamberlain, and ſlew him. A Fact ſufficiently revenged on him by

Artaxerxes *Artaxerxes*, his Son and Succeſſor, who began his Reign *A. M.* 3500, and governed the Empire honourably full 44 Years. He was called *Longimanus*, or *Long-hand*, becauſe his Right-hand was longer than his Left. He made a Peace with the *Athenians* in the firſt Year of his Reign, by the advice of *Timagoras*, and reduced *Ægypt*. *Themiſtocles* being baniſhed by his ungrateful Country-men, fled to his Court, and was entertained kindly; but being deſired to ſerve under him in *Ægypt* againſt the *Græcians*, he poiſoned himſelf rather than be obliged to fight againſt his Country, tho' ungrateful to him, to pleaſe his Friend. The reſt of this King's Reign was peaceable. He was kind to the *Jews*, as appears from *Ezra*, c. 7. and *Nehemiah*, c. 2. and therefore by moſt is taken to be that *Ahaſhuerus*, who kept his Court at *Shuſhan*, his Name in the *Perſian* Language being *Arta-Shaſht*. He permitted *Nehemiah*, *Ezra*, and *Zorobabel*, to return and build *Jeruſalem*, that it might be again inhabited. He was contemporary with *Jojachim* the High-Prieſt, and died in a good old Age, and was buried at *Perſepolis*, as his Father *Xerxes* was.

Darius Nothus. *Darius Nothus*, or the Baſtard (after the death of *Xerxes* and *Sogdianus* Queen *Heſter*'s Children, who is ſaid to have been married to his Father *Artaxerxes*) poſſeſſed himſelf of the Empire, and held it 19 Years. *Ægypt* rebelled againſt him, and by making a defenſive League with the *Athenians*, preſerved their Liberty under his and his Succeſſors Reign. He had two Sons by an inceſtuous Marriage, *Artaxerxes* and *Cyrus*, a Prince ſo ambitious, that his Father was forced to keep him at a diſtance from him, by making him governour of *Aſia* the leſs, in which Poſt he was when his Father died, and left his Empire to his eldeſt Son

Artaxerxes II. *Artaxerxes* II. This Prince fell into great Troubles from the reſtleſs Ambition of his Brother *Cyrus*, who being encouraged by the favour of his Mother *Paraſatis*, and ſecret Inſinuations of *Teſſaphemes*, his pretended Friend, who told him he had moſt right to the Kingdom, becauſe he was born after his Father was King, whereas his Brother was born before, began to aſpire to the Government: *Teſſaphemes* being cautious of his Deſigns, informs *Artaxerxes* of it, who thereupon ſends for him to Court, and when he appeared, was ſecured in Fetters of Gold, but by the Interceſſion of his Mother, he was ſet at Liberty, and reſtored to his Lieutenancy of *Lydia* and the adjacent Provinces. *Cyrus*'s Ambition at his return was improved into revenge, and thereupon having obtained Aids from *Greece*, who were willing to widen the Breach in *Perſia*, to ſecure themſelves, raiſed Forces with a reſolution to win the Crown, or find a Grave. From *Syria* he marched into *Aſſyria*, and without oppoſition poſſeſſed himſelf of *Suſa* and *Babylon*, which made him think the reſt his own: But *Artaxerxes*'s approach with a huge Army of 900000 Men, altered his former Apprehenſions. The Armies no ſooner met, but they prepared for Battle, and quickly engaged. *Cyrus* full of Courage and Youth, ruſhing thro' the thickeſt of his Enemies, made at *Artaxerxes* himſelf, and aſſaulted him ſo fiercely, that 'twas thought he was ſlain; but *Artaxerxes* was only enraged by it, and returned his blows ſo heavily, that *Cyrus* gave ground, and being known by the falling off of his Train, was ſlain by *Mithridates*, a young *Perſian*, which ſo diſperited the Army, that they fled. The *Athenians* among whom *Xenophon* was, kept themſelves together, and in deſpight of the *Perſians*, made a ſafe retreat into *Greece*. *Mithridates* was after the Battle, highly rewarded, but ſoon after by *Paraſatis*'s Subtlety, cruelly put to death, and *Statira* for ſhewing a Deteſtation to the Fact, poiſoned. Among the Spoils, *Darius* the Prince light upon *Aſpaſia*, *Cyrus*'s Miſtreſs, and fell in Love with her: The old King alſo hearing her Beauty commended, deſired to ſee her, and fell alſo in love with her, but yielded to the Youth of his Son, that he ſhould have her, yet not being able to ſuppreſs his Paſſion, took her again from him, and ſhut her up in the Temple of *Anaya*, or *Diana* at *Ecbatan*. This Action ſo enraged the Prince, that he attempted to aſſaſſinate his Father in his Cloſet, for which he was condemned to die, and the Sentence was executed (the Conſpirators being moſt of them ſlain in the Attempt). The King approved of his Death at firſt, but upon reflection that he had loſt ſo hopeful a Man, it broke his Heart, and ſo he died, after he had reigned 36 Years, being buried at *Perſepolis*, *A. M.* 3600.

Ochus. *Ochus* his third Son was crowned King, and reigned 26 Years: He was guilty of as many tragical Actions, as any of his Predeceſſors. In reducing *Ægypt*, and conquering *Judea*, *Bactria*, *Syria*, and *Cyprus*, he ſpilt much Blood, giving little quarter any where. At home he inconſiderately made away his two Brethren, and as he was contriving further miſchief, was poiſoned by *Bagoas* the Eunuch, with a Deſign to have mounted the Throne himſelf; but finding that not feiſible, he raiſed the next Heir to it, whoſe Name was

Arſames. *Arſames*, but *Bagoas* fearing leaſt this King ſhould revenge his Father's death upon him, ſoon after ſlew him. In his Death the Royal Race of *Cyrus* the Great was at an end, after they had ruled the *Perſian* Empire about 230 Years. *Bageas*, altho' of great Power, yet for his treaſonable practiſes was grown ſo odious to the Subjects, that he found it in vain to attempt the Throne himſelf, and therefore he thought it the beſt way to ſecure himſelf by preferring his Friend, the Lieutenant of *Armenia* to it, named

Darius Codomannus.

Codomannus: He was of the Royal Blood, and of ſuch noted Valour and Courteſy, that he was no ſooner mentioned than approved. Being ſettled in the Regal Seat he aſſumed the Name of *Darius*, to ingratiate himſelf with the People, who had that Name in Veneration: He was a Man of as great Proweſs and Virtue as any of his Royal Predeceſſors, but the Supream Power had irreſiſtibly decreed his Ruin, and the downfal of the *Perſian* Empire, as *Daniel* had foretold, *c.* 11. 2. And in order to it, *Philip* the Father of *Alexander*, ſo ſoon as he could prevail with the *Grecian* States to be their Captain-General, reſolved to invade *Aſia*, but his Deſign was oppoſed ſo effectually by *Memnon*, a *Rhodean* Officer under *Darius*, that *Philip* made little progreſs in it during his Life, and his Death ſeemed utterly to put an end to it.

Alexander's Intention to invade Greece.

Alexander ſucceeded him, and was for ſome time buſied with inteſtine Broils at home, which he had no ſooner compoſed, but he reſumed his Father's purpoſe of invading *Aſia*, to retaliate (as he pretended) the *Perſians* for the many Invaſions and Vexations they had given *Greece*, but principally to quench his Ambitious Thirſt, and ſo give the Reins to his boundleſs Spirit. He diſpoſed of his own Kingdom to *Antipater*'s Truſt, and diſtributed his Treaſure among his Friends, ſaying to *Parmenio*, *The Hopes of* Aſia *was ſufficient for him.* The Army which he provided for this Expedition was inconſiderable, *viz.* 30 thouſand Foot, 5 thouſand Horſe, and 150 Ships, but his Men were moſt of them old Souldiers, bred up in his Father's Wars. He landed in *Aſia* without any Oppoſition, bad Defiance to the *Perſians* at his firſt landing, by throwing a Dart, and offered a Solemn Sacrifice upon *Achilles*'s Tomb:

The Battle of Granicus.

Darius's Army under *Spithridates*, their General, met him about the River *Granicus*, in the *Adraſtian* Field, and encountered him; *Spithridates* performed the part of a gallant Commander in this Fight, but being ſlain, the Army fled, and *Alexander* gained a compleat Victory, with the ſlaughter of 20000 of his Enemies, but not above 30 both Horſe and Foot of his own. This Victory made him Maſter of the moſt parts of *Aſia* the leſs, and furniſhed him with Recruits and Proviſions. Paſſing thro' *Phrygia*, he cut the fatal Knot at *Gordis*, upon which the Conqueſt of *Aſia*, according to the *Oracle*, depended. *Darius* by this time began to think it ſeaſonable to ſecure himſelf, and reſolved with a numerous Army to engage *Alexander* in Perſon, and to that end raiſed 300000 Foot, and 100000 Horſe. All the Riches almoſt of *Aſia* marched along with this Army, the Prieſts, Chariots of the Sun, the King's Mother, Wives, and Concubines in their richeſt Apparel, and Chariots of Gold attending the King in this Royal Expedition.

Darius vanquiſhed.

The *Perſians* doubted not but their multitude would either affright, or oppreſs *Alexander*'s few Men, but they found the contrary, for hopes of ſuch vaſt Spoils tranſported them with a Deſire of fighting, ſo that they no ſooner met them than they engaged. The Fight was ſhort, for the *Perſians* being more careful to preſerve their Riches, than encounter a parcel of rough Fellows, fled, and the *Macedonians* purſuing them, ſlew of them 100000 Foot, and as many Horſe, took all the Treaſure, which was 2000 Camels and Mules loaded, and made *Darius*'s Mother, Wife, Children, and King, Priſoners, whom he uſed as a Noble Prince, not ſuffering them to be violated, or their Jewels to be taken from them: The Spoils of this Battle were very many and rich. Soon after this Battle *Parmenio* routed Prince *Memnon*'s Brigade, near *Damaſcus*, ſlaying the Prince, and taking not only the Wives and Daughters of moſt of the *Perſian* Nobility Priſoners but a further Maſs of *Darius*'s Treaſure, amounting to 6200 Talents of coined Money, and 500 Talents in Bullion, beſides other Wealth of great value. This Victory ſubjected *Phenice*, and the greateſt part of *Syria* to him, of which, that he might make a thorough Conqueſt, he beſieged *Tyre* and *Gaza*, and took them. Then he went up to *Jeruſalem*, but *Jaddas* the High-Prieſt, with his Brethren the Prieſts, meeting him in their Pontificals, he put off his Hoſtile Temper, and deſired a Bleſſing of him, as the Prieſt of the moſt High God. From thence he marched into *Ægypt*, which ſubmitted to him: Here he viſited *Jupiter Ammon*'s Temple with great Difficulties, paſſing thro' the ſcalding ſandy Deſarts, and was ſaluted by the name of *Jupiter*'s Son by the Oracle. Returning to *Memphis*, he marched toward the North part of *Aſſyria*, called *Adiabene*. About this time the *Perſian* King offered *Alexander* his Daughter, with all *Aſia* and *Egypt*, and 30000 Talents for her Portion; but *Alexander* had graſped the whole World in his Deſigns, and anſwered, *That the Firmament could not endure two Suns*, and ſo they prepared on both ſides for another Fight.

Darius vanquiſhed a ſecond time at Arbela.

Darius recruited his Army to 500000 Horſe and Foot, and *Alexander* to 50000. They ſoon met and engaged, and much Bravery was ſhewn on both ſides, but the Victory again fell to *Alexander*, tho' with the loſs of 300 of his beſt Men, of which were *Parmenios*, *Perduca*, and *Epheſtion*; but he ſlew above 40000 of his Enemies. This Victory broke the Hearts of the *Perſian* Nobility, and ſet the Imperial Crown upon his Head; for the Cities round about ſurrendred to him; firſt *Arbela*, near which the Battle was fought, then *Babylon*, which he moſt deſired and admired; *Mareus* or *Mariſtes*, the Governour, ſurrendred it to him, with all its Treaſure and Riches, and him he left to preſerve it with a Garriſon, and ſo departed to *Suſcaria* and *Perſepolis*, which were alſo ſurrendred to him by *Abutiles* and *Tiridates*, their Governours.

Anabarzanes's Valour.

Anabarzanes in this March, met him firſt in the *Pylæ Perſidæ*, and with a ſmall party of reſolute *Perſians* ſo defended it, that *Alexander*, after the loſs of more Captains and Men than in the two great Battles, he was forced to find another way, and then haſted to ſecure *Perſepolis* for his Maſter, but being denied Admiſſion by *Tiridates*, he wheeled about, and met the *Macedonian* Victor, and fought him in another place, where his former Succeſs failed, and he found his Grave.

Perſepolis burnt.

Alexander after this marched to *Perſepolis*, and tho' he was admitted without Oppoſition, yet he licenſed his Souldiers to kill and ſpoil as they liſted, and after he had taken to himſelf, beſides 12000 Talents in Coin, ſet the City and Palace on fire, to revenge the Miſchiefs done to *Greece* by *Xerxes*, it being the Principal Seat and Burying-place of the Kings.

Darius ſlain by Beſſus.

Alexander after this, having received Intelligence that *Beſſus* had perfidiouſly ſlain his Maſter *Darius*, who at his Death retained ſo greatful a Memory of his Civility to his Kindred, that he implored all his Gods, that *Alexander* might have his Deſires, and be conquerour of the whole World, gave order for a ſpeedy March in perſuit of this Regicide, and ſo with 20000 Foot and 3000 Horſe, marched towards *Bactria*, deſigning to carry on his Conqueſt towards the Eaſt at the ſame time. Having paſſed *Parthia* and *Hyrcania* in 15 days, he came to *Margiane*, where *Beſſus*, who was for his Treachery become the reproach of Men, being apprehended by his own Party, was brought to *Alexander*, who abhorring the ſight of him, ordered that he ſhould be delivered to *Oxatres*, *Darius*'s Brother, to be diſpoſed of as he thought fit. This done, he appointed the Interment of the Royal Embalmed Corps, which was performed in a military manner, himſelf being the Chief Mourner, and expreſſing ſo much grief in his Countenance, that he won the Hearts of the *Perſian* Princes to ſubmit voluntarily, whom before he had forced. This Funeral being thus performed,

Alexander King of Perſia.

Alexander paſſed his Army over the Rivers *Oxus* and *Jaxartes*, and thirſting after the Conqueſt of *India*, directs his Courſe thro' part of the *Maſſagetes* Country. In this Part he laid the Foundation of twelve Cities, but falling into ſome Exceſſes, he ſlew *Clytus*, his old and truſty Servant. After this he marched to *Nyſa* and repoſed himſelf and Army there a-while. Hereabouts he was ſhewed a moſt ancient Monument of *Camari*, the fourth in deſcent from *Adam*, who reigned over the *Indians* of theſe parts before the Deluge. Here he conſtituted his *Argyraſpides*, who had their Armour filletted and damaſked with Silver.

Porus's Battle with Alexander.

Porus a valiant and powerful *Indian* Prince, having notice of *Alexander*'s approach towards his Country (which contain'd a great part of what the *Mogul* holds in *Indoſtan*) met him on the Banks of *Hydaſpes* with a great Body of Horſe and Foot, and many Elephants of War, where they fought, and gave the *Greeks* ſuch a Proof of their Valour, that tho' they got the Victory, yet they grew weary of conquering with ſo much difficulty, and deſired to put an end there to this tedious War. *Alexander* was unwilling to hear of ſuch Deſigns, and to put the Thoughts of them out of their Minds, he celebrated the *Bacchinalia*, and for fifteen days allowed the Army to indulge themſelves in all manner of Debaucheries,

The Army deſire to go home.

and then marched from the Mountain *Meros*, thro' *Dædala* and *Acadera*, where he took a Caſtle which could not be ſubjected by *Hercules*, with *Mazaga* and *Nora*, two principal places of ſtrength, and ſo with ſome difficulty paſſed his Army over the River *Aceſines*, a Branch of the River *Indus*, and ſet Foot in *India*.

The River Aceſines.

Here he acquainted his great Officers with his Deſigns to penetrate as far as *Ganges*, which they ſeemed to approve of, but when it was known to the Army, it raiſed ſuch a general diſcontent, that finding he could not allay it, either by Threats or

Diu.

The *Oxidracans* and *Mallians.*

Promiſes, he was forced to ſeem contented, and ſo he departed to *Diu*, anciently called *Patalec*, where muſtring his Horſe and Foot together, which had gone ſeveral ways, he invaded the Country of the *Oxidracans*, and ſtormed the Principal Fort the *Mallians* had, but raſhly mounting the Parapet, and leaping into the Town with two Officers only, had periſhed, had not the Army forced their Entrance as Men deſperate to reſcue him. After this he ſubdued the *Brachmans* Countrey, and preparing for his March againſt the moſt remote *Indians*, aſſembled on the River *Ganges*, the Camp broke out into freſh Murmuring, which not being able to appeaſe by all the Arguments he could uſe, he was forced to condeſcend, and ſo publiſhed his Reſolutions to treat, which was received with general Acclamations of Joy, tho' he had a Deſign rather to recruit his Army, by meeting with thoſe 15000 which were marched towards him as far as *Jaſquez*.

Alexander returns to Ormus.

Having therefore reſted a Month upon the Banks of *Indus*, he prepared for a March towards *Ormus*, diverting himſelf in that time with obſerving the Flux of the River, the Situation of the Sea Coaſts, the Largeneſs of the Horizon, and Proſpect of the Ocean, which for his further Recreation he would needs one day venture upon, and accordingly went aboard his Admiral riding near *Diu*, and ſailed 20 Leagues South-weſt on the Ocean, but the Contrariety of the Element having its uſual Effect, and the Sky threatning a Storm, it ſoon became unpleaſant to him, and ſo he haſtened to Land, being ſatisfied, that tho' he had ſubdued the Land, he muſt leave the Sea unconquerable. And now *Alexander* having given his Admiral Inſtructions to ſurround not only *Arabia*, but *Africke*, taken *Ambigor*'s City by ſtorm, and laid the Foundations of the City *Barce* (the laſt of 70 Cities which he had built in his nine Years Government) he bid *India* and the Ocean farewel with a Sigh, and advanced into the Country of the *Orytes*. Here he met with great ſcarcity of Proviſion for his Army, till he came into *Godroſia*, which compenſated them with as great plenty. Marching along the Coaſts, here he met with Recruits near the City *Arbis*, which is under the Tropick of *Cancer*, at which his Army tired, and near ſpent, greatly rejoiced. Here he ſolemnized the Feaſt of *Bacchus* again, with the former Luxury and Riot, and ſoon after at *Theſpacus* viewed his new Fleet, and took ſome recreation by Sea, but the Tradition of his coaſting about *Arabia*, and landing at *Socotora*, deſerves no Credit. Removing his Camp further to a convenient place for pitching his glorious Tent, he gave Audience to an hundred Embaſſadors, which were come from the remoteſt parts of *India* on this and the other ſide of *Ganges*, with rich Preſents to congratulate his Victories, and crave his Alliance. Theſe Strangers he entertained, and after Audience, feaſted them moſt magnificently upon an hundred Beds of Burniſhed Gold, and diſmiſs'd them with Preſents ſuitable to his Greatneſs. After this he marched thro' *Carmania* to *Lar*, and thence to *Perſagard* (now *Halquera*) where *Orſines*, a Prince of the Blood-Royal of *Perſia*, was inconſiderately put to death by *Alexander*, for robbing *Cyrus*'s Tomb, upon the falſe Accuſation of *Bagoas* his Enemy, who upon further Examination, was diſcovered to have wronged him, and ſuffered the ſame Puniſhment, his Houſe and rich Furniture valued at 600000 Crowns, being given to *Perducas*. Here *Calanus* the *Indian Brachman*, in contempt of death, built his own Funeral-Pile, and burnt himſelf alive. After this, *Alexander* returned to *Suſhan*, and married the *Perſian* Princeſs *Statira* himſelf, and gave her Siſter to his dear *Epheſtion*, and other *Perſian* Ladies to the great Officers of his Army; for the greater Magnificence of which Marriages, he made a Royal Feaſt for 9000 Gueſts, to each of whom he gave a Golden Cup for their Sacrifices, and diſcharged all the Debts of his *Macedonian* Souldiers out of his own Treaſury, which amounted to 9070 Talents, which is of our Money 500700000 Crowns. This was a great Sum for *Alexander* to ſpare, ſince his Yearly Revenue was 300000 Talents, beſides the vaſt Sums taken by him out of the Treaſury of *Babylon*, &c. Having ſome Apprehenſions of Death in going to *Babylon*, he turned with his Army towards the North, and came to *Ecbatan*, where his Favourite *Epheſtion* died of a Fever, which caſt *Alexander* into ſuch an extream Paſſion of Grief, that he cauſed a general Howling to be made thro' the Camp for ſeven days, ordered all the Horſes in the Camp to be ſhorn, and no Inſtruments of Muſick to be heard. For him he erected a Monument, which coſt him 12000 Talents, and cauſed his dead Corps to be worſhipped as a Deity, by offering Incenſe to him. While theſe Obſequies were performing, *Alexander* had notice that ſeveral Embaſſadors from *Carthage*, and ſeveral parts of *Africa* and *Europe*, attended his coming to *Babylon*, to congratulate his Succeſs in the Eaſt, and divert his Journey into the Weſt, by craving his Alliance, which cauſed him to haſten thither.

The *Chaldeans* oppoſe *Alexander*'s entrance into *Babylon.*

The *Chaldean* Magicians oppoſed his Entrance into it, and prevailed with him to turn aſide to *Byrſa* beyond *Euphrates*, but here meeting with *Anaxarchus* the Philoſopher, who laughed at their Art, he returned to *Babylon*, where he made as ſplendid an Entrance as Art could invent. After Audience, he ſummoned a Parliament of the whole World, and gave them the moſt ſumptuous Entertainments, in which having given to *Perdicas Darius*'s Ring, with which he ſealed all his Commiſſions and Diſpatches, he died, not without ſupicion of Poyſon given him by *Caſſander* his Cup-bearer, at the Direction of his Father *Antipater*.

His Death.

Alexander died in the 33d Year of his Age, and 12th of his Reign.

Aridæus.

Arideus his Natural Brother by the Suffrage of the Army, was choſen to ſucceed him, and *Perducas* aſſigned his Governour, but were both ſlain not long after, the one by *Olympia* and the other by *Ptolemy*. After their Death, the Empire, tho' large enough to have ſatiated the Ambition of all, was torn into many pieces, till by the Sword it was all in a ſhort time reduced under four, of which

Seleucus.

Seleucus was one: He obtained the Government of *Syria*, and made *Perſia* a Subordinate Province of his Empire: Under this Prince and his Heirs *Perſia* remained 30 Years, notwithſtanding the Diſcontents of the *Perſian* Nobility, until *Theodatus* Governour of *Bactria*, which was then a rich Country, and far diſtant from *Syria*, revolted, and took upon him the Supream Title. His example encouraged the reſt of the Eaſtern People to ſhake off the *Macedonian* Yoke, and elect themſelves Kings of their own Countrey. Among them *Arſaces*, a Noble *Scythian*, being well acquainted with the Diſcontents of *Perſia*, but chiefly moved by Ambition, enters the Country in an hoſtile manner, defeats *Andragoras* the Lieutenant of the Province, over-runs *Hyrcania*, and having obtained the Aſſiſtance of *Theodatus*'s Son, affronted *Seleuchus*, called *Caleimachus*, in the Field, and having gained a compleat Victory, utterly aboliſhed the *Syrian* Government in *Perſia*, and arrogated to himſelf the Empire as Conquerour.

Arſaces.

Arſaces being thus raiſed by Fortune, *A. M.* 3718, invited the *Scythians* to be Sharers with him in his good luck, and named the Country *Parthia* from them (for *Parthi ſunt exules Perſarum*) keeping the Native *Perſians* in ſubjection to them: He enlarged the Bounds of his Dominion almoſt from *Euphratus* to *Indus*, living ſo highly honoured by his Subjects, that *Cyrus* was not more eſteemed by the *Perſians*, *Ptolemy* with the *Ægyptians*, or *Romulus* with the *Romans*, than *Arſaces* with the *Parthians*: He built *Dara*, afterwards called *Aſpadara*, and now *Spahawn*. The ninth from him called

Herodes.

Herodes, had the Honour to give the *Roman* General *Craſſus* a memorable Defeat at *Carras*; and his Succeſſor

Phraortes.

Phraortes forced *Marcus Antonius* with loſs ſufficient to retreat over *Araxis* into *Syria*, but *Ventidius* his Lieutenant two Years after redeemed his Credit, by ſlaying

Pacorus.

Pacorus, the King of it, in Battle, and had reduced the Country to the *Roman* Subjection, had not *Anthony* envying his Glory, recalled him; nevertheleſs the *Roman* Name was of ſuch Terrour by this Defeat, that the *Parthians* acknowledged Obedience to *Auguſtus Cæſar*, who by his Election ſet over them

Phraortes II.

Phraortes II. in whoſe time our Saviour the Prince of Peace was born.

Orodes.

Orodes, whom ſome call *Dorideus*, ſucceeded him, and had for his Succeſſor

Vonones.

Vonones, to whom

Tiridates.

Tiridates, the laſt of the *Arſacide*, ſucceeded. He was ſlain by

Artabanus.

Artabanus, whom the *Perſians* call *Ard-Babamen*: twelve of this Prince's poſterity ſwayed the *Parthien* Sceptar after each other, until the laſt was treacherouſly ſlain by *Caracalla* the *Roman* Emperour, under a Pretence of a Marriage with the *Parthian* King's Daughter, which Breach of Faith ſo highly incenſed the *Parthians*, that they maintained a gallant and deſperate Fight againſt the *Romans* under

Caracalla, nor would be reconciled, till they underſtood, that

Macrinus.

Macrinus, his General, had revenged their Quarrel upon *Caracalla*, and poſſeſſed his Throne: Nevertheleſs he enjoyed the Kingdom but one Year, and then gave place to

Heliogabalus.

Heliogabalus, who held the *Roman* Scepter three Years, and then gave place to *Alexander Severus*, who was buried at *York*. In his time the *Perſians* under the Command of *Artaxerxes*, endeavoured to recover their

Freedom, and after three days fight broke off the *Roman* Yoke.

Artaxerxes I. *Artaxerxes*, whom the *Perſians* call *Ard'yr-Baban-chan*, *i.e.* Father and Lord in War, was no ſooner Inveſted in the *Perſian* Throne, but conſidering how much the *Romans* had encroach'd upon his Empire, ſent his Embaſſador to them to demand Reſtitution. *Severus*, with a conſiderable Army, advances towards *Perſia* to return an Anſwer, but having divided his Men into three parts, ſo weaken'd himſelf, that he returned without effecting any thing, and tho' little Blood was ſpilt, yet this want of ſucceſs ſo raiſed the Spirits of the *Perſians*, that when *Valerianus*, about 25 Years after, hearing that *Artaxerxes* was dead, marched againſt them with hopes of ſucceeding better than *Severus* had done, it fell out worſe, for

Sapores. *Sapores* his Succeſſor beat the *Roman* Army, and took *Valerian*, Surnamed *Colobus*, Priſoner, whom, to his dying day, he made his Footſtool; a great contempt to the *Roman* Name, yet the deſerved puniſhment of this Emperour, who had been ſo great a Perſecutor of the Chriſtians, and had broiled S. *Lawrence* to Death. *Gallienus* ſucceeded *Valerian* in the *Roman* Empire, but neither he, nor any of his Succeſſors, for four turns, gave *Sapores* any moleſtation, ſo bad was the Entertainment their Predeceſſors had found againſt them: This gave him the more leiſure to exerciſe his Tyranny at home, and diſturb the World abroad, for he coaſted with his Army into *Syria, Cilicia, Meſopotamia, Cappadocia*, and at laſt was ſlain by *Odenatus* the *Palmyrian* King, when he had reigned 20 years.

Hormiſda I. *Hormiſda* reigned after *Sapores*; the *Perſians* called him *Kirman-ſha*, he ruled but 13 Months, and then yielded his place to

Vararanes I. *Vararanes*, who poſſeſſed the Throne 3 Years.

Narſes I. *Narſes*, called *Yezd-gird* by the *Perſians*, followed him, and after 16 Years reign left the Crown to his Son

Vararanes II. *Vararanes* II. Surnamed *Seganenſe*, whom the *Perſians* call *Beſaran*. He, after a few Months, left the Throne to a ſtranger named

Narſes II. *Narſes*: This Prince proſecuted the War with all poſſible rage againſt the *Armenians* and *Meſopotamians*, in whoſe behalf *Galerius*, the *Roman* Conſul, fought againſt him with bad ſucceſs at firſt, but venturing a ſecond Battel was Victor; which ſo diſheartned *Narſes*, that in the height of Deſpair and Impatience he burnt himſelf, after 8 years Government.

Mizdates. *Mizdates* reigned 7 years after him, and left the Throne to

Shapores. *Shapores*, or King *Porus*. He was a reſtleſs Adverſary to the *Romans*, and tyrannical to the *Perſians*, and to the Chriſtians moſt malicious. He was acknowledged Sovereign before he was born, the Crown at a venture being ſet upon his Mother's Belly before ſhe was delivered. *Julian* the Apoſtate raged not more againſt the Chriſtians in the *Leſſer Aſia*, than *Sapores* did at the ſame time in the *Greater*, the *Jews* perſwading him, that the *Chriſtians* favoured the *Romans*; and ſo from the Year 337 to 347, he Maſſacred above thirty thouſand Chriſtians, it being the practiſe in theſe Primitive Times, among the Chriſtians, to oppoſe force with patience only, and tho' theſe Tyrants thought, by theſe means, to deſtroy the Memory of Chriſt and his Doctrine, yet they found that the Blood of the Martyrs was indeed the Seed of the Church, according to the Old Verſe, *Sanguine fundata è Eccleſias Sanguine crevit*, &c. *Julian* out of Cruelty to the *Chriſtians*, as well as out of Ambition beſieging his Territories, was mortally wounded under the Walls of *Cteſiphon* by an Inviſible Hand, and expired with this deſpairing Exclamation, *Viciſti, Galilee, Viciſti*; and about the ſame time *Sapores* being at *Mopſiorior*, a Town under Mount *Taurus*, ſighed out his affrighted Ghoſt at the Age of 71 Years, and *A.C.* 380. leaving his Kingdom to his Brother

A great Perſecution in Parthia.

Julian's Death.

Artaxerxes II. *Artaxerxes*, who in the 11th Year of his Reign took his Farewel of the World, and

Sapores. *Sapores* ſucceeded him, but reigned but five Years.

Varanes III. *Varanes*, Surnamed *Cinnizat*, was the next Heir, and ruled ten Years.

Yezdgird. *Yezd-gird*, a conſtant Friend to the *Romans*, ſucceeded. *Socrates* reports, that he was Converted by *Maruthas* Biſhop of *Meſopotamia*, who was ſent into *Perſia* for that end by Pope *Innocent* and *Theodoſius* the Emperor, by whoſe perſwaſion he deſtroyed the *Pyræum*, or Idol-Temple, and extinguiſhed the Fire, which for many preceding Generations had by thoſe *Gentiles* been Heatheniſhly worſhipped. The *Perſian* Stories ſay he Apoſtatized; but that is not ſo certain, as that he died *A.D.* 426. in the 20th Year of his Reign.

Varanes IV. *Varanes* IV. or *Baharan*, Inherited the Regal Dignity. He is taxed with Cruelty to the Chriſtians, for whoſe Defence *Theodoſius* Jun. ſent *Ardaburius* with a gallant Army. *Varanes* diſtruſting his own ſtrength, requeſted Aid from *Alamandarus* an *Arabian Saracen*. Theſe Armies had their Rendezvous about *Babylon*, but before the Battel begun, ſuch a pannick fear ſeized the *Pagans* that they fled, and were above a hundred thouſand of them ſwallowed up in *Euphrates*, beſides what fell by the Sword of their Purſuers. The *Perſian* King ſeeing Divine Vengeance thus to purſue him, was Heart-broken with grief, and died, when he had tyrannized twenty Years. His Succeſſor was

Varanes V. *Varanes* V. he made a Peace with the Emperor *Martian*, and died in the 17th Year of his Reign.

Perozes. *Perozes*, or *Pheruz*, poſſeſſed the empty Throne. He was a Prince more raſh than valiant, and periſhed in his Wars with the *Scythians*, when he had reigned twenty Years.

Valens. *Valens*, or *Belax*, or *Julas*, was then choſen King, and ruled four Years.

Cabades. *Cabades*, or *Cobad* and *Canades*, got next into the Throne, and poſſeſſed it ten Years; and

Lambaſes. *Lambaſes* Depoſed him, and reigned four Years, and then was Depoſed for making a brutiſh Edict, that Women ſhould be common, and *Canades* placed in the Throne: But he being through too much lenity to his Brother made blind unexpectedly, the Tyrant was reſtored again. He made great Wars upon the *Romans*, becauſe they had induced *Zatus*, King of the *Lazars* in *Colchos*, to receive Baptiſm at *Conſtantinople*, the Emperor *Juſtinian* himſelf ſtanding the Godfather, and moſt of the Nobility of *Aſia* honouring the Solemnity. He ſlew many thouſand of the *Lazars* and *Armenians* in this War, and died when he had reigned 30 Years.

Coſhroe I. *Coſhroe*, his Son, was after the accuſtomed Solemnity crowned King in his ſtead: He was the moſt cruel Tyrant that ever reigned in *Perſia*. He made a Peace with *Juſtinian* the *Roman* Emperor for an hundred Years, but broke it ſoon, and exaſperated him to the uttermoſt. He put to Death his innocent Brother *Balax*, and aged Uncle *Aſpebides*; and when the People murmured at it, he commanded them to follow him into *Syria*, where he engaged them in a deſperate War againſt the *Palmyrians*, who, under *Zenobia*'s Conduct, beat them ſoundly. In revenge whereof, he plundered *Barrhoſa*, *Antioch*, *Seleucia*, *Apamola*, and other Parts thereabouts. In *Phœnicia* he raviſhed *Euphemia*, a Chriſtian Lady, and of her begot *Hormiſda*, who ſucceeded him, and commanded the Nymphs of *Daphne* to ſacrifice Incenſe to him, leaſt he ſhould raviſh them. He burnt *St. Michael*'s Church, beſieged *Sergiropolis*, and attempted to ſpoil *Jeruſalem*, but hearing that *Belliſanus* was approaching, he renewed his League with the *Romans* to avoid the ſtorm, which he never intended to keep, for he broke it the next Year. At this time the *Armenians* received the Chriſtian Faith, and the *Romans* received Complaints from the Chriſtians of *Coſhroe*'s Cruelty; whereupon *Juſtin* the Emperor ſends *Tiberius* to relieve them. *Coſhroe*, with an Army of equal ſtrength, meets the *Romans*, but was overpower'd and vanquiſhed. Many *Perſians* were ſlain upon the place, and many in the purſuit, *Coſhroe* himſelf eſcaping narrowly; but when he came to reflect upon his loſs, eſpecially of his Fire-god, he fell into ſuch deſpair, that he ſoon after died, and was buried at *Cteſiphon*, a City in *Suſcana*, not far from *Hercules*'s Altar, after he had reigned Eight and forty Years, leaving his Regal Power to

His Luſt and Impiety.

Hormiſda II. *Hormiſda* his Son. He was crowned King *A.D.* 589. His eight years Rule was very troubleſome, for in his third year *Mauritius*, Son-in-Law, and Lieutenant to *Tiberius*, entred *Perſia* with an Army, and acted all manner of Hoſtilities, altho' *Tama*, *Coſhroe*, &c. did all they could to prevent it. *A.D.* 589. *Philippicus*, with ſome *Roman* Legions, entred *Perſia*, to relieve the Chriſtians in thoſe Parts. *Cardarigas* being told by the *Magi*, that they were brought thither to be deſtroy'd by ſome uncontroulable Deſtiny, engag'd them, but loſt above thirty thouſand *Perſians* in the fight. *Barames*, a noble *Bactrian*, eſcaped from the *Romans*, but being forced by *Hormiſda*, who was almoſt diſtracted for this Overthrow, to put on Womens Garments, and with a Diſtaff in his Hand to brave the Enemy, he retreated into thoſe Parts which affected him; and prevailing with *Ferra-chan* and *Byndoes*, *Perſian* Noblemen of Account, to joyn with him, they ſpeedily raiſed ſuch a Force, as to ſeize the King and depoſe him, crowning in his room his Son

Coſhroe II. *Coſhroe*. The Soul of his cruel Grandfather ſeemed to be tranſmigrated into this Man, for he firſt cauſed his own Father to be Aſſaſſinated, whom the People had in in that eſteem, that they deify'd him. *Barames* abominating

nating this Cruelty, thought to have pulled him down, as he had raiſed him up; but the King having notice of his deſign, endeavoured to have raiſed ſome Forces for his defence, but not finding any that would appear in his Service, (ſo generally hated was he) he was forced, to ſave his life, to fly to *Byzantium*, with his Wife *Ceſarea*. *Mauritius* and his Empreſs receiv'd him courteouſly, and after he pretended to become a Chriſtian, he ſent an Army, commanded by *Narſes* and *Commentiolus*, to re-inveſt him in his Empire, which they effected, and *Coſhroe*, in gratitude, profeſſed to become a ſincere Chriſtian, ſending the Emperor a Croſs of great value in Gems and Gold, and a Chalice of the ſame Metal; but as ſoon as he heard of the Maſſacre of *Mauritius*, with his Wife and Children, by *Phocas* the Captain of his Army, and the Arrogance of Pope *Boniface*, who aſſumed the Title of *Univerſal Biſhop*, he denied Chriſt, yet vowed to Sacrifice himſelf in *Mauritius*'s quarrel. This done, *A. D.* 603. with an Army of a hundred thouſand Men he entred into *Syria*, and there did all the miſchief imaginable, as well as in *Paleſtine* and *Phœnice*. The *Leſſer Aſia* alſo underwent his fury, and he chaſed the poor Chriſtians to *Calcedon*. After that he takes *Capeſſa* and *Edyſſa*; and to his ſatisfaction, in 612, hears of the untimely Deaths of *Narſes* and *Phocas* his Enemies, who were beheaded by *Heraclius*. That Year alſo he ſacked *Apamee*, *Cæſarea*, *Cappadocia*, &c. and was overjoyed at a Victory over the Chriſtians at *Antioch*, which encouraged him to over-run *Paleſtine*, and ravage *Jeruſalem*, where he derided the Venerable Patriarch *Zacharias* to vex the Chriſtians, and took the Croſs from thence, and carried it to *Shyrazto*, where 'twas kept ſome Years.

Mauritius the Emperor ſlain by *Phocas*.

His Cruelty to the Chriſtians.

He much infeſted the *Roman* Empire, eſpecially in *Anatolia*, and Maſſacred three hundred thouſand Chriſtians, vowing that he would exterminate their very Name. *Heraclius* had his hands full at that time, and deſiring a Ceſſation of Arms, but not obtaining it, was forced to engage him once, and again, and was as often Victorious; and at the Battel of *Gazacot* put his Army to flight, and made him ſeek his own ſafety in *Media*. *Heraclius* ſought for *Coſhroe*, but could not find him, whereupon he executed his Wrath upon his Idols, ſacrificing the *Flamens* for it, and extinguiſhing the *Pyræum*, with which he mixed common Fire, and made it active to conſume the City to aſhes. *Coſhroe* by this time had gather'd a freſh Army out of *Hyrcania*, and ſent *Sha-Rablecca* to Forage *Albania*; but hearing they were in a good poſture of defence, he return'd to wait for *Sarbaras* with new Forces, which, had they joyned, would have done much miſchief, but *Heraclius* timely interpoſing, defeated both thoſe Armies in one day, neither knowing of the others loſs. *Mahomet*, the falſe Prophet, was a common Soldier in *Heraclius*'s Army at this time, and ſoon after this his Hegyra, or flight from *Mecca*, begins, becauſe the Inhabitants of that place threaten'd to kill him for his Innovations, *A. D.* 622. and of this Emperor's Reign 13.

Heraclius's Succeſs againſt him.

Mahomet's Hegyra began.

Coſhroe being of a reſtleſs temper, commands *Sarbaras* again to take the Field with a numerous Army, to try his fortune with *Heraclius*, who, as ſoon as he heard of it, advances toward him, and after an hot diſpute came off Victor; many loſt their lives, but the *Perſian* Horſe, with the General, made a fair retreat. The Emperor had his Winter-Quarters in *Paphlagonia*; but *Coſhroe* ſwells with paſſion, and reſolves to try another Battel before his laſt *Exit*, and to that end Muſters together an Army of 150000 Men, which he divides into three parts, giving one to *Sayn*, who was to go againſt the Emperor, another to *Sarbaras*, who was to march to *Conſtantinople*, and a third he commanded himſelf, ſtaying upon the Frontiers. *Heraclius* having Intelligence of his force and drift, divides his Army alſo into three parts, one part he haſtens into *Thrace*, and another under *Theodore* to oppoſe *Seyn*, who tho' he bravely behaved himſelf with his Regiment of *Chryſolocol*, which he truſted moſt in, was routed, and no wonder, ſince God viſibly helped the Chriſtians in *Heraclius*'s Army, by pouring down Hailſtones upon their Enemies. The *Perſians* fled, and *Seyn* himſelf was ſlain, but his Body was redeemed, which the Tyrant, inſtead of allowing it a decent Burial, commanded it ſhould be arrayed in Rags, perfumed with Dogs-turds, and cut in pieces. *Sarbaras* in the mean time entred *Thrace*, pillaged *Chalcedon*, and laid Siege to *Conſtantinople*, and for ten days ſtormed it; but ſuch was the reſolution of the Chriſtians, that they could not gain an entrance, but hearing of *Heraclius*'s coming they rais'd the Siege, and made a ſafe, tho' diſhonourable Retreat, into their own Quarters. The Emperor reſolving to retaliate the *Perſians* for this Violence, entred *Armenia* with a conſiderable Army, and in a long Battel obtained a Victory over the *Perſians*, and purſuing *Coſhroe*, made a forcible entry into *Cleſiphon*, which he firſt plundered, and then totally demoliſhed by Fire. *Coſhroe* hearing of *Sarbaras*'s ill ſucceſs in *Thrace*, was inflamed with paſſion, and ſent an Aſſaſſine to murder him, but the Emperors Son having notice of it, diſcover'd it to the General, who being provok'd by his Maſter's ingratitude, raiſed a dangerous Rebellion.

Heraclius vanquiſhes *Coſhroe's* Army a ſecond time.

Coſhroe's Death.

Coſhroe ſeeing things ſucceed thus unfortunately, fell into a Fever firſt, and then into a Flux, of which he died, having nominated *Mardeſes*, the Son of *Syra* his beloved Wife, for his Succeſſor, but before the Crown could reach his Head, he was ſlain by his Brother *Syroes* before his Father's face, which Fratricide, when *Coſhroe* curſed, his Son commanded ſome Villains to ſhoot him, and ſo he ſuffered for the Cruelty he had uſed towards his Father *Hormisda*, and breathed out his wretched Spirit when he had reigned, or troubled the World rather, 50 Years.

Heraclius hearing of *Coſhroe*'s Death, hoped that the old Quarrel was at an end, and therefore travell'd to *Jeruſalem* to preſent the Patriarch *Zacharias* with the Croſs he had reſcued from *Coſhroe*, and arrived there *Sept.* 17. 628. the ſame Year that *Boniface* publiſhed his *Univerſal Supremacy* to the World, and *Mahomet* his *Alcoran*.

The Pope's Supremacy and Alcoran publiſhed together.

Syroes.

Syroes, or as the *Tarick* calls him, *Scyrviah*, reigned ſix Years, and was then rewarded for his Parricide, being ſlain by *Sarbaras*, whom the *Perſians* call *Shawryr*.

Ardchyrben Xirviah.

Ardchyrben Xirviah was the next Heir to the Crown, but enjoyed it 3 Months only, being alſo Murdered by *Sarbaras*, who was within eight Months ſlain himſelf by *Joon-ſha*, or *Slyn-ſhaw*, Lord of that part of *Taurus* called *Larry-Joon*.

Joon-ſha.

Joon-ſha, at the end of three Months, was baniſhed by

Turvan.

Turvan, or *Turan-Doct*, Natural Daughter to *Coſhroe*, who at the end of 16 Months was made away by Poiſon, and died much lamented. To her followed

Jazan-Zeddah.

Jazan-Zeddah, who ruled 9 Months and then died; and after him ruled

Azurmy-Doct.

Azurmy-Doct, *Coſhroe*'s youngeſt Daughter, who governed but 16 Months and then died, leaving the Government to

Shezir.

Shezir, or *Kezir*, who at the end of 6 Weeks was ſlain by

Phorog-Zeddah.

Phorog-Zeddah, who was poiſoned, and gave place to

Yeſdgird.

Yeſdgird, who was forthwith made away by

Bornarym.

Bornarym, who met with the ſame fate from

Hormiſdas III.

Hormiſdas, who was taken Captive, and his Kingdom made ſubject to

Mahomet.

Mahomet, *A. C.* 640. Hegyra 20. And ſo *Perſia*, after a Succeſſion of 28 Kings, who ruled it for 400 Years, was forced for a time to ſubmit to the Power of the *Saracens*. *Mahomet* was then in the *Roman* Army, and firſt putting his *Arabian* Brigade into a Mutiny for want of Pay revolted, and being made their General, quickly reduced *Arabia*, *Ægypt* and *Syria*; and finding *Perſia* in a perplexed condition, ſeized it.

Ebubecar.

Ebubochar ſucceeded *Mahomet*; he is ſaid to have Warred againſt the *Abaſſines*, *Dybanes* and *Bernagaſſees*. He died in his great Climacterick Year, having ſat as Caliph, and King of *Perſia*, two Years, and was ſucceeded by

Omar.

Omar or *Heſhmar*, Son of *Kattab-Taruques*, a Wealthy Merchant. He purſued *Ally*, the Son-in-Law of *Mahomet*, for pretending to the Caliphſhip, and having raiſed a great Army, ſacked *Baſhra* an *Arabian* City, and proceeding as far as *Gabata*, tyrannized over *Syria* and *Ægypt*, Forraged *Paleſtine* and *Iberia*, and Invaded *Aſſyria*.

He Vows to extirpate Chriſtianity.

After theſe things coming to *Bagdat*, his head Quarters, he reſolves to repoſe there, and ſpend the remainder of his time in Exerciſes of Devotion, making a Vow to endeavour the utmoſt Extirpation of Chriſtianity, which he judged the ſureſt way to propagate the Alcoran. To this end he gave a Commiſſion to *Mavi*, and ſends him with a numerous Army firſt againſt the *Syrians*, and with ſmall oppoſition took *Damaſcus*, a City at that time very Wealthy, and ſo full of Delights, as *Mahomet* acknowledged, that he durſt not truſt himſelf there for fear of temptations.

How he propagated *Mahomet's* Doctrine.

In like manner he ſent ſundry other Captains, with conſiderable Forces, to reduce other Countries with the Sword; as *Ruſtan-beg*, with 15000 Horſe, to *Chuſiſtan*. But he being ſlain at the Siege of *Eſcair-Mecron*, *Moſes*, Surnamed *Aſher*, commanded after him, and ſubdued *Abawaz*, *Sabur-Arkan*, *Cowreſtan*, *Jaarown* and *Lar*, making them to acknowledge *Mahomet*, and Enrol themſelves *Omar*'s Tributaries.

Habi-

Habu-Obed-ben-Maſudli alſo, with 13000 Horſe, ſubdued *Irac*, *Waſit* upon *Diglat* and *Elſheer*, tho' at firſt repulſed with the loſs of 5000 Men; *Yeſdgird* the *Perſian* General oppoſed the *Saracens* at *Galula*, *Spahawn* and *Yezd*, but *Omar*'s Fortune in other places diſpirited his Men, ſo that they did nothing with ſucceſs. After *Yeſdgird*'s Death, *Hormiſda* laboured to repel the *Saracens*, and recover the Liberty of his Country, but was ſlain with his whole Army. *Omar*, about 6 Months after this Battel, was ſlain treacherouſly, and was buried in the *Alcaba* at *Mecca* near to *Ebubocar*, his Predeceſſor, after he had ruled 12 Years.

Ozman.

Ozman, in deſpight of *Ally*, ſucceeded him, and reigned ten Years, having the Pontificacy four Months. By *Hucba*, his Field-Marſhal, who commanded a great Body of Horſe, he ſubjected divers Parts of *North-Africk*, as *Numidia* and *Mauritania*, as far as *Tunis* or *Carthage*.

The *Coloſſus* of *Rhodes* demoliſhed.

Mavi, Sultan of *Damaſco*, over-run *Syria*, *Ægypt*, *Cyprus* and *Rhodes*, where he acted many Cruelties; and among other things, demoliſhed the huge *Coloſſus* built by *Chares* of *Lyndus*, at the expence of 300 Talents in 12 Years, This huge Image was of gilded Braſs, 80 Cubits high, the Thumb as big as a large Man, the Legs ſtood on either ſide of the River, ſo wide, that a large Veſſel under Sail might paſs between them. In one Hand it held a Javelin pointing to the Eaſt, and in the Breaſt was a Mirrour, in which the Inhabitants of the Iſle could deſcry Ships at a diſtance. He ſold it to a *Jew* of *Emiſſa* for 200*l.* Sterling, who broke it down, and loaded 930 Camels with the Braſs of it. He alſo defaced 100 other *Coloſſus*'s, and 70000 coſtly Monuments. *Heraclius* the *Roman* Emperor died *A. C.* 640. after he had reigned 30 Years, and *Heraclius*'s *Conſtantinus* ſucceeded him. He was poyſoned in the 7th Month of his Empire, by *Martina* his Step-Mother, that ſhe might advance her Son *Heracleonas*, but contrary to their expectation the People baniſhed them both, cutting off their Noſes and Tongues, and *Conſtans* was ſaluted Emperor. *Ozman* by this time had finiſhed his Paraphraſe upon the Alcoran, which he digeſted into ſeven ſmall Tracts, and ſubdivided into an 114 Chapters. And ſince *Mahomet* in the ſecond and third *Azoara*, promiſes the greateſt ſhare in Paradiſe to ſuch as deſtroy moſt Unbelievers, *Ozman* having done his Church-work, deviſes from this Doctrine to enlarge his Empire, but under this Charitable pretence, to ſhew other Nations the way to Paradiſe; and to that end, promiſes his Bleſſing to any that would undertake the Conqueſt of *India*. *Abdal-Ben-Emyr*, a Man both Valiant and Superſtitious, accepts the Task, and with 30000 Men haſtens thitherwards, but by *Ozman*'s Inſtructions firſt directs his Courſe towards *Tartary*, and ſubdues *Aſia*, *Coraſan*, *Maurenahar*, *Gaſneken*, and *Dileman*, as far as *Jehun* and *Ador*, Rivers beyond the *Oxus*. *Ozman* by theſe Conqueſts made himſelf the moſt puiſſant Prince then living, yet the Multitude at home was ſo enraged againſt him, that he was forced to drink Poiſon voluntarily to eſcape being ſlain by them; and ſo he died in the 88 Year of his Age, in the 5th Year and 8th Month of his Caliphſhip, *A. D.* 655.

Conſtans Emperor of *Rome.*

His Conqueſts to propagate *Mahomet's* Doctrine.

Ally.

Ally, the right Heir, was after his Death ſaluted Caliph by the Army, which conſiſted of 10000 *Perſians*, and 20000 *Arabs*, at *Meccha*; but his Reign was full of trouble, for *Mavi* the *Syrian*, chief of the *Ommiari* Race, ſtorming at *Ozman*'s fall, and thinking himſelf worthy to ſucceed him, enters *Arabia* with a hundred thouſand Men, reſolving to Depoſe *Ally*, but in the firſt Encounter was well beaten, and loſt ten thouſand of his Men, but at the ſecond Battel, *Ally* loſt not only the Day, but his Life and Crown, and

Mavi, or *Mnavias.*

Mavi, or *Mnavias*, was ſaluted King. *Ally* died in the 63d Year of his Age, and was buried at *Moſqued* near *Cufe*, upon *Euphrates*. He left a Ring, with which the *Perſian* Kings Wed their Kingdom, and the Motto of it is, *Corde Sincero Deum Veneror*. By *Fatima*, *Mahomet*'s only Daughter, *Ally* had *Hocem*, who had twelve Children, which *Mavi* ſlew all, but *Muſa-Chereſim*, or *Mahomet-Mahadin* the youngeſt, who eſcaped, and is thought ſtill to be alive.

Mavi having thus ſtated himſelf in the Government, ſent *Suſindus* his Kinſman with a great Force againſt the *Gracians*, and to beſiege *Syracuſe* and *Byzantium*, but by *Conſtantine* the Emperor he was ſlain, with thirty thouſand other *Saracens* of his Army.

A great Plague.

The ſame Year the Plague raged ſo horribly in the *Mahometan* Empire, that the like had not ever been known, and *Mavi* himſelf died of it, in the 77th Year of his Age, and 24 of his Reign; his Symbol was *ignoſce precor*. He was ſo implacably bent againſt the Family of *Ally*, that beſides the Slaughter of his Son and Grandchildren, he cauſed an *Anathema* to be uſed daily in their Common-Prayer againſt him, which the *Ommiari* Family continued for eight Deſcents, till by *Omar* it was aboliſhed, and the Murder of *Ally*'s Family was revenged by *Abdulla-Sophy* the 22d Caliph, who inviting all the *Ommiari* Race, being 80 Perſons, to receive the Fealty, cauſed them all to be Murdered, and then had this Dirge ſung over them, *For the day of* Huſſan *and his eleven Sons*. About this time there were ſuch terrible Earthquakes in *Aſia*, that 600 Cities and Villages were overturned by them in one Night.

Terrible Earthquakes.

Toezed.

Toezed, or *Jezed*, followed *Mavi*: He was an eminent Poet, and put the Alcoran into Rhime. His Riot and Venery ſo exaſperated *Mutar-Mavia-Ben-Abdella*, that he made him away when he was but 40 Years old, having ruled but three Years.

Mutar

Mutar was as quickly Dethroned by

Abdel-Ben-Jezed.

Abdel-Ben-Jezed, a *Benbumian*, who ſat but 9 Months, and then was depoſed by

Marvan.

Marvan, who was diſpoſſeſſed by

Abdalla.

Abdalla, who was bereft of Life and Kingdom by

Aben.

Aben, or *Abdal-Melec*, who was forced to fly by

Didacus.

Didacus, as he himſelf was by

Oyledore.

Oyledore, who was ſlain by *Juſtinian*'s help by

Solyman.

Solyman, who was expulſed by

Abdal-Melec.

Abdal-Melec, who returning from Baniſhment, took revenge to the uttermoſt upon *Mutar*'s Murderers. The Chriſtians were the worſe for this Eſtabliſhment, for he forthwith Forraged *Syria*, *Armenia* and *Thrace*, and in the fifteenth Year of his Empire died, ordaining

Ubyt.

Ubyt, called *Ulitus*, and *Evelyd Mirahmimus*, to be his Succeſſor. This Caliph died of grief, becauſe the Armies, which he had ſent into *Spain*, rebelled againſt him.

Zulzemyn.

Zulzemyn ſucceeded him, and him

Omar Ben-Abdemazed

Omar-Ben-Abdemazed, who was depoſed by

Tezid.

Tezid, the Son of *Melec* the late Caliph.

Ebrahim.

Ebrahim marched off ſoon after him, a fool-hardy and unfortunate Prince. After his Death the Empire was divided between

Gezid and Walid.

Gezid and *Walid*, who having ſped ſo well in *Aſia* and *Africk*, invaded *Europe* with all the Forces they could get together. *Walid*'s Army, led by *Abdireme*, having firſt croſſed the Streight in Veſſels, marched into *Spain*, conquered *Granada*, and ſettled themſelves there for ſeven hundred Years, till of late *Ferdinand* and his Succeſſors drove them out, and forced them into *Barbary*. *Gezid*'s Forces, led by *Sha-Reblar*, entred *France*, but met with ſuch reſiſtance from *Charles Martel*, then King, and 30000 *French*, that after a long and ſmart fight, in ſight of the City of *Tours*, in *Touraine* in *France*, the *Saracens* were beaten, and three hundred thouſand of them ſlain, *July* 22. 726. The News of this misfortune ſo afflicted the two Caliphs, that they died mad.

Marvan.

Marvan was placed in their ſtead, in whoſe time *Hyllin* his General purpoſed to invade *Tartary* with an hundred thouſand Men, but in the way was aſſaulted by Sophy *Salyn*, St. *Azmulli*'s Son, deſcended from *Ally*, and in the conflict ſlain. *Marvan*, in revenge, invades *Perſia* with three hundred thouſand Men, and encounters *Selyn* near *Spahawn*, who vanquiſhed the *Arabian* with the loſs of an hundred thouſand of his Men. *Marvan* affrighted at this loſs flies to *Babylon*, and from thence by *Mecca* into *Ægypt*. *Salyn* purſues him, and by his Baniſhment or Death put an end to the Race of his inveterate Enemies the *Benbumians*, begun by *Mavi*. The Family of *Ally*, or *Ben-Abbas*, began by this means to recover the Scepter of *Perſia*, *A. D.* 750. Heg. 130. when

St. Azmulli.

St. *Azmulli* mounted the Throne. He was Crowned King at *Cufe*, and ſat as Caliph alſo; for altho' *Abuballa* oppoſed him for a while, yet he held it againſt him. About this time it was that the *Turks*, living then in the moſt Northerly Parts of *Zagathai*, made an Irruption through the *Caſpian Streights*, and for ſome time ſeated themſelves in *Turcomania*, a Province in *Armenia the Greater*. This *Azmulli* it was, that revived *Mutar*'s Tenents to the Honour of *Ally*, and Diſgrace of the three Succeſſors of *Mahomet*, publiſhed afterward by *Siet Gunet* of *Ardaveil*. St. *Azmulli* being dead, his Son

Salyn.

Salyn was ſaluted King, who living but 3 Years.

Almanſor.

Abubeer, called *Buzſafer* and *Almanſor*, ſucceeded him, *A. D.* 758. Heg. 138. He repaired *Bagdat*.

Mahadi-Abuballa.

Mahadi-Abuballa followed him, and next to him reigned

Moſes.

Moſes, or *Eladi Mirza*. In his time *Charlemagne* flouriſhed, and this Iſle under King *Edgar* changed its name from *Britain* to *England*. He was the Father of

Amarumlus.

Amarumlus, or *Aaron*, whom the *French* ſpeak ſo much of. He had a great amity with the Emperour *Charles*, and they ſent Embaſſadors and Preſents to one another: He is ſaid to have died a *Chriſtian*, In his time ſome Fanatick Schollars undertook to fly in the ſight of thouſands, but periſhed among the Rocks, tho' the Wind was high. *Aaron*, after 33 Years Rule, died, and was ſucceeded by

Mahomet.

Mahomet his Son, who reigned five Years.

Abdalea.

Abdalea came after him. He raged againſt the *Chriſtians*, and troubled ſeveral Iſlands in the *Mediterranean* Sea, and dying, was ſucceeded by

Mulla-cawn.

Mulla-cawn, who equally vexed the *Chriſtians*, diſturbed *Italy*, and alarmed *Rome*, but he in a ſhort time yielded to fate, and was ſucceeded by theſe *Caliphs* in order.

Mahomet.

El-Takeit, in whom ended the Caliphs of the *Arabick* or *Perſian* Stem; for then *A. D.* 1030, *Heg.* 410, came in

Tangrolipix.

Tangrolipix the *Turcoman*, who was called into *Perſia* by the then *Sultan*, to aſſiſt him againſt the *Babylonian Piiaſtre*: When the *Turk* had freed *Mahomet* from his Danger, he deſired to go into *Armenia* to viſit his Kindred, who were lately ſeated there; but was denied, which he reſented with ſuch impatience, that before *Mahomet* could appeaſe the angry *Turk*, he was bereaved both of Life and Kingdom. In his Death the Family of *S. Azmulli* was eclipſed, till *Sa-Iſhmael* received the Splendour of it. From *Tangrolipix* deſcended

Ottoman, Son of *Ertogul* the *Oguzian*, who in 1300, *Heg.* 680. laid the Foundation of the *Turkiſh* Empire in *Aſia* and *Europe*, as the *Salghuicars* commanded *Perſia*, begun by

Togrul Beg

Togrul-Beg, Son of *Salghuicus*, Son of *Didacus* the *Turk* or *Tartar*. He was ſlain by Treaſon, and his Succeſſour was

Pharug zed.

Pharug-zed, *Maſue*'s Son, who was ſlain by *Olo-ben-Æſolan*, Prince of *Gaznehen*, and left his Government to

Ebraim-ben-Maſud.

Ebraim-ben-Maſud, whoſe Son *Maſud* having married the Daughter of *Melec-ſha*, King of *Turqueſtan*, entred *Perſia* with a great Army from *Coroſan*, and near *Tabriz* ſlew *Almodſtarſhad-bila-Caliph*, and in another Fight *Reſhed-bila*, his Son at *Spahawn*. To *Maſud* in *Gaznehen*, ſucceeded *Sha-Eſolam*, who was ſlain by *Baharon-ſha* his Brother, and *Coſrhao* his Son ruled in his ſtead, who after he had foraged *India*, died *Heg.* 640, and in him the *Sabutaque* Family came to an end. In thoſe times

Ghaladud-dawl.

Ghaladud-daul was Caliph of *Babylen*, and part of *Perſia*, whoſe ſeventh Succeſſor

Muſtaed-zem

Muſtaed-Zem, was ſlain by *Cingis-chan*, *An. Heg.* 580. and

Almoſtanſor-bila Manſor.

Almoſtanſor-bila-Manſor governed *Chaldæa* and *Perſia* in his place.

Charar-Mahomet.

Charar Mahomet the *Turk*, entred *Perſia*, *A. D.* 1415. *Heg.* 795, and having ruled three Years, left

Kara-Iſſuph.

Kara-Iſſuph to ſucceed him. He alſo died after three Years at *Casbyn*, and left ſix Sons, of which all of them died untimely, except

Joon-ſha.

Joon-Sha. In his time the *Ottoman* Race had ſo enlarged their Conqueſt in the *Leſſer Aſia*, that the *Grecian* Princes, (to ſtop that Impetuous Torrent) were forced by their Embaſſadors to beg the Protection of the Victorious *Tartar*, *Tamberlane*, who having lately received an Affront from the *Turk*, willingly undertook it, and with all the Force he could make, marcheth againſt *Bajazet*. Near Mount *Stella* (in the Plain where *Pompey* worſted *Mithridates*) was maintain'd a long and bloody Fight between them, but the Victor fell to *Tamberlane*, who ſlew many thouſand *Turks* to gain it, and having taken *Bajazet*, put him in an Iron Cage, as Men uſed to do Wild Beaſts, and carried him in that ridiculous poſture, thro' all his March, after which, the reſt of the *Turkiſh* Provinces ſubmitted to him, without any conſiderable reſiſtance. *Tamberlane* paſſing thro' *Media* towards *Samarchand*, gave a Friendly Viſit to *Syet*, or *Shec-Seffee*, a reputed Saint at that time, living in *Ardavil*, who perceiving that by *Hebare-Mirza*'s Advice, the Conquerour had decreed many thouſand Priſoners to Slavery or Death, begged their Liberty, which *Tamberlane* granting, this Mercy highly increaſed the Opinion of his Holyneſs. *Tamberlane* ſoon after died, *viz.* *A. D.* 1407, and was buried at *Anzar* in *Cathaya*, and three Years after the *Perſian* Saint followed, leaving a Son behind him, called *Siet Ganet*, who pretending to great Zeal, and Angelical Contemplation, fitted all things for the pulling down of *Joon-Sha*, which he thus effected: He invited

Acem.

Acem, or *Uſem*, otherwiſe called *Uſan-Caſſan*, the *Armenian* King, to the Conqueſt of *Perſia*, which by the Overthrow of *Malaonores*, and the death of *Joon-Sha*, was quickly effected, *A. D.* 1470. *Heg.* 850. The Saint of *Ardaveil* in the mean time compoſed a new Model of Church Affairs, with a Deſign to make a perpetual Schiſm between the *Turks* and *Perſians*, which the Victor was contented to permit. The Opinion of the *Syet*'s Holineſs made his new Doctrine to be received without Examination. He taught them, that *Ebubecri*, *Omar*, and *Ozman*, the three Caliphs that ſucceeded *Mahomet*, whom they had formerly eſteemed as Prophets, were Impoſtors, and Intruders upon the Caliph-Ship (it being *Ally*'s right, upon the account of his Marriage with *Fatima*, *Mahomet*'s only Daughter) and ſo it was thought fit that thoſe three pretended Prophets ſhould be expunged the Calendar, and reputed Hereticks. This has cauſed an irreconcilable Difference between the *Turks* and *Perſians*; ſo that the Former account the Latter Hereticks, and the *Mufti* declares it more meritorious to kill one *Perſian* than an hundred Chriſtians. This Breach was contrived by *Ganet* to advance his own Tribe, as deſcended from *Mirza Ceriſim*, the Grandſon of *Ally*, and to make his Acceſs to the Crown eaſier, which, when *Joon-ſha* perceived, *Gunet* withdrew himſelf into the *Arabian* Territories, where he married *Martha* the Daughter of *Uſan-Caſſan* to his Son *Ayder Myrza*, that his Acceſs to the Throne might be rendred more eaſy. *Uſan-Caſſan* ſtill kept what he had conquered, and lived long in Peace, maintaining a good Correſpondence with *Mahomet* the *Great Turk*, till being ſollicitated to it by the *Venetians*, he invaded the *Turks* Dominions, and fought ſeveral times ſucceſsfully with two great *Turkiſh* Generals, *Muſtapha* and *Amurath*, but at laſt was overpowered and worſted by *Mahomet*; for grief of which, together with Age, he died, in the Year 1477, and was buried at *Casbyn*. He left ſeven Sons, but moſt of them came to untimely ends, and their Children fell into many Quarrels among themſelves for the Diadem, till at length moſt of them being kill'd, and the reſt fled,

A Schiſm between the *Turks* and *Perſians.*

Elvan-beg.

Elvan-beg got the Poſſeſſion of it, and kept it peaceably five Years, till ſeeing *Ayder* his Brother-in-Law grown popular by his Sanctity, he grew Jealous of him, and ſo by the Suggeſtions of *Jacup*, he cauſed him to be murdered, and had done the like to his Son *Iſhmael*, but that having timely notice of it by a Friend, he withdrew to *Pyr-Ally*, the Governour of *Mozendram*, and ſo eſcaped the Danger. *Iſhmael* in the mean time, as his Years encreaſed, ſo did his Reputation with the *Perſians*, who ſeeing his Courage and Ingenuity, wiſhed for an Opportunity to raiſe him higher, which he was as ready to embrace. *Morad*, or *Amarath*, *Elvan*'s Brother, aiming at the Crown, gave *Iſhmael* an Occaſion to raiſe what Forces his Friend *Pyr-Ally* could aſſiſt him with, upon the juſt Pretence of ſecuring himſelf, and revenging his Father's Death; and ſo he poſſeſſed himſelf of *Sumacly*, which he fortified. *Elvan* immediately advanced with all his Forces to ſuppreſs theſe Rebellions, and fortunately worſted *Morad*, and obliged him to fly for ſafety into *Arabia*; but his Succeſs with *Iſhmael* was clear different; for *Iſhmael* having obtain'd many additional Recruits from *Tauris*, and eſpecially from *Arzenion*, firſt ſlew *Pharac-Iſſuph*, his Father's Murderer, and then joining Battle with his Uncle *Elvan*, at or near *Teſdicauz*, the Midway between *Spahawn* and *Slyraz*, after an hour's Fight, had the better, and put *Elvan*'s Army to flight, himſelf being ſlain in the purſuit, and ſo

Iſhmael Sophy.

Iſhmael, ſurnamed *Sophy*, both by Blood and Conqueſt, got the *Perſian* Scepter into his Hand, the People receiving him with univerſal Joy, for the Reſtauration of the Diadem to a Prince of their own Blood. The Crown was no ſooner on *Iſhmael*'s Head, but by Proclamation he ratified the Reformation his Grandfather had contriv'd, and declared the *Turks* Hereticks, and to aſſure them of his Fitneſs to govern, he entred *Diarbic* with a conſiderable Army, and reduced it, and ſoon after did the like to *Armenia*, *Albania*, *Ibena*, and *Sarcaſhia*, which he challenged for his Right, as deſcended of *Uſan-Cuſhan*, to the Amazement of the *Turks*. About 1506, *Techellis Aydars*, Diſciple, out of zeal to propagate his new broached Opinions, and force the erroneous *Turk* to a Conformity, with a conſiderable Party of Horſe, which *Iſhmael* gave him liberty to raiſe, and divide with his Fellow-Diſciple *Caſſan*, gave a notable Diſturbance to the *Turks* for ſome time, for having adjudged the *Turks* Hereticks, and proclaimed them Enemies to the Faith of the *Muſſalmen*, worthy to be proſecuted with Fire and Sword, they entred *Natolia* in an Hoſtile manner, with twenty thouſand Horſe and Foot. They defeated *Orcan*, the Governour of thoſe Parts, under *Bajazet*, in a pitch Battel, at *Iconium* near *Lycaonia*, and ſoon after did the like to *Caragozes*, and *Ally Baſha*, in the Plains of *Ancyra*; ſo that *Bajazet* himſelf was ſtartled at their Succeſs, as if *Tamerlane*'s Ghoſt were revived. And certainly, had *Iſhmael* furniſhed this Captain with Recruits, and given him ſuch encouragement as he deſerved, he had made a great progreſs againſt the *Turks*, but failing, he was forced to maintain his Men upon Plunder, which rendred him odious to the Country, and gave the *Turk* advantage againſt him; ſo that *Iſhmael*, to appeaſe the one and gratify the other, put *Techellis* to Death.

Bajazet makes Peace with *Iſhmael*.

This Storm being blown over, *Bajazet* obſerving that *Iſhmael*'s Prudence and Conduct might diſappoint his Deſigns of extending his Empire, both Eaſtward towards *Indus*, and Weſtward againſt the Chriſtians, thought it Wiſdom to make a Peace with the *Perſian*, that he might not be interrupted in his Deſigns. During this Peace, *Iſhmael* was as active as *Bajazet*, for he reduced *Shervan*, *Ghylan*, the Princes in *Hierac*, *Chuſiſtan*, *Kermoan*, and *Mairon*, that were not Feudatory to him; part of *Mezondram*, and made *Acen-Ally*, King of *Corazan*, an Homager to him. *Iſhmael* having thus enlarged his Dominions, directs his march, with all his Force, towards *Oxus*, and having paſſed that River, harraſſed and plundered all the Provinces, Cities and Towns, of that part of *Scythia*, as far as *Balke*, the Metropolis of the *Uſbeg-Tartars*; thus ſufficiently retaliating the *Tartar* for the Inroads and Diſturbances they had at ſeveral times given the *Perſian* to oblige the *Turk*.

Bajazet makes War on *Iſhmael*, who worſts him.

But hearing that *Bajazet*, at the importunity of the *Tartars*, was drawing towards the Confines of *Perſia*, with a great Body of Horſe and Foot, he retreated loaden with Spoil homewards. In a few days Intelligence was brought him, that the *Turks* were drawing towards *Rivan*, and that the *Meſopotamians*, under the *Turk*, had by treachery got into *Bagdat* and plundered it, uſing the *Perſian* Garriſon barbarouſly, by calling them Raffadins, or Hereticks, and cutting off the Noſes and Thumbs of many of them. *Iſhmael*, to revenge theſe Cruelties, fell into *Diarbec* with fifty thouſand Horſe, and harraſſed the *Turkiſh* Quarters to purpoſe, and engaging the Enemy near *Caramit*, had the better of them, and purſued them to the Banks of *Tigris*.

Bajazet poiſon'd, and *Selim* ſucceeds.

In the Year 1511. Heg. 891. *Iſhmael* again recovered *Bagdat* by the treachery of *Bamez-beg*, who for a certain Sum of Money let him in at a Poſtern. *Lemius* alſo, a *Portugueſe* Agent, was civilly treated by *Iſhmael* at *Caſhan*, and *Bajazet* was poiſoned by a *Jew*, and his Son *Selim* ſucceeded him. *Iſhmael* provoked him to make a War againſt him by harbouring *Morad*, or *Amurath*, his Elder Brother's Son, and putting him at the Head of ten thouſand Horſe; whereupon *Selim* in Perſon marched againſt him with an Army of 300000 Foot and Horſe, and paſſed the River *Araxis* by the help of their great Guns. *Iſhmael* having Intelligence of *Selim*'s approach, marched againſt him with thirty thouſand Horſe, and ſixty thouſand Foot (tho' the *Perſian* Annals allow not above half the number.) The Emperors and their Armies drew up in a large place, called the *Calderen* Plains, not far from *Coy*, and nearer unto *Naſſivan*, where for full 16 hours a moſt memorable Battel was fought, with equal fierceneſs and reſolution on both ſides, and tho' there was found ten *Turks* to one *Perſian* ſlain, yet for as much as there was no Chaſe, the Victory is not clear; but becauſe *Selim* immediately after the fight retreated into *Caramania*, it may ſeem to have inclined to the *Perſian* ſide. In his return he cauſed *Aladeules*, the King of *Anti-Taurus*, to be ſtrangled for his Correſpondency with *Iſhmael*, and his Nephew *Morad*. Soon after this, *Selim* with all his Force invaded *Ægypt*, and by the treachery of *Caer-beg*, the Sultan of *Aleppo*, vanquiſhed *Campſon Gaurus* the King of it, and made his Kingdom a Province, which the *Turk* holds to this day.

A Battel with *Iſhmael*.

Iſhmael's actions after.

In the mean time *Iſhmael* took care of his wounded Soldiers, and having recruited his Army, perfectly ſubdued *Mozendram*; and for the better preſervation of his Perſon and Honour, inſtituted a Life-guard for himſelf called *Coozel-Baſha's*, conſiſting at firſt of an hundred, but now of a thouſand Horſe, moſt of them *Georgians*, all well-experienced Men, and well-reputed for Arms, and for that reaſon they have extraordinary Pay. While theſe things were doing, *Bagdat*, by the treachery of *Mahomet A[illegible]*, was again delivered to the *Turk*, and *Sha-Tamas* was born at *Ardavil*; and in the five ſucceeding Years, *Iſhmael* had by ſeveral Wives 5 other Sons, *viz. Helcawn*, *Sermiza*, *Elias-beg*, *Sommiza*, and *Barben-cawn*.

Selim died, and *Solyman* ſucceeded.

In the Year 1520. *Selym* the Great *Turk* died, and was ſucceeded by *Solyman*. *Iſhmael* ſurvived him but five Years, and then left his Crown in the 20th Year of his Reign, and 40th of his Age, (being buried at *Ardavil* near his Anceſtors) to

Tamas.

Tamas, or *Tahamas-ſhaw*. In his time *Solyman* having gotten *Babylon*, reduced *Diarbec* and part of *Chuſiſtan*, with all the adjacent Countries that confine the North of *Arabia*, as far as *Balſora*. From hence the Great *Turk* had a fair proſpect into the *Perſian* Gulph, and began to think of Conquering all the Regions as far as *Indus*. To that end having built a great Navy at *Suez*, he ſent it under the Command of *Solyman Baſſa*, with ten thouſand Men, to ſurprize *Diu*. The *Portugueze* had private notice of the Deſign, and tho' ſecretly carried, had ſo well provided for them, that when the *Turks* came before it, they repulſed them with great loſs, and ſunk ſo many of their Ships, that not one third part of them lived to return; a Succeſs ſo grateful to the *Perſian* King and *Mogul*, that they Congratulated the Chriſtians for it.

Solyman invaded *Perſia*, and is routed by *Delementhes*.

Solyman was heartily vexed at his loſs and diſgrace, but thought fit to diſſemble it, and drawing up all his Horſe out of *Diarbec* and *Caramania*, he fell unexpectedly into *Media*, and entred *Tabriz* without oppoſition, where he cut down the Trees, ſpoil'd the Gardens, levelled the King's Palace, and other Houſes, to the ground, and carried away the rich Spoils to *Caramit* in *Diarbec*. *Tamas*, and the *Perſian* Nobility, who were ſufficiently incenſed by theſe Actions, was not idle in the mean time to find means to retaliate, and for that end ordered *Delementhes*, a Perſon who had many times engaged the *Turk*, with 6000 Horſe to follow them in the Rear, which he did, and much galled them; and when their Army was drawn up near *Betlis* to fight him, he fell into their Quarters in the Night with a mighty noiſe, and after a little reſiſtance put them into ſuch a Confuſion, that they fled where they could beſt to ſecure themſelves. In the purſuit, five Sanziacks, eight hundred Janiſaries, and twenty thouſand private Soldiers, were ſlain, forty Pieces of Cannon taken, and all his Seraglio of fine Women, on which Old *Solyman* doted. The two Baſſa's hardly eſcaped, and *Ebrahim* the chief fell under his Maſter's diſpleaſure, and was ſoon after ſtrangled. *Solyman* the next Year, in the Head of an hundred and fifty thouſand Men, re-enters *Perſia*; and *Sha-Tamas*, having had experience that the *Turks* had great advantage againſt them by their Ordnance, prevailed with the Vice Roy of *Goa* to furniſh him with 5000 *Portugueze*, good Fire-men, from their Garriſons, which they willingly granted, becauſe of the late Invaſion of *Diu* by the *Turks*. The *Portugueſe* brought with them a Train of twenty Pieces of Cannon, which in the fight ſo miſchieved the *Turks*, that the *Perſians* had the better, which they imputed to the good Services of the Chriſtians. *Solyman* by this miſchance was forced to draw back into *Natolia*, but hearing that *Muſtapha*, who had incurred his Father's diſpleaſure, had committed himſelf to the *Perſian*, he marches thither again with an Army of eighty thouſand Men, doing all the miſchief he could. *Tamas*, to prevent the ſpoiling of his Country, advanced with all the Force he had as far as *Erez*, where coming to an Engagement, the *Perſian* Horſe, not enduring the noiſe of Guns, forſook the Field and fled.

The *Perſians* worſt the *Turks*.

Muſtapha ſtrangled.

Muſtapha being thus left to ſhift for himſelf, fled to his Father's Tent, and beſought pardon for his Mother *Roxellana*'s ſake, but the inexorable *Turk* wanting bowels, ordered him to be ſtrangled, tho' his only Son then living by that *Venter*. Not long after it, Old *Solyman* died at the Siege of *Zigeth* in *Hungary*, and *Amurath* ſucceeded him, the Ambaſſadors from moſt parts Congratulating his Acceſs to the Crown. *Sha-Tamas* alſo diſpatched *Shaculy-chan* in an Embaſſy to *Conſtantinople*. The *Turks*, in the interim, took *Nicoſia* and *Cyprus* from the *Venetians*, which occaſioned a perpetual League with *Spain*, and all the Princes of *Italy*, and cauſed an Embaſſy to be ſent to the *Perſians*, to engage them to fall ſpeedily upon the *Turkiſh* Quarters; but *Sha-Tamas*, either through fear, or love of his own eaſe, would not yield to their deſires. Nevertheleſs, *Amurath* had no ſooner made an end of the *Cyprian* War, and recruited himſelf after the great defeat given him at the *Lepanto*, but he fell afreſh to quarrel with the *Perſian*. *Tamas*, not ſuſpecting his deſigns, was invading the *Uſbegs* Country, and happily took *Cabul*, but hearing that the *Turk* was about to make War upon his Country, forthwith retreated to the *Caſbyn*, where amidſt his Martial Conſultations and Proviſions, he was ſeized with Death, *May* 11. 1576. when he had reigned 50 Years, and lived 68. and was interred at *Ardevil* with all due

Amurath, who ſucceeded *Solyman*, invades *Perſia*.

Ceremony among his Royal Anceſtors. He left 12 Sons behind him, and 3 Daughters. *Mahomet* the Eldeſt claimed the Crown as his Birth-right, but could not have it, becauſe of the ſtrong Faction which ſtood for *Iſhmael* his ſecond Brother; ſo that he was forced to fly into *Georgia* for ſafety. In the mean time, *Peria-Conconna*, his Siſter, and *Sabamal-chan*, who headed *Iſkmael*'s Faction, put *Ayder*, and 8 other of the Sons of *Tamas*, to Death; and ſoon after, *Iſhmael* himſelf was ſerved the ſame Sauce by her. *Mahomet* at the ſame time was gathering Men in *Georgia* and *Curdiſtan*, to obtain his Right, and having got together 12000 Men, made his way by force to it.

Mahomet.

Mahomet was no ſooner arrived at the Throne, but he commanded his *Amazonian* Siſter's Head to be cut off, which was accordingly done, and preſented to him on a Spears Head. The *Turk* obſerving the advantage that theſe inteſtine Broils gave him, reſolves, with all the Forces he could draw out of *Natolia*, *Diarbec*, and the Parts about *Bagdat*, to make an entire Conqueſt of *Perſia*, and ordered *Muſtapha*, the cruel and perfidious Baſſa, to undertake the Task, which was ſo agreeable to his temper. *Mahomet*, in the interval, got himſelf quietly eſtabliſhed on the Throne, inſomuch, that upon the firſt News of the *Turks* approach, Sultan *Tocomac*, Governour of *Kervan*, an expert Soldier, and feared by the *Turks*, with a gallant Body of Horſe encounter'd them on the Frontiers of *Armenia*, in which Engagement, tho' he ſhewed a great deal of Reſolution, and routed the Van of *Muſtapha*'s Army, yet the wrathful Baſſa, advancing his whole Body, oppreſſed the *Perſian* ſo with numbers, that tho' they fought deſperately, they were forced to retreat, leaving 4000 of their Men dead behind them. *Muſtapha*, as a Trophee of this Victory, faced a Bulwark with the Heads of the ſlain; but finding upon a Muſter that he had loſt 40000 of his Men, by Fluxes and the Enemies Sword, he thought it beſt to retreat, but by the way being encouraged with a large Recruit of Men, led by *Menuchara* a *Georgian* Prince, he reſolved to re-enter *Shervan*.

The *Perſians* vanquiſhed by the *Turk*.

The *Perſians* rally and worſt the *Turk*.

Tocomac, the *Perſian* General, had no ſooner notice of it, but with a ſpriteful Party he beat up the *Turks* Quarters, as they lay diſperſed in a Valley by the River *Conac*, which being increaſed by ſome Rains, ſwept away above 10000 of them in the flight. Notwithſtanding this loſs, *Muſtapha* continued his march as far as the City *Erez*, which finding unpeopled, he put in a Garriſon of 5000 Men, moſt of them *Georgians*, and going on took *Samachy* without reſiſtance, and appointed *Oſman-beg* chief Commander in thoſe Parts, and then departed to *Erzerom* his Head Quarters. *Emyr-hamze*, *Mahomet*'s Eldeſt Son, having in the mean time got ſome Experience in the *Indian* War, ſo ill endured theſe Bravado's of the *Turks*, that he never left ſolliciting his Father, till he gave him a Commiſſion to raiſe what Horſe he could to oppoſe the *Turk*. This valiant Prince ſoon raiſed twenty thouſand Horſe, with which he proſecuted the Enemy ſo bravely and ſucceſsfully, that his fame ſpread through all *Aſia*, inſomuch that the *Turks* gave out that *Caſtriot* was revived, for he firſt defeated *Caytas* the Baſha, as he was a forraging, he took *Erez* by Storm, and ſent all the Cannon to *Casbyn* as a Preſent to his Father, he routed the *Becopence Tartar*, deſtroying moſt of their Men, and taking *Abdul-Cheray* their General Priſoner; he took *Sumachy*, making all the *Turks* Priſoners of War, and thus by his Valour broke in pieces the *Turkiſh* Army of ſeventy thouſand Men, ſo that for ſome Years after the Country had reſt.

Emir-Hamze's Victories

The *Turks* being thus happily expelled *Perſia*, *Emir-hamze*, loaden with Spoils as well as Victory, in triumphant manner returned into *Casbyn*, where he was embraced by the King, his Mother, and the young *Tartarian* Prince being in company. The *Tartar* had his liberty, giving his Parole to be a true Priſoner, but being allowed too much liberty with the Queen-Mother, the Sultans envied him, and cauſed him to be ſlain by the Rabble, which provoked the *Crim*, whoſe Brother he was, to joyn with the *Turks* to revenge his Death.

Amurath raiſes greater Forces.

Amurath, upon the News how formidable the Prince of *Perſia* was like to appear in the enſuing Spring, gave *Muſtapha* Orders to levy a greater Army, and proſecute the War with Fire and Sword, who accordingly drew together all the Cavalry the *Turk* had in *Syria* and *Armenia*, the *Greater* and *Leſs*, and a huge Body of Foot, and *Haſſan* Aga marched with the Van to *Teſlis*. *Emangoly-chan*, late Governour of *Genge*, was conſtituted General of the *Perſians*, and having notice of *Haſſan*'s intent to fall into *Shervan*, he took the advantage of a Paſs, and falling upon them, ſlew many of them, and ſcattered the reſt in the Woods, in which, while the *Perſians* ranged to find the Enemy, the *Turks* laid an Ambuſh for them at their return, and having ſlain many of them, took the *Perſian* General Priſoner, whom they kept under a Guard at *Erzerom* three Years, and would neither accept an Exchange, or Ranſom. *Haſſan* being now Maſter of the Field advanced to *Teſlis*, but was unexpectedly charged by the *Perſians*, and that with ſuch admirable Courage, as the *Turk* was put to flight, and their Train and Treaſure taken; *Haſſan* eſcaped on his Horſe, and carried *Muſtapha* the News of his defeat, which the Old Man was ſo angry at, that he had ſtrangled him, had not his taking the *Perſian* General, and his relation to the Grand Viſier, pleaded for him. This Diſaſter, and the approaching Winter, cauſed *Muſtapha* to ſend his Army into their Winter-Quarters, and ſo gave the *Perſians* time to prepare againſt the Spring.

The *Perſian* Gener. taken Priſoner.

Muſtapha diſcharged.

Amurath having notice of theſe actions of his Favourite, which were miſrepreſented by his Enemies, ſummoned him to *Stambul* to anſwer his Miſcarriage, and was diſcharged his Command, and had loſt both his Life and Eſtate, had not the Sultana interceded for him. *Sinan-Baſſa*, his Enemy, was put into his place, which vexed him moſt of all. During this, the differences between the two Brothers, *Emir-hamze* and *Abbas*, Governour of *Aſia*, hindred the neceſſary preparations againſt the *Turk*, ſo that the *Perſian* King choſe rather to ſue for a Peace by *Maxut-chan*, his Embaſſador, with a rich Preſent, than proceed in the War. The Grand Seignior accepted the Preſent, but would not grant a Peace, unleſs the *Perſians* would deliver *Tabriz*, *Casbin*, and all *Sheirvan*, to the *Turk*, to be enrolled for ever in the Provinces under that Crown. The Embaſſador would give no anſwer to theſe Demands, till he had conſulted with his Maſter, and therefore ſent to *Mahomet* about them, who called his Chief Officers together to conſult about it, and the reſult was, *That no inch of Earth ſhould be given the* Turk *more than he could gain by his Sword.* To prevent which, a great Army under the Victorious *Emir-Hamze*'s Command was ſent to the Frontiers of *Armenia*, and *Abbas-Miaza* was ſent with another Army to proſecute the War againſt the *Mogul*. *Maxut-chan* was immediately called home, and that he might diſcover their Order and Force, he paſſed through the Enemies Quarters, of which he gave ſuch a ſatisfactory account, when he came to *Casbyn*, that he was made Treaſurer, a place both honourable and profitable; but *Emir-chan* made him ſo uneaſie in it, that he was forced to withdraw, and live privately at *Van*, rather than run any further hazards. *Emir-Hamze* drawing towards the *Turk*, entruſted *Simon-chawn* the *Georgian*, and *Tocomac* the *Perſian*, with part of his Forces, and ſo formed an Ambuſcade, into which they drew the *Turk*, and ſlew above 6000 of them; the reſt eſcap'd to *Erzerom*, the Baſſa's head Quarters, a Town of great ſtrength as well by Nature as Art, and very convenient for Proviſions, which may be brought thither from the Midland, *Euxin* and *Caſpian* Seas. It ſtands in *Cappadocia*, called of Old *Leuco Syria*, and has *Armenia* on the one hand, which the River *Euphrates* divides from it and *Caramania*, which comprehends the ancient *Lycia*, *Cilicia*, *Pamphilia* and *Cana*, on the other. *Amurath* reſolving to fall into *Hungary*, and thoſe parts, thought fit to call home *Sinan-Baſſa*, to adviſe with concerning that War, and conſtitute *Mahomet-Baſſa* (Nephew to *Muſtapha*, who was lately dead of Age and Grief, but ſome rather think of Poyſon) General againſt the *Perſians*. At *Erzerom* he muſter'd all his Army, and the Seaſon being good, marched without reſiſtance as far as the River *Araxis*, burning and doing all the Spoil he could. *Emir-Hamze*, by his Scouts, having notice of their number and approach, ordered *Tocomac*, with *Simon* the *Georgian*, to ſtop their progreſs as well as they could, till he came up with his Horſe and Dragoons. Theſe Captains falling upon the *Turks*, in their march towards *Tauris*, made good their ground, till they were over-powered by *Mahomet*'s Horſe, but when he underſtood by ſome Priſoners that the *Perſian* Prince was at hand, he thought beſt to retreat; which, when the Prince knew, he purſued them with unuſual haſte, and killed many in the Rear, as well as cauſed many to be drowned in their paſſing the Rivers haſtily, but he continued his march till he came to *Teſlis*.

The *Perſians* renew their preparations againſt the *Turk*.

Erzerom deſcribed.

The *Perſian* Embaſſador affronted at *Conſtantinople*.

Ebrahim-chawn, Embaſſador of the *Perſian* King at *Conſtantinople*, received an Affront at the Circumciſion of his Eldeſt Son *Mahomet* without any provocation, being made a Priſoner ſome time, with his Attendants; but *Mahomet* would take little notice of it, becauſe the difference between his Sons threatned a Civil War, but at length they were ſeemingly reconciled. In the mean time, *Ferrat-chan* was made General of the *Turks* againſt the *Perſians*, but doing little in that place, he was called home, and *Oſman-Baſſa* put in his place. This *Baſſa* was quick of Reſolution, and by Nature fierce, and having raiſed an Army of 200000 Horſe and Foot, with a ſuitable Train of great Guns, he marched thro' *Media*, almoſt in view of *Tauris*, deſtroying his Enemies Country all along. *Emir-Hamze*, the *Perſian* General, knowing the way of the *Turks* March, advanced againſt them with 10000 good Horſe, the King following with 80000 Horſe and Foot more. The *Perſian* Prince encamped five Leagues Southward of *Tauris*, and expected the coming of *Oſman*, who knowing that the *Perſian* Horſe were afraid of his Artillery, continued his March with a reſolution to try the Fortune of a Field, but *Oſman* not thinking it convenient to have *Tauris* on his Rear, reſolved to take it; *Alliculi-chan* was the Governour, and before he could ſummon it, made ſuch a ſally out upon the *Turks*, as killed them a thouſand Men, and retreated with a little loſs. This unexpected Aſſault ſo enraged the *Turk*, that he haſtened his approach, and having planted his Batteries, plaid ſo furiouſly upon the Wall, that he made a large Breach, and reſolved to ſtorm it. The beſieged ſeeing their Danger, beat a Parley, and ſurrendred the Town upon Conditions; but ſome of the Inhabitants breaking them by making away ſome Janizaries in a Stove, the incenſed *Turk* gave the Souldiers liberty to plunder, kill, raviſh, and do what they liſt, ſome few only eſcaping to the *Perſian* Camp. *Emir-Hamze* hearing the Relation of this Cruelty, drew out a Party to be revenged of the Enemy, but *Oſman* ordering a Party of 40000 to beat him back, he was forced to retreat, yet ſo gradually, as ſhewed their Valour.

Perſians conquer the *Turks*.

Soon after this, the whole Armies engaged, but the *Perſians* had the better, tho' the *Turks* by the help of their Artillery, made a pretty good retreat, leaving 6000 Men to the Mercy of the Enemies Sword. Upon this the Prince ſent a Defiance to the *Turkiſh* Army, which was accepted by the General, and within five Days both Armies drew out for Battle. The *Turks* were upwards of 100000, but the *Perſians* ſcarce amounted to half the number, yet being ſuperiour in Reſolution, gain'd the Victory; for after that the *Baſſa* of *Caramit* fell by *Emir-Hamre*'s Sword, the *Turks* gave Ground, and fled in Confuſion, having loſt the *Baſſa* of *Frepizorid*, ſix *Sanziacks*, and 20000 Common Men, and had not the *Turks* great Guns diſordered now and then the *Perſian* Horſe, they had obtained a compleat Victory: The *Perſians* loſt 2000. *Oſman* was ſo daunted with this ill ſucceſs, that having conſtituted *Giaffer-chan* Governour of *Tauris*, with whom he left a good part of his Army to defend it, he went himſelf to *Erzorom*, to recover his Flux, but tho' *Ozman* got thither ſafe with his Guard, yet his Foot and Train, which marched ſlower, were interrupted, for the *Perſian* Horſe croſſing a nearer way, got before them, and ſkirmiſhing with them, ſiezed their Caravan near *Sancazan*, which conſiſted of above 6000 Camels and Mules, with valuable Burthens, beſides *Aſmegoes* loaden with Proviſions, and when the whole Army came up, there followed another Engagement. The *Turks* (tho' *Oſman* was abſent) were ſo well commanded, that tho' the *Perſians* had the better, yet 'twas with a conſiderable loſs, which they requited with the death of 20000 *Turks*. The Relation of this Encounter being carried to *Ozman* by the reſt of the Army, was ſo unpleaſant to him, that it increaſed his Diſtemper, inſomuch that within a few Days after he gave up the Ghoſt, leaving the Conduct of his ſhattered Army to *Baſſa Sinan Cicala*, a good Souldier, and Wary, who when he came to take his Muſters at *Erzerom*, found that *Ozman*, one way or another, had loſt 100000 Men. The *Perſian* Prince after theſe Victories, returned to *Casbin*, where he was embraced by his aged Father, honoured by all the Officers, and little leſs than adored by the Vulgar; but after a little Refreſhment he was uneaſy that *Tauris* was in the Hands of the *Turk*, and became reſtleſs in his Deſires to reduce it, but was retarded in his Preparations by the envious Contrivances of his Brother *Abbas* and *Alliculy-chan*, who ſought all ways to eclipſe his Glory, and leſſen him in his Father's Opinion, whom popular applauſe had made jealous of him. In the mean time *Ferrat Baſſa*, with a great Army was marching with a ſeaſonable Relief to *Tauris*, which was diſtreſſed for Victuals, and by Fluxes and other Diſtempers, had loſt moſt of its Men. The *Perſian* King rous'd by this Advance of their Enemy, by the Perſwaſions of his Son *Abbas*, Commiſſioned *Alliculy-chan* his Friend, to go Commander in chief of an Army diſtinct from that, which his Brother *Emir-Hamze* commanded. *Emangely-chan* alſo brought another Army of 15000 Men, but the Prince had the Command of the main Body of Horſe and Foot, being about 40000 more; *Emangely-chan* by the Prince's Order, went to diſcover the Enemy, and in beating up the Quarter of *Zeynal-chan* near *Salmas* did ſome execution, but as ſoon as *Alliculy-chan* ſaw the *Turkiſh* Army, he drew back, and ſuffered the Enemy to proſecute their way, harraſing the Countrey. This treacherous Act of *Alliculy-chan* angred the Prince, but it not being ſeaſonable to puniſh it, he reſolved to join with *Emangely-Chan*, and encounter the Enemy, to which he was encouraged by the coming in of many Volunteers to ſerve him; but when he was in the height of his hopes, he was ſlain by an Eunuch as he lay ſleeping on a Pallat in his Tent, ſuppoſed to be done by the Procuration of his Brother *Abbas* and *Alli-culy-chan*. His death over-whelmed *Perſia* with Grief, and made the Army heartleſs and careleſs to give any further reſiſtance to the *Turks*, who rejoiced at it as their greateſt Fortune. The Eunuch was ſeverely tortured, and the Prince buried at *Ardevil*, with all Demonſtrations of Love, *Sept.* 1586, near the Dormitories of his Anceſtors. *Ferrant-chan* the *Turkiſh* General, tho' he could not but ſhew ſome Tokens of Sorrow for this Noble Heroe's Death, yet let not the Advantage ſlip, but in a ſhort time made tributary the whole Territory about *Garge*, and forced a Contribution from *Sumachy* and all the Country betwixt that and the *Caſpian-Sea*. When he was called home, *Cicala-Baſſa*, Governour of *Bagdat*, had the Charge of the *Perſian* War. He waſted the *Median* Territories, which ly upon the Frontiers of *Diarbec*; but while *Mahomet* was ſending *Emangely-chan* to oppoſe his Motions, *Amurath* the better to proſecute his intended War in *Europe* by his Embaſſador, deſired a Ceſſation of Arms with the *Perſian*, who willingly condeſcended to it, that he might have leiſure to enlarge his Dominions towards *Candahor* and *Chabul*, and ſo Articles were agreed and ſigned. *Hoſtage* exchanged, and the Peace proclaim'd at *Conſtantinople* and *Casbyn*. *Shaw-Mahomet*, tho' he had quiet in his Dominions, yet had none in himſelf; *Emir-Hamre*'s Death was ſuch a wound to him, that he never had one joyful Day more, but ſpent his Life in continual Sorrow, till Death put an end to his diſconſolate Life, in the Year of our Lord 1597, and with all due Ceremony he was buried among his Princely Anceſtors, and in his place

Alliculy-chan's treachery.

Emir-Hamze ſlain.

Abbas. *Vide* his Effigies, *Fig.* 7.

Abbas his Son was proclaimed, and ſoon after crowned King. Embaſſadors from moſt parts of the World came ſoon after to congratulate his Acceſs to the Crown, and among the reſt, one from *Turkey*, who after that Complement, threatned *Abbas* with War, unleſs he ſent his Son, or ſome eminent Hoſtage inſtead of the King's Nephew lately dead, which being done before the other Embaſſadors, was ſo highly reſented by *Abbas*, that he commanded him to be gone, at which when the Embaſſador ſmiled, the King fell into ſo great a Paſſion, that he ordered him to be ſlain, but this Sentence was after recanted, and being chabucht on the Soles of his Feet, he was ſent away miſerably diſgraced, partly to ſhew how little he valued the *Turks* Amity, and partly to be quit for the uncivil Treatment a *Perſian* Embaſſadour had not long before received at *Conſtantinople*. *Amurath* looked upon this uſage of his Embaſſador as an high Affront, and blaſpheming, breathed Defiance, vowing the utter Extirpation of the *Sophian* Race; but being forced to reſpite his revenge by reaſon of ſome Wars in *Hungary*, and Troubles at home, he died before the Execution of it, in 1604, leaving *Sultan Achmar* his Succeſſor, who being intent upon the entire Conqueſt of *Hungary*, ſtill put off the Revenge he deſigned the *Perſian*. *Abbas* by this means had time given him to compaſs his Deſigns, and underſtanding that *Cicala-Baſſa*, Governour of *Babylon*, was abſent from his Charge in proſecution of *Zel-Ally*, a famous Relet, he cauſed ſeveral of his Officers, and *Coorel-Baſha's*, to be diſguiſed like Merchants, and under colour of a Caravan, enter *Bagdat* unſuſpected; and ſo he became Maſter of the place. *Cicala* having made his Peace at Court, levied a powerful Army to invade *Perſia*, and beſiege *Bagdat*, and accordingly the next Spring fell upon the Viceroy's Quarters at their Van, ſpoiling all he could; but young *Emir-Hamze-Mirza*, *Abbas*'s eldeſt Son, with a ſtrong Body of Horſe, meeting him about *Sultany*, gave him ſuch a blow, that in a little time after all the *Perſian* Provinces were cleared of the *Turks*. *Sha-Abbas* now moving in his own Orb to ſecure himſelf the better againſt his Inveterate Enemies, ſent his Embaſſadors to the Emperour *Rodolphi* King of *Poland*, *Henry* IV. of *France*, *Philip* IV. of *Spain*, and the *Venetians*, to engage them in a joint League againſt their common Enemy, which *Achmat* knowing, ordered *Naſſaph Baſſa* to raiſe all the Forces he could, to find him work at home; but before either

A *Turkiſh* Embaſſador treated ill by the *Perſians*.

the Peace or Levies for War were finiſhed, a Peace upon the *Perſian* Embaſſadour's arrival at *Conſtantinople*, was concluded between theſe two *Mahometan* Princes, and *Sha-Abbas* to confirm it, ſent an extraordinary Preſent in 1613, to the Port, that he might more vigorouſly proſecute the War with the *Great Mogul*. But this Peace did not hold long, for in 1618. the *Turk* by way of *Erzerom*, entred *Media*, the Army being commanded by *Ally-Baſſa*, and taking the Opportunity of the King's abſence, plundered as far as *Ardevil*, but *Emir-Hamze* advancing toward them, they came to truce again, but ſoon broke it, and inſiſted upon the reſtitution of *Tauris*. The Command of the *Perſian* Army was given to *Emir-Hamze*, whom the *Turk* dreading, thought not fit to proſecute the Deſign, and ſo things ſeemed quiet, till *Abbas* having ſettled things about *Larry-Joon* in *Mozendran*, returned home, and then taking the Opportunity of the *Turks*, he engaged in *Hungary*, in the Head of a Royal Army, he cleared *Shervan*, expelled their Garriſons, cut off *Van* and *Teflis*, and ſoon after maſtred *Balſora* and *Bagdat*, which ſoon revolted to the *Turks* again. In the mean time the *Perſian* having Intelligence from *Conſtantinople* of the Deſtructions there, *viz.* That the *Janizaries* had upon ſome ſlight diſguſt put to death *Oſman* and *Muſtapha*, the *Grand Seigniors*, which they had made ſucceſſively, and *Delavir* the *Grand Viſier*, and ſet up *Achmat* the Brother of *Ozman*, invaded *Diarbeck* with a conſiderable Body of Horſe and Dragoons, and having bribed one of the principal Officers of *Bagdat*, got entrance into it, and became abſolute Maſter of it, before the Governour *Achmat* had any notice of it for prevention. *Achmat* hereupon not daring to truſt himſelf in it, withdrew with a ſmall party of Horſe into *Karaniania*, and by his Flight ſo diſcouraged all he left behind, that not only the whole Province, but all the Countries from *Armenia* to *Balſora*, ſubmitted to the *Perſian* Crown, the *Turks* which ſtood out, flying either into *Syria* or *Egypt*. The *Perſian* after this Succeſs caſt his Eye upon *Natolia*, where *Abaſſi-Baſſa* commanded, who being obnoxious for his late Revoult, the *Perſian* doubted not but he would eſpouſe their Cauſe for his own Defence, but trying him to deliver *Erzeram* to them, the crafty *Turk* ſlew a thouſand of their Men that they ſent to take Poſſeſſion of it, for which being pardoned his former Revoult by the Port, and preſented, he fell into *Diarbe*, with all the Force he could make, and gave a conſiderable defeat to a Body of *Perſian* Horſe and Foot: *Abbas* was ſtartled at this Loſs, and having notice of his ſtrength, and of his ſummoning *Bagdat*, he marched in the Head of 30000 Horſe toward the Enemy, who were double his number. The *Turks* neverthelcſs reſolved to continue the Siege, and entrenched themſelves, but *Abbas* giving them continual Alarms, and cutting off their Proviſions, reduced them to ſo great want, that the *Turks* were forced to draw off, and retreat with Bag and Bagage; but being retarded by their Artillery, the *Perſians* purſued them ſo for ten days, that few of them eſcaped. *Abbas* having thus ſufficiently ſcoured the Weſtern Parts, was no leſs active and ſucceſsful elſewhere; for the next Year, *viz.* in 1627, by the good Conduct of *Kurchiki-cawn*, he drove out the *Turk* quite out of *Shervan* and *Gheylan*, and reduced the Natives to their Allegiance; and by *Tamas-Cooli-beg*, likewiſe annexed *Mozendram* to his Empire, having done the like a little before by *Lolla-beg* and *Emangely-cawn*, in the Conqueſt of *Lar*, *Karmaen*, *Ormus*, *Chaſiſtan*, *Macron*, and part of *Ajaman* and *Jazirey*, ſo as he extended his Territories, one way from *Indus* to *Euphrates*, and the other from the *Caſpian-Sea* to *Babylon*, and the Gulph of *Perſia*, which to this Day the *Perſians* keep to the Honour of their Crown and Terrour of their Neighbours.

His Death.

Abbas having attained to this great Degree of Glory, died in the Year 1628, *Heg.* 1008. after he had lived 80 Years, and ruled 43. His Body was carried from *Casbyn* to *Ardevil*, and there buried by his great Anceſtors, and he was ſucceeded by *Sophi* his Grandſon, who after 15 Years reſigned the Crown to his Son *Abbas* now reigning, and was buried at *Coom*.

Sophi Abbas now reigning.

Chap. XXIV.

Some Miſcellaneous Obſervations relating to the Perſons, Cuſtoms, and Manners of the Perſians.

Miſcellanies.

SIR *Tho. Herbert* having given us a brief Account of the Revolutions of State amongſt the *Perſians*, under a long Succeſſion of Kings, has added many other uſeful Obſervations concerning the Country and People, which not being capable to be reduced to one Head, are ſet down promiſcuouſly in this Chapter, which follow in order.

The Names of *Perſia*.

Concerning the Names of the Country, he obſerves, that no Nation hath had greater Changes and Variation of Names than *Perſia*; for in *Nimrod*'s days 'twas called *Chuſa* or *Cuth*, from *Cuth* the Son of *Cham*, who firſt ſettled here: In *Chedarlaomer*'s days it bore the Name of *Elam*, from *Elam* the Son of *Sem*, from whom the People were called *Elamites*, or *Elemæans*; and ſo it continued, till *Daniel*'s time, after which 'twas called *Perſia*, from *Perſeus* a *Grecian* Hero, who ſubdued it. In the time of the *Parthians* it was called *Arſaca*, from *Arſaces* their beloved King, and after that *Artea*, which ſignifies, a Noble Country; and from thence many of their Kings and Nobles have taken their Fore-names, as *Artaxerxes*, *Artabanus*, &c. Since the *Tartars* over-running it as they did the greater part of *Aſia*, have named it *Chorſoria*, or rather *Corſace*. The *Arabians*, *A. C.* 598, when *Mahomet* ſubdued it, named it *Saracenia*, and the *Turks* *Azenica*. The *Scythians* call them *Aramei*; and *Siet Gunet*, the late Reformer of the *Alchoran*, calls it *Ernizaria* and *Agamia*.

Extent of it.

The Empire is bounded with *India*, *Arabia*, *Meſopotamia*, the *Caſpian* and *Perſian* Seas. From *Candahor* to *Babylon* it ſtretches 440 Pharſangs, or 1320 Miles *Engliſh*; and from *Jeiphy* near *Van* in *Georgia*, to Cape *Gwadir* in *Gedroſia*, 496 Pharſangs, or 1488 Miles *Engliſh*; ſo that the Compaſs is not much leſs than 4000 Miles. The North and Eaſt part of the Country is fertile in Graſs, Corn and Fruit, becauſe the Air is temperate, and the Soil often moiſtened with Showers; but the South and Weſt (except by the Rivers) is barren, mountainous, and ſandy, having no Rains, becauſe of the Heat, yet habitable, by reaſon of the frequent Breezes. In general, the Air is healthy, tho' with variety of Heat and Cold.

The Revenue of the *Perſian* Kings.

Concerning the Revenue of the Kingdom, he ſays, he muſt go upon conjecture much, becauſe nothing is more uncertainly computed than the Wealth and Revenues of a Kingdom. The publick Revenue of old was 14560 *Euboic* Talents, which being brought to the King's exchequer in different ſorts of Coin from the ſeveral Provinces, was melted down as ſoon as it came in, and kept in Earthen Pots till there was occaſion to coin it for uſe. The preſent Revenue of the *Perſian* Kings is about 357000 *Tomans*, which amount to about 1190000 *l.* Sterling, which is raiſed from Raw Silk, Cottons, and Cuſtoms. The *Perſian* King thinks no way of getting Money diſhonourable, for he ſends into the Market every day Preſents of Fruits and Flowers in moſt of his Towns, which are 90 walled Towns, and above 40000 Villages, who muſt return his Preſents with Gold and Silver. He has alſo his Factors abroad, who return, ſome in three, others in five or ſeven Years, giving no Account to their Commiſſioners; and if they return empty, they are rarely ſent again, but if they come full fraught to his liking, he rewards them conſiderably, and further gratifies them with a Woman out of his Haram, an Horſe, a Sword, a Mandil, or the like. The Caravans from *Indoſtan*, *Tartary*, and *Arabia*, which paſs thro' his Country every Year, importing Merchandizes of ſeveral ſorts, as *China* Ware, Sattens, Silk, Stones, Drugs, &c. he finds Arts to make them ſell at moderate Rates, or pay well for their ſafe Paſſage, and ſo gains greatly by them. Beſides, by a Cuſtomary Law, he makes himſelf Heir to whom he pleaſes, ſo that few rich men die, but he claims

their

Preſents to the King.

their Goods, and none dare diſpute his Title. He alſo, according to an Old Mode, expects Annual Preſents from his great Men. The Duke of *Shyraz* lately preſented the King with as many Larrees as were valued at 465000 Florins, 49 Goblets of Gold, 72 of Silver, and other Rarities, too great a Preſent for a Subject, unleſs he were allowed all ſiniſter ways to enrich himſelf, as indeed the Governours under all *Mahometan* Princes are. They have Power of Life and Death, condemn without hearing, and diſpoſe of Mens Perſons and Eſtates, when, and how they pleaſe, without any reſpect of Right, eſpecially at Mens Deaths, where there is any conſiderable Eſtate, their Heir ſeldom coming in for above a tenth part.

The *Perſian* King how honoured.

Concerning the Honour they give their Kings, it is the Cuſtom in *Perſia*, as in other Eaſtern Countries, to adore their Kings; ſo that as of Old, they are not content to reverence him as the Image of God, who by his Infinite Wiſdom governs and preſerves all things, but they have a more tranſcendant Opinion and Eſteem concerning him, making proſtrations before him, not preſuming to ſpit or cough in his preſence, nor pull their Hands out of their Sleeves, ſwearing by his Head, bowing their Bodies, and kiſſing the Letters that come from him. In his Titles, to illuſtrate his Perfections, they give him the Epithets of *Amber*, *Nutmegs*, *Roſes*, and ſuch ſweet Odours and Flowers as moſt delight the taſte, which is the Cuſtom all over the Eaſt. But tho' in Government they are Abſolute, yet they have certain Ordinances of War to be obſerved by their Soldiers, and a kind of Imperial Law to be obſerved by all other Subjects, which they have Judges conſtituted to Execute; but they are ſo ſubject to Bribery, unleſs in Criminal Matters, that little Juſtice is to be had from them.

His Laws in War and Peace.

The Nature of the People.

Concerning the Natives, they are generally well-limb'd and ſtraight; the Zone they live in makes them tawny, the Wine cheerful, and Opium luſtful. The Women paint, the Men love Arms; all affect Poetry. They allow no hair in any part of the Body, but on the upper-lip, on which they wear it long, thick, and turning downward, and on the top of their Heads, by which they are made to believe, that their Prophet, at the Reſurrection, will lift them up into Paradiſe; which fancy, 'tis probable, that *Mahomet* took from *Ezek.* 8. 3. where the Angel took up that Prophet by a lock of his Head, and lifted him up between the Earth and Heaven, or from the *Apocryphal* Story of *Bel* and the *Dragon*, where *Habakkuk* the Prophet is ſaid to be tranſported from *Judæa* to *Babylon*. The reſt of their hair is ſhaven off, and made incapable of growing again by the Oil *Dow ic*, with which they anoint the places thrice.

Their Turbants.

Inſtead of hair, they wreath about their Head rolls of Linen, not only for Ornament, but to keep off the heat of the Sun, and defend them againſt an Enemy. Moſt of the *Perſians* wear them large and valuable, tho' for the moſt part of Callico; and the Superiour ſort of People have them woven with Silk and Gold, with a rich Fringe or Taſſel of Gold and Silver at the end, but at Feaſts and Entertainments they wreath them with Ropes of Orient Pearl, and Chains of Gold ſet with precious Stones of great value. The Kings differs not in ſhape from others, but in bigneſs only, or in that he ſets it more upright. With theſe Turbants the *Perſians* go covered all day long, and are never uncovered neither at their Devotion, nor in the King's Preſence, becauſe they count it irreverent, but they expreſs their complaint by bowing the Head towards the Heart; but both theſe Cuſtoms were brought in among them by *Mahomet*, for before they wore a kind of Hat, or Bonnet, and uncovered their Heads both at Salutations and in the Preſence of their Superiours, and ſtill to Strangers they will do it ſometimes in Complaiſance.

Their Garments.

They wear no Bands, and their Alijoba, or upper Garment, is of Callico ſtitch'd with Silk, or quilted with Cotton. The better ſort have Garments of Parti-coloured Silk, as Sattin, or Gold and Silver Chamlots, for variety beſt pleaſeth them. No colour diſpleaſeth but black, and that is never worn, becauſe 'tis diſmal and unlucky. Their Sleeves are ſtraight and long, their Veſt reacheth to their Calves Their Waſtes are girt with Saſhes of Silk and Gold eight Yards long. They diſtinguiſh the Qualities of thoſe that wear them; Dukes and Nobles have them of Gold, Merchants and *Cooſalbaſhes* of Silver, and Men of inferiour Rank of Silk and Wool. Their Shirts are of Cotton, their Breeches have Stockins ſewed to them, which do not touch their Shoes by two inches. Their Shoes are of Leather of any colour they fancy, well-ſtitched, ſharp-toed, with high heels, and nailed, yet not for Thrift, but out of Cuſtom. Over their other Cloaths they throw a ſhort Cloth-Coat without Sleeves, and furred. In hot Seaſons they wear Stockins of *Engliſh* Cloth heeled with Leather.

Their Rings.

Gloves, or Gold Rings, are of no eſteem among them, but they wear Silver Rings in Memory of *Mahomet*'s Ring left to *Oſman* for a Legacy. They paint their nails and hands with Alcanna, or Chaa-powder, into a red or tawny colour, not for Ornament only, but to cool their Liver, and make them Valiant in War. In their Rings they wear Agats or Torquoiſes, which of all Stones they moſt delight in; but ſome have their Name, or a Word out of the Alcoran engraven in them.

Their Learning and Writing.

Their Mullah's, or Clergy, engroſs all their Learning. They write with a Reed or Cane, and kneel uſually while they write for their eaſe. Their Paper is very gloſſy, made of Bombaſine, or Cotton-wool; and dropping Oiled colours, they vein it like Marble.

They waſh with great Ceremony, joyning the tops of their Fingers together of both Hands, both before and after Meals, and upon their natural Occaſions, which they do in the open Streets.

Their Swords are more bending than the Faulchions, of pure Metal, and as ſharp as a Razor. The Hilts are without Wards, being of Gold, Silver, Horn, Ivory, Steel and Wood.

Perſian Scimitars worſhipped.

Their *Perſian* Scimitars were of that value with the *Scythians*, that they worſhipp'd them as the Image of *Mars*. Their Scabbards are of Camels Hide, cover'd with Velvet on Feſtivals, and embroidered with Gold, or ſet with Stones of price. They ſeldom ride without Bows and Arrows, the Quiver being wrought or cut very artificially, the Bow ſhort, but ſtrong, and the Arrows long and well-headed. They are ſo Skilful in Archery, in which they chiefly delight, that they can in a full career cleave an Orange hung croſs the Hippodrome, and when paſt the Mark, turn backward and hit the reſt. They have ſome Cannon mounted at *Lar*, &c. but ſeldom uſe them in Field-Services, which give the *Turks* ſome advantage againſt them, who diſorder the Horſe with the noiſe of them. The uſe of Muskets they have learn'd from the *Portugueſe*, and uſe them well.

Their Women, their Perſons and Garb. *Vid. Fig.* 18.

The Women veil their faces in Publick. They are low in ſtature, but ſtraight and comely, more corpulent than lean, for Wine and Muſick fatten them. Their complexion is naturally pale, but by painting made ſanguine. Their hair is black and curled, their forehead high, skin ſoft, eyes black, have high noſes, pretty large mouths, thick lips, and round checks. Honeſt Women, when they go abroad, ſpeak to none in their Way, nor unveil their faces. When they ride, the vulgar ſort ſit aſtride, but the better ſort are mounted on Camels in Cages of Wood covered, to keep them from the ſight of Men. Their hair curling hangs about their ſhoulders, and ſometimes is plaited in a Cawl of Gold; round about their face and chin they uſually hang a Rope of Pearl. Their Eye-lids are coloured Coal-black with a fine Pencil dipped in the Mineral called *Alcohole*. They make alſo Incitions in their fleſh of various ſhapes and forms. Their Noſes are hung with Jewels of Gold ſet with rich Stones, and their Ears have Rings of equal luſtre. They beautify their Arms, Hands, Legs and Feet, with painted Flowers and Birds.

Their Courtezans.

The Courtezans have a more laſcivious Carriage and Dreſs: They force every Limb to dance to the Muſick of their Bells and Timbrels. Their Habit is looſe and gawdy, reaching to their mid-leg; under which they wear Drawers of Cloth of Gold Sattin, tiſſued Stuffs, or coſtly Embroidery. They are of no Religion, look temptingly, drink notably, and covet Men and Money greedily. The Queen is preſent with the *Perſian* Kings at Supper and Banquets, but withdraws when the King is diſpoſed to drink and be merry, for then they call for Muſick and Courtezans, for they will not have their Wives privy to their Intemperance and Wantonneſs.

The Arms of *Perſia*.

Concerning the Arms of *Perſia*, *Zenoras* obſerves, that in Old time they bore *Luna*, an Eagle crowned with the Sun, diſplayed *Saturn*, which continued till *Cyrus* altered it, who, as *Xenophon* tells, had an Eagle hung upon a long Spear for his Arms. The *Perſian* Kings bore this Eſcutcheon, till *Craſſus* was overcome by them, and then they Blazoned a Sagittary on their Royal Standard, with which alſo their Doricks (a piece of Gold of 15 *s.* value) was ſtamped. But *Mahomet*, when he had conquered them, and introduced his Law, rejected theſe, and choſe a *Mercury*, and Moon Creſcent, with this Impreſs, *Totum dum impleat Orbem*, alluding to an Univerſal Command, which the *French* have tranſcribed and ſet up at *Fountainbleau*. *Siet Gunet* changed *Mahomet*'s Coat, and invented a new Enſign, *viz.* *Venus*, a Lion couchant Sol; the Sun Orient in his face of the ſame, Minted alſo in their Braſs Medals, and as a tye of Amity accepted of by the

Great Mogul and Neighbouring Princes. The *Cawns*, *Beglerbegs*, *Sultans*, *Aga's*, *Soldagars*, and *Cooſel-baſhes*, bear no Coat-Armour, becauſe they are ignorant in Heraldry. No honour among the *Perſians* is Hereditary. They are very civil and noble in their Natures to one another, and eſpecially to Strangers. They allow Degrees among themſelves, and other People, and give a due reſpect to Men according to their Degrees, Quality, or Merit. In Old time they were Idolaters, as the Governours now are, but by converſing with the *Greeks* and *Romans*, they have learned to worſhip Dæmons, and aboliſhed their Cæleſtial Worſhip. They honoured *Jupiter*, or the Firmament, but *Apollo*, *i. e.* the Sun, or *Mythra*, they moſt affected, and to him they dedicated many Temples, and giving him Titles of Honour, Health and Gentleneſs. The Moon alſo they had no adoration of, ſuppoſing her to be eſpouſed to *Apollo*, and ſtill they bowed to it at its firſt appearance. *Venus* alſo had equal Reverence, and the Elements were Deify'd. Reward and Puniſhment came alſo into the Number of their Gods. *Zertooſt* commanded them to keep a continual Fire, not to be fed with common Fuel, nor kindled with profound Air, but ſuch as ſhould come from the Beams of the Sun, Lightning, Flints, or the like. The Water they would not allow to be corrupted with dead Carkaſſes, Dirt, Urine, or any other naſty thing. Images they little regarded, performing their Religious Rites in Groves, Mounts, or other places. Their Marriages they commonly celebrated in the Spring about the Æquinox, and the Bridegroom eat nothing but Apples and Camels Marrow. Polygamy they approve of, not only from the Example of their Kings, but becauſe they honour ſuch moſt as have many Children.

The Education of their Children.

They ſeldom ſaw their Children till they were four Years old, from which Age to twenty they learn to ride and ſhoot, fare meanly, lodge hard, watch. The Old Men went plain, but the Young Mens Habit was rich, their Arms and Legs being hung with Chains of burniſhed Gold, or Braſs, which imitated the Sun's brightneſs. In their War they wore Coats of Mail, or Steel, curiouſly linked, and their Breaſt-plates ſcaled: Their Targets were of Ox-hide, large and round, and their Cap of Linen in many folds. Bows, Swords and Axes, were their Arms, which they kept well, and managed dexterouſly. The great Mens Tables were ſplendid in rich Furniture and Diſhes of Gold, but in Meats very ordinary and ſparing. They were much given to Drunkenneſs, with which they ſealed all their Negotiations and Bargains with, nevertheleſs their Complements are hearty, embracing their Equals, and giving the Head and Knee to Superiours. Superſtitious they are, and care not to act in any Affair, unleſs by caſting the Die they light of a Fortunate Chance. In Sickneſs and Troubles ſome uſe Sorcery, preſcribing Charms, Croſs-Characters, Letters, and the like, taken commonly out of the Alcoran. Necromantick Studies they much admire, becauſe above common reach, and few of their *Siets* but can exerciſe. *Friday* is their Sabbath, which they keep licentiouſly.

Their Callings, Buſineſs, Arts and Sciences.

Concerning their Callings, Buſineſs, Arts and Sciences. The Soldiery is moſt in requeſt among them, of which they have four degrees, *viz.* *Chawns*, *Cooſel-baſhes*, *Aga's*, and *Cheliby*, or *Coridſchey*. The *Timars*, or *Turqmars*, are more deſpicable. Upon the Muſter, the *Perſian* King can march three hundred thouſand Horſe, and ſeventy thouſand Foot or Muſquetoons, ſuch force he can advance, but ſeldom exceeds fifty thouſand, becauſe 'tis as many as can be Forraged in ſuch barren Countries, which afford little Paſturage, or other Provender for Horſes, and therefore they feed them with chopt Straw and Barley, which renders them leſs apt to Diſeaſes, and keeps them in as good heart as ours, which have better Proviſion. In Peace they are not idle, but exerciſe themſelves in ſundry ſorts of Martial Feaſts. They love to hunt and chaſe the Stag, Antelope, Gazal, Tyger, Boar, Goat, Fox, Jackal, Wolf, and the like. They know well how to uſe the Bow, Dart, Scimitar, Gun and Javelin. Their Harquebuz is longer than ours, but thinner, and they uſe it well, but deteſt the trouble of Cannon, and ſuch Inſtruments of War, as require Carriage. They have large Greyhounds, of ſuch Courage, as to encounter Lions. They have Spaniels, but not ſo good as their Hawks might challenge, for they have Eyeries of Eagles, Lannars, Gawſe-hawks, and Hobbies, with excellent Falcons, out of *Ruſſia* and *Scythia*, which they fly commonly at Hares, Jackals, Partridge, Pheaſant, Hern, Pelicans, Poots and Oſtriches. The Vulgar ſort delight in Morrice-dancing, Wraſtling, Bandying, Swinging on the Ropes, Ram and Cock-fighting, in which Exerciſes they ſpend both Time and Money. Cats are more in requeſt with them than Dogs, which they frequently carry in their Arms, in imitation of their Prophet *Mahomet*, who uſually carry'd a Cat in his Sleeve. Merchants are in eſtimation among them, who trade into *Turkey*, *Ruſſia*, *India*, and other Parts of *Aſia*, but ſeldom into *Europe*. Their Mechanicks are induſtrious and ingenious in working Silk and Cotton, dying and weaving Carpets, and printing Flowers of all ſorts in Leather and in Colours, of which they make Buſkins, Sandals, Saddles, and Furniture for Houſes.

Their Phyſicians.

Their Phyſicians are great admirers of Nature, doting ſo much thereon, that they often make the Inſtrument the Cauſe. They are well Moralled, and civil in Language and Guarb, which beget them eſteem from all that converſe with them, but are Covetous, and love Magick Studies. They have degrees tranſcending one another in Title, as their Skill and Seniority merits. They are moſt of them Philoſophers, but their Libraries are ſmall, and their Books uſually Arabick, but choice and uſeful. They prefer Plants and Vegetables before Minerals. In their Schools they affect Silence, and ſitting croſs-legged, wag their Bodies, imagining that motion advantages their Study, and ſerves for Exerciſe. The Doctors are named *Hackeems*, *i. e.* Learned Men, but their Mountebanks *Shitan-Tabib*, *i. e.* the Devils Chirurgeons. They are Maſters of much Knowledge, and delight much in Judicial Aſtrology. Many Arabick Writers, learned both in Natural Philoſophy and Mathematicks, have flouriſhed in thoſe Parts, and their Books they read, *viz.* *Hippocrates*, *Galen*, *Averroes*, *Alfarabius*, *Avicenna*, *Razis*, *Albumazar*, &c. In Geography they have *Abulfæda*, and in Oratory *Alphraganus*, which they read and become admirable. They have plenty of Herbs, Druggs, Gums and Odours, which they underſtand the uſe of, and can apply ſeaſonably.

Some of their Medicines.

For Fluxes they give Sloes, Rice, Cinnamon, Pomegranates, and Barbaries. To purge Melancholy, Aloes, Senna and Rhubarb. For Flegm, Turbith; and for Colds and Sweatings, Oils of Beavers, Leopards, Jackals, *Herba Maris*, and *Ladies Roſe*. The Country affords plenty of *Galbanum*, *Scammony*, *Ammoniac*, *Manna*, *Piſtacho's*, *Dates*, *Rhubarb*, *Opoponax*, *Sarcocolla*, and *Aſſafætida*; which laſt is found in greateſt quantities about *Lahor*, and the River *Indus*. But Sweating is the Epidemick Phyſick, being of leaſt Charge and moſt Uſeful, inſomuch that ſome Cities have three hundred Hummums, or Baths, and others many, tho' not ſo numerous. By frequent Bathing their Skins are made ſoft and fine, and their Bodies tender and active. They compute their Years by Moons, and not by the Sun, ſo that the number of Days in the whole Year with them amounts but to 353, which our computation by the Sun exceeds 12 Days, and makes a great difference between their Hegyra and our Year of the Lord.

Such as practiſe Manufactures are of an Inferiour account to the Soldiers, nevertheleſs they live plentifully, and out of the reach of the King's jealous Eye, which often ruin the great ones. The Peaſants are Slaves, and can call nothing their own, becauſe they are ſo ſubject to the Rapine of the *Begs* and *Cooſel-baſhes*, tho' upon complaint they find reaſonable Juſtice from the *Cauſees*. They are of a gentile and obliging Nature, facetious, harmleſs in Diſcourſe, and little inquiſitive after Foreign News, ſeldom inquiring more about any Country than, Whether they have good Wine, fair Women, ſerviceable Horſes, and well-temper'd Swords. Few of them can read, becauſe that Science is ingroſſed by Church-men, Clerks, Santo's and Merchants, yet honour ſuch as can.

Their Muſick and Poetry.

Some little Skill they have in Muſick, which reſembles the Doric and Phrygic, a ſoft and lofty Conſort. Above all Poetry lulls them, but their Poems are Amorous and Laſcivious. *Abul-Caſen*, who lived *Anno Heg.* 385. *Elgazzuly*, *Ibnal-farid*, and *Elfargani*, are their principal Poets in thoſe fancies; nor is Poetry rewarded better any where than there. *Mahomet* the Great, *Almanſor*'s Son, gave Poet *Marvan* for ſeventy Diſticks, which he preſented him with, 70000 Staters: And *Taher*, King *Abder-Haymon*'s General, for three Verſes, which a Poet gave him, requited him with three hundred pieces of Gold; and tho' their Verſes be but lame, yet their ſinging them makes them harmonious.

Their dancing.

The Men affect not dancing, yet take no ſmall pleaſure in the Boys and Girls that do, who to admiration conform the parts of their Bodies by ſtrange windings and geſticulations to the ſound of Bells, Timbrels and Cimbals. The Art of painting the Face in theſe Countries, is more ancient than commendable, not only Women, but Men uſing it.

Perſia

Eunuchs, their Antiquity and Uſe.

Perſia continues the ancient Cuſtom of emaſculating Youths, not only to preſerve the Excellency of their Voice in ſinging, but principally for the guarding of the Seraglio of great Perſons, which tho' it ſufficiently effeminate them, yet ſome Eunuchs have neither wanted Courage nor Reputation, but have been elected Generals for the Field. They are of ancient ſtanding in the Court of *Perſia*, and were formerly made by the Exciſion of the Teſticles only, but now all the Secrets are cut off, becauſe a jealous *Turk* obſerved one of theſe Geldings covering a Mare. Honeſt Women rarely ſhew their faces, covering their beauty with a white Sheet; and no Man dares to praiſe anothers Wife, for fear of ſtirring up the Jealouſie of her Husband.

Circumciſion how uſed in *Perſia*.

Concerning Circumciſion; it is here uſed, and none can be called a *Muſſul-man* without it. Men, and ſometimes Women, conform to it; the Men for Paradiſe, and Women for Honours ſake. The Males are Circumciſed at *Iſhmael*'s Age, which was thirteen Years old, and the Women between nine and fifteen, as is practiſed in and about *Cairo*. The *Arabians* practiſed it before *Mahomet*, who is thought rather to have permitted than commanded it; a Fee is to be paid at the Ceremony, and for want of it, the pooreſt ſort are ſeldom cut. The Ceremony is more or leſs, according to the difference of degree, performed either at home, or in the Moſques. If a Son to a *Mirza*, *Cawn*, *Sultan*, or *Chelaby*, be to be Circumciſed, it is done with great pomp, for his Kindred and Friends, in their beſt Equipage, aſſemble at the Parents Houſe, and as a Symbol of their Joy, preſent him with Gifts of ſundry prices. After a ſmall ſtay, they mount the Boy upon a fine Horſe, with rich trappings. He is finely Cloathed, holding in his Right Hand a Sword, and in his Left Hand the Bridle. Two Slaves go on each ſide him, one bearing a Lance, the other a Flambeau. Before goes the Muſick, and the Father follows, whom the reſt of the Kindred attend in Order, according to the nearneſs of their Relation. The *Hodgee* attends at the entrance of the Moſque, helps him down, and hallows him, and then they go immediately to their Work: One holds his Knee, a ſecond Diſrobes him, and a third holds his Hands, whilſt others, by ſome trivial conceit, ſeek to divert his thoughts, to extenuate his enſuing pain. The Prieſt having ſaid his Prayers, delates the Fore-skin, and in a trice, with his Silver Scizzars, Circumciſeth him, and then applies an healing Powder of Salt, Date-ſtones, and Cotton-wool. The Standers by, to joy his initiation into *Mahometaniſm*, throwing down their *Munera Natalitia*, ſalute him by the Name of a *Muſſul-man*, but if the Ceremony be performed at home, they provide a Banquet, before which the Boy enters before the Company uncloathed and circumciſed; and in memory of it they Feaſt three days, as *Abraham* did when *Iſaac* was weaned. At the end of theſe days, the Child is led about in State, bath'd and purged, and having a white Turbant upon his Head, is ſaluted with Acclamations.

Apoſtate Chriſtians how Circumciſed.

But Apoſtate Chriſtians go before the *Cadi*, who leads them to the Moſque, where they are without any ceremony Circumciſed; which done, they ſpurn at the Croſs with their feet, and ſpit thrice at it, making their profeſſion in theſe words, *La, la, la, illah, &c.* God is firſt, praiſe him, and next to him *Mahomet*. Then they hold up one finger, to renounce the Trinity, and he receives a new Name. Then he is led upon an Aſs ſlowly through the City, that every one may obſerve that he is become a Proſelyte of *Mahomet*; but praiſed be God, we have few Examples of ſuch Chriſtians.

Marriage, by whom uſed, and how celebrated.

Concerning their Weddings, they have not much variety. All marry, as they pretend, to furniſh the Emperour with Soldiers for Defence, and Paradiſe with Saints, to ſing the Praiſes of *Mahomet*, except their *Dervies*, which are an Order of begging Friars among them, who from a tranſcendant conceit of their own Purity forbear Matrimony. Such as intend to marry, provide a Sum of Money to buy the Woman's good-will he has a mind to, her Parents having no more to do but to bath and purify her. They chuſe their Wives more by report of others than by their own knowledge, the Friends of either Party recommending and concluding the Match. On the day of Marriage the Bride is Veiled with Lawn, and bravely Mounted, a Troop of Friends accompanying her to the Church, and in the Mid-way ſhe is met with as many more, and all to greaten the Ceremony. Entring the Moſque, the *Mulay* takes the Proteſtation of their good liking, and ſhe demands three things, as the *Jewiſh* Women did of Old, Bed-right, Food and Cloathing. Their Fathers having declared their Conſent, the Prieſt circles them with a Cord, joyns their Hands, takes a reciprocal Oath, and calls *Mahomet* to witneſs; and then the *Caddi* having enrolled their Names, with the Day, Hour, Month and Year of their Nuptials, diſmiſſes them with an *Euge*. The firſt day is ſpent in Feaſting and Jovialty, the Men and Women aſunder. At Night the Bride is waſhed and perfumed, that ſhe may be better accepted by her Husband. The next Night they bathe together, and ſo continue ſeven days Feaſting, in which time, if the Man diſcover the Woman not to be a Virgin, ſhe is returned to her Parents with diſhonour, otherwiſe ſhe is kept till Death makes a Divorce.

Inceſtuous Marriages allowed, and Divorces.

The Alcoran allows Inceſtuous Marriages, under a pretence of preſerving Love in Families. If a Man be weary of his Wife, or ſhe be barren, he acquaints the *Mulay* with it, who will give him a Divorce upon his allowing his Wife a Dowry; and if they agree again, they may be married again, and that often. They may not marry any of another Religion, but uſe them as Slaves or Concubines. They refrain from them in their Diſeaſes. Their Law allows four Wives, and Concubines without number. They never wed Proſtitutes. The Women give ſuck two Years. They permit not Widows to marry again, till 120 days be expired from their Husband's Death.

Their Death and Burials.

Concerning their Death and Burials. They retain many of the ancient Ceremonies uſed by the *Jews* and *Gentiles*; when a Man dies, the next of Kin cloſeth his Eyes, as did *Joſeph* and *Telemachus*. The nobler ſort have their Sepulchres in the ſides of the Mountains about *Perſepolis*, in very deep Pits; and ſome are Embalmed, their Brains being drawn out with a Silver Inſtrument, and their Belly (as ſoon as the Bowels are taken out) being filled with Spices, but the poorer ſort uſe only Bitumen, or the Juice of Cedar, which reſiſts putrefaction. Their moſt uſual way of Burial is this: They waſh the Corps firſt with clean Water, and then carry it to the Grave orderly, and with ſilence, and lay it in their Church-yards, where none have lain before, for they never bury in their Moſques, or Churches. They place his Head towards *Medina*, and the next a-kin watch for ſeven days to keep the Evil Angel from his Grave, ſinging Pſalms of Lamentation for the Dead. Others take a different Method: In the firſt place go Kindred of the Dead, then his Slaves naked to the Waſte, who, to expreſs their Zeal, ſcratch their Arms and Breaſts, and cut and print Circles in their Fleſh, ſo that the Blood runs down in many places. Next follow ſome Youths, who carry on their ſhoulders ſome Texts of the Alcoran, while they utter the praiſes of the Dead. Next theſe go many Perſons of the beſt rank, who put their hands to the Cord that draws the Hearſe, and on every ſide throng the Multitude with Laurel, Cypreſs, or Flowers in their hands. In the laſt place go the *Præficæ*, or Mourning Women, who tear their hair, and counterfeit tears, and ſhrieks to provoke others to paſſion. In this manner they go ſlowly with ſilence to the Burial-place, and having firſt cried out, *Lala-Hillulla, i. e.* Let us praiſe God, uncloath, waſh, and anoint the Carkaſs, and ſo wrapping it in fine Linen bury it, with his Head towards *Meccha*, his Face towards Heaven, and his Arms ſpread out to embrace *Mahomet*. Upon the Grave they fix two ſtones, one at the Head, and the other at the Feet, on which his Name, Quality, and time of his Burial, is noted in *Arabick* Characters. There they leave him, but go twice a day to ſing his Requiem, beſeeching *Mahomet* to ſuccour him againſt his bad Angels, of whom, as a part of their Creed, they hold this Opinion, *viz.* That ſo ſoon as any *Muſſul-man* is buried, forthwith *Muengar* and *Quarequar*, two ugly Devils, aſſail him, one with an Iron Club, and the other with an Hook of flaming Braſs, in which poſture they view the Carkaſs, command him to lift up his Head, and falling on his Knees beg his Soul, which then returns to him, that he may give an account of his former life. If upon his Confeſſion it appear good, the Devils flee away, and give place to two Angels apparelled in white Silk to comfort him, not leaving him till the day of Doom, nor ſeeming unwilling to protect him; but if upon Examination his Life appear bad, the two Devils, one beating him down into the Earth with a Club, the other pulling him up again with his Hook, torment him in that manner till *Mahomet* calls a Parliament to give him deliverance. In former times they uſed to burn the Bodies of the Dead in a Linen called *Linum Vivum*, made of the ſtone *Asbeſtos*, which will not conſume in the Fire, but preſerves the aſhes in it unmixt from the aſhes of the Pile; but this Cuſtom is now left off, and they bury their Dead in the ground.

Their Opinion about the Angels that attend the Dead.

The Furniture of their Houſes and Diet.

Concerning the Furniture of their Houſes and Diet: A Pan, a Platter, and a Carpet, is the Epitome. Their

Diet

Their Bread. Pelo. Maza. Paſties. Salads. Mutton. Camels. Goats. Pheaſants. Herbs. Locuſts. Cheeſe and Butter. Sherbet. Coffee, its Virtues.

Diet is ſoon dreſs'd, quickly eaten, and as readily digeſted as deſcribed. Their Table is uſually the ground, covered with a Carpet, over which they ſpread a Pintado, and ſit croſs-legged as Taylors do. Before every Man they lay five or ſix Cakes of Wheat like Pancakes, which are their only Bread; they tear it in pieces with all their fingers. Spoons with handles half a Yard long, and large Bowls, lie ſcattered up and down the Board. They ſeldom go beyond *Pelo*, but will make forty ſeveral ſorts of Diſhes of it, by dreſſing it ſeveral ways, *viz.* with Butter, Fruits, Turmerick, Saffron, Onions, Garlick, Almonds, Raiſins, which give it a different colour, *&c.* or without, giving it ſeveral Names, as *Chelo*, *Ciſhmy-Pelo*, *Cherry-Pelo*, &c. They have alſo a Meat reſembling *Maza*, which was Meal mixed with Water and Oil, with Gobbets of fleſh. They have alſo little Paſties of haſhed Meats, like the *Turks* Sambouſes. They eat Rice, becauſe they call it an Holy Grain, ſprung from *Mahomet*'s Civet. They eat alſo Salads, Achairs, and hard Eggs. Their Mutton is ſweet, but fat principally in the Tail, which commonly weighs twenty pound. The Country yields Camel, Goats and Pheaſants, and their Law allows the eating of them, but prohibits Beef, Veal, Pork, Hare and Buffolo. They ſell Camels fleſh in the Markets roaſted upon Scuets, or cut in Mammocks and Carbonado'd; three or four Spits are ſold for two pence. The Poor content themſelves with dry Rice, Herbs, Lentils, Roots, Fruits and Flummery, and are well ſatisfied with ſuch ſlender Diet. They ſometimes eat Locuſts, and Dates preſerved in Syrrup mixed with Butter; Milk is with them a precious Food. Their Cheeſe and Butter is the worſt that ever was taſted, the Cheeſe is blue and hard, bad to the eye, worſt to the taſte, and worſt of all to the digeſtion. Their Butter is ſluttiſh, full of hairs, and unſalted. Their Drink is ſometimes fair Water, Sugar, Roſe-Water, and Juice of Limons mixed, and confected with Citrons, Violets, and other ſweet Flowers; and for more delicacy, an addition of Amber, which we call Sherbet. They alſo drink Wine, pretending a peculiar Privilege indulged them by *Ally* and *Siet Gunet*, which the *Turks* are not worthy of. They alſo drink Arack and Aquavitæ, and take Tobacco much, which they ſuck through Water; but above all, affect Coffee, or Coho, a drink as black as Soot, wholſome as they ſay, but not toothſome, if ſupped hot it comforts the Brain, expels Melancholy and Sleep, purges Choler, lightens the Spirits, and begets an excellent Concoction, and by Cuſtom becomes delicious; but all theſe Virtues beget not their liking of it ſo much as this Romance, that it was invented and brewed by the Angel *Gabriel* to reſtore *Mahomet*'s decay'd moiſture, which it did ſo effectually, as that he did Wonders both in *Mars* and *Venus*'s Camp.

Opium and its Virtues.

Opium is much uſed among them: They chew it, and ſay it helps Catarrhs, Cowardice, Epilepſies, ſtrengthens much; ſo that Foot-Poſts are enabled by it to run Day and Night without intermiſſion. The *Perſians*, for the moſt part, eat in Porcellane, or other Earth, not valuing Silver, becauſe, they ſay, *Mahomet* going into Hell, ſaw the Devils at Dinner ſerved in Silver. In feeding they uſe no Knives, but feed themſelves with four fingers, which is enjoyned them by Tradition. They never cut, but break or rend their Bread, becauſe *Ozman* in his Parody tells them, that *Shitan*, or the Devil, cuts all he eats. At their Meals they are the merrieſt Men alive: No People in the World have better ſtomachs, drink more freely, and eat more plentifully, condemning the Epithets given Wine in the Alcoran, that 'tis Giants Blood, and Devils Gall.

Their Drinking.

They never quarrel in their Cups, nor deſire any Man to ſit longer, or drink more than he pleaſes. They never drink Healths, nor one to another, as the Chriſtians do, who have that civil Cuſtom, but too often abuſe it.

Their Bed.

Their Beds are Cots of two Foot high, or four low Poſts ſtrengthened with Girth-Web, a Shag, or Yopangee ſpread a top, which is of double uſe, for it ſerves as an Umbrella abroad, and at home for a Coverlet. In Summer their Slaves attend about them, ſome to waft, and beget cool air, others to ſcare away the Gnats, and ſuch like buzzing Vermine, which trouble them exceedingly in hot Weather. The Men account it a ſhame to make Water ſtanding, becauſe Dogs do it, and when they piſs, they have Slaves attending with Silver Ewers filled with Water to cleanſe the pollution.

Their Riding and Horſes.

The better ſort ride ſo often on Horſeback, tho' but a few Rods, that they count a Mad Man that walks. Their Horſes for Service are of the *Arabian* breed, faſhioned like Jennets, but ſwifter, and of more courage: They curb their Metal in with ſharp Bits. Their Bridles are long, and ſometimes ſtudded with Gold, of which Metal are their Stirrups and Pummels often. The Saddles of the better ſort are uſually of Velvet, high and cloſe like our great Saddles, and the Trees are curiouſly painted. Their Horſes are generally in good liking, tho' their fare be mean, *viz.* Chopt Straw and a little Barley. Mules with them are as valuable as their Horſes, becauſe more ſerviceable in Ways ſandy and mountainous. Men commonly uſe Horſes, and Women Mules and Camels. On every Camel they hang two Cajua's, which hold two Women apiece. They are a ſort of Wooden Cages, covered with Cloth, in which they ſit. When any Haram travels, they are guarded with Eunuchs armed with Bows and Swords, both for Offence and Defence.

The Perſian Religion.

Now concerning their Religion, or Superſtition rather, it varies not from the *Turks* in any particle of the Alcoran, and yet they account one another Hereticks. The Schiſm was begun *A. D.* 1400. by *Siet Gunet*, the better to advance the *Sophian* Title, and is held up ſtill ſo furiouſly, that thoſe two Mighty Monarchs proſecute one another with an hatred irreconcileable.

Mahomet's Pedigree and Life. His Marriage.

Mahomet was the Son of *Abdar* a Pagan, and *Emma* a Jeweſs, born at *Jathreb* in *Arabia*, *Anno Chr.* 574. *Juſtinian* governing the *Roman* Empire, and *Coſhroes*, the Father of *Hormisda*, the *Perſian*. His Parents were poor, and therefore he became an Apprentice to *Zayed-ben-Hartah*, a rich Merchant, who dying, left his Servant a conſiderable Legacy, but Traffick decaying by reaſon of the Wars between *Coſhroes* and the *Romans*, *Mahomet* liſted himſelf firſt under *Heraclius*, and after under the *Perſian*, not caring who was vanquiſhed ſo he gained. Having much increaſed the Eſtate his Maſter left him by the War, he ventured to ſet up for himſelf, and having Credit enough to Command many *Tartars* and *Arabians*, he attacks firſt the Chriſtian Forces, and then the *Perſian*, and beats them both. Upon this Occaſion, obſerving the Diſcords among the *Romans* by the Death of *Mauritius*, whom *Phocas* ſlew, he gives it out, that he was Ordained from the beginning of the World to Eclipſe the Power of the Pope, to Inſtruct the World in a better way than *Moſes* or *Chriſt* had; that he was the Comforter, and ſent to advance the *Arabian* Name above all other in the Univerſe. The *Jews* at firſt cried him up for the *Meſſiah*, but when they ſaw him eat Camels fleſh abhorred him; but the Savages ſtill admired him, credited his Revelations, and hoped he would effect his Promiſes. But before he could effect them, the *Perſians* broke in upon him and his Men, and ſo miſerably beat them, that he was forced to fly for his life upon his Dromedary, leaving his Men to the fury of the *Perſians*, and loſing all his Money. This Misfortune filled his Heart with ſad reflections for a time, but afterward conſidering that he might retrieve all again if he had but Money, laid cloſe Siege to *Chodaige*, a Woman of great Wealth, and by ſome thought Queen of *Coraſan*, and by his amorous aſſaults won her. By her he had three Sons, and as many Daughters: His Sons died young, and his Eldeſt Daughters *Fatyma* and *Zaynab* were married to *Ally*, and his Younger *Om-Kalthom* to *Abubeker*. He had many other Wives and Concubines. And now having raiſed himſelf again in the World, he began to think of diſcharging his promiſe in giving the World a more excellent Doctrine than *Moſes* or *Chriſt* had, and having taught certain Doves to feed out of his Ear, and Camels to expect their Food from him, he got ſo great a reputation for Holineſs, that all *Arabia* expected great things from him.

His helps to compoſe. His Alcora

Having therefore the help of *Sergius* an *Italian* Monk, a *Sabellian*, diſcontented becauſe he miſſed of the Biſhoprick of *Byzanth*, and *John* of *Antioch* an Heretical *Neſtorian*, two ſubtle Spirits, he furniſhed his Alcoran by mixing Truth with Falſhood, *A. D.* 620. being then 46 Years of Age. Having compoſed his Alcoran, he went to *Mecca* to have it received, but the *Arabs* perceiving his deſign, and knowing his Birth and Breeding, baniſhed him, and had deſtroyed him, had not his Wives Relations ſaved him. *Mahomet* was ſo diſheartned at this repulſe, that he once reſolved to burn his Book, but *Sergius* telling him that ſo great a Work could not fail of Oppoſition, revives his hopes, and ſecludes himſelf from Company for two Years, and then again ventures to divulge his Doctrine, to which by gifts, and other perſwaſions, he attracted ſo many Followers, that within ſeven Years his Alcoran was received at *Mecca*, and from thence ſpread it ſelf into all the Eaſt. *Mahomet* ſoon after dies, in his Climacterick Year, *A. D.* 637. Heg. 17. ordaining *Ally* to ſucceed him, and his Corps to be Entombed in *Ayſces* Grave in *Jathrip*, which he new named *Medina Talnabi*. His Alcoran or Sunna, *i. e.* the Book of

Truth,

The Contents of the Alcoran.

Truth, or Legend for the Faithful, is ſtuffed with Philoſophy, both Moral and Natural, and mixed with ſo many Fancies and Inventions, as renders the whole abſurd and ridiculous. In the Preface 'tis ſaid, that the Book was ſent from God by *Gabriel* to *Mortis-Ally*, but he miſtaking the right Man gave it to *Mahomet*, but God ſeeing him indued with equal Virtue, the Angel was not blamed, but the Gift was confirmed. They report alſo, that as ſoon as he was born, the Angel brought him three Keys, by which a threefold Dominion was conferred on him, *viz.* over Law, Victory and Prophecy.

The Names of it.

The *Alcoran*, called by them *Kurrawn*, i. e. Scripture, *Aleſalem*, i. e. the Law of Peace, and *Alcacan*, i. e. Judgment, was digeſted by *Ozman*, 15 Years after *Mahomet*'s Death, into a Volume twice as big as *David*'s Pſalms, and divided into 114 *Azaora's* or Chapters, put by *Ozman* into a kind of Rhime, and writ originally in *Arabick*. It contains not ſo much Rules for Devotion and a good Life, as a Relation of his own Acts, intermixed with the Art of War and Peace, Syſtems of Rhetorick, Mathematicks, and Ethicks, borrowed out of *Ariſtotle*, and other Philoſophers, but groſly and confuſedly handled. His Mother inſtructed him in the *Jewiſh* Rites, and *Sergius* in the Goſpel; from whence it is that he mentions *Noah*, *Jonas*, *David*, and other Prophets, commending their Writings, and quotes St. *Luke*'s Goſpel at large. It ſays of *Chriſt*, That he is the *Meſſias*, Word, Spirit, and Light of God, not omitting his Aſcenſion; yet he will not own him to be the Son of God. He ſays, that he was the moſt Holy, Chaſt, and Powerful Saint that ever lived upon Earth, and ſays, he ſhall ſave the *Chriſtians*, as *Moſes* ſhall the *Jews*, but in another place he aſſerts, that no Soul ſhall be ſaved but by the Alcoran. No Man therefore among them dares undervalue our Bible, but practice it ſo far as is commanded by the *Alcoran*. And ſo they reverence *Chriſt* and his Apoſtles, and viſit his Sepulchre and the Saints Tombs, yet with *Arrius* it denies Chriſt's Divinity, with *Sabellicus* the Trinity, with *Macedonius* the Proceſſion of the Holy Ghoſt, and with *Manichelus* the Death of Chriſt. In Chap. 32. he politickly Commands that no Man be ſo impious as to queſtion any tittle of his Law, or diſpute about it. Their Commandments are eight, *viz.*

The Doctrine about Chriſt.

The Commands of the Alcoran.

I Commandment. *There is but One Great God, and* Mahomet *is his Prophet.*

The *Muezins* and *Talismans*, every fourth hour, ſing this aloud from the Steeple-tops of every Moſque. This Command is borrowed either from the Decalogue, or 4th of *Ezekiel*. The ancient *Bards* and *Druids* made it an Article of their Faith in thoſe dark Times.

II Commandment. *'Tis neither Good nor Juſt that any* Muſſul-man *live unmarried, leaſt the Profeſſors of the* Alcoran *be diminiſhed.*

Polygamy allowed.

Polygamy is tolerated by this Law, yea, ſuch are thought moſt Honourable, who ſuperabound in Wives and Concubines. *Mahomet* boaſts in his Alcoran, that he had ſtrength enough to ſatiate 40 Women; and 'tis to be thought, that in this Precept he had reſpect to the Natural Diſpoſition of the *Arabians*, who are better pleaſed with ſuch Freedom and Voluptuouſeſs than Virtue, not caring how, ſo he could make them Obey him.

III Commandment. *It behoves* Muſſul-men *to be Charitable, and to hate Contention.*

Hoſpitals for Beaſts and Birds.

Travellers find ſpecial Advantage by this Commandment, for whereas there are no Inns in theſe Countries, they have erected Buildings for the Accommodation of Travellers, which are always open and clean kept, and near them is a large and convenient Stable: Yea, ſo remarkable is their Charity, that they not only erect Hoſpitals for the lame and diſeaſed, but ſometimes for aged, ſtarved, or hurt Birds, Beaſts, and ſuch Creatures.

IV Commandment. *It behoves* Muſſul-men *to invocate their Prophet every day five times at leaſt, and to attend his coming patiently.*

Their manner of Praying, and Names of it.

They accompliſh this Precept with ſo much regard, that when the *Muezin* call from the Steeple of the Moſque, they fall to Prayer, whatever buſineſs they are about. Before they enter the Moſque they waſh their Feet, lay aſide their Shoes, and being aſſembled, turn their Faces all one way. In their Prayers they ſhut ſometimes their Eyes and Ears, and ſometimes drop their Beads, and at every Name of *God* or *Mahomet* kiſs the Earth. They often repeat *Llay-lala*, or *Hilula*, *i. e.* Praiſes, and then ſay a Prayer to this effect: *In the Name of the Good and Holy God, praiſed be the Sovereign of all Worlds, the Merciful God of Doom. Thee we ſerve, thee we call upon, ſhew us the beſt way, that which thou haſt revealed to* Mahomet, *not that whereby thou puniſheſt the Ungodly.* Another Prayer they have, which is a Tautology of the Names of God, which they uſe often in all *Mahometan* Countries. Theſe are the moſt uſual Prayers, but they are not without other ſet Forms of Prayer, compiled by *Ozman* in his Parody, and more largely by the famous *Almotannabby*, who in his high-flown Conceits endeavoured to exalt his Name and Reputation above *Mahomet*'s. Theſe Prayers are for the ſafety of their Kings, an happy Iſſue, the welfare of their Country, thanks that they are *Muſſul-men*, or true Believers. Their five Canonical hours are, 1. About break of Day. 2. Noon. 3. Three in the Afternoon. 4. Sun-ſet. 5. Midnight. The firſt hour is performed by four *Teſſalems*, and two Prayers. The ſecond by ten times kiſſing the Earth with five *Elfata's*. The third by eight Grovelings, and four Ejaculations. The fourth by five *Sizeda's*, or kiſſing the ground, and three Orations. The fifth hath fifteen *Teſſalems*, and eight Repetitions. Howbeit, the *Perſians*, ſince their Reformation, think it enough to pray thrice, *viz.* Morning, Noon and Night, in 24 hours. On their *Guyumaa* or Sabbath, they aſſemble in their Moſques, (which are without Seats and Bells) firſt waſhing their Faces, Hands, and Arms to the Elbow, then kneeling with their Faces toward *Medina*, ſpeak not one to another, nor ſpit or cough, if they can avoid it.

Their hours of Prayer.

V Commandment. *See thou obſerve Yearly a Month* Lent, *a* Byram, *with the other Feſtivals.*

Their Lent, whence Inſtituted.

The *Lent*, or *Ramadan*, begins commonly at the Sun's entrance into *Aries*, in imitation of our *Lent*, or rather the forty days of *Moſes* abode in the Mount, tho' they ſay in memory of *Mahomet*'s hiding himſelf in the Deſart, when the People of *Mecca* perſecuted him for divulging his Alcoran, or rather for his remaining ſo long in the ſixth Heaven, when he ſays, He had the Honour to ſhake hands with the Almighty, (which he ſays was ſeventy times colder than Ice) and to prove it to the People, commanded the Moon to deſcend, *&c.* During this *Ramadan*, they eat nothing all the day, and he is accounted a Heretick that abſtains not; but the Sun is no ſooner down but their Carnival begins, and they let out their Appetite to all manner of Pleaſures, and Epicurize in all manner of Dainties. This Feaſt they keep twenty nine days, or one Moon, for tho' the Alcoran commands forty days, yet thoſe of the New Reformation have limited it to a Month.

Their Byram or Eaſter.

The *Byram* begins as ſoon as their *Lent* is ended, which they celebrate for three days with the greateſt Merriment, and on the laſt of them uſually reſolve upon a Pilgrimage to viſit their Prophet's Sepulchre, not entombed in an Iron Coffin, and hanged between two Load-ſtones, as ſome have reported, but laid under a fair Marble, poliſhed, and engraven with Arabic Sentences out of the Alcoran. In the Way they wallow in all kind of Turpitude, and are no where miſuſed, being cloathed with a Pilgrim's Coat, and Hypocritick Sanctity.

The Buccarie.

The *Buccarie* they ſolemnize in *November*, in commemoration of the Ram ſacrificed by *Abraham*, at which time as *Iſhmael* (as they ſay) ſhould have been Offered.

The Oudhuſſan.

Oudhuſſan, a Feſtival kept in Memory of *Hocem*, or *Huſſan* the Son of *Ally*, who was ſlain, with eleven of his Sons, by *Mavy* the Caliph of *Damaſcus*, Nephew to *Oſman*, as a Triumph againſt the *Benhumians*, who left no means unattempted to have rooted out the Family of *Ally* root and branch, which nevertheleſs was providentially preſerved in one of the Stem, named *Mirza Shereſim*, from whom *Azmully*, *Siet Gunet*, and the preſent Sophian Race, is deſcended. On this day they puniſh *Mavy*, by a deformed Image of him with a black Face, Noſe pierced through with a Dart, and clad with Straw, which they drag through the Streets in great Multitudes, curſing and tormenting of it in the vileſt manner. In token of Joy, they unanimouſly ſing their *Epinicia*, and crying aloud, *Tough Ally*, ſtrive to rend the Clouds with Clamours. At a ſet-time they ceaſe, and giving fire to a Train of Gun-powder, blow up the deteſted *Syrian*, Squibs ratling, and the People making an hideous noiſe at his Funeral. *Huſſan*'s Ghoſt after this ſleeps quietly, as they think, and each *Perſian* commending one another's Zeal, ſpend the following Night in Merriment.

Mavy's puniſhment.

Jedt-Ouſant

Jedt-Ouſant, which is kept in Memory of the aforeſaid *Huſſan*, *Ally*'s Son, who they believe was loſt in a Wilderneſs, where thirſt, or rather *Mavy* the Caliph killed him. Nine days they wander up and down, ſhaving neither Head nor Beard, nor ſeeming Joyful, but inceſſantly beating their Breaſts; and ſome tear their Garments, crying *Huſſan, Huſſan*, in a melancholy Note, ſo long and loud, till they are hoarſe. The *Dervices*, and other *San toons*, being in the Croud, expreſs their Zeal by turning round with incredible ſwiftneſs for a long time. The tenth day they find an Imaginary *Huſſan*, at

The Dervices Devotion.

which they ſhout with all their Might, till they bring him to his Grave, where he ſleeps till next Year's Zeal fetch him out to accompany their Devotion. This Feaſt is like the Heathen Feſtival of *Adonis*, the *Ægyptian* of *Oſyris*, and the *Jewiſh* for *Tamuz*, *Ezek*. 8. 14.

Their *Nowrouz*. The *Nowrouz* is in imitation of our New-Years-Day, only they begin their Year at the Vernal Æquinox. This is a Feſtival of Jollity, wherein few Prayers, but all manner of Pleaſures are uſed. For the reſt of the Year, very few Women of Quality appear in publick, and thoſe veiled from the ſight; but in theſe 12 days of the *Nowrouz* all places are full of them, they diſcover their Faces, friſking in amorous Poſtures, and drawing the Eyes by a forced Magick. They alſo ſend Gifts and Preſents up and down one to another, as Silk, Gold, Horſes, Fruits, and the like. Nothing but Riding the Horſe, Drinking, Cock-fighting, Fortune-telling, Singing, ſwinging in the Air, Courting, and the like, being obſerved to the laſt minute of the Feſtival.

Women appear publickly.

The *Imamy*. The *Imamy* is kept in Memory of *Mahomet*'s Camel. In *November*, the Prieſt of *Mecca* ſends a Camel by his Son to *Spawhawn*, where it is welcomed by many thouſand *Muſſul-men* with extreme Joy for ſo Holy a Preſent. The *Hodgee* that brings it, perſwades them to a thankful remembrance, and Bleſſes them. The Multitude thronging about it lead it into a Field, and having plucked off the hair with admirable dexterity, which they keep as a ſacred Relick prevalent againſt ſudden Death, Hunger, Thirſt, Poverty, and the like, the *Hodgee* ſigns it for ſacrifice; and then the *Darraguod* pierces it with his Javelin, the Viſier beheads it and gives it the King, and then the Multitude tear the Carkaſs in pieces, greedy to obtain a Charm of long Life and Plenty, as they imagine it to be.

The Sacrifice of a Camel.

The *Caddyer-Ally*. The *Caddyer-Ally* is a Feaſt in Memory of *Ally*'s Victory over the three Caliphs of *Mecca*, Conquered by Death, not *Ally*. After ſome Lamentations they utter many Prayers, Sing-ſongs, and beſtow Alms. The King is at moſt Charge at this Solemnity, becauſe of the Honour which reflects on him by the Memory of his Anceſtors.

The *Auwtpatſion*. Tho *Auwtpatſion* (or *Owdt-baptſion*) is celebrated in Memory of *Mahomet*'s Baptiſm by *Sergius*. Many of the ordinary ſort of *Mahometans* aſſemble at this Feaſt, and when the *Darraguod* has ended his Sermon, promiſcuouſly ſprinkle one anothers Faces with Water, then beſmear their Fleſh with Dirt and Filth; (which to pleaſe the King the great ones will alſo ſometimes do) at laſt they waſh themſelves, and ſuppoſe themſelves purer than ever.

The *Sephian*. The *Sophian* is a Solemnity of Faſting, Feaſting and Praying, for the proſperity of their King, and continuation of the Line of the *Sophi's*.

The Feaſt of *Roſes and Daffidils*. The *Feaſt of Roſes and Daffidils*, is begun by a Proceſſion of *Santoons* at the firſt budding of thoſe Flowers, and for thirty days is celebrated with all manner of Sports and Recreations. This Feaſt ſeems to be derived from the times of the ancient Kings of *Perſia*, who had the Supreme Monarchy of the World. At the keeping of this Feaſt they ſet up an infinite number of Tents, which are full of Men, Women, Boys and Girls, who ſport themſelves with Arms, Muſick, Songs and Dances, much like the Games of *Olympus*, or *Orgyes* of *Bacchus*.

VI Commandment. *Reverence thy Parents.*

How they perform this Law, many Tragical Stories daily ſhew us.

VII Commandment. *Curſed be the Slayer.*

A Law ſo well practiſed in *Perſia* through the rigour of the Governours, that one may travel in their Country in any place, and at any time, without dangers; for tho' they are bred up to War, and are great lovers of Wine, they ſcarce ever quarrel, or kill any Man. Yet to enlarge their Territories, and propagate their Faith, they think it a Meritorious Act to kill and ſlay their Enemies, without any tincture of Mercy.

VIII Commandment. *Do ſo to others, as thou wouldſt others ſhould do to thee.*

This Law obliges them to be Humane and Courteous, as they generally are, but whoever reſorts to them for Juſtice, will ſoon diſcern that Bribery, which is lately crept in among them, hinders the Obſervation of this Law in the true ſenſe of it.

The Paradoxes of the Alcoran. The Alcoran being a Miſcellany of divers Sciences, contains many Paradoxes in it. In the 33 *Azaora*, he ſays, That *Dagial*, or *Shytan*, *i.e.* the Devil, at length ſhall be ſaved by *Mahomet*'s means. And in the 72 *Azaora*, he adds, That *Elgebenny*, *i.e.* the Infernal Ghoſts, ſhall after I know not how many Years be freed. In the 85 *Azaora* he treats of the Zodiac; and in the 91, 92, 93, of the Moon, Night and Morning, and in the 113 of the Fimament, but his Philoſophy ſavours of his Ignorance, who declares of himſelf, That he could neither Read nor Write, and therefore pretends his Learning was Supernatural. In one Chapter he ſays, *Solomon* was a great Magician, and that he learned it of *Marot* and *Arot*, two bad Angels; but we may with more reaſon ſay; *Mahomet* was one, if that be true which he ſays of himſelf, that being on a time compaſſed with a great Aſſembly of *Arabians*, he pointed at the Moon with his Thumb and long Finger, and in Obedience to him it immediately clove aſunder, and fell upon the Hill of *Mecca*, where *Mahomet* at that time ſtood, and having embraced *Mortus-Ally*, aſcended again. In another place he aſſures his Proſelytes, that *Mecca*, *Medina* and *Jeruſalem*, be holy Cities, built by *Adam* in Paradiſe, but framed in Heaven; but *Elmedin* in *Chaldæa*, *Antioch* in *Syria*, *Vaſtat* in *Ægypt*, and *Eb-beram* in *Armenia*, ſprung out of Hell, becauſe they reſiſted the progreſs of his Alcoran.

Mahomet a Magician.

Mahomet's Aſcenſion into Heaven. In the 47th *Azaora* he records his aſcent into Heaven, where he ſaw rare Objects, and from whence he brought a deſcription of the ſeveral Spheres, Heavens, Hell and Paradiſe, as alſo of Angels and Saints, Judgment, the Reſurrection, Joy and Pain. Their Authors tell it thus: One Evening, as *Mahomet* was ſporting with *Ayſce* his young Wife at *Mecca*, *Gabriel* (called by the *Perſians Seraphiel*) entred the Chamber in a flaſh of fire, and thus ſaluted *Mahomet*, *Hail thou beloved Man! I come to fetch thee: God, whom thou ſo zealouſly worſhippeſt, deſires to ſee thee at his own Habitation.* *Mahomet* demands how he ſhould aſcend? The Angel ſhews him an Aſs, called *Albarack*, and bids him mount him, and he carried him to *Jeruſalem* at four ſteps, where the Angel taking him into his Protection, carried him into Heaven, into which *Gabriel* the Porter, who keeps ſeventy thouſand Keys, for ſo many Diviſions in Paradiſe, let him in.

The ſeven Heavens. He paſſed the ſeven Heavens in a moment, (tho' he ſays they are 500 Years travel) and ſays, The firſt is of refined Silver, in which all the Stars are fixed with Chains of burniſhed Braſs. The ſecond is of Gold, tried ſeven times in the Fire. The third of Pearl. Here he ſaw innumerable Troops of Saints and Angels, as *Adam*, *Enoch*, *Samuel*, *Abraham*, &c. They ſaluted him, and he prayed for them. The fourth was of *Smaragdus*, where he ſaw innumerable Companies of other Angels inceſſantly praiſing God. Among them he ſaw *Phatyr*, the Angel of Mercy, who keeps the Holy Pen with which God regiſters all things paſt, preſent, and to come, with Ink of pure Light, and in ſuch a myſterious Character, that none but himſelf and *Seraphael* can read it. The fifth Heaven is of Diamonds, where he ſaw the Wiſeſt of all the Angels, who keeps the Book wherein all Mens Names are written, and as he blots them out they die. The ſixth is of *Turquoiſe*, and the ſeventh of *Alabab*, *i.e.* Fire and Light congealed. All theſe incloſe one another like Pearl, or Onions, and are of tranſparent Metal.

The Heaven of Heavens. Above all is the Heaven of Heavens, full of Light and Silence. There *Mahomet* ſaw the higheſt Throne, ſupported by ſeven Angels, and on it the Almighty, who laid his hand on *Mahomet*'s Face in a ſign of Welcome; at which *Mahomet* bluſh'd for ſhame, and ſwet for fear. From him, after he had received full Inſtructions, he deſcended with his Alcoran.

The Nature of Angels. Of Angels he ſays, they are either good or bad, both are ſubject to Death: The Good, becauſe they conſiſt of flame, an Element, and to ſin, becauſe *Lucifer* for his Ambition was driven out of Paradiſe. Bad Angels are impriſoned in Dogs, Swine, Toads, Wolves, Bears, Tygers, &c. After the Day of Doom they ſhall be tormented in Hell ſome Millions of Years, but in the end ſhall be delivered.

The Day of Judgment and the manner of it. Of the Great and General Judgment he ſays, 'Tis as certain as the Day of Death, and will happen ſuddenly, when the World is wrapt up in careleſs Security. The Angels know not the time, till *Mahomet* points it out by a great and fearful Duel between *Adriel* and Death, whom in the end he vanquiſheth, but becomes thereby ſo enraged, that he deſtroys all the living Creatures of the World. After this enſues an Univerſal Earthquake, attended with a ſhower of purling Brimſtone, which deſtroys all Graſs, Trees and Vegetables, and turning the Earth topſy-turvy, reduceth them to their firſt Chaos. Forty days it remains in this condition, and then God will for forty days and nights more rain a ſhower of Mercy, and then by a gracious and gentle breath reduce the World into a freſh and glorious Eſtate. Then he will call up *Seraphiel*, and bid him ſound his Trumpet. At the firſt ſound ſhall enſue a revivification of Men and Angels, and at the ſecond Angels ſhall reſume their Glories, and Men their Fleſh. Then *Michael* ſhall in his Balance poiſe every Man's Deeds, and they, whoſe good Actions over-poiſe their bad, are put upon the Right-hand, and all others on the Left. Such as are loaden with ſins, are to paſs over a narrow and weak Bridge to Hell; ſuch as have few ſins go over ſafely, but they that have many break the Bridge, and fall into an Abiſs. The Alcoran then tells us what Hell is, *viz.* That 'tis in the middle of the World, encompaſſed with a thick Wall of Adamant, entred at ſeven Gates of flaming Braſs, divided into many Cells; ſome of which are more loathſome, and fuller of torment than others. Some have ſharp Pikes and Swords placed upright to torture Souls, ſome are full of Oil and Brimſtone ever flaming; others abound with Toads and Serpents, and all the noiſome Creatures imaginable. The Damned eat nothing but forbidden Fruit, which being in their Bowels, burns like Sulphur, and makes them roar continually. Some Rivers are full of Crocodiles, and others ſo cold as to make them gnaſh and chatter: Howbeit, their Doctors teach, that theſe pains ſhall not endure for ever, but after each Soul has ſuffered ſo many thouſand Years as their ſins deſerve, *Mahomet* will deliver them, and the Devils alſo.

What Hell is.

What Paradiſe is.

The nature of Paradiſe he ſays is this: 'Tis a place of as much delight as *Mahomet*'s Carnal imagination is able to fancy. He ſuppoſes it will be upon the Earth after the Day of Doom. The Alcoran ſays, 'tis as many Miles about as there be Motes in the Sun, the Wall is Gold nine times refined, it has ſeven Gates, the firſt of Carbuncle, ſecond of Pearl, third of Emerald, fourth of Turquoiſe, fifth of Jacinth, ſixth of Smaragd, and ſeventh of Amethyſt. It is divided into ſeven ſpacious Gardens, which are ſubdivided into ſeventy times ſeven places of delight, each filled with Inhabitants, Muſick, Wine, and all Senſual pleaſures imaginable. All have cool refreſhing Rivolets of Chryſtal, drilling over Pibbles of Amber. Summer-houſes it hath alſo ſhaded with Trees ever fruitful and verdant. In the center of this *Elizium* is ſo broad a Tree, that all Paradiſe is delightfully ſhaded by it; the Trunk of it is Diamond, and Leaves Gold. From ſeveral Quarters come four ſtreams of pureſt Water, Milk, Coho and Honey. Aromatick Flowers are there in abundance, which raviſh both Eye and Smell. The Birds pleaſe with far more delightful Singing than the ſweeteſt Nightingales. The Air is compounded of ſelf-raviſhing Odours. *Mahometans* (for *Chriſtians*, *Jews* and *Gentiles*, have not ſuch Glory) are ever young and ſprightful there. The Women are exceeding beautiful and courteous, and the Males have a complexion brighter than the Sun. Theſe are the Fanatick Doctrines of the Alcoran, which are firmly believed by the *Aſiaticks*.

A Tree in the midſt of Paradiſe.

Their ſeveral Orders of Churchmen and Religious.

There are ſeventy Orders or Degrees among them, and tho' their Tenets are very ridiculous, yet they are ſo eſteemed of here, that in their defence they will become Martyrs; for theſe falſe Teachers are ſo raviſhed and tranſported by having gained a Dominion over the Faith and Conſciences of Men, that no Perſecution can make them leave it. They have various ſorts of Eccleſiaſticks. The Mufti is the Chief in hearing and deciding Caſes of Error, which if he fail in, the Prieſt of *Mecca* determines it. The *Caddi-Cadaleſtris* are next. The *Hodgee's*, *Emeri's*, and *Mulai's*. The firſt are Expoſitors, the other are Mendicants, who eat their Bread in Idleneſs. The *Tylalli* converſe moſt, and the *Dervices* are wandring Wolves in Sheeps Cloathing. The *Taliſmans* regard the hours of Prayer, by turning the four Hour-glaſs. The *Muyezim* cry from the tops of the Moſques, *Llala-Hillala*. The *Calenderi*, *Abdalli* and *Derviſlari*, are Pæderaſts, and dangerous to meet in Solitary places. The *Terlaqui* and *Cobtini*, are of the Family of Love. The *Leſhari* and *Papaſis*, are Fortune-tellers and Star-gazers. The *Suuni*, *Naappi*, and *Tecuai*, Vow Silence and Aſſaſſinate. The *Sietti* and *Imami*, ſometimes pull out their Eyes, having ſeen *Medina*, and others their Tongues. The *Haquiemals* ſing amorous Songs, ſome for Pennance go naked, and others are covered with aſhes. The *Doanni* are Fools and Madmen, yet thought Inſpired. The *Mandeæ* afflict their Bodies by Thirſt, laſhing and wounding themſelves, and in Charity carry Burdens, or do any ſervile Work *gratis*. Some abjure Fleſh, Fiſh, Wine, and Roſe-water; ſome live like Hermits, others build Houſes to Safe-guard Birds and Beaſts, and feed them, and have Muſick to keep them from melancholy. Others build Hoſpitals, Inns, Baths, Moſques, and the like. Some are Poets, others Mimicks. Others have Seeds and Charms to make Women fruitful. Some ſcorch their Skins in the Sun, and others anoint their naked Bodies with Honey, to invite the Flies and Waſps to torment them; and this they do, as they think, out of Pity and Piety. Theſe, and many other ſuch like things, they do in Obedience to their Alcoran, and are paſt all Conviction in theſe Follies, becauſe the Crafty Lawgiver, perceiving his Divinity and Philoſophy inſufficient to abide the trial, has Commanded them, that none upon pain of Damnation ſhould preſume to queſtion a Syllable of his Law, and therefore as few, but the Eccleſiaſticks, will ſtudy it; ſo all by a reverenc'd Ignorance and Obſtinacy hope to be ſaved by it.

CHAP. XXV.

Sir Tho. Herbert*'s Travels into other Parts of* India, *with his Obſervations of things moſt remarkable in them.*

SIR *Tho. Herbert* and his Company, having ſpent ſome time in travelling over *Perſia*, returned again to *Swalley*, and on *April* 12. ſet Sail to make ſome Obſervations upon other Parts of *India*, than which the World for Pleaſure and Wealth has none more conſiderable. Being three or four leagues off at Sea, they had a proſperous gale, and had ſight of ſome noted Towns, *viz. Gundavee*, *Daman*, *S. John de Vacas*, *Choul* and *Dabul*. Moſt of theſe Towns were ſubjected by *Alberquerq* to the Crown of *Portugal*.

Dabul deſcribed.

Dabul, of Old called *Dunga*, is ſituate in 17 degrees and 35 min. Northern latitude; heretofore it was under the Command of the King of *Decan*, but now is ſubject to the *Portugueze*, to whom *Fr. Almeida* gained it by ſtratagem. It is ſeated upon an high, pleaſant, and fruitful Hill, from whence ſtreams a Rivolet of freſh Water, very uſeful in that hot Clime. The Road is reaſonable good for Anchorage. The Houſes appear to the Seaward beautiful, tho' they are but low, and terraſſed a top to qualify the heat and cold. An old Caſtle, and a few Temples, is all ſhe boaſts of at preſent, for the Bazar is but ordinary, the Streets narrow, and her Mart inconſiderable, her Trade being removed to *Goa*, and *Calicut* on the South, and *Surat* and *Cambaia* on the North.

Choul deſcribed.

Choul lies in 18 deg. 30 min. Northern latitude; it was taken from the King of *Decan* by *Almeida* in 1507. and to ſecure it to the *Portugueze* he built a Fort, which he fortified with Cannon. *Miſamoluc*, the King of *Decan*, endeavoured to recover it with a numerous Army of Horſe and Foot, beſides Elephants, but by the gallant Defence made by the *Portugueze*, he was forced to raiſe the Siege with loſs and ſhame. The Inhabitants are a mixture of *Portugueze* and *Bannians*; it affords nothing elſe obſervable. After five days Sail they came cloſe to the Iſle of *Goa*, where they found the air ſo hot, that they were forced to ſweat and live like Salamanders.

A Fly called Cacaroch.

Delyn's Bay.

Here they were troubled much with an *Indian* Fly called *Cacaroch*, which alive vexes the fleſh with its biting, and dead the Noſe with an odious ſmell. This Weather continued but a Week, and then having a freſh gale, they came to an Anchor *April* 23. in Mount *Elly*, or *Delyn*'s Bay, a Port in the Dominions of the *Mallabar*. Here the treachery of the Inhabitants kept them in their Ships, who yet brought them in their Canoes Coco's, Mango's, Jacks, Green Pepper, Caravances, Buffolo's, Hens, Eggs, and other things, which they ſold dear. Here they had the Wood called *Calambuco*, a Tree much valued and uſed at Funerals; it is very ſweet and delightful to the ſmell, grows high and even. It is found commonly in the lofty Mountains of *Chamoys*, in *Cochin-China*, and being hardly got, is ſold at exceſſive Rates, becauſe the *Bannians* delight to have this Wood in their Obſequies; and the *Japonians* value it for Ornament in their Houſes, for they imagine no Pillow ſo wholſome to ſleep on. The Richer ſort alſo burn *Arabian* Gums with the Dead, which they firſt wrap in pure white Linen, ſweet and fine, or tranſparent Taffata. Here are the faireſt Limons, as alſo Pappa's, Coco's, Banana's and Plaintains, very ſweet and delicious. The Oranges are juicy and dainty, and of ſo curious a reliſh, as that they affect the Eater beyond meaſure, and the Rind is no leſs pleaſant than the Juice. The Tree has bloſſoms, green and ripe Fruit all together. The Banana's are no leſs delightful, the Tree is low, but ſpreads gracefully; the Fruit is like a Sauſage for ſhape, but moſt pleaſant in taſte, they are yellow when ripe, and the Rind peels off eaſily, and the Fruit diſſolves in the Mouth with an incomparable reliſh. The Jack grows upon a Tree very low, it is in ſhape like a Pumpion, without of a yellow colour mixed with Veins, and within full of Kernels, which lie in golden Cloves; the Fruit is ſomewhat unpleaſant at the firſt taſting, but of double benefit in the ſtomach, being reſtorative and good for the back. The Anana is as big as the Jack, ſpringing from a Root like an Artichoak, and never riſing above two foot high, and ſo eaſily gathered. It has an hard Rind, but pleaſant within, and the ſtomach much covets it, being eaſie of digeſtion. The Duroyen reſembles the Jack, beautiful on the outſide, and excellent within; being opened it ſmells like a rotten Onion, but the Meat is white and cordial, nutritive and dainty. It abounds moſt in *Malacca* and *Java*; Arec and Betele are here much uſed. The Arecca-Tree grows high, and is like the Palmeto, the Wood is fuzzy, and the Fruit like a Walnut, but like good Oil has neither taſte nor ſmell, but being wrapped in a Leaf of Betel, or Be-tree, and chewed, they ſay it cures the Cholick, removes Melancholy, kills Worms, purges the Maw, preſerves Teeth, prevents Hunger, and ſtupifies the Senſe, which makes the *Indian* Women to chew it when they are to be burned with their dead Husbands.

Mount Elly is in 12 deg. latitude, and 55 deg. 30 min. longitude; 'tis as hilly place as any in the *Indies*, and parts the two rich and populous Kingdoms of *Decan* and *Mallabar*. Stormy Weather is uſually here when the Sun is neareſt, and makes their Summer; and from the Summer-Solſtice to the Autumnal Æquinox, it continues windy and rainy. Theſe extraordinary Rains cauſe the overflowing of the *Menan* in *Siam*, and *Suhan* in *Pegu*, as the like Weather about the ſame time in *Æthiopia* raiſes the Waters of the *Niger* and *Nilus*. This is the Winter of the Eaſtern People, the Weather being always fair for the other 8 Months, and more eſpecially along the *Indian* Coaſt of *Malabar*, of which a little.

Mount Elly.

The *Menan* and *Suhan*.

Malabar is at this day a great and famous part of *India*, extending from *Batticala*, a Port in 14 deg. to Cape *Comryn*, which is about 7 degrees North of the Æquinoctial, but 400 Miles in length, but no where above an hundred in breadth, and in ſome places not more than fifty. The Country is ſo populous, that the *Samoryn* of *Calicut* is able, upon occaſion, to take the Field with two hundred thouſand Men, to oppoſe his powerful Neighbours the Kings of *Narſinga*, *Decan* and *Golcunda*. It is verdant for the greateſt part of the Year, abounding with Cattel, Corn, Silk-worms, Peppers, Ginger, Tamarinds, Caſſia, Cardamom, Rice, Myrobalans, Anana's, Pappa's, Melons, Dates, Coco's, and other Fruits; and has ſeveral Defenſive Towns and Harbours, as *Coulam*, *Cochin*, *Calicut*, *Mangabore*, &c. The Roads about it are anchorable and ſecure, and afford as good Harbours as any in the *Indies*. *Malabar* is divided into ſeveral Petty Governments, which are all ſubject to the Great *Samoreen*, a naked Negro, but mightily exalted by being the principal *Brachman*, and no leſs tyrannical than proud. The *Nayroes* are his Nobles, who exerciſe no leſs Authority over their Inferiours, than the *Samoreen* doth over them, being freely tolerated an Arbitrary liberty, Life excepted. They are extremely Libidinous, provoking their appetites by Art and Diet, and eſpecially by the uſe of the Herb *Deutroa*, which heightens their Security and Recreation. They are Proud and Lazy, and uſually go armed. They load their Necks and Arms with Silver, Bracelets, Ropes of Pearl, and other Effeminate pieces of Bravery, and are ſo ſtately, that they expect more than ordinary reſpect, for they will not allow an inferiour Perſon to look them in the face, or appear within fifty paces. Of colour, they are rather black than olivaſter, their hair curls, and grows longer than the *Africans*, and tho' they wear their hair, yet they wreath about their Temples a curious ſort of Linen, ſometimes wrought with Silk and Gold. They wear about their Waſte a piece of Callico, but are naked in all other parts of their Body. The Vulgar wear about their Waſte a parti-coloured Plad, and pink their Skin. The Women Veil themſelves like other *Indians*. Their greateſt pride is expreſſed in adorning their Ears, with many weighty Baubles to dilate them, and their Noſes with Jewels of Silver, Braſs and Iron, and hanging their Arms and Legs with rich Chains.

Malabar deſcribed.

The Defenſive Towns and Harbours.

The King and Nobles.

Their Colour and Habit.

Concerning their Marriages, it was formerly a Cuſtom that the *Brachman* had the firſt Nights Company with the Bride, but that Cuſtom is wholly abrogated. The *Samoreen* confers his Command on his Siſter's Iſſue, thinking they were of his Blood. They are a People addicted more to Arms than Arts, and tho' the *Portugueze* thought them eaſie to overcome, becauſe they were naked and unlearned, yet were deceived in both, Nature inſtructing them in the ways of their Defence.

Their Marriages.

The Country abounds with Minerals and Stones of price, and no part of it is deſtitute of Fruit and other Proviſion; but the Land, eſpecially by the Sea-ſide, is Wooddy and Mountainous; and in thoſe Parts that lie between *Narſinga* and *Malabar*, there are many Wild Beaſts, that make the Ways dangerous, and Serpents that have Wings and Feet, if Report may be believed.

The Product of the Country.

Moſt of the People in their Diet abſtain from Fleſh and Wine; yea, Wine-Vinegar and Strong-Water, not allowing themſelves the Liberty of Radiſh-Roots, Onions, Garlick, or other Roots and Herbs, that have a tincture of red, and reſemblance of blood, that they may keep to the Rules of the Shaſter, and Example of their Anceſtors, contenting themſelves with Milk, Rice, Sugar, Herbs, and Fruits of ſeveral ſorts and Spices, being of the *Bannian* perſwaſion, who will not take away any Creatures life to preſerve their own. Paſſing from hence they came before

Their Diet.

Callicut, thought to be *Ptolemy*'s *Canthapis*, and anciently called *Callicaris*, once a Town of Trade, but now ruined by the *Portugueze*, who have transferred their Mart and Staple to other Towns, and ſo made this place poor and deſolate. It lies in the 11 deg. Northern latitude, and ſtanding in the hot Zone, muſt needs at ſome time of the Year be very hot. The Earth is but meanly fruitful in Graſs, but the Gardens, by the help of Brooks brought into them by Art, are for the greateſt part of the Year redundant in variety of Flowers and Fruits. The City is of it ſelf large, but the Houſes are low, thick and dark, and the Streets narrow. The Harbour is at ſome diſtance from the Town, and but indifferent to anchor in; there are near it the Remains of two ſtrong Forts, raiſed by the *Portugueze*, but demoliſhed by the *Malabar*. The *Somareen* uſually reſides in this City, a Prince of great Power and Awe, black in colour, and treacherous in diſpoſition. They worſhip many *Pagotha's* here, pretending that they adore not Idols, but the *Deumo's* they repreſent; the *Portugueze* have defaced moſt of them. Their Grand *Cacc-Deumo*, whoſe Chappel is uncovered, and the Walls about three yards high, has upon his Head a Diadem, whence iſſue out four great Ram's Horns. His Eyes are ſmall and ſquint, and his Mouth large, opening like a Port-cullice, from which branch out four great Tusks. His Noſe is flat, and his Beard ſpreads like the Rays of the Sun. His Hands reſemble the Claws of a Vulture. His Thighs and Legs are ſtrong and hairy, and Feet and Tail are like a Monkies. All which put together, make the Devil like himſelf, and the People groſs Idolaters.

Callicut deſcribed.

Other Temples they have full of Pagods, equally deformed, yet all differing in their ſhapes, ſome black, ſome red. Every Morning the Prieſts (a Jogue) perfumes and waſhes them, the Devil it ſeems leaving a filthy ſmell behind him. Every Morning, the Prieſt attired in Lawn, Sacrifices a live Cock, which having killed with a ſharp Silver Knife, and embowelled, he ſends to the *Somareen*, who receives it as Food ſent him from his *Duomo*, and what he leaves is given not to the Poor, but to the Crows, his Serviteurs.

Their Temples and Sacrifice.

They exchange Wives, and tolerate Polygamy both in Men and Women, and the Iſſue is bequeathed as the Woman nominates. They write in Sedge and Palmeto Leaves, as the Ancients did, but inſtead of a pin of Iron, they write with a piece of hardened Wood cut ſharp. Then they paſſed by

Polygamy.

Cowlam, it is a Town and Province, and ſtands in 9 deg. North. About 200 Years ago the Town was rich, great and populous, traded to by many *Indians*, enlarged ſo by the *Somareen*, that it numbred 100000 Inhabitants, but now the period of her Excellency is come, *Callicut* and *Goa* have Monopolized the Trade

Cowlam deſcribed.

from

The *Bannian* deſcribed.

from her. The *Bannians* all along this Coaſt ſwarm in Multitudes, ſucking in gain by an unmeaſurable thirſt and induſtry, which is raviſhed from them by Drones, the *Moors* and *Gentiles*, who are Lords over them: For the *Bannian* is no Swaggerer nor Royſter, he abhors Domineering and Fighting, and ſuffers himſelf to be fleeced by any Man, rather than reſiſt, or ſhed Blood by breach of Peace, or making the leaſt Oppoſition; they love no Tumult, no Innovation, are content to ſubmit rather than govern. They are Morally honeſt, courteous in their Behaviour, temperate in Paſſion, decent in Apparel, abſtemious in Diet, induſtrious in their Callings, charitable to the Needy, humble, merciful, and ſo innocent, as not to take away the Life of the ſillieſt Vermin, leaſt by deſtroying any living thing, they ſhould diſlodge the Souls of their Friends from their Manſions, for they believe the tranſmigration of Souls into Beaſts.

Chriſtians of S. *Thomas*.

Among them are mixed ſome Chriſtians whoſe Anceſtors were converted by St. *Thomas* the Apoſtle, as indeed there are Chriſtians almoſt in all *Mahometan* Countries, becauſe the *Mahometans* allow Liberty of Conſcience, according to a Chapter in their Alcoran, That none are to be diſſwaded from the Religion they have ſucked in from their Cradle. Theſe *Indian* Chriſtians have ſundry Ceremonies and Forms, of long time practiſed among themſelves, differing from the uſages both of Papiſts and Proteſtants. Their Churches are low, and poorly furniſhed, but neatly kept, and without painted Images. They aſſemble cheerfully, and at their entrance ſhut their Eyes for contemplation. They kneel with their faces toward the Altar, where the Prieſt is ſeated, whom they ſalute with humble Reverence, and he returns his Bleſſing by lifting up his Hands and Eyes. At a ſet hour Prayer begins, and the whole Service ſeldom laſts above two hours. They firſt make a brief Confeſſion of Sin, and then Expound ſome part of the Scripture, to which the People attend with gravity and ſilence. They ſing an Hymn, and at their going out of the Church re-ſalute the Miniſter, who ceaſeth not to elevate his Hands till they are departed. At home they uſually read a Chapter out of each Teſtament in their Mother-Tongue, into which they held St. *Thomas* tranſlated them out of the Originals. Every firſt *Sunday* in the Month the Prieſt reads an Homily, written, as they ſay, by the ſame Apoſtle, or ſome of his Scholars.

Their Baptiſm with the Sign of the Croſs.

Divorce and Viſitation of the Sick.

They baptize commonly at the fortieth day after the Birth, if the Parents deſire it not ſooner, and at it. They ſign with the Croſs on the Forehead, and then waſh all over with Water. The Lord's Supper they Adminiſter in both kinds, and the Communicants receive it kneeling. They obſerve two days Preparation, in which time they eat no Fleſh, revel not, and company not with Women; and in the Church, if need be, make their Confeſſion. The Clergy marry but once, the Laity twice: Widows, if they marry before the Year be expired, are ill reported of. None, unleſs in caſe of Adultery, are allowed to Divorce. In Sickneſs the Prieſt is uſually ſent for, both to Pray and give the Euchariſt, it deſired; which done, they take their farewel of their Wife, Children, and other Friends, and ſo rid themſelves of Worldly diſtractions, that by contemplating on the Joys of Heaven, they may mitigate the grim aſpect of approaching Death.

Their Burials.

Their Faſts and Feaſts.

Being dead, the Survivors rather Joy than Mourn, and having firſt waſhed the Corps, lay it in clean Linen. Friends accompany him to the Grave, and place the Body with the Head Weſt, and five days after viſit the Family. They Feaſt and Faſt according to our Cuſtom. Their *Lent* begins in the Spring, and is obſerved forty days. Their Year is Solar. Our three chief Feſtivals they celebrate, and on the firſt of *July* commemorate the Martyrdom of S. *Thomas*. They have many *Protomiſts*, and the chief of them reſide in an Houſe built upon a Mountain 9 Miles from *Cranganor*. Since the *Portugueze* have ſettled in *India*, they ſhave their Heads. Laicks pay Tithes, affect Juſtice, profeſs Truth, practiſe Humility, and believe no Purgatory.

Brin-John.

May 7. they came cloſe to *Brin-John*, an high Mountain, and paſſing Cape *Comryn* ſailed by the *Maldives*, the King of which ſtiles himſelf Emperor of 13 Provinces, and 12000 Iſlands, and ſo kept on their Courſe to

Zeilon deſcribed.

Chriſtianity planted here.

Zeylon, called by the Inhabitants *Chingal*, who are a very comely People, and well-featur'd, nothing like the *Africans* ſave in colour. They are very ingenious, and good Mechanicks. The better ſort wear Silks, but the Vulgar are naked from the Waſte upwards. The air is very hot, being within 8 degrees of the Æquinoctial. The length of it is about 70 leagues, breadth 40, and circuit 250, or thereabouts. The Seeds of Chriſtian Knowledge were ſown in this Iſland very early, perhaps by Queen *Candace*'s Eunuch; ſince *Dorotheus*, who lived in *Conſtantine*'s days, ſays he preached the Goſpel in many parts of *Arabia* and *India*, and ſundry Iſles thereabouts, but now they are moſt of them turned Apoſtates. In *Claudius*'s days, ſome of the Natives of this Iſland came to *Rome*, and pretended much to the Knowledge of Aſtronomy and the Sphere, which 'tis probable they derived their Skill of from the *Gymnoſophiſts* the Scholars of *Zoroaſter*. *Laurentius*, the Son of *Almeida*, diſcovered it in 1500.

Their Idols.

At preſent 'tis over-run with Heatheniſm, and there is ſcarce any Village or Mount without its inanimate Pagod, their ſuppoſed Deity, or *Male-Geny*. Among others was the infamous Idol called *Hanimant*, or *Apes-Tooth*, which was highly eſteemed and reſorted to by Millions of *Indians*, till *Conſtantine*, the Vice-Roy of *Goa*, took it away from them at *Columbo*, and tho they offered him 300000 Ducats burnt it; yet a Crafty *Bannian* forged another ſo well, that the *Jogues* believed it the ſame, and ſo he ſold it to the joyful *Zeilonians* for great price.

Not far from *Mattacala* ſtands another famous *Pagotha*, of which the *Jogues* report, that *Joſhua* their King believing it a ſenſeleſs Idol, the Image on a time, when he entred his Temple, breathed out Fire, his Eyes ſeemed to ſparkle with rage, and his Scimitar in his Hand wrathfully bent againſt him; at which the King being amazed, cried out for help, accuſes his Infidelity, and having ſatisfied for his Error, became a zealous Idolater.

Adam's Footſtep.

Upon *Columbo*'s-*Peak* they ſhew the foot-ſteps of Old *Adam*, who they believe was born and buried there; and not far from it is a Lake of Salt Water, ſaid to be the tears of *Eve*, which ſhe ſhed for her Son *Righteous Abel*, for whom ſhe wept 100 Years.

The Cinnamon-tree deſcribed.

The Soil is good, and abounds with ſundry ſorts of Spices, as Pepper, Ginger, *&c.* but there is the greateſt plenty of Cinnamon, which is a precious Bark. The Tree is ſtraight, and the Boughs grow in a comely Order; it reſembles the Olive-tree in height, but the Bay in leaves. The Bloſſoms are very white, the Fruit round, hard, and dark coloured. It is covered with a thick Bark, of which the Peaſants ſtrip it in the Summer, and dry it in the Sun. This Iſland affords many other Rarities, as Oranges, Dates, Coco's, Anana's, Plantains, Maſtick, Elephants, Buffalo's, Cows, Sheep and Hogs, Smarages, Rubies, Balaſs-Diamonds, Amber-greeſe, *&c.* Theſe things firſt invited the *Danes* to trade hither; and then the *Portugueze*, under the Victorious *Almeida*, to covet it, who in ſpight of their united Heptarchy, in 1506. made them pay the Annual Tribute of 250000 pound weight of their beſt Cinnamon to their King *Emanuel*. Store of Pearl-Oyſters have been taken between Cape *Comryn* and *Zeylon* of good value. Here alſo is no want of Gold, but the King thinks Porcellane-Diſhes more valuable.

Coromandel.

From *Zeylon* they ſailed by the Coaſt of *Coromandel*, which ſtretches above 300 leagues from Cape *Comryn* under 8 deg. North, towards the *Æſtuarium* of *Ganges*, now called the Gulph of *Bengal*. Upon this Coaſt are ſeveral Towns of Note, as *Negapatan*, *Meliapore*, *Polycat*, *Armagun*, *Narſinga*, *Meſlipatan*, *Bipilipatan*, and ſundry others; in ſome of which the *Engliſh*, and in others the *Dutch*, have Factories.

The *Ganges* deſcribed.

The *Ganges* is one of the largeſt Rivers in the World, it holds its Courſe of 3000 Miles, and is increaſed by 50 other Rivers that run into it, and for above 100 Miles is double the breadth, and thrice the depth, that *Euphrates* is at *Babylon*. It divides *India* into two parts, and branches it ſelf into ſeveral ſtreams. Upon the Banks of it ſtand many noted Towns, and at length at 5 Mouths, of Old called *Cambyſum*, *Magnum*, *Cambericum*, *Pſeudoſtomum* and *Antibolum*, empties it ſelf into the Gulph of *Bengal*, and then into the *Indian* Sea. The *Bannians* have the Water of *Ganges* in that great eſteem, that they covet to have their Mouths wetted with in deadly Fits.

Negapatan deſcribed.

Negapatan, ſo called from the River *Nega*, on whoſe Banks it ſtands, lies in 12 deg. Northern Latitude, and odd Minutes, in a Clime hot and unwholſome through the high Winds and unſeaſonable Rains, which are common here ſome part of the Year, yet they have good Water, well-reliſhed Fruits, which nouriſh much. The People are blackiſh, and unfit for Studies, much vexed with Fevers, Fluxes, and other diſtempers. The Heat is ſo great here, that it weakens their ſtomachs, and makes them unfit for Labour. They wear a fine Shuddery, or Veil, over their Secrets, and a ſmall Wreath about their Heads, going naked in the reſt of their Body in all ſorts of Weather. They have Gold, precious Stones, and other Merchandizes, which draw Trade to them. They tolerate all Religions.

Their Marriages.

The manner of their Marriages is extraordinary. The Prieſt with a Cow, and the Man and Woman, go to the Water-ſide, where the *Bramyn* mutters a ſhort Prayer, and then links their hands about the Cows tail, pours upon them all his hallowed Oil; and laſtly, forces the Beaſt into the River, into which ſhe goes willingly ſo far as till they be up to the middle in the Water, nor do they return till the waves force them. Being come on ſhore they untie, and hold this Myſterious Conjunction forcible and ſacred for ever after.

Women burnt with their Husbands when dead.

The Heathens are averſe to Law and Morality here, and as if they were ignorant of the Law of Self-preſervation, allow their Wives to burn with their Husbands; ſo that Death having ſeparated them, the Wife conceits her ſelf a dead Carkaſs, and reſolves to make her ſelf an Holocauſt. To this end ſhe Cloaths her ſelf with Lawn, Fetters her Arms, Legs and Thighs, with Chains, expreſſing Love, but her Ears, Noſe and Fingers, are adorned with Pearl and precious Stones. With one hand ſhe holds a Noſegay of Flowers, and in the other a Ball, both which they account Emblems of Paradiſe. She is attended with a great number, ſome accompanying her for love, others for civility, but moſt to encourage her, and grace the Ceremony. The Prieſt all the way deſcribes the Joys ſhe ſhall poſſeſs with her Husband, whom ſhe ſhall immediately enjoy in Paradiſe. She returns a modeſt ſmile, trips on, and chews ſomething in her Mouth to intoxicate her Brain. Upon the ſight of the Pile ſhe ſeems tranſported with ſatisfaction; and when her Husband's Carkaſs is laid upon it, and it begins to burn, having bid farewel to Parents, Children and Friends, ſhe, like a mad Lover, whirls about the Pit, and willingly throws her ſelf into the midſt of the flames, which ſoon turn both of them into aſhes. Muſick of ſundry ſorts, with the Acclamations of the Spectators, make a great noiſe, both for the greater honour of the Obſequy, and that the ſhrieks of the poor wretch may not be heard to diſcourage others. The *Mahometans*, ſince they have come into theſe Parts, have prohibited them the uſe of this barbarous Cuſtom, but ſome Women have made themſelves away, yet others more wiſe do refuſe it; but then, by way of ignominy, they are commanded to ſhave their Heads, and ſequeſter themſelves from Company, as a puniſhment. This Cuſtom, that the Wife ſhould be burnt with the Husband, is not ſo ancient as that of burning the Dead is, but was brought in upon this Occaſion: Several laſcivious Wives, upon ſome ſlight provocation, or other diſtaſte, did ordinarily poyſon their Husbands, for prevention of which, this *Draco's* Law was deviſed and enjoyned the Widow, which tho' it ſeems a ſevere Inſtitution, yet it was neceſſary to extirpate ſo bad a Cuſtom. Nor is ſome part of their Devotion leſs Tragical, as well as Lewd and Wicked, as this inſtance may prove: Upon a certain Feaſt they ſet a Maſſy Pagod, or Idol of Metal gilt, upon a Chariot of eight Wheels richly gilded, into which they aſcend by ſeveral eaſie ſteps; upon it the *Jogues*, and ſeveral proſtituted Girls are placed (for through an helliſh Zeal the Parents deſtinate their pretty Children to Lewdneſs.) Thus mounted they go on the Proceſſion, and happy is the Man, (in their eſteem) be he rich or poor, great or baſe, that can lend an hand to draw the Chariot; yea, they account them happieſt, who out of a frantick Zeal raſhly throw their naked Bodies in the way, to the end, that by the weight of the Chariot they may be cruſhed to Death, and become thereby the Devils Martyrs. But enough of theſe things, let us come now to

The Original of burning the Wives with their dead Husbands.

Meliapore deſcribed.

Meliapore, a famous Town in the Kingdom of *Biſnagar*, lying in 13 deg. 20 min. Northern latitude. It was firſt called *Salamina*, then *Melange*, after that *Meliapore*, and now S. *Thomas*, becauſe that Apoſtle is ſaid to have ſuffered Martyrdom here, after he had finiſhed his Labours in publiſhing the glad Tydings of Salvation through *Perſia*, *Hyrcania*, *Bactria* and *Sogdiana*, and many other Parts of *India*. His death happened about thirty Years after our Saviour's Paſſion, and a Commemorative Feaſt in his Memory is celebrated *July* 1. by all the Native Chriſtians of *India*. This is all that makes this Town famous at this day, for it's but ſmall and poor in it ſelf, and has but little Trade to it, unleſs for Cotton-Ware, and ſome common Commodities. It is ſaid that the Inhabitants of this place have this mark ſet upon them for their Cruelty to S. *Thomas*, that one Leg is always bigger than the other in the Calf. S. *Thomas* Sepulchre remained in this Town, and was much reſorted to and honoured by the *Indian* Chriſtians, till about 50 Years ſince, when the Relicks of this holy Apoſtle were taken away and enſhrined in the Virgin *Mary*'s Church at *Goa*, by the Command of *John* III. King of *Portugal*. Near this Town are *Polycat*, *Armagun*, *Caleture*, *Tanaſſery* and *Petipoly*, *Engliſh* Factories, and all in the way to

S. *Thomas*'s Feaſt.

His Sepulchre.

Narſinga deſcribed.

Narſinga, a noble Part of *India*, and famous all over *Aſia*, bounded by *Malabar*, *Golcunda*, *Bengal*, and the Ocean. The King is ſo rich, that he deſpiſes his Neighbours, and ſo powerful, that he values neither *Mogul*, *Decan*, *Somaryn*, nor *Peguan*. The Country is ſo full of all things neceſſary for Uſe and Pleaſure, as fair Towns, ſtrong Forts, pleaſant Fields, and choice Minerals; and has ſuch Rivers, as ſo enriches the Earth, that it abundantly produces Corn, Cattel and Fruits, inſomuch, that he is reputed as conſiderable a Monarch as any is in *India*. His Annual Revenue is computed to be two Millions of Money. The *Bannians* ſwarm like Locuſts in this Kingdom, and the *Brachmans* are no where more reputed of, having ſeveral Temples, of no fine Structure, but full of Idols.

Biſnagar deſcribed.

Biſnagar (which is the *Binagra* of *Ptolemy*) is now the ſecond City for Grandeur and Trade in that Kingdom, encompaſſed with a Wall of near four Miles in Circuit, regularly fortified, well built, and no leſs Wealthy. The Haven is good, and the City frequented by Ships from *Europe*, and Junks from all parts of *India*, *Perſia* and *Arabia*. The Cuſtom heretofore was, that a Traveller, when he came to the Court, had civil Entertainment, and was many times invited by the King, the better to ſhew his Bravery, for his Coat was thick ſet with Stones and Gems of luſtre, which when he was Cloathed with, he ſo nearly reſembled the Sun, whom they worſhip, that he was little leſs than adored. His Court was full of Majeſty, and his Guards conſiſted of a thouſand Men. Polygamy he affects, and reckons it one of his principal Titles, that he is the Husband of 1000 Wives, many of which have him all his life in ſuch eſteem, that at his Death they voluntarily burn themſelves with him. More Northward upon this Coaſt is

Meſulipatan deſcribed.

Meſulipatan, or by contraction *Meſſipatan*, a Town ſituate in 16 deg. and half Northern latitude, and in the Skirt of the *Bengalan* Gulph; the Province has a mixture of Idolaters. The *Gentiles* are moſt numerous, but *Mahometans* are moſt powerful, ſince it has been made ſubject to the *Mogul*. The Town is neither for bulk or beauty conſiderable, being about 50 Years ago almoſt unpeopled and made deſolate by a raging Mortality and Famine. The Streets are but few, and thoſe narrow; the Houſes are low, and Fields parched by the extreme heat that rages there from *March* to *July*, from which time to *November*, Wind and Rain as inceſſantly diſturb them, ſo that of 12 Months they have but four, *viz.* from *November* to *March*, wholſome and moderate. Neverthelefs, the Rains ſo prepare the Earth for the reception of Seed, that they uſually reap two Harveſts of Rice, Caravans, and other Grain. The *Engliſh* at preſent have their Reſidence here, and bring a Traffick hither for Rice, Callico's, and the like Commodities, which will increaſe daily, unleſs the deceitful diſpoſition of the People occaſion their remove thence to *Armagun* and *Polycat*, Towns upon the ſame Coaſt, and neighbouring to *Meſulipatan*, where they may ſit down with more Eaſe and leſs Charge, and have as great variety of Merchandize.

Two Harveſts in a Year.

Caſta deſcribed.

Near this place is an unchaſte Town, tho' its Name ſeems to import otherwiſe, being called *Caſta*; a Town Infamous for Idolatry. The Moſques ſhew Art in the Sculpture, but are hateful in their impious Devotion, their Pagods bearing ſome reſemblance with the Images of *Priapus* and *Pan*, which *Servius* deſcribes with great Eyes, a flat Noſe, wide Mouth, four great Horns, a long Beard, claws for Hands, and Crook-legg'd, all over deformed. The Feaſts of *Bacchus* are ſtill here Celebrated, for they cover themſelves with Skins, adorn their Heads and Treſſes with Ivy, in one Hand holding a Javelin, and in the other Cimbals of Braſs and Timbrels, attended by many Boys and Girls, which ramble like ſo many diſtracted People up and down, and ſtriving to rend the Air with their continued Clamours.

Cows adored here.

The Cow is here adored as the *Ægyptian Apis*, or Py'd Bull was, and ſo are the Sun, Moon and Stars, as Celeſtial Souls. Others there be among them, that have Rivers and Trees in Veneration, as the *Celtæ* deſcribed by *Tacitus* had. In one of their Feſtivals they have a wicked Cuſtom to faſten ſick and needy Men to an Engine, which elevating him equal with the Pagod, the Blood trickles from his wounded ſhoulders, and at his deſcent he is daſhed againſt a Tree. Then after he has Invocated the *Deumo* to accept his Offering, he returns home with hopes to thrive the better ever after. They often Sacrifice in the Night, making the Streets bright with Lights.

They

Their Burials.

They have a different kind of Burial from what we find in moſt other places, for here the Corps is placed either in a deep Cave, which is long and narrow, or elſe between two Walls built on purpoſe, wherein the ſimple Relict voluntarily incloſes her ſelf, expecting Death by Famine, which is the moſt languiſhing and formidable Death. They go for the moſt part naked, the heat of the Zone excuſing Cloathing.

Their Curricurries, *Vid.* the Fig. 19.

They delight in Fiſhing and Sporting upon the Water in Boats, or Curricurries. From this Coaſt they ſailed to

Malacca deſcribed.

Ophir here proved.

Malacca, which is in, or near the *Aurea Cherſoneſus*, places ſo Celebrated for the plenty of Gold that has been brought from thence, that *Ophyr* is not without reaſon fixed hereabouts; for tho' *Rabianus Maurus*, and after him *Chriſtopher Columbus*, places it in the Gulph of *Mexico*, and *Geropius* in *Peru*, which retains the Name of *Pervaym*, a Name of the ſame import as *Ophyr*; and *Ortelius* would perſwade us, that he has found it in *Æegeſymba*, or South *Africk*, at a place called *Phura*, a part of *Soffola*, yet that *Ophir* was at and about *Malacca*, or at leaſt in ſome contiguous Parts of the *Eaſt-Indies*; and that *Joktan*, with all, or moſt of his Sons, were planted in the *Eaſt-Indies*, appears by the continuation of the Names of the principal Planters ſtill remaining in theſe Parts, for the Old Name of *Ganges* is *Joktan*, and the *Taphin* near it retain *Ophir*'s Name plainly. In *Pegu* is a Country call'd *Ava*, *Chava* and *Chavilah*, and the Inhabitants *Eulæi*, which ſhew *Havilah* to be their Founder. Of *Hadoram*, the *Aramæi* in *Guzurat* ſeem to be deſcended. *Abimael* is the Father of the *Malls*, or People of *Malabar*, as they were called of Old. Of *Obal* are the *Obolites*, and *Abelotes*, which Hiſtorians place about *Ganges*. From *Elmodan*, the *Emodian* Mountains may be ſuppoſed to take their Name without ſtraining. The Town and Province of *Joor*, or *Jehor*, plainly retains the Name of *Jerah*, and the *Sabæi*, who in conjunction with the *Tococæ* oppoſed *Alexander*'s Conqueſt, bear the Name of *Sheba*; ſo that there are plain footſteps, that *Ophir* was hereabouts. *Malacca* is ſituate in 5 deg. Northern latitude, and is a City in the Kingdom of *Siam*, to whoſe King it was ſubject till *Alberquerq* took it from him, and put it under the King of *Portugal* his Maſter, and made a Garriſon, fortifying it with 3000 Ordnance. He alſo ſeized the King's Exchequer, in which he found above 1250000 pieces of Rials of Eight, but the Death of the King was ſo ill reſented by the King of *Siam*, and the neighbouring Potentates, that combining together, and taking the Advantage of *Albuquerq*'s Abſence, they ſuddenly appeared before the Town, and by a deſperate Storm maſtered the City and Citadel, yet generouſly gave the *Portugueze* leave to Ship themſelves away, commanding their Works to be demoliſhed. Nevertheleſs, it was not long after brought under the Crown of *Portugal*, and ſo continued, till it was lately wreſted from them by the *Hollander*, who have gotten many Plantations in thoſe Parts, and by their Naval Force have not only engroſſed to themſelves the *Molucco* Iſlands, but almoſt all the Trade of the Eaſt. *Malacca* is a place of good account both for Strength and Trade, tho' being a low Land 'tis not reputed healthy. The Town is long, extending about two Miles, but not half ſo much in breadth. The Buildings are low and ordinary, and the Streets narrow. The Bazar is the only place of beauty in it. It is watered by the *Gaza*, which here admits a Bridge tho' near the Sea, 'tis 3 leagues wide. For its defence it has a Caſtle ſtored with Cannon, and a Wall reaſonably flankered and ſtrengthned by a latt Graff and Counterſcarp. The *Siamites*, who being baniſhed their own Country ſettled here, being civil and induſtrious have invited the Trade hither, and ſo made the Town wealthy and conſiderable. The Gardens and Fields about it abound with Fruit, among which the Duroyen and Pine-Apple are the principal, and the Land being low, and Soil fat, it encourages them to plant Corn, and ſeveral ſorts of Grain. But being near the Æquinoctial Line, the Air is uſually very warm, and ſometimes above meaſure. They have frequent Thunder, but qualify'd with long nights, and frequent ſhowers and breezes. Here the Manzoons blow W. N. W. from *Auguſt* to *October*, about which time the Wind veers N N. E. until *March* be ended, and then it turns S. and holds till the beginning of *Auguſt*. The *Indians* are numerous hereabouts, the better ſort wear rich Apparel, but the Vulgar go for the moſt part naked. They are generally Witty and Hoſpitable, love Muſick and Novelties, civil in Peace, fierce in War, deceitful if too much credited. Their Language is Copious, as the *Latin* and *Arabick* are. *Sincapura* divides this Continent from *Sumatra*, being ſcarce half a degree to the North of the Æquinoctial and the moſt Southernly Cape of the *Aſian* Continent. It was a place of great Trade with the *Chineſes*, *Javans*, *Sumatrans*, and the People of other Iſles thereabouts, until *Malacca* drew the Commerce from thence. The Streight is not above a Muſket-ſhot over, and ſo rocky, that it affords a dangerous paſſage. From *Malacca* 'tis not above 12 hours travel to

Their Fruits and Corn.

The Indians deſcribed.

Sincapura deſcribed.

Patania deſcribed.

Patania, called *Potinga* by *Ptolemy*: It lies in 7 deg. Northern latitude in the Gulph of *Bengal*, called *Sinus Argaricus extra Gangem*, between *Malacca* and *Siam*. It affords many Commodities, which draw the Merchants thither. 'Tis under a Regal Government, and the Princes derive themſelves from one *Gingee* Son, and Vice-Roy to the King of *Delly*, ſettled here when *Patania* was ſubdued. The *Mogul*, his great Neighbour, has often threatned to Dethrone him, but he keeps his own, being defended by the *Ganges*, and ſmall Iſlands in it, which he has well fortified. The Town is by ſituation ſtrong, which is increaſed by 12 braſs Ordnance; one of which is 26 foot long. Here are ſome Idol Temples, but the Monuments of moſt Note are the Tombs of their Kings. The People are black, and by reaſon of the heat go for the moſt part naked. They take great delight in chewing Betel and Opium, and drinking Arack, a ſtrong Liquor, which they do to exceſs. The better ſort uſually eat in their Plates of Gold, others in Porcellane. The People uſually ſpeak three Languages, which are written as many different ways, *viz.* the *Malai*, from the Right-hand to the Left, as the *Hebrew*; the *Siameſe*, from the Right-hand to Left, as we; and the *Chineſe*, downright; all three are uſeful to ſuch as Traffick. They are a mixture of *Mahometans* and *Gentiles*, the one worſhip God, as the other do their Pagods, both erroneouſly. They are very hoſpitable to ſuch as come to reſide among them for Novelty or Gain, and enquire not after their Country, Buſineſs or Religion, but they are ſo addicted to Vice, that Strangers had need to pray for Grace to reſiſt Female temptations, for the Women are fooliſhly frolick, and fearleſly merry; idleneſs and heat provokes them ſo, that they wallow in all manner of Turpitude. The Grape moves them to Wickedneſs, for they delight their Palate with the choiceſt Wines, Arac and Fruits, but by their Intemperance they ſhorten their days. Near it is

Their Languages.

Their Hoſpitality and Vice.

Siam.

Their Idols worſhip.

Siam, called anciently *Sabanna*, and *Cortatha*, a City and Kingdom diſtant from the Æquinoctial 14 deg. a great and famous part of *India*. The King of it has a large Juriſdiction, *Joor*, *Malacca*, a great part of *Pegu*, *Brama* and *Cambogia* were Tributary to him, *Patania* alſo; *Jamobay*, *Odjea*, and other Territories, watered by *Ganges*, acknowledged him, ſo that within the memory of Man, he was able to bring into the Field 500 Elephants, and 200000 fighting Men armed with good Swords, Bows and Arrows, Shields and Lances. He pretends to a long Race of Royal Anceſtors. The Zone is hot, which makes the Men black, and Cloathing almoſt needleſs, ſo that they content themſelves with a Cambolin of Lawn of ſad colour, trebled about their ſhoulders, and carry a Sambrero in their hands to abate the heat. They wear no Sandals, that the ſcorching Sands may mortify their fleſh. They allow liberty to Chriſtians, Moors, and other Superſtitions, yet the Natives are tranſcendent Idolaters, worſhipping Deities in the ſhapes of *Pan* and *Priapus*, with other Goatiſh fancies, and in ſuch poſtures as are not fit to be mentioned. They have Groves and Altars, on which they Offer Fleſh, Fruits and Flowers; and many times, when their *Tallapoi* tells them their *Duomo* is melancholy, they make harmonious Muſick to them to make them chearful. Others by break of day, run to their Pagods with a Baſket of Rice, hoping that day will be happier. The Kings of *Arrachan*, *Tanaſſery*, *Siam*, *Pegu*, *Auva* and *Tangu*, are all *Gentiles*, and have their Temples ſtuffed with Pagods. The *Tallapoi* preach uſually every *Monday* (their Sabbath) in the Market, and call the People together by the ſound of a Copper Baſon. They ſeem Mendicants by Profeſſion, yet what by their Policy, and what by their Incantations (for they foretel future Events, and have great Knowledge in things paſt, preſent, and to come, by Magick, and Moral Obſervations, reſolving, diſſwading, applauding, and directing them) they are had in very great Eſtimation. Theſe are their Prieſts. Their People are very great Sodomites, a Sin which Nature abhors. Sedge and Palmeto leaves are uſed for Paper. The uſual place of the King's Reſidence is at *Indy*, a Town ſituate in an Iſle compaſſed with the *Menan*. His Palace is large, pretty well built, and held defenſible. The other Houſes are low and mean, and the Streets narrow, but very uſeful to keep out the extreme heat which ſometimes rages. The Inhabitants of *Coromandel* and the *Chineſes*, trade hither with Sattens, Porcellanes, and, other Commodities of value, which make the place more noted. The Boys often paint themſelves with blue from top to toe, and cut, gaſh, and pink their Skins, for Beauty and Ornament. The Men affect Perfumes, and practiſe Complements.

The Soil and its Product.

The Soil, tho' watered with the *Menam*, is but indifferent for Graſs, but abounds in rich Stones, as Diamonds, Chryſolites, Onyx, Magnets and Bezoars. It bears plenty of Lignum Aloes, Benjamin and Cotton. It has alſo Mines of Iron and Copper. There is Gold and Silver alſo, but moſt of their Silver comes from *Japan*. They have ſuch plenty of Proviſions brought to them from other Parts, that they are bought here cheaper than in many other places.

The Blood-ſtone.

Among Stones, the Cabriz or Blood-ſtone, which is here generated, is moſt memorable; the Vertue of which is ſo marvellous, that 'tis ſaid, when the *Portugueze* killed a Man who had one about him, tho' they gave him many wounds he bled not till they pulled it from him, to their great admiration. The Beaſt out of which it is taken is called a Caball. The *Chineſes* reſiding at *Bantam* underſtand it beſt, tho' ſome ſay that in *Siam* and *Java* they are ſeen ofteneſt. Near this Kingdom lies

Pegu deſcribed.

Pegu, called by *Ptolemy Leſiarum Regio*, bounded by *Siam*, *Ganges*, and the Ocean, was a greater Monarchy 50 Years ago than now it is, becauſe the *Siamites* have taken many wealthy Seigniories from it, but is ſtill Commander of many Territories and Iſlands. It is the *Braman* Metropolis, and is ſituate in 16 deg. 40 min. Northern Latitude. The City is walled with Stone, beautified with Turrets, has 4 fair Gates, and 12 Poſterns, but is chiefly defended by a large deep Graff that compaſſes it. The Streets are not many, but large and broad, which is rare in the hot Countries. Before moſt of their Doors do grow Trees, uſeful for Shade and Fruit. It is divided into the New and Old, but this laſt is largeſt, and beſt inhabited. The Country is now bare of Wood, tho' anciently well Timbred. They are Worſhippers of Devils, for their Varella's are ſtuffed with ugly Idols; and that at *Dogonnee*, for Structure without, and Ornament within, excels any in the Eaſt.

The Product of it.

This Kingdom abounds with all ſorts of Nature's Bleſſings, *viz.* ſtore of Gold, Silver, Lead and Iron, as alſo Smaragds, Topazes, Rubies, Saphires, Garnats, Emeralds, Eſpinels and Cats-eyes; alſo plenty of Rice, Caravans, Long-Pepper, Sugar, Benion, Muſk, Lac, Bamboos, Cotton and Callicoes. It is probable S. *Thomas* preached the Goſpel here, but they delighted in darkneſs rather than light, for they now wallow'd in abominable Sins, and their Kiacks are full of filthy Idols.

Their ſtrange Opinions.

Yet *Bomferius* tells us of remarkable Opinions among them, *viz.* They believe that the World (conſiſting of Heaven, Sea and Earth) conſiſted of 4 Creations, and that for Impiety it was 4 times deſtroyed, *viz.* by Fire, Wind, Water and Earthquakes. Each Age was governed by a Guardian Deity, which was Tranſitory and Mortal. They reckon that the Deſtruction of the World, and the Death of their laſt God, was 30000 Years ago, and that all ſhall once more ſuffer a Chaos. They alſo imagine that a great Lord, who is Omniſcient and Omnipotent, and Rules in Heaven, but they do not worſhip him, becauſe Satan aſſures them he deſires it not, and does them no hurt, and therefore they worſhip him that he may do them no miſchief. They believe a Reſurrection of the Body after Death, and a Re-union with the Soul, and as (*Bomferius* tells us) a threefold Receptacle of Souls departed, *Naſhac*, *Niſhac* and *Scheca*, *i. e.* Heaven, Hell and Purgatory. Their Habit is a thin fine Lawn, they wear no Beards, and dye their Teeth black, becauſe Dogs-teeth are white, whom they hate to be like. They cut and pink their fleſh to become as Modiſh as their Neighbours. The Crows and Parrots here are uſually grey, as they are in *Africk*. The Land is low in many places, and ſubject to Inundations; but that which troubles them moſt is, the multitude of ravenous Beaſts among them, as Tygers, Wolves, and the like offenſive Creatures, to avoid which they raiſe their Houſes upon Arches, or Poſts of Bamboos, and get up to them by Ladders.

The Kingdom of *Pegu*.

About 100 Years ago the King of *Pegu* was a very formidable Monarch, having 12 Wealthy Provinces which acknowledged him their Sovereign, *viz. Siam*, *Auva*, *Chavilan*, *Brama*, *Jangomer*, *Tangram*, *Cablan*, *Lauran*, *Meliotalke*, *Arrachan*, *Tangu* and *Rachan*, out of which he Yearly extracted 2 Millions of Crowns, and a Million of Men, to ſerve him upon all Occaſions; but this would not content him, he muſt have all his neighbouring Princes in contempt, which begat a Rebellion firſt from the Vice-Roy of *Siam*, and then from thoſe of *Brama*, *Tangu* and *Rachan*, who miſerably harraſſed his Kingdom by Civil Wars, till by a Marriage the Kingdoms of *Siam* and *Pegu* are now divided, but ſettled in Peace, and begin again to flouriſh.

Veſſels brought to *Pegu*.

To *Pegu* from *Bengal*, *Negran-bar* and *Coſmin*, are brought in Paro's or Boats by Water, Veſſels which are pretty large, and ſowed together with *Cairo* (as 'tis here called) which is a Cord made of the Rind of Coco's, for they have no Iron, their curious Quilts and Carpets, ſtitch'd and wrought with raw Silk and threads of Gold and Silver, and the Bark of a Tree called *Moga*, Callico's, Rice, Pepper, Ginger, Sugar, Honey, Butter, Lac and Wax, with other Merchandizes. At *Coplen* are found Stones of price.

A white Elephant Worſhipped.

This Monarch, when he will appear in his Majeſty, loads his Head, Ears, Arms, Hands, Noſe and Legs, with Gems, which ſet him out like Stars, and when he Worſhips, Deifies a white Elephant of an unuſual bigneſs.

Elephants deſcribed.

The Elephant is for growth and underſtanding the chief of Senſitive Creatures. They go two, and ſometimes three Years with Young, and have extreme torment in their Labour. Their Teat is between their Fore-legs, which the Young Ones eaſily find. At three Years of Age they wean themſelves, and eat Herbs, Shrubs, Boughs of Trees, and other Vegetables, but when they are in Service, they are allowed more dainty Fare to increaſe their Strength and Courage, as Corn, Fruits, Roots, Sugar-Canes, Milk, Whey, and the like. They grow till they are 15 Years Old, and are uſually 18 foot high, and ſome of the higheſt mount to 24 foot high. Notwithſtanding their bigneſs, they are not dull and unweildy, but nimble and briſk ſpirited. They can, and uſually do lie down, as other Beaſts; and *Suetonius* ſays, one at *Rome* was taught to dance upon a Cable. They are highly commended for Courage, and tho' their Tusks and Proboſcis are their beſt Weapons, yet they can frame their mighty Body into Offenſive and Defenſive poſtures. In Rutting-time, which is in the hotteſt Seaſon, the Males are mad, and can hardly be ruled without a Females company. His Trunk is compoſed of ſmall Nerves, which be full of ſtrength, and very active; his Skin is rough and Aſh-coloured. His Teeth are proportionable to his Body, 13 Foot long ſome, and weigh upwards of 130 pound. Muddy Rivers, and cool ſhady Places, are his delight, but he hates Swine, Serpents and Mice. The Growing of a Cock alſo offend him.

Muſk-Cats.

Here are alſo ſtore of Muſk-Cats, a Beaſt bigger than a Caſtor, with a little Head, clear Eyes, long Muzzle, ſharp Teeth, parti-coloured, hard and briſtly hair, yellow above, and white below. His Pocket is near his Genitals, which is ſcraped with a Stick or Spoon when he is in Services, but when free, ſends it out voluntarily, and it is diſcovered by the ſmell. By theſe Countries lie ſeveral Iſlands, the Deſcription of which follows.

Sumatra deſcribed.

Sumatra, called of Old *Taprobane*, or *Taparvane*, and by ſome ſuppoſed to be *Ophir*, or *Parvaym*. By the Inhabitants called *Salytra*, or *Sabutra*. It is one of the largeſt Iſles in the Univerſe, in length 600, and breadth 240 Miles. *Alvaro Telezzo* diſcovered it in 1506, and ſince moſt Merchants in the World trade thither. 'Tis under the Æquinoctial, ſo that our Pole-ſtar is not viſible to them. It is governed by many Petty-Kings, but the King of *Acheen* is the moſt powerful. All of them have ſtore of Gold and Stones, but miſerable in their Superſtition. Moſt of them, not many Years ſince, adored Cats, Rats, Dogs and Devils; but ſince the Alcoran has been received there, the worſhip of theſe Elementary Creatures has been aboliſhed. Both Sexes go naked. The Soil is good by the Rivers-ſides, but barren where the Gold is found. Here are ſeveral Towns of Note, as *Acheen*, by the People called *Aſhey*, *Peder*, *Pacem*, *Daya*, *Tyco*, *Byaman*, *Jambee*, *Tycoa*, *Baruzec*, *Cattatinga*, *Menantabo*, *Gambar*, *Aru*, *Daru*, and *Paſſaman*, which has plenty of Gold. *Manancabo* is the moſt Inland Town, which does not want Gold. In the Streight betwixt this Iſland and the Continent, againſt *Jor*, which the King of *Acheen* conquered in 1613, are the *Barellæ*, and other ſmall, but pleaſant Iſlands. The Rivers abound with Fiſh, and might prove more delightful for the Net and Angle, did not the Crocodiles, which ſwarm here in greater numbers than in the *Nile*, fruſtrate both.

Crocodiles deſcribed.

Theſe Creatures are the greateſt Wonders we meet with in Nature, in that from as ſmall a beginning as an Egg, not much bigger than a Turkies, it increaſes to 8 or 10 Yards in length, and whereas other Creatures have their growth unto a period, and then decay, the Crocodile grows bigger and bigger until its Death. Their Bodies are no longer than their Tails, which they uſe as the Elephant doth his Proboſcis. Their Mouth is ſo wide, that they can ſwallow an Horſe or Man whole; their Teeth are engrailed. They have no Tongue, and cannot move their Upper-Jaw. Their Belly is penetrable, but their Back can hardly be pierced. They eat nothing all the Autumnal Quarter, but all the reſt of the Year greedily devour all ſorts of prey. The Number 60 is notable in the Female. Before ſhe lays Eggs 60 days paſs, and ſhe lays uſually 60 Eggs; ſhe conceals them 60 days, and ſits on them 60 days before hatching. She has 60 Teeth and 60 Joints, and they uſually live 60 Years. It is a Monſter, being neither Beaſt, Fiſh, nor Serpent, but the moſt noxious of Monſters. The *Ægyptians* make it the Hierogliphick of Impudence, becauſe it's daring to all but ſuch as are very bold, to whom it is very fearful. The *Ichneuphons* aws it, becauſe it often ſteals into its Belly, and gnaws its Guts, while he opens his Chaps to let the *Trochilus* into his Mouth to pick his Teeth, which is the Food that Creature lives on. The fleſh of it is ſo good and ſweet, that by many it is accounted a dainty. From hence they ſailed by ſome ſmall Iſles called *Marrah* and *Lampon*; in the Streights of *Sunda* to

The *Ichneumon* and *Trochilus*,

Java deſcribed.

Java Major, is an Iſland ſituate in 7 deg. 40 min S. Latitude, and in an 120 deg. Longitude, a very great and noble Iſle, for from Eaſt to Weſt it ſtretches 150 Leagues, or 450 Miles, and from North to South 90 Leagues, or 270 Miles *Engliſh*. The Midland is for the moſt part Mountainous, and thinly Peopled, but the Sea-Coaſts is low and very populous. The Uplands are very ſubject to Wind, but healthy, but the Coaſts are marſhy and unwholſome. It is a Compendium of the World, for it abounds with all things that be either uſeful or excellent. The Coaſt (by reaſon of the Trade for Pepper) has Towns beſt built and moſt wealthy. Upon the North-ſide and to the North-Eaſt are *Bantam*, *Palamban*, *Jackatra*, (new-named by the *Dutch Batavia*) *Japarra*, *Tuban*, *Joclan*, *Grecy*, *Cheringin*, *Serabaya*, &c.

Bantam.

Bantam lies in 6 deg. 20 min. Southern Latitude, and 3 deg. of Weſterly variation. It is the biggeſt City in the Iſland, as the Natives own, and ſtretched almoſt two Miles in length. The moſt remarkable places in it are the *Pengrans* Palace, the Bazar, a few irregular Streets, and at the fartheſt end the *Chineſes* joyn together, as the *Jews* do at *Amſterdam*, but their Houſes are nothing ſo ſplendid. The Town of its own growth affords little, ſave Rice, Pepper and Cotton-wool, but the greateſt quantities of Pepper are brought by the Induſtrious *Chineſes* in Junks, or Praws, every *January*, from *Jamby* in *Sumatra*, *Borneo*, *Malacca*, and other places, making *Bantam* the Magazine, out of which, by Money or Exchange for Commodities, they furniſh the *Dutch*, *Engliſh*, and other Nations.

The *Chineſes* deſcribed.

The *Chineſes* are no quarrellers, tho' Voluptuous, Venereous, coſtly in their Sports, great Gameſters, and in trading too ſubtle for young Merchants: Oftentimes ſo great Gameſters at Dice, that when they have loſt their Eſtates they'll ſtake their Wives and Children, yet in a little time, *Jew* like, by gleaning here and there they'll redeem all; but if they do it not by the day appointed, they are ſold in the Market for the moſt advantage. The Iſle has one Sovereign Prince, whom they call the *Mattaran*, who has four Deputy-Governours, and is ſo powerful as to be able to carry 200000 Men into the Field upon Occaſion, who are indeed ignorant of Martial-Diſcipline, eſpecially as we uſe it, but of approved Courage and Dexterity, and ſufficiently ingenious, as to the invention of their Arms and Execution.

They commonly uſe Lances, Darts, Arrows and Shields, but the greateſt Bravery is in their Crizes, a Weapon two foot long, and four inches broad, waved, ſharp both in the edge and point, but, contrary to the Laws of Nature and Nations, venomed. The handle of them is uſually of Wood or Horn, (but ſometimes of Gold, Silver or Ivory) cut into the form of a miſ-ſhapen Pagod, which they Idolize; for after they have committed any Murder, they ask the Pagod on their Creſt pardon, as *Lewis* XI. the King of *France*, did the Crucifix in his Hat. The *Javans* are a corrupt People, and trade in Murder, Adultery, Theft, Rapine, Deceit, and all other Wickedneſs. Magick and Aſtrology delights them, and their Prieſts are excellent in thoſe Studies, in which Satan inſtructs them to oblige him in gratitude to worſhip him. The Natives, till of late, were not acquainted with Navigation, but in the Art of ſwimming (as moſt Negroes) are moſt expert. Such as dwell at ſome diſtance from the Sea make Hunting their chief Recreation, a Sport which tries their Courage, as well as their Agility, for the Iſle has ſtore of Tygers, Ounces and ſuch Beaſts, as will bear chaſe and reſiſt. The Alcoran is received in this Iſland as well as its Neighbours. They are very friendly to the *Engliſh*, eſpecially ſince the *Dutch* have forced *Jacatra* from them, betwixt whom there is an irreconcileable Enmity. The *Oran-kays* are the chief ſort of People, who are lazy and ſociable, but deceitful. They repute themſelves deſcended from *China*, and have a Tradition, that their Anceſtors in a Junk were caſually driven upon that Iſle by a Tempeſt 700 Years ago. They are a very proud Race, wear their hair pretty long, and about their Heads ſometimes wreath a valuable Saſh, which none but themſelves dare touch. Elſewhere they go naked to the Waſte, where they gird themſelves with a parti-coloured Mantle, which falls no deeper than their knees. Their ordinary Food (and that bought not at eaſie rates) is Rice, Pinange, Wheat, Betel, Opium, Goats, Hens, Eggs, Coco's, Plantans and Jacks. They have excellent good Water to drink, and for Wine, Rack-a-pee, which being temperately drunk, cheers the Heart, kills Worms, cures Fluxes, and helps Digeſtion, but immoderate drinking it haſtens Death. Theſe Countries, for the greateſt part of the Year, are ſubject to ſuch loud thunders and flaſhes of Lightning, as are very dreadful.

Pepper deſcribed.

In this Iſle nothing but Pepper and Cotton is worthy our noting. Pepper comes of Seed firſt ſown, and in the growth is ſupported by Poles like Hops or Vines, till by its maturity it gets the ſtrength of a buſhy, round and pleaſant Tree. The Pepper hangs in many Cluſters, four Inches in length, and one about, and yield each about 50 or 60 Corns, which be full, round and fragrant, but the ſmooth are beſt accounted of.

The Cotton-tree.

The Cotton-tree is ſlender, but ſtraight, a Yard high, but like a Briar. At the top it divides it ſelf into ſeveral ſmall branches, which are each of them charged with many Balls, round, and like a Wallnut, which contain the Bombaſt. When they are ripe, they beat the Cotton out with Flails, to the great enriching the Owner.

Baly, an Iſle.

Baly is an Iſle near *Java*, lying on the Eaſt-ſide of it, inhabited by *Gentiles*. The Women there continue the Cuſtom as yet of burning at their Huſband's Funeral, more than in any other places in *India*, where the *Mahometans* have Dominions. The Way from *Java* to the *Celebes* is North-Eaſt, diſtant from *Bantam* 200 Leagues.

The *Celebes* deſcribed.

Celebes, of Old called *Caſſiteria*, and *Solis Inſula*, now *Makaſſer*, from the beſt City in it, is an Iſle for quantity and quality very conſiderable; it ſtretches from the Æquator 6 degrees South, is of an Oval form, and is at leaſt 200 Miles long, well-peopled, but with bad Men, being till of late the worſt of Savages, Men-Eaters, which is now reformed by their receiving of the Alcoran, tho' the greateſt part of the Inhabitants are ſtill *Gentiles*. The Iſle is fruitful, tho' under the moſt frying part of the Torrid Zone; they go naked, ſave that they tie a few Fig or Plantain-leaves about their middles. Their day is Sun, but complexion Night. The better are Tulip-painted, and wear a thin Shirt, with a pure white Shuddero, for Ornament, to ſet off their black hue. The Women paint their Faces and Body, but are very impudent and amorous, and ſo Skilful in the Art of poyſoning, that they can ſing ſafety to themſelves while they deſtroy others. They have Poyſons that deſtroy immediately, others operate in an hour, the Veins and Body rotting to amazement. This place is an Hell upon Earth, no ſtaying in it, and ſo they haſted to

The *Moluccoes* deſcribed.

The *Moluccoes*, called *Solis Inſulæ* in former Ages, are five in number, *Molucco*, *Gillolo*, *Ternate*, *Tidore* and *Machan*, or *Matan*, where *Magellan*, after his long Voyage in 1520, ended his Life, thro' the treachery of thoſe *Barbarians*, to whoſe Prince he had a little before given Aſſiſtance. The *Engliſh* were the firſt Chriſtians that traded hither, but the *Dutch* have thruſt them out. *Gillolo* is the biggeſt, and *Ternate* the higheſt of theſe Iſlands; all of them bear Cloves, Mace, Nutmegs, Ginger, Pepper, Oil, Aloes, and Honey. They lie under the Æquinoctial, but by the daily ſhowers and breezes, which the nearneſs of the Sun cauſes, the Fruits ripen ſooner, the Earth ſmells more Aromatical, and the Air is more Nutritive there, than in moſt other places thereabouts.

The Clove-tree.

The Clove-tree differs in proportion according to the Soil where it grows; ſome are as big as the Bay-tree, which it reſembles, the Leaves being only ſomewhat narrower, others no bigger than the Box-tree, or other Trees of little growth. 'Tis for the moſt part of the Year green, having Leaves long and ſmall, ſpreading into many branches. It bloſſoms early, but the Flowers change their colour three times a day. In the Morning they are pure white, at Noon a diſtempered red, and at Night black. The Cloves diſcover themſelves at the very tip of the branches, and in their growth ſend out ſuch a ſmell, as raviſhes the Senſes. They are pruned thrice every Year, and gratefully return a treble Vintage; and tho' it be perfected but once in three Years, yet it proves a great advantage. Phyſicians ſay, that Cloves are hot and dry in the third degree, ſtrengthen the ſtomach, help concoction, and ſuck up moiſture ſo exceedingly, that no other Plant will thrive near it. The Nutmeg-tree, like the more excellent ſort of Trees, is

The Nutmeg-tree.

not

Mace.

Birds of Paradiſe.

not very lofty, ſcarce riſing ſo high as the Cherry; ſome have liken'd it to the Peach, but it differs in the ſhape of the leaf and grain, and affects more compaſs. The Nut is compaſſed with a coarſe defenſive huſk, reſembling the thick Rind of a Wall-nut, but at full ripeneſs diſcovers her treaſure, the Mace with a Vermilion bluſh twining round it, and both ſending forth moſt pleaſing ſmells. The Mace in a few days turns yellow by the Sun's beams, and invites the Gatherer. In theſe Iſles only are found thoſe rare and beautiful Birds called commonly *Manucodiatæ*, or Birds of Paradiſe; he is of the bigneſs of a Parrot, the Feathers upon his Head are ſo ſmall, as rather reſemble Hair than Feathers, his Train thick, very long, and curiouſly coloured, being in ſome parts of his Body green, and in others yellow. His Wings are large, and of a bright colour, but he has no Feet; in flying he mounts exceeding high, and continues long in motion, Travellers much eſteem it, but the Natives ſuperſtitiouſly reverence it.

Amboyna, how gotten by the *Dutch*.

Several other Iſlands of Note there are hereabouts, ſome of which, namely *Amboyna*, were in the quiet poſſeſſion of the *Engliſh*, until they were diſſeiſed by the treachery and cruelty of the *Dutch*, who, under a ſhew of Friendſhip, invited their Factors to a Feaſt, and not only got poſſeſſion of the place, but put them to Death, with moſt cruel and exquiſite Tortures, to the everlaſting Diſgrace of their Perſons and Nation.

Banda deſcribed.

The *Dutch* in poſſeſſion of them.

Banda lies near the *Moluccoes*, in 4 deg. 30 min. of Southern Latitude, and 20 Leagues from *Amboyna*; it has many ſmall Iſles round it, *viz.* *Putavay*, *Lantore* the biggeſt, *Batan*, *Labatacka*, *Nero*, *Tycobaſſa*, *Cumber*, *Pulareen*, *Salymo*, and others, which are called by the Name of *The Iſles of Banda*, they appear like one continued Wilderneſs of Nutmeg and Clove-trees, Pepper, Vines and Olives. Our *Engliſh* Merchants firſt traded hither alſo, and the People by their means contracted a perpetual Amity with our King, but the *Dutch* have now expelled our Merchants from thence by force, and now entitle themſelves Lords of *Bandæ*, caring for no Man's Right nor Intereſt but their own, altho' 'tis well known that the *Dutch* traded thither after the *Engliſh*, and that till the Year 1598, they had no trade in any part of the *Indies*, in which Year 3 Ships and a Pinnace ſet forth from *Amſterdam*, being their firſt Venture into the *Eaſt-Indies*, but what they wanted in Time, they have got by unjuſt Craft, and now are increaſed to the wonder and admiration of the Natives. Near theſe Iſles lies

Borneo deſcribed.

Bezar deſcribed.

Lignum Aloes.

Borneo, called by *Ptolemy Porne*, is directly under the Æquator; it is ſuppoſed to be the *Inſula bonæ fortunæ*, and is of an Oval form. The greater part inclines to the North, towards which it is extended 7 deg. but to the South but three; it was accidentally firſt diſcovered by Mr. *de Breu*, and is ſubject to the *Spaniſh* Government and Avarice, which is indefatigable and inſatiable after Gold. It has many Villages, which are full of People, but they are poor, and miſerable Idolaters. The plenty of Gold, Diamonds, and other Merchandize, which is found here, as Bezar, Lignum, Aloes, Muſk, Civet, Benjamin, Amber, Sanguis Draconum, Wax, Rice, Rattans, or Canes, draw a great concourſe of Merchants and Travellers thither. Her beſt Sea-Towns and Ports are *Socodania*, which lies in 1 deg. 35 min. South, and from *Bantam* N. E. an 150 Leagues, or thereabouts, and *Bemermaſſin*; the reſt are ſcarce worth regard. Bezar, or as the *Perſians* call it, Pezar, and Pazahar, is of two ſorts, one ſort found in *Aſia*, *viz.* in *Perſia*, and at *Pegu* and *Borneo*, which is the beſt, and the other in *America*, but inferiour to it. It is found in the Stomach or Maw of a Goat, and other Beaſts, but that which is taken from Beaſts which feed upon Theriacal Herbs is moſt Soveraign, and of greateſt Vertue to expel Poyſon; it is of divers ſhapes, for ſome reſemble a Plumb, a Date-ſtone, or Doves-egg; others are like Cheſnuts, Goats-kidneys, but all blunt at the end. The colour alſo is as various, for ſome are red, or pale green, others are Dark-yellow or Sky-coloured; the laſt are beſt. They conſiſt of many Scales, which like Onions incloſe one another, and as they grow leſs, yield more ſplendor, and increaſe in vertue. Many are Counterfeit, and to diſcover the Cheat, they either pierce them with hot Bodkins, or having firſt weighed them, ſteep them in cold Water 4 hours; if they do not crack, nor increaſe in their weight by lying in the Water, they are held good, but if they do either, 'tis a ſure ſign they are baſe and vile. The Bezars of *Borneo* are not above half the value with the *Perſian* Lignum Aloes, called by the *Javans* and *Malayans Garro*, by the *Indians* and *Portugueze D'Aquila*, and by the *Chineſes* and *Cochin-chineſes Calamba*; it is formed of large round Sticks of a clouded grain, mixed with veins of Aſh-colour. It is pleaſant to the eye, weighty in the hand, bitter to the taſte, but aromatick to the ſmell, and takes fire very quickly; upon which account it is that the *Indians*, *Malayans*, *Siamites*, *Peguans*, *Cambogeans*, and *Borneans*, uſe no other Wood when they burn the Corps of their deceaſed Parents, which with them is the nobleſt way of Burial.

Muſk.

Muſk is bred in the Navel of the Cat, and is either yellow, brown, or black; the firſt is the beſt, and the laſt the worſt. The choiceſt is of an Amber-colour, not unlike Spikenard, and is covered with a Skin, which ſhoots out ſome briſtly hairs; this ſort is of ſo ſtrong a ſmell, that to many it ſeems offenſive, and being taſted affects the ſtrongeſt Brain. Sweet Spices take away the ſmell of it. If it diſſolves ſoon in the Mouth, and ſlowly in the Hand, 'tis known to be good.

Civet.

Civet (which is a ſort of Muſk bred in a little Bladder within the Teſticles of a certain Creature not unlike a Cat) is of different colours; the deepeſt yellow is uſually the beſt, the worſt is white and greaſy, nevertheleſs, when it is new, 'tis pale, and gradually turns yellowiſh.

Benjamin.

Benjamin, which is called by the *Malayans Menyan*, and by the *Indians Benyan*, is either white or yellow, and both ſorts are ſtreaked; this Gum iſſues from a Tree which is high and ſmall, ſpreading with fruitleſs branches, the Leaves are ſomewhat like the Olive. *Arabia* breeds good, but *Pegu* and *Siam* better; that from *Sumatra*, *Priaman* and *Barrouſe*, is coarſe and bad.

Amber.

Amber is of many ſorts, grey, brown, white and black; the grey is reputed the beſt, the black the worſt, and the other two indifferent. The beſt ſort of grey is pure, and interlaced with aſhy veins, and not ſubject to ſink; it is for the moſt part gotten in *Soffala*, *Magadoxa*, *Monibaſſa*, *Moſambique*, *Madagaſcar*, *Mohelia*, *Melinde*, and other parts of South *Africk*, but at great hazards.

Places moſt famous for Jewels.

Concerning Gems, the places reported moſt famous for them are theſe: The Emerald *Calchedon*, Onix and Sardonix *Sardis*; Bezar, Amber, Hemathiſt and Turquoiſe, are for the moſt part to be had in *Arabia*, *Indoſtan* and *Perſia*. Pearls, Beryls, Saphires, Adamants, at *Zeylon*; Jaſper, Cornelion, Chryſolite, Agate, Hiliotrope and Jacinth, in *Malabar*, *Narſinga*, and *Cochin-china*. Diamonds come from *Borneo*, *Golconda*, *Biſnagar*, *Delly*, and the Iſles near the *Greater Java*. Gold, Silver, Rubies and Porcellane, from *Pegu*, *Siam*, *Bengal*, *Sumatra*, *Japan* and *China*.

Pearl.

The beſt and moſt Orient Pearl are fiſhed near *Bahrim*, in the *Perſian* Gulph, where they ſay have been found no leſs than 100 Pearls, great and ſmall, in one Oyſter; nevertheleſs, ſtore of ſmall Pearl are had in Oyſters, Muſcles, and other Shell-fiſh, all along the Coaſts of *India*. Not far from *Borneo* was found a Pearl, round and orient, as big as a Dove's-Egg, and of great value; and the *Mogul* has Pearls of an incredible bigneſs.

Mindano.

By a N. N. E. Courſe they ſailed by *Mindano*, an Iſle as big as *Sicily*, extending from 6 to 9 deg. North. The *Philippines* lie Northward of *Mindano*, and near them all the *Manilles*, called by *Ptolemy*, *Inſulæ Satyrorum*. They are nameleſs, becauſe numberleſs, but the biggeſt of them, and moſt famous, is called *Luconia*, which lies 14 deg. North.

Cambogia.

Weſt of this Iſland lies *Cambogia*, a rich part of the *Aſiatick* Continent; and North, *Shyma* and *Shicoca*, two Iſles beſt known to the Inhabitants of *China* and *Japan*.

Formoſa.

Formoſa, an Iſle very advantageouſly ſituated for Trade, ſtands in 22 deg. and is 150 Miles in length, and 50 in breadth, lies in the way to *Japan*, neighbouring upon *China*; it was firſt inhabited by the *Spaniards* and *Mulattoes*, who grew very numerous and rich, till the *Dutch* thruſt in a Colony among them.

Corea.

Corea is a long, narrow Peninſula, famous in the Situation, but infamous in the Inhabitants, who are a People that live by Spoil, and doing miſchief to their Neighbours; more ſubtle than the *Chineſes*, or *Japoneſes*.

Japan deſcribed.

Japan was unknown to the Old Geographers, and firſt diſcovered by *Motus*, *Peſhotus*, and *Zeymorus*, three baniſhed *Portugueze*, who ſeeking their Fortune in a Veſſel, were driven by Storm upon this Iſle in 1542, and from that time it became well known to that Nation; but the *Engliſh* did not trade thither till 1613, and the *Dutch* more lately. Whether it be an Iſle or no is diſputable, tho' ſome pretend to know the Dimenſions of it, and accordingly limit it between the 35 and 48 Degrees, aſſerting it to be 230 Leagues long, and 109 broad. The Soil is barren and coarſe, but fruitful in Minerals. The Towns of beſt Note and Traffick are *Meaco*, the Metropolis, a Midland City, *Surunga*, *Ozacca*, till of late the Reſidence of the Court; the Buildings in them are very ordinary. Of beſt Note are the *Foliques*, which are filled with *Manada's*, to which the *Japonians* are exceedingly addicted.

Their Religion.

The Jeſuits have taken great pains to Convert the People to Chriſtianity; and in *Xaverius*'s days there were many that profeſſed their Belief in Chriſt, but they have ſince Apoſtatized, and the greateſt Number becoming *Gentiles*, have Maſſacred the conſtant Profeſſors of the Faith, inſomuch, that there are now but few Chriſtians among them, the People rather inclining to the Alcoran, which is of late come very near them, and agrees beſt with their Senſual Appetites.

Their Government.

The Government is Monarchical, above 60 Petty-Princes doing Homage to the Emperor of *Japan*. The Country is for the moſt part Mountainous, but full of Rivolets, which make it abound with Corn, Graſs and Minerals. The North and Eaſt Parts are leſs Peopled than the South and Weſt. The Old *Roman* puniſhment of Crucifixion is here uſed, a Death not more full of torture than Ignominy. The People are Valiant, and reaſonably Civil, but affecters of Novelties, very jealous and revengeful upon Occaſions. They pretend much to Learning, and eſpecially pride themſelves in their Skill in Geography, tho' ignorant of that Art, as uſed in *Europe* and *Africk*. They divide the World into three Parts only, *China*, *Japan* and *Siam*, which ſufficiently ſhews their Skill in it. At their Entertainments they ſit long and fare well, and in their eating uſe Sticks, or Forks, and ſhift the Table, as new Courſes are ſerved. In riding they mount on the Right-ſide. Their Alphabet contains but 20 Letters. At Funerals they wear white. They deny themſelves to be deſcended of the *Chineſes*, but are really Exiles of *China*, baniſhed above 600 Years ago for an Inſurrection; upon which account they retain an implacable Animoſity to the *Chineſes*, and rob and prey upon them on all Advantages, yea, abominate them in their Prayers, and in all their Complements and Ceremonies are oppoſite to them as may be. The Children are ſo ſenſible of their Reputation, that to vindicate themſelves from a falſe Accuſation they'll cut off a Joint from their Fingers, and wiſh it may never heal if it be true. Murder, Theft, Treaſon and Adultery, are puniſhed ſeverely, either by Crucifying, or Beheading with a Cuttan. *Ozacca* is 80 Leagues from *Bungo*, a Port of good Note, but in nothing ſo remarkable as for a Caſtle, regularly fortified, and of excellent ſtone, varniſhed and tiled with Plates of Gold, the Walls are 20 foot thick, and the whole is encompaſſed with a large deep Trench full of Water, over which are ſome Draw-bridges. This Caſtle was of late the Priſon of *Coja-zamma*, Eldeſt Son of *Fiqua-zamma* the late Emperor, whoſe Father *Faxiba-zamma* ſubjected all the other Princes of *Japan* to himſelf, and made them by Oath to acknowledge him their Sovereign. Over-againſt *Ozacca*, on the other ſide of the River, ſtands *Sacay*, a Town traded to by the Chriſtians. *Edo* is not far from it, a place ſtrongly Walled and well Peopled. Fifteen Leagues from thence is *Oringee*, a Town that affords good Anchorage. *Firando* and *Fuccate* are *Engliſh* Factories. *Fuccate* is a pretty Town, watered with a ſweet River, and defended by a Caſtle: a Forreſt of 3 Miles long encompaſſeth the Town almoſt, and under the lofty Pines and ſpreading Sycamores the People pay their Idolatrous Worſhip, for under thoſe green Trees are many ſmall, but richly tiled Fotiques, where they adore their Pagods in the ſhape of *Pan* and *Priapus*, yea, Satan himſelf in his uglieſt Forms; ſo in all the Country, where there are moſt Trees and Corn, there are moſt Idolaters. In *June* and *July* they ſeldom fail of prodigious Storms, called Tuffons, or Hurricanes, that for 24 hours thunder moſt dreadfully in the Air. In *Meacco* are 60 Temples and Colleges, in which ſome have numbred 3333 *Chamebræ*, or little gilded Deities, called by them *Manada's*, of which *Shaca* and *Amida* (as the *Bonzees* ſay) have the higheſt rank in their Calendar. Among them is a Monſtrous Image erected by *Tyco-zamma* of *Ari-calke*, ſo large, that the Chair he ſits in is 70 foot high and 80 broad, his Head big enough to hold 15 Men, and his Thumb 40 Inches in compaſs, and the reſt of the Body proportionable. At *Dabys* is ſuch another *Coloſſus*, of hollow Copper raiſed, 24 foot high: But the *Fotique* at *Tencheday* is moſt remarkable, where Satan often appears. This Temple is of an extraordinary Structure, and ſerved by many *Bonzees*.

Their hatred to the *Chineſes*.

Their Ports.

Fuccate deſcribed.

An huge Idol.

A Damoſel preſented to the Idol.

Among other Sacrifices or Forms of Worſhip uſed here, this is one: That a Damoſel every New Moon is brought into the Temple by a *Bonzee*, and placed right againſt the Idol. At her entrance the Room is forthwith illuminated with *Lignum-Aloes* burning in Lamps of Gold, but ſoon after the Lamps are extinguiſhed miraculouſly, and in groſs Darkneſs the Deity is ſaid to company with her. At her return ſhe is entertained with Muſick and Songs, and the Enthuſiaſtick Girl reſolves them many Queſtions, and is of more repute with them ever after. A Notable Deluſion of Satan. Due Weſt from *Japan* is

China deſcribed.

China, this Country is the moſt Eaſterly part of the Continent of the *Greater Aſia*, a Kingdom no leſs Great than Wealthy, and as Famous as Great, but not well diſcovered, becauſe they are jealous of Strangers. It has many Names, becauſe it is a Cuſtom among them, that every new King gives Names both to themſelves and the Kingdom. *Ptolemy* calls them, *Sinarum Regio*, and other Geographers *Seres*. The Inhabitants call their Nation *Tamen*, and themſelves *Tameginês*. It is a ſpacious Monarchy, extending from 17 to 47 deg. of Northern Latitude; it is almoſt ſquare, and from every ſide 1500 Miles, and ſo is 4000 Miles in compaſs. The Country is full of ſweet and navigable Rivers, ſome of which are no leſs inhabited than the Cities, which are ſaid to be 600, beſides Walled Towns 2000, Unwalled 4000, Caſtles 1000, and Villages almoſt innumerable, which contain (as the Friars eſtimate them) above 60 Millions of Men; beſides Women and Children, 4 times more than all *France* is ſuppoſed to have. The whole Empire is divided into 15 Provinces, governed by ſo many *Quonfu* and *Lauſiæ*, who have their Deputies called *Tutons* and *Chyans*. Each Province has a Metropolis, but the chief of them are *Paquin*, *Nanquin*, *Cantam* and *Quinzay*. *Paquin* has now the precedency, tho' *Quinzay* had it formerly; it elevates the Pole 41 deg. 15 min. and is, if the Relation of ſome be true, not only the greateſt and beſt Peopled City in all *Aſia*, but the whole World, for they ſay it hath 30 *Dutch* Leagues in circumference, in which are many ſtately Buildings, 24000 *Mandarins* Sepulchres, the meaneſt of them are not without ſome beauty, and as many little gilded Chappels, beſides 3800 Idol-Temples, as many Gates and Poſterns as there be Days in the Year, 120 Bazars, and above 1000 Bridges. This City is diſtant about 100 Miles from that marvelous Wall built 1000 Years ſince by *Chriſnagol*, or as others call him, *Zaintzan*, their 117th King, to keep out the *Tartar*. The Wall is 1200 Miles long, 12 Yards thick, and 6 Fathoms high, and was 27 Years erecting, by the continual Labour of 750000 Men; nevertheleſs, it could not hinder the *Tartar* of late from over-running, and ſubjecting this great Empire to them, by forcing their paſſage through it. *Nanquin* is the ſecond City for Grandeur in the *Chineſe* Empire, once the Metropolis of it; it is ſituate in 35 deg. Northern Latitude, and is 8 Leagues from the Sea. It is 12 Leagues about, being encompaſſed with ſtrong Walls and Ditches. The King's Palace is very large, and the other Buildings many, being accounted 200000, but not beautiful. The Temples are 2000, the Streets fair, and People induſtrious. It is 600 *Engliſh* Miles from *Paquin*, the Way for the moſt part being Navigable. *Cantam* lies in 25 deg. Latitude; it is a rich and ſpacious Town, Ships ride commonly in view of it, but from *Paquin* it is little leſs than 2 Months travel. Here Merchants are permitted to go aſhore, but when they enter the City-gate, uſually Enrol their Names in a Book, engaging themſelves upon a Penalty to go on board at Night, but of late they are allowed a little more liberty. The Merchants trade hither for Musk, Gold, Silks of all ſorts, Cabinets, Porcellane, and ſeveral other rich Commodities. *Quinzay* borders on *Cochin-china*; it was of Old the greateſt, and is at this day the moſt remarkable City in the Orient for variety of ancient Rarities, of which the moſt Notable are their *Meani*, or Idol-Temples. The Country is Champain, and exceeding Fruitful. The Rivers abound with Fiſh, which the *Chineſes* not only Feaſt themſelves with, but upon Frogs, Snakes, Rats, Hogs, Dogs, and ſuch like Creatures, which other Nations abominate; and for better diſpatch, they fiſh with Cormorants. The People are Olive-coloured, more black or white as they live at a diſtance from the Æquinoctial. They wear their hair long and filletted, but their Beards are thin and ugly. Their Eyes are commonly black and ſmall, Noſes little, Nails almoſt as long as their Fingers, but ſerving to diſtinguiſh their Generoſity. The better ſort have their Cloathing of Silk, and a ſlight ſort of Sattin, and the meaner in black Cloth made of Cotton. Both wear their Coats long and quilted, made to tie on the Left Arm; their Sleeves are long, and the Wriſts very ſtrait. Their Shoes are of ſuch Stuff as their Coats, but ſome have them richly embroider'd, the Soal being of Cloth or Callico. The greateſt variety is in their Head-attire; ſome knit their hair in Cawls of Silk, or Horſe-hair, others with Fillets of Gold and Silver. Others wear high round Caps made with fine twigs ſtitched with Silk of divers Colours, but others fancy an Antick ſort of Hat, which is high-crown'd and round, and one half without a brim. No colour pleaſeth them ſo much

Paquin.

Nanquin deſcribed.

Cantam.

Quinzay.

as tawney. The Women are Modeſt, and differ nothing in their Apparel. They cover themſelves with a Veil of white Linen, ſo that nothing appears but their Feet, which from their Infancy they ſo ſtraiten to make themſelves A-la-mode, that they become many of them lame. They Tolerate Polygamy, and that odious Sin of Sodomy, and are not aſhamed to expoſe them to publick view by paintings. They are a proud, lazy, jealous and voluptuous ſort of People. Muſick, Poetry, Painting and Stage-plays, delight them exceedingly, and they care not what they ſpend in Luxury and Fire-works. They eat in Porcellane, and put their Meat in ſeveral ſmall Diſhes, which they love to Mince, and take it up with two Sticks of Bone, or Ivory, or with their Nails, which ſome wear very long for that Uſe, for they account it abſurd to touch either their Mouths or Meat with their Fingers. Their Drink is commonly hot, and appears to be Coffee by the colour and taſte. They drink a little and often. The *Louthayas* eat on Tables, ſit on Stools, and will be ſerved on the Knee.

No Beggars.

Tho' they are given to Idleneſs, yet they have few or no Beggars; for if a young Perſon beg he is whipped, if an old one, he is ſent to an Hoſpital to be provided for.

Their puniſhments.

Murder and Theft they puniſh with Death. The leaſt puniſhment they uſe is the Strapado. Their Juſtice is ſevere, their Priſons ſtrong, and Executions quick. They honour their *Mandarins*, reverence the *Chyams*, and almoſt adore their King. No Subject can have recourſe to him but by Petition. His Wives Children and Eunuchs only have acceſs to him. Ambaſſadors enter not into his preſence without ſome Gifts of value. The People are much pleaſed with Novelties, and more eſpecially love to ſee ſtrange Arts, which they practiſe with delight.

Their Arts and Trades.

Few of them but have Skill either in Tillage, making *China*-Diſhes, Painting, Singing, Playing, or ſome other Art which is uſeful and modeſt. They affect Mathematicks. They uſe no Letters, but Characters, of which they have above 40000. They write downward with Pencils made of Horſe-hair, ſuch as Painters uſe. Their Language is almoſt all Monoſyllables. Moſt of them have a Vein of Poetry and Muſick, and are ſtudious in all the Liberal Sciences. Scholars and Merchants are in greater eſteem with them than Men of War.

Their honour to their King.

No People in the World honour their King more than they, for they ſuppoſe him too Glorious to look on. They obey his Will in every thing, they fill his Exchequer Yearly with above 100 Millions of Crowns, and call him the Undaunted Emperor, Lord of the whole World, Son of the Sun, and Beauty of the whole Earth.

Their Duty to their Parents.

Nor do any People expreſs more filial Reſpect to their Parents than they, for they obey them at all times, and in all places; marry not without their Conſent, leave their Childrens Names to them, honour them be they never ſo mean, maintain them be they never ſo poor, and at their Death expreſs all Symptoms poſſible of Duty, Mourning in white Linen as the *Jews* did of Old, ſeldom leſs than two or three Years; the longer they mourn, they think they better expreſs their filial Affection.

Their Pride.

They arrogate to themſelves the Invention of all Arts and Knowledge in the Liberal Sciences, and it can't be denied but they have ſome of them, as Logick, Rhetorick, Muſick, Arithmetick and Aſtronomy. They are, they ſay, the moſt unmix'd People in the Univerſe, have all from their own Ingenuity, and borrow nothing from others. They boaſt that they firſt invented Characters, Guns, Painting, Tillage and Navigation, in which if they do not falſify, yet they come far ſhort of the *Europeans* in the perfection of thoſe Arts, for their Guns are ſhort like Piſtols;

Their Guns.

their Painting is with mean Deſigns and filthy Poſtures, tho' their Colours are good. They ſhadow but meanly, in which conſiſts the excellency of Painting.

Husbandry.

Their Husbandry is without much Art, for tho' their Grain is good, the Soil rich, and the Zone moderate, yet is neither their Corn ſo good, various, and certain as ours.

Navigation.

Their Navigation is lame, they build many Ships, but without beauty or ſtrength. Nor have they much Skill in Sailing, having no good Mathematick Inſtruments, nor knowing the Uſe of the Compaſs. They are ignorant of the Load-ſtone, uſing the *Dog-Star* and *Urſa Minor* for their beſt Directors; yet, they ſay, they ſee with both Eyes, the *Europeans* with one, and all other People are blind.

Their love of Gaming.

They love Gaming exceſſively, and will Stake their Wives and Children in their playing, which if they loſe, they willingly part with them till they can redeem them. They are Hoſpitable one to another, and believe a Reſurrection, for they will ſometimes lend Money to be paid in another World. Stage-plays, Masks, Fire-works, and ſuch Devices, pleaſe them wonderfully, nor care they what Money they expend in ſuch Sports, if their expectation be not fruſtrate. Their Houſes are meanly built, and as badly furniſhed.

Their Temples.

Their *Meani* have no external Beauty nor Grandeur as might be expected in ſo rich a Country, and among ſo Superſtitious a People, but they are many times lined with excellent good Porphyry, Serpentine, and like Marble.

Their Colleges.

Their Colleges and Temples expreſs, by ſome Invention or other, their Infernal Art and Familiarity with the Old Magician, to whom they devote ſome Enthuſiaſtick Boys, who pronounce ſomewhat that points at his Worſhip and their Obedience.

Their Feſtivals.

They Celebrate their Birth-days very ſolemnly for a Fortnight, ſpending the Day in Paſtimes, and the Nights in Feaſting, indulging themſelves much in choice Fruits and Wines. *New-years-Day*, which is with them in *March*, they keep with all ſolemnity, ſtriving to exceed each other in the fancies of their Pageants, and adorning their Doors with Paper-Arches and Images by Day, and with Lanthorns and Lights by Night. Their Weddings have more or leſs Ceremony, according to the Quality of the Perſons.

Their Funerals.

Their Funerals are thus Celebrated: When a Man dies, they firſt Waſh, then Perfume, and laſt of all put his beſt Cloaths on, and covering his Head, ſet him in a Chair. Then his Wife having paid her Reſpects, goes to him and kiſſes him, and takes her leave of him with all the ſorrow imaginable; and after her, the Children and Relations do all the ſame in their Order. This done, after three days they lay him in a Coffin of precious Wood, which they cover with a Silk Cloth, and over it place his Picture. For 15 days the Corps reſts in that ſort, and every day a Table is ſpread before it well-furniſhed with Meat, which the Prieſts, who burn Incenſe and offer Sacrifice, are allowed to eat in the Night. When they carry it to the Grave, Women are hired to howl, to move others to compaſſion; and upon the Coffin ſometimes they ſet the Image of a Dead Man, who is to ſhew him the readieſt way to *Elizium*.

Their Mourning.

When the Burial is over, the Widow and Children keep themſelves from Company ſome few days, and when they go abroad, wear Sackcloth next their Skin, have long and plain Cloaths, and for three Years ſpace are not ſeen to laugh or joy in any thing, but to the utmoſt of their power ſhew their love by their continued lamentation, abſtinence from Feaſts and Paſtimes, and ſubſcribing their Letters by the Name of ſuch a ones (*viz.* the Dead Man being named) Diſobedient Widow, Son, &c.

CHAP. XXVI.

Sir Tho. Herbert's *Return home from* China *into* England; *and the things remarkable in his Way.*

The Iſle of *Digarroys.*

THE Raviſhing Delights, and Magical Excellencies of the Orient, tho' pleaſing his Mind, could not take his thoughts off from his own beloved Country, but *Ovid*'s *Neſcio quâ Natale Sola*, &c. was always the cloſe of his Obſervations; and ſo ſetting Sail homeward upon *June* 7. after a long Voyage through Storms, endured with much patience, he came to the Iſle of *Digarroys*, which is 50 Miles about, and in the 20 deg. South Latitude. Here they would not anchor, becauſe they knew that the Iſle of *Mauritius* was but 90 Leagues diſtant upon a W.N.W. Courſe, and there they expected ſome refreſhment. The Iſle of *Digarroys* was firſt diſcovered by the *Portugueze*; it is a deſolate Iſland without Inhabitants, but plentifully furniſhed with Wood, Tortoiſes, Dodo's, and the like Fowl. At the South-Weſt are Shoals, which are long and dangerous. By the benefit of a conſtant Wind, they ſoon arrived at *Mauritius.*

Hens.

Bays.

The Soil.

England's Foreſt, an Iſle.

Mauritius is an Iſle ſituate within the Torrid Zone, under 20 deg. 5 min. Southern Latitude, and 20 deg. 20 min. Longitude from Cape *Comeryn.* The variation is 24 deg. and 19 min. It properly belongs to *Africa*, and is removed 100 Leagues, or thereabouts, from *Madagaſcar* to the Eaſt. For variety of Temporal Bleſſings, this Iſle may compare with any place in the Univerſe. It was firſt diſcovered by the Induſtry of the *Portugueze*, who gave it the Name of *Do-cerne*, which the *Dutch* changed into that of *Maurice*, for reaſons not known to us. It was thought by the firſt Diſcoverers, that Chriſtians had formerly inhabited this Iſle, by the Croſſes, and other Symbols found there. It abounds with, and is capable of all things neceſſary for Humane Life, which can be required in the Zone that 'tis placed in. The Land upon the Sea-coaſt is high, but elſewhere Champian and Plain. It is of an Oval ſhape, and in Circuit not above 100 *Engliſh* Miles. The Air exceeding good; and the Soil, tho' untilled, ſo fruitful, that it produces without Seed, Graſs, Herbs and Flowers. Ambergreeſe is often found floating about this Iſland, but how generated is not known, but it is highly valued according to its Nature. Here is alſo Coral in abundance: 'Tis a green Shrub or Plant in the Salt Sea, but has no Leaves. It beareth white Berries, which by force of the Sea and Air turn into Stone, and when it turns red it is valuable. It grows alſo upon the *Malabar* Coaſt, in the Red-Sea, and ſome other Parts of the *African* ſhore, and near the *Philippine* Iſlands. It produceth Trees of ſeveral ſorts, ſome good for Timber, others for Food, all for Uſe. The moſt rare Trees are the Ebony, which affords Wood of different Colours, as black, white, red and yellow, all of great Uſe; but the black is moſt valuable. The Tree is commonly high, and very ſtraight, covered with a ſmooth Bark. They were found here in great plenty, but the *Dutch* and *French* have carried away ſuch abundance, that the plenty is much abated. Here alſo grows that Phænix in Nature the Palmeto or Date-Tree; the Trunk of it is ſlender, but very high and round, not branching but near the top, and then reſembling Sedge rather than Boughs, which are ever green. Under the Sedge appears a ſoft pulp, not unlike a Colliflower, but becauſe the vegetative Vertue of the Tree conſiſts in it, it will not thrive after it is ſevered, but while that ſubſtance remains it yields a Liquor like the Toddy, which is in colour and reliſh not unlike Muſt, or new Wine, which iſſues out of the Bark, when it is pierced, the quantity of a Pottle in an hour. It is a kind of Tree-honey, and being drunk with moderation comforts the Spirits, purges and helps Obſtructions, and kills Worms, but being immoderately taken intoxicates the Brains, and diſpoſes to Fluxes, but being ſet two days in the Sun, turns acid, and then is binding. Here are alſo Coco-Trees, both Male and Female; they both bear Bloſſoms, but the Female is only fruitful, and that by inoculating a flowering branch of the Male into it, or planting it near it, and not otherwiſe. Lizards and Parrots, and other Birds, flock to the Trees that are pierced, when Men are gone, to ſuck up the remaining Liquor. Several other ſorts of Trees there are, which differ in quality and form, which tho' they had a reſemblance to Pines, Sycamores and Limes, and the Fruit to Artichokes, Plums, Nuts, &c. yet were in Nature different. This Iſle has great variety of Birds, and ſome of them very rare, as the Dodo, whoſe Body is round and fat, which cauſes its ſlow pace, and is ſo big, as to weigh no leſs than 50 pounds. It is better to the Eye than Stomach, for the fleſh is ſo oily and cloying, that only ſtrong Stomachs can digeſt it. It is of a melancholy Viſage, and has ſuch ſmall Wings as are unable to hoiſt her from the ground. Her Head is half covered with down of a dark colour, and the other half naked; the Bill is hooked, and from the thrill or breathing place to the end, is of a light green colour mixed with a pale yellow, her Eyes are round and bright, ſhe has fine down inſtead of feathers, which grow only 3 or 4 at her Tail, her Legs are thick and black, her Tallons great, and her Stomach ſo hot as to digeſt Stones. Here are alſo Aeries of Hawks, and ſundry other Birds, as Goſhawks, Lannars, Hobbies, Paſſe-Flemingoes, Geeſe, Pouts, Swallows, Kites, Black-birds, Sparrows, Robins, Herons, white and beautiful, their fleſh good, but feathers more valuable: Cacato's fierce, and not to be tamed, Bitterns, Hens, and many others, but the Parrots are moſt curious in their feathers, and more eſteemed for their prating. In the Rivers are found great variety of Fiſh; the rareſt are the Man-atee, a Fiſh which uſes both Elements, their Fins ſerving for Stilts on Land, as they do for Oars in the Sea. The Fleſh differs little from Veal in taſte. They affect ſhoal'd Waters, and uſually ſwim near the ſhore, that they may graze upon it; their eyes are ſmall, their bulk about three Yards long, and in breadth about half ſo much. A gentle Fiſh, delighted in beholding Man's face, and valuable for a Stone found in the Head, which being pounded and drank in Wine faſting, cures the Stone and Colick. The Torpedo, or Cramp-fiſh, which by hiding it ſelf in the Mud, catches leſſer Fiſh very ſtrangely, for by his coldneſs he benums ſuch Fiſh as ſwim over him, or lodge near him, and ſo preys upon them. When they are taken, they affect the Hand of the Catcher with a ſudden trembling, by evaporating a cold breath, which ſtupifies the touch. The Eagle-fiſh, made more for Admiration than Food, the Eyes are 5 quarters aſunder, and the Fins, from one end to the other, 4 Yards; its Mouth is ſo wide, and Teeth ſo long, that it reſembleth a ſmall Port-cullice. The Tail alſo is very long and ſmall. Other ſtrange Fiſh are alſo met with here, ſome have the ſhapes of Hedgehogs, other of Cats, ſome round, and ſome triangular. More ordinary Fiſh are found alſo here in abundance, as Dolphins, Boneta's, Albicores, Cavallo's, Porpices, Grampaſſes, Mullets, Breams, Tench, Trout, Soals, Flounders, Tortoiſes, Eeles, Pikes, Sharks, Crabs, Lobſters, Oyſters, Craw-fiſh and Cuttle-fiſh, Rock-fiſh and Lampits. Moreover, this Iſle affords Goats, Hogs, Beeves, and Land-Tortoiſes, ſome of which are ſo big, as to ſuffer two Men to ſit on them, and ſo ſtrong as to carry them; yea, ſome report that 15 Men have ſtood upon one of them. The Sailors uſe to eat them, but they are better Meat for Hogs than Men; as are alſo their Rats, Bats and Monkies. Hens excel them, and are eaſily catched, for they flock together in companies of 30 or 40 together; and if you kill one, they will none of them be frighted at it. In this Iſle are ſeveral good places to anchor in, but two are moſt frequented, the one on the North-Weſt, and the other on the South-Eaſt; both which Bays ſeem to be Land-locked, and have Ouzy-ground, ſo that Ships ride ſafe there in 5, 10, 15, or 20 Fathoms, no where dangerous. The Soil of it is ſtony towards the ſhore, but at more diſtance has rich Mould, covered with Graſs and Herbs, and bearing Wood in abundance. It has Springs of good Water, and nothing wants which may delight the Eye, or ſatisfy the Taſte. It is uninhabited, but ſuch invitations 'tis like will be ſoon accepted. From the Iſle of *Maurice* they ſet ſail, and on the 5th day came to an Iſland called *England*'s-*Foreſt*, ſo named by Capt. *Caſtleton*, Commander of the *Pearl* in 1613, but ſome of late have given it the Name of Seignior *Maſcarenas.* This pleaſant Iſle is about 50 Miles in Circuit, it lies in 20 deg. 55 min. Southern Latitude, and is diſtant from the Iſle of *Mauritius* 37 Leagues. The ground is very high, and raiſeth it ſelf a good way into the middle Region; the Earth is every where green, eſpecially in tall Trees. It had no Creatures in it but Birds, till the *Engliſh* put ſome Hogs and Goats into it, that by multiplication they might be an happy Relief to Paſſengers. Here are plenty of Fiſh, and the Eels are of a remarkable bigneſs, ſome of them weighing 30 pounds, and they are very moiſt and ſweet to the taſte. The Birds are much the ſame as thoſe mentioned in the Iſle of *Mauritius.* From hence they ſailed into the *Mare de Zur*, where for many hundred Miles they were recreated with many ſhoals of Fiſh, that play'd about their Ship, and among others the Whale, ſome of which ſeemed longer than their Ship, tho' of great burden. This Fiſh uſually exceeds any other Creature in bigneſs, being near 40 Cubits long, and a 4th part in thickneſs; yea, *Nearchus* told *Alexander*, he ſaw one 50 Cubits long. And *Pliny*, in his Nat. Hiſt. lib. 32. ſays, there are ſome 603 foot long. After 70 days ſail they came to the Iſland of

S. Helena, an Iſle, deſcribed.

Mr. Candiſh put in here.

Aſcenſion-Iſle.

Earthquakes in theſe Iſ

The Iſle *Corve.*

The true Meridian

S. Helena, placed in a rough Sea, but ſecured from Inundation, not ſo much by its height, tho' extraordinary, as by the Supreme Providence, which ſets Bounds to the Sea. It has no Iſles near it, but ſtands in an equal diſtance between the Ports of *Rio Grandi* in *Braſile*, and Cape *Negro* in the Kingdom of *Congo* in *Africk*; its Name was given it by *John de Nova* about the Year 1502, becauſe he diſcovered it in his return from *India* to *Lisbon*, *May* 3. a day Conſecrated to the Memory of the Moſt Religious Empreſs *Helene*, the Mother of *Conſtantine* the firſt Chriſtian Emperor. This Iſle lies in 16 deg. of Southern Latitude, and from the utmoſt Promontory of South *Africk* 22 deg. Longitude. It is diſtant from the Lands end of *England* 4500 *Engliſh* Miles, and from the *Cape of Good Hope* 1740. It belongs to *Africa.* It is but ſmall, not exceeding 30 *Engliſh* Miles in circumference, but ſo exceſſive high, that it veils its head often in the Clouds, which ſend down ſufficient moiſture to cool the Sun's ardour. Nevertheleſs, the Land is not more eminent in its height than the Sea is profound in its depth, being ſo deep, that it affords ill anchoring ſave at the N. W. where 'tis but 20 fathoms; yet to ride ſecurely, 'tis beſt to carry the Anchors aſhore. The flux and reflux of the Sea hardly appears here, becauſe of the great depth. The Land is ſo ſteep that it can hardly be aſcended, inſomuch that the Sailors thus deſcribe the Way up to it: *That 'tis ſuch, as that a Man may chuſe whether he will break his Heart in going up, or his Neck in coming down*; but being once up, ſcarce any place can yield a more large and delightful proſpect. The Land is very even and plain a top, without any Hills. It has ſome Springs, which are ſweet at their riſing, but running through the Salt Hills, and drawing near the Sea, where they meet with a ſaltiſh Vapour, they are brackiſh. There are but two noted Rivolets in it, the one running down towards the Chappel, built there for God's Worſhip by the *Spaniards*, but pulled down by the *Dutch*, and put to common Uſes; the other running into *Limon-Valley*, ſo called from a Limon-Tree growing there. There are ſome Ruins of a little Town lately demoliſhed by the *Spaniard*, becauſe it was become a Magazine of a private Trade from both *Indies*; other Monuments or Antiquities there are none. There are no Inhabitants at preſent, but plenty of Hogs and Goats, who multiply there to admiration. Here are alſo ſtore of Pheaſants, Pouts, Quails, Hens and Partridges, as alſo of Herbs and Roots, tho' not naturally growing here, but ſown by the *Portugueze*, as Wood-Sorrel, Three-leaved-Graſs, Scurvy-Graſs, and the like; all Herbs ſoveraign againſt the Scurvy, the uſual diſeaſe at Sea, and moſt predominant with the Iſlanders, Baſil, Parſley, Mint, Spinage, Fennel, Anniſe, Radiſh, Muſtard-ſeed, Tobacco, and the like. Mr. *Candiſh*, in his Voyage round the Globe, putting in here, found ſtore of Limons, Oranges, Pomgranates, Pomcitrons, Figs and Dates, but now none of theſe Fruits are found here, ſave one Limon-Tree, which how it comes to paſs none can tell. After a Weeks refreſhment here they took their leave of this Iſle, a proſperous Gale inviting their departure, and on *Octob.* 16. came juſt under the Sun. The *Thurſday* after they had a proſpect of *Aſcenſion-Iſle*, ſo named by *John de Nova* in the Year 1502, becauſe he diſcovered it firſt upon that Feaſt. It lies in the 7th deg. of Southern Latitude, and is little more than 30 Miles in Circuit; 'tis neither well wooded nor watered, has nothing obſervable in it. From *St. Helena* 'tis 720 *Engliſh* Miles, or thereabouts. On the 27th day they croſſed the Æquinoctial a fourth time. The Weather here is very hot, ſave that it is qualified by the continual blowing of the Manzoons and Tornadoes, which cauſe a variable Weather, *viz.* loud blaſts of Wind, naſty ſhowers of Rain, and terrible Thunder and Lightning. On *November* 11. they became parallel to *Cape de Verd*, and thoſe Iſles called by the Poets *Gorgades*, becauſe they feign that thoſe three Iſlands were the Habitations of the three *Gorgons*, *Meduſa*, *Stenia* and *Uriabe*, making them Furies inſtead of Beauties, contrary to *Perſeus*'s report of them. Leaving theſe Iſles upon the more Weſterly Courſe, they coaſted part of the *American* Continent, *viz.* *Guiana*, *Florida*, *Virginia* and *New-England*, and other Parts of *Norembega.* Here they obſerved, that the Sea in many places, as they ſailed, was ſo covered with green Weeds, and ſmall Berries, even where the Water was not to be fathomed, that it rather ſeems a Field of Graſs than the Ocean, and much retarded their way in Sailing. About the beginning of *December* they had ſight of the *Azores*, or *Flemiſh* Iſlands, which Name ſeems to infer as if they were found out by the *Dutch*; for according to Tradition, a Merchant of *Bourges*, bound for *Lisbon* in 1449, was by ſtreſs of Weather driven ſo far Weſt, as unexpectedly, betwixt the Latitude of 38 and 40 degrees, he deſcried ſeveral ſmall Iſlands in view one of another, but at that time without ſhew of any Inhabitants. He called them the *Flemiſh* Iſlands. Coming ſoon after aſhore at *Andaluſia*, and reporting his Adventure, the *Portugueze*, by his Compaſs, eaſily found the Way to them, and quickly planted them with Men, and whatever elſe was neceſſary, giving them at the ſame time the Names of *S. George*, *S. Michael*, *S. Mary*, three Saints, to whoſe Patronage the Captain thought fit to recommend three of the Iſles; *Fayall*, from the Beach-Trees which then abounded in this Iſle, *Pyco*, from the Pyramidal ſhape it bears, and *Tercera*, becauſe it reſembles three Iſles. This is the biggeſt and fruitfulleſt of them, for it abounds with Wine, Oil, Corn, Fruit and Oade. *Angra* is her beſt Town, and *Braſile* her ſtrongeſt Fort, which alſo command the Haven. *Pyco* is extraordinary high Land, and ſurges in a Peak, or Spire, like *Teneriff*, ſo far above the Clouds, that the top is uſually covered with Fogs, and is ſeldom to be diſcerned by the Sailors. This Iſle is not above 10 Miles in compaſs; the higher Earth is for the moſt part Sulphur, and ſhews many hollow places, at which ſmoke and flame often evaporate, and now and then ſend forth Brimſtone, but in the Valleys are delightful Shades, and cool Rivolets, into which when the Fire is vomited, it cauſes a terrible noiſe, to the terror and amazement of Strangers. Theſe Iſlands are more ſubject to Earthquakes than other places. In 1591, in *S. Michael*'s Iſland, there happened an Earthquake which continued ſhaking from the 26th day of *July* to the 12th of *Auguſt*, to the extreme affrighting of the Inhabitants, for by the force thereof, they perceived the Earth to remove from place to place; and *Villa Franca*, the beſt Town, it had quite demoliſhed, the Ships that rode at Anchor in the Bay trembled and quaked, inſomuch that the Inhabitants thought verily that Dooms-day was at hand. The *Spaniards* report for a truth, that the Iſle *Corve*, adjoyning to the former, roſe out of the Sea, being before under Water; but this Miracle is not ſo credible, as that this Iſle and *Flores* was diſcovered by the *Spaniards*. Theſe Iſlands ſuffered much from the *Engliſh* in the quarrel they had with *Spain*, for in 1588, the Earl of *Eſſex* ſacked *Flores* and *Corve*, and gave *S. Michael* to be plundered by the Soldiers, and the next Year *Fayall* underwent the ſame Fate. In 1597, *Pyco* was made a prey to the *Engliſh* under Sir *Walter Rawleigh*, ſo that the Inhabitants of theſe Iſles had reaſon to curſe the Catholick ambition. At *S. Michaels* the true Meridian is only found, for there the Needle ſhews no variation either Eaſterly or Weſterly, contrary to what is obſerved in other places. Leaving the *Azores*, the Wind being fair they entred the *Cantabrian* Ocean, and at length came to anchor at *Plimouth*, giving God hearty thanks for their preſervation from ſo many Dangers in their long Voyage.

BOOK IV.

CONTAINING

Voyages, Trafficks, and Diſcoveries TO RUSSIA AND The Northern PARTS.

CHAP. I.

The Journal of William de Rubruquiſh, *a* French-man, *of the Order of the* Minorite Friers, *into* Tartary *and* China; *Written to* Lewis IX *King of* France, 1253.

1253.

IN the Year of our Lord 1253, I departed from *Conſtantinople*, and paſſing the *Euxine* Sea, arrived in the *Tartars* Country, who have no ſetled place of abode, but travel toward the South in Winter, and when the Spring approaches, they remove again towards the North. Their Houſes are made of Wickers platted together and placed in Carts, ſome of which are ſo large, that meaſuring once the breadth between the Wheel-ruts of one of their Carts, I found it to be 20 Foot over, and when the Houſe was upon the Cart, it reach'd over the Wheels on each ſide five Feet at leaſt. I told 22 Oxen in one Team, drawing an Houſe upon a Cart, eleven a breaſt. The Axle-tree of the Cart was of an huge bigneſs, like to the Maſt of a Ship. The Man that drove the Oxen ſtood in the Door of the Houſe. They go a ſlow pace, and when they come to any place where they intend to make ſome ſtay, they take down their Houſes from their Carts, and turning the Doors Southwards, the Maſter's Bed is placed at the North end of the Houſe. If he have more Wives than one, ſhe with whom he ſlept the Night before, ſits by his ſide the Day following, and all his other Wives muſt that Day reſort unto the ſame Houſe to drink.

How they make their Coſmos.

In Winter they make excellent Drink of Rice, and alſo of Honey: In Summer they care not for any Drink but *Coſmos*, which is Mares Milk prepar'd after this manner. They faſten a long Line unto two Poſts ſtanding firmly in the Ground, and unto the ſame Line they tye the young Foals of thoſe Mares they intend to milk; then come the Dams to ſtand by their Foals, gently ſuffering themſelves to be milked; and if any of them be unruly, they put her Foal under her to ſuck her a while, and removing it away again, a Man milks the Mare. When they have gotten a quantity of this Milk, they pour it into a great Bladder or Bag while it is new, and beat the Bag with a Club, till it begins to boil like new Wine, and to be ſowre and ſharp of taſte. It bites the Tongue like Wine of Raſps, leaving a taſte behind it like to Almond Milk; it intoxicates weak Brains, and ſtrongly provokes Urine.

Caracoſmos.

The *Caracoſmos* or black *Coſmos*, for Men of quality to drink, is made on this manner. They beat the Milk till the thickeſt part deſcend to the bottom like the Lees of White-wine, which is given to Servants, and makes them ſleep exceedingly. That which is thin and clear, their Maſters drink, and is a very ſweet and wholſome Liquor.

Their Butter.

Their Cows Milk is churned into Butter, which is boiled and put into Rams Skins and reſerved for Winter. They put no Salt in it, and yet it putrifies not, by reaſon of the long boiling. The Milk that remains after the Butter, they let ſtand till it be as ſowre as may be, then boil it till 'tis all turned into Curds, which they dry in the Sun until they are as hard as the Droſs of Iron, and ſtore it up in Bags againſt Winter; at which time when Milk faileth, they put the ſaid Curds, called *Gryut*, into a Bladder, and pouring hot Water into it, beat it till the Curds are diſſolved, and the Water become very ſowre, and then drink it.

Of their Diet.

As to their Food, they eat all manner of Carrion without Exception, and among ſo many Droves it cannot be, but ſome Cattle muſt needs die. But in Summer, as long as their Mares Milk laſts, they care not for any Food. When a Horſe or Ox dies, they cut the Fleſh into thin ſlices, and hanging it up againſt the Sun and Wind, it preſently dries without Salt, and alſo without ſtench or Corruption. They make better Puddings of

1253.

their Horſes than of their Hogs, which they eat being new made; the reſt of the Fleſh they reſerve till Winter. When they eat a Ram, they mince the Fleſh in a Bowl with Salt and Water, (other Sauce they have none) and the Maſter of the Houſe taking what he pleaſes for himſelf, gives to the reſt of the Company a Morſel or two upon the Point of a Knife or a little Fork, which the Receiver muſt eat alone, and not impart any of it to another. If he cannot eat it all, he puts the reſt in a ſquare Budget, which they commonly carry with them for the ſaving their Proviſions, and wherein they lay up their Bones when they have not time to gnaw them throughly.

Their Women.

The Women are for the moſt part very fat, and the leſſer their Noſes are, the handſomer they are eſteemed. Their Duty is to drive Carts, to lay their Houſes upon their Carts, and to take them down again, to milk Kine, to make Butter and *Gryut*, to dreſs Skins and make Garments, which they ſow with Thread made of Sinews. They never waſh any Apparel, nor their Diſhes or Bowls, but when their Meat is boiled, they waſh the Platter wherein it muſt be put, with ſcalding hot Broth out of the Pot, and then pour the ſaid Broth into the Pot again. The Womens Garments differ not from the Mens, only that they are ſomewhat longer.

The Men.

The Men ſpend their time in making Bows and Arrows, Stirrops, Bridles and Saddles, building Houſes and Carts, keeping Horſes and Camels, milking Mares, Sheep or Goats, dreſſing and tanning Hides, which is done with Sheeps Milk thickned and ſalted.

Marriages.

As to their Marriages, no Man can have a Wife among them until he has bought her, whereby their Maids are often very ſtale before they are married. They inviolably obſerve the firſt and ſecond Degrees of Conſanguinity, but have no regard to the Degrees of Affinity, but will marry two Siſters ſucceſſively or together. Widows never remarry, becauſe they believe that every Widow after death ſhall return to her own Husband.

Laws.

Murder, Adultery and Sacriledge, are puniſhed with death.. The Criminal muſt be taken in the Fact, or confeſs the ſame, which if he refuſe to do, they put him to torture. Small Thefts are puniſh'd with cudgelling, and if the Executioner gives 100 Strokes, he muſt uſe 100 Staves. If two Men fight, no Man dare intrude to part 'em, nor may the Father help his own Son; but he that is worſted, muſt appeal unto the Court of his Lord, which may be done preſently and without delay; and whoſoever offers violence to him after appeal, is put to death.

At our firſt arrival among theſe barbarous People, after they had made us wait a long time, while they were ſitting in the ſhadow under their Carts, they came to us on horſeback. The firſt Queſtion was, If we had ever been with them before? and we anſwering that we had not, they impudently began to beg our Victuals, whereupon we gave them ſome of our Bisket and Wine, and when they had drank one Flagon, they demanded another, telling us, That a Man goes not into the Houſe with one Foot: But we gave them no more, excuſing our ſelves that we had but little. We were five Perſons in company, and had with us four covered Carts. They ask'd what I had in them, whether Gold, Silver, or precious Garments, to carry unto *Sartach* their Duke? I anſwered, That they had nothing to do to ask ſuch Queſtions, but that their Duke ſhould ſee what we had brought when we ſhould come to him. With this Anſwer they ſeemed ſatisfied, giving us Horſes and Oxen, and two Men to conduct us. Whilſt they were furniſhing us with theſe Neceſſaries, they ceaſed not to beg our Bread for their Children, wondring at all things they ſaw, as our Knives, Gloves, Purſes and Points, and deſiring to have them; for they think themſelves Lords, and that nothing ſhould be denied them by any Man. That Evening our Guides gave us ſome *Coſmos*, which was very ſavoury, and made me ſweat extreamly. In the Morning we met the Carts of *Scacatai*, a Prince of that Country, unto whom the Emperour of *Conſtantinople* had written Letters of Requeſt to let me paſs thro' his Territory. The Carts cover'd with Houſes ſeemed like a mighty City. There were with them huge droves of Oxen and Horſes, and flocks of Sheep. Our Guide told me that I muſt preſent ſomething to *Scacatai*, and went before to give notice of our coming. His Interpreter advanced to us, asking us what we would preſent unto his Lord. We took a Flagon of Wine with ſome Bisket and Fruit; but he was not contented, becauſe we had not brought ſome rich Garment.

Court of Scacatai.

When we were admitted to his Preſence, we found him ſitting on his Bed with a Citron in his Hand, and his Wife ſitting by him, the upper part of whoſe Noſe ſeemed to be pared away, that ſhe might ſeem flat noſed, and the place was anointed with a black Ointment. I beſought him that he would vouchſafe to accept of that ſmall Gift at our hands, excuſing my ſelf that I was a Monk, and that it was againſt my Profeſſion to poſſeſs Gold, Silver, or precious Garments, and therefore had not any ſuch thing to give him. Hereupon he cauſed our Preſent of Wine, *&c.* to be received, and diſtributed it among his Men, who were met together to drink and make merry. I delivered him alſo the Emperour of *Conſtantinoples*'s Letters. He asked us if we would drink any *Coſmos* (for thoſe Chriſtians which live among them, as the *Ruſſians*, *Grecians*, &c. will never drink of it, and account themſelves no Chriſtians after they have once drank it, and their Prieſts reconcile them to the Church as if they had renounced the Chriſtian Faith). I anſwered, that we had as yet ſufficient of our own, and that when it ſhould fail us, we muſt be conſtrain'd to drink ſuch as ſhould be given us. He then asked what Words we would deliver to Duke *Sartach*; I anſwered, the Words of Chriſtian Faith. He asked again, what theſe Words were, for he was deſirous to hear them. Then I expounded unto him as well as I could by my Interpreter, the Apoſtles Creed, which when he had heard, he ſhook his Head. When we had travailed in his company until *Whitſunday*, he order'd two *Tartars* to drive our Carts, and one to conduct us to Duke *Sartach*, alſo one Goat and many Bladders of Cows Milk; but their *Coſmos* is ſo highly eſteem'd, that he gave us but little of it. Our *Tartar* Servant would intrude upon us, when we ſet under our Carts in the ſhade, to avoid the vehement heat at that time, and would eat up our Victuals; and had ſo little manners as to lay their Tails in our preſence while they were diſcourſing with us. Thus we travelled with great toil, till we arrived at the Bank of the River *Tanais*, which divides *Aſia* from *Europe*. It is here as broad as the River *Sein* at *Paris*. We were firſt ferried over, and then our Carts in two Boats bound together, one Wheel in each Boat. The *Tartars* move no further northwards than this place, but in the beginning of *Auguſt* return ſouthwards.

Court of *Sartach*. *Coiat* the *Neſtorian*.

On the laſt of *July*, we arrived at the Court of Duke *Sartach*, within three days journey of the River *Volga*. He had ſix Wives and each of them about 200 Carts. Our Guide addreſſed himſelf to one *Coiat* a Neſtorian, a Man of great authority, whoſe Office is to introduce Forreigners. When I came before him, I told him for what purpoſe I was come, and requeſted ſo much favour at his hands, as to bring my Letters to the ſight of his Lord, excuſing my ſelf for bringing no Preſent to him or his Lord, by reaſon of my being a Monk, not receiving nor uſing any Gold, Silver, or other precious things, ſave only our Books, and the Veſtments wherewith we ſerved God. He anſwered very courteouſly, that being a Monk, in ſo doing I did well, for ſo I ſhould obſerve my Vow; neither did he ſtand in need of any thing we had, but was ready to beſtow upon us ſuch things as we wanted, and cauſing us to ſet down and drink of his Milk, he requeſted us to ſay our Devotions for him. Then he enquired who was the greateſt Prince among the *Franks*; I ſaid the Emperor; He replied *No*, but the King of *France*. Then returning to our Lodging, we ſent him next Morning a Flagon of *Muſcadel*, and a Box of Biscuits, which was more acceptable to him. The next Morning he commanded me to come to Court, and to bring the King's Letters and my Veſtments and Books with me, becauſe his Lord deſired to ſee them. We went accordingly, lading one Cart with Bisket, Wine, and Fruits, and another with our Books and Veſtments, which he cauſed to be laid open, and demanded whether I would beſtow all thoſe things upon his Lord. We anſwered, That our humble requeſt was, that our Lord his Maſter would vouchſafe to accept our Bread, Wine, and Fruits, not as a Preſent, becauſe it is too mean, but as a Benediction, leſt we ſhould come with an empty Hand before him; and when he ſhall ſee the Letters of my Soveraign Lord the King of *France*, he will by them underſtand for what cauſe we are come unto him, and then our ſelves and all that we have, ſhall ſtand to his courteſy; but as to our Veſtments, they are holy, and it was unlawful for any but Prieſts to touch them. Then he commanded us to put on the ſaid Garments, that we might go before his Lord, and we did ſo. I put on the moſt precious Ornaments, and took in my Arms a very fair Cuſhion, and the Bible which your Majeſty gave me, and a moſt beautiful Pſalter which the Queen beſtowed upon me, wherein were goodly Pictures. My Aſſociate took a Miſſel and a Croſs, and the Clerk having put on a Surplice, took a Cenſor in his Hand. When we came near, the Felt hanging before his Door was

lifted

1253. lifted up that he might behold us. Then they cauſed the Clerk and the Interpreter to bow the Knee thrice, but of us they required no ſuch ſubmiſſion. They diligently admoniſh'd us, that in going in and coming out, we ſhould not touch the Threſhold, and requeſted us to ſing a Benediction; We entred in, ſinging *Salve Regina*: The *Moals* or rich *Tartars*, thruſting in with us, preſſed us very much: All his Wives were there aſſembled. Then *Coiat* carried to his Lord the Cenſor with Incenſe, which he took in his Hand, and beheld very diligently. Then he carried the Pſalter to him, which he, and his Wife that ſate by, looked earneſtly upon. Laſtly, he carried the Bible to him, and *Sartach* asked if the Goſpel were contained therein: I told him it was, and all the Holy Scriptures beſides. He took the Croſs in his Hand, and asked if the Image upon it were the Image of *Chriſt*: I ſaid it was. Then he commanded all to ſtand aſide, that he might the better ſee our Ornaments. I delivered to him your Majeſties Letters, with a Tranſlation into *Arabick* and *Syriack*. When he had heard them, he order'd our Bread, Wine and Fruits to be received, and permitted us to depart with our Veſtments and Books to our Lodging: But in the Morning early, a Prieſt, who was Brother unto *Coiat*, came to us, and requeſted to have our Box of Chriſme, becauſe *Sartach* (as he ſaid) was deſirous to ſee it, and ſo we gave it him. In the Evening *Coiat* ſent for us, ſaying, Your King hath written good words to my Lord and Maſter *Sartach*, but there are ſome Difficulties in them, concerning which, he dare not determin without the advice of his Father *Baatu*, and therefore you muſt go thither, leaving your Veſtments and Books in my cuſtody, becauſe my Lord is deſirous to take a more diligent view of them. The next day he ſent a *Neſtorian* Prieſt, who took them from us.

Court of *Baatu*.

Then came our Guide, telling us we muſt depart immediately; and ſo travelling eaſtward, we came on the third day to the River *Volga*, and paſſed down ſtream in a Bark to the Court of *Baatu*, which when I beheld, I was aſtoniſh'd at the ſight; for the Houſes or Tents ſeemed like a huge and mighty City, the People ranging about it for the ſpace of three or four Leagues. The Court is called in their Language *Horda*, which ſignifies the Middle, becauſe the Chief among them always dwells in the midſt of his People, excepting that directly towards the South, no Subject may place himſelf, becauſe toward that Region the Court Gates are open, but to the right and left, they may extend themſelves as far as they will, and every one knows on which ſide of the Court he ought to place his Houſe when he takes it from the Cart. The next day we were brought unto the Court of *Baatu*, and cauſed a large Tent to be erected, becauſe his Houſe or ordinary Tent would not contain ſo many Men and Women as were aſſembled. Our Guide admoniſhed us not to ſpeak, till *Baatu* ſhould give us Commandment ſo to do, and that then we ſhould ſpeak our minds briefly. When we came into his Preſence, the firſt Queſtion he ask'd us was, Whether your Majeſty had ſent Ambaſſadors unto him or no; I anſwered, That your Majeſty had ſent Meſſengers to * *Ken-Can*, and would not have ſent to him or *Sartach*, if you had not heard that they were converted to Chriſtianity. Then leading us unto his Pavillion, we were charged not to touch the Cords of the Tent, which they think equivalent with the Threſhold of the Houſe. *Baatu* ſate on a Bed guilt all over, with three Stairs to aſcend to it, and one of his Ladies ſate by him. At the entrance of the Tent was a Bench furniſh'd with *Coſmos*, and ſtately great Cups of Silver and Gold, richly adorned with precious Stones. We ſtood before him in our Habits bare footed and bare headed: After he had beheld us earneſtly, he commanded us to ſpeak: Then our Guide gave us direction to bow our Knees and ſpeak: Whereupon I bowed one Knee, but he ſignified that I ſhould kneel upon both Knees, and being loth to contend about Circumſtances, I did ſo. And the Prince again commanded me to ſpeak; then I thinking of Prayer unto God, becauſe I kneeled on both Knees, began to pray on this manner. " *Sir*, We beſeech the Lord, from whom all " good things do proceed, and who hath given you theſe " Earthly Benefits, that it would pleaſe him hereafter to " make you Partaker of his Heavenly Bleſſings, becauſe " the former without theſe are but vain and unprofitable. *And I added further*, Be it known unto you for " certain, that you ſhall not obtain the Joys of Heaven, " unleſs you become a Chriſtian; for God ſaith, *Whoſoever believeth and is baptized, ſhall be ſaved, but he that believeth not, ſhall be condemned.* At theſe Words he modeſtly ſmiled, but the *Moals* began to clap their Hands and to deride us, and my Interpreter himſelf was abaſhed and utterly daſhed out of countenance. After ſilence made, I ſaid unto him, I came unto your Son, becauſe we heard that he was become a Chriſtian, and I brought unto him Letters from my Soveraign Lord the King of *France*, and your Son ſent me hither unto you; the cauſe of my coming is therefore beſt known unto your ſelf. Then he cauſed me to riſe up, and enquired your Majeſties name and my name, and the names of my Aſſociate and Interpreter, and order'd them all to be put down in writing. He demanded (having been inform'd that your Majeſty was departed from your own Countries with an Army) againſt whom you waged War. I anſwered, againſt the *Saracens*, becauſe they had defiled the Houſe of God at *Jeruſalem*. Then he ordered us to ſit down, and gave us *Coſmos*, which is accounted a great favour when any Man is admitted to drink it in his own Houſe. As ſoon as we had taken our leave, our Guide came to us and ſaid, Whereas your Maſter requeſts that you may remain in this Land, *Baatu* cannot grant it without the conſent of *Mangu-Can*, wherefore you and your Aſſociate with your Interpreter muſt go to him, but the Clerk and the Lad ſhall return to the Court of *Sartach*, and tarry there till you come back. I intreated him to ſpeak to *Baatu* that the Clerk might go with us; He ſaid, *No more Words*, it being reſolved that ſo it ſhall be, and therefore I dare not go to the Court any more. Thus we parted with tears, the Clerk and the Lad being ſent back to the Court of *Sartach*, where (as I afterwards underſtood) they found the *Neſtorian* Prieſts in his preſence, adorned with our Veſtments. 1253.

* *Can* ſignifies a Diviner or South-ſayer, and *Ken-Can* is the ſuppoſed *Preſbyter John*.

I with my Aſſociate and Interpreter, rode forward with *Baatu* along the Bank of *Volga* for five Weeks together; at length, about the middle of *September*, a *Moal* came to us ſaying, I am the Man that muſt conduct you to *Mangu-Can*; we have thither a Journey of four Months long to travel, and there is ſuch extream cold in thoſe parts, that Stones and Trees are riven aſunder; therefore I would wiſh you to conſider with your ſelves whether you be able to endure it. I ſaid, I hoped by God's help, we ſhould be able to brook that which other Men can endure. Then he bid us to ſhew him all our Garments, and what he thought leſs needful for us, he willed us to leave behind, and the next day they brought each of us a furred Gown made of Rams Skins, with the Wool ſtill upon them, and Breeches of the ſame, with Buskins and Shoes made of Felt, and Hoods of Skins after their manner.

On the 16th of of *September* we ſet forward, having three Guides to direct us. We had on the North ſide *Bulgaria* the greater, on the South the *Caſpian* Sea. We rode continually eaſtward over the Plains of *Cangle* 46 days, travelling almoſt every day as far by my eſtimation, as from *Paris* to *Orleans*, and ſometimes further, as we hapned to be provided with Poſt-horſes; for ſome days we had change of Horſes twice or thrice a day; at other times we travelled two or three Days together, and ſaw no People, and then were conſtrained not to ride ſo faſt: We being Strangers had always the worſt Horſes. They always mounted me upon a ſtrong Horſe, becauſe I was corpulent and heavy, but whether he went eaſie or not, I durſt not queſtion. We endured much Hunger, Thirſt and Cold, eating no Victuals but in the Evening: In the Morning we ſupt off ſome ſodden Millet, and at Night we had ſome Rams Mutton, and every Man a meaſured quantity of Broth to drink, which fleſh Broth did much refreſh us: We were ſometimes for want of Fewel, fain to eat our Fleſh half boiled or almoſt raw, having ſeldom any other Fewel but the Dung of Horſes and Oxen, unleſs it were a few Thorns in ſome places. There are Woods growing on the Banks of ſome Rivers, but are very rare. Our Guide at the firſt ſeemed to diſdain us, and it was tedious to him to conduct ſuch baſe Fellows; but when he began to know us better, he directed us to the Habitations of rich *Moals*, who live diſpers'd over this vaſt Deſart. They marvelled that that we would receive neither Gold nor Silver at their Hands: They inquired concerning the great Pope, whether he was ſo old as they had heard, it being reported among them that he was 500 Years old: They enquired alſo of our Countries, whether there were abundance of Sheep, Oxen and Horſes. On the Eve of *All-Saints* we forſook the way leading towards the Eaſt, and went directly ſouthward, and on the 9th day came to Mount *Caucaſus*, not far from which ſtands the City of *Coilac*, where we tarried 15 days for *Baatu*'s Secretary, who ought to have accompanied our Guide for the diſpatching ſome Affairs in the Court of *Mangu*. Thence we continued our Journey until the 27 of *December*, at which time we arrived at the Court of *Mangu-Can*, and on the fifth of *January* were admitted to his preſence.

1253. Court of *Mangu-Chan* First, ſome *Neſtorian* Prieſts came to us, demanding of us what Reverence we would do to *Chan*, whether after our own faſhion or theirs: I anſwered, That we were Prieſts given to the Service of God, but would humble our ſelves to all Men for the Lord's ſake: and that if they pleaſed, we would firſt ſing Praiſes to God, who had brought us ſafe hither from a far Country, and would afterwards do whatſoever their Lord ſhould pleaſe, provided that he command us nothing againſt the Worſhip and Honour of God: Then they entring the Houſe, deliver'd what we had ſaid, and their Lord being contented, they placed us before the Gate of the Houſe, lifting up the Felt which hung before it, and becauſe it was *Chriſtmas* we began to ſing,

A Solis ortus Cardine
Et uſque Terræ limitem,
Chriſtani canamus Principem,
Natum Mariâ Virgine.

From the firſt Eaſtern Land
To furtheſt Weſtern Strand,
Let us Chriſt laud and ſing,
Bleſt Virgins Son, our King.

When we had ſung this Hymn, they ſearched us to ſee if we had any Knives about us; then we were admitted. In the Entrance there ſtood a Bench with *Coſmos*, by which they order'd our Interpreter to ſtand, and cauſed us to ſit on a Form before the Ladies. The whole Houſe was hung with Cloath of Gold, and on a Hearth in the middle of the Houſe, a Fire was made of Ox Dung, Thorns, and Wormwood Roots, which grow there very big: He ſate on a Bed cloathed with a ſpotted Fur, ſhining like a Seals Skin. He was a flat noſed Man, of a middle ſtature, about the age of 45 Years, and his Wife, a little pretty young Woman, ſate by him; and one of his Daughters who was marriageable, with divers little ones, ſate next to them upon a Bed. He had that Daughter by a Chriſtian Lady whom he dearly loved, and altho he had married that young Wife, yet the Daughter was Miſtreſs of all that Court which had been her Mothers. He made them aſk us what we would drink, whether Wine or Rack, *i. e.* Drink made of Rice, or Cows Milk, or Mead. I anſwered, Sir, we are not Men who take pleaſure in drink, What pleaſes you ſhall content us: Then he commanded ſome of that made of Rice to be given to us, clear and ſavoury as White Wine, whereof I taſted a little for Reverence ſake; but our Interpreter (to our misfortune) ſtanding near the Butlers, they gave him much Drink and he was quickly drunk. Then *Chan* cauſed Falcons and other Birds to be brought unto him, which he took upon his Fiſt, and after a long time commanded us to ſpeak, which I did as followeth.

“ We firſt give Thanks and Praiſe to God, who hath brought
“ us from remote Parts of the World to ſee *Mangu-*
“ *Chan*, to whom God hath given ſo great Power upon
“ Earth; and we beſeech our Lord, by whoſe Com-
“ mand we live and die, to grant him a long and proſpe-
“ rous Life, Sir, we heard that *Sartach* was become a
“ Chriſtian, whereat the Chriſtians, but eſpecially the
“ King of *France*, rejoiced, and ſent us with Letters to him,
“ wherein are Words of Peace, teſtifying whoſe Ser-
“ vants we are, and intreating him to permit us to a-
“ bide in his Country, it being our Office to teach Men
“ to live according to the Law of God. *Sartach* ſent us
“ to *Baatu* his Father, and *Baatu* hath ſent us hither
“ unto you. Ye are they to whom God hath given great
“ Dominions upon Earth, we therefore intreat your
“ Highneſs to give us leave to continue in your Country,
“ to do the Service of God for you, your Wives, and
“ your Children. We have neither Gold nor Silver
“ nor precious Stones to preſent unto you, nor any thing
“ but our ſelves, whom we preſent to ſerve and to pray
“ unto God for you. At the leaſt give us leave to continue till the cold be paſt, my Companion being ſo weak that he cannot travel. He then anſwered, " As the Sun
“ ſpreads his Beams every where, even ſo our Power and
“ *Baatu*'s ſpreads it ſelf, ſo that we have no need of your
“ Silver and Gold. Hitherto I underſtood my Interpreter, but further I could not perceive any perfect ſentence, whereby I found that he was drunk, and *Mangu-Can* was drunk alſo, as I thought. He ſeemed to be diſpleaſed that we went to *Sartach* before we came to him, but my Interpreter being out of order, I held my peace, only beg'd, his Highneſs would not be diſpleaſed at what I had ſpoken of Gold and Silver, becauſe I ſpoke it not as if he had need of ſuch things, or deſired them, but becauſe we were willing to honour him with temporal as well as ſpiritual things; then making our Obeiſance to him, we withdrew, his Secretary and Interpreter accompanying us, who were very inquiſitive of the Kingdom of *France*, whether there were many Rams, Oxen, and Horſes there. They appointed one to attend on us; 1253. In the Evening the Interpreter came again to us, ſaying, *Mangu-Can* hath compaſſion on you, and gives you two Months time to ſtay, in which time the extream cold will be paſt; and further ſays, that within ten days journey towards the North, there is a good City called *Caracarum*, if ye will go thither, he will furniſh you with Neceſſaries, or if ye will abide here you may, but it will be a troubleſome thing for you to follow the Court. I anſwered, The Lord preſerve *Mangu-Can*, and grant him a proſperous and long life, but by the good Providence of God, we have found here a Monk, who we think to be an holy Man, wherefore we would willingly ſtay with him, becauſe we would pray together for the Life of *Chan*, which Anſwer being carried to him, he ſent to the Monk to know if he would have our Company, who gladly anſwer'd that he would; and ſo we dwelt with him till our departure to *Caracarum*.

On *Septuageſſima Sunday* the *Armenian* Prieſts went in proceſſion to the Houſe of *Mangu*, and the Monk, my ſelf and Aſſociate (being firſt ſearched if we had Knives) went in with the Prieſts. As we were entring, I obſerved one of the Servants carrying out the Shoulder-Bones of Rams burnt to the blackneſs of Coals: Upon enquiry I was informed, that the *Chan* never does any thing, not ſo much as permit a Man to enter into his Houſe, before he have conſulted with thoſe Bones, which is done in this manner.

Manner of Divination by Blade-Bones. He cauſes three Bones to be brought unto him unburnt, and holding them in his Hand, he thinks of the Thing whereof he would conſult, whether he may do it or not, and then delivers the Bones to be burnt. When they are burnt black they are brought unto him, and if the Bones by the heat of the fire are cleft forth right, then he concludes that he may do it; but if the Bones be cracked athwart, or round pieces fly out of them, then he doth it not; yet if one of the three be cleft forth right, he doth it. We were admoniſh'd at our entrance not to touch the Threſhold, but my Companion coming out laſt, turned his Face about and bowed to *Chan*, and then haſtily following us, ſtumbled at the Threſhold, whereupon, they that obſerved the Threſhold, laid hands on him, and commanded an Officer to carry him to *Bulgai*, Threſhold Superſtition. who is the Judge of thoſe that are arraigned of life and death. When I looked back and ſaw him not coming, I thought they had detained him to give him ſome lighter Garments, he being weak and ſo laden with Pelt Garments, that he could ſcarce go. The next day *Bulgai* came, and diligently enquired whether any had warned us to take heed of touching the Threſhold; I anſwered, Sir, our Interpreter not being with us, how was it poſſible we ſhould underſtand? ſo he pardoned him, but would never after ſuffer him to come into any of the Houſes of *Mangu-Can*.

About *Paſſion Sunday* the *Chan* began his Journey to *Caracarum*, and the Monk and we followed him: As we paſſed between the Hills it was extream cold, with much Wind and Snow, whereupon he ſent about mid-night to the Monk and us, intreating us to pray unto God that he would mitigate that Wind and Cold, becauſe the Beaſts in the Train being with young and ready to bring forth, were in danger of their Lives. The Monk ſent him Incenſe, requiring him to put it on the Coals and offer it to God, which whether he did or no, I know not, but the Tempeſt ceaſed, which had continued two days. On *Palm Sunday* we entred *Caracarum*, carrying the Croſs aloft with the Banner. *Caracarum* The City is encloſed with a Mud Wall, and hath four Gates, two Churches for the *Mahometans*, one for Chriſtians, but moſt of the Inhabitants are Idolaters, called by them *Tuinians*.

One day I was ſent for to the Court, and the chief Secretaries were very urgent with me to know the cauſe of my coming, telling me that *Chan* knows well enough that you have no meſſage unto him, but only come to pray for him, as many other Prieſts do, but if you have any thing elſe to ſay to him, declare it. I told him I had nothing more to ſay to him, unleſs I ſhould ſpeak the Words of God unto him, which I would gladly do, if he would hear them. They asked what Words of God I would ſpeak unto him; I ſaid, This is the Word of God: *To whom much is committed, more is required at his hands; to whom more is forgiven, he ought to love more.* I told *Mangu* himſelf, *that God had given him much; for the Power and Riches he hath, were not given him by the Idols of the* Tuinians, *but by the Omnipotent God, who hath made Heaven and Earth, in whoſe Hands all Kingdoms are, and tranſlates them from Nation to Nation for the Sins of Men;*

wherefore if ye love him, it ſhall go well with him, if otherwiſe, let him know that God will require all theſe Things at his hands. Then one of them ſaid, *Is there any Man that loves not God?* I anſwered, *God ſaith, if any Man love me, he will keep my Commandments; therefore he that keepeth not the Commandments of God, loveth not God.* Then ſaid he, *Have you been in Heaven that you might know the Commandments of God?* No, ſaid I, *but he hath given them from Heaven to Holy Men, and at laſt he himſelf deſcended from Heaven to teach us; and we have theſe things in the Scriptures, and can ſee by the Works of Men, whether they keep them or no.* He replied, *Will you then ſay that* Mangu-Chan *keeps not the Commandments of God?* I anſwered, *If it pleaſe* Mangu-Chan, *I will recite to him the Commandments of God, and he ſhall be his own Judge, whether he keep them or not.* So they departed and told him that I ſaid that he was a *Tuine* or Idolater, and kept not the Commandments of God: Whereupon he called me before him, and ſaid, Tell me the truth, whether you ſaid that I was a *Tuinian*? I anſwered My Lord, I ſaid not ſo; but if your Highneſs pleaſe, will recite the Words I ſpake: Then reciting what I had ſaid, he replied, I thought you ſaid not ſo, for it is a Word you ſhould not ſpeak, and your Interpreter hath not rightly interpreted. Then holding forth his Staff to me, he ſaid, *Fear not, we* Moallians, ſaid he, *believe that there is but one God, through whom we live and dye; and we have an upright Heart towards him. As God hath given unto the Hand divers Fingers, ſo hath he given many Ways to Men; God hath given the Scriptures to you, and ye Chriſtians keep them not. Ye find it not in the Scriptures, that one of you ſhall diſpraiſe another;* Do you find it? ſaid he; No ſaid I, but I told your Highneſs from the beginning, that I would not contend with any: *I ſpeak it not,* ſaid he, *as to you. In like manner, ye find it not, that for Money a Man ought to decline from Juſtice.* No Sir ſaid I, neither came I into theſe Parts to get Money; nay, I have refuſed that which was given me. *I do not ſpeak it,* ſaid he, *for that God hath given you the Scriptures, and ye keep them not, but he hath given us Southſayers, and by doing that which they bid us, we live in peace.* Then he began to ſpeak of my Return, ſaying, You have ſtaid a long time here, my pleaſure is therefore that you return: Will you carry my Letters? I anſwered, That if he could make me underſtand his Words, and that they were ſet down in writing, I would endeavour to deliver them ſafely. Then he asked if I would have Gold or Silver; I ſaid, we received no ſuch things, but we have not wherewith to defray our Expences, and without your help we cannot get out of your Country. Then ſaid he, I will provide you all Neceſſaries through my Country; how far would you be brought? I ſaid, let our Paſs bring us into the King of *Armenia*'s Country, if I were there, it were enough. He anſwered, I will cauſe you to be conveyed thither, and after look to your ſelf; ſo I departed from his Preſence, and never ſaw him more.

The Faith of the Tartars.

Aſſoon as the Letters were diſpatched, they called me and interpreted them, the Tenor whereof I wrote, as I could underſtand them by my Interpreter, which is this.

Mangu-Chan's Letters to Lewis, the King of France.

“ *THe Commandment of the Eternal God is this; There*
“ *is but one Eternal God in Heaven, upon Earth there*
“ *is but one Lord, Chingis Can Temingu Tingij,* that is to
“ ſay, *the ſound of Iron* [they call *Chingis* the ſound of
“ Iron, becauſe he was a Smith] This is the Word
“ which is ſpoken to you; whatſoever *Moals* we are,
“ whatſoever *Naymans*, whatſoever *Merkets*, whatſoever
“ *Muſulmans*, whatſoever Ears may hear, whereſoever
“ Horſe may go, there cauſe it to be heard
“ and underſtood, that ſince they have heard my
“ Commandment and would not believe it, and
“ would levy an Army againſt us, ye ſhall hear and
“ ſee, that they ſhall be, as having Eyes and not ſeeing,
“ and when they would hold any thing, they ſhall be
“ without Hands, and when they would walk they ſhall
“ be without Feet. This is the Commandment of the
“ Eternal God, by the Vertue of the Eternal God, by
“ the great World of the *Moal*. The Commandment of
“ *Mangu-Chan* is given to *Lewis* the King of *France*, and
“ all other Lords and Prieſts, and to the great World of
“ the *Franks*, that they underſtand my Words, and the
“ Commandment of the Eternal God, made to *Chingu*
“ *Chan*. A certain Man called *David*, came to you as an
“ Ambaſſador of the *Moals*, but he was a Lyar, and
“ with him you ſent your Ambaſſadors to *Chen-Can*, who
“ arrived not at his Court until after his death. *Charmis* his
“ Wife ſent you ſome Cloth called *Naſic*, but how ſhould
“ that wicked Woman, more vile than a Dog, know
“ Matters appertaining to War and Peace, to ſettle the
“ great World in quiet, and to do good? Thoſe two
“ Monks which came from you unto *Sartach*, were ſent
“ by him to *Baatu*, who, becauſe *Mangu-Chan* is the
“ greateſt over the World of the *Moals*, ſent them unto
“ us; but now, that the great World, and the Prieſts
“ and Monks might live in peace, and enjoy their Goods,
“ and that the Commandment of God might be heard
“ among you, we would have ſent our Ambaſſadors of
“ *Moal* with your Prieſts; but they anſwered, that be-
“ tween us and you, were many bad Men and trouble-
“ ſome Ways, ſo that they feared they could not bring
“ them ſafe unto you; but if we would deliver them
“ our Letters containing our Commandment to King
“ *Lewis*, they would carry them. Wherefore we have
“ ſent the Commandment of Eternal God by your ſaid
“ Prieſt, it is the Commandment of the Eternal God,
“ which we haven given you to underſtand; and when
“ you ſhall hear and believe it, if you will obey us, ſend
“ your Ambaſſadors unto us, ſo ſhall we be certified
“ whether ye will have Peace with us or War. When
“ by the Power of the Eternal God the whole World
“ ſhall be in Unity, Joy, and Peace, from the riſing of
“ the Sun unto the going down of the ſame, then ſhall
“ it appear what we will do; but if, when ye ſhall hear
“ and underſtand the Commandment of the Eternal
“ God, and will not hearken to it, nor believe it, ſay-
“ ing, Our Country is far off, our Hills are ſtrong, our
“ Sea is great, and in this Confidence ſhall levy an Army a-
“ gainſt us, to know what we can do; he who made
“ that which was hard, eaſy, and that which was far off,
“ near, the Eternal God himſelf knows it.

On the ninth of *July*, we were called to Court, and one of the Officers holding three Garments or Coats, ſaid to us, Ye have ſtaid long here praying for *Chan*, and will not receive Gold nor Silver, he intreats you, that at the leaſt every one of you would receive a ſingle Garment, that ye depart not empty from him; then we received them out of reſpect to him, for they take it very ill if their Gifts are contemned; ſo taking our leave we went to *Caracarum*.

A vaſt Deſart.

My Companion, who had been long ſick, deſired to ſtay here, ſo we parted with tears in our Eyes, and I proceeded on my Journey with my Interpreter, my Guide, and one Servant. We were two Months and ten Days travelling from *Caracarum* to *Baatu*, in all which time we ſaw ſome Graves but no Town, nor token of any Houſe. Sometimes we had no Suſtenance but *Coſmos* for two or three days together, and were once in great danger, not being able to find any People, our Horſes tired, and our Proviſion failing us.

In the end of *Auguſt* I met *Sartach*, who was then travelling to *Mangu-Chan*, with his Wives and Children, Flocks and Herds: I paid my Duty to him, ſaying, I would willingly have ſtaid in his Country, but *Mangu-Chan* would have me return to my own and carry his Letters. He anſwered, That I muſt perform the Will of *Mangu-Chan*, and meeting with *Coiat* in his Train, I required him to reſtore our Cloths and *Books*: He replied, Did you not bring them to *Sartach*? I ſaid, Tho' I brought them to *Sartach*, yet I gave them not to him, and that he knew. He anſwer'd, you ſay true, and none can reſiſt the truth, I left your Goods with my Father, who is near *Sarai*, a new Town *Baatu* hath made on the Eaſt ſide of *Volga*, but our Prieſts have ſome of the Veſtments. I told him, if he liked any thing, he might keep it, ſo my Books be reſtored. He being in haſte to be gone, ſaid, The Train of Ladies follows us near at hand, you ſhall alight there, and I will report what you ſay to *Sartach*, and ſend you his Anſwer by this Man. In the Evening the Man returned with two Coats, ſaying, Behold two Garments, the one *Sartach* hath ſent to you, and the other, if it ſeem good to you, you ſhall preſent to the King on his behalf. I told him I wear no ſuch Garments, I will preſent them both unto my King, in honour of your Lord. He gave me alſo *Sartach*'s Letter to *Coiat*'s Father, to reſtore all that belonged to me, ſo ſetting forward, we came to the Court of *Baatu* the 16th of *December*, 1254, the ſame day I departed thence the Year paſt: I found the Clerk and the Lad I had left there in good health, tho' they had ſuffered much Want, and if the King of *Armenia* had not comforted them and recommended them to *Sartach*, they had periſhed. The *Tartars* thinking I had been dead, had demanded of them if they could keep Oxen or milk Mares, and if I had not returned, they had certainly been made Slaves.

Baatu hearing of my coming, commanded me to appear before him, and ordered the Letters which *Mangu-Chan* ſends unto your Majeſty to be interpreted to me; for *Mangu* had written to him to add, leave out, or exchange what he ſhould think fit. Then ſaid he, You ſhall carry theſe Letters, and cauſe them to be underſtood. When *Coiat*'s Father had read *Sartach*'s Letter which I brought him, he reſtored my Veſtments, except three *Albes* and an *Amice* trim'd with fine Silk, a Stole, a Girdle, and a *Tualia* adorned with Golden Embroidery and a Surplice: He reſtored alſo all the Silver Plate, except the Cenſor and a little Box where the Chriſme was, all which, *Sartach*'s Prieſt had gotten: He gave me all my Books again, except our Ladies Pſalter, which I could not deny him, becauſe he ſaid *Sartach* took much delight in it.

I travelled a Month with them before I could have a Guide, and then parting from them, being the firſt of *November*, we went toward the South; for the firſt five days we ſaw not a Man, and were in great danger by reaſon of thirſt.

On the 11th we came to the Mountains of the *Alani*, and in two days more to *Porto Ferrea* or *Derbent*, built by *Alexander* the *Great*: The City is above a Mile long, with a ſtrong Caſtle on the top of the Hill: Here we found Vineyards, and drank Wine again.

Four days Journey hence we came to a great City called *Samag* or *Shamaki*, and then entred a great Plain, thro' which the River *Cur* flows, from which the *Curgi* have their name, whom we call *Georgians*.

Then leaving *Perſia* and the *Caſpian* Mountains on the left towards the South, and *Curgia* on the right, we directed our Journey S. W. till we came to a City called *Naxnan*, formerly the Metropolis of a great Kingdom, wherein was 800 *Armenian* Churches, but the *Tartars* have made it a Wilderneſs, and there are now but two ſmall ones left, in one of which the Clerk and I kept the Feaſt of *Chriſtmas* as well as we could. An *Armenian* Biſhop told me, there was a Church not far diſtant, where St. *Bartholomew* and St. *Judas Thaddæus* were martyred.

Near this City is a Mountain called *Maſſis*, on which they ſay the Ark of *Noah* reſted; and there is a little Town near it called *Cemainum*, which ſignifies Eight, ſo called, ſay they, from the eight Perſons that founded it, who came forth of the Ark. They ſay many have eſſayed to climb the Hill, but could not, tho' it did not ſeem ſo high to me, but that Men might well get unto it: An old Man gave me this Reaſon why none ſhould climb it, becauſe, ſaid he, *Maſſis* is the Mother of the World.

The ſecond Sunday in *Lent* we came to the River *Euphrates*, by which we deſcended eight Days, always going to the Weſt. Thence we paſſed weſtward through very hilly Countries and deep Snow. There was ſo great an Earthquake there that Year, that in the City of *Arſengen* 10000 Perſons of note periſhed, beſides poor People, of whom no notice was taken. Riding three days together, we ſaw the gaping of the Earth as it was cleft by the Earthquake, and heaps of Earth which came from the Mountains and filled the Valleys; ſo that if a little more of the Earth had been moved, that which *Eſay* ſpeaks had been literally fulfilled, *Every Valley ſhall be filled, and every Mountain and little Hill ſhall be humbled.* We continued our Journey to *Iconium*, thence to *Curcum* a Haven of *Cilicia*, from whence I paſſed into *Cyprus*, where I arrived 16 *June*, and at *Tripolis*, *Auguſt* 15, 1255.

Mountain whereon *Noah's* Ark reſted.

Chap. II.

Sir Hugh Willoughby's *unfortunate Voyage to diſcover and ſettle a Trade in* Ruſſia, 1553.

1553. IN the laſt Year of the Reign of *Edward* VI. three Ships were ſet forth by the *Company of Merchants Adventurers for the Diſcovery of Places unknown*, whereof *Sebaſtian Cabota* was Governour, *viz.* the *Bona Eperanza* of 120 Tuns, Admiral, commanded by Sir *Hugh Willoughby*; the *Edward Bonadventurer* of 160 Tuns, commanded by *Richard Chancellor*; and the *Bona Confidentiæ* of 90 Tuns, whereof *Cornelius Duforth* was Maſter.

They departed from *Deptford* the 11th of *May*, and on the ſecond of *Auguſt* at Night, being near the Coaſt of *Fiamark*, the *Edward* loſt ſight of the other two, in very foul weather, and ſteering their Courſe for *Wardhouſe* in *Norway* (as it had been agreed upon) they tarried there ſeven days, expecting the arrival of the other two Ships, but they not appearing, Mr. *Chancellor* in the *Edward* purſued his Voyage, and firſt diſcovered the Bay of St. *Nicholas*, where anchoring, he eſpied ſome Fiſhermen in a Boat, who being amaz'd at the ſtrange Greatneſs of his Ship, endeavoured to eſcape from him, but he overtaking them, was informed by them that the Country was called *Ruſſia* or *Muſcovy*, and that the Duke's name was *Juan Vaſiliwich*.

The Governour of the place ſent advice hereof to the Court, and the Meſſenger returned with Orders for Poſt-horſes and Sleds to be gotten for Mr. *Chancellor* and his Company without any Money; and after a long Journey of near 1500 Miles, he arrived at *Moſco*, the chief City of the Kingdom. Twelve Days after his arrival, the Secretary advertiſed him, that the Duke's Pleaſure was, that he ſhould attend with the King of *England*'s Letters He was firſt brought to an Anti-chamber, where ſate about 100 Gentlemen all in Cloth of Gold, and from thence was conducted into the Counſel-Chamber, where ſate the Duke himſelf, in a long Garment of beaten Gold and an Imperial Crown upon his Head. When he had delivered his Letter, the Duke told him he was welcome, and enquired of the health of the King his Maſter, and then inviting him to dinner. In the middle of the Dining-Room was a Table covered with Cups of Gold: The number of Perſons that dined were about 200, all ſerved in Veſſels of Gold, and the Gentlemen that waited were all in Cloth of Gold. Before the Service came in, the Duke ſent to every Man a piece of Bread, and the Bearer called the Party ſo ſent to, by his name aloud, and ſaid, John Baſiliuich, *Emperour of* Ruſſia, *and great Duke of* Muſcovia, *doth reward thee with Bread*; at which Words all Men ſtand up, and ſo likewiſe when he ſendeth drink. Dinner being done, he departed to his Lodging, an hour within night.

1554. Mr. *Chancellour* having obtained a Priviledge written in *Ruſſe*, with the Great Duke's Seal, did in the beginning of the Year 1554, return with the ſaid Ship *Edward* to *London*. The other two Ships attempting further Northwards (as appears by Sir *Hugh Willoughbies* Papers) were in *September* encountred with ſuch extream cold, that they put back to ſeek a Wintring Place, and miſſing the ſaid Bay of St. *Nicholas*, fell upon a Deſart Coaſt in *Lapland*, and entred into a River called *Arzina*, which was ſoon frozen up. They ſent out three Men S. S. W. three days journey to ſee if they could find People; then they ſent out three Men Weſtward four days journey; and laſtly, three Men S. E. three days journey, who all returned without finding of People or any Habitation: Here they all periſhed, being 70 Perſons, for want (as ſome think) of making Caves and Stoves. Their Bodies were found in the Ships the next Summer by *Ruſſian* Fiſhermen, and it appears by a Will found in Sir *Hugh Willoughbies* Ship, written by his Kinſman *Gabril Willoughby*, that he and moſt of the Company were alive in *January*, 1554.

1554.

A Copy of the Letters Miſſive, from Edward *the* VI. *to the Kings, Princes, and Potentates, inhabiting the North-Eaſt Parts of the World, when Sir* Hugh Willoughby *attempted his Voyage thither,* Anno Dom. 1553. *and in the ſeventh and laſt Year of his Reign.*

Edvardus ſextus *Angliæ, Franciæ,* & *Hiberniæ,* Rex, Omnibus Regibus, *&c.*

EDward *the* VI. *by the Grace of God, King of* England, France *and* Ireland, *&c. To all Kings, Princes, Rulers, Judges and Governours of the Earth, and all others having any excellent Dignity on the ſame, in all places under the univerſal Heaven, Peace, Tranquility and Honour be unto you, and your Lands and Regions under your Dominions, and to every of you as is convenient.*

Foraſmuuch as the Great and Almighty God hath given unto Mankind above all other living Creatures, ſuch an Heart and Deſire, that every Man ſeeks to join Friendſhip with other, to love and be loved, alſo to give and receive mutual Benefits, it is therefore the Duty of all Men according to their Power, to maintain and increaſe this Deſire in every Man, with well deſerving to all Men, and eſpecially to ſhew this good Affection to ſuch, as being moved with good Deſire, come unto them from far Countries; for how much the longer Voyage they have attempted for this Intent, ſo much the more do they thereby declare, that this Deſire hath been ardent in them. Furthermore the Examples of our Fathers and Predeceſſours do invite us hereunto, who have ever gently and lovingly treated ſuch as of friendly mind came to them, as well from Countries near hand as far remote, committing themſelves to their protection; and if it be right and juſt to ſhew ſuch humanity towards all Men, doubtleſs the ſame ought chiefly to be ſhewn to Merchants, who wandring about the World, ſearch both the Land and the Sea, to carry ſuch good and profitable things as are found in their Countries, to remote Regions and Kingdoms, and to bring thence ſuch things as they find there commodious for their own Countries, as well that the People to whom they go, may not be deſtitute of ſuch Commodities as their Countries do not produce, and that they themſelves may be Partakers of ſuch things wherein they abound; for the God of Heaven and Earth, in providing for Mankind, would not that all things ſhould be found in one Region, to the end, that one ſhould have need of another, that by this means Friendſhip might be eſtabliſhed among all Men, and every one ſeek to gratify all. For the eſtabliſhing and furtherance of which univerſal Amity, certain Men of our Realm moved hereunto by the ſaid Deſire, have taken a Voyage upon them by Sea into far Countries, to the Intent, that between our People and them, a way may be opened to bring in and carry out Merchandize, deſiring us to further their Enterprize: Who aſſenting to their Petition, have licenced the right valiant and worthy Sir Hugh Willoughby, *Knight, and other our truſty and faithful Servants with him, according to their Deſire, to go to Countries to them yet unknown, as well to ſeek things as we lack, as alſo to carry unto them from our Regions, ſuch things as they want; ſo that hereby Commodity may enſue, both to them and us, and an indiſſoluble and perpetual League of Friendſhip be eſtabliſhed between us both: We therefore deſire your Kings and Princes, and all other to whom there is any Power on the Earth, to permit unto thoſe our Servants, free Paſſage by your Regions and Dominions; for they ſhall not touch any thing of yours, you being unwilling. Conſider you that they alſo are Men, if therefore they ſhall ſtand in need of any thing, we deſire you of all humanity, and for the Nobility which is in you, to aid and help them with ſuch things as they lack, receiving again of them ſuch things as they ſhall be able to give you in recompence. Shew your ſelves ſo towards them, as you would that we and our Subjects ſhould ſhew our ſelves towards your Servants, if at any time they ſhall paſs by our Regions.*

Thus doing, we promiſe you by the God of all things that are contained in Heaven, Earth, and the Sea, and by the Life and Tranquility of our Kingdoms, that we will with like humanity accept your Servants, if at any time they ſhall come to our Kingdoms, where they ſhall as friendly and gently be entertained as if they were born in our Dominions, that we may hereby recompence the Favour and Benignity you have ſhewed to our Men. Thus after we have deſired you Kings and Princes, &c. with all Humanity and Favour to entertain our well beloved Servants, we will pray our Almighty God to grant you long Life and Peace, which never ſhall have end. 1554.

Written in *London*, which is the chief City of our Kingdom, in the Year from the Creation of the World 5515, in the Month of * *Iiar*, the fourteenth Day of the Month, and the ſeventh Year of our Reign.

Copy of the Emperour of *Ruſſia*'s Letters, ſent to King *Edward* the VI. by the Hands of *Richard Chancellor*, 1554.

T*HE Almighty Power of God, and the incomprehenſible Holy Trinity, rightful Chriſtian Belief, &c. We great Duke* Juan Vaſilivich, *by the Grace of God, great Lord and Emperour of all* Ruſſia, *great Duke of* Volodemer, Moſco *and* Novogrod, *King of* Kazan, *King of* Aſtracan, *Lord of* Pleſco, *and great Duke of* Smolansko, *of* Tweria, Joughoria, Permia, Vadska, Bulghoria, *&c. Lord and great Duke of* Novograd *in the* Low Country, *of* Chernigo, Rezan, Polotskoy, Roſtove, Yaruſlaveley, Bealozera, Liefland, Oudoria, Obdoria, *and* Condenſa, *Commander of all* Siberia, *and of the North Part, and Lord of many other Countries greeting. Before all, right, great, and worthy of Honour,* Edward *King of* England, *&c. according to our moſt hearty and good Zeal, with good Intent and friendly Deſire, and according to our Holy Chriſtian Faith and great Governance, and being in the light of great underſtanding, our Anſwer by this our honourable writing unto your Kingly Governance, at the requeſt of your faithful Servant* Richard Chancellor *with his Company, as they ſhall let you wiſely know, is this. In the ſtrength of the 20th Year of our Governance, be it known, that at our Sea Coaſts arrived a Ship with one* Richard *and his Company, and ſaid that he was deſirous to come into our Dominions, and according to his Requeſt, hath ſeen our Majeſty and our Eyes; and hath declared unto us your Majeſties Deſire, as that we ſhould grant unto your Subjects to go and come, and in our Dominions and among our Subjects, to frequent free Marts with all ſorts of Merchandiſe, and upon the ſame to have Wares for their return; and they have alſo delivered us your Letters, which declare the ſame Requeſt. And hereupon we have given Orders, that your faithful Servant* Hugh Willoughby *be well entertained wheresoever he ſhall land or touch in our Dominions, who as yet is not arrived, as your Servant* Richard *can declare.*

And we with Chriſtian Belief and faithfulneſs, and according to your honourable Requeſt and my honourable Commandment, will not leave it undone, and are furthermore willing that you ſend unto us your Ships and Veſſels when, and as often as they may have paſſage, with good aſſurance on our part to ſee them harmleſs; and if you ſend one of your Majeſties Counſel to treat with us, whereby your Country Merchants may with all kind of Ware, and where they will, make their Market in our Dominions, they ſhall have their free Mart with all free Liberties through my whole Dominions, with all kind of Wares to come and go at their pleaſure, without any let, damage or impediment, according to this our Letter, our Word, and our Seal, which we have commanded to be under ſealed.

Written in our Dominion, in our City, and our Palace in the Caſtle of *Moſco*, in the Year 7060, the ſecond Month of *February*.

This Letter was written in the *Muſcovian* Tongue, in Letters much like to *Greek*, very fair written on Paper, with a broad Seal hanging to the ſame, much like to the broad Seal of *England*, having on one ſide a Man on Horſeback fighting with a Dragon. Under this Letter was another Paper written in *Dutch*, which was the Interpretation of the other.

The ſecond Voyage to Ruſſia.

THE Company ſent two Ships for *Ruſſia* this Year, *viz.* the *Edward Bonadventure* and another, with divers Agents and Factors, who had with them Letters from their Majeſties King *Philip* and Queen *Mary* to the *Great Duke*. They paſſed up the *Dwina* to *Vologda*, where 1555.

---

* For *Iiar* poſſibly we ought to read *Mair*, which in the *Saracean* Language is *February*, interpreted by them the Month to ſet Ships to Sea.

where leaving the reſt of my Company, *Richard Chancellor, George Killingworth, Henry Lane, Edward Price*, and *Robert Beſt*, went forward in Poſt Sleds to *Moſco*, where arriving the fourth Day of *October*, and giving notice of the ſaid Letters, Houſes and Diet were appointed for them and their Train, and they were ſoon after conducted thro' the City of *Moſco* to the Palace. They paſſed thro' ſeveral Rooms, wherein were many ancient grave Perſons in long Robes of Gold, Tiſſue and Violet, with Caps, Jewels and Chains. Theſe proved to be no Courtiers, but Merchants and other ancient Inhabitants, who were thus furniſhed from the Wardrobe and Treaſury, to wear them for a time, and ſo to reſtore them.

Then entring into the *Preſence*, being a large Room flored with Carpets; there ſate above 100 Men in richer Habits, who when the *Engliſh* came in and paid Reverence, all ſtood up, the Prince only ſitting, and yet riſing when the King or Queen's name was mentioned: They were then admitted to kiſs his Hand, and invited to Dinner; the Prince ſate bare headed, his Crown and rich Cap upon a Pinnacle by. Not far diſtant ſate his Metropolitan, with divers of his Kindred and chief *Tartarian* Captains. A Table was appointed for the *Engliſh*, in the midſt of the Room, directly againſt the Prince, who ſent them ſeveral Meſſes from his own Table, in Diſhes of maſſy Gold, which were delivered to them by their Chriſtian Names, as *Richard*, *George*, *Henry*, &c. likewiſe Bread and ſeveral ſorts of Drink of purified Mead made of clarified Honey. At their riſing, the Prince called them to his Table to receive each of them a Cup of Drink from his Hand, and took into his Hand Mr *Killingworth*'s Beard, which would reach over the Table, and pleaſantly delivered it to the Metropolitan, who ſeeming to bleſs it, ſaid in *Ruſſe*, *This is God's Gift*: His Beard was thick, broad, of a yellow colour, and in length five Foot and two Inches of aſſize. Then taking leave, being night, they were accompanied by many People, carrying Pots of Drink and Diſhes of Meat dreſſed to their Lodging.

Mr *Killingworth* being informed that the two Ships, with the dead Bodies of Sir *Hugh Willoughby* and his People, were found by *Ruſſian* Fiſhermen, ſent thither, and much of the Goods and Victuals was recovered and ſaved.

1555.

The Letters of King *Philip* and Queen *Mary*, to *Juan Vaſilivich*, Emperor of *Ruſſia*; written the firſt of *April*, 1555. and in the ſecond Voyage.

PHilip *and* Mary, *by the Grace of God, King and Queen of* England, France, Naples, Jeruſalem, *and* Ireland, *Defenders of the Faith, Princes of* Spain *and* Sicily, *Archdukes of* Auſtrich, *Dukes of* Burgundy, Milan, *and* Brabant, *Counts of* Haſpurg, Flanders, *and* Tirol, *to the right High, right Mighty, and right Excellent Prince, garniſhed with all Gifts of Nature, by God's Grace,* John Vaſilivich, *Emperour of all* Ruſſia, *Great Duke of* Volodemer, Moſco, *and* Novogrod, *King of* Cazan, *King of* Aſtracan, *Lord of* Plesko, *and Great Duke of* Smolensko, *of* Tueria, Joughoria, Permia, Vadska, Bulghoria, *and others, Lord and great Duke of* Novogrod *of the* Low Country, *of* Chernigo, Rezan, Polotskoy, Roſtove, Yeraſtave, Bealozera, Liefland, Oudoria, Obdoria *and* Condenſa, *Commander of all* Siberia, *and of the North Parts, and Lord of many other Countries, greeting. Whereas by the Conſent and Licence of our moſt dear and entirely beloved late Brother, King* Edward *the* VI. *whoſe Soul God pardon, ſundry of our Subjects, Merchants within the City of* London, *within this our Realm of* England, *did at their own proper Coſts and Adventure, furniſh three Ships to diſcover, ſearch and find Lands, Iſlands, Regions, and Territories, before this Adventure not known, nor commonly haunted and frequented by Seas; one of which three Ships, named the* Edward Bonadventure (*whereof our right well beloved* Richard Chancellor *was then Governour and Great Captain*) *chanced by the Grace of God and good Conduct of the ſaid* Chancellor, *to arrive and winter in the North Part of your Empire of* Ruſſia. *Foreſmuch as we be credibly informed by the Report of our truſty and welbeloved Subject, that your Majeſty did not only call him and certain of his Company to your Imperial Preſence and Speech, entertained and banqueted them with all Humanity and Gentleneſs, but alſo being requeſted partly by the Letters of our ſaid Brother, and partly by the requeſt of the ſaid* Richard Chancellor, *have by your Letters Patents under your Seal among other things granted, That all ſuch Merchants as ſhall come forth of any of our Realms of* England *or* Ireland *with all manner of Wares, if they will travel or occupy within your Dominions, they may freely and at their liberty, travel out and in, without hindrance or any manner of loſs; and of your further ample goodneſs, have promiſed that our Embaſſadors, if we ſend any, ſhall with free good Will, paſs to and from you without any hindrance or loſs, with ſuch Meſſage as ſhall come unto you, and to return the ſame to our Kingdoms well anſwered, as by the ſame your Letters written in your Lordly Palace and Caſtle of* Moſco, *in the Year 7063. the Month of* February *more at large appeareth. Like as we cannot but much commend your Princely Favour and Goodneſs, and in like manner thank you for the abundant Grace extended to the ſaid* Richard Chancellor, *and others our Subjects Merchants, even ſo theſe are to pray and requeſt you to continue the ſame Benevolence towards them, and other our Merchants and Subjects, which do or ſhall hereafter reſort to your Country: And for the more Aſſurance and Encouragement to trade and exerciſe the Feat of Merchandiſe with your Subjects and all other Merchants within your Dominions, that it may pleaſe you at this our contemplation, to aſſign and authoriſe ſuch Commiſſaries as you ſhall think meet, to trade and confer with our welbeloved Subjects and Merchants, the ſaid* Richard Chancellor, George Killingworth, *and* Richard Gray, *Bearers of theſe our Letters, who are by us authoriſed for that purpoſe; and to confirm and grant ſuch other Liberties and Privileges, unto the Governour, Conſuls, Aſſiſtants and Commonalty of the Fellowſhip of the ſaid Merchants, as the ſaid Bearers in their name, propoſe and required by you to be granted for their ſafe Conduct, good Government, and order to be erected and continued among them in your ſaid Dominions; and this with ſuch your Clemency and Expedition, as we upon the next arrival of the ſaid* Richard Chancellor, *may be informed of your gracious Diſpoſition and Anſwer, which your Benevolences ſo to be extended, we be minded to requite towards any your Subjects Merchants that ſhall frequent this our Realm, at your Contemplation therefore to be made. Thus right High, right Excellent, and right Mighty, Almighty God, the Father, the Son, and the Holy Ghoſt, have you in his bleſſed keeping.*

Given under our Seal at our Palace of *Weſtminſter*, the firſt of *April*, in the Year from the bleſſed Incarnation of our Saviour *Jeſus Chriſt*, 1555. and in the firſt and ſecond Years of our Reigns.

A Copy of the firſt Priviledges granted by the Emperour of *Ruſſia* to the *Engliſh* Merchants, in the Year 1555.

1555.

‘ *JOhn Vaſilivich* by the Grace of God, Emperour of *Ruſſia*, Great Duke of *Novogrod*, *Moſcovia*, &c. To all People that ſhall ſee, read, hear or underſtand theſe Preſents, greeting. Foraſmuch as God hath planted all Realms and Dominions, in the whole World with ſundry Commodities, ſo as the one hath need of the Amity, and Commodities of the other, and by means thereof Traffick is uſed from one to another, and Amity thereby increaſed; and becauſe amongſt Men nothing is more to be deſired than Amity, without which, no Creature being of a natural good Diſpoſition, can live in quietneſs; ſo that it is as troubleſome to be utterly wanting, as it is perceived to be grievous to the Body to lack Air, Fire, or any other Neceſſaries moſt requiſite for the Conſervation and Maintenance thereof in health, conſidering alſo how needful Merchandiſe is, which furniſheth Men with all that which is convenient for their Living and Nourture, for their Clothing, Trimming, the ſatisfying of their Delights, and all other things convenient and profitable for them, and that Merchandize bringeth the ſame Commodities from divers Quarters in ſo great abundance, as by means thereof nothing is lacking in any Part, and that all things be in every place (where entercourſe of Merchandizes is received and imbraced) generally in ſuch ſort as Amity thereby is entred into and planted to continue, and Injoyers thereof be as Men living in a Golden World: Upon theſe Reſpects and other weighty and good Conſiderations, us thereunto moving, and chiefly upon the Contemplation of the Gracious Letters, directed from the Right High, Right Excellent, and Right Mighty, Queen *Mary*, by the Grace of God, Queen of *England*, *France*, &c.

‘ in

1555. in the Favour of her Subjects, Merchants, the Governour, Conſuls, Aſſiſtants, and Commonalty of Merchants Adventurers for diſcovery of Lands, &c.

‘Know ye therefore that we of our Grace ſpecial, meer Motion and certain Knowledge, have given and granted, and by theſe Preſents for us our Heirs and Succeſſours, do give and grant as much as in us is and lieth, unto *Sabaſtian Cabota* Governour, Sir *George Barnes* Knight, &c. Conſuls, Sir *John Greſham*, &c. Aſſiſtants, and to the Commonalty of the aforenamed Fellowſhip, and to their Succeſſours for ever, and to the Succeſſours of every of them, theſe Articles, Grants, Immunities, Franchiſes, Liberties and Priviledges, and every of them hereafter following expreſſed and declared, *Videlicet*.

‘Firſt, we for us, our Heirs and Succeſſours, do by theſe Preſents give and grant free Licence, Faculty, Authority, and Power, unto the ſaid Governour, Conſuls, Aſſiſtants, and Commonalty of the ſaid Fellowſhip, and to their Succeſſours for ever, that all and ſingular the Merchants of the ſame Company, their Agents, Factors, Doers of their Buſineſs, Atturneys, Servants, and Miniſters, and every of them, may at all times hereafter for evermore, ſurely, freely and ſafely with their Ships, Merchandiſes, Goods, and things whatſoever ſail, come and enter into all and ſingular our Lands, Countries, Dominions, Cities, Towns, Villages, Caſtles, Ports, Juriſdictions, and Diſtricts by Sea, Land, or freſh Waters, and there tarry, abide, and ſojourn, and buy, ſell, barter and change all kind of Merchandizes, with all manner of Merchants and People, of whatſoever Nation, Rite, Condition, State or Degrees they be, and with the ſame or other Ships, Wares, Merchandizes, Goods, and Things whatſoever they be unto other Empires, Kingdoms, Dukedoms, Parts, and to any other place or places at their Pleaſure and Liberty, by Sea, Land or freſh Waters, may depart and exerciſe all kind of Merchandizes in our Empire and Dominions, and every part thereof, freely and quietly, without any Reſtraint, Impeachment, Price, Exactions, Preſt, Straight, Cuſtom, Toll, Impoſition or Subſidy to be demanded, taxed or paid, or at any time hereafter to be demanded, taxed, ſet, levied or inferr'd upon them or any of them, or upon their Goods, Ships, Wares, Merchandizes, and things, of, for, or upon any Part or Parcel thereof, or upon the Goods, Ships, Wares, Merchandizes, and Things of any of them, ſo that they ſhall not need any other ſafe Conduct or Licence, general nor ſpecial of us, our Heirs or Succeſſours, neither ſhall be bound to ask any ſafe Conduct or Licence in any of the aforeſaid places ſubject unto us.

2. *Item.* ‘We give and grant to the ſaid Merchants this Power and Liberty, that they nor any of them, nor their Goods, Wares, Merchandizes or Things, nor any part thereof, ſhall be by any means within our Dominions, Lands, Countries, Caſtles, Towns, Villages, or other Place or Places of our Juriſdiction, at any time hereafter attached, ſtayed, arreſted nor diſturbed for any Debt, Duty, or other thing, for the which they be not principal Debtors or Sureties, nor alſo for any Offence or Treſpaſs committed, or that ſhall be committed, but olny for ſuch as they or any of them ſhall actually commit, and the ſame Offences (if any ſuch happen) ſhall be by us only heard and determined.

3. *Item.* ‘We give and grant that the ſaid Merchants ſhall and may have free Liberty, Power and Authority, to name, chooſe, and aſſign Brokers, Shippers, Packers, Weighers, Meaſurers, Waggoners, and all other meet and neceſſary Labourers for to ſerve them in their Feat of Merchandizes, and miniſter and give unto them and every of them a Corporal Oath, to ſerve them well and truly in their Offices, and finding them or any of them doing contrary to his or their Oath, may puniſh and diſmiſs them, and from time to time chooſe, ſwear and admit others in their Place or Places, without Contradiction, Let, Vexation or Diſturbance, either of us, our Heirs or Succeſſours, or of any other our Juſtices, Officers, Miniſters or Subjects whatſoever.

4. *Item.* ‘We give and grant unto the ſaid Merchants and their Succeſſours, that ſuch Perſon as is or ſhall be commended unto us, our Heirs or Succeſſours, by the Governour, Conſuls, and Aſſiſtants of the ſaid Fellowſhip reſiant within the City of *London*, within the Realm of *England*, to be their chief Factor within this our Empire and Dominions, may and ſhall have full Power and Authority to govern and rule all *Engliſh* Men that have had or ſhall have Acceſs, or Repair in or to this ſaid Empire and Juriſdiction, or any Part thereof, and ſhall and may miniſter unto them, and every of them, good Juſtice in all their Cauſes, Plaints, Quarrels and Diſorders between them moved, and to be moved, and aſſemble, deliberate, conſult, conclude, define, determine and make ſuch Acts and Ordinances, as he ſo commended with his Aſſiſtants, ſhall think good and meet for the good Order, Government and Rule of the ſaid Merchants, and all other *Engliſh* Men repairing to this our ſaid Empire and Dominions, or any part thereof, and to ſet and levie upon all and every *Engliſh* Man, Offender, or Offenders, of ſuch their Acts and Ordinances made, and to be made, Penalties and Mulcts, by fine or impriſonment. 1555.

5. *Item.* ‘If it happen that any of the ſaid Merchants or other *Engliſh* Men, as one or more do rebel againſt ſuch chief Factor or Factors, or his or their Deputies; and will not diſpoſe him or themſelves to obey them and every of them as ſhall appertain, if the ſaid Rebels or Diſobedients do come and be found in our ſaid Empire and Juriſdictions, or any Part and Place thereof, then we promiſe and grant, that all and every our Officers, Miniſters and Subjects, ſhall effectually aid and aſſiſt the ſaid chief Factor or Factors, and their Deputies, and for their Power ſhall really work to bring ſuch Rebel, or diſobedient Rebels, or Diſobedients, to due Obedience, and to that Intent ſhall lend unto the ſame Factor or Factors, and their Deputies, upon requeſt therefore to be made, Priſons and Inſtruments for Puniſhments, from time to time.

6. *Item.* ‘We promiſe unto the ſaid Merchants and their Succeſſours, upon their Requeſts, to exhibit and do unto them, good, exact and favourable Juſtice, with Expedition in all their Cauſes, and that when they or any of them ſhall have acceſs, or come to or before any of our Juſtices, for any their Plaints moved, and to be moved between any our Subjects or other Strangers, and them or any of them, that then they ſhall be firſt and forthwith heard, as ſoon as the Party which they ſhall find before our Juſtices, ſhall be impeached, which party being heard forthwith, and aſſoon as may be, the ſaid *Engliſh* Merchants ſhall be rid and diſpatched, and if any Action ſhall be moved by or againſt any of the ſaid Merchants being abſent out of our ſaid Empire and Dominions, then ſuch Merchant may ſubſtitute an Attorney in all and ſingular his Cauſes, to be followed as need ſhall require, and as ſhall ſeem to him expedient.

7. *Item.* ‘We grant and promiſe to the ſaid Merchants and to their Succeſſours, that if the ſame Merchants or any of them ſhall be wounded, or (which God forbid) ſlain in any part or place of our Empire or Dominions, then good information thereof given, we and our Juſtices and other Officers, ſhall execute due Correction and Puniſhment without delay, according to the Exigence of the Caſe, ſo that it ſhall be an Example to all others not to commit the like; And if it ſhall chance the Factors, Servants, or Miniſters of the ſaid Merchants or any of them to treſpaſs or offend, whereby they or any of them ſhall incur the Danger of Death or Puniſhment, the Goods, Wares, Merchandizes, and things of their Maſters ſhall not therefore be forfeited, confiſcated, ſpoiled nor ſeized by any means by us our Heirs or Succeſſours, or by any our Officers, Miniſters or Subjects, but ſhall remain to their uſe, frank, free, and diſcharged from all Puniſhment and Loſs.

8. *Item.* ‘We grant, that if any of the *Engliſh* Nation be arreſted for any Debt, he ſhall not be laid in Priſon, ſo far as he can put in ſufficient Surety and Pawn; neither ſhall any Sergeant or Officer lead them or any of them to Priſon, before he ſhall have known whether the chief Factor or Factors, or their Deputies ſhall be Sureties, or bringing in Pawn for ſuch arreſted; then the Officers ſhall releaſe the Party, and ſhall ſet him or them at liberty.

9. *Item.* ‘Moreover we give, grant and promiſe to the ſaid Merchants, that if any of their Ships or other Veſſels ſhall be ſpoiled, robbed, or Damnified in ſailing, anchoring, or returning to or from our ſaid Empires and Dominions, or any part thereof, by any Pirats, Merchants, or other Perſons, whatſoever he or they be, that then and in ſuch caſe, we will do all that in us is, to cauſe Reſtitution, Reparation, and Satisfaction to be duly made to the ſaid *Engliſh* Merchants, by our Letters and otherwiſe, as ſhall ſtand with our Honour, and be Conſonant to Equity and Juſtice.

10. *Item.* ‘For us our Heirs and Succeſſours, we do promiſe and grant to perform, maintain, corroborate,

1555.

‘ authenticate and obſerve all and ſingular the aforeſaid Liberties, Franchiſes, and Priviledges, like as preſently we firmly do intend, and will corroborate, authentick and perform the ſame by all Means and Ways that we can, as much as may be, to the Commodity and Profit of the ſaid *Engliſh* Merchants, and their Succeſſours for ever.

‘ And to the Intent that all and ſingular the ſaid Gifts, Grants, and Promiſes may be inviolable obſerved and performed, we the ſaid *John Vaſilvich*, by the Grace of God, Emperour of *Ruſſia*, great Duke of *Novogrod*, *Moſco*, &c. for us, our Heirs and Succeſſours, by our Imperial and Lordly Word inſtead of an Oath, have and do promiſe by theſe Preſents, inviolably to maintain and obſerve, and cauſe to be inviolably obſerved and maintained, all and ſingular the aforeſaid Gifts, Grants and Promiſes from time to time, and at all and every time and times hereafter: And for the more corroboration hereof, have cauſed our Signet hereunto to be put.

Dated in our Caſtle of *Moſco*, the 20th Day of
in the Year

The Charter of the Merchants of Ruſſia, *granted upon the Diſcovery of the ſaid Country, by King* Philip *and Queen* Mary.

‘ PHilip and *Mary*, by the Grace of God, King and Queen, *&c.* To all manner of Officers, true Jury Men, Miniſters and Subjects, and to all other People as well within this our Realm or elſewhere under our Obeyſance, Juriſdiction, and Rule, or otherwiſe unto whom theſe our Letters ſhall be ſhewed, ſeen, or read, greeting.

The diſcovery principally intended for God's Glory.

‘ Whereas we be credibly informed, that our right truſty, right faithful, and welbeloved Counſellors, *William* Marqueſs of *Wincheſter*, Lord High Treaſurer of this our Realm of *England*, *Henry* Earl of *Arundel* Lord Steward of our Houſhold, *John* Earl of *Bedford* Lord Keeper of our Privy Seal, *William* Earl of *Pembroke*, *William* Lord *Howard* of *Effingham*, Lord High Admiral of this our ſaid Realm of *England*, &c. have at their own Adventure, Coſts, and Charges, provided, rigged, and tackled certain Ships, Pinaces, and other meet Veſſels, and the ſame furniſhed with all things neceſſary, have advanced and ſet forward, for to diſcover, aſcribe, and find Iſles, Lands, Territories, Dominions, and Seigniories unknown, and by our Subjects before this not commonly by Sea frequented, which by the Sufferance and Grace of Almighty God, it ſhall chance them ſailing Northwards, North-eaſtwards, and North-weſtwards, or any Parts thereof, in that Race or Courſe which other Chriſtian Monarchs (being with us in League and Amity) have not heretofore by Seas trafficked, haunted, or frequented, to find and attain by their ſaid Adventure, as well for the Glory of God, as for the Illuſtrating of our Honour and Dignity Royal, in the Increaſe of the Revenues of our Crown, and general wealth of this and other our Realms and Dominions, and of our Subjects of the ſame: And to this Intent our Subjects above ſpecified and named, have moſt humbly beſeeched us, that our abundant Grace, Favour and Clemency may be graciouſly extended unto them in this behalf: Whereupon we inclined to the Petition of the foreſaid our Counſellors, Subjects and Merchants, and willing to animate, advance, further and nouriſh them in their ſaid godly, honeſt, and good Purpoſe, and, as we hope, profitable Adventure, and that they may the more willingly and readily atchieve the ſame, of our ſpecial Grace, certain Knowledge, and meer Motion, have granted, and by theſe Preſents do grant, for us, our Heirs and Succeſſours, unto our ſaid right truſty, and right faithful, and right welbeloved Counſellors, and the other before named Perſons, that they by the name of Merchants Adventurers of *England*, for the diſcovery of Lands, Territories, Iſles, Dominions, and Seigniories unknown, and not before that late Adventure or Enterpriſe by Sea or Navigation, commonly frequented as aforeſaid, ſhall be from henceforth one Body and perpetual Fellowſhip and Commonalty of themſelves, both in Deed and in Name, and them, by the Names of Merchants Adventurers for the diſcovery of Lands, Territories, Iſles, and Seigniories unknown, and not by the Seas and Navigations, before their ſaid late Adventure or Enterpriſe by Sea or Navigation commonly frequented, we do incorporate, name and declare by theſe Preſents, and that the ſame Fellowſhip or Commonalty from henceforth ſhall be, and may have one Governour of the ſaid Fellowſhip and Commonalty of Merchants Adventurers.

1555.

Sebaſtian Cabota firſt Governour of the *Moſcovy* Company.

‘ And in conſideration that one *Sebaſtian Cabota* hath been the chiefeſt Setter forth of this Journey or Voyage, therefore we make, ordain, and conſtitute him the ſaid *Sebaſtian*, to be the firſt and preſent Governour of the ſame Fellowſhip and Commonalty, by theſe Preſents, to have and enjoy the ſaid Office of Governour, to him the ſaid *Sebaſtian Cabota* during his natural Life, without amoving or diſmiſſing from the ſame Room.

‘ And furthermore, we grant unto the ſame Fellowſhip and Commonalty and their Succeſſours, that they the ſaid Fellowſhip and Commonalty, and their Succeſſors after the deceaſe of the ſaid *Sebaſtian Cabota*, ſhall, and may freely and lawfully in places covenient and honeſt, aſſemble themſelves together, or ſo many of them as will or can aſſemble together, as well within our City of *London*, or elſewhere, as it ſhall pleaſe them, in ſuch ſort and manner as other worſhipful Corporations of our ſaid City have uſed to aſſemble, and there yearly name, elect and chooſe one Governour or two of themſelves and their Liberties, and alſo as well yearly during the natural life of the ſaid *Sebaſtian Cabota*, now Governour, as alſo at the election of ſuch ſaid Governour and Governours before his deceaſe, to chooſe, name and appoint 28 of the moſt ſad, diſcreet, and honeſt Perſons of the ſaid Fellowſhip and Commonalty of Merchant Adventurers, as is above ſpecified, and four of the moſt expert and ſkilful Perſons of the ſame 28, to be named and called Conſuls, and 24 of the reſidue, to be named and called Aſſiſtants to the ſaid Governour or Governours, or Conſuls for the time being, which ſhall remain and ſtand in their Authority for one whole Year then next following: And if it ſhall fortune the ſaid Governour, Conſuls and Aſſiſtants, or any of them ſo to be elected, and choſen as is aforeſaid, to die within the Year after his or their election, that then and ſo often, it ſhall and may be lawful to and for the ſaid Fellowſhip and Commonalty, to elect and chooſe of themſelves other Governour or Governours, Conſuls and Aſſiſtants, in the place and ſtead of ſuch as ſo ſhall happen to dye, to ſerve out the ſame Year.

Sir *George Barnes*, *William Garret*, *Anthony Huſie*, *John Suthcot*, the firſt four Conſuls.

‘ And further we do make, ordain, and conſtitute *George Barnes* Knight and Alderman of our City of *London*, *William Garret* Alderman of our ſaid City, *Anthonie Huſie*, and *John Suthcot*, to be the firſt and preſent four Conſuls of the ſaid Fellowſhip and Commonalty by theſe Preſents, to have and enjoy the ſaid Offices of Conſuls to them the ſaid *George Barnes*, *William Garret*, *Anthony Huſie*, and *Suthcot*, for term of one whole year next after the Date of theſe our Letters Patents; and we do likewiſe make, ordain, and conſtitute, Sir *John Greſham* Knight, Sir *Andrew Judde* Knight, Sir *Thomas White* Knight, Sir *John Yorke* Knight, *Thomas Offley* the elder, *Thomas Lodge*, *Henry Herdſon*, *John Hopkins*, *William Watſon*, *William Clifton*, *Richard Pointer*, *Richard Chamberlaine*, *William Mallorie*, *Thomas Pallie* the elder, *William Allen*, *Henry Becher*, *Geffrey Walkenden*, *Richard Fowls*, *Rowland Heyward*, *George Eaton*, *John Ellot*, *John Sparke*, *Blaſe Sanders*, and *Miles Mordin*, to be the firſt and 24 Aſſiſtants to the ſaid Governour and Governours, and Conſuls, and to the ſaid Fellowſhip and Commonalty by theſe Preſents, to have and enjoy the ſaid Offices of Aſſiſtants to them for term of one whole Year, next after the date of theſe our Letters Patents. And further, we for us, our Heirs and Succeſſours, as much as in us is, will and grant by theſe Preſents unto the ſaid Governour, Conſuls, Aſſiſtants, Fellowſhip and Company of Merchants Adventurers aforeſaid, and to their Succeſſours, that the ſaid Governour or Governours, four Conſuls, and 24 Aſſiſtants, that now by theſe Patents are nominated and appointed, or that hereafter by the ſaid Fellowſhip and Commonalty of Merchants Adventurers, or the more part of them which ſhall be then preſent, ſo from time to time to be choſen, ſo that there be 15 at the leaſt wholly agreed thereof, the ſaid Governour or Governours, or one of them, and two of the ſaid Conſuls ſhould be there, and twelve of the reſidue of the ſaid number of 15, ſhall be of the ſaid Aſſiſtants, and in the abſence of ſuch Governour, that then three of the ſaid Conſuls and twelve of the ſaid Aſſiſtants at the leaſt for the time being, ſhall and may have Uſe and Exerciſe, full Power and

Authority to rule and govern all and ſingular the Merchants of the ſaid Fellowſhip and Commonalty, and to execute and do full and ſpeedy juſtice to them, and every of them, in all their Cauſes, Differences, Variances, Controverſies, Quarrels, and Complaints, within any our Realms, Dominions and Juriſdictions only moved, and to be moved touching their Merchandiſe, Trafficks, and Occupiers aforeſaid, or the good Order or Rule of them or any of them.

‘ Alſo we for us, our Heirs and Succeſſors, ſo much as in us is, do likewiſe by theſe Preſents grant, that the ſaid Governour, Conſuls, Aſſiſtants, Fellowſhip and Commonalty, and their Succeſſours ſhall and may have perpetual Succeſſion, and a common Seal, which ſhall perpetually ſerve for the Affairs and Buſineſs of the ſaid Fellowſhip and Commonalty. And that they and their Succeſſours ſhall and may be for ever able Perſons, and capable in the Law, for to purchaſe and poſſeſs in fee and perpetuity, and for term of Life or Lives, or for term of Years or otherwiſe, Lands, Tenements, Rents, Reverſions, and other Poſſeſſions and Hereditaments whatſoever they be, by the name of the Governour, Conſuls, Aſſiſtants, Fellowſhip and Commonalty of the Merchants Adventurers by Seas and Navigations for the diſcovery of Lands, Territories, Iſles, Dominions and Seigniories unknown, and before the ſaid laſt Adventure or Enterpriſe by Seas not frequented, as before is ſpecified, and by the ſame names, ſhall and may lawfully alien, grant, let and ſet the ſame or any part thereof, to any Perſon or Perſons able in the Law to take and receive the ſame; ſo that they do not grant nor alien the ſame, or any part thereof into Mortmain, without ſpecial Licence of us, our Heirs or Succeſſours, firſt had and obtained.

‘ Alſo we for us our Heirs and Succeſſours have granted, and by theſe Preſents do grant unto the ſaid Governours, Conſuls, Aſſiſtants, Fellowſhip and Commonalty of the ſaid Merchants and to their Succeſſours, that they and their Succeſſours, ſhall and may lawfully purchaſe unto them and their Succeſſours for ever, Lands, Tenements, and Hereditaments whatſoever, of the clear yearly value of threeſcore and ſix Pounds, thirteen Shillings, and four pence of lawful Money of *England* and not above, as well of ſuch Lands, Tenements and Hereditaments, as be holden or ſhall be holden of us, our Heirs or Succeſſours, as of any other Perſon or Perſons, the Statues provided againſt Alienations into Mortmain, or any of them, or any Article or Clauſe in them or any of them contained, or any other Law, Cuſtom, Statute or Proviſion to the contrary in any wiſe notwithſtanding: And that they by the name of the Governour, Conſuls, Aſſiſtants, Fellowſhip and Commonalty of Merchants Adventurers, for the diſcovery of Lands, Territories, Iſles, Dominions and Seigniories unknown by the Seas and Navigations, and not before the ſaid late Adventure or Enterpriſe by Seas frequented as aforeſaid, ſhall and may be able in the Law to implead, and be impleaded, to anſwer and to be anſwered, to defend and to be defended before whatſoever Judge or Juſtice temporal or ſpiritual, or other Perſons whatſoever, in whatſoever Court or Courts, and in all Actions perſonal, real, and mixt, and in every of them, and in all Plaints of *novel Diſſeiſon*, and alſo in all Plaints, Suites, Quarrels, Affairs, Buſineſſes and Demands, whatſoever they be, touching and concerning the ſaid Fellowſhip and Commonalty, and the Affairs and Buſineſs of the ſame only, in as ample manner and form, as any other Corporation of this our Realm may do.

‘ Moreover, we for us, our Heirs and Succeſſours, have given and granted, and by theſe Preſents do give and grant unto the ſaid Governour, Conſuls, Aſſiſtants, Fellowſhip, and Commonalty of Merchants Adventurers aforeſaid, and to their Succeſſours, that the ſaid Governour or Governours, Conſuls and Aſſiſtants, and their Succeſſours, in manner, form and number afore rehearſed, ſhall have full Power and Authority from time to time hereafter, to make, ordain, eſtabliſh and erect all ſuch Statues, Acts and Ordinances, for the Government, good Condition, and laudable Rule of the ſaid Fellowſhip and Commonalty of Merchants Adventurers aforeſaid, as to them ſhall be thought good, meet, convenient and neceſſary, and alſo to admit unto the ſaid Corporation and Fellowſhip to be free of the ſame, ſuch and as many Perſons as to them ſhall be thought good, meet, convenient and neceſſary. And that every ſuch Perſon or Perſons as ſhall fortune hereafter to be admitted into the ſaid Fellowſhip, Commonalty and Corporation, ſhall from the time of his or their admittance, be free of the ſame. And alſo we will, and by theſe Preſents grant for us, our Heirs and Succeſſours, unto the ſaid Governours, Conſuls, Aſſiſtants, Fellowſhip, and Commonalty of Merchants Adventurers aforeſaid, and to their Succeſſours, that the Governour or Governours, Conſuls and Aſſiſtants of the ſame, in manner, form and number afore rehearſed, and their Succeſſours for the time being, ſhall and may have full Power and Authority by theſe Preſents from time to time, as to them ſhall ſeem good to limit, ſet, ordain and make Mulcts and Penalties by Fines, Forfeitures and Impriſonments, or any of them upon any Offender of the ſaid Fellowſhip and Commonalty, for any Offence touching the ſame Fellowſhip and Commonalty, and alſo that all Acts and Ordinances by them or their Succeſſours to be made, which time ſhall think not neceſſary or prejudicial to the ſaid Fellowſhip or Commonalty, at all times to revoke, break, fruſtrate, annihilate, repeal and diſſolve at their pleaſure and liberty. And further we will, that if any of the ſaid Fellowſhip and Commonalty ſhall be found contrarious, rebellious or diſobedient to the ſaid Governour or Governours, Conſuls, and the ſaid Aſſiſtants for the time being, or to any Statues, Acts or Ordinances by them made or to be made, that then the ſaid Governour or Governours, Conſuls, and the ſaid Aſſiſtants, in manner, form, and number above ſpecified, for the time being, ſhall and may by vertue of theſe Preſents, mulct and puniſh every ſuch Offender or Offenders, as the Quality of the Offence requireth, according to their good Diſcretions.

‘ And further, we will that none of the ſaid Offender or Offenders ſhall decline from the Power of the ſaid Governour or Governours, Conſuls and Aſſiſtants, in manner, form and number aboveſaid for the time being; ſo always, that the ſaid Acts, Statutes, and Ordinances, do only touch and concern the ſaid Governour or Governours, Conſuls, Aſſiſtants, and the ſaid Fellowſhip and Commonalty of our before named Merchants Adventurers, or the Men of the ſame Fellowſhip and Commonalty, and none other; And ſo always, that ſuch their Acts, Statutes and Ordinances be not againſt our Prerogative, Laws, Statutes, and Cuſtoms of our Realms and Dominions, nor contrary to the ſeveral Duty of any of our Subjects towards us, our Heirs and Succeſſours, nor contrary to any Compacts, Treaties or Leagues, by us or any of our Progenitours heretofore had or made, or hereafter by us, our Heirs and Succeſſours to be made, to or with any foreign Prince or Potentate, nor alſo to the Prejudice of the Corporation of the Mayor, Commonalties and Citizens of our City of *London*, nor to the prejudice of any Perſon or Perſons, body Politick, or corporate, or incorporate, juſtly pretending, claiming, or having any Liberties, Franchiſes, Privileges, Rights or Preheminences, by vertue or pretext of any Grants, Gift, or Letters Patents, by us, or any our Progenitours heretofore given, granted or made.

‘ Moreover, we for us, our Heirs and Succeſſours, will, and by theſe Preſents, do grant unto the ſaid Governours, Conſuls, Aſſiſtants, Fellowſhip, and Commonalty of our Merchants aforeſaid, that their ſaid Governour or Governours, Conſuls and Aſſiſtants, and their Succeſſour in the time being, in manner, form and number above rehearſed, ſhall have full Power and Authority to aſſign, conſtitute and ordain one Officer, or divers Officers, as well within our aforeſaid City of *London*, as alſo in any other place or places of this our Realm of *England*, or elſewhere within our Dominions, which Officer or Officers, we will to be named and called by the name of Sergeant or Sergeants to the Fellowſhip or Commonalty of the ſaid Merchants, and that the ſaid Sergeant or Sergeants, ſhall and may have full Power and Authority by theſe Preſents, to take, levy and gather all manner of Fines, Forfeitures, Penalties and Mulcts of every Perſon or Perſons of the ſaid Fellowſhip and Commonalty, convict and that ſhall be convicted upon, or for breaking of any Statutes, Acts, or Ordinances, to be made by the ſaid Governour or Governours, Conſuls and Aſſiſtants for the time being.

‘ And further, we will and alſo grant for us our Heirs and Succeſſours, that the ſaid Officer or Officers ſhall have further Power and Authority for the Default of Payment, or for Diſobedience in this behalf (if need be) to ſet hands and arreſt as well the Body and Bodies, as the Goods and Chattles of ſuch Offender and Offenders, and Tranſgreſſors, in every place and places not franchiſed. And if it ſhall fortune any ſuch Offender or Offenders, their Goods and Chattles or any part thereof, to be in any City, Borough, Town Incorporated, or

1555.

other place franchiſed or priviledged, where the ſaid Officer or Officers may not lawfully intromit or intermeddle, that then the Mayor, Sheriffs, Bayliffs, and other head Officers or Miniſters within every ſuch City, Borough, Town, Incorporate, or place or places franchiſed, upon a Precept to them or any of them, to be directed from the Governour or Governours, Conſuls and Aſſiſtants of the ſaid Fellowſhip, in number and form aforeſaid, under the common Seal of the ſaid Fellowſhip and Commonalty for the time being, ſhall and may attack and arreſt the Body or Bodies of ſuch Offender or Offenders, as alſo take and ſieze the Goods and Chattles of all and every ſuch Offender or Offenders, being within any ſuch place or places franchiſed, and the ſame Body and Bodies, Goods and Chattles of all and every ſuch Offender and Offenders, being within any ſuch Place or Places franchiſed, and every part thereof ſo attacked and ſiezed, ſhall, according to the Tenor and Purport of the ſaid Precept, return and deliver unto the ſaid Officer or Officers of the aforeſaid Fellowſhip and Commonalty.

‘ And further, we will and grant for us, our Heirs and Succeſſours by theſe Preſents, that all and every ſuch Mayor, Sheriff, Bayliff, or other head Officers or Miniſters of any City, Borough, Town Incorporate, or other places franchiſed, ſhall not be impeached, moleſted, vexed or ſued in any of our Court or Courts, for executing or putting in execution of any of the ſaid Precept or Precepts.

‘ And furthermore, we of our ample and abundant Grace, meer Motion, and certain Knowledge, for us, our Heirs and Succeſſours, as much as in us is, have given and granted, and by theſe Preſents do give and grant unto the ſaid Governour, Conſuls, Aſſiſtants, Fellowſhip and Commonalty of Merchants Adventurers, and to their Succeſſors, and to the Factor and Factors, Aſſign and Aſſigns of every of them, full and free Authority, Liberty, Faculty and Licence, and Power to ſail to all Ports, Regions, Dominions, Territories, Lands, Iſles, Iſlands, and Coaſts of the Sea, whereſoever before their late Adventure or Enteppriſe unknown, or by our Merchants and Subjects by the Seas not heretofore commonly frequented, under our Banner, Standard, Flags and Enſigns, with their Ship, Ships, Bark, Pinnaces, and all other Veſſels of whatſoever Portage, Bulk, quantity or quality they may be, and with any Mariners and Men as they will lead with them in ſuch Ship or Ships, or other Veſſels at their own proper Coſts and Expences, to traffick, deſcry, diſcover and find, whatſoever Iſle, Iſlands, Countries, Regions, Provinces, Creeks, Arms of the Sea, Rivers and Streams, as well of Gentiles, as of any other Emperour, King, Prince, Governour, or Lord whatſoever he or they ſhall be, and in whatſoever part of the World they be ſituate, being before the ſaid late Adventure or Enterpriſe unknown, and by our Merchants and Subjects not commonly frequented, and to enter and land in the ſame without any manner of Denying, Pain, Penalty or Forfeiture to be had or taken by any of our Laws, Cuſtoms or Statutes to our uſe, or to the uſe of our Heirs or Succeſſours for the ſame.

King *Philip* and Queen *Mary* hereby do diſanul Pope *Alexander*'s Diviſion.

‘ And we have alſo granted, and by theſe Preſents, for us, our Heirs and Succeſſours, do grant unto the ſaid Governours, Conſuls, Aſſiſtants, Fellowſhip and Commonalty, and to their Succeſſours, and to their Factors and Aſſigns, and to every of them, Licence for to rear, plant, erect and faſten our Banners, Standards, Flags and Enſigns, in whatſoever City, Town, Village, Caſtle, Iſle, or main Land, which ſhall be by them newly found, without any the Penalties, Forfeitures or Dangers aforeſaid, and that the ſaid Fellowſhip and Commonalty, and their Succeſſours, Factors and Aſſigns, and every of them ſhall and may ſubdue, poſſeſs and occupy all manner of Cities, Towns, Iſles, and main Lands of Infidelity, which is or ſhall be by them or any of them newly found or deſcried, as our Vaſſals and Subjects, and for to acquire and get the Dominion, Title, and Inſurrection of the ſame Cities, Towns, Caſtles, Villages, Iſles, and main Lands, which ſhall be by them or any of them, newly diſcovered or found unto us, our Heirs and Succeſſours for ever.

Conqueſt permitted.

‘ And furthermore, whereas by the Voyage of our Subjects in this laſt ‖ Year attempted by Navigation, towards the diſcovery and diſcloſure of unknown Places, Realms, Iſlands and Dominions by the Seas not frequented, it hath pleaſed Almighty God to cauſe one of the three Ships by them ſet forth for the Voyage and Purpoſe above mentioned, named the *Edward Bonadventure*, to arive, abide, and winter within the Empire and Dominions of the high and mighty Prince our Couſin and Brother, Lord *John Baſilvich*, Emperour of all *Ruſſia*, *Volodomer*, Great Duke of *Muſcovy*, &c. who, of his Clemency, for our Love and Zeal, did not only admit the Captain and Merchants our Subjects into his Protection and Princely Preſence, but alſo received and entertained them very graciouſly and honourably, granting unto them by his Letters addreſſed unto us, frank Acceſs in all his Seigniories and Dominions, with Licence freely to traffick in and out with all his Subjects in all kind of Merchandiſe, with divers other gracious Priviledges, Liberties and Immunities, ſpecified in his ſaid Letters under his Signet: Know ye therefore that we of our further Royal Favour and Munificence, of our meer Motion, certain Knowledge, and ſpecial Grace, for us, our Heirs and Succeſſours, have given and granted, and by theſe Preſents do give and grant unto the ſame Governours, Conſuls, Aſſiſtants, Fellowſhip, and Commonalty above named, and to their Succeſſours, as much as in us is, that all the main Lands, Iſles, Ports, Havens, Creeks, and Rivers of the ſaid mighty Emperour of all *Ruſſia*, and great Duke of *Moſco*, &c. and all and ſingular other Lands, Dominions, Territories, Iſles, Ports, Havens, Creeks, Rivers, Arms of the Sea, of all and every other Emperour, King, Prince, Ruler and Governour, whatſoever he or they before the ſaid late Adventure or Enterpriſe not known, or by our aforeſaid Merchants and Subjects by the Seas not commonly frequented, nor by any Part nor Parcel thereof lying Northwards, North-eaſtwards or North-weſtwards, as is aforeſaid, by Sea ſhall not be viſited, frequented nor haunted by any our Subjects, other of than the ſaid Company and Fellowſhip, and their Succeſſours without expreſs Licence, Agreement and Conſent of the Governour, Conſuls, and Aſſiſtants of the ſaid Fellowſhip and Commonalty above-named, or the more part of them, in manner and number aforeſaid, for the time being, upon pain of Forfeiture and Loſs, as well of the Ship and Ships, with the Appurtenances, as alſo of all the Goods, Merchandiſes, and things whatſoever they be, of thoſe our Subjects, not being of the ſaid Fellowſhip and Commonalty, which ſhall attempt or preſume to ſail to any of thoſe places, which be or hereafter ſhall happen to be found, and trafficked unto, the one half of the ſame Forfeiture to be to the uſe of us, our Heirs and Succeſſours, and the other half to be to the uſe of the ſaid Fellowſhip and Commonalty. And if it ſhall fortune any Stranger or Strangers for to attempt to hurt, hinder or endamage the ſame Merchants, their Factors, Deputies or Aſſigns, or any of them in ſailing, going or returning at any time in the ſaid Adventure, or for to ſail or trade to or from any of thoſe Places, Lands or Coaſts, which by the ſaid Merchants, their Factors, Deputies and Aſſigns, have been, or ſhall be deſcried, diſcovered and found, or frequented, as well within the Coaſts and Limits of Gentility, as within the Dominions and Seigniories of the ſaid mighty Emperour and Duke, and of all and every other Emperour, King, Prince, Ruler, and Governour, whatſoever he or they be, before the ſaid late Adventure or Enterpriſe not known by any of our ſaid Merchants and Subjects, by the Seas not commonly frequented, and lying Northwards, North-weſtwards, or North-eaſt-wards as aforeſaid, then we will and grant, and by theſe Preſents do licence, and authoriſe for us, our Heirs and Succeſſours, the ſaid Merchants, their Factors, Deputies, and Aſſigns, and every of them to do their beſt in their defence, to reſiſt the ſame their Enterpriſes and Attempts. Willing therefore, and ſtraightly commanding and charging all and ſingular our Officers, Mayors, Sheriffs, Eſcheators, Conſtables, Bailiffs, and all and ſingular other our Miniſters and Liege Men and Subjects whatſoever, to be aiding, favouring, helping, and aſſiſting unto the ſaid Governour or Governours, Conſuls, Aſſiſtants, Fellowſhip and Commonalty, and to their Succeſſors and Deputies, Factors, Servants, and Aſſigns, and to the Deputies, Factors and aſſigns of every of them, in executing and enjoying the Premiſſes, as well on Land as in the Sea, from time to time, and at all times when you or any of you ſhall be thereunto required. In witneſs whereof, &c.

Anno 1554.

1555. The Muſcovites Priviledges unto the Engliſh.

The largeneſs of the Priviledge of the Muſcovite Company.

‖ Anno 1555.

Apud Weſtmonaſterium, 6 die Feb. Annis regnorum noſtrorum primo & ſecundo.

Further

Further Priviledges granted to the Merchants of Ruſſia.

‘THeſe Letters Patents were confirmed by act of Parliament, 8. *Eliz.* 1566. wherein it is enacted, That by reaſon the name by which the ſaid Fellowſhip is incorporated by the Letters Patents aforeſaid is long, and conſiſteth of very many words, that therefore the ſaid Fellowſhip, Company, Society and Corporation, ſhall from henceforth be incorporated and called only by the name of the *Fellowſhip of Engliſh Merchants for diſcovery of new Trades.* Provided that it ſhall be lawful for any of the Subjects of this Realm to ſail to the Port, Town, Territory or Caſtle of *Wardhouſe*, or to any part of *Norway*: Not to tranſport any Cloth or Kerſies before the ſame ſhall be dreſſed, and for the moſt part died within this Realm, upon forſeiture of five Pound for every Cloth and Kerſy, one half to the Queen, the other half to the Maſter or Warden of the Cloth-Workers of *London*. Nor to tranſport any Commodity of this Realm but only in *Engliſh* Ships, and ſail for the moſt part by *Engliſh* Mariners, on forfeiture of 200 Pound, one Moiety to the Queen, the other to the head Officers of any Port-Town, having any Haven or Harbour decayed, by whatſoever name they be incorporated, to the reparation of ſuch Harbour, that will ſue for the ſame in any Court of Record, by Action, Bill, Plaint or Information, wherein no Eſſoin, Protection or Wager of Law for the Defendant ſhall be allowed.

‘Provided alſo, that whenſoever the ſaid Company ſhall willingly withdraw, and diſcontinue wholly by the ſpace of three Years, in time of Peace, the diſcharging of their Merchandiſes at the Road of St. *Nicholas* Bay in *Ruſſia*, and do not diſcharge their ſaid Merchandizes at ſome other Port or Road lying on that North Coaſt of *Ruſſia*, or other Territory now ſubject to the ſaid Prince, hitherto by the Subjects of this Realm not commonly frequented, that then during the time of any ſuch diſcontinuance and withdrawing as is aforeſaid, it ſhall be lawful to all the Subjects of this Realm to trade to the *Narve* only in *Engliſh* Bottoms, any thing in this Act to the contrary notwithſtanding.

The Third Voyage to Ruſſia.

1556. THE Company ſent two Ships to *Ruſſia* this Year, *viz.* the *Edward* and the *Philip* and *Mary*, with Supernumerary Maſters and Mariners, to bring home the *Bona Speranza* and the *Confidentia* that had been frozen up in *Lapland*. They touched at *Lapland*, and thence ſailed to the Bay of St. *Nicholas*, from whence they came all together on the 20th of *July*, bringing with them a *Ruſſian* Embaſſador, named *Oſep Napea*, with 16 of his Retinue, who were ſhipped with Mr. *Chancellor* in the *Edward*, but by contrary Winds and violent Tempeſts they were ſeparated. The *Confidentia* was ſeen to periſh on a Rock on the Coaſt of *Norway*; the *Speranza*, wherein were divers *Ruſſe* Merchants and Servants of the Embaſſador, was never ſince heard of. 'Tis ſuppoſed, that by two Years wintering in *Lapland*, ſhe became unſtaunch, and ſunk. The *Philip* and *Mary* arrived in the *Thames* the 18th of *April*, 1557. the *Edward* on the tenth of *November* 1556. arrived in the Bay of *Pettiſlego*, in the North of *Scotland*, where forced from her Anchors, ſhe was ſplit upon the Rocks in the Night, and Mr *Chancellor* with ſeven *Ruſſes* and divers Mariners were drowned, the Embaſſador with a few others, with much difficulty eſcaping.

As ſoon as the News of this Diſaſter came to *London*, the ſixth of *December*, the Company obtained Letters from the Queen to the Queen Dowager and Council of *Scotland*, in favour of the ſaid Embaſſador, and immediately diſpatched *Lawrence Huſſy*, Doctor of the Civil Law, and *George Gilpin*, into *Scotland*, with Money and other Neceſſaries to relieve him, and conduct him with his Retinue into *England*. They arrived at *Edingburgh* the 23d of *December*, and after viſiting the Embaſſador, repaired to Queen Dowager with their Letters, who gave them hopes of ſpeedy reſtitution, and in order thereunto, ſent Commiſſioners with an Herald of Armes to *Pettiſlego*, commanding by Proclamation all Perſons as had any part of ſuch Goods as were ſpoiled, and taken out or from the Ship, to bring them in and reſtore the ſame; ſo that after much Trouble, Time and Charges, ſome ſmall Parcels of Wax, and other ſmall trifling things of no value, were by the poorer ſort of *Scots* brought to the Commiſſioners, but the Jewels, rich Apparel, Preſents, Gold, Silver and coſtly Furs, were concealed and embezel'd. Whereupon the Queen at the requeſt of the Ambaſſador, cauſed about 180 of them to appear before her and anſwer the ſame, whereof not only good Teſtimony by Writing was produced, but alſo the things themſelves found in the Hands of the *Scottiſh* Subjects, who by ſubtil and crafty dealing and connivance of the Commiſſioners, abuſed the Embaſſador and his Attendants, ſo that no effectual Reſtitution was made; whereupon he departed towards *England* on the fourteenth day of *February*, and on the 18th came to *Berwick*, where by the Queen's Command, he was honourably received by the Lord *Wharton*, and on the 27th was met twelve Miles from *London* by 80 Merchants with Chains of Gold, well mounted, and all their Servants in one Livery, and conducting him to a Merchants Houſe four Miles from *London*, he there received a quantity of Gold, Velvet and Silk, with all Furniture thereunto requiſite, wherewith he made him a riding Garment, repoſing himſelf that Night. The next day he was conducted to *London* by 140 Merchants of the *Ruſſian* Company, and as many of their Servants in one Livery, and by the Queen's Command was met on the way by the Lord *Mountague*, with 300 Horſe, who conducted him to the North part of the City, where four eminent Merchants richly apparell'd, preſented him a fair large Gelding, with rich Trappings and a Foot cloth of Crimſon Velvet. The Embaſſador being mounted, was met at *Smithfield Bars* by the Lord-Mayor and Aldermen in their Scarlet, and rode thro' *London* between the Lord-Mayor and Lord *Mountague* to his Lodgings in *Fenchurch Street*, a great number of Merchants riding before, and their Servants following after.

1556.

Here he tarried, expecting the King's return from *Flanders*, which was the 21ſt of *March*, during which time he was daily viſited by the Aldermen and chief of the Company, who ſent him a rich Cup-board of Plate, and provided all kind of Victuals for his Table and his Servants, with all ſorts of Officers to attend upon him.

The Queen alſo preſented him with a rich piece of Cloth of Tiſſue, a piece of Cloth of Gold, another piece of Cloth of Gold raiſed with Crimſon Velvet, a piece of Crimſon Velvet in grain, a piece of Purple Velvet, a piece of Damask purpled, and a piece of Crimſon Damask, all which he thankfully accepted.

On the 25th of *March* he was conducted into the preſence of the King and Queen, where, after he had deliver'd his Letters, made his Speech, and preſented their Majeſties with two Timber of Sables (the reſt being loſt in the Shipwrack) he was diſmiſs'd with much Honour and Reſpect. A Timber is twice 40.

The time of the Year approaching for his departure, he received the Preſents from their Majeſties to the Emperour, which were,

1 Two rich pieces of Cloth of Tiſſue.
2 One fine piece of Scarlet.
3 One fine Violet in grain.
4 One fine Azure Cloth.
5 A pair of Brigandines, with a Murrain covered with Crimſon Velvet and gilt Nails.
6 Two Lions, a Male and Female.

Gifts given to the Embaſſador at his departure.

1 A Chain of Gold of 100 *l.* value
2 A large Baſon and Ewer of Silver gilt.
3 A Pair of Pottle Pots gilt.
4 A pair of Flagons Gilt.

Gifts ſent from the Emperour of *Ruſſia* to the King and Queen of *England*, ſpoiled by the *Scots* after the Shipwrack.

1. Six Timber of Sables, rich in colour and Hair.
2. Twenty entire Sables, exceeding beautiful, with Teeth, Ears, and Claws.
3. Four living Sables, with Chains and Collars.

4 Thirty Luſarns, large and beautiful.
5 Six large and great Skins, very rich and rare, ſuch as are worn by the Emperour only.
6. A large and fair white Jerfoulcon for the wild Swan, Crane, Gooſe, and other great Fowls, with a Drum of Silver, uſed as a Lure to call the Hawk.

1556. This Year alſo the Company ſet out a Pinnace, called the *Search Thrift*, *Stephen Barrow* Maſter, to diſcover the Harbours in the Northern Seas. He went beyond the Bay of St. *Nicholas* as far as the Iſland *Vaygats*, but meeting with much Ice and Snow, and continual North-eaſt and Northerly Winds, and the Nights beginning to grow dark, he thought it beſt to return to the 22. *Aug.* Bay of St. *Nicholas*, where he arrived at *Colmogro* the 11th of *September*, and there wintered, intending upon the approach of next Summer to proceed in the diſcovery of the River *Ob*, but being ſent to *Wardhouſe* next Spring in ſearch of the *Engliſh* Ships, the Deſign for that time was laid aſide.

The Fourth Voyage to Ruſſia, *&c.*

Written by ſome of the Engliſh, *who then went over to ſerve the Emperour.*

1557. THE Company ſet out four Ships this Year, *viz.* the *Primroſe*, the *John Evangeliſt*, the *Ann*, and the *Trinity*: The Embaſſador *Oſep Napea* was Shipped on the *Primroſe*, whereof *Anthony Jenkinſon* was Commander. They departed from *Graveſend* the twelfth of *May*, and arrived in the Bay of St. *Nicholas* the thirteenth of *July*, having ſailed from *London* unto the ſaid Bay 750 Leagues.

The Embaſſador and his Company with great joy went aſhoar, and as many of us *Engliſh* Men as came to ſerve the Emperour, travelled with him to *Moſco*: We went up the River *Dwina* to *Vologhda*, being 1000 Verſts, and every Verſt is three fourths of an *Engliſh* Miles. There we laded our Cheſts and things in ſmall Wagons with one Horſe, and we were fourteen days in travelling from *Vologhda* to *Moſco*, which is 500 Verſts.

The twelfth of *September* we arrived at *Moſco*, and were brought by *Napea* and two of the Emperour's Gentlemen unto a large Houſe, where every one of us had his Chamber appointed.

The fourteenth of *September* we were commanded to come unto the Emperour, and were immediately admitted to his Preſence, and kiſſed his Right-hand: He ſate in a Chair of State, with a Crown on his Head, and a Staff in his Left-hand, garniſhed with coſtly Stones. He told us by his Interpreter that we were all welcome, and willed us to dine with him; ſo we gave Thanks and departed till Dinner was ready. When Dinner time approached, we were brought into the Dining Room, and were placed at a Table over againſt the Emperour, that he might behold us all.

At the upper end of one Table ſate the Emperour, his Brother, and the King of *Cazan*, who is a Priſoner: About two Yards lower ſate the King of *Cazan*'s Son, a Child of five years of age, and beneath him ſate many of the Nobility.

At another Table near to the Emperour's, ſate a Monk alone, who was in all points as well ſerved as the Emperour. At another Table ſate *Chirkaſſes*, entertained by the Emperour to ſerve againſt his Enemies.

All the Tables were covered only with Salt and Bread, and after we had ſate a while, the Emperour ſent to every one of us a piece of Bread, the Meſſenger uſing the Words, *The Emperour and great Duke gives thee Bread this Day.* There came in ſix Singers, who ſtood in the middle of the Chamber with their Faces towards the Emperour, whoſe Voices were not delightful to our Ears.

The Emperour did not put a morſel of Meat into his Mouth until he had firſt bleſſed it, and in like manner when he drank; for he was very religious in his way, and eſteemed his Religious Men above his Noble-Men.

The Dinner laſted five Hours, and the Tables being taken away, we came into the middle of the Room, and reverenced the Emperour, who delivered to every one of us with his own Hands a Cup of Mead, and gave us leave 1557. to depart. He ſent to our Lodging the ſame Evening, three Barrels of Mead of ſeveral ſorts, in all about a Hogſhead.

The 16th of *September* the Emperour ſent to our Lodging for every one of us a *Tartar* Horſe, the Streets of *Moſco* being very dirty in the Summer.

The 18th he ſent us furred Gowns of branched Velvet and Gold, and ſome of red Damask; that of Doctor *Standiſh* our Phyſician was furred with Sables, and the reſt with white Ermin, and ſome with grey Squirrel, and all faced and edged round about with black Beaver.

The 10th of *October* the Emperour gave Dr. *Standiſh* Dr. of Phyſick, 70 Rubles in Money, and to the reſt of us that were Men of Occupations, thirty Rubles a piece. A Ruble is worth about 13 Shillings Sterling.

The hallowing of the River. Every year upon Twelfth Day, they hollow the River *Moſcua*, which runs thro' the City, after this manner. They make a hole in the Ice three Fathom ſquare, the ſides whereof are trimmed with white Boards; then at at nine in the Morning they come out of the Church in Proceſſion as followeth.

Firſt, young Men with Wax Tapers burning; then follow Banners, the Croſs, Images of our Lady, St. *Nickolas*, and other Saints; then about 100 Prieſts; then the Metropolitan led between two Prieſts, and after him the Emperour with his Crown upon his Head, attended by his Nobility. When they came to the Hole, the Prieſts ſate themſelves in order about it: On one ſide of the Hole was a Scaffold, with a Chair in which the Metropolitan ſate, but the Emperour ſtood upon the Ice; then the Prieſts began to ſing their Service and bleſſed the Water, which done, the Metropolitan took a little in his Hands and caſt it upon the Emperour and his Nobles, and then they returned to the Church with the Prieſts. When the Emperour was gone, there was a great Crowd, for there came above 5000 Pots to be filled with that Water, a *Muſcovite* thinking himſelf unhappy if he hath not ſome of this Water. Many went naked into the Water, Men, Women and Children, divers ſick People were thrown in, and plucked out quickly, and when the Crowd was gone, the Emperour's beſt Horſes were brought to drink of the ſame Water, and many other Men brought their Horſes to drink, and by that means make their Horſes as holy as themſelves.

The *Ruſſes* begin their *Lent* eight Weeks before *Eaſter*; Their Lent. the firſt Week they eat Eggs, Milk, Cheeſe, Butter, Pancakes, and ſuch things, viſiting one another, and from that Sunday until our *Shrove-Sunday*, there are but few *Ruſſe* ſober, and it is accounted no reproach among them.

The next Week being our firſt Week of *Lent*, they keep a great Faſt, and the People are perſwaded that the Metropolitan neither eats nor drinks any thing for the ſpace of ſeven Days, and they ſay there are many Religious Men which do the like.

The Emperour eats but one Morſel of Bread and drinks but one draught of Drink in a day during that Week, and none of reputation come out of their Houſes in that time, ſo that the Streets are void of company, except a few poor People: The other ſix Weeks they keep as we do ours, but not one of them will eat either Butter, Cheeſe, Eggs or Milk.

On *Palm-Sunday* they have a Solemn Proceſſion in this manner.

Firſt, there is a Horſe covered with white Linen down to the Ground, his Ears being made long with the ſame Cloth like to aſſes Ears. Upon this Horſe the Metropolitan ſits on one ſide like a Woman; In his Lap lies a fair Book with a golden Crucifix upon the Cover, which he holdeth faſt with his Left-hand, and in his Right-hand he hath a Croſs of Gold, wherewith he bleſſeth the People as he rides.

There are about 30 Men who ſpread their Garments before the Horſe, and as ſoon as the Horſe is paſt over any of them, they take them up and run before and ſpread them again, ſo that the Horſe always goes on ſome of them. They which ſpread the Garments are all Prieſts Sons, and for their labour the Emperour gives them new ones.

A Nobleman leads the Horſe by the Head, but the Emperour himſelf going on foot, leads the Horſe by the Reins of his Bridle, holding a Branch of a Palm-Tree in his other Hand: Then followed the Nobility and Gentry, and a great number of People. In this order they went to Church, and then the Emperor and ſome of the Nobility dined at the Metropolitan's Houſe. The Emperour leads the Metropolitan's Horſe in proceſſion.

The reſt of this Week until *Eaſter Day*, they kept very ſolemnly, continuing in their Houſes for the moſt part, and upon *Monday* or *Thurſday*, the Emperour always receives the Sacrament, and ſo do moſt of his Nobles. Upon *Good Friday* they continue all the Day in Contemplation and Prayers, and they uſe to let looſe a Priſoner inſtead of *Barrabas*. The Night following they go to the Church, where they ſleep until the next Morning. They have a Cuſtom to colour Eggs red, of which every Man and Woman gives one to the Prieſt of their Pariſh upon *Eaſter-Day* in the Morning; and they carry ſuch Eggs in their Hands on that day and three or four days after. They uſe it they ſay as a Token of their unanimous Joy for the Reſurrection; for when two Friends meet in the Holydays, they take one another by the Hand, and one ſays, *Chriſt the Lord is riſen*, the other anſwers, *It is ſo of a truth*, and then they kiſs and exchange their Eggs, both Men and Women, continuing in kiſſing four Days together. The Emperour hears all Complaints himſelf, and gives Sentence with expedition, but refers Religious Matters to the Metropolitan.

Kiſſing in the Greek Church.

The Hoſpitality of their Monaſteries.

They have Monks, Fryers, and Nuns in many great and rich Monaſteries, who keep great Hoſpitality, and relieve many poor People daily: They eat no Fleſh during their lives, as is reported, but they may eat Fiſh every day. Many of theſe Monks are great Merchants, and have Boats which traffick in the Rivers from place to place.

Want of Preachers cauſe of Ignorance and Idolatry.

They have no Preachers, whereby they live in groſs Ignorance and Idolatry: The Prieſts are married and wear the ſame Garments with other Men: Their Crowns are ſhaven, the reſt of the Hair hanging over their Shoulders: They never ſhave their Beards. If a Prieſt's Wife die, it is not lawful for him to marry again.

Communion.

At the Communion the Prieſts breaks the Bread, and puts it into the Wine, and takes it out together with a Spoon.

Images.

Their Churches are full of Images, unto which the People bow, and knock their Heads againſt the Ground before them, that ſome will have large Knobs on their Foreheads. Their Service is in the *Ruſſian* Language, but few of the common People underſtand one half of what is read in their Churches.

Baptiſm.

When a Child is born, it is not baptized until the next *Sunday*, and then they may take as many Godfathers and Godmothers as they will, who ſettle themſelves about a Table in the Church, whereon ſtands an Earthen Pot full of warm Water, every one holding a ſmall Wax Candle burning; then they repeat certain Words after the Prieſt, among which is, that the Child ſhall forſake the Devil, at which Words they all ſpit: Then he bleſſes the Water in the Pot, and breaths over it, and taking all the Candles which the Goſſips have, holds them all in one Hand, and lets part of them drop into the Water, and then gives every one his Candle again. After the Water is thus ſanctified, he holds the Child in a ſmall Tub, and one of the Godfathers takes the Pot with warm Water, and pours it all upon the Child's Head.

Then follow many more Ceremonies, as anointing the Childs Ears and Eyes with Spittle, and making Croſſes with Oyl upon his Back, Head and Breaſt: Then the Prieſt taking the Child in his Arms, carries it to the Images of St. *Nicholas* and our Lady, *&c.* and ſpeaking to the Images, deſires them to take charge of the Child that he may live, and believe as a Chriſtian ought to do, *&c.* Then clipping off ſome of the Childs Hair, he delivers the Child to the Godfathers and Godmothers, one of whom hangs a Croſs about the Child's Neck, which he muſt always wear, for that *Ruſſe* who has not a Croſs about his Neck, they eſteem no Chriſtian.

Matrimony.

Their Matrimony is performed in this manner: The Man ſends to the Woman a ſmall Box, wherein is a Whip, Needles, Thread, Silk, Linnen Cloth, Sciſſars, *&c.* as alſo ſome Raiſins, Figs, *&c.* to let her know, that if ſhe offend ſhe muſt be puniſhed, but if ſhe do well, no good thing ſhall be withheld from her; and ſhe ſends to him a Shirt, Handkerchiefs, *&c.* of her own making. When the day of Marriage is come, the Bride reſiſts and ſtrives with thoſe that would have her out of the Houſe, and pretends to weep; yet in the end two Women get her out and lead her to the Church, her Face covered, that her Diſſimulation may not be perceived, becauſe ſhe makes a great noiſe as if ſhe were ſobbing and weeping, until ſhe come at the Church, and then her Face is uncovered: Then cometh the Man accompanied with his Friends, who bring with them a Pot of Wine or Mead: Then the Prieſt joins them together, much after our Order, they promiſing to love and ſerve each other during their Lives; which done, the Woman drinks to the Man, and when he hath drank, he lets the Cup fall to the Ground, haſting to tread upon it, and ſo doth ſhe, and which of them treads firſt upon it, they think will have the Victory, and be Maſter at all times after, which for the moſt part happens to be the Man, becauſe he lets it fall himſelf, and ſo is moſt ready to ſet his Foot upon it: Then they go home, the Woman's Face uncovered, the Boys in the Streets following them and uttering immodeſt Words. When they come home, the Wife is ſet at the upper end of the Table, and the Huſband next to her; then they drink till they be all drunk, and ſometimes have a Fidler or two, and two Men who led the Bride from Church, dance naked a long time before the Company. When they are weary of drinking they go to bed, and the Bridegroom puts ſome Money into one of his Boots, which ſhe muſt pull off, and if ſhe happen on the Boot where the Money is, ſhe hath it for her pains, and is excuſed from pulling off his Boots for all time to come; but if ſhe miſs the Boot where the Money is, ſhe is bound from that day forward to pull off his Boots continually.

They marry very young, the Sons at 16 or 18, and the Daughters at 12 or 13. Men of credit keep their Wives very cloſe, ſo that they are rarely ſeen, but when they go to Church at *Chriſtmas* or *Eaſter*, or to viſit ſome of their Friends.

Moſt part of the Women ride aſtride in Saddles with Stirrops as Men do. Painting their Faces is counted no ſhame among them, and they colour their Eye-brows as black as jett.

Burial.

When any one dies, they ſtretch him out, and put a new pair of Shoes on his Feet, then wind him in a Sheet, and the Prieſt puts a Certificate into his Right-hand, to aſſure St. *Nicholas* that the party died a Chriſtian; but thoſe who are hanged or beheaded, have no ſuch Teſtimonial with them.

Bread made of Straw.

Many poor People among them periſh for want of Food; ſome are forced to dry Straw and Stamp it, and eat it inſtead of Bread; In the Summer they make good ſhift with Graſs, Herbs and Roots, Bark of Trees is good Meat with them at all times. No People in the World live more miſerable than the Poor in theſe Parts, moſt of thoſe who have ſufficient for themſelves and others, are ſo unmerciful, that they care not how many they ſee die of Hunger in the Streets.

Stoves.

The Country is ſubject to many Diſeaſes, and they hold the beſt Remedy is, to go often into the Stoves or Baths, and almoſt every Man hath one of his own which he heats commonly twice a Week, and all the Houſhold ſweat and waſh themſelves therein.

CHAP.

CHAP. III.

The ſeveral Voyages of Mr. Anthony Jenkinſon, *the firſt whereof was in the* Primroſe, *with the Ambaſſador* Oſep Napea, *in the year* 1557.

1557. MR *Jenkinſon*, Commander of the *Primroſe*, having ſet the Embaſſador aſhore at the Bay of St. *Nicholas*, 12 *July* 1557, as was ſaid in the laſt Chapter, he tarried there till the ſaid four Ships were diſcharged and laden again, which departed for *England* the firſt of *Auguſt*.

He arrived at *Moſco* the 6th of *December*, and on the 25th dined with the Emperour: The Entertainment was very ſplendid, but being deſcribed already in the laſt Chapter, I ſhall not repeat it here.

The City of *Moſco*, he ſays, is great, the Houſes for the moſt part of Wood, and ſome of Stone, with Windows of Iron, which ſerve for Summer. There are many fair Churches of Stone, but more of Wood, which are made hot in Winter. The Emperour's Palace is in a fair large Caſtle ſituate upon a Hill, two Miles about, and the River on the South-weſt ſide of it; It hath 16 Gates in the Walls, and as many Bulwarks.

The Country is full of moriſh Ground, and plain, abounding with Woods and Rivers, and produces great plenty of Corn. They have many ſorts of Meat and Drink when they Banquet, and delight in eating of groſs Meats and ſtinking Fiſh: Before they drink they uſe to blow in the Cup, and their greateſt Friendſhip is in drinking. They are great Talkers and Lyars, without any Faith or Truſt in their Words, Flatterers and Diſſemblers.

In every good Town there is a Tavern, called a *Curſemay*, which the Emperour ſometimes lets out to Farm, and ſometimes beſtows for a Year or two on ſome Duke or Gentleman, in recompence of his Service; and during that time he is Lord of all the Town, robbing and ſpoiling, and doing what he pleaſes, and when he is grown rich, the Emperour removes him, and ſends him to the Wars again.

In the Winter they travel upon Sleds, the Way being hard and ſmooth with Snow, and the Waters and Rivers all frozen; and one Horſe with a Sled will draw a Man upon it 400 Miles in three Days; but in Summer the Ways are deep with Mire, and travelling is very ill.

A *Ruſſe*, if he be a Man of Ability, never goes out of his Houſe in Winter, but upon his Sled, and in Summer upon his Horſe: In his Sled he ſits upon a Carpet, or a white Bears Skin. The Sled is drawn with a Horſe decked with Foxes and Wolves Tails about his Neck, and is guided by a little Boy on his Back: His Servants ſtand upon the Tail of the Sled.

Mr. Anthony Jenkinſon's *Voyage from* Moſco *to the City of* Boghar *in* Bactria, *Anno* 1558.

THE 23d of *April*, 1558 (having obtained the Emperor of *Ruſſia*'s Letters to divers Kings and
1558. Princes through whoſe Dominions I ſhould paſs) I departed from *Moſco* by Water, having with me two Servants, *Richard* and *Robert Johnſon*, and a *Tartarian* Interpreter, with ſeveral parcels of Wares.

On the 11th day of *May* we came to a fair Town and Caſtle, ſituate at the falling of the River *Occa* into the River *Volga*, called *Nyſe Novogrod*, where we tarried till the nineteenth, for the coming of a Captain, who was ſent by the Emperour to rule at *Aſtracan*, who being arrived, and having 500 great Boats under his Conduct, with Victuals, Soldiers, Munition and Merchandiſe, we departed all together the ſaid 19th day, and on the 29th day came to *Cazan*, formerly a City of great wealth, where we tarried till the 13th of *June*, and the next day paſſed by a goodly River, called *Cama*, on our Left-hand, and all the Country from thence to *Aſtracan*, and from thence on the North ſide of the *Caſpian* Sea, to a Land of the *Tartars*, called *Turkmen*, is called *Mangat* or *Nagay*, whoſe Inhabitants are *Mahometans*, and were all deſtroyed in 1558 (while I was at *Aſtracan*) by Wars among themſelves, accompanied with Famin and Peſtilence, ſo that the ſaid Country is now deſolate, to the great content of the *Ruſſes*, who have had cruel Wars with them for a long time. Theſe *Nagayan*, when they flouriſhed, were divided into Companies called *Hords*, every *Hord* having a Ruler, whom they obeyed as their King, and was called a *Murſe*. They had no Towns or Houſes, but lived in the open Fields, every *Murſe* having his *Hord* about him, with their Wives, Children, and Cattle, who when they had conſumed the Paſture in one place, removed to another; and when they remove, they have Houſes like Tents ſet upon Wagons or Carts, which are drawn from place to place with Camels, and therein their Wives, Children, and all their Wealth, which is very little, is carried about, and every Man hath at leaſt four or five Wives, beſides Concubines. Uſe of Money they have none, but barter their Cattle for Apparel and other Neceſſaries. They delight in no Art or Science, except it be that of War, wherein they are expert, but for the moſt part they are paſturing People, and their Riches conſiſts in Cattle. They eat much Fleſh, eſpecially the Horſe, and drink Mares Milk, wherewith they are often drunk. Corn they ſow not, neither do they eat any Bread, mocking the Chriſtians for the ſame, ſaying, that we diſable our Strength, by eating the top of a Weed, and drinking a Drink made of the ſame, and impute their own Strength to their great devouring of Fleſh and drinking of Milk. But to proceed on my Journey.

The River of Cama.

Nagayan Tartars.

Hords.

All the Country on the Right-hand of the River *Volga*, from over againſt the River *Cama* unto the City of *Aſtracan*, is the Land of *Crim*, whoſe Inhabitants are alſo *Mahometans*, and live for the moſt part like to the *Nagayans*, having continual Wars with the *Ruſſians*: They are valiant in the Field, and are ſupported by the *Turks*.

Crim Tartars.

The 28th we came to a great Hill, being the juſt mid-way between *Cazan* and *Aſtracan*, which is about 200 Leagues; it is in the Latitude of 51 Degrees 47 Minutes.

The fourteenth of *July* we arrived at *Aſtracan*, conquered by this Emperour of *Ruſſia* ſix Years paſt, 1552: It is from *Moſco* to *Aſtracan* 600 Leagues. The Town is ſituate upon an Iſland on the ſide of a Hill, having a Caſtle within the ſame, walled about with Earth and Timber. The Town is alſo walled about with Earth, the Houſes for the moſt part are very mean. The Iſland is deſtitute of Wood and Paſture, and the Ground will bear no Corn.

Aſtracan.

The Air is infected by reaſon of much Fiſh, eſpecially Sturgeon, which is the chief Food of the Inhabitants, Fleſh and Bread being very ſcarce. They hang up their Fiſh in the Streets and Houſes to dry for their Proviſion, which cauſes ſuch abundance of Flies, as the like was never ſeen in any Land.

Store of Sturgeons.

There was a great Famin and Plague while I was there, eſpecially among the *Nagayan Tartars*, who come thither in great numbers to ſeek for Succour from the *Ruſſians*, their ancient Enemies; but they were but ill entertained, a great number of them dying for hunger, and lay dead in heaps all over the Iſland, very pitiful to behold. Many of them were ſold by the *Ruſſes*; I could have bought 1000 *Tartar* Children of their own Parents, a Boy or a Girl, for a Loaf of Bread not worth above ſix pence in *England*.

Famin and Plague at Aſtracan.

Aſtracan is the furtheſt Hold that the *Ruſſians* have taken from the *Tartars* towards the *Caſpian* Sea: The Trade there is but ſmall and beggerly, altho' there come Merchants from divers places: The *Ruſſes* bring red Hydes,

1551.

red Sheep-Skins, Veſſels of Wood, Bridles and Saddles, Knives and other Trifles, alſo Corn, Bacon, and other Victuals: The *Tartars* bring Wares of Cotton-wool, and wrought Silks: The *Perſians* from *Shamaki* bring coarſe Sowing Silk, Craſto-Girdles, Shirts of Mail, Bows, Swords, and ſuch like things, and ſome Years Corn and Walnuts, but all things in ſuch ſmall quantity, that there is no hope of any Trade in thoſe parts worth following.

The Iſland is 12 Leagues long and three broad, and lies Eaſt and Weſt, in Latitude 47 Deg. 9 Min. We tarried there till the ſixth day of *Auguſt*, and having bought and provided a Boat, in company with certain *Tartars* and *Perſians*, we laded our Goods and embarked our ſelves, and the ſame day departed; my ſelf and the two *Johnſons* having the whole charge of the Navigation down the River *Volga*, being very crooked and full of Flats near the Mouth thereof. We entred the *Caſpian* the 10th of *Auguſt*, being 20 Leagues from *Aſtracan*, in Lat, 46 Deg. 27 Min. And on the 19th, being at an Anchor near a River called *Jaic*, and all our Men aſhoar (except my ſelf then very ſick, and five *Tartars*, whereof one was reputed a Holy Man, becauſe he came from *Mecca*) there came unto us a Boat with 30 Men, well armed, who boarding us, began to enter into our Bark, which our holy *Tartar*, named *Azy*, perceiving, asked them what they would have, and withal made a Prayer; whereupon the Rovers ſtaid, declaring that they were Gentlemen baniſhed from their Country, and in great want, and came to ſee if there were any *Ruſſes* or other Chriſtians in our Bark. *Azy* anſwered them reſolutely, that there were none, avowing the ſame by great Oaths of their Law (which lightly they will not break) whom the Rovers believed, and upon his Words departed; and ſo thro' the fidelity of this *Tartar*, I with all my Company and Goods were ſaved, and our Men being come aboard, we departed, ſteering Eaſt South Eaſt, and on the 27th there aroſe ſuch a Storm, that we thought verily we ſhould have periſhed: It continued three days, and put us from the Port we deſigned, and forced us to anchor in a bad Haven, and ſending ſome of our Men on Land to talk with the Governour and People, for Proviſion of Camels to carry our Goods from the Sea-ſide to a place call'd *Sellyzure*, which is 25 days journey, our Meſſengers returned with comfortable Words, and fair Promiſes of all things.

Wherefore the third of *September*, 1558, we diſcharged our Bark, and I with my Company were civilly entertained by the Prince and People; but before our departure we found them to be a very bad and brutiſh People, for they ceaſed not daily to moleſt us, either by fighting, ſtealing or begging, raiſing the Price of Horſes, Camels, and Victuals, double what it was wont to be, and forced us to buy the Water that we drank, which made us to haſten away, and to conclude with them for the hire of Camels, *&c.* according to their own demand; ſo that for every Camels load, being but 400 weight of ours, we agreed to give three Hides of *Ruſſia*, and four wooden Diſhes, and to the Prince or Governour, one ninth and two ſevenths, that is to ſay, nine ſeveral things, and twice ſeven ſeveral things; for Money they uſe none.

And thus being ready the 14 of *September*, we departed, being a Caravan of a thouſand Camels; and having travelled five days journey, we came to another Prince's Dominion, and upon the way were met by certain *Tartars* on Horſeback, well armed, and Servants to *Timor Sultan*, Governour of the Country of *Manguſlave*, where we meant to have arrived and diſcharged our Bark, if the Storm had not diſappointed us. Theſe *Tartars* ſtayed our Caravan in the name of their Prince, and opening our Wares, took ſuch things as they liked beſt, for their Prince, without Money. They took from me a ninth, whereupon, after much contention, I rode unto the Prince, and preſented my ſelf before him, requeſting his Favour and Paſport to travel thro' his Country, and not to be robbed and ſpoiled by his People. He granted my Requeſt, entertaining me very civilly, and commanded me to be well feaſted with Fleſh and Mares Milk, for Bread they have none, nor other Drink except Water; But he had no Money to give me for ſuch things as he took of me, which were worth about 15 Rubbles, however he gave me his Letter, and a Horſe worth about ſeven Rubbles, and ſo I departed from him, glad when I was gone, for he was reported to be a very Tyrant, and if I had not gone to him, I underſtood his Commandment was, that I ſhould be robbed and deſtroyed.

This *Sultan* lived in the Fields, without Caſtle or Town, and ſate in a little round Houſe made of Reeds, and covered with Felt without, and with Carpets within. There was with him the great Metropolitan of that wild Country, eſteemed by the People as much as the Biſhop of *Rome* is in moſt parts of *Europe*, with many more of his chief Men. The *Sultan* and he demanded of me many Queſtions of our Kingdoms, Laws, and Religion, as alſo the cauſe of my coming into thoſe parts. To whom I anſwered as to me ſeemed beſt, which they took in good part.

1557.

Twenty days journey in the Deſert.

So I departed and overtook our Caravan; we travelled 20 days in the Deſarts, from the Sea-ſide, without ſeeing Town or any Habitation, carrying our Victuals with us, yet were neceſſitated to eat one of my Camels and a Horſe for our part, as others did the like; and during the ſaid 20 days we found no Water, but ſuch as we drew out of old deep Wells, very brackiſh, yet paſſed ſometimes two or three days without it. And the fifth of *October* we came to a Gulph of the *Caſpian* Sea again. Here the Cuſtomers of the King of *Turkmen* met us, who took Cuſtom, of every 25 one, and ſeven ninths for the ſaid King and his Brethren.

Having refreſhed our ſelves, we departed the next day, and on the ſeventh arrived at a Caſtle called *Sellizure*, where the King, called *Azim Can*, reſided, with three of his Brethren, and on the ninth day I was commanded to come before him, to whom I delivered the Emperor of *Ruſſia*'s Letters, and gave him alſo a Preſent of a Ninth, whereupon he entertained me very well, and cauſed me to eat in his Preſence as his Brethren did, feaſting me with Fleſh of a wild Horſe, and Mares Milk, without Bread. And the next day he ſent for me again, and asked me divers Queſtions about the Affairs of the Emperour of *Ruſſia*, as alſo concerning our Country and Laws, and at my departure, gave me his Letters of ſafe Conduct.

The 14th we departed from *Sellizure*, and on the 16th arrived at a City called *Urgence*, where we payed Cuſtom as well for our own Heads as for our Camels and Horſes; and having there ſojourned one Month, the King called *Aly Sultan*, Brother to the forenamed *Azim Can*, returned from a Town called *Coraſan*, within the Borders of *Perſia*, which he had lately conquered from the *Perſians*, with whom he and the reſt of the Kings of *Tartaria* have continual Wars. Being commanded to come before him, I preſented the Emperour of *Ruſſia*'s Letters, and after asking me divers Queſtions, he gave me his Letters of ſafe Conduct.

Urgence ſtands on a plain Ground, with Walls of Earth, by eſtimation four Miles about; the Buildings are alſo of Earth. It hath one long Street, covered above, which is the place of their Market. It hath been won and loſt four times within ſeven Years, by Civil Wars, by means whereof there are but few Merchants in it, and they are very poor, ſo that in all that Town I could not ſell above four Kerſies. All the Country from the *Caſpian* Sea to *Urgence* is called *Turkman*, ſubject to the ſaid *Azim Can*, and his five Brethren. The chief of them is call'd *Can*, but is little obeyed except in his own Dominion; for every one will be King of his own Portion, and one Brother is perpetually ſeeking to deſtroy another; for being begotten of divers Women, they have no natural Affection, and are commonly the Children of Slaves, either Chriſtians or Gentiles, whom the Father keeps as Concubines, and every *Can* or *Sultan* hath four or five Wives, beſides young Maids and Boys; and when there are Wars between the Brethren (as they are ſeldom without) he that is vanquiſhed flies to ſome watering places in the Deſarts, with ſuch Company as will follow him, and there lives by robbing and ſpoiling as many Caravans of Merchants and others, as he is able to overcome, until he be in a capacity of invading ſome of his Brethren again. From the *Caſpian* unto the Caſtle of *Sellizure*, and in all the Countries about the ſaid Sea, People live in the open Fields, removing from one place to another in great Companies, with their Cattle, whereof they have ſtore, as Camels, Horſes, and Sheep, both tame and wild. Their Sheep are of great ſtature, with Buttocks weighing 60 or 80 Pound.

Wild Horſes.

There are many wild Horſes killed by the *Tartars*, with their Hawks, who are taught to ſieze upon the Horſe's Head or Neck, till the Hunter can come up with him and kill him with an Arrow or Sword. In all this Land there grows no Graſs, but a certain Bruſh or Heath, whereon the Cattle feeding, become very fat.

The *Tartars* are good Archers, and never ride without their Bow, Arrows, and Sword. They are great Devourers of Fleſh, which they cut in ſmall pieces, and eat it greedily by handfuls, eſpecially Horſe-Fleſh.

The 26th of *November*, We departed from *Urgence*, and the ſeventh of *December* arrived at a Caſtle called *Kait*, ſubject to a *Sultan* called *Saramet*, who deſigned to rob all the Chriſtians in the Caravan, had it not been for fear of his Brother the King of *Urgence*, as we were informed by one of his chief Counſellors, who willed us to make him a Preſent, which we did, and beſides for Cuſtom, one red Hyde of *Ruſſia* for every Camel, and ſome petty Gifts to his Officers.

Thus proceeding on our Journey, the tenth of *December* at Night being at reſt, and our Watch ſet, there came to us four Horſemen, whom we taking as ſpies, diſarmed and bound them; upon Examination they confeſſed, that they had ſeen the Tract of many Horſemen and no footing of Camels, and aſſured us that there were Rovers and Thieves abroad, becauſe few People travel in that Country, but in company of *Caravans*, where are many Camels; and the print of Horſes Feet newly made, without Camels Feet, was to be ſuſpected: Whereupon we conſulted, and ſent a Poſt to the ſaid *Sultan* of *Kait*, who immediately came himſelf with 300 Men, and examined theſe four ſuſpected Men ſo ſtrictly, uſing many Threats, that they at laſt confeſſed, there was a baniſh'd Prince with forty Men three days journey forward, who lay in wait to deſtroy us, and that they themſelves were of his Company.

The *Sultan* thereupon appointed a Captain with 80 well armed Men to conduct us; the *Sultan* himſelf returned back again, taking the four Thieves with him. Theſe Souldiers travelled with us two days, conſuming much of our Victuals, and the third day very early in the Morning, they ſet out before our Caravan, and ranging the Deſert for the ſpace of four Hours, they came towards us as faſt as their Horſes could run, telling us they had found the Tract of Horſes not far from us, and therefore willed us to make ready to receive our Enemies, and asked us what we would give them to conduct us further, or elſe they would return. We offered as we thought good, but they refus'd our Offer, and would have more, and ſo not agreeing they departed from us, and returned to their *Sultan*, who (as we conjectured) was Privy to the Conſpiracy.

The *Tartars* manner of Divination.

As ſoon as they were gone, certain *Tartars* of our Company, called Holy Men, becauſe they had been at *Mecca*, cauſed the whole Caravan to ſtay, and would make their Prayers, and divine whether we ſhould meet with any ill Company or no, to which our whole Caravan did agree: Then they killed ſome Sheep, and firſt ſod the Blade-bones of them, and then burnt them, and mingling the Sheeps Blood with the Powder of the ſaid Bones, they wrote certain Characters with it, uſing many other Ceremonies and Words, and by the ſame divined and found, that we ſhould meet with Enemies and Thieves to our great trouble, but ſhould overcome them: I and my Company gave little credit to their Sorcery, but we found it true, for within three Hours after the Departure of the Soldiers, we deſcried far off divers Horſemen making towards us, whereupon we gathered our ſelves together, being 40 of us, well appointed and able to fight, and then going to Prayers, every one after his Law, we profeſſed to live and die together. The Robbers were 37, well armed with Bows, Arrows and Swords, and the Captain a Prince baniſhed from his Country. They called us to yield our ſelves, or elſe to be ſlain; but we defyed them, whereupon they ſhot at us all at once, and we at them very hotly, and ſo continued fighting from Morning until two Hours within Night, divers Men, Horſes and Camels being wounded and ſlain on both ſides, and had it not been for four Hand Guns, which I and my Company uſed, we had been overcome and deſtroyed, the Robbers being better armed, and alſo better Archers than we: But after we had ſlain divers of their Men and Horſes with our Guns, they durſt not approach ſo near, but came to a truce with us till next Morning. We encamped our ſelves upon a Hill, encloſing our Camp with Packs of Wares, and placing our Horſes and Camels within the ſame, to ſave them from the Enemies Arrows: The Robbers alſo encamped within an Arrow ſhot of us, but they were betwixt us and the Water, to our great diſcomfort, becauſe neither we nor our Camels had drank in two days before.

Thus keeping a good Watch, when half the Night was ſpent, the Captain of the Robbers ſent a Meſſenger half way to us, requiring to talk with our Captain, whom they call the *Caravan Baſha*, who anſwered the Meſſenger, I will not depart from my Company to go into the half way to talk with thee, but if thy Prince with all his Company will ſwear by our Law to keep the Truce, then will I ſend a Man to talk with thee, or elſe not. Which the Prince underſtanding, he and his Company ſwore ſo loud, that we might all hear, and then we ſent one of our Company, reputed a Holy Man, to talk with the ſame Meſſenger. The Meſſage was pronounced aloud thus, *Our Prince demandeth of the* Caravan Baſha, *and all of you that be* Buſſarmans (*that is to ſay Circumciſed*) *not deſiring your Blood, that you deliver into his Hands as many* Caphars, *that is, Unbelievers* (*meaning us the Chriſtians*) *as are among you, with their Goods, and in ſo doing, he will ſuffer you to depart with your Goods in quietneſs, otherwiſe, you ſhall be handled with no leſs cruelty than the* Caphars, *if he overcome you, as he doubteth not.* To which our *Caravan Baſha* anſwered, That he had no Chriſtians in his Company, nor other Strangers, but two *Turks* which were of their Law, and altho' he had, he would rather die than deliver them, and that we were not afraid of his Threatnings, and that he ſhould know when Day appeared. The Robbers in the mean time, contrary to their Oath, carried away our Holy Man to their Prince, crying with a loud Voice in token of Victory, *Ollo*, *Ollo*, which much diſcouraged us, fearing that the Holy Man would betray us, but he, tho' ſtrictly examined and cruelly handed, would not confeſs any thing that might be prejudicial to us, nor yet what Men of ours were ſlain and wounded the day before. Day appearing, we prepared our ſelves to Battle again, which they perceiving, required to come to an agreement with us, demanding much of us, and moſt of our Company being unwilling to hazard another Battle, they having but little to looſe, and a ſafe Conduct to paſs, we were forced to agree, and to give the Robbers 20 Ninths, that is to ſay, twenty times nine ſeveral things, and a Camel to carry away the ſame, which being received, they left us, and we went forward, and that Night came to the River *Oxus*, where we refreſhed our ſelves, having been three days without Water, and tarried there all the next day, making merry with our ſlain Horſes and Camels, and leſt we ſhould meet any more of that Gang, we left the High-way by the River ſide, and went thro' a ſandy Deſert, where we were four Days before we came to Water, and then came to a Well, the Water whereof was very brackiſh, and we were then in great need of Water and Victuals, being forced to kill our Horſes and Camels to eat.

Here we were in danger of falling again into the Hands of Robbers; for one Night being at reſt, there came certain Scouts, and carried away ſome of our Men which lay at a little diſtance from the Caravan, wherewith there was a great Shout and Cry. We thereupon immediately led our Camels and departed, being about midnight and very dark, and drove hard till we came to the River *Oxus* again, and then feared nothing, being defended by the ſaid River; and whether it was that we had gotten the Water, or that the Rogues were far from us when the Scouts diſcovered us, we know not, but we eſcaped that Danger.

Boghar.

Upon the 23d of *December* we arrived at the City of *Boghar* in *Bactria*. The City is very great, the Houſes for the moſt part of Earth, tho' there are alſo many Houſes, Temples, and Monuments of Stone ſumptuouſly built and guilded, eſpecially *Bath Stoves*, ſo artificially built, that the like is not in the World.

Worm breeding in the Leg.

There is a little River running thro' the middle of the City, but the Water thereof is very unwholſome, breeding a Worm of an Ell long in the Legs of ſome that drink it, eſpecially Strangers; it lies between the Fleſh and Skin, and is pluckt out about the Ankle with great skill, every day about an Inch, which is rolled up, and if it break in pulling out, the Party dies: And yet it is there forbidden to drink any thing but Water or Mares Milk, and whoſoever is found to break that Law, is cruelly whipped through the open Markets; and there are Officers who have Authority to go into any Mans Houſe, and ſearch if he have *Aqua Vitæ*, *Wine*, &c. and if they find any, break the Veſſels, ſpoil the Drink, and ſeverely puniſh the Maſter of the Houſe; and many times if they perceive by the Breath of a Man, that he hath drank any ſuch Liquor, he ſhall be puniſhed without further Examination.

There is a Metropolitan in *Boghar*, who cauſes this Law to be ſo ſtrictly kept: He is more obeyed than the King, and will depoſe the King, and ſubſtitute another at his pleaſure, as he did by the laſt King, whom he betrayed, and in the Night killed him in his Chamber: He was a Prince that loved all Chriſtians well.

This Country was heretofore ſubject to the *Perſians*, whoſe Language they now ſpeak, but is now a Kingdom of it ſelf, and hath continual Wars with the *Perſians* about Religion, altho' they be all *Mahometans.* One Occaſion of their Diſcord is, becauſe the *Perſians* will not cut the Hair of their upper Lips, as the *Bogharians* and all other *Tartars* do, which they account great Sin, calling them *Caphars*, or Unbelievers, as they do the Chriſtians.

The King hath no great Power or Riches, his Revenues are but ſmall, being chiefly maintained by the City, taking the tenth Penny of all things that are ſold, as well by the Craftſmen as the Merchants, to the great impoveriſhment of the People, whom he keeps in great ſubjection, and when he lacks Money, he ſends his Officers to the Shops of the Merchants, to take their Wares to pay his Debts, as he did to pay me ſome Money that he owed for 19 pieces of Kerſey. Their Money is Silver and Copper, for Gold they have none current: They have but one piece of Silver, worth twelve pence *Engliſh*, and their Copper Pieces are called *Pooles*, whereof 120 are equal to one piece of twelve pence, and are more common in payment than the Silver, which the King raiſes and falls to his moſt advantage every Month, and ſometimes twice a Month, not caring how much he oppreſſes his People, becauſe he expects not to reign above two or three years, before he be either ſlain or expelled, to the great Deſtruction of the Country and Merchants.

The 26th day of the Month I was commanded to come before the King, to whom I preſented the *Ruſſian* Emperour's Letters: He entertained us very civilly, cauſing us to eat in his Preſence, and often ſent for me, and diſcourſed familiarly with me in his ſecret Chamber, about the Power of the Emperour and the *Great Turk*, as alſo of our Country, Laws and Religion, and made us to ſhoot in Hand-guns before him, himſelf alſo practiſing upon the ſame. But after all this great Entertainment, before my departure, he ſhewed himſelf a very *Tartar*, for he went to the Wars owing me Money, and tho' he gave order for my Payment, yet I was but ill ſatisfied, being forced to rebate part, and to take Wares in payment for the reſt, contrary to my Expectation; but of a Beggar better Payment I could not have, and was glad to be ſo paid and diſpatched.

But one thing I muſt needs commend in this barbarous King which was, that as ſoon as he was informed of our trouble with the Robbers, he diſpatched 100 Men well armed, with charge not to return before they had either ſlain or taken them, who according to their Commiſſion, ranging the Deſart, ſlew part of them, and four they took and brought unto the King, two of whom had been ſore wounded by our Guns in the Skirmiſh; and after the King had ſent for me to come and ſee them, he cauſed them all four to be hanged at his Palace Gate, becauſe they were Gentlemen, to the example of others; and of ſuch Goods as were gotten again, I had part reſtored to me, and this good Juſtice I found at his Hands.

There is yearly a great Reſort of Merchants to this City, who travel in great *Caravans* from *India*, *Perſia*, *Balgh*, *Ruſſia*, &c. and heretofore from *Cathay*, when there was paſſage; but they are ſo beggerly and poor, and bring ſo ſmall quantity of Wares, lying two or three Years to ſell the ſame, that there is no hope of any trade there worth the following: The chief Commodities brought thither are as followeth.

The *Indians* bring fine Whites, which the *Tartars* roll about their Heads, and other kind of Whites made of Cotton-wool and *Craſca*, which ſerve for Apparel, but Gold, Silver, precious Stones and Spices, they bring none. They carry back wrought Silk, red Hides, Slaves and Horſes, &c. but of Kerſies and other Cloth they make but little account. I offered to barter Kerſies with ſome Merchants that came from *Bengala* and the River *Ganges*, but they would not barter for ſuch Commodity as Cloth.

The *Perſians* bring *Craſca*, Woolen-Cloth, Linen-Cloth, divers kinds of wrought Silks, *Argomacks*, &c. and do carry thence, red Hides, other *Ruſſian* Wares, and Slaves of divers Countries, but Cloth they would buy none, for they brought it thither themſelves, being ſupplied with it, as I was informed, from *Aleppo* in *Syria*.

The *Ruſſes* bring red Hides, Sheeps Skins, Woolen Cloth, Wooden Veſſels, Bridles, Saddles, &c. and carry thence Wares made of Cotton-Wool, divers kinds of Silks, *Craſca*, &c.

From *Cathay* were brought in time of Peace, when the Ways were open, Musk, Rhubarb, Sattin, Damask, &c.

During my ſtay at *Boghar*, there came Caravans from all theſe Countries, except from *Cathay*; and the Reaſon why none came thence, was the Wars between the Cities of *Taskent* and *Caskar*, directly in the Way betwixt *Boghar* and *Cathay*; ſo that for three Years before our being there, no Caravan had gone between *Boghar*, and *Cathay*, and when the Way is clear, it is nine Months Journey.

The time of year being come for all Caravans to depart, and the King being gone to the Wars, and news came that he was fled, I was advertized by the Metropolitan himſelf to depart, becauſe the Town was like to be beſieged. I determined firſt to have gone thence into *Perſia*, and to have ſeen the Trade of that Country, but was diverted by the Wars newly begun between the *Sophy* and the Kings of *Tartaria*, which made the Roads unſafe; and there was a Caravan that came from *India* and *Perſia* with ſafe conduct, was robbed about ten days journey from *Boghar*, and many of them ſlain. Alſo the Metropolitan of *Boghar* took the Emperour of *Ruſſia*'s Letters from me, without which I ſhould have been taken Slave in every place. And beſides, all ſuch Wares as I was forced to take of the King and his Nobles for payment of Cloth they had of me, were not vendible in *Perſia*; for which and divers other Reaſons, I was conſtrain'd to return to the *Caſpian*-Sea the ſame way I came; ſo that on the 8th of *March*, 1599, we left *Boghar*, being a *Caravan* of 600 Camels, and if we had not departed when we did, I and my Company had been in danger to have loſt Life and Goods; for ten days after our departure, the King of *Samarcand* laid ſiege to the City, while the King was abſent, and gone to war againſt another Prince who was his Kinſman.

The 25th of *March* we came to the aforeſaid Town of *Urgence*, and eſcaped the Danger of 400 Rovers, who lay in wait for us back again, moſt of them being of Kindred to that Company of Robbers whom we met with going forth, as we perceived by four Spies whom we took. There were in my company, and committed to my charge, two Embaſſadors to the Emperour of *Ruſſia*, one from the King of *Boghar*, the other from the King of *Balgh*; and after we had tarried at *Urgence* and the Caſtle of *Selliſure* eight days for the aſſembling our Caravan, we departed the ſecond of *April*, having four more Embaſſadors in our Company, ſent from the King of *Urgence* and his Brethren, unto the Emperour of *Ruſſia*, with Anſwers to ſuch Letters as I brought them; and the ſame Embaſſadors were alſo committed to my charge by the ſaid Princes, to whom I promiſed faithfully, and ſwore by our Law, that they ſhould be well uſed in *Ruſſia*, and permitted to depart thence again in ſafety, as the Emperor alſo had written in his Letters. They were ſomewhat fearful, becauſe none had gone from *Tartary* to *Ruſſia* in a long time before.

The 23d of *April* we arrived againat the *Caſpian*-Sea, where we found the Bark we had left there, but neither Anchor, Cable nor Sail, but having brought Hemp with us, we ſpun a Cable our ſelves, with the reſt of our Tackling, and making a Sail of Cloth of Cotton-Wool, we rigged our Bark as well as we could, but Boat or Anchor we had none. In the mean time, while we were contriving to make an Anchor of a Cart Wheel, there arrived a Bark from *Aſtracan* with *Tartars* and *Ruſſes*, which had two Anchors, with whom I agreed for one; and thus being in a readineſs we ſet ſail, I and the two *Johnſons* being Maſter and Mariners, having in our Bark the ſaid ſix Embaſſadors, and 25 *Ruſſes*, who had been a long time Slaves in *Tartary*, nor ever had before my coming, Liberty or Means to get home, and theſe Slaves ſerved to row when need was. Thus ſailing along the Coaſt, and ſometimes out of ſight of Land, the 13th of *May*, having a contrary Wind, we came to an Anchor three Leagues from the Shore, and there aroſe a Storm which continued 44 Hours, which brake our Cable, and being upon a Lee-ſhore, and no Boat to help us, we hoiſed our Sail and ſtood in with the Shore, looking for preſent death; but as God provided for us, we ran into a Creek full of Oze, where we lived in great fear for a time; for if our Bark had periſhed, altho' we had eſcaped with our Lives, yet we had either been deſtroyed or made Slaves by the wild People of that Country, who live like Beaſts without Habitation. The Storm being over, we went out of the Creek again, and having ſet the Land with our Compaſs, and taken Marks during the Tempeſt, while we rode at Anchor, we went directly with our Bark to the place where we rode, and found our Anchor we had loſt, the *Tartars* much marvelling how we did it. Two days after, there aroſe another Storm at North-eaſt, and we lay a try, being driven far into the Sea, and had much ado to keep our Bark from ſinking, the Billow was ſo great; but at laſt, having fair Weather, we fell in with the River *Yaik*, according to our deſire, whereof the *Tartars* were very

They recover their loſt Anchor.

glad, fearing we ſhould have been driven on the Coaſt of *Perſia*, then at war with the *Tartars*.

On the 28th of *May* we arrived at *Aſtracan*, where we remained till the tenth of *June*, to provide Boats to go up againſt the Stream of *Volga* with our Goods. Note, that in our Paſſage over the *Caſpian*, we ſet up the red Croſs of St. *George* in our Flags, in honour of the Chriſtians, which I ſuppoſe was never ſeen in that Sea before. The red Croſs ſet up in the *Caſpian* Sea.

The *Caſpian* is in length about 200 Leagues, and in breadth 150; it hath on the Eaſt, the great Deſart Country of the *Tartars*, called *Turkmen*, on the Weſt the Country of the *Chirkaſſes*, the Mountains of *Caucaſus*, and the *Euxine*-Sea, diſtant from the *Caſpian* 100 Leagues, on the North is the Land of *Nagay*, and the great River *Volga*, and on the South are *Media* and *Perſia*. The Water of this Sea is freſh in many places, and in ſome places as ſalt as the Ocean; altho' many great Rivers fall into it, yet it hath no Out-let, unleſs it be under ground. The River *Volga* alone, by the *Tartars* called *Edel*, is one of the greateſt Rivers in the World; it ariſes out of a Lake in a Mariſh not far from *Novogrode* in *Ruſſia*, and it is from thence to the *Caſpian*-Sea, above two thouſand *Engliſh* Miles.

I enquired touching the Trade of *Media* and *Perſia*, bordering on the *Caſpian*, and find it much like the Trade of *Tartary*. The few Ships upon the *Caſpian*, want of Port, Poverty of the People, and the Ice, are Hindrances to Trade.

I offered at *Aſtracan* to ſome Merchants of *Shamaky* in *Media*, to barter Kerſies for their Wares, but they would not, ſaying, they had them as cheap in their Country as I offered them, which was ſix Rubbles for a Kerſy: And while I was at *Boghar*, Cloth and other Commodities of our Country, were brought thither from *Perſia*, and ſold as cheap as I could afford ours.

The 10th of *June* we departed from *Aſtracan* towards *Moſco*, with 100 Gunners in our Company at the Emperour's Charges, for the ſafe Conduct of the *Tartarian* Embaſſadors and me, and the 28th of *July*, arrived at the City of *Cazan*, without any refreſhment of Victuals in that time, there being no Habitation in all that way.

The 7th of *Auguſt* we left *Cazan*, and came by Water to the City of *Morum*, from whence we tranſported our Goods by Land. On the ſecond of *September* we arrived at the City of *Moſco*, and four days after I kiſſed his Majeſties Hand, and preſented him a white Cows Tail of *Cathay*, and a Drum of *Tartary*, which he well accepted. I then brought before him all the Embaſſadors that were committed to my charge, with the 25 *Ruſſian* Slaves; and that day I dined in his Majeſties Preſence, who ſent me Meat by a Duke, and asked me divers Quſtions touching the Countries where I had been.

On the 17th of *February* I obtained leave from the Emperour to depart, and on the 21ſt came to *Vologhda*, and there remained till the breaking up of the Year; and then having ſeen all the Goods laden in Boats, I departed with the ſame, and arrived at *Colmogro* the 9th of *May*, 1560.

A Letter of Sigiſmond *King of* Polonia, *written in the 39th Year of his Reign, to* Elizabeth, *the Queens moſt Excellent Majeſty of* England, *&c.*

1559. Sigiſmund Auguſtus, *by the Grace of God, King of* Polonia, *Great Duke of* Lituania, Ruſſia, Pruſſia, Maſſovia, *and* Samogetian, *&c. Lord and Heir,* &c. *to the moſt Noble Princeſs, Lady* Elizabeth, *by the ſame Grace of God, Queen of* England, France, *and* Ireland, *&c, our dear Siſter and Kinſwoman, greeting and increaſe of all Felicity. Whereas your Majeſty writeth to us that you have received two of our Letters, we have looked that you ſhould have anſwered to them both; Firſt to the one, in which we intreated more at large, in forbidding the Voyage to* Narve, *which if it hath been done, we had been unburdened of ſo often writing of one Matter, and might have anſwered your Majeſty much better to the purpoſe; Now we thus anſwer to your Majeſty to thoſe Matters of the which you write to us, the third of* October, *from* Windſor. *Firſt, foraſmuch as your Majeſty at the Requeſt of our Letters hath diſcharged the Arreſt of Merchants Goods, and of the Names of Men of* Danske, *our Subjects, which was ſet upon them by the Commandment of your Majeſty, and alſo have reſtored the old and ancient Liberty of Traffick, we acknowledge great Pleaſure done unto us in the ſame, and alſo think it to be done according to common Agreement made in times paſt. Neither were we ever at any time of any other Opinion touching your Majeſty, but that we ſhould obtain Right and Reaſon at your Hand: Foraſmuch as we likewiſe ſhall at all times be ready to grant to your Majeſty, making any Requeſt for your Subjects, ſo far as ſhall ſtand with Juſtice, yet ſo far are we from yielding to any thing to your Majeſty in Love, Benevolence, and mutual Office, that we judge every good Turn of yours to be recompenced by us to the utmoſt, and that ſhall we prove as occaſion ſhall ſerve, therefore we ſhall command the Arreſts, if any be made by our Subjects (as it is unknown to us) of Merchants Goods and* Engliſh *Names, to be diſcharged, and ſhall conſerve the old Liberty of Traffick, and all other things which ſhall ſeem to appertain to Neighbourhood between us and your Majeſty, provided that none of the Subjects of your Majeſty, hereafter preſume to uſe the Navigation of the* Nerve *forbidden by us, and full of danger, not only to our Parts, but alſo to the open Deſtruction of all Chriſtians and liberal Nations, which as we have written afore, ſo now we write again to your Majeſty, that we know and feel of a ſurety, the* Muſcovite, *Enemy to all Liberty under the Heavens, daily to grow mightier by the Increaſe of ſuch Things as be brought to the* Narve, *while not only Wares, but alſo Weapons heretofore unknown to him, and Artificers and Arts be brought unto him, by means whereof he maketh himſelf ſtrong to vanquiſh all others, which Things, as long as this Voyage to* Narve *is uſed, cannot be ſtopped. And we perfectly know your Majeſty cannot be ignorant how great the Cruelty is of the ſaid Enemy, of what Force he is, what Tyranny he uſeth on his Subjects, and in what ſervile ſort they be under him. We ſeemed hitherto to vanquiſh him only in this, that he was rude of Arts, and ignorant of Policies; if ſo be that this Navigation to the* Narve *continue, what ſhall be unknown to him? therefore we that know beſt, and border upon him, do admoniſh other Chriſtian Princes in time, that they do not betray their Dignity, Liberty and Life of them and their Subjects, to a moſt barbarous and cruel Enemy, as we can no leſs do by the Duty of a Chriſtian Prince; For now we do foreſee, except other Princes take this Admonition, the* Muſcovite *puft up in Pride, with thoſe things that be brought to the* Narve, *and made more perfect in Warlike Affairs, with Engins of War and Ships, will make aſſault this way on Chriſtendom, to ſlay or make abound all that ſhall withſtand him, which God defend. With which our Admonition divers Princes already content themſelves, and abſtain from the* Narve. *The others that will not abſtain from the ſaid Voyage, ſhall be impeached by our Navy, and incur the Danger of loſs of Life, Liberty, Wife and Children. Now therefore if the Subjects of your Majeſty will forbear this Voyage to the* Narve, *there ſhall be nothing denied to them of us. Let your Majeſty well weigh and conſider the Reaſons and Occaſions of our ſtopping of Ships going to* Narve, *in which ſtopping, our Subjects of* Danske *be in no fault, as we have already written to your Majeſty, neither uſe we their Council in the ſame. In any other Matter, if there be any fault in them againſt your Majeſty or your Subjects, we will gladly do juſtice upon them, that your Majeſty may well underſtand that we be careful of you and your Subjects. Neither think we it meet to take* Hamburgh *or any other place to judge the Matter; for we have our Council and Judgment Seat at* Rie, *where your Majeſty and your Subjects, or any other, ſhall have Juſtice adminiſtred unto them, with whom we have had ancient League and Amity; and thus much we have thought good to let your Majeſty underſtand. Farewell.*

Dated the ſixth of *Decem.* the 39th Year of our Reign.

Sigiſmundus Auguſtus, Rex.

CHAP.

CHAP. IV.

Mr. Anthony Jenkinſon's *Second Voyage from* London *to* Moſco, *and thence over the* Caſpian-*Sea into* Perſia, Anno 1561.

1561. THE *Swallow* and two other Ships were this Year ſet out by the Company of *Merchants Adventurers*, and on board the firſt I embarked. We departed from *Graveſend* the 14th of *May*, 1561, in the third Year of the Reign of Queen *Elizabeth*, and on the 14th of *July* arrived at *Colmogro* in the Bay of St. *Nicholas*, and after ſome ſtay there, I came to *Vologhda*, diſtant from *Colmogro* 700 Miles, where having tarried four days, I arrived at *Moſco* the 20th of *Auguſt*, and notifying my coming to the Secretary, and that I had Letters from the Queen's Majeſty to the Emperour, he informed him thereof. But I was told that the Emperour was then going to be married to a *Chircaſſian* Lady of the *Mahometan* Law, and had commanded that no Stranger, Embaſſador, or other, ſhould come before him for a time, and that during the three days of the Feaſt, the Gates of the City ſhould be ſhut, and that no Perſon, Stranger or Native, ſhould ſtir out of their Houſes during that time.

On the 6th of *September* the Emperour made a great Feaſt, whereunto all Embaſſadors and Strangers of quality were invited, among whom I was one; but the Secretary requiring me to come to him and ſhew him the Queens Letters, I refuſed ſo to do, ſaying, I would deliver them to the Emperor's own Hands, and not otherwiſe: The Secretary replied, that unleſs he might firſt peruſe them, I ſhould not come into the Emperour's preſence; ſo I was not at the Feaſt: But I was told by a Nobleman, that the Emperour enquired for me, and that the cauſe of my abſence was to him unknown. The next day I gave a Petition into his Majeſties own Hands, ſetting forth the cauſe of my coming, ſignified by the Queens Letters, and the Anſwer I had from his Secretary, beſeeching him to accept her Majeſties Letters with ſuch Honour and Friendſhip, as his Letters ſent by *Oſep Napea*, were received by the hands of our late Soveraign Lady Queen *Mary*, or elſe that it would pleaſe his Highneſs to diſmiſs me, ſaying, I would not deliver the ſaid Letters but in to his own Hands, as is uſe in our Country. After ſome Conſideration, I was commanded to come with the ſaid Letters before his Majeſty, and delivered the ſame into his own Hands, with the Companies Preſents, which were gratefully accepted, and the ſame day I dined in his Preſence with great Entertainment. Shortly after I deſired to know whether I might be licenced to paſs thro his Majeſties Dominions into *Perſia*, according to the Queens requeſt: I was anſwered, that I ſhould not paſs thither, becauſe his Majeſty intended to ſend an Army that way into *Chircaſſia*, which would make my Journey dangerous, and if I ſhould periſh therein, it would be much to his diſhonour. Thus having received his Anſwer, neither to my Expectation nor Content, I remained there a good part of the Year, and having in that time ſold moſt part of the Kerſies and other Wares appointed for *Perſia*, when the time of Year required to return for *England*, I deſired Paſport and Poſt-horſes for Money, which was granted: But being ready to come away, *Oſep Napea* came to our Houſe, and perſwaded me that I ſhould not depart that day, ſaying, that the Emperour was not truly informed, imputing great fault to the frowardneſs of the Secretary, who was not my Friend. The next day I met them both together, and when after much conteſtation, they perceived that I would depart, they willed me to ſtay until the Emperour were ſpoken with again touching my Paſſage: And three days after, the Secretary ſent for me, and told me that the Emperour's pleaſure was, that I ſhould not only paſs thro' his Dominions into *Perſia*, but alſo have his Letters of Recommendation to forreign Princes, with ſome of his own Affairs committed to my charge. Whereupon I prepared my ſelf for the Voyage, and the 15th of *March* dined again in his Majeſties preſence, in company of a *Perſian* Embaſſador and others; and receiving a Cup of Drink at his Majeſties Hands, I took my leave of him, and departed from *Moſco* the 27th of *April*, 1562, down the River *Volga*, in company of the ſaid *Perſian* Embaſſador, with whom I had great friendſhip, and arrived in health at *Aſtracan* the 10th of *June*.

As ſoon as I came there, I went to the Captain, unto whom the Emperour had given charge, not only to ſupply me with all things needful during my abode there, but alſo to conduct me with 50 Gunners in two Brigantines into the *Caſpian* Sea, until I had paſſed ſome dangerous places where Pirates do haunt; and having prepared my Bark for the Sea (the *Perſian* Embaſſador being gone before in a Bark of his own the 15th day of *July*) we departed from *Aſtracan*, and the next Evening paſſed the Mouth of the River, lying South-eaſt from *Aſtracan*, 20 Miles diſtant. The 22d aroſe a great Storm, which laſted to the 30th, and made our Bark ſo leaky, that with continual pumping we had much ado to keep her above Water, altho' we threw much of our Goods overboard.

On the fourth of *Auguſt* we arrived at *Derbent*, in the Latitude of 41 Degrees, where I and my Company going aſhoar, we dined with the Captain, to whom I gave a Preſent, and then taking in ſome freſh Water, we ſailed South-eaſt about 80 Miles, and the 6th of *Auguſt* we arrived at *Shabran*, where we unloaded, and being in my Tent, the Governour, called *Alcan Murcy*, came to me and entertained me very civilly, unto whom giving a Preſent, he appointed 40 armed Men to watch and ward with me. *Derbent.*

On the 12th, Orders came from the King of *Shiruan* that I ſhould repair to him with all ſpeed, and 45 Camels, with Horſes for me and my Company, were in readineſs; ſo departing thence we came on the 18th to a City called *Shamaky*, where my lodging was appointed, and the next day I was ſent for to come before the King, named *Obdowlocan*, who then kept his Court in Tents upon the Mountains, 20 Miles from *Shamaky*, to avoid the Heats. On the 20th I came into his Preſence, and kiſſing his Hands, he invited me to dinner, and commanded me to ſit down not far from him. The King with his Nobility richly attired, ſate croſs leg'd upon rich Carpets, and perceiving it was painful for me ſo to ſit, he cauſed a Stool to be brought in, and willed me to ſit thereupon after my faſhion. I told in the firſt courſe 140 Diſhes, and in the ſecond, conſiſting of Fruit, *&c.* 150 Diſhes. Dinner ended, the King ſaid unto me, *Queſh queld*, that is to ſay, *Welcome*, and calling for a Cup of Water, drawn from a pleaſant Fountain that ſtood before him, he taſted of it and delivered me the reſt, asking how I liked it, and if there were ſo good in our Country. Then he asked me divers Queſtions about the Religion and ſtate of our Country, and whether the Emperour of *Germany*, *Ruſſia*, or the *Great Turk* had moſt Power; to all which I anſwered to his content. Then he demanded the cauſe of my coming, and if I intended to go any further: I told him that I was ſent from the Queens moſt excellent Majeſty of *England* unto the *Great Sophy*, to intreat Friendſhip and free Paſſage for *Engliſh* Merchants to trade in his Dominions, with the like to be granted to his Subjects when they ſhould come into our Countries, to the Honour and Profit of both Realms. The King anſwered, that he would not only give me paſſage, but alſo ſend Men to conduct me to the *Sophy* then at *Casbin*, 30 days journey from *Shamaki*. Three days after he ſent for me again, and I coming in the Morning before he was up (for ſpending the Nights in banquetting with his Women, being 140, he ſleeps moſt part in the Day) he ordered that I ſhould ride on Hawking with ſome Gentlemen of his Court, and that they ſhould ſhew me as much ſport as they could; which was done, and many Cranes killed. We returned about three in the Afternoon, the King being then riſen, and ready for Dinner; to which I was invited, and at the entry of his Tent was met by two Gentlemen with two Garments of that Country faſhion, one of Silk, the other of Silk and Gold, ſent to me from the King, and cauſing me to put off my upper Garment, being a Gown of black Velvet furred with Sables, they put the Garment upon my Back, and ſo conducted me to the King, before whom doing reverence and kiſſing his Hand, he commanded me to ſit not far from him, and ſo I dined in his Preſence, he being very merry, and asking me many Queſtion. Dinner ended, I requeſted his ſafe Conduct to the *Sophy*, who diſmiſſing me with great favour, and appointing his Embaſſador, who came lately from *Ruſſia*, and others to conduct me, he gave me at my departure a fair Horſe, with all Furniture, and diſmiſſing me with all my Goods Cuſtom free; ſo returning to *Shamaky*, I tarried there until the ſixth of *October*, to provide Camels, Horſes, and other Neceſſaries for my Journey: And then leaving *Shamaky*, we travelled 60 Miles, and came to a Town called *Yavate*, and paſſing thro' a fruitful Country, on the 16th we arrived at a City called *Ardouil*, where we lodged in an Hoſpital built with fair Stone, by *Iſmael*, Father to the preſent *Sophy*, wherein all Travellers have Horſe meat and Mans meat for three days, and no longer. This ancient City is in the Latitude of 38 Deg.

Ardouil.

auris.

Four days journey to the Weſtward, lies the City of *Tauris*, the greateſt City in *Perſia*, but not of ſuch trade as it hath been, or as others be at this time, becauſe the *Turks* have conquered all the Country almoſt as far as the City, and once ſack'd the City it ſelf, which has cauſed the *Sophy* to remove his Court ten days journey from thence, to the City of *Caſvin*.

The 21ſt we departed from *Ardowil*, travelling over Mountains in the Night, and reſted in the day, being deſtitute of Wood, and were forced to uſe for Fewel, the Dung of Horſes and Camels, which we bought of the paſturing People at a dear rate.

Casbin.

On the ſecond of *November* we arrived at *Casbin*, where our Lodging was appointed near the King's Palace. After two days the *Sophy* commanded a Prince called *Shally Murzey*, Son to *Obdolowcan* King of *Shiruan* aforeſaid, to ſend for me to his Houſe, who asked me in the Name of the *Sophy*, how I did, and if I were in health, ſaying, I was welcome, and invited me to dinner, where I had great entertainment, and then returned to my Lodging. The next day I ſent my Interpreter to the *Sophy*'s Secretary, declaring, that I had Letters directed from our moſt gracious Soveraign Lady, the Queens moſt excellent Majeſty of the Realm of *England*, unto the ſaid *Sophy*, deſiring that I might be admitted into his Majeſties preſence, who advertiſing the *Sophy* thereof, ſoon after anſwered me, that there were great Affairs in hand, and that I ſhould have admiſſion as ſoon as they were finiſhed, willing me in the mean time to make ready my Preſent, if I had any to deliver.

The *Turk's* Embaſſador to the *Sophy*.

An Embaſſador from the *Great Turk* arrived four days before me, who was ſent thither to conclude a perpetual Peace with the *Sophy*, and brought with him a Preſent in Gold, fine Horſes, rich Furnitures, *&c.* worth forty thouſand Pound. The Peace was concluded with Feaſts and Triumphs, corroborated with ſtrong Oaths by their Law or *Alcoran*, to obſerve the ſame, and to live as ſworn Brethren, aiding each other againſt all Princes that ſhould war againſt them or either of them: And upon the concluſion of this Peace, the *Sophy* put to death the *Great Turk*'s Son, name *Briſet Sultan* (a valiant Prince, who fled from his Father to the *Sophy*, and had remained in his Court four Years) and ſent his Head as a Preſent to his Father.

Shaw Thamas.

The 20 of *November* I was ſent for to come before the *Sophy*, called *Shaw Thamas*, and at three in the Afternoon I came to the Court, and alighting from my Horſe at the Court Gate (before my Feet touched the Ground) a pair of the *Sophy*'s own Shoes, ſuch as he wears when he riſes in the Night to pray (as his Cuſtom is) were put upon my Feet, otherwiſe I might not be ſuffered to tread upon his Holy Ground, being a Chriſtian, called by them *Gower*, that is, Unbeliever and Unclean. At the Court Gate my Preſents were diſtributed to Servants of the Court to carry before me, none of my Company being permitted to enter into the Court with me beſides my Interpreter. Thus coming before his Majeſty with ſuch Reverence as I thought fit to be uſed, I delivered the Queens Letter with my Preſent, which he accepting, demanded of what Country of *Franks* I was, and what Affairs I had there to do. I anſwered, that I was of the famous City of *London*, in the noble Realm of *England*, and that I was ſent thither from the moſt excellent and gracious Soveraign Lady *Elizabeth*, Queen of the ſaid Realm, to treat of Friendſhip and free Paſſage for our Merchants to repair and traffick in his Dominions, to bring our Commodities and carry away theirs, to the mutual Commodity of both Realms. He then demanded in what Language the Letters were written; I anſwered, in *Latin*, *Italian*, and *Hebrew*; He replied, We have none in our Realms who underſtand thoſe Tongues. Whereunto I anſwered, that ſuch a famous and worthy Prince as he was, wanted not People of all Nations within his large Dominions to interpret the ſame.

The *Sophy's* Queſtions.

Then he queſtioned me about the State of *Europe*, and who had moſt Power, the Emperour of *Germany*, the King of *Spain*, or *Great Turk*; I anſwered him to his content, not diſpraiſing the *Great Turk*, their late concluded Friendſhip conſidered. Then he reaſoned with me about Religion, demanding whether I was a *Gower*, that is to ſay, an Unbeliever, or a *Muſelman*, that is, of *Mahomet*'s Law: I anſwered, that I was neither Unbeliever nor *Mahometan*, but a Chriſtian. What is that ſaid he unto the King of *Georgia*'s Son, who being a Chriſtian, was fled unto the *Sophy*, and he anſwered, that a Chriſtian was he that believes in *Jeſus Chriſt*, affirming him to be the Son of God, and the greateſt Prophet. Doſt thou believe ſo, ſaid the *Sophy* unto me: Yea that I do, ſaid I. Oh thou Unbeliever, ſaid he, we have no need to have friendſhip with the Unbelievers, and ſo willed me to depart; I being glad thereof, did reverence, and went my way, accompanied with many of his Gentlemen and others, and after me followed a Man with Sand, ſifting all the way that I had gone within the Palace, from the place I had diſcourſed with the *Sophy*, unto the Court Gate.

That Night *Shally Muarzy*, Son to the King of *Hircania*, who favoured me much becauſe I was recommended to him by his Father, willed me not to doubt of any thing, putting me in hope that all would end well.

There daily reſorted to me divers Gentlemen ſent by the *Sophy* to confer with me, eſpecially touching the Affairs of the Emperour of *Ruſſia*, and to know by what way I intended to return into my Country, whether by the way that I came, or by the way of *Ormus*, and ſo with the *Portugal* Ships. I anſwered, that I durſt not return by the way of *Ormus*, the *Portugals* and we not being Friends; for I was advertiſed that the *Sophy* intended war againſt them, and would have charged me for coming as a Spy thro' his Dominions unto the *Portugals*, thinking them and us to be all one People, and calling all by the name of *Franks*; but by the Providence of God this was prevented.

After this the *Sophy* conferred with his Nobility and Council concerning me, who adviſed him that he ſhould not entertain me well, nor diſmiſs me with Letters or Gifts, conſidering that I was a *Frank*, and of a Nation that was Enemy to the *Great Turk* his Brother; for if he did otherwiſe, and the News thereof ſhould come to the knowledge of the *Turk*, it would be a means to break the new League and Friendſhip lately concluded. Adding further, that he had no need, neither was it requiſite for him to have friendſhip with Unbelievers, whoſe Countries lay far from him, and that it was beſt for him to ſend me with my Letters unto the *Turk* for a Preſent: And this (I heard) he was fully determined to do, as ſoon as he ſhould ſend his Embaſſador to the *Great Turk*, which was intended to be very ſpeedily. But *Shally Murzy* hearing of this, ſent a Man in poſt to his Father, to impart it to him, who wrote unto the *Sophy*, that it would not ſtand with his Majeſties Honour, to do me any harm or diſpleaſure, but rather to entertain me kindly, becauſe I came into his Dominions of my free will, and not by conſtraint, whereas if he ſhould uſe me ill, few Strangers would reſort into his Country, which would be much to his hindrance, *&c.* which after the *Sophy* had conſidered (much eſteeming the ſaid King of *Hircan*, being a valiant Prince and his near Kinſman) he changed his mind, and on the 20th of *March* ſent me a rich Garment of Cloth of Gold, and ſo diſmiſſed me without harm.

While I ſojourned at *Casbin*, ſome *Indian* Merchants told me they could bring all ſorts of Spices if they were ſure of vent: I gave them encouragement, and doubt not but great ſtore may be there provided.

The ſaid 20th of *March*, 1562, I returned from *Casbin*, where I had reſided all the Winter, having ſent away all my Camels before, and on the 30th came again to the City of *Ardouil*, and on the 15th of *April* to *Zavat* aforeſaid, where King *Obdowlocan* was at preſent, who immediately ſending for me, declared, that if it had not been for him, I had been utterly ruined, and ſent to the *Turk* for a Preſent, by the Perſwaſion of the *Sophy*'s wicked Council: That the Holy Men were the firſt Movers thereof: That the *Sophy* intended me much good at firſt, and had ſo done if the League had not been concluded between him and the *Turk*. Neverthelеſs, ſaid he, the *Sophy* hath written to me to entertain you well, and you are welcome into my Country, and ſo tarrying there ſeven days, he uſed me very civilly, and gave me Letters of ſafe conduct, and two Garments of Silk, and then diſmiſſed me with great favour, ſending with me his Embaſſador again to the Emperour of *Ruſſia*. On the 10th of *April* I came to the City of *Shamaky*, where tarrying certain days to provide Camels down to the Sea-ſide, I ſent ſome Men before to get my Bark in readineſs; and leaving *Shamaky* on the 16th, I came to the Sea-ſide on the 21ſt of the ſaid Month, and lading my Goods, attended a fair Wind.

On the 30th day of *May*, 1563, we arrived at *Aſtracan*, having paſſed no leſs Dangers upon the Sea in our return, than we ſuſtained in our going forth, and tarrying at *Aſtracan* until the 10th of *June*, having 100 Gunners appointed for my ſafe guard to conduct me up the River *Volga*, I arrived at *Cazan* the 15th of *July*, and at *Moſco* the 20th of *Auguſt*, 1563.

Soon after my arrival, I came before the Emperour, and preſented him the Apparel given unto me by the *Sophy*; after much conference about the Affairs he had committed to my charge, he ſaid, I perceive your good Service, for which I thank you, and will recompence you for it. I anſwered, That I heartily rejoiced that my Service was ſo acceptable to his Highneſs, that all I had done was but my duty, beſeeching him to continue his favour to the *Engliſh Ruſſian* Company, and that he would be pleaſed to give them a new Privilege more ample than the firſt, all which he immediately granted, and ſo I departed. Afterwards having penned a brief Note how I meant to have the ſame Privileges made, I repaired daily to the Secretary for perfecting the ſame, and obtained it under his Majeſties broad Seal, which at my coming away I delivered to Mr *Tho. Glover*, Agent for the Company there; and ſo having ſojourned all that Winter at *Moſco*, I departed thence the 28th of *June* by Poſt, and coming to *Colmogro*, and ſo down to the Sea-ſide, I embarqued on the *Swallow* the ninth of *July*, and after great danger of loſs of Ship, Goods and Life, arrived at *London* (God be praiſed) the 28th of *September*, 1564.

The Queen's Majeſties Letters to the Emperour of *Ruſſia*, requeſting Licence and ſafe Conduct for Mr. *Anthony Jenkinſon* to paſs through his Kingdom of *Ruſſia* into *Perſia*, to the *Great Sophy*, 1561.

Elizabeth *by the Grace of God, Queen of* England, *&c. to the right excellent and right mighty Prince, Lord* John Baſiliwich, *Emperour of all* Ruſſia, *&c. greeting, and moſt happy Increaſe in all Proſperity. Right mighty Prince, the Amity of your Majeſty towards us and our Subjects is very pleaſant to us to be remembred, which being begun by the Goodneſs of God in the Reign of our moſt dear Brother of happy memory, King* Edward VI. *and afterwards through your not only ſingular Humanity fed and nouriſhed, but alſo through your incredible Goodneſs increaſed and augmented, is now firmed and eſtabliſhed with all manner of Tokens of your benevolence, that now we doubt not, but that from henceforth during many Ages, the ſame ſhall endure to the Praiſe of God, to both our Glories, to the publick great Commodity of our Realms on either Part; and to the private deſired Hope and certain Felicity of all your Subjects. And although that this your Goodneſs hath been abundantly extended to all our Subjects that have at any time repaired into any part of your Empire, for the which we give (as reaſon is) your Majeſty right hearty Thanks, and will again ſhew the like unto yours, right willingly, whenſoever Opportunity ſhall require; yet the abundance of your Benignity, both in receiving and alſo entertaining our faithful and beloved Servant* Anthony Jenkinſon, *the Bringer of theſe our Letters, is unto us for him privately very thankful: For beſides this, that in all places of your Empire, he not only by your Majeſties ſufferance, but alſo your Commandment, enjoyed much Liberty and great Friendſhip, your Goodneſs not ceaſing in this your Domeſtical Diſpoſition of Clemency, did right willingly and of your own abundant Grace, commend the ſame our welbeloved Servant, by your Letters ſealed with your Imperial Seal, to ſundry forreign Princes, unto whom he was minded to Journey, which your Magnificence did purchaſe unto him happily, according to his deſire, both paſſage without all peril, through your notable Credit, and alſo atchieving of his Journey thro' your Commendation. Therefore like as theſe your duplicated Benevolences, both that one generally exhibited to all our Subjects frequenting that your Realm, and alſo this the other extended apart to this our right faithful Servant* Anthony Jenkinſon, *is right aſſuredly faſtened in our remembrance, not only for a perpetual and grateful memorial, but alſo for a mutual and meet Compenſation; ſo we deſire of your Majeſty to vouchſafe from henceforth to conſerve and continue in the geminate diſpoſition of your Benevolencies, both generally to all our Subjects, and alſo privately to this our beloved Servant. And we doubt not, but that at our requeſt, you will again graciouſly ſhew unto the ſame* Anthony, *now admitted into our Service, the like favour as heretofore your Majeſty of your meer motion did exhibit unto him, being then a private Perſon; and therefore we deſire your Majeſty again to grant to the ſame our Servant, your Letters of Licence, Paſport and ſafe Conduct, through the Tenour, Authority and Help whereof, he, his Servants, together with their Merchandizes, Baggages, Horſes, and Goods whatſoever, that ſhall be brought in, or carried out, by or thro' all your part, and there tarry ſo long as it ſhall pleaſe him; and from thence return whenſoever it ſhall ſeem good to him or his. And as we doubt not but that your Majeſty in the goodneſs of your Nature, will graciouſly and abundantly grant all theſe good Offices of humanity, ſo we do heartily deſire that your Majeſty will likewiſe vouchſafe to commend the ſame our Servant, together with all his Goods, by your Letters to other forreign Princes, and eſpecially to the* Great Sophy *and Emperour of* Perſia, *into whoſe Empire and Juriſdictions, the ſame our Servant purpoſeth with his to journey, chiefly for tryal of forreign Merchandizes.*

We therefore do truſt that all theſe our Demands ſhall tend and have effect, according to the hope of our Servant, and to our Expectation, for your Wealth, for the Commodity of both our Subjects, lucky to him, thankful to us, acceptable to your Majeſty, and very profitable to our Subjects on either part. God grant your Majeſty long and happy felicity in Earth, and everlaſting in Heaven.

Dated in our famous City of *London* the 25th day of the Month of *April*, in the Year of the Creation of the World, 5523, and of our Lord God *Jeſus Chriſt* 1561, and of our Reign the third.

The Queen's Majeſties Letters to the *Great Sophy* of *Perſia*, ſent by Mr. *Anthony Jenkinſon*, 1561.

Elizabetha, Dei gratia, *Angliæ, Franciæ*, & *Hiberniæ*, Regina, Potentiſſimo & Invictiſſimo Principi, *Magno Sopi, Perſarum, Medorum, Parthorum, Hircanorum, Carmanorum, Margianorum*, Populorum cis & ultra Tigrim Fluvium, & omnium intra Mare *Caſpium* & *Perſicum*, ſinuum Nationum atque Gentium Imperatori ſalutem, *&c.*

Elizabeth by the Grace of God, Queen of England, *&c. to the right mighty and moſt victorious Prince, the* Great Sophy, *Emperour of the* Perſians, &c. *of the People on this ſide and beyond the River* Tigris, *and of all Nations between the* Caſpian-*Sea and the Gulf of* Perſia, *greeting, and moſt happy increaſe in all proſperity. By the goodneſs of Almighty God it is ordained, that thoſe People whom not only vaſt diſtance of Lands, and the invincible wideneſs of the Seas, but alſo the very Quarters of the Heavens do fartheſt ſeparate, may neverthleſs by writing communicate their Thoughts and Deliberations with other grateful Offices of Humanity. Therefore whereas our faithful and right welbeloved Servant* Anthony Jenkinſon, *Bearer of theſe our Letters, is determined with our Licence, Favour, and Grace, to paſs out of this our Realm, and by Gods permiſſion to travel into* Perſia, *and other your Juriſdictions; We mind truly with our good Favour to ſet forward and advance that his right laudable Purpoſe, and that the more willingly, becauſe this his Enterpriſe is only grounded upon an honeſt Intent, to eſtabliſh trade of Merchandiſe with your Subjects, and others trafficking in your Realms; wherefore we have thought good to write to your Majeſty to vouchſafe at our requeſt, to grant to our ſaid Servant* Anthony Jenkinſon, *good Paſports and ſafe Conducts, by means and authority whereof, it may be free and lawful for him, together with his Familiars, Servants, Carriages, Merchandizes, and Goods whatſoever, through your Realms, Dominions, Juriſdictions, and Provinces, freely and without impeachment to journey, go, paſs, repaſs, and tarry ſo long as he ſhall pleaſe, and from thence return whenſoever he or they ſhall think good. If theſe Holy Duties of Entertainment, and ſweeet Offices of Natural Humanity may be* *willingly concluded, ſincerely embraced, and firmly obſerved between us, and our Realms and Subjects, then we do hope that the Almighty God will bring it to paſs, that from theſe ſmall Beginnings, greater moment of things ſhall hereafter ſpring, both to our Furniture and Honours, and alſo to the great Commodity and Uſe of our People; ſo it will be known that neither Earth, the Seas, nor the Heavens, have ſo much force to ſeparate us, as the godly diſpoſition of natural Humanity and mutual Benevolence have to join us ſtrongly together. God grant unto your Majeſty long and happy Felicity in Earth, and perpetual in Heaven.*

Dated in *England* in our famous City of *London*, the 25th day of the Month of *April*, in the Year of the Creation of the World, 5523, and of our Lord and God *Jeſus Chriſt*, 1561, and of our Reign the third.

CHAP. V.

The ſecond Voyage into Perſia, *made by* Tho. Alcock, George Wren, *and* Richard Chenie, *Servants to the* Ruſſian *Company, in the Year* 1563.

1562. THE 10th of *May*, 1563. we departed from *Teraſlave*, and arrived at *Aſtracan* the 24th of *July*; and departing thence the ſecond of *Auguſt*, on the fourth we entred the *Caſpian*, and on the 11th arrived at our Port in *Media*. On the 21ſt of the ſaid Month we came to *Shamaky*, where King *Obdowlocan* then was, who calling us before him the third day after our arrival, we gave him a Preſent, and he entertained us very well.

The King ſate upon the Ground in his Tent, with his Legs a-croſs, the Ground covered with Carpets; we were commanded to ſit down, the King appointing every Man his place to ſit; and the King ordered the Emperour of *Ruſſia*'s Merchants to riſe up, and to give us the upper hand.

Tho. Alcock ſlain. The 20th of *October Thomas Alcock* departed from *Shamaki* towards *Casbin*, and in his return was ſlain in the way between *Leuvacta* and *Shamaky*: Some think his death was procured by a Nobleman whom he had offended, by earneſtly demanding his Debt; others are of opinion, that riding from the Court with out Company, ſome Rogues thinking he had much about him, ſet upon him and ſlew him.

The Third Voyage into Perſia, *begun in the Year* 1565, *by* Richard Johnſon, Alexander Kitching, *and* Arthur Edwards, *Servants to the* Ruſſian *Company.*

1565. WE departed from *Aſtracan* the 30th of *July*, 1565, and by reaſon of contrary Winds, it was the 23d of *Auguſt*, before we arrived at our deſired Port called *Nazavoe*. On the fifth of *September*, having procur'd Camels, we departed thence and came to *Shamaky* on the 11th, and on the 17th we preſented to *Obdowlocan* the King of that Country, one Timber of Sables, one Neſt of Silver Cups, part gilt, three Morſes Teeth, four Arſhines of Scarlet, three pieces of Kerſies, with 40 red Foxes.

He received our Preſents, and thanked us for our good Wills, demanding if Mr. *Jenkinſon* were in good health, and if he would return into theſe parts again. He commanded us alſo to ſit down before him, the diſtance of a Quoits caſt from his Tent, where he ſate with divers of his Council and Nobility, ſending us ſuch Meat as was before him. He told us, that if he ſhould hear of any wrong done to us by any Man, he would puniſh him for an example to others. He gave us a little Houſe for the Preſent, until a better could be provided in ſuch place as we ſhould think moſt meet; and at our taking leave, he willed us to put our Requeſts in writing, that he might the better underſtand our Deſires; but while we were doing ſo, God took this good King, our Friend, out of this preſent Life, the ſecond of *October*, 1565, whereby we loſt all hopes of recovering Mr. *Alcock*'s Debts, which had not been loſt if the King had lived.

Obdolowcan King of Hircania dies.

Great Troubles inſued the death of this King, which much hindred the ſale of our Goods; ſome of the old King's Council and great Officers were caſt into Priſon, others fined, and ſome were ſent for by the *Shaugh*.

On the 26th of *April*, Mr. *Arthur Edwards* was appointed by the Agent Mr. *Richard Johnſon* to go in Company with ſome Noblemen to *Casdin*, having with him an Interpreter and two Servants, where he arrived the 15th of *May*, and of his Negotiation there, he gave the Company the following Account.

Right Worſhipful, *&c.* On the 29th of *May*, 1556, I was brought before the *Shaugh*, and diſcourſed with him about two Hours. He commanded me twice to come nearer him, demanding what were my Requeſts; and having heard them, promiſed me his gracious Letters. Afterwards he called me twice again to come nearer him, and talked with me about the Affairs of *Europe*. Then he ſaid he would have the Company to ſend him all ſorts of Cloths, but one eſpecially, which Maidens do make (as he ſaid) called *Karengi*, I ſuppoſe he meant Weſtern Dozens died into Scarlets. It was ſtrange to his People (conſidering our Religion) to ſee me ſo long in talk with him. *Arthur Edwards Letter to the Ruſſian Company.*

After my firſt Audience, I neglected no time in daily attendance on them who had my Privilege in writing, that I might have it in readineſs at my next appearance before him, which was on the 29th of *June*. I was then in Apparel that he gave me, and received your Letters or Privileges, ſealed and firmed with the *Shaugh*'s own Hand. That day is one of their chief Feſtivals, at which all his Nobility were preſent. He ſaid to me, that if my Letters were not to my mind, in time to come they ſhould be mended; whereupon I made my Reverence, and ſaid, that with as much ſpeed as might be, our Queen ſhould underſtand his Kindneſs towards our Merchants, and ſo departed.

Since the receiving of the *Shaugh*'s Letters, I have eaten with Dukes and others, who before would not come near me; and every day ſome would come to my Shop, and eat and drink with me out of my own Diſh; and at my return to *Shamaky*, when I ſate down to dinner on the Road, they would come and eat with me unbidden, when I wiſhed them further off; for I ſpared them that which gladly I would have eaten my ſelf.

I was asked by the *Shaugh* if the Company were able to bring him yearly one hundred thouſand pieces of Kerſies and Cloths. I anſwered him, that you were able to furniſh his Country with two hundred thouſand, whereat he rejoiced; for I was told that the *Turk*'s Embaſſador laſt year, had put the *Shaugh* in deſpair, by telling him that the *Turk* would not permit any Cloth to be brought into his Country.

There are many *Venetians* dwelling at *Aleppo* in *Syria*, and others that come yearly there and buy Wools, Galls, Tallow, Saffron, Skins, Cotton and other Wares, and great ſtore of Spices: And the *Armenians* receive from the *Venetians*, Kerſies in barter for raw Silks, giving ſometimes 60 pieces of Kerſies for 70 Batmans of Silk of this Country, and forty pieces for *Groſſing* Silk. Alſo Kerſies ſold commonly for ready Money in *Aleppo*, at 11 and 12 Duckets the Piece (the Ducket being here worth 12 Shillings) may coſt the firſt penny 132 and 144 *Shaughs* a Kerſy. By report it is one Month's travel from *Shamaki* to *Aleppo.* Here is much *Venetian* Cloth worn, being crom-pliſted, a Yard and half broad, and ſold here from 24 to 30 *Shaughs* their *Arſhine*, being longer by two Inches than the *Ruſſian Arſhine.* You would do well to ſend of *London* Cloths three or four of all ſorts for a Sample, being well ſhorn and dreſt. Violets in grain, and fine Reds be moſt worn, but other good Colours will away, when they ſhall ſee them: I wore a Garment of *London* Ruſſet, which was much eſteemed. You ſhall do well to ſend ſuch ſorts as are lively to the ſight, and ſome Blacks for Womens Garments, with ſome Orange Colours and Tawnies. Here is much broad Cloth worn, and they talk much of *London* Cloths; they that know the wearing of them, prefer them before others: But forget not to ſend ſome Weſtern Kerſies, *viz.* Dozens, which are well thickned, and cloſe ſhut in the weaving, being died into fine Reds and ſome Scarlets; for I think there is no ſuch Cloth for their Caps.

The *Armenians* and others are deſirous to barter with us, giving Silk for Kerſies, and will ſerve us with all kind of Spices, to be delivered to us in *Shamaky* at theſe prices.

A *Shaugh* is Six-pence. A Batman is about ſix Pound *Engliſh* weight.

Pepper 18 *Shaughs* the Batman.
Mace large, 40 *Shaughs* and 45 the Batman.
Cloves 40 *Shaughs* the Batman.
Nutmegs 16 and 18 *Shaughs* the Batman.
Cinamon 40 *Shaughs* the Batman.

I was told the *Armenians* bring from *Aleppo* yearly four, five and ſix thouſand pieces of Kerſies and Cloths, beſides thoſe which other Men bring. Sixty Batmans of Silk is a Mule's lading, and it is reported that one Village of the *Armenians* yearly carries 400 and 500 Mules lading of Silk to *Aleppo*, and brings thence 800 or 1000 Mules laden with Kerſies and *Venice* Cloths; 18 pieces of Kerſies are a Mules lading.

From *Ormus* to *Casbin* is ſix Weeks travel, and from *Casbin* to *Shamaky* is ſixteen Days with Camels laden; but if one travel with a good Mule unladen, it may be gone in ſeven or eight Days; but here Travellers muſt carry their own Proviſions on Horſes, and ſo muſt travel but a foot pace.

The 15th of *July* I left *Casbin* and came to this Town of *Shamaky*: As for *Galls* here to be bought, there is no profit to be made by them: They are brought from *Aleppo*, and ſold here not under three or four *Shaughs* their Batman, being ſix Pounds *Engliſh* Weight. Grain that you die Scarlet withal is worth the Batman in ready Money, 200 *Shaughs*, which computing the *Shaugh* at 6 *d. Ruſſe*, may be ſix Rubbles for their *Batman.*

The Privileges *granted by the* Shaugh *to the Company is as followeth.*

Privileges granted to the Company by the *Sophy.*

1. ‘ THat you ſhall pay no manner of Cuſtoms or Toll,
‘ now, nor in time to come; And that ſuch
‘ *Engliſh* Merchants as you ſhall appoint now and here-
‘ after, ſhall paſs and repaſs into all his Dominions and
‘ Countries adjoining, to buy and ſell all ſorts of Com-
‘ modities with all manner of Perſons.

2. ‘ That in all places where any of our Merchants
‘ ſhall reſort or abide, his chief Governours, Rulers,
‘ and Juſtices, ſhall aid and defend us againſt all evil
‘ Perſons, puniſhing thoſe that ſhall do us any wrong.

3. ‘ That for all ſuch Debts as ſhall be owing by any
‘ Perſon, Juſtice ſhall be done on the Party, and we paid
‘ at the day.

4. ‘ That no manner of Perſons, of whatſoever State
‘ or Degree they be, ſhall preſume to take any kind of
‘ Wares or Gifts, without leave and good will.

5. ‘ If by Chance-medly any of our Merchants or
‘ Servants (which God forbid) ſhould kill any of his
‘ Subjects, that no part of your *Goods* ſhall be touched or
‘ medled withal nor any *Party* but the Offender; and
‘ true Juſtice to be miniſtred, and none of us to ſuffer
‘ without the Prince's Knowlege and Advice.

6. ‘ That all Debts ſhall be paid to any of us in the
‘ abſence of the other, be the Party dead or alive.

7. ‘ That no Perſon return any kind of Wares back
‘ again, being once bought or ſold.

8. ‘ That when God ſhall ſend your Goods to ſhore,
‘ his People ſhall preſently help us on Land with
‘ them.

The *Shaugh* cauſed his Secretary to write the ſaid Articles in the four Letters he gave me (whereof two are in the *Turkiſh* Language).

I have computed all Charges from hence to *Colmogro*, to which adding the Fraight to *England*, at three pound *per* Tun, the whole will not ſtand you in above 18 or 20 Shillings *per* Hundred. God grant me in health to ſee your Worſhips, *&c. Shamaky* in *Media*, the 8th of *Auguſt*, 1566.

Arthur Edwards.

Chap. VI.

The Fourth Voyage into Perſia, *in the Year* 1598. *by Mr* Arthur Edwards, *Agent*, Lawrence Chapman, *and other Servants to the* Ruſſian *Company.*

1568.

WE departed from *Teraſlave* in *July*, 1568, and arrived at a Port called *Bilbil*, on the 14th of *Auguſt*. The People were not ſo ready to aid us in bringing the Ship into Harbour, and unlading the Goods nor ſo obedient to the *Shaugh*'s Privileges as we expected. As ſoon as our Goods were got on Shoar, we were compelled to open and ſell it at their price, or elſe it would have been worſe for us.

We departed thence as ſoon as we had got Camels, and came to *Shamaky* the firſt of *September*. Thence we came to *Ardouil*, where we ſold nine pieces of Kerſies at 150 *Shaughs* the Piece.

And being then not far from *Tauris*, the Agent ſent thither Mr *Chapman* and an Interpreter, with 54 Kerſies, but he found there ſuch ſtore of broad Cloth and Kerſies brought thither from *Aleppo*, that no Man offred more than 140 *Shaughs* for a Kerſy.

At *Amadia*, ſix days journey from *Tauris*, grow abundance of Galls, bought up yearly by the *Venetians*, and ſold there for two *Biſtes* the *Tauris* Batman, about ſix Pound *Engliſh* weight. Many Drugs were to be ſold both at *Tauris* and *Casbin*, but in goodneſs, nothing like ſuch as are brought into *England* from other places; and the price ſo high, that there would be but ſmall gain in buying them. The price of Spices at our being there (enhanced by reaſon of War againſt the *Portugals* at *Ormus*) Pepper 25 *Shaughs* the *Tauris* Batman; Cloves 50 *Shaughs*; long Pepper 25 *Shaughs*; Mace large, 50 *Shaughs*; Ginger 24 *Shaughs*, and the beſt raw Silk is 60 *Shaughs* the *Tauris* Batman.

Mr. *Edwards* the Agent proceeded in his Journey to *Casbin*, and when he firſt came into the *Sophy*'s Preſence, ſtanding far off, the *Sophy* (who ſate in a Royal Seat) commanded him three times to come near him, until he came ſo near that he might have touched him with his Hand; then asking what Country-man he was, he anſwered, that he came from *England*. The *Sophy* asked his Noblemen if they knew any ſuch Country, which *Edwards* perceiving, he named it *Inghilterra*, as the *Italians* call it. Then one of the Nobles ſaid *Londro*, to which Mr. *Edwards* replied, that was the name of the chief City of *England*, as *Tauris* was of *Perſia*. The Diſcourſe laſted two Hours, wherein after many Queſtions about the State of *Europe*, he demanded of him what was the chief cauſe of his coming into his Realm;

to which Mr. *Edwards* anſwered, that it was to promote Merchandizing, and that if his Majeſty would grant us free Paſſage into all his Dominions, with ſuch Privileges as might ſecure our Lives and Goods, we would furniſh his Countries with fine Kerſies and broad Cloths of all ſorts and Colours, as Scarlets, Violets, *&c.* in ſhorter time, and cheaper than he could have them at the *Turks* Hands. Whereupon new Privileges were granted to us, written in Azure and Golden Letters; one Article whereof was, That if any Merchants or their Servants would turn *Mahometans*, that then the Agent might impriſon ſuch Perſon wherever he ſhould find him, and that no Man ſhould keep or conceal him. Before we obtained this Privilege, ſome Servants would rob their Maſters, and then turn *Mahometans*, that their Maſters might have no Law againſt them, either to puniſh them or recover their Goods. A young Man, Servant to one of our Merchants, rather than abide the Correction of his Maſter, would forſake his Faith; but as God would have it, he fell ſuddenly ſick and died, before he gave himſelf to the Devil. If he had turned *Mahometan*, it would have cauſed much trouble to the Merchants, for if he had ſaid that half their Goods had been his, they would have given credit to him; for, before the *Sophy* granted Privileges to our Nation, the People abuſed them very much, and ſo hated them that they would not touch them, calling them *Caſars* and *Gawers*, that is, Unbelievers, and thought it no wrong to defraud or rob them, bear falſe witneſs againſt them, and ſuch Merchandizes as they had bought or ſold, make them take it again, and change it as often as they liſted, and for the Debts of any Stranger, would take the Goods of any other of the ſame Nation, with many other ſuch like Abuſes.

CHAP. VII.

The Fifth Voyage into Perſia, *by* Thomas Baniſter *and* Geofrey Ducket, *Servants to the* Ruſſian *Company; begun in the Year* 1568, *and continuing to the Year* 1574.

1568. UPon the third day of *July*, 1568, they embarked at *Yeraſlave*, in a Bark called the *Thomas Bonadventure*, of 70 Tuns, accompanied with *Lionel Plumtree*, and twelve *Engliſh* and 40 *Ruſſes*. About 40 Miles on this ſide *Aſtracan*, they were aſſaulted by the *Nagayan Tartars* in 18 Boats, ſome armed with Swords, ſome with Spears, and ſome with Bows and Arrows, in all about 300 Men. The Fight continued two Hours, and they ſo galled the *Tartars* with their Fire-arms, that they fled with the loſs of 200 of their number, as they were informed by a *Ruſſian* Priſoner, who eſcaped from the *Nagayans* and came to *Aſtracan*, where they arrived the 20th of *Auguſt*.

The *Engliſh* Bark aſſaulted by the *Nagayan Tartars.*

Here they were compelled to tarry ſix Weeks, and then proceeding on their Voyage, they arrived at *Bilbil* towards the end of *October*; from thence they went to *Shauaran*, where, as they lodged in their Tents, they were much troubled with a ſort of Foxes, who ſtole their Victuals from them, and in one Night devoured to the bare Bones a mighty wild Boar, that was ſent unto them as a Preſent from the Governour.

Having ſtaid here three or four days, they travelled in four days to *Shamaky*, where ſpending the Winter, in *April* following they took their Journey towards *Ardouil*, a place of great account by reaſon of the Sepulchre of the *Perſian* Kings: Here they tarried ſix Months, finding but ſmall Traffick, the City being more frequented by Noblemen and Gentlemen than Merchants.

The Emperour *Shaw Thomas* ſent a Meſſenger to this place for our Men to come to his preſence at *Casbin*; Mr. *Ducket* being ſick, could not go, but Mr. *Baniſter* went, and was received with great favour, moſt of his Requeſts being granted to him, this only excepted, that whereas he deſired leave to carry ſome Horſes out of his Dominions into *India*, the *Shaugh* ſeemed unwilling to yield to it, and yet did not altogether deny it, but referred it to ſome further time. The *Shaugh* bought of him many Kerſies making good payment, and would oftentimes ſend his Money before the Wares were delivered.

There is one thing I thought fit to remember, That whereas he purpoſed to ſend a great Sum of Money to *Mecca* in *Arabia*, for an Offering to *Mahomet*, he would not ſend any of his own coin, but ſent to the *Engliſh* Merchants to exchange it for theirs, giving this Reaſon for it, That the Merchants Money was gotten by good means, and was therefore worthy to be made an Oblation to their Holy Prophet; but his own Money was gotten by Fraud, Oppreſſion, and diſhoneſt Means, and therefore was not fit to ſerve for ſo holy a uſe.

After ſix Months ſpent in *Casbin*, Mr. *Baniſter* went thence to *Tauris*, where he found Mr. *Ducket* well recovered, whom he had left ſick at *Ardouil*. There is a place within one Day's Journey of *Tauris*, where great ſtore of Galls grow; Mr. *Ducket* bought many of them, and other Merchandize, he continuing in *Tauris* two years and a half, making ſale of the Companies Commodities.

Mr. *Baniſter* returned from *Tauris* to *Shamaky*, and thence went to *Arraſh*, four days Journey with Camels from *Shamaky*, to buy raw Silk, but there, by the unwholſome Air, and corrupt Water in the hot time of the Year, he with *Lawrence Chapman* and ſome other *Engliſhmen* died, which being made known to Mr. *Ducket*, he immediately came from *Tauris* to *Arraſh*, to take poſſeſſion of the Goods, for otherwiſe by the Cuſtom of the Country, had there been no Merchant or other Friend to enter upon what was left, all had fallen into the *Shaugh*'s Hands; which Goods notwithſtanding could not be recover'd from the Officers who had ſiezed and ſealed up the ſame, until Mr. *Ducket* had been in Perſon with the *Shaugh*, and procured his Order for the delivery of them.

The death of *Thomas Baniſter* and *Lawrence Chapman.*

Whilſt Mr. *Ducket* was at *Casbin* in ſute for Goods, *Lionel Plumtree* by perſwaſion of certain *Bogharians*, made proviſion for a Journey to *Cathaia*, with Carriages and Commodities, and having all things ready, departed ſecretly with a Caravan; but being ſix days journey upon his way, 50 Horſemen by procurement of *Humphry Greenſel* (who was afterwards burnt by the *Portugals* in the Inquiſition at *Ormus*) were ſent after him in Poſt by the *Shaugh*'s Lieutenant, to fetch him back again, for fear of divers Inconveniences that might follow.

Humphry Greenſel burnt at *Ormus.*

Mr. *Ducket* returned from *Casbin* to *Shamaky*, and thence went to *Caſſan*, four days journey, carrying with him four Mules laden with Money.

In his way he paſſed thro' *Perſepolis*, heretofore the Royal Seat of the *Perſian* Kings, but there remains nothing now to be ſeen but two Gates, diſtant twelve Miles from each other, and ſome few Pinnacles in the Mountains, and Conveniences for freſh Water.

Perſepolis.

Caſſan is a Town of great traffick, much frequented by *Indian* Merchants; no idle Perſon is ſuffered to live among them; playing at Cards or Dice is by the Law preſent death. Here they tarried ten Weeks, and then returned to *Shamaky*, and thence to *Bilbil* again, where their Ship was in Harbour, and ſetting ſail the 8th of *May*, 1573, by reaſon of contrary Winds and dangerous Flats in the *Caſpian*-Sea, they beat it up and down 20 Days; and on the 28th riding at Anchor upon the Flats, about 150 *Ruſſe Caſſaks*, which are Out-laws and baniſhed Men, having intelligence of them, and of the great wealth they had with them, came to them in divers Boats under colour of Friendſhip, and armed with Calivers and other Weapons, entred their Ship, and ſlew divers *Ruſſians* that belonged to the Ship; whereupon Mr. *Ducket*, *Plumtree*, *William Smith* the Maſter, and *Amos Rial*, being under the Spar-deck, did ſo behave themſelves, that they ſcoured the Hatches,

Caſſan.

The *Engliſh* Ship taken by the *Caſſaks.*

and ſlew 14 of them, and wounded about 30 more; Mr. *Ducket* and the reſt in the mean time received divers wounds, and were ſo overpower'd with the multitude of their Enemies, that they were at laſt conſtrained to ſurrender their Ship to the *Caſſacks*, they ſwearing upon their Crucifixes to do no further harm to their Perſons.

The Ship thus taken, and all the *Engliſh* grievouſly hurt, the *Caſſaks* put them all into the Ships Boat, with two or three *Perſian* Targets full of Horſe-fleſh and Swines-fleſh, without other Victuals or Relief. In this caſe they made what haſt they could to *Aſtracan*, and being come to the Town, Mr. *Ducket* made great ſute to the Captain to have Men and Boats ſet out for recovery of the Ship, if poſſible, who immediately ſent out his Son with 40 Boats and 500 Men to purſue the Pirats, and by good hap came to the place where they rode at Anchor with the Ship, but by their folly in ſtriking up their Drums before they were come near them, the *Caſſaks* diſcovering the Boats, cut their Cables and put to Sea, whereupon the Boats not being able to follow them, returned to *Aſtracan*. Then ſixty other Boats were ſent to purſue them the ſecond time, who came to a place where they found many of them, and ſlew them, and found out the places where they had hid ſome of the Goods in the Earth in the Ship's Cheſts, all which they recovered again for the *Engliſh* Merchants, to the value of 5000 *l.* out of 30 or 40000, but all the reſt the *Caſſaks* in the Ship had carried away.

In the ſame place they found alſo divers of the *Caſſaks* ſlain by the *Engliſh*, buried in the Earth, and wrapt, ſome in 40 or 50 Yards of Sattin or Taffata, and ſome in *Turky* Carpets cut and ſpoiled by thoſe Pirats, of whom as many as could be taken by the *Perſians* (who entirely loved the *Engliſh* Merchants) were put to moſt cruel Torments in all places according to their deſerts.

Our Men thus ſpoiled of their Goods and wounded in their Bodies, remained two Months at *Aſtracan* for their cure, and then went up the *Volga* to *Cazan*, with ſuch Goods as they had recovered from the *Caſſaks*. From *Cazan* they went towards *Teraſlave*, but were intercepted by ſuch a Froſt in the Night, about the beginning of *October*, that their Boats were cruſhed and cut aſunder with the Ice, whereby they were in danger of loſs of Life and Goods, but as much as they could preſerve, they convey'd over land in Sleds to *Vologhda*, and thence to St. *Nicholas* to be laden in Ships for *England*.

But Mr *Ducket*, *Plumtree* and *Rial* went with certain Parcels to *Moſco*, and ſold ſome to the Emperour, who pitying the mighty Loſs they had ſuſtained from his own rebellious Subjects, bought himſelf as much as he liked, and payed preſent Money for the ſame. So ſpending that Winter in *Moſco*, in providing ſuch Wares as ſerved for *England*, they embarked at St. *Nicholas* in *Auguſt*, and after a terrible Paſſage of nine Weeks and three Days, with want of Victuals, they arrived at *London* in *October*, 1574, and ſo made an end of an unfortunate Voyage, which if it had pleaſed God to proſper, that all things had come as ſafely as they were carefully provided, and painfully laboured for, it had proved the richeſt Voyage, and moſt profitable Return that had ever been undertaken by *Engliſh* Merchants, who notwithſtanding all Misfortunes, loſt nothing of their principal Adventure, but only the Intereſt and Gain that might have riſen by the uſe of their Stock in the mean time.

Further Obſervations concerning Perſia, *by Mr.* Ducket.

THE King of *Perſia* (whom we call the *Great Sophy*) is not there ſo called, but is called the *Shaugh*; It were dangerous to call him by the Name of *Sophy*, which in the *Perſian* Tongue ſignifies a *Beggar*. He lives at *Casbin*, ſituate in a fertile Valley three or four days Journey in length. The City is ill built, being for the moſt part of Brick, not hardned with fire, but only dried in the Sun, as is moſt part of the Building in all *Perſia*. The King hath not come out of his Palace in 33 or 34 Years, whereof the cauſe is not known, but as they ſay, it is upon a Superſtition of certain Propheſies, to which they are greatly addicted. He is now about 80 years of age, and very luſty: He hath four Wives and about 300 Concubines, and once every Year he hath all the fair Virgins and Wives that can be found thereabouts brought to him, and taking ſuch as he likes, he puts away ſome of them he had before, and with them gratifies ſuch of his Officers as have done him beſt Service; and if he chance to take any Man's Wife, her Huſband is very glad of it, and in recompence of her, he oftimes gives the Huſband one of his old ſtore, whom he thankfully receives.

Many Concubines.

When any Chriſtian comes before him, he muſt put on a new pair of Shoes made in that Country, and from the place where he enters, there is raiſed as it were a Cauſey all the way until he come to the place where he ſhall talk with the King, who ſtands always above in a Gallery when he talks with any Strangers; and when the Stranger is departed, then is the Cauſey caſt down, and the Ground levelled again.

The Religion of the *Perſians* is the ſame with the *Turks*, only they differ about the right Succeſſor of *Mahomet*; the *Turks* ſay it was one *Omer*, and the *Perſians* ſay it was *Mortus Ali*, whoſe return they have long expected, and the King always keeps a Horſe ready ſadled for him. They ſay that Chriſt was a Holy Man and a great Prophet, but not like unto *Mahomet*, who being the laſt Prophet by whom all things were finiſhed, was therefore the greateſt.

Religion of the *Perſians*.

There is often great mutiny among the People which of *Mortus Ali*'s Sons was greateſt; and I ſaw in *Tauris* a Man coming from one of theſe Skirmiſhes with four Mens Heads in his Hand, holding them by the Hair of the Head; for tho' they weekly ſhave their Heads, yet they leave a Tuft of Hair about two foot long.

The *Caſpian*-Sea neither ebbs nor flows, but ſwells very high in tempeſtuous weather. The Water is very ſalt, unleſs it be at the Mouth of the great River *Volga*, where the Water is freſh at leaſt 20 Leagues into the Sea. It is very full of Fiſh, but no monſtrous Fiſh, yet has it many ſorts which are not in theſe parts of the World.

Deſcription of the *Caſpian Sea*.

CHAP. VIII.

The Embaſſy of Thomas Randolph, *Eſq; to the Emperour of* Ruſſia, Anno 1568. *briefly written by himſelf.*

1568.

THE 22d of *June* I went aboard the *Harry* in *Harwich* Road, having in my Company about 40 Perſons, whereof one half were Gentlemen deſirous to ſee the World. In our Voyage was nothing remarkable, but the great number of Whales engendring together, and the *Sperma Ceti* ſwimming upon the Sea. On the 32d day after our departure, we anchored in St. *Nicholas* Road, and landed there the 23d of *July*, where there ſtands an Abby of about 20 Monks. Their Prior preſented me with two great Loaves of Rye, Fiſh ſalt and freſh, one live Sheep. The Abby is built of Wood; the Church full of painted Images, Tapers, and Candles; the Monks eat together, are much given to drunkenneſs, unlearned, ceremonious in their Church, and long in their Prayers.

There were no Houſes at St. *Nicholas*, beſides three or four near the Abby, and another built by the *Engliſh* Company for their own uſe.

This part of the Country is for the moſt part Wood, and not inhabited by reaſon of the cold in Winter. St. *Nicholas* ſtands in 64 Degrees; the River that runs there into the Sea, is called *Dwina*, very large but ſhallow; It hath its beginning about 700 Miles up in the Country, and upon this River ſtandeth *Colmogro*, and many pretty Villages. The River is pleaſant, running between high Hills covered with tall Fir-Trees, and other Wood.

At *Colmogro*, being 100 Verſts or 75 *Engliſh* Miles from St. *Nicholas*, we tarried three Weeks, until a Gentleman came from the Emperour to conduct us, and furniſh us with all Neceſſaries at the Emperour's charge. The allowance of Meat and Drink, was for every day two Rubbles, beſides the charge of Boats, and 80 Poſt-horſes and 100 Carts to carry my Wines, *&c.*

Colmogro.

Vologhda.

Colmogro is a great Town built of Wood, not walled, and the Houſes ſcattering. I was five whole Weeks upon the River *Dwina* before I came to the *Vologhda*, 1000 Verſts, or 750 *Engliſh* Miles, being drawn with Men againſt the Stream, there being no other paſſage: It ſtands upon the River of *Vologhda*, which falls into *Dwina*. The Town is great and long, built of Wood, as all their Towns are: In it are many Churches, ſome of Brick, ſome of Wood; Many Monks and Nuns: It is a Town of great Traffick, and many rich Merchants therein.

From hence we paſſed by land towards *Moſco* in Poſt, being 500 great Verſts, which are equal with our Miles. The Country we paſſed thro' was plain and pleaſant, well inhabited, abounding with Corn, Paſture, Meadows and Woods.

His arrival at *Moſco.*

At *Teraſlave* we paſſed the River *Volgha*, more than a Mile over, and arrived at *Moſco* about the end of *September*, received by no Man, not ſo much as our own Country-men ſuffered to meet us, which bred ſuſpicion in me, of ſome other Courſe intended, than we had hitherto found.

We were brought to a large Houſe, built on purpoſe by the Emperour for Embaſſadors. Two Gentlemen were appointed to attend upon me, the one to ſee us furniſhed with Victuals, and that we lacked nothing of the Emperour's Allowance; the other to ſee that we ſhould not go out of the Houſe, nor permit any Man to come in to us, in which they left nothing undone that belonged to their charge; but eſpecially he that looked to our Perſons watched us ſo ſtrictly, that we had no ſmall cauſe to doubt that ſome evil had been intended us: No Supplication could take place for our Liberty.

Having paſſed over 17 Weeks in this manner, the Emperour ſent us word that we ſhould be ready againſt *Tueſday* the 20th of *February*, at eight in the Morning.

The Hour being come, the two ſaid Gentlemen, *Priſtaves* (as they call them) came unto me in much better Apparel than before I had ever ſeen them. They preſſed us to depart, being mounted upon their own Horſes, and I upon ſuch a one as I had borrowed, my Men marching on foot to their great grief. The two *Priſtaves* conveyed me into a Room where I tarried two long Hours before I was ſent for to the Emperour. In the end, meſſage being brought that the Emperour was ſate, I was conveyed by the ſaid *Priſtaves* up a pair of Stairs thro' a large Room, where ſate about 300 Perſons upon three ranks of Benches, all in rich Robes taken out of the Emperour's Wardrobe for that Day, that they might reſemble Men of Quality and Honour.

His admiſſion to the Emperour's preſence.

At my firſt entry into the Chamber, I with my Cap gave them reverence, ſuch as I judged their ſtately ſitting, grave Countenances, and ſumptuous Apparel required, but ſeeing that it was not anſwered again by any of them, I covered my Head, and ſo paſſing to a Chamber where the Emperour was, two of his Councellors received me at the Door from the two *Priſtaves*, and ſhewing me to the Emperour, brought me into the middle of the Chamber, where I was willed to ſtand ſtill, and deliver what I had to ſay; I by my Interpreter opened my Meſſage as I received it from the Queen my Miſtreſs, at whoſe Name the Emperour ſtood up, and asked divers Queſtions of her Health and State: He gave me his Hand in token of my Welcome, cauſing me to ſit down and asking me many Queſtions.

The Queen's Preſent.

This done, I delivered her Majeſties Preſent, which was a notable great Cup of Silver curiouſly wrought, with Verſes engraven in it, explaining the Hiſtories engraven on the ſame.

All things ſaid and done to his contentment, he licenced me and all my Company to depart, who were all in his Preſence, and were ſaluted by him with a nod of his Head, and ſaid unto me, I dine not this day openly, by reaſon of great Affairs I have, but I will ſend thee my Dinner, and give leave to thee and thine to go at liberty, and augment our Allowance to thee in token of our Love to our Siſter the Queen of *England*.

I with reverence took my Leave, being conducted by two others of greater Dignity than thoſe who brought me to the Emperour's Preſence, who delivered me to the two firſt Gentlemen, who conveyed me to my Lodging.

Within an Hour came to my Lodging a Duke richly apparell'd, accompanied with 50 Perſons, each of them carrying a Silver Diſh with Meat, and covered with Silver. The Duke firſt delivered 20 Loaves of Bread, having firſt taſted the ſame, and delivered every Diſh into my own Hands, and taſted of every kind of Drink that he brought. The Duke and his Company ſate down with me, and took part of the Emperour's Meat, filling themſelves with all ſorts, and went not away from me unrewarded.

Not long after the Emperour ſent for me in the Night to ſpeak with me ſecretly, where, after above three Hours diſcourſe, I was diſmiſſed towards Morning, and he going next day to *Slonoda*, his Houſe of pleaſure, I heard no more from him in ſix Weeks, which was in the beginning of *April*, and the Emperour then returning, he ſent for me again. I then dealt effectually with him in behalf of our *Engliſh* Merchants, and found him ſo graciouſly inclined towards them, that I obtained my whole Demands. Then he commended to my conduct into *England*, a Nobleman of his called *Andrew Savin*, as his Embaſſador, who embarked with me at St. *Nicholas* about the end of *July*, and arrived ſafely at *London* in *September* following.

CHAP. IX.

The Fourth Voyage of Mr. Anthony Jenkinſon, *Embaſſador from the Queen's moſt excellent Majeſty, to the Emperour of* Ruſſia, Anno 1571.

Note, That Mr. *Jenkinſon* made a third Voyage into *Ruſſia*, 1566.

1571. ON the 26th day of *July*, 1571, I arrived in St. *Nicholas* Bay, with the *Swallow* and the *Harry*, and ſent away my Interpreter to *Moſco* to advertiſe the Emperour of my coming, and to know his pleaſure for my further acceſs. Diſcourſing there with ſome of the Companies Servants, they told me that I was entred into great peril and danger of my Life, and that they heard at *Moſco* that the Prince's diſpleaſure was ſuch againſt me, that if ever I came into his Country again, I ſhould looſe my Head. Whereat I was ſo diſmay'd, that I doubted whether I ſhould proceed, or return home again with the Ships for the ſafe-guard of my Life: But calling to mind my Innocency, and not knowing that I had offended his Majeſty in Word or Deed, I reſolved to put my Life in his Hands, and proſecute the Charge committed to me rather than to return home in vain. Wherefore leaving the ſaid Ships on the 29th, I arrived the firſt of *Auguſt* at *Colmogro*, where I attended the return of the Meſſenger; but the Country being viſited with the Plague, none might paſs on pain of death, and my Meſſenger being 800 Miles upon his way, was ſtopt at a Town called *Shasko*, and not ſuffered to come further, or return back, nor to ſend to me; ſo that in four Months I could not hear what was become of him. In the mean time I found means to ſend another Meſſenger with a Guide by an unknown way, thro' a Deſert Country a thouſand Miles about, thinking that way he might paſs without hindrance; but it proved contrary, for after he had paſſed a great part of his Journey, he fell into the Hands of a Watch, and eſcaped narrowly from being burnt, both he and his Guide, and their Horſes, according to a Law provided for ſuch as would ſeek to paſs by indirect Ways, whereof many have felt the ſmart, who had not wherewith to buy off the pain; neither could that Meſſenger return back to me.

And thus I remained at *Colmogro* until the 18th of *January*, without any Gentlemen to protect me, or lodging appointed me, or allowance of Victuals according to the Country faſhion for Embaſſadors, which as it argued his Majeſties grievous diſpleaſure towards our Nation, ſo the *Ruſſes* perceiving it, uſed ſome Diſcourteſies towards me and my Company; but about the 28th day of *January*, the Plague ceaſing, and the Paſſages being opened, order came from his Majeſty that I ſhould have Poſt-horſes to go to *Peraſlave*, near to the Court, his Majeſty being newly returned from the Wars againſt the *Swedes*.

I arrived there the third day of *February*, where I remained under the charge of a Gentleman, having a Houſe appointed for me, and allowance of Victuals, but ſo ſtrictly kept, that none of our Nation or other, might come or ſend to me, nor I to them.

On the fourth of *March* I was ſent for to the Court, and being within three Miles of the ſame, a Poſt was ſent to the Gentleman who had charge of me, to return back again with me to *Peraſlave*, and there attend his Majeſties further pleaſure, whereat I was much diſmayed, marvelling what that ſudden change meant, and the rather, becauſe it was a troubleſome time, and his Majeſty much diſquieted with the ill ſucceſs of his Affairs.

On the 20th I was ſent for again to the Court, and on the 23d came before his Majeſty, who cauſed me to kiſs his Hand, giving gracious Audience to my Oration, and gratefully accepted the Queen's Letters and her Preſent, in the Preſence of all his Nobility. The Emperour, who all this while ſate in Royal State, ſtood up and ſaid, How doth Queen *Elizabeth* my Siſter? is ſhe in health? To whom I anſwered, God doth bleſs her Majeſty with Health and Peace, and doth wiſh the like unto thee Lord her loving Brother. Then his Majeſty ſitting down again, commanded all to depart but the Secretary and one more of his Council, and willing me to approach near to him with my Interpreter, ſaid unto me theſe Words.

‘ *Anthony*, the laſt time thou waſt here, we did commit unto thee our truſty and ſecret Meſſage, to be declared unto the Queens Majeſty her ſelf, thy Miſtreſs at thy coming home, and did expect thy coming unto us again at the time we appointed, with a full Anſwer of the ſame from her Highneſs; and in the mean time there came unto us at ſeveral times, three Meſſengers, the one called *Manly*, the other *George Middleton*, and *Edward Goodman*, by the way of the *Narve*, about the Merchants Affairs; to whom we ſent our Meſſenger to know whether thou *Anthony* was returned home in ſafety, and when thou ſhould'ſt return to us again: But thoſe Meſſengers could tell us nothing, and did miſcal and abuſe with evil Words, both our Meſſenger and thee, wherewith we were much offended; and underſtanding that the ſaid *Goodman* had Letters about him, we cauſed him to be ſearched, with whom were found many Letters, wherein was written much againſt our Princely Eſtate, and that in our Empire were many unlawful things done, whereat we were much grieved, and would ſuffer none of thoſe rude Meſſengers to have acceſs unto us. And ſhortly after we were informed that one *Thomas Randolph* was come into our Dominions by the way of *Dwina*, Embaſſador from the Queen, and we ſent a Gentleman to meet and conduct him to our City of *Moſco*, at which time we looked that thou ſhould'ſt have returned to us again. And the ſaid *Thomas* being arrived at our ſaid City, we ſent unto him divers times that he ſhould come and confer with our Counſel, whereby we might underſtand the cauſe of his coming, looking for anſwer of thoſe our Princely Affairs committed unto thee, but he refuſed to come to our ſaid Council, wherefore and becauſe our ſaid City was viſited with the Plague, the ſaid *Thomas* was longer kept from our preſence, which being ceaſed, we forthwith gave him acceſs and audience; but all his talk with us was about Merchants Affairs, and nothing touching ours. We know that Merchants Matters are to be heard, becauſe they are the ſtay of our Princely Treaſures; but firſt Princes Affairs are to be eſtabliſhed, and then Merchants. After this, the ſaid *Thomas Randolph* was with us at our City of *Volsghda*, and we dealt with him about our Princely Affairs, whereby Amity between the Queen's Majeſty and us might be eſtabliſhed for ever; and Matters were agreed and concluded betwixt your Embaſſador and us, and thereupon we ſent our Embaſſador into *England* with him to end the ſame, but our Embaſſador returned unto us again, without finiſhing our ſaid Affairs, contrary to our expectation, and the Agreement betwixt us and your ſaid Embaſſador.

His Majeſty having thus made a long Diſcourſe, I humbly beſeeched his Highneſs to hear me graciouſly, to give me leave to ſpeak without offence, and to believe thoſe Words to be true which I ſhould ſpeak, which he granting, I ſpake as followeth.

‘ Moſt noble and famous Prince, the Meſſage your Highneſs ſent by me unto the Queens moſt excellent Majeſty, touching your Princely and Secret Affairs, immediately, and as ſoon as I came home, I did declare both ſecretly and truly unto the Queens Majeſty her ſelf, word for word as you commanded me, which her Highneſs did willingly accept, and being mindful thereof, and willing to anſwer the ſame, the next Shipping her Majeſty ſent unto your Highneſs, her Embaſſador *Thomas Randolph*, whoſe approved Wiſdom and Fidelity was unto her Majeſty well known, and therefore thought meet to be ſent to ſo worthy a Prince, who had Commiſſion not only to treat with your Majeſty about Merchants Affairs, but alſo thoſe of Princely and Secret Affairs committed unto me. And the cauſe (moſt gracious Prince) that I was not ſent again was, by reaſon I was employed in ſervice upon the Seas againſt the Queen's Majeſties Enemies, and was not returned home when Mr. *Thomas Randolph* departed with the Ships to come into your Majeſties Country, otherwiſe I had been ſent. And whereas your Majeſty ſays that *Thomas Randolph* would not treat with your Council about the Matters of his Legation, he did therein according to his Commiſſion, which was, firſt to deal with your Majeſties own ſelf, as is commonly uſed among all Princes when they ſend their Embaſſadors about Matters of great weight. And whereas the ſaid *Thomas* is charged that he agreed and concluded upon Matters at the ſame time, and promiſed the ſame ſhould be performed by the Queens Majeſty; and thereupon your Majeſty ſent your Embaſſador with him into *England*: In anſwer thereunto, may it pleaſe your Majeſty to underſtand, that as the ſaid *Thomas Randolph* doth confeſs that he had divers times diſcourſed with your Highneſs and Council about Princely Affairs, even ſo he denies that ever he did agree, conclude, or make any promiſe in any condition or order, as is alledged, otherwiſe than it ſhould pleaſe the Queen's Majeſty to approve of at his return home; all which he did juſtify to your Highneſs's Embaſſador's Face in *England*; wherefore moſt mighty Prince, it well appears, that either your Embaſſador did not rightly inform your Majeſty, or elſe your Princely Mind, and the true meaning of the Queen's Embaſſador, for want of a good Interpreter, was not well underſtood; and how thankfully the Queen's Majeſty did receive your Highneſs's Commendations and Letters ſent by your Majeſties Embaſſador, and how graciouſly ſhe gave him audience ſundry times, uſing him with ſuch Honour in all Points for the ſake of your Majeſty, her loving Brother, as the like was never ſhewed to any Embaſſador in our Realm; and how honourably with full anſwer in all things, her Majeſty diſmiſſed him, when he had finiſhed all your Princely Affairs (as it ſeemed) to his own content, may appear by a Certificate lately ſent with her Majeſties Letters unto your Highneſs, by her Meſſenger *Robert Beaſt*, and her Majeſty did ſuppoſe that your Embaſſador would have made report accordingly, and that by him your Highneſs would have been ſatisfied in all things, otherwiſe ſhe would have ſent her Embaſſador with him unto your Majeſty

' again, but now her Highneſs perceiving that your Majeſty is not fully ſatisfied in your Princely Affairs, neither by *Thomas Randolph* her Highneſs's Embaſſador, nor by your own Embaſſador *Andrea Savin*, nor yet by her Majeſties Letters ſent by the ſaid *Andrea*, and alſo underſtanding your great diſpleaſure towards Sir *William Garret* and his Company, Merchants trafficking in your Dominions, hath thought good to ſend me at this preſent unto you Lord Emperour and Great Duke, as well with your Highneſs's full mind touching your Princely Affairs, as alſo to know the juſt cauſe of your Majeſties ſaid diſpleaſure towards the ſaid Company of Merchants, and hath commanded me to anſwer all things in their behalf, and according to their true Meanings; for her Highneſs doth ſuppoſe your Majeſties Indignation to proceed rather from the evil and falſe Reports of your late Embaſſador in *England*, and of ſuch wicked Perſons of our own Nation reſident here in your Higneſs's Dominions, Rebels to her Majeſty and their Country, than from any juſt Deſerts of the ſaid Merchants, who never willingly deſerved your Highneſs's Diſpeaſure, but rather Favour in all their Doings and Meanings; and ſince the firſt time of their trafficking in your Majeſties Dominions, which is now 19 Years, the ſaid Merchants have been, and are always ready and willing truly to ſerve your Highneſs with all things meet for your Treaſury, in time of Peace or War, in deſpite of all the Enemies (altho' the Princes of the Eaſt Seas were agreed to ſtop the *Sound* and the Way to the *Narve*) and have brought, and do bring from time to time ſuch Commodities to your Highneſs, as her Majeſty doth not ſuffer to be tranſported forth of her Realm to any other Prince of the World; and what great Loſſes the ſaid Sir *William Garret* with his Company, have ſuſtain'd of late Years in this Trade, as well by Shipwrack as by falſe Servants, is manifeſtly known; and what Service the ſaid Companies Ships did unto your Majeſty againſt your Enemies, two Years paſt in going to the *Narve*, when they fought with the King of *Poland*'s Free-booters, burning the ſame, and ſlaying the People, and delivering as many as were taken alive unto your Captain at the *Narve*, I truſt your Highneſs doth not forget. Wherefore moſt mighty Prince, the Premiſes conſidered, the Queens moſt excellent Majeſty your loving Siſter, doth requeſt your Highneſs to reſtore the ſaid Sir *William Garret* with his Company to your Princely Favour again, and their Priviledges for free traffick, with your accuſtomed Goodneſs and Juſtice, to be miniſtred unto them throughout all your Majeſties Dominions, as aforetime; and that the ſame may be ſignified by your Princely Letters directed to the Officers in all places, any Commandment or Reſtraint from your Highneſs to the contrary notwithſtanding. And further, that it will pleaſe your Majeſty not to give credit to falſe Reports and untrue Suggeſtions of ſuch as are Enemies, and ſuch as neither would have mutual Amity to continue betwixt your Majeſties, nor yet entercourſe betwixt your Countries. And as to ſuch Rebels of our Nation, as *Ralph Rutter* and others, who lie lurking here in your Highneſs's Dominions, ſeeking to ſow Diſſentions betwixt your Majeſties by falſe Surmiſes, ſpending away their Maſters Goods riotouſly, and will not come home to give up their Accounts, advancing themſelves to be Merchants, and able to ſerve your Highneſs with all things fit for your Treaſury, whereas indeed they are of no credit, nor able of themſelves to do your Majeſty any Service at all, the Queen's Highneſs requeſt is, that it would pleaſe your Majeſty to command that ſuch Perſons may be delivered unto me to be carried home, leſt by their remaining here, and practiſing with ſuch as are not your Highneſs's Friends, their evil Doings may be a cauſe hereafter to withdraw your Goodneſs from Sir *William Garret* and his Company, who have true meaning in all their Doings, and are ready to ſerve your Highneſs at all times: Uſing many other Words to the advancement of your Credit, and the diſgracing of your Enemies, and ſo I ended for that time.

Then ſaid his Majeſty, ' We have heard you, and will conſider of all things further, when we have read the Queen our Siſters Letters: *To whom I anſwered*, That I ſuppoſed his Majeſty ſhould by thoſe Letters underſtand her Highneſs's full mind to his Contentation, and what wanted in Writing, I had credit to accompliſh in Word. Wherewith his Majeſty ſeemed to be well pleaſed, and commanded me to ſit down; and after pawſing a while, his Majeſty ſaid, ' It is now a time which we ſpend in Faſting and Praying, being the Week before *Eaſter*, and becauſe we ſhall ſhortly depart hence towards our Borders of *Novogrod*; we cannot give you anſwer nor your diſpatch here, but you ſhall go hence and tarry for us on the way, where we will ſhortly come, and then you ſhall know our Pleaſure and have your Diſpatch. And ſo I was diſmiſſed to my Lodging, and the ſame day had a Dinner ready dreſt, ſent me from his Majeſty, with divers ſorts of Drink, and the day following being the 24th of *March*, a Gentleman came to me from the chief Secretary, to acquaint me the Emperour's Pleaſure was, I ſhould immediately depart towards a City called *Otwer*, 300 Miles from *Sloboda*, and there to tarry his Higneſs's coming unto a place called *Staryts*, 60 Miles from *Otwer*.

Sloboda is a Houſe of Pleaſure near *Moſco*.

Then ſending my Interpreter to the Secretary, I requeſted him to ſhew his Favour to our Merchants in their Sutes, which they ſhould have occaſion to move in my abſence; who anſwered, That they ſhould be well aſſured of his Favour in all. And forthwith Poſt-horſes were ſent me with a Gentleman to conduct me, and ſo departing from *Sloboda*, I arrived at *Otwer* the 28th of *March*, where I remained till the 28th of *May*. Then I was ſent for to come unto his Majeſty to the ſaid *Staryts*, where I arrived the 10th, and on the 12th was appointed to come to the Secretary, who at our meeting ſaid unto me theſe Words.

' Our Lord Emperour and Great Duke, hath not only peruſed the Queen's Majeſties Letters ſent by you, and thereby perceives her mind, as well touching their Princely Affairs, as alſo her earneſt requeſt in the Merchants behalf, but hath alſo well pondered your Words, and therefore his Majeſties Pleaſure is, that you let me underſtand what Sutes you have to move in the Merchants behalf, or otherwiſe, becauſe to morrow you ſhall have acceſs again unto his Highneſs, and ſhall have full anſwer in all things, with your diſpatch away.

Then after long Conference had with him of divers Matters, I gave him in writing certain brief Articles of Requeſts, which I had drawn out ready as followeth.

I. ' THE Queen's Majeſties requeſt is, that it would pleaſe the Emperour to let me know the juſt cauſe of his great diſpleaſure fallen upon Sir *William Garret* and his Company, who never deſerved the ſame to their knowledge.

II. ' That it would pleaſe his Highneſs not to give credit to falſe Reports by ſuch as ſeek to ſow Diſſention, and break Friendſhip betwixt the Queen's Highneſs and his Majeſty.

III. ' That it would pleaſe his Majeſty to receive the ſaid Sir *William Garret* with his Company into his Favour again, and to reſtore them to their former Privileges and Liberties, for free Traffick in, and thro' and out of all his Majeſties Dominions, in as ample manner as aforetime, according to his Princely Letters of Privilege and accuſtomed Goodneſs.

IV. ' That it would pleaſe his Highneſs to grant, that the ſaid Company of Merchants may have Juſtice of all his Subjects, as well for Money owing to them, as other their Griefs and Injuries, throughout all his Dominions, ſuffered ſince the time of his Diſpleaſure, during which time, the Merchants were forced by ſevere Juſtice to anſwer all Mens Demands, but theirs could not be heard.

V. ' Alſo that his Majeſty would underſtand that many Debts are owing to the ſaid Merchants by divers of his Nobility, whereof part are in durance, and ſome executed; and that the ſaid Merchants know not how to be paid and anſwered the ſame, except his Highneſs pity their caſe, and command ſome order to be taken therein.

VI. ' That it would pleaſe his Highneſs to command that the ſaid Merchants may be paid all ſuch Sum or Sums of Money as are owing and due unto them by his Majeſty, for Wares, as well *Engliſh* as *Shamaky*, taken into his Highneſs's Treaſury by his Officers in ſundry places; the long forbearance whereof hath been, and is great hindrance to the ſaid Company of Merchants.

VII. That ſome *Engliſh* Merchants now in *Perſia*, would have come to *Aſtracan* laſt Year, but that the Ship with ſome of our Merchants and Mariners appointed to go for them, was ſtopt at *Aſtracan* by his Highneſs's Captain there, to the great prejudice of the ſaid Merchants: wherefore it may pleaſe his Majeſty to direct his Letters to his Captains at *Aſtracan* and

Cazan, to ſuffer our People to paſs with their Ships, Barks, *&c.* and to be ſafely conducted upon the *Volga*.

VIII. ‘ That whereas lately our Merchants coming from *Shamaky*, have been ill uſed by his Majeſties Cuſtomers both at *Cazan* and *Aſtracan*, where they were forced to pay Cuſtom, altho’ they ſold none of their Wares, the ſaid Cuſtomers exacting more than was due, and for want of preſent Money, took Wares much exceeding their exacted Cuſtom, and kept the ſame as a Pawn: That it may therefore pleaſe his Highneſs to direct his Cuſtomers to reſtore and ſend the ſaid Goods to *Moſco*, the Merchants paying ſuch Cuſtom as his Majeſty ſhall appoint.

IX. ‘ That it would pleaſe his Highneſs to grant that the Company may eſtabliſh their Trade at *Colmogro*, and that ſuch Wares as ſhall be brought out of our Country fit for his Treaſury, may be looked upon and received by his Officers there; and that his Majeſties People trafficking with our Merchants may bring down their Goods to *Colmogro*, whereby the *Engliſh* avoiding great trouble and charge, in tranſporting their Goods ſo far, may ſell the ſame better cheap, to the benefit of his Majeſties Subjects.

X. ‘ That the whole Trade from *Perſia* and other Countries beyond the *Caſpian*, may be eſtabliſhed at *Aſtracan*.

XI. ‘ And foraſmuch as it pleaſed his Majeſty immediately after the burning of *Moſco*, to command that the ſaid *Engliſh* Merchants ſhould give in a Note into his Treaſury for their Loſſes ſuſtain’d by the ſaid Fire, which was accordingly done, and the Particulars amounted to 100000 * Rubbles and above; it may pleaſe his Highneſs of his accuſtomed Goodneſs and great Clemency to conſider of the ſame, and to give the Company ſo much as ſhall ſeem good unto his Majeſty towards their ſaid Loſſes.

* Or Marks.

XII. ‘ That it would pleaſe his Highneſs to underſtand that the Queen at the earneſt Sute and Requeſt of *Andrea Savin* his Embaſſador, did not only pardon and forgive *Thomas Glover* his great Offences againſt her Highneſs committed, for his Majeſties ſake only, but alſo command Sir *William Garret* with his Company, to deal favourably with the ſaid *Glover* in his Accompts, to whom he was greatly indebted, and being their Servant, detained their Goods in his Hands a long time. Whereupon Sir *William Garret* and Company counted with the ſaid *Glover*, ending all things to his contents, and he was found to be Debtor to the Company above 4000 Rubbles, and bound himſelf by his ſolemn Oath and his Hand-writing, to pay the ſame immediately after his return into *Ruſſia* with the ſaid *Andrea Savin*, unto the Companies Agent there; But altho’ it is now two Years paſt ſince the ſaid Agreement, and that the Agent hath often requeſted the Money of the ſaid *Thomas*, yet will he not pay the ſame, but makes delay from time to time, alledging, that his Majeſty owes him a great Sum of Money, without payment whereof he cannot pay the Company. In conſideration hereof, that it may pleaſe his Highneſs to give order that the ſaid *Glover* may be paid, and that he may diſcharge his Debt to the Company, and the rather becauſe he found ſuch Mercy and Favour in *England* for his Majeſties ſake only.

XIII. ‘ And foraſmuch as *Ralph Rutter*, a Rebel to the Queen’s Majeſty, an Enemy to his Country, and to Sir *William Garret* and his Company, hath a long time remained here, living on the Spoils and Goods of the ſaid Merchants, which he wrongfully detained in his Hands, riotouſly ſpending the ſame, during the time he was their Servant, and would not come home when he was ſent for; and alſo becauſe the Queen does underſtand, that the ſaid *Ralph* with his Adherents, ſeek by all falſe means to ſow Diſſention betwixt their Majeſties, and to overthrow the Trade of the ſaid Merchants, her Highneſs’s requeſt is, that the ſaid *Ralph* with his Complices may be delivered to me, to be carried home, and none other of her Majeſties Subjects, not being of the Company, to be ſuffered to traffick within his Highneſs’s Dominions, but to be delivered to their Agent to be ſent home, becauſe the ſaid Merchants with great Charges and Loſſes, both by Shipwrack and riotous Servants, did firſt find out this Trade, and have continued the ſame 19 Years to their great hindrance.

XIV. ‘ And whereas divers Artificers of our Nation here in his Majeſties Service, are grieved that they cannot have Licence to depart home into their native Country, the Queen’s requeſt is, according to her writing in that behalf, that not only it will pleaſe his Majeſty to permit ſuch Artificers here reſident in the Service of his Highneſs, to have free Liberty to depart and go home with me if they requeſt the ſame, but alſo thoſe which ſhall come hereafter to ſerve his Majeſty, to have free Liberty to depart likewiſe at their will and pleaſure.

XV. ‘ That during my long ſtay at *Colmogro*, attending his Highneſs’s pleaſure for my further acceſs, I and my Company, with the Merchants there, were ill uſed by one *Beſſon*, your Majeſties chief Officer, who diſhonoured me, and ſmote my People, and owes the ſaid Merchants much Money and will not pay them; wherefore may it pleaſe his Highneſs to ſend a Gentleman with me to *Colmogro*, to enquire into his evil Behaviour towards her Majeſty and me her Embaſſador, and to puniſh him accordingly, and that he may be forced to pay all the Money he owes to the ſaid Merchants without delay.

XVI. ‘ And whereas the Company hearing of the great dearth in his Majeſties Dominions, by licence from the Queen (not otherwiſe permitted) hath ſent certain Ships laden with Corn into his Highneſs’s Country of *Dwina*, rather for the Relief of his Majeſties Subjects than for any gain; yet the Good Will of the ſaid Merchants lightly regarded, they were forbidden to ſell the ſaid Corn, to their great diſcouragement hereafter to ſend any more: Wherefore may it pleaſe his Highneſs to accept the Good Will of the ſaid Merchants, as well in ſending the ſaid Corn as in all other things ready to ſerve his Majeſty, and to order his Officers of *Dwina* to permit the Merchants to ſell the ſaid Corn, without paying Cuſtom.

Theſe Articles being delivered to the Secretary, I returned to my Lodging; the next day, being the 13th of *May*, I had warning early in the Morning to be at Court betwixt ten and eleven, at which time, being brought before his Majeſty, who ſate ſumptuouſly apparelled with a rich Crown upon his Head, garniſhed with precious Stones, his eldeſt Son ſitting by him, and many of his Nobility about him: After my duty done, he commanded me to approach very near him, and ſpake as follows.

‘ *Anthony*, the Queen our loving Siſters Letters we have cauſed to be tranſlated, and do well underſtand the ſame, and of all things as well by us contained, as by word of Mouth by you to us declared, we have well conſidered, and do perceive that our ſecret Meſſage unto you committed, was done truly according to our mind (altho’ we were advertiſed to the contrary) and now we are by you fully ſatisfied. And when we ſent our Embaſſador into *England* about our great and weighty Affairs, to conclude the ſame with the Queen our Siſter, he could end nothing for want of ſuch Aſſurance as was requiſite in Princely Affairs, according to the manner of all Countries, but was diſmiſſed unto us again, with Letters of ſmall effect, and no Embaſſador ſent with him from the Queen, which cauſed us to think that our Princely Affairs were little regarded, wherewith we were at that time much grieved; for which cauſe, and for the evil behaviour of your Merchants here (who have divers ways tranſgreſſed and broken our Laws, living wilfully in all their Doings) we did lay our heavy diſpleaſure upon them, and did take away from them their Privilege, commanding that the ſame throughout all our Dominions, ſhould be void and of none effect, and thereupon did write to the Queen our Siſter touching our Griefs.

The Cauſes of the Emperour’s diſpleaſure.

‘ And now her Highneſs hath ſent unto us again you her Embaſſador, with her loving Letters and full mind, which we do thankfully receive, and are thereby fully ſatisfied; And becauſe our Princely and Secret Affairs were not finiſhed to our content at our time appointed, according to our expectation, we do now leave off all thoſe matters, and ſet them aſide for a time, becauſe our mind is now changed, but hereafter, when occaſion ſhall move us to the like, we will then talk of thoſe matters again; and ſince it hath pleaſed the Queen our loving Siſter, to ſend unto us at this Preſent, and doth deſire to continue in friendſhip with us for ever (which we do graciouſly accept and willingly agree to the ſame) we of our Goodneſs for her Highneſs’s ſake, will not only from henceforth put away and forget all our diſpleaſure towards Sir *William Garret* and his Company (as tho’ they had never offended us) but will alſo reſtore them to their Privileges and Liberties in and throughout all our Dominions, and we will ſignify the ſame by our Letters, to all Towns and Cities where the ſaid Merchants do traffick, and will ſhew them favour

‘ as formerly, if they deſerve not the contrary: And if the Queen our Siſter had not ſent thee *Anthony* unto us at this preſent, God knows what we ſhould have done to the ſaid Merchants, or whether we ſhould have called back our Indignation.

Then I humbly beſeeched his Majeſty to let me know the particular Offences committed by the ſaid Merchants and the Offenders Names, that I might be able to make report thereof to the Queen my Miſtreſs accordingly, and that the Offenders might have juſt puniſhment for their Deſerts: He anſwered, I ſhould not know them, becauſe he had clearly remitted all Offences: and further, that it was not Princely to forgive, and after to accuſe the Parties, whereby her Majeſties diſpleaſure might fall upon them at home; Notwithſtanding, I afterwards came to know ſome of them, by other means.

Then his Majeſty proceeding, ſaid, ‘ As to the Articles of Requeſt, concerning the Merchants Affairs, which you Yeſterday delivered to our Secretary, we have read the ſame, and appointed our Secretary to declare unto you our mind, and anſwer the ſame; and becauſe we are now upon our Journey towards our Borders, and ſhall depart hence ſhortly, we will diſmiſs you to the Queen our loving Siſter, your Miſtreſs, with our Letters, and full mind by word of mouth, touching all your Requeſts, and will ſend a Gentleman of our Houſhold to conduct you to your Ships, and of our Goodneſs will give you Victuals, Boats, Men, and Poſt-horſes, as many as you ſhall need; and then his Majeſty ſtanding up, and putting off his Cap, ſaid, ‘ Give our hearty Commendations to our loving Siſter Queen *Elizabeth*, unto whom we wiſh long life and happy ſucceſs; and therewith extended his Hand for me to kiſs, and commanded his Son ſitting by him, to ſend the like Commendations, which he did, whoſe Hand I likewiſe kiſſed, and then cauſing me to ſit down, he commanded Wine and divers ſorts of drink to be brought, whereof he gave me to drink with his own hand, and ſo I departed.

The next day I was ſent for to come to the Secretary and one other of the Council with him, who at our meeting ſaid, ‘ We are appointed by the Emperour to give anſwer to your Requeſts deliver'd in writing, which his Majeſty himſelf hath peruſed, and anſwered as followeth.

I. ‘ TO the firſt Requeſt it is anſwered, that all his Majeſties Grief and Diſpleaſure (now put away from the Merchants) did grow, becauſe the Queens Majeſty did not accompliſh and end with his Embaſſador, his ſecret and weighty Affairs, according to his expectation, and the promiſe made by *Thomas Randolph* at his being here, and alſo by reaſon of the ill behaviour of your Merchants reſident here in our Country, as his Majeſty did himſelf yeſterday declare unto you.

II. ‘ To the ſecond, his Majeſty willed you to underſtand, that he hath not, nor will not hereafter be moved to break Friendſhip with the Queens Majeſty without good and juſt cauſe.

III. ‘ To the third, you are anſwered by the Emperour himſelf, that his Favour to the Merchants ſhall be reſtored, and the ſame to be known by his gracious Letters of Privilege now again granted.

IV. ‘ To the fourth, his Majeſty hath commanded that your Merchants here reſident ſhall exhibit and put in writing, unto me his Majeſties Secretary, of all their Griefs and Complaints, as well for Debts as Injuries offered to them ſince the time of his Highneſs's diſpleaſure, and they ſhall have Juſtice truly adminiſtred throughout all his Majeſties Dominions without delay.

V. ‘ To the 5th, his Majeſty doth not know any Debts due unto the Merchants from any of his Noblemen, as is alledged, and whether it be true or no, he knoweth not; the Truth whereof muſt be tried, and thereupon anſwer to be given, and hereafter his Majeſty would not have the Merchants to truſt his People too much.

VI. ‘ To the ſixth it is anſwered, that his Majeſty hath commanded ſearch to be made, what Money is owing to the Merchants for Wares received into his Treaſury, as in the Article, (moſt of the Books of Accounts being burnt in *Moſco*) and ſuch as is due, and found meet to be paid, ſhall be paid forthwith to the Merchants, their Factors or Servants, who ſhall come for the ſame; and for payment of the reſt, his Majeſties further pleaſure ſhall be ſignified hereafter.

‘ The 7th and 8th are granted.

‘ To the 9th and 10th Articles, his Majeſty will conſider of thoſe Matters, and hereafter will ſignify his Princely pleaſure therein.

XI. ‘ To the 11th, as touching an Inventory given into the Treaſury, what Goods the Merchants had burnt in their Houſes at *Moſco*, his Majeſties pleaſure was to underſtand the ſame, to the intent he might know the Loſſes of all Strangers at that preſent, but not to make reſtitution, becauſe it was God's doing, and not the Emperour's.

XII. ‘ To the 12th, concerning *Thomas Glover*, his Majeſty was informed by his Embaſſador, of the Queen's great Mercy and Clemency towards the ſaid *Thomas*, for his ſake, which his Majeſty received in good part, but what Agreement or Dealings was between Sir *William Garret* and his Company, and the ſaid *Glover*, or what he owes unto the ſaid Merchants, his Majeſty knows not; and as for the Money which the ſaid *Thomas* ſaith is owing unto him by the Emperour, his Majeſties Pleaſure is, that ſo much as ſhall be found due, and growing upon Wares delivered into the Treaſury, out of the time of his Majeſties diſpleaſure, ſhall be paid forthwith to the ſaid *Thomas*, and the reſt is forfeited to his Majeſty, and taken for a Fine, as appertaining unto *Rutter* and *Bennet*, accounted Traitors unto his Highneſs, during the time of his diſpleaſure.

XIII. ‘ To the 13th Article, concerning *Rutter* to be delivered unto you to be carried home, the Anſwer was, that as his Majeſty will not detain any *Engliſh-men* in his Country, who is willing to go home, according to the Queen's Requeſt, ſo he will not force any to depart that is willing to tarry with him; yet his Highneſs to ſatisfy the Queen's Requeſt, is contented at this preſent to ſend the ſaid *Ralph Rutter* home with you, and hath commanded that a Letter ſhall be written to his chief Officer at *Moſco*, to ſend the ſaid *Rutter* away with ſpeed, that he may be with you at *Vologhda* by the end of *May* without fail; and touching the reſt of your requeſt in the ſaid Article, his Majeſties pleaſure ſhall be ſignified in the Letters of Privilege granted to the ſaid Merchants.

XIV. ‘ The 14th Article is granted.

XV. ‘ The 15th touching *Beſſon*, the Emperour is much offended with him, and will ſend down a Gentleman with you to inquire into his ill behaviour, as well for ſpeaking undecent Words againſt the Queen's Majeſty as you have alledged, as alſo againſt you, and for his Outrages againſt the Merchants, mentioned in the Article: And the ſaid *Beſſon* being found guilty, to be impriſoned and puniſhed by ſevere Juſtice accordingly, and after to put in Sureties to anſwer the Emperour's high diſpleaſure, or elſe to be brought up like a Priſoner by the ſaid Gentleman, to anſwer his Offences before his Majeſty; and his Highneſs doth requeſt that the Queen would do the like upon *Middleton* and *Manly*, her Meſſengers ſent hither two Years paſt, and upon all others for their ill behaviour towards his Majeſty, as may appear by Letters ſent by *Daniel Silveſtre* from his Highneſs, leſt by bad demeanour of ſuch lewd Perſons, the Friendſhip between their Majeſties might be diminiſhed.

XVI. ‘ To the 16th and laſt Article, touching the Corn brought into the Emperour's Dominions by the Merchants, his Majeſty doth greatly commend them for ſo well doing, and hath commanded to give you a Letter forthwith in their behalf, directed to his Officers of *Dwina*, to ſuffer the ſaid Merchants to ſell their Corn at pleaſure, without paying Cuſtom.

Thus having received my Anſwer to the 16 Articles by me exhibited in writing, with the Emperour's Letters alſo to the Queen, I then requeſted that the new Letters of Privilege granted by his Highneſs, might be diſpatched that I might carry the ſame with me, and alſo that ſuch Money due to the Company, which his Majeſty had commanded me to be paid, might be delivered to me.

Touching the Letters of Privilege the Secretary anſwered, it is not poſſible you can have them with you, for they muſt be firſt ſhewed to the Emperour, and then three to be written of one Tenor, according to your requeſt, which cannot be done with ſpeed, becauſe his Majeſties pleaſure is, that you ſhall depart this Night before him, who removeth himſelf to morrow towards *Novogrod*, but without fail the ſaid Letters ſhall be ſent after you with ſpeed to *Colmogro*, and as to the Money you require, it cannot be paid here, becauſe we have not the Books of Accounts, for want whereof we know not what to pay: wherefore it will be beſt that you ſend one of the Merchants after the Emperour to *Novogrod*, and let him repair unto me there, and without fail I will pay all ſuch Money as ſhall be appointed by his Majeſty to be paid after the Books ſeen.

But there being none of the Companies Servants with me, I requeſted the Secretary that I might leave *Daniel* my Interpreter with him, as well for the Receipt of Money, as for the ſpeedy Diſpatch of the Letters of Privilege, but it would by no means be granted that I ſhould leave any of my own Company behind me, and thereupon I took my leave and went to my Lodging, where preſantly there came a Gentleman who had charge to conduct me, and to provide Boats, Men, Poſthorſes, and Victuals, all the way to the Sea-ſide, being 1300 Miles, and alſo to do juſtice upon *Beſſon* aforeſaid, and ſaid unto me, The Emperour's pleaſure is, that you ſhall preſently depart hence, and I am appointed to go with you. So that Night being the 14th of *May*, I departed from *Starites*, and arrived at *Vologhda* the laſt of the ſaid Month, where I remained five days, expecting a Meſſenger with the new Letters of Privilege, as alſo the coming of *Rutter* whom the Emperour himſelf had commanded before my Face to be ſent unto me without fail, and I did ſee the Letters written to the chief Officers at *Moſco* about it. Neverthelefs the ſaid *Rutter* did not come, neither could I hear of him after, nor know the cauſe of his ſtay, contrary to the Prince's own Word and Meaning, as I ſuppoſe; I therefore diſpatched *John Norton*, one of the Companies Servants with Letters to *Novogrod*, where the Court then lay, to advertiſe his Majeſty that *Rutter* was not ſent to me according to his Highneſs's Order, as alſo about the diſpatch of the ſaid Letters of Privilege, and receipt of the Money, giving the Meſſenger ſtrict charge to return unto me again before the departing of the Ships; and the firſt day of *June* I departed from *Vologhda* by Water towards *Colmogro*, where I arrived the 21ſt, and remained there until the 23d of *July*, expecting the return of my Meſſenger, who had time enough to have diſpacthed his buſineſs and come back again, but he came not, it being otherwiſe determined before his going, as I did after underſtand, and ſhall at large declare unto the Worſhipful Company as ſoon as I ſhall arrive in *England*.

CHAP. X.

The Voyage of Arthur Pett *and* Charles Jackman, *in two Barks, the* George *and the* William, *ſet forth by the* Ruſſian *Company, for the diſcovery of the North-eaſt Parts of the World,* Anno 1580. *Written by* Hugh Smith.

1580.

UPon *Monday May* the 30th, we departed from *Harwich*, and on the 23d of *June*, we put into *Wardhouſe*, to ſeek the *William*, whoſe Company we loſt on the 6th, and to ſend Letters into *England*; At one in the Afternoon the *William* arrived, with all her Company in health.

July.

They part from the William.

On the firſt of *July* the Wind coming fair, we ſailed from *Wardhouſe*. On the ſecond we bare down to the *William*, who ſailing very ill, Mr. *Jackman* told us he was willing to go to *Kegor*, to mend her Sterage. Mr. *Pet* anſwered him, that if he thought himſelf not able to keep the Sea, he ſhould do as he thought beſt, and that he in the mean time would bear with *Willoughbies* Land (it being part of our Inſtructions) and would meet him again at *Vaigats*; and ſo we ſet our courſe E. N. E.

A ſight of perfect Land to the Northward.

The third we were by our reckoning 50 Leagues E. N. E. from *Kegor*, no Ground in 120 Fathom. The 4th we haled S. E. by E. Lat. 71 Deg. 38 Min. On the fifth we ſaw Land, but could not come at it, the Wind being Northerly. On the 6th we met with Ice, and on the ſeventh there appeared more Land North from us, being perfect Land: The Ice was between us and it, ſo that we could not come nearer to it.

An Iſland.

On the tenth at ten in the Morning, we ſaw Land again, but durſt not bear with it by reaſon of a thick Fog. That Night we came with our Ship within an Iſland, where we rode all Night, and went into a Bay to ride near the Land for Wood and Water.

The main Land.

The 11th, about a League from us to the Eaſtward, we ſaw a very fair Sound or River, that paſt very far into the Country in two or three Branches, with an Iſland in the midſt.

Bearbay.

The 12th at eleven in the Morning, there came a great white Bear to the Water-ſide, and took the Water of his own accord; we chaſed him with our Boat, but for all that we could do, he got to Land and eſcaped from us: We named the place *Bearbay*.

This Afternoon we ſet ſail, and on the 13th met with great ſtore of Ice, and on the 14th were ſo embayed with it, that it was by God's great Mercy we came out of it, otherwiſe it had been impoſſible; Lat. 70 Deg. 26 Min. We lay along the Coaſt North Weſt, thinking it to be an Iſland, but finding no end in rowing ſo long, we ſuppoſed it to be part of *Nova Zembla*.

From this time to the 18th, we were conſtrained to go many Points of the Compaſs, as the Ice would give us leave, and on the 18th had ſight of the South part of *Vaigats*. We had but four Fathom Water, ſometimes three, and two and a half, and one and a half. There anchoring, we ſent our Boat to ſound, and all to Leeward had four Foot, three Foot, and two Foot; there was not Water for the Boat between *Vaigats* and the other ſide. Finding no more Water, there was no other way but to go back as we came in.

On the 20th we plied to the Northwards, and got into ſix or ſeven Fathom Water.

On the 21ſt we haled along the Coaſt North and North-weſt, and had eight, nine, and ten Fathoms.

On the 22d the Wind blew much with great Fog, and we lacking Water and Wood, bare with an Iſland, where we found ſtore of both. Under a Point of Land we found a Croſs ſet up, and a Man buried at the Foot of it: Upon the ſaid Croſs Mr. *Pett* did engrave his Name, with the Year of our Lord, and ſo likewiſe upon a Stone at the Foot of the Croſs, to the end, that if the *William* ſhould chance to come thither, they might know that we had been there.

The 23d the Wind came S. W. a Sea-board we ſaw ſix fair Iſlands, we haled N. E. and E. N. E. as the Land did trend. At eight very much Wind at S. E. with Rain and Fog, and great ſtore of Ice a Sea-board. At twelve it became calm on a ſudden, and the Wind coming W. N. W. we took in our Boat, and there came down ſo much Wind as we were not able to ſteer afore it with Courſe and Bonnets of each. We found the Ice to ſtretch into the Land, that we could not get clear to the Eaſtward, ſo we laid it to the Shoar, and found it clear near the Shoar, and we found alſo a very fair Iſland, which makes a good Harbour, and within are twelve Fathoms.

This Iſland is four or five Leagues to the Eaſtward of *Vaygats*; the Land of the Main tends S. E. and S. E. by E. It is an even and plain Coaſt, with ſix or ſeven Fathom Water a League from the Shoar. This day we found the Pole to be elevated 69 Deg. 14 Min. We put into the Ice to ſeek ſome way to get to the Northwards of it, hoping to have ſome clear Paſſage that way, but there was nothing but whole Ice. At nine in the Afternoon we had ſight of the *William*, and there was a great Land of Ice between us, ſo that we could not come one to the other, but we ſounded our Trumpet and ſhot off two Muskets, and ſhe put out her Flag upon her Fore-top-maſt, in token that ſhe did ſee us. We ſhortned ſail, ſeeking a way thro' the broken Ice, and at twelve at Night moored our Ship to a piece of Ice to tarry for the *William*.

The *George* and the *William* met.

The 25th at five in the Morning, the *William* came to us, to our mutual Joy; the *William* had her *Stern-poſt* broken, ſo that the Rudder hanging clean beſides the Stern, ſhe could in no wiſe port her Helm. With all hands we lightned her Stern and trimmed her Head, and when we had brought her forward all that we could, we brought a Cable under her Stern, and with our *Capſten* did wind up her Stern, and ſo made it as well as the place would give us leave, and in the end brought her to ſteer again. We acknowledge this our meeting to be a great bleſſing of God for our mutual Comfort, and gave the divine Majeſty thanks for it. All that Night we took our reſt, being made faſt to a piece of Ice, and indeed we were ſo incloſed with Ice, that we could not tell which way to paſs. Winds we have had at will, but Ice and Fog too much againſt our Wills, if it had pleaſed the Lord God otherwiſe.

The 26th, the Wind at W. N. W. we ſet ſail to the Northwards, to ſeek if we could find any way clear to paſs to the Eaſtward, but the further we went that way, the more and thicker was the Ice, ſo that we could go no further, but were conſtrained to moor upon another piece of Ice. I think we ſailed in all a League this day; here we found 15 Fathoms Oze, and this Oze is all the Channel over. This day Mr. *Jugman* did ſee Land E. N. E. from us, as he did think, whether it were Land or no, I cannot well tell; it was very like Land, but the Fogs have many times deceived us.

The 27th, the Wind at N. W. we ſet ſail to ſeek the Shoar; further into the Ice we could not go, and at ſeven in the Afternoon, we moored to a piece of Ice, the *William* being with us, here we had 14 Fathoms Oze. We wrapt from one Ice to another, and moored again to a piece of Ice until next day: All this Night it did ſnow, with much Wind at W. N. W. N. W. and by Weſt.

The 28th, the Wind at S. W. and S. S. W. a very fair day, Mr. *Pet* and Mr. *Jackman* conferred together what was beſt to be done, conſidering the fair Winds we had, and yet we were not able to paſs for Ice; they agreed to ſeek the Land again, and ſo to *Vaigats*, and there to confer further. We warped from one piece of Ice to another, to get free of them if it were poſſible. Here were pieces of Ice ſo great, that we could not ſee beyond them out of the top.

The Current runs with the Wind.

The 29th, the Wind S. W. we plied to the Shoar, making many turns among the Ice to ſmall purpoſe, for with the Wind doth the Current run.

The 30th, the Wind at S. E. and by S. we did our beſt to ſeek our way as the Ice would give us leave; ſometimes we lay South, ſometimes Weſt, and ſometimes Eaſt.

The 31ſt, the Wind at S. W. we did our beſt in turning to windward, but the Current would not give us leave; for, as I ſaid, the Current goes with the Wind. Perceiving that we did no good, we faſtned our Ship to a piece of Ice: All this day the *William* lay ſtill, and did as much good as we that had taken ſo much pains. This day the Pole was elevated 69 Deg. 20 Min. and here we had 17 Fathoms Oze.

Auguſt.

The firſt day of *Auguſt* was very calm in the Morning, the Wind at W. N. W. and continued ſo that Night with great Fog.

The ſecond day the Wind at S. W. all day with Rain and Fog, we lay ſtill, being incloſed with Ice; here we had 21 Fathoms Oze.

The third day, the Wind at Weſt, and W. N. W. we lay ſtill, incloſed in Ice, the Weather being dark with Fog. Thus abiding the Lord's leiſure, we continued with patience, and ſounding we had 21 Fathoms.

The fourth day we lay ſtill incloſed with Ice, the Wind at W. N. W. the Ice every day increaſed upon us, yet putting our truſt in God, we hoped to be delivered out of it in good time.

The fifth it rained all the Morning with very much Wind at S. S. E. then we ſet ſail, and preſently it became calm for an Hour, and then the Wind came to N. N. E. and we made way among the Ice S. W. and S. S. W. and W. as we could find a way for the ſpace of three Hours; then meeting with a whole Land of Ice, We could go no further, but mored our Ship to tarry for a further opening: Here we found 45 Fathoms Oze, and all the Night was very dark with Fog.

The 6th, 7th, and 8th, the Wind from W. by S. to W. by N. we lay ſtill, being incloſed with Ice that we could not ſtir, labouring only to defend the Ice as it came upon us, the Wind towards Night came to S. S. W. and then the Ice began a little to open: Here we had 70 Fathoms Oze, the Night foggy.

The 9th the Wind at N. W. by W. we lay ſtill becauſe the Ice did yet incloſe us Latitude by Obſervation, 70 Deg. 4 Min. the Night very fair, but it freezed, ſo that in the Morning we had much ado to go thro it, and we feared that if it ſhould freeze ſo much the Night following, we ſhould never get out of it. This Night one Star appeared to us.

Stars appearing a ſign of Winter.

The 10th, the Wind at E. N. E. we with Sail and Oars, made way thro' the Ice, and that Night it ſnowed very much.

The 11th, the Wind at S. W. by great force we made our way through the Ice, which we thought a thing impoſſible, but Extremity makes Men do much, and in the Weakneſs of Man, God's ſtrength moſt appears: This Night we had 97 Fathoms.

The 12th the Wind from S. E. to W. S. W. all the day very dark with Snow and Fog. At ſix in the Afternoon we ſet ſail, the Wind at N. N. E. and bare away S. W. all this Night we found the Ice more favourable to us than it was before, which gave us good hopes to get out of it.

The 13th the Wind at N. E. with a blow againſt a blow againſt a piece of Ice, we brake the Stock of our Anchor, and many other great blows we had, that it was marvellous the Ship was able to abide them. The ſide of our Boat was broken by the recoyling of our Ship, the Boat being betwixt a great piece of Ice and the Ship, and it periſhed the Head of our Rudder, This day was a very hard day with us, and all Night it blew very much Wind, ſo that we drove with the Ice, and our drift was South, and we had great ſtore of Snow.

The 14th the Wind continued Northerly, we faſtned our Ship to a piece of Ice, and drove with it.

The 15th, the Wind at N. E. at nine in the Morning we entred into a clear Sea without Ice, whereat we rejoiced, and not without great cauſe, giving God the praiſe. We had 19 Fathom Water, and at twelve a Clock had ſight of the Land three Leagues from us. This Day we had the Pole elevated 69 Deg. 49 Min. we ran along the Coaſt in ten and nine Fathoms peppered Sand; It is a bold Coaſt without Sands or Rocks.

The 16th the Wind was at Eaſt; we were troubled again with Ice, but we got between the Shoar and it. At twelve we were thwart of the South-eaſt part of *Vaigats*, all along which there was great ſtore of Ice, ſo that we doubted of paſſage, yet with much difficulty we got between the Shoar and it. The day was dark with Fog, we haled N. by W. and ſometimes N. by E. for ſo the Land trends.

The 17th we haled Weſt, for ſo the Land lies: The Wind at S. E. very dark with Fog, and in running along the Shoar we came aground, but God be praiſed, without hurt, for we were preſently off again. The *William* came to an Anchor to ſtay for us, and ſent ſome of their Men to help us, but before they came we were under ſail: We went within ſome of the Iſlands, and haled W. S. W.

The 18th, 19th, and 20th, the Wind Eaſterly, at ſeven this Morning we had 30 Fathom black Oze, and at twelve were upon the ſudden in ſhoul Water, among great Sands, and could find no way out. By ſounding and ſeeking about, we came aground, and ſo did the *William*, but the Wind being off the Shoar, we had no hurt, and the Night being calm, we did our beſt all Night, but could not ſet her afloat. Theſe Shoals lie off of *Colgoyeve*, it is very flat a great way off, and it does not high above two or three Foot Water; it flows N. E. and S. W.

The 21ſt, the Wind at S. W. and being fair Weather, we did lighten our Ship as much as was poſſible for us to do, by reaſon of the place. The ſame high Water, by the help of God, we got both afloat, and the Wind being at S. W. did help us, for it cauſed it to flow the more Water, Latitude 68. Deg. 40 Min. We ſet ſail to ſeek a way out of theſe Sands, our Boat a head ſounding, having ſix, ſeven and eight Fathom. We bare to the Southward, and the *William* bare more to the Eaſtward.

They loſe ſight of the *William*.

The 22d at eight in the Morning, we ſaw the *William* under our Lee as far as we could ſee her, and in a great Fog loſt ſight of her, and never ſaw her more.

On the 23d we had ſight of the Land of *Hugri*, and and on the 27th we ſaw Land again, which we made to be *Kegor*; and on the 31ſt we doubled the North Cape.

We met afterwards with Southerly Winds, which obliged us to put into divers Sounds in *Norway*, where we lay until the firſt of *December*, and then departing from *Scop* Sound, on the ninth we had ſight of *Scotland*,

and on the 26th anchored at *Ratclif*, and praiſed God for our ſafe return.

Charles Jackman in the *William* arrived at a Port in *Norway*, between *Fronden* and *Roſtock*, in *October* 1580, and there did Winter; and from thence departed again in *February* following, and went in Company of a Ship of the King of *Denmark*'s, towards *Iſland*, and ſince that time he was never heard of.

CHAP. XI.

The Voyage of Sir Jerom Bowes *Knight, her Majeſties Embaſſador to* Juan Vaſilvich, *Emperour of* Ruſſia, An. 1583.

1583. THE Emperour having the laſt Year ſent an ancient diſcreet Gentleman of his Houſhold named *Pheodor Andreuich Phiſemsky*, as his Embaſſador to *England*, who had in ſpecial charge to ſollicit her Majeſty to ſend over with him to his Maſter an Embaſſador from her, to treat of important Affairs concerning both Realms; Her Majeſty made choice of Sir *Jerom Bowes*, a Gentleman of her Court, who being attended with 40 Perſons, whereof many were Gentlemen, took his leave of her Majeſty the 18th of *June*, and with the other Embaſſador embarked at *Harwich* the 22d of the ſame, and after a ſtormy Voyage at Sea, arrived at St. *Nicholas* the 23d of *July* following.

The *Ruſſe* Embaſſador having repoſed himſelf one day in the Abby, took his leave of the *Engliſh* Embaſſador, and departed towards *Moſco*.

The *Engliſh* Embaſſador tarried four or five days, and then went to *Colmogro*, about 80 Miles diſtant from St. *Nicholas*.

You muſt here underſtand, that before the *Engliſh* Embaſſadors going into *Ruſſia*, the *Hollanders* had intruded into our Trade, notwithſtanding a Privilege was long before granted to the *Engliſh* for the ſole trade thither. The *Dutch* had by chargeable means won three of the Emperour's chief Counſellors to be their aſſured Friends, namely *Mekita Romanovich*, *Bodan Belskoy*, and *Andrew Shalkan* the Chancellor; for beſides daily Gifts which they beſtowed upon them all, they took ſo much Money of theirs at Intereſt at 25 *per Cent.* as they paid to one of them 5000 Marks yearly for the uſe of his Money; and the *Engliſh* Merchants at that time had not one Friend in Court.

The Embaſſador having ſpent five Weeks at St. *Nicholas* and *Colmogro*, there came a Gentleman from the Emperour to conduct him up the River towards *Moſco*, and to provide Victuals for him on the way.

This Gentleman being a Follower of *Shalkan* the Chancellour, was by him (as it ſeemed) foiſted into that Service, on purpoſe to offer Diſcourteſies and Occaſions of Diſtaſt to the Embaſſador; for the Chancellour with the other two great Counſellours were reſolved to oppoſe themſelves directly againſt her Majeſties Embaſſage, eſpecially in that Point, for the barring all Strangers from trading into the Emperour's Country.

This Gentleman conducted him 1000 Miles up the River *Dwina*, as far as *Vologhda*, where he was received by another Gentleman of greater quality than the other, who preſented the Embaſſador from the Emperour, with two fair Geldings, well furniſhed after their manner.

At *Teraſlave* he was met by a Duke well accompanied, ſent from the Emperour, who preſented him from the Emperour with a Coach and ten Geldings, for the more eaſy conveying him to *Moſco*, from whence the City was diſtant 500 Miles.

Two Miles on this ſide *Moſco* the Embaſſador was met by four Gentlemen accompanied with 200 Horſe, who after a little ſalutation, not familiar without embracing, told him that they had ſomewhat to ſay to him from the Emperour, and would have had him alight on foot to hear it, themſelves ſtill ſitting on Horſeback, which the Embaſſador refuſing to do, they ſtood long upon terms, whether both Parties ſhould alight or not, which at laſt was agreed upon, yet there was great niceneſs whoſe Foot ſhould not be firſt on Ground.

Their Meſſage delivered, they embraced each other, and the Embaſſador was by them conducted to his Lodgings at *Moſco*, a Houſe built on purpoſe for him, themſelves being placed in the next Houſe to it, to furniſh him with Proviſions, and to be uſed by him upon all other Occaſions.

The Embaſſador having been ſome days in *Moſco*, was ſent for to Court, and was accompanied with about 40 Gentlemen, well mounted and ſumptuouſly arraied; and in his paſſage from his Lodging to the Court, ſtood five or ſix thouſand Muſqueteers of the Emperour's Guards. At the entry of the Court he was met by four Noblemen in Cloth of Gold and rich Furs, their Caps embroider'd with Pearl, who conducted him till he was met by four others of greater quality than them, who conducted him to the Emperour's Chamber-door, in which Paſſage there ſtood along the Walls, and ſate upon Benches in rows, ſeven or eight hundred Perſons, ſaid to be Noblemen and Gentlemen, all in coloured Sattins and Cloth of Gold. At the Door he was received by the Emperour's Herald, and all the great Officers of his Chamber, who conducted him to the place where the Emperour ſate in ſtate, having three Crowns ſtanding by him, *viz.* of *Muſcovia*, *Cazan*, and *Aſtracan*, and two young Noblemen on each ſide of him, apparell'd in white, each of them with a fine broad Ax upon his Shoulder, and there ſate upon Benches about 100 Noblemen in Cloth of Gold.

The Embaſſador thus brought to the Emperour to kiſs his Hand, after ſome Complements and Inquiry of her Majeſties health, he willed him to ſit down in a place provided for that purpoſe, nigh ten Paces diſtant from him, from whence he would have had him to ſend him her Majeſties Letters and Preſent, which the Embaſſador thinking not reaſonable, ſtept forward towards the Emperour, but was intercepted by the Chancellour, who would have taken his Letters, to whom the Embaſſador ſaid, that her Majeſty had directed no Letters to him, and ſo went on, and delivered them himſelf to the Emperour's own Hands.

He was thence conducted to the Council Chamber, where, after ſome conference, he was ſent for again to the Emperour, where he dined in his preſence at a ſide Table near unto him, and all his Company at another Board by; there alſo dined at other Tables in the ſame Room, about 100 of the chief Noblemen that were about the Court. The Emperour uſed many Favours to the Embaſſador, and about the middle of Dinner ſtood up, and drank a great Carouſe to the Health of the Queen his good Siſter, and ſent him a great Bowl full of Rheniſh-wine and Sugar to pledge him.

The Embaſſador after this, was often called to Court, where he had conference with the Emperour and his Council, touching both Embaſſages, which divers times raiſed many Jars; and in the end, after ſundry Meetings, the Emperour being diſſatisfied, becauſe the Embaſſador had not power by his Commiſſion to yield to every thing he thought fit (as a Man whoſe Will was ſeldom uſed to be gainſaid) let looſe his Paſſion, and with a ſtern and angry countenance told him, that he did not reckon the Queen of *England* to be his Fellow, for there are (quoth he) that are her Betters.

The Embaſſador greatly diſliking theſe Speeches, and being very unwilling (how dangerous ſoever it might prove to his own Perſon) to give way to the Emperour to derogate from the Honour and Greatneſs of her Majeſty, with like Courage and Countenance to his, told him, that the Queen his Miſtreſs was as great a Prince as any was in Chriſtendom, equal to him that thought himſelf the greateſt, well able to defend her ſelf againſt the Malice of any whomſoever, and wanted no means to offend any that either ſhe had, or ſhould have cauſe to be Enemy unto. Yea (quoth he) how ſaiſt thou to the *French* King, and the King of *Spain*?

Truly (quoth the Embaſſador) I hold the Queen my Miſtreſs as great as either of them. Then what ſaiſt thou (quoth he) to the Emperour of *Germany*? The Embaſſador anſwered, Such is the Greatneſs of the Queen my Miſtreſs, that the King her Father had not long ſince the Emperour in his pay, in his Wars againſt *France*.

This Anſwer ſo diſpleaſed the Emperour, that he told him, if he were not an Embaſſador, he would throw him out of the Doors: whereunto he anſwered, that he might do his will, for he was now faſt within his Country, but he had a Miſtreſs, who (he doubted not) would be revenged of any Injury ſhould be done unto him. Whereupon the Emperour in great heat, bid him get him home, and he with no more reverence than ſuch uſage required, ſaluted the Emperour and departed.

The Embaſſador was no ſooner gone, and the Emperour's choler ſomewhat ſetled, but he commended the Embaſſador before his Council, becauſe he would not endure one ill word to be ſpoken againſt his Miſtreſs, and therewithal wiſhed himſelf to have ſuch a Servant.

About an Hour after he came to his Lodging, the Emperour ſent his Principal Secretary to him to tell him, that notwithſtanding what had paſt, yet for the great love that he had for the Queen his Siſter, he ſhould very ſhortly be called again to Court, and have a reſolution of all the Matters in queſtion: And further imparted to him, that the Emperour would ſend a greater Nobleman home with him in Embaſſage to the Queen his Siſter, than ever he yet at any time ſent out of his Country; and that he determined alſo to ſend to the Queen a Preſent worth 3000 *l.* and to gratify himſelf at his departure, with a Gift that ſhould be worth 1000 *l.* and told him alſo that the next day the Emperour would ſend a great Nobleman to him, to confer with him about certain Abuſes done to him by *Shalkan* the Chancellour and his Miniſters.

And accordingly on the day following, he ſent *Bodan Bleskoy*, the chiefeſt Chancellour he had, and moſt in credit with him, who examined all the Embaſſador's Grievances, righting him in all things wherein he had been wronged, and ſupplying him with what he wanted.

Soon after, the Emperour ordered a larger Allowance of Diet for the Embaſſador than he had before. It was ſo great, that the Embaſſador oftentimes ſought to have it leſſen'd, but the Emperour would not by any means.

The Scroul of the new Diet was this.

One Buſhel of fine Meal for three days.
One Buſhel of Wheat Meal for a day and a half.
Two live Geeſe for a day.
Twenty Hens for a day.
Seven Sheep for a day.
One Ox for three days.
One ſide of a Pork for a day.
Seventy Eggs.
Ten Pound of Butter.
Seventy Penny white Loaves of Bread.
Twelve Penny Loaves of Bread.
One Gallon of Vinegar.
Two Gallons of ſalt Cabbages.
One Peck of Onions.
Ten Pound of Salt.
One Altine or ſix penny worth of Wax Candles.
Two Altines of Tallow Candles.
A Quart of Cherry Mead.
As much of *Mallynovo* Mead.
Two Quarts of burnt Wine.
One Gallon of ſodden Mead.
Three Gallons of ſweet Mead.
Ten Gallons of white Mead.
Fifteen Gallons of ordinary Mead.
Four Gallons of ſweet Beer.
Fifteen Gallons of Beer.
Half a Pound of Pepper.
Three Ounces of Saffron.
One Ounce of Mace.
One Ounce of Nutmegs.
Two Ounces of Cloves.
Three Ounces of Cinamon.

Provender.

One Buſhel of Oats.
One Load of Hay.
One Load of Straw.

Now he began ſo much to diſcover his Purpoſe and Affection towards her Majeſty and her Country, that he ſent to the Embaſſador, intreating him that Mr. *Cole* his Preacher, and Doctor *Jacob* his Phyſician, might ſet down the Points of the Religion in *England*, which was done accordingly, and ſent unto him, who ſeemed ſo well to like them, as he cauſed them to be publickly read (with good approbation) before divers of his Council and many others of his Nobility.

Then he ſeemed very eager to marry ſome Kinſwoman of her Majeſties, and ſaid, he would ſend again into *England* to have one of them to Wife, and if her Majeſty would not upon his next Embaſſage ſend him ſuch a one as he required, he would then go into *England*, and carry his Treaſure with him, and marry one of them there.

Here you muſt underſtand, that laſt Year he had ſent to her Majeſty by his Embaſſador, to have had the Lady *Mary Haſtings* in Marriage, which Treaty by means of her inability of Body, much Sickneſs, or perhaps by reaſon of no great liking either her ſelf or Friends, or both, took no place.

The Embaſſador was now ſo far grown into the Emperour's Favour, that thoſe great Councellours who were his great Enemies before, were now deſirous of ſome publick Courteſies at his Hands for their Advantage to the Emperour: Nor durſt they now any more interpoſe betwixt the Emperour and him; for not long before this, the Emperour had grievouſly beaten *Shalcan* the Chancellour, for abuſing the Embaſſador, and ſent him word that he would not leave one of his Race alive.

The Embaſſadour improving his Favour with the Emperour, obtained divers Suits from him for the Benefit of his Countrymen, among which was an old Debt of 3000 Marks, a Debt ſo deſperate, that it had been left out of their Accounts four Years, and in the opinion of all the Merchants, not fit to be mentioned for fear of offending the Emperour too much, and was therefore left out of his Inſtructions from her Majeſty.

He obtained alſo the repayment of 1500 Marks, which had been exacted from them the two laſt Years before his coming thither.

Alſo that all Strangers were forbidden to trade any more into *Ruſſia*, and that the Trade in all the Emperour's Northern Coaſt, from *Wardhouſe* to the River *Ob*, ſhould be only free to the *Engliſh* Nation.

He obtained alſo for the *Engliſh* Merchants, the abatement of all Cuſtom, which they had long before paid, and agreed ſtill to continue, amounting to 2000 *l.* yearly.

And among his private Grants, he got leave for *Jane Ricardo* to return home; ſhe was the Widow of Doctor *Bomelius* a *Dutch-man*, and Phyſician to the Emperour, who for practiſing Treaſon with the King of *Poland* againſt the ſaid Emperour, was roaſted to death at *Moſco*, in the Year 1579.

All theſe were granted, ſome of the Money already repaid, the old Privileges ſigned, ſealed, and was to be delivered to him at his next coming to Court, before which time the Emperour died of a Surfeit, on the 18th of *April*, 1584. having reigned 54 Years.

The death of the Emperour *Juan Vaſilivich*

The caſe was now wonderfully alter'd with the Embaſſador, who now fell into the Hands of his great Enemies, *Mekita Romanovich* and *Andrea Shalkan* the Chancellour, who after the death of the Emperour, took the Government upon themſelves, and preſently cauſed the Embaſſador to be ſhut up a cloſe Priſoner in his own Houſe, for the ſpace of nine Weeks, where he was ſo ſtrictly guarded and badly uſed, as he daily ſuſpected ſome further miſchief to have followed: At laſt he was ſent for to Court to have his Diſpatch, and to take his leave of the Emperour, whether being conducted (not after the uſual manner, and brought to the Council Chamber, there came to him only *Shalkan* the Chancellour and a Brother of his, who without more Words, told him for the Sum of his Diſpatch, That this Emperour would not treat of further Amity with the Queen, than ſuch as was between his late Father and her, before his coming thither; and they would not hear any reply to be made by the Embaſſador, but preſently cauſed him and all his Company to be diſarmed, and go towards the Emperour. In his Paſſage ſuch Outrages were offered him, as, had he not uſed more patience than his natural diſpoſition afforded him, he had not in likelyhood eſcaped with Life, yet at laſt was brought into the Emperour's preſence, who ſaid nothing to him more than what the Chancellour had ſaid, but offered him a Letter to carry to her Majeſty, which the Embaſſador (becauſe he knew it contained nothing concerning his Embaſſy) refus'd, till he ſaw his Danger grow too great. Neither would the Emperour ſuffer the Embaſſador to reply, nor could he well, becauſe they had taken away his Interpreter, that the Emperour might not know how diſhonourably he had been uſed. He was ordered to depart from *Moſco* before the Coronation of the new Emperour,

perour, and there was no Favour or Friendſhip left for him, *Shalkan* the Chancellour having ſent him word that the *Engliſh* Emperour was dead. He had only one Gentleman appointed to accompany him to the Sea-ſide, and underſtanding before he left *Moſco*, that ſome ſudden revenge was deſigned againſt him upon the way, he provided the beſt he could for his defence, by arming his Servants, and commanding the *Engliſh* Merchants in her Majeſties name to accompany him, that if any ſuch attempt ſhould be made againſt him, the Aggreſſors ſhould die with him for Company: This Reſolution of his was thought to contribute to his ſafety, altho' none of the *Engliſh* Merchants did accompany him. He was forced to digeſt many Injuries upon the way before he reached St. *Nicholas*, and then recollecting his ill uſage at *Moſco*, and the poor and diſgraceful Preſent ſent him (in the name of the Emperour) inſtead of that which was intended for him by the old Emperour, knowing all this to be done in diſgrace of her Majeſty and himſelf, he reſolved now to be diſcharged of the Letter and Preſent, and ſo furniſhing and placing his Men to anſwer any aſſault that ſhould be offered him in getting to his Ship, he bid farewel to the uncourteous Gentleman that brought him thither, and then ſent three or four of the moſt valiant and diſcreet Men he had, with his Majeſties weak Letter and worſe Preſent to be delivered to him or left at his Lodging, and then recovered his Ship in ſafety, altho' preſently after there was great hurly burly after him, to force him to receive the ſame again, but they failed of their purpoſe; ſo departing from St. *Nicholas* the 12th of *Auguſt*, he arrived at *Graveſend* the 12th of *September*, in the Year 1584.

CHAP. XII.

A ſhort Narrative of the Tragical Revolutions in Ruſſia, *after the death of* Juan Vaſilowich.

Demetrius murthered.

IVan Vaſilowich dying in 1584, in the 54th Year of his Reign, left two Sons, *Pheodore* aged 25 Years, who ſucceeded him, and *Demetrius* an Infant, who was ſent with his Mother to a Town called *Ouglets*. He left alſo one Daughter married to the Lord *Boris*, whoſe Siſter *Irenia* was married to the Emperour *Pheodore*. This Lord aiming at the Soveraignty, procured the death of the young Prince *Demetrius* in this manner. The great Bell at *Ouglets*, being rung as is uſual in caſe of Fire, ſome were ſet to kill him as he came forth. The Inhabitants, to put away ſuſpicion from themſelves, killed ſuch of the Family as they met in their fury; notwithſtanding which, *Boris* exerciſed ſevere Tortures and terrible Executions upon them. Not long after, the Emperour *Pheodore* died in the Year 1598, not without ſuſpicion of being poyſoned by *Boris*, having reigned 14 Years. He was impotent in Body and Mind, and very ſuperſtitious in Religious Matters, ſo that his Father was wont to ſay of him, *That he was fitter to ring Bells in Churches, than to govern an Empire.*

Death of *Pheodore*.

The Empreſs ſucceeds.

As ſoon as the Funeral was over, his Will was read, whereby the Empreſs (Siſter to the Lord *Boris*) with the Patriarch, were intruſted with the Adminiſtration of the Government. Hereupon a general Aſſembly of the States was held at *Moſco*, and their Oaths given to the Empreſs, who immediately went into a Nunnery, there to paſs the 40 days of mourning; in which time, either by her own Inclination, or her Brother's Perſwaſion, ſhe renounced the World, and transferred the Government upon the *Boiarens*, that they according to their Wiſdom, and Love to their Country, might take care thereof; whereupon the People were ſo moved, that they came thronging to the Nunnery Gates, imploring her care in ſo perilous a time, whom alone they were bound to ſerve. She commanded them to go to the *Knazeys* and *Boiarens*, but they proteſted againſt them, ſaying, That they had ſworn to her, and would be ordered by Lord *Boris* her Brother. Hereupon *Boris* went out to appeaſe the Multitude, and undertook, together with the *Knazeys* and *Boiarens*, to adminiſter the Government during the 40 days of mourning, in which time the Empreſs profeſſed her ſelf a Nun, changing her Name to *Alexandria*.

She enters into a Nunnery.

And profeſſes.

The time of mourning ended, the People were called into the Caſtle, where the Chancellor made an Oration, perſwading them to ſwear Obedience to the *Knazeys* and *Boiarens*, which they with Out-cries diſclaimed, ſaying, they would do it to none but the Queen and Lord *Boris*. The Council ſitting to conſider thereof, the Chancellour came forth and commanded them to ſwear to the *Knazeys* and *Boiarens*, the Queen being now become a Nun, wheupon they unanimouſly named Lord *Boris* as one worthy of the State, to whom they were ready to ſwear. He being preſent, roſe up and modeſtly excuſed himſelf, proteſting his unwillingneſs and unworthineſs, and willed them to chooſe ſome other more worthy; and going thence immediately toward the Church, they laid Hands on him, with loud Cries and Lamentations, beſeeching him not to forſake them. He weeping, ſtill refuſed, alledging his inſufficiency, and the more to inflame their deſire, abſented and hid himſelf a whole Month with his Siſter in the Nunnery. The People fearing his flight, beſieged the place, and with continual clamours, urged the Queen to perſwade her Brother to accept the Empire. She again ſends them to the *Knazeys* and *Boiarens*, upon the mentioning of whoſe Names they began to mutiny. *Boris* then went forth and told them, if they were no quieter, he alſo would take Sack-cloth, and enter into a Monaſtery, as his Siſter had done; whereupon they caſt out ſome deſperate threats of looking to themſelves, ſince the Commonwealth was ſo neglected. At laſt the Queen by their importunity, perſwaded her Brother no longer to reſiſt God's Will, who had put this conſtancy into the Peoples Minds, and to accept that which God ſeemed thus to command.

Boris after many Excuſes, at laſt ſeemed to be overcome by his Siſter's Intreaties, and aſſented to her, who ſignified as much to the People, to whom ſhe preſented him, praying them to be as loyal to him, as they had been earneſt for him. *Boris* alſo ſpake unto them in this manner. ‘Foraſmuch as it ſeemeth good to the ‘Divine Grace and Providence whereby all things are ‘governed, that by common Conſent and continual ‘Prayers, I take upon me the Principality over you ‘and all the Provinces of *Ruſſia*; I will no longer re‘ſiſt, how heavy ſoever I conceive this Burthen to my ‘Shoulders, but have determined to undertake your ‘Protection with greateſt Fidelity, being ready to ‘ſway the *Ruſſian* Scepter and Government, as far as ‘God's Grace ſhall enable me; on the other ſide, be you ‘faithful to me and to my Command, as God may ‘you help. I am your moſt gentle King.

Boris his Speech.

Joyful Acclamations followed, with Proteſtations of their Fidelity and future Obedience. He entring the Monaſtery, after Prayers received the firſt Benediction, and the Bells of *Moſco* (of which are reckoned 3000) reſounded the publick Joy. All the Magiſtrates, and ſuch as received Salaries of the King, preſented him, according to cuſtom, with Gold, Silver, precious Stones, Bread and Salt, humbly deſiring his acceptance, with Wiſhes of long Life and Happineſs: He rendring them thanks, accepted the Bread and Salt only, ſaying, *Theſe were his, the reſt they ſhould keep themſelves.* Then inviting them to a Feaſt, he with *Mary* his Wife, *Theodore* his Son of ten, and *Arſenica* his Daughter of 16 Years of Age, went out of the Monaſtery in ſolemn Proceſſion to the Caſtle. The like Preſents were offered to his Wife and Children, who accepted the Bread and Salt only.

The Feſtival ended, a ſolemn Oath was taken from all the Governours: Then came News that the *Crim Tartars* had entred the Borders, hoping to find all things in confuſion; whereupon he aſſembled an Army of 300000 Men, and marched in Perſon againſt them; the *Tartars* hearing how things went, ſent Embaſſadors to the Emperour's Tents, and returned home, whereupon he marched back to *Moſco*, where he was ſolemnly crowned by the Patriarch.

Boris crowned.

Twelve days together all Orders were feaſted in the Caſtle, and the Magiſtrates and Officers had a Years pay given them; the *German* Merchants had Money lent them, to be repaid ſeven Years after without uſury, and Immunities and Privileges were granted to thoſe of other Countries: Alms were diſtributed to Widows, Orphans, and other poor Perſons: *Pheodore*'s Obſequies were ſolemnly performed, the Prieſts richly rewarded, and the whole Empire, which ſeemed to be dead, received a glorious Reſurrection.

And now to eſtabliſh what he had begun; his firſt care was to increaſe his Treaſure; and as at firſt he was popularly prodigal, ſo after a ſmall time he became very penurious, ſhortning the Allowance of the Court from what it had been in former times. His next care was, to hold good Terms with other Princes, and by forreign Alliances, to ſettle on his own Race, this new gotten Empire. He is ſaid for this end, to have ſought a Wife for his Son out of *England*, and a Huſband for his Daughter out of *Denmark*. His Wife being a Woman of a haughty Spirit, thought her too good for any *Hollop* (ſo they call their Slaves, and ſuch ſhe eſteemed all her Subjects and for that reaſon refuſed to give her in Marriage to *Peter Baſman*, the beſt Commander in the Army.

His Policies.

But while his Sun now ſhined in the height of his Courſe, there aroſe ſuch groſs Vapours out of *Demetrius*'s Grave, as not only eclipſed his Imperial Glory, but engendred ſuch a bloody Storm, as not only overwhelmed him and all his Family, but alſo the whole Empire.

Demetrius.

About the middle of *October*, 1604, news was brought to Court, that one who named himſelf *Demetrius Evanowich Beala*, who was ſuppoſed to have been murther'd at *Ouglets*, was up in Arms for his Right and Inheritance. This *Demetrius* was in his youth ſhorn a Friar in a Monaſtery, from whence making his eſcape he went into *Poland*, where calling to mind the fond conceit among the *Ruſſes*, that *Demetrius Evanowich* was ſecretly conveyed away, and that ſome other was murthered in his ſtead, and knowing the general diſtaſt of the Government of *Boris*, having alſo many Circumſtances of Time, Age, and Features, to advantage and ſecond his Pretence; firſt made himſelf known to the Principal Jeſuits in *Poland*, to whom he promiſed, if he might receive help for the recovery of his juſt Inheritance, his firſt care ſhould be to reduce the *Ruſſians* to the union of the *Roman* Church. The *Jeſuits* communicated the Matter to the Pope, and brought him to the Palatin of *Sendomir*, a potent Man in that Kingdom, whoſe Daughter he covenanted to marry if he ſucceeded in his *Ruſſian* Enterpriſe. The *Palatin* brought him before King *Sigiſmund*, who gave him a Chain of Gold, and promiſed to aſſiſt him.

Thus by the King's Favour, the *Palatine*'s Money, and the *Jeſuits* Induſtry, he raiſed an Army of 10000 Souldiers in *Poland*, and in his march was joined by 10000 *Caſſacks*. *Boris* ſent an Army of 100000 Men againſt him; he alſo ſent Embaſſadors into *Poland*, to put them in mind of the League between both Nations, and to deſire that this Counterfeit *Demetrius*, a Prieſts Baſtard, might be delivered to him alive or dead, adding Threats if they perſiſted: The Patriarch alſo with the Biſhops and Spiritual Men of *Ruſſia*, wrote unto the Spiritual Men of *Poland*, declaring unto them what that Heretick and Traitor was, from whence he came, and the occaſion of his running away, as alſo the manner of the making away of Prince *Demetrius*, and withal requeſting the Rulers and Spiritual Men of *Poland*, that they now knowing what a Runnagate this was, would not give credit to him, nor break the League concluded between them.

But ſuch was the prevailing Power of the Pope and Jeſuits in *Poland*, that no credit was given to theſe Writings. Both Armies meeting, *Demetrius* confident (as he made ſhew) in the Juſtice of his Cauſe, called upon God, ſo as he might be heard of all, with his Hands ſtretched forth, and his Eyes lifted up to Heaven, in ſuch like Words, *O moſt juſt Judge, kill me firſt with a Thunder-bolt, deſtroy me firſt and ſpare this Chriſtian Blood, if unjuſtly, if covetouſly, if wickedly I undertake this Enterpriſe; thou ſeeſt mine Innocency, help the just Cauſe; to thee O Queen of Heaven, I commend my ſelf and theſe my Souldiers.* *Demetrius* got the Victory, which he uſed with great modeſty; *Boris* hereupon ſent ſome with large Promiſes to murther him, and the Patriarch excommunicated all that favoured him. *Demetrius* wrote hereof modeſtly to the Patriarch, and to *Boris* alſo, offering fair Conditions if he would reſign his uſurped Empire, which he with Indignation rejected, and is ſaid to have been in ſuch a chafe, that he fell down ſuddenly, much Blood paſſing from his Mouth, Noſtrils, and Ears, and in the end of *April* died, ſome ſay of an Apoplexy, others that he poyſoned himſelf, having reigned ſeven Years.

Demetrius his Prayer,

The death of *Boris*.

His Wife and Son being advanced to the Throne, and the Nobility ſworn to them, *Peter Baſman* their great General, who had performed many honourable Services, and was the Man of greateſt hope and expectation in the whole Empire, was ſpeedily diſpatched with an Army, but upon his march revolted to *Demetrius*, and with him all the *Engliſh*, *Scots*, *French*, *Dutch*, and *Flemings*. They were all kindly received by *Demetrius*, who marching towards *Moſco*, ſent Meſſengers with Letters to the Lords of the Council, which entring the Suburbs, were conducted by infinite numbers of the Commons to a ſpacious Plain before the Caſtle Gate, where the Council then ſate, and were ſummoned by the ſaid Meſſengers, to come and hear their rightful King *Demetrius Ivanowich*, ſpeaking unto them by Letters; many of them came, for otherwiſe the Commons were reſolved to fetch them out; then the Emperour's Letters were read aloud to this effect.

Peter Baſman revolts to *Demetrius*.

'That he much wondred, having ſent many Letters 'and Meſſengers to them, with manifeſt Proofs of being 'their lawful Prince, as being the Son of *Juan Vaſilowich*, and the only Brother of *Pheodore*, ſelf-Upholder 'of happy memory, their late Emperour; yet notwith'ſtanding his long Patience, they had not only refuſed to 'anſwer his Princely Letters, but had been ſo preſump'tuous as to detain his Meſſengers; all which, notwith'ſtanding, he being confident of his juſt Title, and wil'ling to ſpare his Subjects Blood, had in his Princely 'Wiſdom and Clemency, again wrote, theſe his laſt 'Peace-requiring and Grace-offering Letters, and to this 'end had ſent Men of great Birth, with Commiſſion to 'diſplace his Enemies the *Gedonoves*, and others, till his 'further Pleaſure were known; and if they would now 'ſubmit themſelves to him, as to their lawful Prince and 'Soveraign (as he was well ſatisfied they in their Conſciences knew him to be) they ſhould yet find him a gracious 'and merciful Lord, if not a ſevere and juſt Avenger of 'their many miſdeeds, *&c.*

Demetrius his Letters.

But before this Letter was half read, the Multitude ran violently into the Caſtle, and releaſed two of *Demetrius* his Meſſengers, who had been miſerably tortured, whipt, and roaſted. Then the Prince, Empreſs, and Princeſs were taken into Cuſtody, and *Demetrius* was by conſent of the Nobles, (ſome few excepted) declared their right and lawful Emperour.

The Empreſs adviſed the young Prince and Princeſs to follow their Father's example, and murder themſelves by Poyſon, promiſing to bear them Company; the Mother drank firſt, and was pledged by the Son, who both died immediately, but the Princeſs drinking but little, ſurvived. Others aſcribe this Murther to the command of *Demetrius*, and that this Self-murther was a pretence only.

The Empreſs and Prince poyſon themſelves.

He entred *Moſco* the 19th of *June*, with pompous Proceſſion of Soldiers and Prieſts, the latter carrying Banners, with Pictures of the Bleſſed Virgin and *Nicholas*, their tutelar Saint. *Demetrius* mounted on a white Palfey, and attended by the Patriarch and others, went firſt to the Temple of our Lady, and after Prayers to St. *Michaels* Church, wherein *Juan Vaſilowich* lay buried, and hearing that *Boris* lay there interred, he preſently commanded his Body to be taken up, and to be removed to a meaner Chapel without the City. Then paſſing by the Houſe of *Boris*, he was ſo offended at the ſight, that he ſent Workmen preſently to raze the ſame. Thence proceeding to the Imperial Palace, and taking upon him the Government, he ſhewed more favour to the *Poles* and other Forreigners, than to the *Ruſſes*, which haſtned his ruin. Seventy noble Families of the Kindred or Faction of *Boris* were exiled, that their Goods and Lands might be ſhared among Strangers.

But his Clemency was remarkable to *Suisky*, his Succeſſour in the Empire, who being condemned for refuſing to acknowlege him as Emperour, and uttering reproachful Speeches on him, as, that he was of baſe Parentage, and had conſpired with the *Poles* to overthrow the *Ruſſian* Nobility and Religion; yet when he was at the place of Execution, after he had ended his Prayers, and on his Knees expected the fatal Stroke, received his Pardon.

his Clemency to *Suisky*.

The firſt of *September* being New-years-day with the *Ruſſes*, was appointed for his Coronation, and *Martha* the Empreſs (his ſuppoſed Mother) Widow of

Juan Vaſilovich was ſent for, from the Monaſtery far from Court, where *Boris* had placed her. An honourable Convoy was herein employed, and he with great ſhew of Piety went to meet her, embraced her with Tears, and bare-headed on Foot, attended her Chariot to the Caſtle. To the *Jeſuits* he allotted a fair place not far from the Caſtle, for the exerciſe of the *Romiſh* Religion, and would have then declared himſelf in that point, but fearing *Suisky*, he waited a fitter Opportunity.

Embaſſage to *Poland.*

His next care was to recompence the *Poles,* to enter into a League with that Nation, and to conſummate the marriage; for which reaſon he ſent *Athanaſius* his Treaſurer with 300 Horſemen, and Jewels for the Lady and her Father, worth 200000 Crowns, who in *November* came to *Cracovia*, had audience of King *Sigiſmund*, where he with all thankfulneſs, acknowledged the King's forwardneſs with his Nobles in recovering his Maſter's Right, to which God hath given ſucceſs beyond expectation; That he deplored the *Turkiſh* Inſolencies in *Hungary* and other parts, and would willingly join with the *Pole* and other Chriſtian Princes againſt them. In the mean time that he was willing to make an everlaſting League with him, and to that end intreated his good Leave to take upon himſelf a Wife out of *Poland*, namely, *Anna Maria*, Daughter of *George Miecinſie*, Palatine of *Sendomir*, in purſuance of a Contract made with her at the time of her being in *Poland*, which is as followeth.

Copy of the Contract of Marriage in the time of his being in *Poland.*

‘We *Demetry Evanowich*, by the Mercy of God, Prince of all *Ruſſia*, &c. calling to memory our former Life, being not in that form and manner, as in other great Monarchies, as was in the time of our Predeceſſours, and other Chriſtian People. Neverthelcſs, by the Providence of Almighty God, from whom proceedeth a beginning and an end, and from whom cometh Life and Death, we have by him eſpied and made choiſe unto our ſelf, with good liking in the time of our being in the Kingdom of *Poland*, of a Companion of great and honourable Birth, and of Godly Education, and is ſuch a Companion, with whom we ſhall by the Mercy of God live peaceably, which is the reſplendant and noble Lady *Marina*, Daughter to the great Palatin *Sendemersko*, and upon this Occaſion have taken him for our Father, and in regard that we are not yet in our own Kingdom, we do therefore purpoſe hereafter to take order for her coming unto us, with the ſaid General *Sendamersko*. Likewiſe when I ſhall come to live in my own Kingdom, then ſhall the Palatin *Sendamersko* remember his faithful and true Promiſe with his Daughter, the Lady *Marina*, her Vow, my ſelf remembring my own Vow, and ſo both of us to hold it faithfully with Love and Affection, and to that end do we bind our ſelves by our Writings. Likewiſe firſt and principally in the name of the Holy Trinity, I do give my faithful and true Princely Promiſe, that I will take in Marriage the Lady *Marina*; if on the contrary I do not, then I wiſh that I might give this as a Curſe upon my ſelf, alſo as I ſhall enter into our Kingdom and Heretage of *Moſco*, then will I give the Palatin her Father, a Reward of 100000 Pieces of *Poliſh* Gold, and to the Lady *Marina* our Wife, in conſideration of her great and long Journey, as alſo for the providing and furniſhing her ſelf, I will give out of my Treaſure, Velvets wrought with Silver and Gold, and the Meſſenger that ſhall be ſent to me from the Lord her Father, or from the Lady her ſelf, I ſhall not hold or keep, but ſhall let them paſs, and ſhall reward them with Gifts, which ſhall be a Token of our Princely Favour. Secondly, as ſoon as we ſhall come to the Imperial Throne of our Father, then preſently will we ſend our Embaſſador to the reſplendent King of *Poland*, And to the forenamed Lady *Marina* our Wife, we give two Lordſhips, viz. *Novogrod* the *Great*, and *Vobsko*, with all the Provinces belonging to the ſame, with Counſellors, Gentlemen, and Yeomen, and Prieſts fitting for a Congregation, to rule and govern freely, with full Authority, in the ſame manner and form as if we ruled; and my ſelf to have no more Right, Title, or Authority in the ſaid two Cities; and do wholly give and beſtow all on the ſaid Lady *Marina*, that is contained in this Writing, as ſoon as by God's help, we ſhall be married together, and thereunto have given this our Writing, ſealed with our Princely Seal; But if our Wife ſhall not have by us any Children, then in thoſe two Lordſhips before ſpecified, ſhe ſhall place Men in Authority of her own, to govern and do juſtice: And it ſhall be free for the ſaid Men in authority, to give Lands and Inheritance to their own Souldiers, and to trade freely at pleaſure, as if it were in their own true and lawful Dominion, and to build Monaſteries, and ſet up the *Romiſh* Religion, and to have *Latin* or *Romiſh* Prieſts and Schools, but ſhe herſelf to abide and remain with us. And concerning her Prieſts, to have as many as ſhall be needful to be kept for her own Godly *Romiſh* Religion, without all let or hindrance; and as we our ſelf by the Mercy of God, are already inclined to the ſame, ſo will we likewiſe with earneſt care, ſeek by all means to bring all the Kingdom of *Moſco* to the knowledge of the *Romiſh* Religion, and to ſet up the Church of *Rome*. Alſo if God ſhould not grant unto us good ſucceſs, whereby this be performed within a Year, then it ſhall be at the pleaſure of our Father to ſeparate me and his Daughter *Marina*; but if it ſhall pleaſe him to forbear till another Year, then do I paſs this my Bill with my own Hand-writing, and thereunto I have ſworn my ſelf, and given a Vow according to the Holy Order, and all in this Bill to hold and keep carefully; as alſo that I ſhall bring all the *Ruſſe* People to the *Latin* Religion. Written at *Sambore* the 25th of *May*, *Anno* 1604.

He promiſes to eſtabliſh the *Romiſh* Religion.

Prince *Demetry* of *Ouglets*.

At the end of eight Days the Contract was ſolemnly finiſhed by the Cardinal Biſhop of *Cracow*, and the Embaſſador with her Parents were feaſted by the King.

Demetrius his Marriage. Both crowned.

In the end of *January*, the Bride, her Father, Uncle and train of Women, accompanied the *Ruſſian* Embaſſador in his return, and arrived at *Moſco* in the end of *April*, where they were married by the Patriarch, and both of them ſolemnly crowned.

Demetrius had brought a Guard of *Germans* with him from *Poland*, which being without example of his Predeceſſors, and ſeeing it diſliked of his Subjects, he diſmiſſed, together with all foreign Souldiers. They being thus ſent away without pay, returned with the caſhiered *Polanders* to the Borders, where they committed many Outrages, to the great diſcontent of the *Ruſſes*, many of whom were offended at his too much reſpect to the *Poles*, others queſtioned his Birth, whereupon he entertained many *Lieflanders* and *Germans* for his Guards, to whom he added 100 *Engliſh* Halberdiers, with as many *Scots*, and 100 *French* armed with Partiſans.

At this time came an Embaſſador with Letters from *Sigiſmund* King of *Poland*, which becauſe they gave him not the Title of Emperour, were not received nor opened. In excuſe whereof, the Embaſſador uſed Words unſufferable to *Ruſſian* Patience, telling him that he ſhould go and deprive the *Great Turk* of thoſe Titles. *Demetrius* diſſembled his Reſentment in regard of the Aſſiſtance he formerly had, and might ſtill expect from the *Poles*.

A bloody Day.

On the ſixth day after the Marriage, being the 17th of *May*, a ſolemn Feaſt was held, wherein the Emperour and Empreſs ſate crowned in the Hall, at which the *Poliſh* Embaſſador refuſed to be preſent, except he might ſit at the Princes Table, as the *Ruſſian* Embaſſador had been honoured at *Cracow*; the *Ruſſes* denied ſtifly, but *Demetrius* at laſt yielded. The *Poles* had domineer'd over the *Ruſſes* as if they had been a conquer'd People, whereupon the Nobility and Commons taking the advantage of this time, when the *Poles* ſtood leaſt on their guard, came to the Court at three in the Morning, and *Suisky* their Leader having cauſed the great Bell to be rung in token of Fire, that *Demetrius* might be rais'd and come forth of his Apartment, *Peter Beſman*, who came running out half naked, was ſlain by one of his own Servants, and *Demetrius* awakned with the noiſe, and now ſeeing a greater danger than Fire, took a *Turkiſh* Sword, and ſlipping down from a Window, brake his Leg with the fall, whereby he was eaſily taken, and by *Suisky*'s command, carried into the great Hall where Embaſſadors have Audience; where ſome upbraiding him with his Impoſtures, he with his Sword laid one of them on the Ground, and then deſiring the Nobility that he might be permitted to ſpeak to the People, it was denied. Some ſay that he obtained of *Suisky*, that he might be tried by the Teſtimony of the Empreſs *Martha*, Widow of *Juan Vaſilowich*, who being brought out of the Nunnery, affirmed before the Nobles on her Oath, that her Son *Demetrius* was many Years before murthered by the command of *Boris*, executing her former Acknowledgments of this Impoſture, as proceeding from her Fear, and the general acceptance he found among the People, whereupon they ran upon him, and with many Wounds

Peter Baſman ſlain.

Demetrius ſlain.

ſlew him. His Body was dragged thro' the Mire into the Market-place, expoſed ſome Days to publick view, and then burnt

Among his Papers was found the Contract between him and the *Palatine*, before his coming out of *Poland*, That asſoon as he ſhould acquire the Kingdom of *Moſco*, he would take his Daughter to Wife, and give her the Provinces of *Novogrod* and *Vobsko*, therein freely to build and ſet up Monaſteries, and eſtabliſh the *Romiſh* Religion. There were found alſo by him, Letters from the Pope and Cardinals to that effect, and that he ſhould be mindful to take in hand ſpeedily, what he had promiſed and vowed to *Sigiſmund* and the Cardinals, *viz.* To be himſelf of the *Romiſh* Religion, and to bring all the People of *Ruſſia* into the ſame, not only thoſe that of themſelves were willing, but others alſo, and to put them to death that ſhould ſeek to oppoſe it.

The Palatine *Sendomir*, Father of the Empreſs, was blocked up in his Houſe: The miſerable Bride was ſpoiled of all her Apparel and Jewels, without Garment to cover her, or Bed to lie on, careful only of her Father and Uncle, and wiſhed that ſhe with them might ſave their Lives and recover their Country.

Many *Engliſh* and other Merchants ſuffered in this Tumult; *Ambroſe Cellar* loſt his Life, and 30000 Crowns; *James Win* was beheaded with his own Sword; *Nathan* loſt 150000 Florins; *Nicholas Limborough* 50000; twelve hundred *Poles* loſt their Lives; many of them were ſaved by the *Boiarens*; 400 *Ruſſes* were ſlain; at Night the Tumult ceaſed; the new Empreſs, her Father, his Brother, with other *Poles*, to the number of 8 or 9000, were committed to ſafe cuſtody.

Suisky's Speech.

After the Tempeſt was calmed, the *Boiarens* aſſembling in Council, *Suisky* made a Speech to them, profeſſing himſelf ſorrowful for what had paſſed in the execution of a juſt Zeal for the Imperial Family and his Country, and in hatred of a cruel Tyrant. That *Juan Vaſilewich* (how injuriouſly ſoever taxed by ſome) had left Kingdoms annexed to his Inheritance, as Monuments of his Magnanimity. That *Pheodore* ſucceeded, but *Boris* ruled, who firſt murthered the youngeſt Brother, as was thought, and after that poyſoned the other, to attain the Empire. That for theſe Reaſons *Demetrius* (whoſoever he was) found Friends, himſelf amongſt others; but when Religion was endanger'd, Forreigners advanced, Laws violated, Exotick Faſhions introduced, and Liberties ſuppreſſed, he withſtood him with the Peril of his Life, which it grieved him to have enjoyed by his Grant, who being a Robber, had no Right to take it. Yet ſeeing their forwardneſs in ſo juſt a cauſe, he (more regarding his Countries Safety than Rumors and Reports) had been their Captain, to do that which God, the Diſpoſer of Kingdoms, by the ſucceſs had approved; ſo that it remained now, ſeeing the Imperial Family was extinct, they ſhould ſeek one of the nobleſt Blood, moſt religious Zeal, and experienced Wiſdom, who would eſteem his Peoples Hearts his ſtrongeſt Forts, to become their Prince.

He is choſen Emperour.

Thus was he choſen Emperour, who not long before was at the Block to be beheaded, for reporting that he had ſeen the Body of the true *Demetrius* after he was dead, and did help to bury him. This *Suisky* was 50 Years old, never married, a Prince of great Wiſdom, and a Favourer of the *Engliſh* Nation.

One of his firſt Acts was to ſend an Embaſſy into *Poland*, to complain of their obtruding that Changeling on *Ruſſia*, whereby above 200 of their principal Nobility had loſt their Lives, demanding Reſtitution of the Monies which that Impoſter had cauſed to be tranſported into *Poland*, or elſe he would, with King *Charles* of *Sweden*, enter *Poland* with an Army, to be revenged on them for breaking the League they had ſworn to. *Sigiſmund* anſwered modeſtly, excuſing their helping him whom they conceived to be the right Heir, and deſired that the Peace might continue.

A ſecond Demetrius.

But when things were better ſetled in *Poland*, and grown worſe in *Ruſſia*, by the Diſlike conceived againſt *Suisky*, another *Demetrius* aroſe, who pretending to have made his eſcape on the day of the Maſſacre, ſo cunningly and confidently related particular Paſſages of paſt Occurrents, that the Lady of *Demetrius* was by him bedded, and being aſſiſted by the *Poles*, he raiſed an Army and laid ſiege to *Moſco*.

There was at that time ſome difference between *Chares* King of *Sweden* and *Sigiſmund* King of *Poland*, who laid claim to the Crown of *Sweden*. *Suisky* takes hold of this Advantage, and is aſſiſted by the King of *Sweden*, with an Army conſiſting chiefly, of *Engliſh*, *French* and *Scots*, under the command of *Pontus de la Gardie*, a *French-man*. Theſe march to *Moſco*, then beſieged by the new *Demetrius*, and *Poles*, and put him into ſuch fear, that not truſting the *Poles*, he ſtole away by Night with a ſmall Retinue; the *Poles* obtained Articles of Compoſition, and departed. But *Demetrius* raiſing another Army of ſuch *Ruſſes* as voluntarily came to him, again laid ſiege to *Moſco*, wherein *Suisky* then was, while *Zolkiewasky* a *Poliſh* General beleagred another part thereof with 40000 Men, whereof 1500 were *Engliſh*, *Scots* and *French*. *Suisky* ſeeing no hope to withſtand them, betook himſelf to a Monaſtery. The *Muſcovites* ſoon after ſurrendred their City to the *Poles*, and joined with them againſt *Demetrius*, who thereupon fled, and was afterwards killed in his Camp by a *Tartar*. *Suisky* having loſt his Liberty and Empire, was carried Captive into *Poland*, where, after he had been expoſed to ſcorn, and manifold Miſeries, he died in Priſon.

Demetrius ſlain.

Suisky dies in *Poland*.

Vladiſlaus choſen Emperour.

The *Muſcovites*, to reſcue themſelves from their preſent Miſeries, agreed with the *Poliſh* General *Zolkiewsky*, to elect *Vladiſlaus*, Son of King *Sigiſmund*, for their Emperour, but whether for Breach of Conditions on his part, or out of an inveterate hatred to the *Poles*, or natural jealouſy and diſtruſt of Strangers, or a National Inconſtancy, they ſoon grew weary of him, and began to think how they might reſtore their former Government, which they effected in this manner.

Encouraged thereunto by a Butcher.

There dwelt in the North about *Dwina*, a bold Fellow, a Butcher, who railing at the baſeneſs of the Nobility, and Corruption of the Officers, ſaid, If they would chooſe a good Treaſurer, and pay Souldiers well, they might ſoon have thoſe that would fight and expel their Enemies the *Poles*, provided they would firſt chooſe a worthy General, for which place he recommended to them a poor maimed Gentleman, named *Pozarsky*, who had done good Service, but being neglected, did now live retiredly. The Multitude approved his Council, and choſe *Pozarsky* for their Leader, and the Butcher for a Treaſurer, delivering into his Hands what Money they had, which he ſo faithfully diſburſed, and *Pozarsky* ſo well diſcharged his truſt, that a great Army was gathered, and *Moſco* then beſieged by the *Poles*, was relieved. And for further ſecurity againſt the *Poles*, and to recompence the Sufferings and Impriſonment of the *Ruſſian* Chancellour, then in *Poland*, they elected his young Son *Micallowich*, under whoſe Empire (having a good Council appointed) they might live happily; the Butcher alſo was made a Councellor. Embaſſadors were ſent to divers Princes to mediate between them and the *Poles*, and by the Countenance and Interceſſion of the Emperour, the King of *Great Britain*, and other Princes, the young Emperour was peaceably ſetled in his Dominions, and making a truce with the *Poles* for 14 Years, he obtained thereby his Fathers liberty, who was after conſecrated Patriarch of all *Ruſſia*.

Micallowich Son to the Chancellour, choſen Emperour.

CHAP.

C h a p. XIII.

An Account of the Engliſh *Affairs in* Ruſſia, *after the death of* Juan Vaſilowich. *Written by* Mr. Jerom Horſey, *then remaining in* Ruſſia, *as Servant to her Majeſty*, 1584.

1584. JUan *Vaſilowich* being dead the 18 of *April*, 1584 his Son *Pheodore Juanowich*, aged 25 Years, was crowned with great Solemnity on the 10th of *June* following. As ſoon as the Ceremony was over, Mr. *Horſey* was called to the Emperour as he ſate in his Imperial Seat, and then *John de Wale*, a famous Merchant of the *Netherlands*, lately come to *Moſco*, and pretending himſelf a Subject to the King of *Spain*, was called alſo. Some of the Nobility would have preferr'd him before Mr. *Horſey*, to which Mr. *Horſey* would not agree, ſaying, He would have his Legs cut off, rather than yield to ſuch an Indignity offered to the Queen his Soveraign, as to bring a Preſent to the Emperour, after a Subject of the King of *Spain*, or any other whatſoever. The Emperour perceiving the Controverſy, ſent his Lord Treaſurer and another of his Council to them, who returning and declaring to the Emperour what they had heard, Mr *Horſey* was firſt admitted, and made his Preſent to the Emperour in behalf of the *Engliſh* Merchants trading thither, wiſhing him joy, and long to Reign in tranquility, and ſo kiſſed the Emperour's Hand, who accepted the Preſent, and ſaid, that for his Siſter's ſake, Queen *Elizabeth* of *England*, he would be a gracious Lord to her Merchants, in as ample manner as ever his Father had been. After him, the ſaid Subject of the King of *Spain* was admitted with his Preſent, whom the Emperour willed to be no leſs faithful and ſerviceable to him, than the Queen of *England*'s Subjects had been, and then the King of *Spain*'s Subjects ſhould receive Favour accordingly.

Not long after Mr. *Horſey* was ſent from the Emperour on a Meſſage to the Queen of *England*. He departed from *Moſco* the fifth of *September*, and travelling over Land, delivered his Letter to the Queen, and was forthwith commanded to repaſs into *Ruſſia*, where he arrived by Sea on the 20th of *April*, 1586. He now obtained ſuch ample Privileges for the Merchants, as in 20 Years before would not be granted; the Heads whereof are as follows.

The Emperour's Privileges to the *Engliſh* Merchants.

‘ THrough the Will of the Almighty, and without beginning God, which was before this World, whom we glorify in the Trinity, one only God the Father, the Son, and the Holy Ghoſt, Maker of all things, Worker of all and every where, Fulfiller of all things, by which Will and Working, he both loveth and giveth Life to Man; that our only God, which inſpireth every one of us, his only Children, with his Word, to diſcern God, through our Lord Jeſus Chriſt, and the holy quickning Spirit of Life now in theſe perilous times, eſtabliſh us to keep the right Scepter, and ſuffer us of our ſelves to reign to the good profit of the Land, and to the ſubduing of the People, together with the Enemies, and to the maintenance of Vertue.

‘ We *Pheodore*, the Off-ſpring of *John*, the Great Lord, Emperour, King, and Great Prince of all *Ruſſia*, &c.

‘ For our Siſter's ſake Queen *Elizabeth*, and becauſe the *Engliſh* Merchants do alledge, that they have had great Loſſes by Sea, I have granted that they ſhall trade into all parts of our Dominions, without paying Cuſtom.

‘ But they ſhall not bring in nor carry out of our Dominions, any other Mens Goods but their own, nor ſell them, or barter them away for them.

‘ Alſo our natural People, ſhall not buy or ſell for them, or from them, neither ſhall they keep any of our Subjects Goods, or Pawns by them to colour them.

‘ Alſo they ſhall not ſend any of their Ruſſe Servants, into any City to ingroſs Commodities, but into what City they themſelves ſhall come, they ſhall buy and ſell, and ſhall ſell their own Commodities and not ours.

‘ Alſo they ſhall ſell all their Commodities by whole ſale and not by retail.

‘ And they ſhall buy, ſell, and exchange their own Commodities themſelves, and the *Ruſſe* Merchants ſhall not make ſales, or exchange for them or from them any of their Commodities.

‘ In caſe of Shipwrack on our Coaſt, we will cauſe the Goods to be ſought out in true Juſtice, and to be given to the *Engliſh* which ſhall at that time reſide in our Country; and if it ſhall ſo happen that there be no *Engliſh-men* within our Realm, then will we cauſe theſe Goods to be laid up in a place together, and when the People of *England* ſhall come into our Realm, then all thoſe Goods to be delivered to them.

‘ And whereas we have gratified the *Engliſh* Merchants with a Houſe at *Moſco*, and alſo at *Teraſlave*, *Vologde*, *Colmogre*, and at the Haven of the Sea, we have commanded that there ſhall not be taken of them any yearly Rent for thoſe Houſes, neither ſhall they pay any Duty or Tax with any of the Townſmen of thoſe places.

‘ Our Officers and ſworn Men at *Colmogre*, ſhall take an account in writing, of the Commodities of *England* and *Ruſſia*, what the Merchants ſhall declare themſelves, but they ſhall not overlook their Commodities, nor unbind any of their Packs.

‘ And if any Controverſy happen concerning Merchandiſe or Injuries, then they ſhall be judged by our Treaſurers and Secretary of the Embaſſadors, who ſhall do Juſtice between both Parties; and if the Truth cannot be diſcovered by Law, then it ſhall be ſought out by Oath and Lot, and the Judges or Juſtices ſhall take of them no kind of Duty, for matters of Law, in any place throughout our Realm.

‘ Given in our Princely Palace within the City of *Moſco*, in the Year from the Foundation of the World, 7095, in the Month of *February*.

CHAP. XIV.

A Treatiſe of Ruſſia, *by Doctor* Giles Fletcher, *Embaſſador from Queen* Elizabeth *to* Theodore, *Emperour of* Ruſſia, A. D. 1588.

1583.

THIS Country formerly called *Sarmatia*, is bounded on the Northwards by *Lapland*, and the North Ocean; on the South by the *Tartars* called *Chrims*; on the Eaſt by the *Nagayan Tartars*, who poſſeſs all the Country on the Eaſt ſide of *Volga*, towards the *Caſpian* Sea; on the Weſt and South-weſt by *Lithuania*, *Livonia*, and *Polonia*.

The Country is of great length and breadth; from *Narva* in the Weſt to *Siberia* in the Eaſt, is 4400 Verſts, or thereabouts; and from *Cola* to *Aſtracan*, is reckoned 4260 Verſts. A Verſt by their reckoning is 1000 Paces, yet leſs by one quarter than an *Engliſh* Mile.

Of the Soil and Climate

The Northern parts towards *Cola*, St. *Nicholas*, and *Siberia*, are all very barren, by reaſon of the extream cold in Winter, nothing growing there but great Woods of Fir and Birch, and conſequently but few Inhabitants; ſo likewiſe along the River *Volga*, between *Cazan* and *Aſtracan*, altho' the Soil be very fruitful, there are but few People, by reaſon of the Neighbourhood of the *Chrim Tartars*, who will neither build Towns, nor ſuffer the *Ruſſes* ſo to do. The Country differs very much from it ſelf according to the Seaſon of the Year; ſo that a Man would marvel to ſee the great alteration between Winter and Summer in *Ruſſia*. The whole Country in Winter lies under Snow, ſometimes a yard or two thick, but greater towards the North. The Rivers are all frozen up a yard thick or more, how ſwift or broad ſoever they be; and this commonly from the beginning of *November* till the end of *March*, at which time the Snow begins to melt; ſo that it would breed a Froſt in a Man to look abroad in that time and ſee the Winter Face of that Country. The ſharpneſs of the Air you may judge of by this; Water caſt up into the Air, congeals into Ice before it come to Ground: In the extremity of Winter, if you hold a Pewter Diſh or Pot in your Hand, or any other Metal (except where their warm Stoves be) your Fingers will freeze faſt to it, and draw off the Skin at parting When you paſs out of a warm Room into a cold, you ſhall ſenſibly feel your Breath to wax ſtark, and even ſtifeling with the cold as you draw it in and out. You ſhall ſee many drop down in the Streets, many Travellers brought into the Towns ſitting dead, and ſtiff in their Sleds; divers looſe their Noſes, the Tips of their Ears, and the Balls of their Cheeks, their Toes, Feet, *&c.* Many times, when the Winter is very hard and extream, the Bears and Wolves iſſue by Troops out of the Woods, driven by hunger, and enter the Villages, tearing and ravening all they can find; ſo that the Inhabitants are fain to flee for ſafeguard of their Lives. And yet in the Summer you ſhall ſee ſuch a new Face of a Country, the Woods, which are for the moſt part Fir and Birch, ſo freſh and ſo ſweet, the Paſtures and Meadows ſo green and well grown (and that upon a ſudden) ſuch variety of Flowers, ſuch noiſe of Birds (eſpecially Nightingals, that ſeem to be more loud, and of a more variable Note than elſewhere) that a Man ſhall rarely travel in a more pleaſant Country.

Of the Cold of *Ruſſia.*

This freſh and ſpeedy growth of the Spring there, ſeems to proceed from the benefit of the Snow, which all the Winter time keeping the Ground warm from the rigour of the Froſt, in the Spring time, when the Sun diſſolves it into Water, it ſo throughly drenches and ſoaks the Ground, which is for the moſt part of a ſlight ſandy Mold, and then ſhines ſo hotly upon it again, that it draws forth the Herbs and Plants in great plenty and variety in a very ſhort time As the Winter exceeds in Cold, ſo the Summer inclines to too much Heat, eſpecially in *June*, *July*, and *Auguſt*, being much warmer than in *England*.

The Country is well watered with Springs, Rivers, and Lakes; ſome of theſe Lakes are 60, 80, 100, and 200 Miles long, with breadth proportionable.

The chief Rivers.

The chief Rivers are, 1. *Volghe*, which hath its Spring 200 Verſts above *Yeraſlave*, and grows ſo big by the conflux of other Rivers, that by that time it comes thither, it is an *Engliſh* Mile broad and more, and ſo runs into the *Caſpian*-Sea, about 2800 Verſts in length.

The next is *Boriſthenes*, now called *Neper*, dividing the Country from *Lithuania*, and falls into the *Euxin*-Sea.

The third is, *Tanais* or *Don* (the ancient Bounder between *Europe* and *Aſia*), it riſeth in the Province of *Rezan*, and ſo running thro' the Country of the *Chrim Tartars*, falls into the Lake *Mœtis*, by the City of *Azof*. By this River you may paſs from *Moſco* to *Conſtantinople*, drawing your Boat over a little *Iſthmus*, a few Verſts overthwart.

The fourth is *Dwina*, many hundred Miles long, with great Rocks of Alabaſter on the Banks, towards the Sea-ſide, emptying it ſelf into the Bay of St. *Nicholas*.

The ſixth *Onega*, falling into the Bay of *Solouetſco*, 90 Verſts from the Bay of St. *Nicholas*; from which Port into the *Finland*-Sea, and ſo into the *Sound*, may be paſſed all by Water.

Seven *Moskua*, that runs thro' the City *Moſco*, giving it the Name.

All theſe are large Streams, the leaſt to be compared to the *Thames* in breadth, and in length far more, beſides divers others. The Pole at *Moſco* is 55 Deg. 10 Min. and at St. *Nicholas* 63 Deg. 50 Min.

Of the Native Commodities of the Country.

Their Fruits and Grain.

For Fruits, they have Apples, Pears, Plums, Cherries, Melons, &c. Wheat in ſuch plenty, that it is ſometimes ſold for two *Alteens* or ten Pence Sterling the *Chetfird*, which makes almoſt three *Engliſh* Buſhels.

Their Rye is ſowed before Winter, all other Grain in the Spring, and for the moſt part in *May*. They that dwell far North, are ſupplied from the Southern Parts, and are ſometimes forced to make Bread of a Root called *Vaghnoy*, and of the middle Rind of the Fir-tree.

Furs.

The Native Commodities are, Firſt, *Furs* of all ſorts, whereof are tranſported ſome Years by Merchants of *Turky*, *Perſia*, *Bougharia*, *Georgia*, *Armenia*, and into ſome Parts of *Europe*, to the value of four or five hundred thouſand Rubbles.

Wax.

The ſecond Commodity is *Wax*, whereof hath been ſhipped fifty thouſand Pood yearly, every Pood containing 40 Pound

Honey.

The third is *Honey*, whereof beſides an exceeding great quantity ſpent in their ordinary Drinks, great ſtore is carried out of the Country.

Tallow.

Fourthly, of *Tallow*, they tranſport much yearly, the richer ſort uſing Wax for their Lights, and the poorer ſort, Birch dried in their Stoves, and cut into long Shivers. Of Tallow there has been ſhipped one hundred thouſand Pood yearly.

Hides.

Fifthly, Their *Loſh-hide* and *Cow-hide*; their *Loſh* or *Buff-hide* is very large, their *Bull* and *Cow-hide* (for Oxen they make none, nor Weathers) is of a ſmall ſize: There have been tranſported in ſome Years one hundred thouſand Hides, beſides great ſtore of Goats Skins.

Train Oil.

Sixthly, *Train Oil* drawn from the *Seal-Fiſh*; towards the end of Summer, they go down with their Boats to the Bay of St. *Nicholas*, to a Cape called *Foxnoſe*, where they leave their Boats till the next Spring, and then returning thither again, they draw their Boats over the Sea Ice, and uſe them for Houſes to reſt and lodge in. Then dividing themſelves five or ſix Boats in a Company, they that firſt find the Haunt, fire a Beacon which they carry with them, and thereupon the reſt joyning them, they incloſe the Seals in a Ring, that lie ſunning themſelves together upon the Ice, commonly 4 or 5000 in a Shoal, and ſo invade them, every Man with his Club in his Hand. If they hit them on the Noſe they are ſoon killed, but if on the Sides or Back, they will bear a great blow, and many times catch and hold down the Club with their Teeth by main force, that the Party is forced to call for help to his Fellows. When they have killed what they can, they take the Skin from the Body, with the Lard or Fat, and all that cleaves to the Skin. This they take with them, leaving the Bodies behind, and ſo go to Shoar, where digging Pits of a Fathom and a half deep, they take the Fat or Lard from the Skin, and throw it into the Pit, caſting among it hot burning Stones to melt it withal. The uppermoſt and pureſt is uſed in oyling Wool for Cloth; the groſſer, (which is of a red colour) they ſell to make Soap.

Cavear. Seven, *Ickary* or *Cavear*, whereof a great quantity is made upon the River *Volga*, out of the Fiſh called *Bellougina*, the *Sturgeon*, the *Severiga*, and the *Sterledey*, and is exported into moſt parts of *Europe*.

Hemp, Flax. Eight, *Hemp* and *Flax*, whereof great quantity is tranſported yearly.

Salt. Nine, *Salt*, which at *Aſtracan* is made naturally by the Sea Water, which caſts it up into great Hills, and is digged down and carried away by Merchants, paying three Pence Cuſtom for every hundred weight.

Tar. Ten, *Tar*, whereof they make great quantity out of the Fir-trees, and ſend much abroad.

Slude. About the River *Dwina* grows a ſoft Rock called *Slude*; this they cut into pieces, and tear it into thin Flakes, which they uſe inſtead of Glaſs for Lanthorns. It gives a clearer light than Glaſs, and is better than Glaſs or Horn, becauſe it is not ſo apt to break or burn.

Saltpeter and Brimſtone. *Saltpeter* they make in many places, and ſome ſmall ſtore of *Brimſtone*, but want skill to refine it.

Iron. Their Iron is ſomewhat brittle: They have no other Mine growing within the Realm.

Beaſts. They have Fallow-Deer, the Roe-buck, and great ſtore of Goats. Their Horſes are but ſmall, but very ſwift and hardy: They travel them unſhod both Winter and Summer, without all regard of pace. Their Sheep are but ſmall, and bear courſe and harſh Wool.

Fowls. They have great ſtore of Hawks, whereof the moſt eſteemed is the *Gerfaulcon*; of other Fowls the principal are the Swan, the Stork, the Crane, the Tedder, of the colour of a Pheaſant, but far bigger: Of Pheaſant and Patridge they have great plenty.

Fiſh. For freſh Water Fiſh, beſides thoſe common with us, as Carp, Pike, Pearch, Tench, Roach, *&c.* they have divers kinds very delicate, as the *Bellouga* or *Bellougina*, four or five Ells long; the *Oſitrina* or Sturgeon, the *Severiga*, and *Sterledy*, like to a Sturgeon, but leſs. Theſe four kinds of Fiſh breed in the *Volga*, and are ſent thence into the whole Realm for a great Food. Of the Roes of theſe four kinds is made great ſtore of *Caveare*. They practice their Fiſhing in Summer, and ſend it frozen in the Winter into all parts of the Realm.

The chief Cities of Ruſſia.

The chief City of *Ruſſia* is *Moſco*; it is in a manner round, with three ſtrong Walls one within the other, and Streets lying between; whereof all within the inmoſt Wall (fenced and watered by the River *Moskua*, that runs cloſe by it) is accounted the Emperour's Caſtle. The number of Houſes, (by the Account given to the Emperour) before it was fired by the *Chrim* in the Year 1571, was 41500.

Novograd. The next in greatneſs, and in a manner as large, is *Novograd*, where (as the *Ruſſian* ſay) that great defeat was given by the *Scythians* to their Slaves, who, during their Maſters abſence in the Wars againſt the *Tartars*, had poſſeſs'd their Houſes, Lands, and Wives; whereupon adviſing what was beſt to be done, it was reſolved to ſet upon them with their Horſe-whips; and ſo marching on, and laſhing all together with their Whips in their Hands, they gave the onſet, which ſeemed ſo terrible in the Ears of their Villains, and ſtruck ſuch a ſenſe into them of the ſmart of the Whip which they had felt before, that they fled like Sheep: In memory of which Victory the *Novgradians* have ever ſince ſtamped their Coins, with the Figure of a Horſe-man ſhaking a Whip aloft in his Hand.

The Streets inſtead of paving, are planked with Fir-trees, plained and laid cloſe one to the other. Their Houſes are of Wood, without any Lime or Stone, built very cloſe and warm with Fir-trees plained and piled one upon another; betwixt the Trees they thruſt in Moſs to keep out the Air; every Houſe hath a pair of Stairs up into the Chambers out of the Yard or Street. This Building ſeems far better for their Country than Stone or Brick, which are colder and more damp than their wooden Houſes, eſpecially of Fir, which is a dry and warm Wood, and whereof they have ſuch plenty, that a fair Houſe may be built for 20 or 30 Rubbles, where Wood is ſcarſeſt; the greateſt inconvenience, is its aptneſs to take Fire, which happens often, by reaſon of the dryneſs and fatneſs of the Fir, which burns like a Torch, and is hardly extinguiſhed till all be conſumed.

Of the Emperour's Title.

The Emperour's ſtile runs after this manner; *Theodore Juanovich*, by the Grace of God, Great Lord and Emperour of all *Ruſſia*, Great Duke of *Volodemer*, *Moſco*, and *Novogrod*, King of *Cazan*, King of *Aſtracan*, Lord of *Plesko*, and Great Duke of *Smolensko*, of *Tweiria*, *Joughoria*, *Permia*, *Vadska*, *Bulghoria*, and others, Lord and Great Duke of *Novograd* of the Low-Country, of *Chernigo*, *Rezan*, *Polotskoy*, *Roſtove*, *Taruſtavely*, *Bealozera*, *Leifland*, *Oudoria*, *Obdoria*, and *Condenſa*, Commander of all *Siberia*, and of the North Parts, and of many other Countries, *&c.*

This Stile contains in it all the Emperour's Provinces, and ſetts forth his Greatneſs, and therefore they have great delight and pride in it, forcing not only their own People, but alſo Strangers that have any Matter to deliver to the Emperour by Speech or Writing, to repeat the whole Form from the beginning to the end, which breeds much Cavail, and ſometimes Quarrel betwixt them and the *Tartar* and *Poland* Embaſſadors, who refuſe to call him *Czar*, that is, Emperour, and to repeat the other parts of his long Stile. When I had audience of the Emperour, I ſaluted him only with thus much, *viz.* Emperour of all *Ruſſia*, Great Duke of *Volodemer*, *Moſco*, and *Novograd*, King of *Cazan*, King of *Aſtracan*, the reſt I omitted of purpoſe, becauſe I knew they gloried to have their Stile appear larger than the Queen of *England*'s, but this was ſo ill taken, that the Chancellour, who then attended the Emperour, with the reſt of the Nobility, with a loud chafing Voice, called ſtill upon me to ſay out the reſt. I anſwered, that the Emperours Stile was very long, and could not ſo well be remembred by Strangers, and that I had repeated ſo much of it as might ſhew that I gave honour to the reſt, *&c.* But all would not ſerve, till I commanded my Interpreter to ſay it all out.

Of the State or Form of their Government.

Their Government is much after the *Turkiſh* manner, which they ſeem to imitate by applying all things to the advantage of the Prince, as near as the Country, and reach of their Capacities in Politick Affairs will give them leave to do.

Their higheſt Court is called the *Zabore*, that is, the *Publick Aſſembly*. There are preſent at it, 1. the Emperour; 2. About 20 of his Nobility, who are of his Council; 3. Some of the Clergy, about the ſame number. As for the *Burghers* or any to repreſent the Commonalty, they have no place there, the People being of no better account with them than Servants or Slaves, who are to obey, not to make Laws, nor to know any thing of publick matters before they are concluded.

The Court is held in this manner, The Emperour ſummons ſuch of his Nobility as he thinks fit, being, as was ſaid, all of his Council, together with the Patriarch, who calleth ſuch Biſhops, Abbots, and Friars, as are of beſt reputation among them.

The Emperour attended with his Nobility, is met in an Ante-chamber by the Clergy, following their Patriarch, who bleſſeth the Emperour with his two Fore-fingers, laying them on his Fore-head and the ſides of his Face, and then kiſſeth him on the right ſide of his Breaſt. Then one of the Secretaries propounds the cauſe of their Aſſembly, and the principal Matters which they are to conſider of; and the Patriarch with his Clergy have the Prerogative to be firſt asked their opinion, what they think of the Points propounded by the Secretary, whereto they anſwer commonly to this effect, 'That the Emperour 'and his Council are of great Wiſdom and Experience, 'in the Policies and publick Affairs of the Realm, and 'far better able to judge what is profitable for the Com'monwealth than they are, who attend upon the Ser'vice of God only, and Matters of Religion, and 'therefore may it pleaſe them to proceed; that inſtead 'of their Advice, they will aid them with their Prayers, 'as their Duties and Vocations do require, *&c.* Then up ſtands ſome Abbot or Friar (appointed before hand) and deſires that it would pleaſe his Majeſty to command to be delivered unto them, what his own Judgment and determinate pleaſure is, touching the Matters propounded by his Secretary.

Whereunto he replied by the Secretary in the Emperour's name, ‘ That his Highneſs with thoſe of his noble Council, upon good and ſound Advice, have found the Matters propoſed to be very good and neceſſary for the Wealth of his Realm, notwithſtanding, becauſe they are religious Men, and know what is right, his Majeſty requires their Godly Opinions, yea, and their Cenſures too, for the approving or correcting the ſaid Propoſitions, and therefore deſires them again to ſpeak their minds freely, and if they ſhall like, to give their Conſents, that then the Matters may paſs to a full Concluſion.

Hereunto, when the Clergy have given their Conſents (which they commonly do without much pauſing) they take their Leaves with bleſſing the Emperour, who brings the Patriarch on his way as far as the next Room, and ſo returns to his Seat. The Acts thus paſſed by the *Zabore*, are drawn into a Proclamation, which they ſend into every Province and chief Town of the Realm, to be publiſhed by the Dukes and *Diaks*, or Secretaries of thoſe places. The Seſſions ended, the Emperour invites the Clergy to a ſolemn Dinner, after which, they depart to their own homes.

Among other Methods, theſe following have been uſed by their Emperours to augment their Treaſure.

I. They would ſuffer their Subjects to give freely to the Monaſteries (which many do, eſpecially in their laſt Wills) and to lay up their Money and Subſtance in them, to keep it more ſafe; whereby their Monaſteries are exceeding rich. This was done to have the Money of the Realm more ready for their Hand, when they liſt to take it; which many times is done without any noiſe, the Friers being content to part from ſome, rather than hazard to looſe all at once.

To this end *Juan Vaſilowich* did what few Princes would have done in their greateſt Extremities; he reſigned his Kingdom to the Emperour's Son of *Cazan*, as tho' he meant to retire to a private Life. Towards the end of the Year he cauſed this New King to call in all Charters granted to Biſhopricks and Monaſteries, which they had enjoyed many hundred Years before, and to cancel them all. This done (as if he had diſliked the Fact and Miſgovernment of the new King) he reſumed his Scepter, and ſo was content (as in favour of the Church and Religious Men) that they ſhould renew their Charters, and take them of himſelf, reſerving and annexing to the Crown, ſo much of their Lands as he thought Good.

By this practice he wrung from the Biſhopricks and Monaſteries, an huge maſs of Money, from ſome 40, ſome 50, ſome 100000 Rubbles, and this as well to increaſe his Treaſure, as to abate the ill opinion of his hard Government, by a ſhew of worſe in another Man.

II. To make an open ſhew of want when they intend to lay a heavy Tax upon the People, as was done by *Theodore Juanowich*, at the beginning of his Reign, when being left very rich (as was thought) by his Father, he ſold moſt of his Plate, and ſtampt ſome into Coin, that he might ſeem to want Money, whereupon preſently came out a Taxation.

III. They would ſometimes ſend their Meſſengers into the Provinces to foreſtal and ingroſs Commodities, taking them at ſmall Prizes (what themſelves liſt) and ſelling them again at exceſſive Rates, to their own Merchants and Strangers; If they refuſed to buy them, then to force them to it. The like is done when any Commodity, native or forreign (as Cloth of Gold, broad Cloth, *&c.*) thus engroſſed by the Emperour, happens to decay or marre by long lying, which is forced upon the Merchants at the Emperour's price, whether they will or no.

IV. By engroſſing foreign Commodities, and then forcing his Merchants to buy them of his Officers at his own price.

V. By making a Monopoly for a Seaſon of all ſuch Commodities as are paid him for Rent or Cuſtom, and to enhance the price of them, as Furs, Corn, Wood, *&c.* During which time none muſt ſell of the ſame Commodity, until the Emperour's be all ſold.

Juan Vaſilowich ſent into **Permia** for certain Loads of Cedar, whereof he knew that none grew in that Country. The Inhabitants returned anſwer, That they could find none there; whereupon he taxed their Country in 12000 Rubbles, as if they had concealed the Commodity. Again, he ſent to the City of *Moſco* to provide for him a *Colpack*, or Meaſure full of live Fleas for a Medecin: They anſwered, that the thing was impoſſible, and if they could get them, yet they could not meaſure them, for leaping out, whereupon he ſet a Mulct upon them of 7000 Rubbles.

To theſe may be added their Seiſures and Confiſcations upon ſuch as are in diſpleaſure, and the Conniving at their *Dukes* and *Dyacks* in the Provinces, till their time be expired, and then turning all into the Emperour's Treaſury, but never any thing back again to the right Owners, how great or evident ſoever the Injury be.

Of the Nobility and Degrees of Perſons among them.

The Degrees of Perſons or Eſtates in *Ruſſia* are as follows.

I. The *Vadelney Knazey*, that is the exempt or privileged Dukes.

II. The *Boiarens*, who beſides their Nobility, are honoured wih the Title of *Counſellors*.

III. The *Voyavodey*, or ſuch Nobles as are, or have been *Generals*, whoſe Title deſcends to their Poſterity alſo. Theſe take place of all Dukes and Nobles that are not of the two firſt ſorts: And theſe three Ranks of Nobility have the addition of *Vich* put to their Sirname, which is a Note of Honour that the reſt may not uſurp; and if it be not added in the naming of them, they may ſue the *Beſtcheſt* or Penalty of diſhonour upon them, that otherwiſe ſhall term them.

Title *Vich.*

IV. The fourth and loweſt degree of Nobility, is of ſuch as bear the name of *Knazey* or *Dukes*, but come of the younger Brothers of thoſe chief Houſes through many deſcents, and have no Inheritance of their own, ſave the bear Title of Duke. For the Title of their Dignities deſcends to all their Children alike, whatſoever elſe they leave them; ſo that the Sons of a *Voiaveda*, or General in the Field, are called *Voiavodey*, tho' they never ſaw the Field; and the Sons of a *Keez*, or Duke, are called *Knazey*, tho' they have not one Groat of Inheritance or Livelyhood to maintain themſelves. Of this ſort there are ſo many, that the plenty makes them cheap; ſo that you ſhall ſee Dukes glad to ſerve a mean Man for five or ſix Rubbles a year, and yet they will ſtand highly upon their *Beſtcheſts* or reputation of their Honors; and ſo much of their Nobility.

The ſecond degree of Perſons.

The ſecond Degree of Perſons is their *Sina-Boiarskey*, or Sons of Gentlemen, who are all preferred, and hold that name by their Service in the Wars, being Souldiers by their very Stock and Birth; to which order are preferred their *Diacks*, or Secretaries, who ſerve the Emperour in every chief Town, being joined in Commiſſion with the Duke of that place.

Laſtly, their *Commons*, whom they call *Mouſicks*, in which number they reckon their Merchants and Artificers. Theſe are reckoned in no degree at all, nor have any place or Suffrage in the *Zabore*, and are eſteemed no better than *Kolophey's* or Villains, and ſo ſubſcribe themſelves in all their Writings to any of the Nobility, as they of the Nobility do unto the Emperour; and indeed no Bondſlaves are kept in more awe and ſubjection, than the common People are by the Nobility, Officers and Souldiers; ſo that when a poor *Mouſick* meets with any of them upon the High-way, he muſt turn himſelf about, as not daring to look him on the Face, and fall down with his Head to the very ground.

The ſervile and miſerable eſtate of the Ruſſe People.

As to their Lands and Goods, they are ſo expoſed to the rapine of the Nobility and Souldiers, beſides the Taxes, Cuſtoms, Seizures, and other publick Exactions laid upon them by the Emperour, that they are diſcouraged from following their Trades, becauſe the more they have the more danger they are in, not only of their Goods, but of their Lives alſo; and if they have any thing they convey it into Monaſteries, or hide it under Ground, or in Woods, as Men do when they are in fear of foreign invaſion; ſo that many Villages and Towns are without Inhabitants; and in the way towards *Moſco*, betwixt *Vologhda* and *Teraſlave*, about 100 *Engliſh* Miles, there are 50 Villages at leaſt, ſome half a Mile, ſome a Mile long, that ſtand vacant and deſolate without any Inhabitant. The like is in all other places of the Realm, as I have been told by thoſe that have travelled the Country.

This oppreſſion makes the People (tho' otherwiſe hardned to bear any toil) to give themſelves over to Idleneſs and Drinking, as caring for no more than from hand to Mouth.

Caback's or Drinking Houſes.

In every great Town the Emperour hath a *Caback* or drinking Houſe, where is ſold *Aqua Vitæ* (which they call *Ruſſe* Wine) Mead, Beer, *&c.* Out of theſe he receives Rent, amounting to a great Sum of Money, ſome yield 800, 900, 1000, 2000, or 3000 Rubbles a year. Here the poor labouring Man and Artificer many times ſpends all from his Wife and Children; ſome will lay in 20, 30, or 40 Rubbles or more into the *Caback*, and vow themſelves to the Pot until all that be ſpent; and this (as he will ſay) for the honour of *Hoſpodare*, or the Emperour. You ſhall have many there, who have drank all away to the very Skin, and ſo walk naked. While they are in the *Caback*, none may call them forth, whatſoever cauſe there be, becauſe he hinders the Emperour's Revenue.

Ruſſes not permitted to travel.

Altho' the People ſeem apt enough to receive any Art (as appears by the natural Wits in the Men, and very Children) yet they excel in no common Art, much leſs in any learned Science. They are kept in ignorance, that they may be fitter for the ſervile condition they are in, and have neither Reaſon nor Valour to attempt innovation; for which purpoſe they are kept from travelling, that they may learn nothing, nor ſee the Faſhions of other Countries abroad. You ſhall ſeldom ſee a *Ruſſe* Traveller, except he be with ſome Embaſſador, or make an eſcape out of his Country, which he can hardly do, by reaſon the Borders are watched ſo narrowly, and the Puniſhment, if he be taken in the Attempt, which is death, and confiſcation of all his Goods; neither do they willingly ſuffer any Stranger to come into their Realm out of any civil Country, farther than neceſſity of uttering their own Commodities, and taking in of foreign, enforces them to do.

And therefore in the Year 1589, they conſulted about the removing of all Merchants Strangers to the border Towns, to have their reſidence there, and to be more wary in admitting other Strangers hereafter into the Inland parts of the Realm: For the ſame purpoſe alſo, they are kept within the Bounds of their Degree by the Laws of their Country, ſo that the Son of a *Mouſick*, Artificer, *&c.* is ever a *Mouſick*, Artificer, *&c.* and hath no means to aſpire any higher, except, having learned to write and read, he attain to the preferment of a Prieſt or Diack. The *Ruſſe* Character is no other than the *Greek* ſomewhat diſtorted.

Of their publick Juſtice, and manner of proceeding in Civil and Criminal Matters.

Proceeding in Civil Cauſes.

Their proceeding in Civil Actions is on this manner, Firſt the Plaintiff puts up his Supplication, ſhewing the Wrong done unto him, whereupon a Warrant is granted to him, which he delivers to the *Priſtave* or Serjeant, to arreſt the Party, who muſt put in Sureties to anſwer at the day appointed, or elſe ſtand at the Serjeants mercy, for his ſafe keeping.

Theſe Serjeants are commonly very cruel towards their Priſoners, clapping as many Irons upon them as they can bear, to ſqueeze out of them the larger Fees; tho' it be but for Six-pence, you ſhall ſee them go with Chains on their Legs, Arms, and Necks. When they come before the Judge, the Plaintiff declares according to the Contents of his Supplication. They have no Atturnies, Counſellors, *&c.* to plead their Cauſe for them, but every Man is to tell his own tale, and plead for himſelf as well as he can.

Controverſies ended by kiſſing the Croſs.

If they have any Witneſs or other Evidence, they produce it before the Judge; If they have none, or if the Truth of the Cauſe cannot ſo well be diſcerned by the Plea, or Evidence on both parts, then the Judge asks the Plaintiff or Defendant (which he thinks good) whether he will kiſs the *Croſs*, upon that which he avouches or denies. He that takes the Croſs (being ſo offered by the Judge) is accounted clear, and carries the Cauſe. This Ceremony is not done in the Court, but the Party is carried to the Church by an Officer, and there it is done, the Money in the mean time hanging upon a Nail, or lying at the Idol's Feet, ready to be delivered to the Party, as ſoon as he hath kiſſed the Croſs before the Idol.

This kiſſing the Croſs is as their corporal Oath, and accounted with them a very holy thing, which no Man will dare to violate or profane by a falſe Allegation.

The manner of drawing Lots.

If both Parties offer to kiſs the Croſs, then they draw Lots, by putting into a Cap two equal Balls of Wax, in one of which is the name of the Plaintiff, and in the other that of the Defendant; then the Judge calls ſome By-ſtander, and commands him to ſtrip up his right Sleeve, and with his bare Arm in God's name, ſeverally to take out the two Balls, and he whoſe Name comes out firſt, is preſumed to have the right on his ſide, and the other Party is convicted and delivered to the Serjeant to carry him to the *Praveuſh* if he do not pay the Money, or content the Party. The *Praveuſh* is a place where ſuch as have Sentence paſſed againſt them, and refuſe to pay that which is adjudged, are beaten with great Cudgels on the Shins and Calves of their Legs. Every Morning from eight to eleven, they are ſet on the *Praveuſh* and beaten in this manner till the Money be paid. In the Afternoon and Night time, they are kept in Chains, unleſs they put in ſufficient Sureties for their appearance at the *Praveuſh* at the Hour appointed. You ſhall ſee 40 or 50 ſtand together on the *Praveuſh* all on a row, and their Shins thus cudgelled every Morning, with a piteous cry. If after a Years ſtanding on the *Praveuſh*, the Party will not, or cannot ſatisfy his Creditor, it is lawful for him to ſell his Wife and Children, either outright, or for a certain term of Years; and if the Price of them do not amount to the full payment, the Creditor may take them to be his Bondſlaves, for years, or for ever, according to the value of the Debt.

Proceeding in crimial Matters.

When a Man is apprehended for Treaſon, Murder, Theft, *&c.* he is brought before the Duke and Diack of that Province; the Examination is all by Torture, as ſcourging with Whips made of Sinews or white Leather, as big as a Man's Finger, which enters the Fleſh and gives a ſore laſh; or by tying to a Spit and roaſting at the Fire; ſometimes by wrenching and breaking one of their Ribs with a pair of hot Tonges, or cutting the Fleſh under the Nails, *&c.*

The Examination thus taken, with all the Proofs and Evidences alledged againſt the Party, are ſent to the Council Table at *Moſco*, where only Judgment is given in matter of Life and Death; and that by evidence upon Information, without ſeeing or hearing the Party, who is ſtill kept in Priſon where the Fact was committed, and never ſent up to the place where he is tried. If they find the Party guilty, they give Sentence of death according to the quality of the Fact. The Priſoner is carried to the place of Execution with his Hands bound, and a Wax Candle burning, held betwixt his Fingers.

Executions.

Their capital Puniſhments are Hanging, Beheading, knocking on the Head, Drowning, putting under the Ice, ſetting on a Stake, *&c.* but for the moſt part the Priſoners condemned in Summer are kept till Winter to be knockt on the Head and put under the Ice. Theſe Puniſhments are to be underſtood for common Perſons; for if Theft or Murder be committed upon a poor *Mouſick* by one of the Nobility, he is ſeldom puniſhed, or ſo much as called to account for it, becauſe the *Mouſicks* are looked upon as their *Kolophey's*: If a Murder or Theft be committed by a Gentleman Souldier, perhaps he ſhall be impriſoned at the Emperour's pleaſure; or if the Fact be very notorious, he may be whipped, which is commonly all the puniſhment inflicted on them.

If a Man kill his own Servant, little or nothing is ſaid to him, becauſe he was accounted his Bondſlave, and ſo to have a right over his Head; the moſt is ſome Mulct to the Emperour if the Party be rich; and ſo the Puniſhment is rather againſt the Purſe than the Injuſtice. They have no written Law, except a ſmall Book containing ſome Judicial Forms and Circumſtances, but nothing to direct them in giving Sentence upon Right or Wrong.

Of their Military Force.

The Souldiers of *Ruſſia* are called *Sinaboiarskey*, or the Sons of Gentlemen, every Souldier being a Gentleman by virtue of his Military Profeſſion, and none are Gentlemen but Souldiers. When they are of Years able to bear Arms, they enter their Names in the Office of the *Great Conſtable*, who allots them certain Lands for their maintenance, for the moſt part the ſame their Fathers enjoyed; For the Lands aſſigned to maintain the Army are ever certain, without addition or diminution, and are regiſtred in this Office: But if the Emperour have as many Souldiers in pay as the yearly value of thoſe Lands does amount to, then thoſe who come and enter themſelves in the Office, have nothing allowed them for the preſent, except ſome one portion of Land be divided in two, which often cauſes great diſorder in that Country; for a Souldier who hath many Children, ſhall have ſometimes but one entertained in the Emperour's pay; ſo that the reſt having nothing, are forced to live by unjuſt and wicked Shifts, and oppreſſing the People.

The Moving Caſtle.

The *Ruſſe* truſteth rather to the number than to the valour of his Soldiers; they charge on all together in a hurry without order; their Enſigns is the Image of St. *George*; the Foot are commonly placed in a moving Caſtle, ſo framed that it may be ſet up in length (as occaſion requires) one, two, three, four, five, ſix, or ſeven Miles, for ſo long it will reach. It is nothing elſe but a double Wall of Wood, with about three yards ſpace betwixt the two ſides, ſo that they may ſtand within it, and have room enough to charge and diſcharge their Pieces, and to uſe their other Weapons. It is cloſed at both ends, and made with Loop holes on either ſide, to lay out the muzzles of their Guns, and to puſh forth any other Weapon. It is carried with the Army whereſoever it goes, being taken into pieces, and ſo laid on Carts ſparred together, and drawn by Horſes that are not ſeen, becauſe they are covered with their Carriages as with a Paint-Houſe. It is eaſily put together without the Help of a Carpenter or Inſtrument, the Timber being ſo framed as ſhut one piece within another.

The *Ruſſes* have been ever obſerved to be vanquiſhed by the *Poles* and *Swedes* in a pitched Field; but in defending a Caſtle or Town, they prove good Souldiers, as was ſeen at the ſiege of *Vobsko*, where they repulſed the King of *Poland* with his whole Army of 190000 Men, and forced him in the end to give over his ſiege, with the loſs of many of his beſt Captains and Souldiers.

Reward of Valour.

If any Man ſignalize himſelf, by doing ſome ſpecial piece of Service, the Emperour ſends him a piece of Gold ſtamped with the Image of St. *George* on Horſeback. This they hang on their Sleves and ſet in their Caps: and this is accounted the greateſt Honour they can receive for any Service they do.

Of their Eccleſiaſtical State, or Church Government.

The Patriarch of the *Greek* Church reſided formerly at *Conſtantinople*, and being forced thence by the *Turk*, removed to the Iſle of *Scio*, to which place the Emperours and Clergy of *Ruſſia* were wont yearly to ſend Gifts, and to acknowledge a Spiritual Subjection to him.

In the Year 1588 *Hieronymo* Patriarch of *Scio* (baniſhed by the *Turk* as ſome ſaid, others, deprived by the Clergy) came to *Moſco* where the Emperour, who was very ſuperſtitious, gave him great entertainment. Before his coming to *Moſco*, he had been in *Italy* with the Pope, as was reported by ſome of his Company.

His chief Buſineſs was (in revenge of the *Turk* and the *Greek* Clergy, who had thruſt him from his Seat) to treat about reducing the *Ruſſe* Church under the Pope of *Rome*, wherein it may ſeem that coming lately from *Rome*, he was ſet on by the Pope, who tho' he had in vain attempted the ſame many times before, (and namely, in the time of *Juan Vaſilowich*, by one *Anthony* his Legate) yet thought this the moſt proper time to obtain his purpoſe, by the Mediation of their own Patriarch; but this not ſucceeding, he Patriarch came to a ſecond Point, concerning the reſignation of his Patriarchſhip, and tranſlation of the See from *Conſtantinople* or *Scio* to the City of *Moſco*. This was ſo well received by the Emperour, as matter of Religion and Policy, that no other Treaty nor forreign Embaſſages were regarded, till that Matter was concluded.

The Reaſons alledged by the Patriarch for the traſlating his See, were theſe, 1. Becauſe it was under the *Turk*, who is an Enemy to the Faith. 2. Becauſe the *Ruſſe* Church was the only natural Daughter of the *Greek* at this time, and holds the ſame Doctrine and Ceremonies with it, the reſt being all ſubject to the *Turk*, and fallen away from the true profeſſion; and, to make the better Market of his broken Ware, he inſiſted upon the Honour that would grow to the Emperour and his Country, to have the Patriarchal Seat tranſlated into the chief City of his Empire. As for the right of tranſlating it, and appointing his Succeſſour, he made no doubt of it, but that it pertained wholly to himſelf.

The Patriarchal See tranſlared from *Conſtantinople* to *Moſco*.

So the Emperour and his Council, with the principal of his Clergy being aſſembled at *Moſco*, it was determined that the Metropolite of *Moſco* ſhould become Patriarch of the whole *Greek* Church, and have the ſame full Authority and Juriſdiction that pertained before to the Patriarch of *Conſtantinople*; And that it might be done with more ſolemnity, the 25 of *Jan.* 1588. the *Greek* Patriarch accompanied with the *Ruſſe* Clergy, went to the great Church of our Lady, (having firſt wandred thro' the whole City, bleſſing the People with his two Fingers) where making an Oration, he delivered his Reſignation in an Inſtrument of Writing, and ſo laid down his Patriarchal Staff, which was preſently received by the Metropolite of *Moſco*, and divers other Ceremonies uſed about the inauguration of this new Patriarch.

Hieronymo was that day honoured with rich Preſents ſent him from the Emperour and Empreſs, of Plate, Cloth of Gold, Furs, &c. and at his departing, received many Gifts more from the Emperour, Nobility and Clergy. Thus the Patriarchſhip of *Conſtantinople* (which hath continued ſince the Council of *Nice*) is now tranſlated to *Moſco*, or they made believe that they have a Patriarch with the ſame Right and Authority that the other had: However *Hieronymo* made good advantage of it, and went away with a rich Booty into *Poland*, whether their Patriarchſhip be current or not.

Eccleſiaſtical Juriſdiction.

The Clergy of *Ruſſia*, are altogether ordered and overuled by the Emperour and his Council, as well concerning their Lands and Revenues, as their Authority and Juriſdiction, and have ſo much and no more of both, than his pleaſure does permit them. The Eccleſiaſtical Juriſdiction extends to all Teſtimentary Cauſes, Marriages, and Divorcements, to which purpoſe they have their Officiate or Commiſſaries, that are Lay-men, of the Degree of Dukes or Gentlemen, that keep their Courts, and execute their Juriſdiction, who, beſides their oppreſſing the common People, reign over the Prieſts alſo. Theſe Officials are not appointed by the Biſhops, but by the Emperour or his Council, and are to give account of their Doings to none but them.

Election of Biſhops.

The election of Biſhops pertains wholly to the Emperour; they are ever choſen out of Monaſteries; ſo that there is no Biſhop, Archbiſhop, nor Metropolite, but hath been a Monk or Friar before, and conſequently muſt be unmarried Men. Their Revenues to maintain their Dignities are ſomewhat large; the Patriarchs yearly Rents of his Lands, beſides other Fees, is about 3000 Rubbles or Marks; the two Metropolites, and four Archbiſhops, about 2500; the Biſhops, ſome 1000, ſome 800, 500, &c.

The Learning of the *Ruſſe* Clergy.

As for Preaching, they neither uſe it, nor have any skill in it, the whole Clergy being utterly unlearned; and as themſelves are void of learning, ſo are they wary to keep out all means that might bring it in, leaſt their Ignorance ſhould be diſcovered; and have therefore perſwaded the Emperours, that it would breed Innovation, and prove dangerous to their State to have any novelty of Learning come within the Realm. There came once a Preſs and Letters out of *Poland* to *Moſco*, where a Printing Houſe was ſet up with the Approbation of the Emperour himſelf; but not long after, the Houſe was fired in the Night time, and the Preſs and Letters were burnt, as was thought, by the procurement of the Clergy.

Prieſts.

The Prieſts (whom they call *Papaes*) are made by the Biſhops, without any great tryal of their Parts or Gifts before they admit them. Their Heads are ſhorn (not ſhaven, for they like not that) about an hand breadth on the Crown, and that place anointed with Oil by the Biſhop who puts upon him firſt his Surplice, and then a white Croſs of Silk upon his Breaſt, which he wears eight days and no more; and ſo gives him authority to ſay and ſing in the Church, and to adminiſter the Sacraments.

It is lawful for a Prieſt to marry once, but if the firſt Wife die, he cannot take a ſecond, but he muſt looſe his Prieſthood and his Living withal. The Reaſon they take from that place of St. *Paul* to *Timothy*, 1. 3. 2. not well underſtood, thinking that to be ſpoken of divers Wives ſucceſſively, which the Apoſtle ſpeaks of at one and the ſame time. If he would needs marry again after his firſt Wife is dead, he is no longer called *Papa*, but *Roſpapa* or *Quondam* Prieſt. This cauſes the Prieſts to make much of their Wives, who are accounted as Matrons, and of beſt reputation among the Women of the Pariſh.

The Prieſts receives no Tyths of Corn or other thing, but ſtands to the Courteſy of the Pariſh, and makes up his Income by Offerings, Shrifts, Marriages, Burials, Dirges, and Prayers for the Dead. They uſe alſo to viſit their Pariſhoners Houſes with Holy Water and Perfume once a Quarter, and ſo having ſprinkled, the good Man and his Wife, with the reſt of their Houſhold and Houſhold Stuff, they receive a Gratuity according to the Man's Ability. Theſe things laid together, may make about thirty or forty Rubbles or Marks a year, whereof he pays a tenth part to the Biſhop of the Dioceſs.

Friars.

Of *Friars* they have an infinite Rabble, far greater than in any Country where Popery is profeſſed; the Reaſon whereof ſeems to be, becauſe the Friars life is the ſafeſt from the Oppreſſions and Exactions that fall upon the Commons; and beſides, ſuch as are voluntary, there are divers that are forced to put on the Friars Habit, upon ſome diſpleaſure; theſe are for the moſt part the chief Nobility. Divers turn Friars to avoid the Puniſhment they have deſerved by the Laws of the Realm; for if a Man can get a Monaſtery over his Head, and there put on a Coul before he be attacked, he is for ever protected againſt any Law, for all Crimes but Treaſon; But they will admit none but ſuch as bring their Stock with them (except ſuch as are commanded by the Emperour to be received) ſome bring 1000 Rubbles and more, but none are admitted under three or four hundred.

The manner of their Admiſſion is thus, Firſt, he is ſtript of all his ſecular Apparel, then the Abbot puts upon him next to his Skin, a white Flannel Shirt, with a long Garment down to the Ground, girded upon him with a broad Leather Belt ; then is his Crown ſhorn, the Abbot pronouncing theſe Words while he is clipping his Hair, *As theſe Hairs are clipped off and taken from thy Head, ſo we now take thee and ſeparate thee clean from the World and Worldly Things.* This done, he anoints his Crown with Oil, and puts on his Coul : They vow perpetual Chaſtity and abſtinency from Fleſh.

Beſides their Lands, they are the greateſt Merchants in the whole Country ; the Lands of ſome Monaſteries are worth 1000 or 2000 Rubbles a year ; there is one Abby called *Troits*, that hath in Lands and Fees 100000 Rubbles or Marks a year : There are of Friars within it about 700, beſides Officers and Servants. They have alſo many Nunneries, whereof ſome may admit none but Noblemens Widows and Daughters, who the Emperour will keep unmarried to extinguiſh their Families.

Of their Lithurgy or Form of Church Service.

Their Morning Service is done in this order : The Prieſt being come into the middle of the Church, ſays with a loud Voice, *Bleſſavey Vladika* (that is) *Bleſs us Heavenly Paſtour*, meaning *Chriſt*. Then he adds, *In the name of the Father, and of the Son, and of the Holy Ghoſt, one very God in Trinity*; and *Aſpody Pomelius* or *Lord have mercy upon us*, repeated three times. This done, he enters the Chancel, where ſtanding at the Altar or Table ſet near to the upper Wall of the Chancel, he ſays the Lord's Prayer, and then again *Aſpody Pomelius*, or *Lord have mercy upon us*, pronounced twelve times; then, *Praiſed be the Trinity, the Father, the Son, and the Holy Ghoſt for ever and ever* ; whereunto the Deacons and People ſay *Amen* : Then the Prieſt adds the Pſalms for that day, and begins with, *O come let us worſhip and fall down before the Lord*, *&c.* and therewithal, himſelf with the Deacons and People, turn themſelves towards their Images that hang on the Wall, and croſſing themſelves, bow down three times, knocking their Heads to the very ground ; After this he reads the Ten Commandments, and *Athanaſius*'s Creed out of the Service Book.

Legend. This done, the Deacon who ſtands without the Chancel, reads a piece of Legend out of a written Book, of ſome Saints Life, Miracles, *&c.* This is read with a kind of a plain ſinging Note; after which, he adds certain Collects, and ſo ends his Service, which laſts commonly an Hour and half or two Hours.

Candles. All this while ſtand burning before their Idols, a great many Wax Candles (whereof ſome as big as a Man's Waſt) vowed, or enjoyned by pennance upon the People of the Pariſh.

About nine in the Morning, the High Service is ſung by the Prieſts and Choriſters ; and if it be a Feſtival Day, then *Bleſſed be the Lord God of Iſrael*, and *We praiſe thee O God* &c. are ſung with a more ſolemn and curious Note. This commonly laſts two Hours.

In the Evening Service the Prieſt begins as he did in the Morning ; and after the Pſalms he ſings, *My Soul doth magnify the Lord*, &c. and then the Prieſts, Deacons and People, all with one voice ſing, *Aſpody Pomelius*, or *Lord have mercy upon us*, thirty times together ; whereunto the Boys anſwer as faſt as their Lips can go, *Verii, Verii, Verii, Verii*, or *Praiſe, Praiſe, Praiſe*, &c. thirty times together : Then is read or ſung by the Prieſt the firſt Pſalms, *Bleſſed is the Man* &c. and in the end of it is added *Allelugia* repeated ten times : Then follows ſome part of the Goſpel read by the Prieſts, which he ends with *Alleluja*, repeated three times : All this while the Prieſt ſtands above at the Altar or high Table within the Chancel, whence he never moves all the Service time ; the Deacons without the Chancel Door, and the People ſtand the whole Service time in the Body of the Church, they having no Pews or Seats in their Churches.

Baptiſm. The Sacrament of Baptiſm is adminiſtred after this manner. The Child is brought to the Church within eight days after it is born, the Prieſt ſtanding ready in the Porch with his Tub of Water by him, declares unto them, that they have brought a little Infidel to be made a Chriſtian : Then he teaches the Witneſſes in a ſet form out of his Book, what their Duty is in bringing up the Child after he is baptized : This done, in the name of God, he commands the Devil after a conjuring manner, to come out of the Water, and ſo after certain Prayers, plunges the Child thrice over head and ears ; for they hold it neceſſary that no part of the Child be undipped in the Water.

The Form of Baptiſm is the very ſame uſed by us, viz. *In the name of the Father, and of the Son, and of the Holy Ghoſt* ; And as ſoon as the Child is baptized, the Prieſt lays Oil and Salt tempered together upon the Fore-head, both ſides of the Face, and upon the Mouth, drawing it along with his Finger over the Child's Lips, ſaying certain Prayers that God would make him a good Chriſtian, *&c.* All this is done in the Church-porch. Then is the Child (as being now made a Chriſtian, and fit to be received within the Church-door) carried into the Church, the Prieſt going before, and there he is preſented to the chief Idol of the Church, being laid on a Cuſhion before the Feet of the Image, by it (as by the Mediator) to be commended unto God. If the Child be ſick or weak (eſpecially in Winter) they make the Water luke warm. After Baptiſm, they cut off the Hair from the Child's Head, and wrapping it up with a piece of Wax, lay it up in a ſecret place of the Church.

When they take a *Tartar* Priſoner, they will commonly offer him Life, on condition to be baptized ; and yet they perſwade very few of them ſo to redeem their Lives. *Tartar* chooſe to die rather than turn Chriſtians. The Year after *Moſco* was fired by the *Chrim Tartar*, there was taken a *Divoymorſey*, one of the chief in that Exploit, with 300 *Tartars* more, who had all their Lives offered them if they would be baptized after the *Ruſſe* manner, which they all refuſed to do, with many Reproaches againſt thoſe that perſwaded them ; and ſo being carried to the River *Moſco*, they were all baptized after a violent manner, being brought to the brink of a Hole made in the Ice, and by a knock on the Head forced into the Water.

The Lord's Supper. The Sacrament of the Lord's Supper they receive but once a year, in their great Lent time, a little before *Eaſter* ; three at moſt are admitted at one time, and never above : The Prieſt begins with certain uſual Prayers, the Communicants ſtanding the mean while with their Arms folded : Then the Prieſt fills a Spoon with Claret, and putting a ſmall piece of Bread into it, tempereth them both together, and ſo delivers them in the Spoon to the Communicants that ſtand in order, ſpeaking the uſual Words of the Sacrament, *Eat this*, *&c.* *Drink this*, &c. both at one time, without any pauſe.

This done, he delivers them again Bread by it ſelf, and Wine, tempred together with a little warm Water, to repreſent the Blood and Water that flowed out of the ſide of Chriſt. While this is doing, the Communicants unfold their Arms, and then folding them again, follow the Prieſt thrice round the Communion Table, and ſo return to their places again, where, after ſome Prayers, he diſmiſſeth them, charging them to be merry for ſeven days following ; which ended, he enjoins them to faſt as many more ; and this they obſerve with great devotion, eating nothing but Bread and Salt, except a little Cabbage, or other Plant, and drink nothing but Water.

Of the Doctrine of the Ruſſe *Church, and its Errours.*

I. They will not publickly read ſome Cononical Books of Scripture, as the Books of *Moſes*, eſpecially the four laſt, which they ſay (not diſcerning the difference between the Moral and Ceremonial Law) are all annulled and of no uſe, by the coming of Chriſt. The Books of the Prophets they allow of, but read them not publickly in their Churches, becauſe (ſay they) they were but Directors unto Chriſt, and proper to the Nation of the Jews ; only the Book of Pſalms they have in great eſtimation, and ſing and ſay them daily in their Churches. Of the New Teſtament, they allow and read all except the Revelation, which, though they allow it, they read not, becauſe they do not underſtand it.

II. They hold with the Papiſts, that their Church Traditions are of equal Authority with the written Word of God, and prefer themſelves to other Churches, affirming, that they have the true and right Traditions delivered by the Apoſtles to the *Greek* Church, and ſo to them. Traditions.

III. That the Church (meaning the *Greek*, and eſpecially the Patriarch and his Synod, as the head of the reſt) have a Soverain Authority to interpret the Scriptures, and that all are bound to hold that Interpretation to be ſound and authentick. Authority to interpret Scriptures.

IV. Concerning the Divine Nature, and the three Perſons in the one Subſtance of God, they hold that the Holy Ghoſt proceeds from the Father only, and not from the Son. The Holy Ghoſt to proceed from the Father only.

V. About the Office of Chriſt, they hold many foul Errors, and the ſame almoſt with the Popiſh Church, namely, that he is the ſole Mediator of Redemption, but not of Interceſſion

VI. For the means of Juſtification, they agree with the Papiſts, that it is not by Faith in Chriſt only, but by their Works only.

VII. They ſay with the Papiſts, that no Man can be aſſured of his Salvation, till the Sentence be paſſed at the Day of Judgment.

Auricular Confeſſion. VIII. They uſe Auricular Confeſſion, and think they are purged by the very Action from ſo many Sins as they confeſs to the Prieſt.

Three Sacraments. IX. They hold three Sacraments, *Baptiſm*, the *Lord's Supper*, and *Extream Unction*; yet they hold not the laſt ſo neceſſary to Salvation, but think it a great Curſe and Puniſhment if any die without it.

X. They think there is a neceſſity of Baptiſm, and that all are condemned that die without it.

XI. They rebaptiſe as many Chriſtians (not being of the *Greek* Church) as they convert to their *Ruſſe* Profeſſion.

XII. They obſerve their Faſts ſo ſtrictly, and with ſuch blind Devotion, that they will rather die than eat a bit of Fleſh, Eggs or ſuch like, for the health of their Bodies in extream Sickneſs.

XIII. They hold Marriage to be unlawful for all Clergy-men, except Prieſts only, and for them alſo after the firſt Wife, as was ſaid before.

Of their Marriages.

The manner of ſolemnizing their Marriage is different from that of other Countries; the Man, tho' he never ſaw the Woman before, is not permitted to have any ſight of her all the time of his Wooing, which is not managed by himſelf, but by his Mother or ſome grave Matron of his Kindred. When the Parents or Guardians are agreed, (for without their conſent the Contract is not lawful) they have a Conference about the Dowry, which is commonly as large as the Ability of the Parents will admit.

The Man makes no Jointure in recompence of the Dowry; but in caſe he have a Child by his Wife, ſhe enjoys a Third after his deceaſe: If he have two Children by her or more, ſhe is to have an Addition at the diſcretion of her Huſband: If the Huſband depart without Iſſue by his Wife, ſhe is returned to her Friends without any thing but her Dowry, if the Huſband leave ſo much behind him: If the Woman were never married before, her Father and Friends are bound to aſſure her a Maiden; which occaſions many Brawls and Law Suits among them.

The Contract thus made, the Parties ſend Tokens to each other, the Woman firſt, then the Man, but yet ſee not one another until the Marriage be ſolemnized. On the Eve before the Marriage Day, the Bride is carried to the Bridegrooms Houſe, with her Weeding-Cloths and Bed with her; for this is always provided by the Bride, and hath commonly moſt coſt beſtowed upon it: Here ſhe is accompanied all that Night, by her Mother and other Women, but not welcomed or ſeen by the Bridegroom himſelf.

The time being come, the Bride puts on a Vail that covers her Head and Body to the middle; and thus accompanied with her Friends, and the Bridegroom with his, they go to Church all on Horſeback, tho' the Church be near, and themſelves but of mean condition. The Words of Contract are much the ſame with thoſe uſed with us, with a Ring alſo given to the Bride, which being put on, and the Words of Contract pronounced, the Bride's Hand is delivered into the Hand of the Bridegroom, who ſtands on the other ſide of the Table: Then the Bride cometh to the Bridegroom, and falls down at his Feet, knocking her Head upon his Shooe in token of her ſubjection and obedience; and the Bridegroom caſts the lap of his Gown or upper Garment over the Bride, as a Token that he will protect and cheriſh her.

Then the Bridegroom and Bride ſtanding both together at the Tables end, the Father and Friends of the Bride bow themſelves down low to the Bridegroom, and then his Friends do the like to the Bride, in token of Affinity and Love ever after betwixt the two Kindreds. The Bridegroom then taking the Bride by the Hand, they are met in the Church-porch by ſome with Cups of Mead in their Hands; the Bridegroom takes one and drinks to the Bride, who opening her Vail below (that ſhe may not be ſeen by the Bridegroom) puts the Cup to her Mouth underneath it, and pledges him. Thus returning all together from the Church, the Bridegroom goes not home to his own, but to his Father's Houſe, and ſhe likewiſe to hers, where either entertain their Friends apart: At the Entry into the Houſe, they fling Corn out of the Windows upon the Bridegroom and Bride, as a token of Fruitfulneſs and Plenty.

When the Evening is come, the Bride is brought to the Bridegroom's Father's Houſe, and there lodges that Night, with her Vail ſtill over her Head: All that Night ſhe may not ſpeak one Word (for that charge ſhe receives from her Mother and other Matrons her Friends) that the Bridegroom muſt neither hear nor ſee her, till the day after the Marriage; neither muſt ſhe ſpeak in three days after, except a few words at Table, with great reverence to the Bridegroom; if ſhe behave her ſelf otherwiſe, it is a great prejudice to her credit ever after, and will highly be diſliked of the Bridegroom himſelf.

After the third day they depart to their own home, and make a Feaſt to both their Friends together. On the marriage day and during the Feſtival, he is called *Young Duke*, and ſhe *Young Dutcheſs*.

The common People generally uſe their Wives like Servants, and upon diſlike, the Man may enter himſelf into a Monaſtery on pretence of Devotion, and ſo leave his Wife to ſhift for her ſelf as well as ſhe can.

Of other Ceremonies of the Ruſſe *Church.*

The Sign of the Croſs is much abuſed by them, ſetting it up in their High-ways, tops of Churches, and in every Door of their Houſes, ſigning their Foreheads and Breaſts with it continually, and that with great devotion as ſhould ſeem by their outward Geſture: The like is done when they begin any Work, ſit down or riſe up from Meat; and think all other Chriſtians to be no better than *Turks*, becauſe they do not ſign themſelves with the Croſs, as the *Ruſſians* do.

They have Holy Water in great eſteem as the Popiſh Church hath, and on Twelfth Day they hallow all the Rivers in the Country: It is done at *Moſco* with great Solemnity, as hath been before deſcribed. The Patriarch after certain Prayers, conjures the Devil to come out of the Water, and therefore on the Morning before, all the People of *Moſco* make Croſſes of Chalk over every Door and Window of their Houſes, leſt the Devil being conjured out of the Water, ſhould fly into their Houſes.

At every Brewing, they bring a Diſh of Wort to the Prieſt within the Church, which being hallowed by him, is poured into the Brewing; The like is done with the firſt Fruits of their Corn in Harveſt.

Beſides their weekly Faſts on *Wedneſdays* and *Fridays*, they have four Lents every Year; in their great Lent they have three Vigils, and the laſt *Friday* they call their great *Vigil*, at which time the whole Pariſh muſt be preſent in the Church, and watch from nine in the Evening until ſix in the Morning, ſtanding all the time, except when they fall down and knock their Heads to their Idols, which muſt be juſt 170 times in the whole Night.

About their Burials they have many Superſtitions and prophane Ceremonies, as putting between the Fingers of the Corps, a Letter to St. *Nicholas*, whom they make the Porter of Heaven Gates, as the *Papiſts* do St. *Peter*.

In Winter when all is covered with Snow, and the Ground ſo hard frozen as no Spade nor Pickax can enter, their Cuſtom is not to bury the dead, but to keep the Bodies of ſuch as die in Winter, in an Houſe in the Outparts of the Town, by them called *Bohſedom* or *God's Houſe*, where the dead Bodies are piled up like Billets in a Wood Stack, as hard with the Froſt as a very Stone, till the Spring come, and then every Man takes his dead Friend and commits him to the Ground. They bury their dead as they uſed to go, with Coat, Hoſe, Boots, and the reſt of his Apparel.

Of their private Behaviour, and manner of living.

As to the Conſtitution of their Bodies, they are generally of a large ſize, and account it a Grace to be groſs and burly.

Their Diet is rather much than curious; they commonly begin their Meals with a ſmall Cup of *Aqua Vitæ*, (called by them *Ruſſe* Wine) and drink not again till towards the end of their Meals, and then take it in largely, kiſſing one another at every Pledge. After Dinner there is no talking with them, but every Man goes to his Bench to take his Afternoon ſleep, which is as ordinary with them as their Nights reſt. They begin their Meals with their baked Meats, next their Roaſt, (whereof they uſe but little) and laſtly their Broths. Diet.

This Diet would breed in them many Diſeaſes, but that they uſe Bath-ſtoves or Hot-houſes twice or thrice a Week, inſtead of all Phyſick: All the Winter, and almoſt Bath-almoſt the whole Summer they ſo warm the Houſe, that a Stranger can hardly bear it. Theſe two Extreams (ſpecially in the Winter) of heat within their Houſes and cold without, makes them of a dark and ſallow Complexion, their Skins being tanned and parched both with Cold and Heat, eſpecially the Women, who are for the moſt part of far worſe Complexions than the Men; and therefore the *Ruſſians* allow their Wives and Daughters ſomewhat to buy Colours to paint their Faces, which they do ſo viſibly, that every Man may perceive it, and yet no notice is taken of it, becauſe it is common, and pleaſes their Husbands.

The *Ruſſians* being thus accuſtomed to both Extremities, of Heat and Cold, can bear them more patiently than Strangers can do. You ſhall ſee them ſometimes (to ſeaſon their Bodies) come out of their Bath-ſtoves all on a froth, and fuming as hot almoſt as a Pig at a Spit, and preſently to leap into the River ſtark naked, or to pour cold Water all over their Bodies, and this in the extremity of Winter.

The number of their vagrant and begging Poor, is almoſt infinite; They are ſo pinched with Famin and extream Want, that they beg after a violent and deſperate manner, as, *Give and cut me*; *Give me and kill me*, and ſuch like Phraſes.

The *Ruſſes* are ſaid to believe nothing another Man ſaith, nor ſpeaketh any thing worthy to be believed: This quality makes them odious to all their Neighbours, eſpecially to the *Tartars*, who account themſelves to be honeſt and juſt in compariſon of the *Ruſſians*; and it is thought that the Offence they take at their double dealing, hath been a great Cauſe to keep the *Tartars* ſtill Heatheniſh, and to miſlike the Chriſtian Profeſſion.

Of the Tartars, Samoits, *and other Borderers.*

Their Neighbours, with whom they have great Dealings both in Peace and War, are the *Polonians*, the *Swedes*, and the *Tartars*, who are divided into many Tribes, different in Name and Government one from another, of whom, the greateſt is the *Corim Tartar*, that lies South and South-eaſt from *Ruſſia*, and moſt annoys the Country by frequent Invaſions, commonly once every Year, and ſometimes penetrates very far into the Country.

In the Year 1571, he came as far as the City of *Moſco*, with an Army of 200000 Men, without reſiſtance, the Emperour *Juan Vaſilowich* with his Army having marched a wrong way, which was thought done on purpoſe, as not daring to adventure a Battle, becauſe he ſuſpected his Nobility and chief Commanders had a deſign to betray him to the *Tartar*.

The City he took not, but firing the Suburbs, which were all of Wood, they burnt ſo furiouſly, that in four Hours time the greateſt part of the City was conſumed alſo, being 30 Miles or more in compaſs. The throng of the People preſſing out at the Gates fartheſt from the Enemy, was ſo great, that there periſhed by the Fire and the Croud, 80000 People.

The *Chrim* having thus fired the City, returned with his Army, and ſent the Emperour a Knife (as was ſaid) to ſtab himſelf, upbraiding his Loſs and deſperate Caſe, neither daring to meet his Enemy in the Field, nor to truſt to his Subjects at home.

The principal Cauſe of this continual Quarrel, is for the right of certain Borders, claimed by the *Tartar*, but poſſeſſed by the *Ruſſe*. The *Tartar* alledges, that beſides *Aſtracan* and *Cazan*, the whole Country as far as the City of *Moſco*, yea, and *Moſco* it ſelf pertaineth to his right, which ſeems to be true by the Report of the *Ruſſes* themſelves, who tell of a Homage done by the *Ruſſe* Emperour every year to the *Chrim*, the *Ruſſe* Emperour ſtanding on foot, and feeding the *Chrim*'s Horſe, (himſelf ſitting on his Back) with Oats out of his own Cap, and that within the Caſtle of *Moſco*: And this Homage (they ſay) was done till the time of *Baſileus* the Emperour, who ſurpriſing the *Chrim* by a Stratagem, changed this Homage into a Tribute of Furs, which was afterwards denied to be paid by the ſucceeding Emperour.

Hereupon they continue the Quarrel, the *Chrim Tartar* invading him once or twice every Year, about *Whitſontide* or Harveſt. If the *Chrim* come in his own Perſon, he brings with him an Army of 100000 or 200000 Men, otherwiſe they make ſhort and ſudden Inroads with leſs numbers, invading and retiring as they ſee advantage.

Their common Practice (being very populous) is to make divers Armies, and ſo drawing the *Ruſſe* to one or two places of the Frontiers, to invade ſome other place that is left defenceleſs. They are all expert Horſe-men, and will ſhoot as readily backward as forward: Their Armies are a Bow, a Sheaf of Arrows, and a Scymitar: The common Souldier hath no other Armer than his ordinary Apparel, *viz.* a black Sheeps Skin, with the Wool ſide outward in the Day time, and inward in the Night time, and a Cap of the ſame; but their *Murſey's* or Noblemen imitate the *Turks* both in Apparel and Armor. When they paſs a River, they tye three or four Horſes together, and taking long Poles or pieces of Wood, bind them faſt to the Tayls of their Horſes, ſo ſitting on the Poles, they drive them over.

When they give an aſſault, they make a great ſhout, crying all together *Olla Billa, Olla Billa, God help us, God help us*. They chooſe rather to die than to yield to their Enemy, and will often bite the Weapon, when they are paſt ſtriking or helping themſelves, whereas the *Ruſſe* Souldier, if taken by his Enemy, neither defends himſelf, nor intreats for his life, as reckoning ſtrait to die; and the *Turk* commonly when he is paſt hope of eſcaping, caſts away his Weapon, and holds up both his Hands, as it were to be tied, hoping to ſave his Life by offering himſelf Bondſlave.

The chief Booty the *Tartars* ſeek for in their Wars, is to get ſtore of Captives, eſpecially young Boys and Girls, whom they ſell to the *Turks* or other Neighbours. To this purpoſe they take with them great Panniers, to carry them tenderly, and if any of them happen to tyre or be ſick on the way, they daſh him againſt the Ground, or ſome Tree, and ſo leave him dead. The Souldiers are not troubled with keeping Captives or other Booty, becauſe they have certain Bands for that purpoſe, who mind nothing elſe.

The *Ruſſe* Borderers being uſed to their Invaſions, keep few Cattle there beſides Swine, which the *Tartar* will not touch nor drive away with him, becauſe he is of the *Turkiſh* Religion, and will eat no Swines Fleſh. Of *Chriſt* our Saviour they confeſs as much as the *Turk* does in his *Alcoran*, *viz.* That he came of the Angel *Gabriel* and the Virgin *Mary*, that he was a great Prophet, *&c.* But their Religion differs from the *Turks* in this, that they have Idols made of Silk or other Stuff, of the Faſhion of a Man, faſtned to the Door of their moving Houſes; and have beſides, the Image of their King or great *Cham* of an huge bigneſs, erected at every Stage when the Army marches, to which every one muſt bow as he paſſes by, be he *Tartar* or Stranger.

In their Marriages, a Man may take any Woman, except his Mother, Siſter or Daughter; and altho' he accompany with the Woman, yet he accounts her not for his Wife, till he have a Child by her: If ſhe be barren, after a certain time he turns her home again.

They have Dukes called *Morſeys* or *Dyvoymorſies*, that rule over ten, twenty, or forty thouſand a piece, which they call *Hoords*: When the *Chrim* hath occaſion for them in his Wars, they are bound to come with their Souldiers, every man with his two Horſes at the leaſt, the one to ride on, the other to kill, when it comes to his turn to have his Horſe eat; their chief Food being Horſe-fleſh, which they eat without Bread or any other thing with it; ſo that when a *Ruſſe* takes a *Tartar*, he commonly finds a Horſe Leg or ſome other part of him at his Saddle-bow.

While I was at *Moſco*, there came thither the *Chrim*'s Nephew, accompanied with 300 *Tartars*; he had two very large and fat Horſes flayed in a Sled, ſent to his Lodging to be made ready for his Supper for him and his Company. They prefer it before other Fleſh, becauſe the Meat is ſtronger than Beaf, Mutton, *&c.* and yet (which is a marvel) tho' they ſerve all as Horſemen in the Wars, and eat all of Horſe-fleſh, there are brought yearly to *Moſco* to be exchanged for other Commodities, thirty or forty thouſand *Tartar* Horſe. They keep alſo great Herds of Kine and Flocks of black Sheep, rather for the Skins and Milk, than for the uſe of the Fleſh, tho' ſometimes they eat of it. They drink Milk or warm Blood, and for the moſt part mix them together. In travelling they will bleed a Horſe in a Vein, and drink it warm as it comes from his Body.

Towns or ſtanding Building they have none, as being in their opinion neither pleaſant nor wholſome; but their Houſes are built upon Wheels, and when they come to their Stages, theſe Cart-houſes are placed very orderly in a Rank like Streets, and reſemble a very large Town.

They begin to move their Houſes and Cattle in the Spring time from the South towards the North, and ſo driving on till they have grazed all up the fartheſt part Northwards, they return back toward the South Country, by ten or twelve Miles a Stage, and there continue all Winter, the Graſs in the mean time being grown up again, to ſerve their Cattle as they return.

Of Money they have no uſe at all, neglecting Gold and Silver, and all Tillage of their Ground, to be more free for their wandring kind of life, and to keep their Country leſs ſubject to Invaſions, which gives them a great advantage over all their Neighbours, ever invading and never being invaded.

For Perſon and Complexion, they have broad and flat Faces, of a tanned colour, fierce look, thin haired upon the upper Lip, and a pit on the Chin, light bodied, with ſhort Legs, as if they were naturally made for Horſemen, which they practice from their Childhood, ſeldom going a foot about any buſineſs. Their greateſt Exerciſe is Shooting, wherein they train up their Children, not ſuffering them to eat till they have ſhot near the Mark.

There are divers other *Tartars* that border upon *Ruſſia*, as the *Nagaies*, the *Cheremiſſens*, the *Mordwites*, the *Chircaſſes*, and the *Shalcans*, which all differ from the *Chrim Tartar* in Name more than Regiment, except the *Chircaſſes* that border South-weſt toward *Lituania*, who are far more civil than the reſt of the *Tartars*, of a comely Perſon and ſtately Behaviour, applying themſelves to the faſhion of the *Polonians*. Some of them have ſubjected themſelves to the Kings of *Poland*, and profeſſed Chriſtianity. The *Nagayans* lie Eaſtward, and are reckoned the beſt Warriours among all the *Tartars*, but more Savage and cruel than the reſt. The moſt rude and barbarous is the *Mordovite Tartar*, who worſhips the firſt living thing he meets with in a Morning, and ſwears by it all that day. When his Friend dies, he kills his beſt Horſe, and flaying the Skin, carries it on high upon a long Pole, before the Corps to the place of Burial.

Altho' the *Tartars* are void of Learning and without written Law, yet certain Rules they hold by Tradition, which are common to all *Hoords*; which are,

I. To obey their Emperour and other Magiſtrates, in whatſoever they command for the publick Service.

II. Except for the publick behoof, every Man to be free and uncontrouled.

III. No private Man to poſſeſs any Lands, but the whole Country to be as a Common.

IV. To neglect all daintineſs and variety of Meats, and to content themſelves with that which comes next to hand, for more hardineſs and readineſs in executing their Affairs.

V. To wear any baſe attire, and to patch their Cloths, whether there be any need or not, that when there is need, it may be no ſhame to wear a patch'd Coat.

VI. To take or ſteal from any Strager whatſoever they can get, as being Enemies to all Men but ſuch as will ſubject themſelves to them.

VII. Toward their own Hoord and Nation, to be true in Word and Deed.

VIII. To ſuffer no Stranger to come within the Realm, if any do, the ſame to be Bondſlave to him that firſt takes him, except ſuch Merchants and others as have a *Tartar* Paſport about them.

The *Permians* and *Samoits* that lie North and North-eaſt from *Ruſſia*, are of the *Tartar* kind, having all broad and flat Faces: They are now ſubject to the *Ruſſe*, and live by hunting and trading with their Furs: They are clad in Seal Skins, with the hairy ſide outwards; are all black haired, and beardleſs: They are all Idolaters, worſhipping the Sun, the Ollen, the Loſh, &c. They live a Savage Life, roving from one place to another, without Habitation: Their Leader in every Company is their Prieſt.

On the North ſide of *Ruſſia* next to *Corelio*, lies the Country of *Lappia*, part of which is ſubject to the Kings of *Sweden* and *Denmark*, who exact Tribute and Cuſtom from them, but the greateſt part belongs to the *Ruſſian*. The whole Country is either Lakes or Mountains, but the Inland Parts are furniſhed with Woods which grow on the Hills ſides, the Lakes lying between. Their Diet is very plain, having no Bread, but feed only on Fiſh and Fowl. They are utterly unlearned, having not ſo much as the uſe of any Alphabet or Letter among them. For Witchcraft they are thought to paſs all Nations in the World, tho' as to the Story of ſelling Winds by tying Knots on a Rope, it is a meer Fable. Their continual Practice of ſhooting Wild Fowl, makes them excellent Marks Men. They travel upon Sleds drawn by the *Olen* Deer, which they turn a grazing all the Summer in an Iſland, called *Kilden*, and towards the Winter, when the Snow begins to fall, fetch them home again for the uſe of their Sleds.

CHAP. XV.

The Firſt Voyage of William Barets *into the North Seas*, 1594. *Written by* Garet de Veer.

1594. IN the Year 1594, four Ships were ſet out from the United Provinces, for the diſcovery of *Cathaia* and *China*, by ſailing to the Northward of *Norway*, *Muſcovia*, and *Tartaria*, whereof *William Barents* was chief Pilot.

Upon the 5th of *June* they ſailed from the *Texel*, and on the fourth of *July* ſaw *Nova Zembla* in 73 Deg. 25 Min.

On the ninth they entred into *Beeren-Fort*, under *Williams* Iſland, and ſpying a white Bear, they preſently entred their Boat, and ſhot her into the Body with a Musket; the Bear leaping up, took the Water, and the Men in the Boat rowing after her, caſt a Rope about her Neck, and dragged her at the Stern of the Boat, intending to carry her alive in the Ship, and ſhew her for a Wonder in *Holland*, but ſhe uſed ſuch force, that they were glad to be rid of her, and content themſelves with her Skin; for the Bear ſwimming to the Boat, got hold of the Stern with her fore Feet, which *Barents* perceiving, ſaid, ſhe will there reſt her ſelf, but ſhe ſtrugled ſo violently, that at laſt ſhe had gotten half her Body into the Boat, which ſo daunted the Men, that they ran to the further end of the Boat, thinking they ſhould have been ſpoiled by her, but the Rope about her Neck caught hold upon the Hook of the Rudder, which held her from coming further, whereupon one of the Men thruſt her into the Body with a half Pike, wherewith ſhe fell down into the Water, and ſo dragging her to the Ship, they killed her out right, and flaying her, brought the Skin to *Amſterdam*. **A white Bear killed.**

The 10th of *July* they ſailed out of *Beeren-Fort*, and on the 13th found great ſtore of Ice; as far as they could diſcern out of the top, it ſeemed like a plain Field. *July.*

On the 17th *William Barents* took the height of the Sun, and they were then in 77 Deg. and ¼.

On the 19th, they were cloſe by the Land of *Nova Zembla*, about Cape *Naſſaw*.

On the 25th, they were ſo incloſed with flakes of Ice, that out of the top they could not diſcern any thing beyound it, and indeavoured to make their way thro' it, but could not.

On the 28th, the height of the Sun taken at Noon with the Aſtrolabe, was found to be elevated above the *Horizon* 57 Deg. 6 Min. his declination being 19 Deg. 18 Min. which in all is 76 Deg. 24 Min. the Land lay all covered with Snow, the Weather being clear, and the Wind Eaſt.

On the 31th, having laboured forward between the Land and the Ice, they got to the Iſlands of *Orange*, upon one of which they ſaw about 200 Sea-horſes, lying upon the Shoar and basking themſelves in the Sun. Sea Horſes or Morſes They are bigger than Oxen, their Skins like a Seal, with very ſhort Hair, and two Teeth ſticking out of their Mouths, on each ſide one, about half an Ell long, as white, hard and even as Ivory, and as much eſteemed in *Muſcovia*, *Tartaria*, and the Parts adjacent.

Our Men ſuppoſing that the *Moſes* could not defend themſelves, being out of the Water, went on Shoar to aſſault them and get their Teeth, but they brake all their Hatches, Cuttle-axes, and Pikes in pieces, and could not kill one of them, but ſtruck ſome of their Teeth out of their Mouths, and brought them away with them.

Auguſt. They return. *William Barents* finding that he could not accompliſh his intended Voyage, and his Men refuſing to ſail further, on the firſt of *Auguſt* turned his courſe to ſail back again to meet the other Ships that had taken their courſe to *Weygats*, or the Streights of *Naſſaw*; and on the 15th, the Sun being S. W. *William Barents* took the heighth thereof, and found it to be elevated above the *Horizon* 35 Deg. ſo that there wanted 55 Deg. of 90, which 55 Deg. being added to 14 Deg. ¼, which was the Sun's declination, makes 69 Deg. 15 Min. for the heighth of the Pole in that place; and coming to the Iſlands called *Matflo* and *Delgoy*, they met with the other Ships, that came out of *Weygats* the ſame day. They meet with their Company.

One of the three Ships had paſt the Streight of *Weygats*, and at the end of it found a large Sea, on which they ſailed 50 or 60 Miles Eaſtward, and were of opinion that they had been about the River *Obi*, that falleth out of *Tartary*, and they ſaid that the Land of *Tartary* from that place ſtretched North-eaſtward, whereby they thought they were not far from Cape *Tabin*, and ſo thinking they had diſcovered enough for that time, and it being too late in that Year to ſail further, they returned to *Weygats*, and meeting with *Barents*, and the other two Ships, they ſet ſail together on the 18th of *Auguſt*, and arrived at *Texe* the 16th of *September*.

CHAP. XVI.

The ſecond Voyage of William Barents *into the North Seas*, 1595. *Written by* Geret de Veer.

1595. THIS Year the States of the *United Provinces* and Prince *Maurice* ſet forth ſeven Ships to ſail thro' the *Weygates* to *Cathaia* and *China*; ſix of them were laden with Merchandizes, and the ſeventh being a Pinnace, had Commiſſion when the other Ships were paſt about Cape *Tabin*, to return and bring news thereof.

July. On the ſecond of *July*, we ſailed from the *Texel*, and on the 17th of *Auguſt* ſaw great ſtore of Ice along the Coaſt of *Nova Zembla*.

On the 19th we entred *Weygates*, and as we went in, we caſt out the Lead, and had ſeven Fathom Water.

Auguſt. The 20th of *Auguſt* the height of the Sun being taken with the Croſs-ſtaff, we found it elevated above the *Horizon* 69 Deg. 20 Min. when it was S. W. and by S. being at the higheſt, or before it began to deſcend.

The 21ſt we went on Land with 54 Men, and being two Miles within the Land, we found many *Vel-werck*, *Traen*, and ſuch like Wares, and the Foot-ſteps of Men and Deer, as alſo many Images. In the mean time our Maſter ſent out a Boat to ſee if the *Tartarian* Sea was open, but it could not get into the Sea becauſe of the Ice, ſo they went over the Land to the Weſt Point, and there perceived that the Ice in the *Tartarian* Sea lay full upon the *Ruſſian* Coaſt, and in the Mouth of *Weygates*.

The 23d of *Auguſt* we found a *Lodgie* or Boat of *Pitzore*, ſowed together with Ropes, that had been Northward to ſeek for Sea-horſes Teeth, Trane, and Geeſe, which they fetched in their Boat to lade in certain Ships that were to come out of *Ruſſia* thro' *Weygates*, which Ships they ſaid were to ſail into the *Tartarian* Sea, by the River *Oby*, to a place called *Ugolita* in *Tartaria*, there to ſtay all Winter, as they uſed to do every Year, and told us that it would yet be nine or ten Weeks before it began to freeze in that place, and that when it once began to freeze, it would freeze ſo hard, that Men might go into *Tartary* upon the Ice, over the Sea, called by them *Mermare*.

The 24th in the Morning, betimes, we went on board of the *Lodgie* for further Information of the Sea on the Eaſt ſide of *Weygates*, and the like we did on the 25th, at which time they gave us eight fat Geeſe that lay in the bottom of their Boat: We deſired that one or two of them would go with us aboard our Ship, whereupon ſeven of them went willingly with us, and wondred much at the greatneſs and furniture of our Ship. When they had looked into every place, we ſet Fiſh, Butter and Cheeſe before them to eat, but they refuſed it, ſaying, that Day was a Faſting Day with them; yet at laſt, when they ſaw ſome of our pickled Herrings, they eat them Heads, Tails, Skins, and Guts, and having eaten them, we gave them a ſmall Firkin of Herrings, for which they gave us great thanks, and ſaid, they knew not what friendſhip they could do us to requite our Courteſy. At Noon, we got up our Anchors and ſailed North-eaſt two Miles, but were forced back again by the great ſtore of Ice, and ſo came to our old Road, there to ſtay for a more convenient time.

On the laſt of *Auguſt William Barents* our Captain, ſailed to the South ſide of *Weygates*, and going on Shoar, our Men, being nine in number, went about a Mile into the Land, not thinking to find any Men there (becauſe they had been on Shore in the *Weygates* at other times, and ſaw none) and being miſty weather, they perceived about 20 Men, who were very near them before they knew it. Our Interpreter went alone towards them to ſpeak with them, which they perceiving, ſent one towards us, who coming almoſt to our Men, took an Arrow out of his Quiver, offering to ſhoot at him, wherewith our Interpreter called unto him in the *Ruſſian* Tongue, *Shoot not, we are Friends*; which the other hearing, caſt his Bow and Arrows to the Ground, and ſaid, *You are welcome*, and ſaluting each other, by bending their Heads towards the Ground after the *Ruſſian* manner, our Interpreter queſtioned him about the ſituation and ſtretching of the Sea Eaſtward of the Streight of *Weygates*: He anſwered, That when we ſhould paſs a Point of Land about five days ſailing from thence (pointing with his Hand towards the North-eaſt) that then we ſhould come to a great Sea (pointing towards the South-eaſt) ſaying that he knew it very well, becauſe one had been there, who was ſent thither by their King with certain Souldiers, whereof he had been Captain. They land in the *Samoyeds* Country.

They are for the moſt part low of Stature, with broad flat Faces, ſmall Eyes, ſhort Legs, their Knees ſtanding outward, and are very nimble: They are apparelled in Deer's Skins from head to foot, and wear long Hair, which they pleat and fold, letting it hang down their Backs. Deſcription of the *Samoyeds*.

Their Sleds ſtood always ready with one or two Deer in them, which will carry a Man or two ſwifter than our Horſes. Swiftneſs of their Sleds.

One of our Men ſhot a Muſquet toward the Sea, wherewith they were in ſo great fear, that they ran and leapt like mad Men: We told them by our Interpreter, that we uſed our Pieces inſtead of Bows, and to convince them, one of our Men took a flat Stone, and ſet it upon a Hill a good diſtance from him, and with a Bullet ſtruck the Stone aſunder, whereat they wondred exceedingly.

After they were gone from us, one of them came riding to the Shoar, to fetch a rough hewed Image which our Men had taken off the Shoar and put into their Boat; as ſoon as he ſaw it in the Boat, he made us a ſign that we had not done well in taking it away; whereupon we gave it him again. Not far from thence we found hundreds of ſuch carved Images, having a little Hill inſtead of a Noſe, and two cuts in places of Eyes, and under the Noſe a cut in place of a Mouth. Before the Images we found great ſtore of Aſhes and Bones of Deer, whereby we ſuppoſed that they there offered unto them.

On the ſecond of *September* we ſet ſail, but by reaſon of the Ice, the Miſt, and the ſhifting of the Wind, we could hold no Courſe. *September*

On the fourth we ſailed between the Firm Land and the *States Iſland*.

On the ſixth ſome of our Men went aſhoar on the Firm Land, to ſeek for Stones which looked like Diamonds, and two of our Men lying together in one place, a great lean white Bear came ſtealing out, and caught one of Two Men killed by a Bear.

them

them faſt by the Neck, who not perceiving what it was, cried out and ſaid, *Who is it that pulls me ſo by the Neck?* wherewith the other lifting up his Head to ſee who it was, cried out, and ſaid, *Oh Mate, it is a Bear*, and therewith preſently roſe up and ran away.

The Bear at the firſt falling upon the Man, bit his Head aſunder, and ſucked out his Blood, wherewith the reſt of the Men that were on the Land, being about 20; ran preſently thither, either to ſave the Man, or elſe to drive the Bear from the dead Body, and having charged their pieces and bent their Pikes, ſet upon her, who was ſtill devouring the Man, but ſhe perceiving them to come towards her, fiercely ran at them, and getting another of them out from the Company, tore him in pieces, wherewith all the reſt ran away.

We perceiving out of our Ship and Pinnace, that our Men ran to the Sea-ſide to ſave themſelves, with all ſpeed entred into our Boats, and rowed as faſt as we could to the Shoar to relieve them; being come aſhoar, we beheld the cruel Spectacle of our two dead Men torn in pieces by the Bear, whereupon we encouraged our Men to go back again with us, and with Pieces, Cuttle-axes and half Pikes to ſet upon the Bear, but they would not all agree thereunto, ſaying, that our Men are already dead, and that we might get the Bear well enough, by taking her at ſome advantage, and not expoſe our ſelves to ſo open danger. The Bear was ſtill devouring her Prey, not fearing the number of our Men, altho' they were thirty at leaſt; whereupon the Maſter and Purſer of *Barent*'s Ship, and the Pilot of the Pinnace, went forward, and when the Maſter and Pilot had ſhot three times and miſſed, the Purſer advancing, ſhot the Bear into the Head between the Eyes, and yet ſhe held the Man ſtill faſt by the Neck, and lifted up her Head with the Man in her Mouth, but beginning to ſtagger, the Purſer and a *Scotch* Man drew out their Cuttle-axes, and ſtruck at her ſo hard, that they broke them, and yet ſhe would not leave the Man, till at laſt the Pilot went to them, and with all his might ſtruck the Bear upon the Snout with his Piece, wherewith ſhe fell to the Ground, making a great noiſe, and the Pilot leaping upon her, cut her Throat. The ſeventh of *September* we buried the Bodies of our Men in the *States* Iſland, and having flayed the Bear, carried the Skin to *Amſterdam*.

They kill the Bear.

The 9th we ſailed from the *States* Iſland, but the Ice came ſo thick upon us, that we could not get thro'.

On the 10th we ſailed towards the *Waygates*, and ſent two Boats into the *Tartarian* Sea, to certify us what ſtore of Ice was abroad; and that Evening we anchored all together in *Waygates*.

On the 11th, we ſailed into the *Tartarian* Sea, but met with ſo much Ice, that we returned the ſame day to *Waygates*.

The 14th, we hoiſed up our Anchor, thinking once again to try what we could do in the *Tartarian* Sea, but our Admiral being of another mind, lay ſtill.

The 15th, the Wind driving in at the Eaſt end of *Waygates*, forced us to get up our Anchors, and ſail out of the Weſt end with all our Fleet, and make homewards again.

On the 19th of *September* we entred into *Wardhouſe*, and upon the 18th of *November* arrived in the *Maes*.

CHAP. XVII.

The Third Voyage of William Barents *into the North-Seas,* 1596. *Written by* Gerat de Veer.

What hapned to them at Sea, before they built their Houſe.

1596.

THE *States General* of the *United Provinces*, upon the return of the ſaid ſeven Ships from their Northern Voyage, with leſs benefit than was expected, reſolved to ſend ſome Ships a third time, to ſee if they could bring the Voyage to a good end: And accordingly two Ships were made ready; in the one *Jacob Heemskerk Hendrickſon* was Maſter and Factor, and *William Barents* chief Pilot; in the other *John Cornelison Riip* was Maſter and Factor. We departed from the *Vlie* the 13th of *May*, and on the 30th were in the Latitude of 69 Deg. 24 Min.

June.

On the firſt of *June* we had no Night, and on the ſecond, when the Sun was about S. S. E. we ſaw a ſtrange ſight in the Element, for on each ſide of the Sun there was another Sun, and two Rain-bows that paſſed clean thorow the three Suns, and then two Rain-bows more, the one compaſſing round about the Suns, and the other croſs thorow the great Rundle, which Rundle ſtood with the uttermoſt Point, elevated above the *Horizon* 28 Deg. At noon we took the height of the Sun, and found it elevated above the *Horizon* 48 Deg. 43 Min. his Declination being 22 Deg. 17 Min. which added together, makes 71 Deg. for the height of the Pole.

Three Suns and four Rain-bows.

On the fifth, one of our Men walking on the Deck, cryed out that he ſaw Swans, which we that were under Deck hearing, came up, and perceived that it was Ice that came driving from the great heap; at midnight we ſailed thro' it, the Sun then about one Degree above the Horizon in the North.

The ſixth we entred into the Ice, which was ſo ſtrong that we could not paſs thro' it, ſo we ſailed along by it, keeping our Courſe N. N. E.

The ſeventh we were in the Latitude of 74 Deg. and we ſailed thro' the Ice as if we had paſt between two Lands; the further we ſailed, the more and thicker Ice we found, and the Water as green as Graſs.

The 8th we came to ſo thick a heap of Ice, that we could not ſail thro' it

Cherry-Iſland.

The 9th, we found the Iſland that lies in 74 Deg. 30 Min. and as we gueſt, it was about five Miles long; here we found the Compaſs to vary 13 Deg.

The 12th we ſaw a white Bear, which we rowed after with our Boat, thinking to caſt a Rope about her Neck, but when we came near her, ſhe was ſo great, that we durſt not do it, but rowed back again to our Ship to fetch our Arms and more Men, and ſo made to her again with Muſquets, Halberts and Hatches, the other Ships Boat coming alſo to help us, we rowed to her and fought her two Hours, our Weapons doing her but little hurt: One of our Men ſtruck her into the Back with an Ax, which ſtuck faſt in her Back, and yet ſhe ſwam away with it, but we rowing after her, did at laſt cleave her Head with an Ax, wherewith ſhe died; we flaied her and found her Skin to be twelve Foot long: This done, we eat ſome of her Fleſh, but did not well approve of it: We called this place *Bear Iſland*.

Bears Skin 12 Foot long

The 13th we left the Iſland, and ſailed North ſomewhat Eaſterly, and on the 14th we caſt our Lead 113 Fathom deep, but found no Ground.

On the 15th in the Evening, we ſaw a great thing driving in the Sea, which we thought had been the Hull of a Ship, but paſſing along by it, we perceived it to be a dead Whale, that ſtunk horribly, and on it there ſate a great number of Sea Mews.

Dead Whale

The 16th we continued our Courſe N. by E. with miſty weather.

The 17th and 18th, we ſailed along by great ſtore of Ice.

On the 19th we ſaw Land again, and taking the height of the Sun, we found that we were under 80 Deg. 11 Min. This Land was very great, and we ſailed Weſtward along by it, till we were under 79 Deg. 30. Min. where we found a good Road, but could not get near the Land, the Wind being at N. E. the Bay reaches right North and South into the Sea.

The 21ſt we anchored in 18 Fathom, and ſaw a white Bear ſwimming towards our Ship; we rowed after her in our Boat, and croſſing her in her way, drove her from the Land, and forced her to ſwim a Mile into the Sea, we following her with the moſt of our Men in three Boats, cutting and hewing her till moſt of our Arms were broken in pieces; ſhe ſtruck her Claws ſo hard into the

Bears Skin 13 Foot long.

Red Geeſe ſeen.

Red Geeſe bred under 80 Degrees in *Greenland*,

the Head of our Boat, that ſhe left the print of them behind her, and had it been in the middle of the Boat, ſhe had peradventure overſet it; at laſt we killed her, and flayed her, her Skin was 13 Foot long. Then rowing toward the Land, we found a good Haven, and a great Creek or River, and upon an Iſland therein, we found many red Geeſe Eggs; the Geeſe were of a perfect red colour, ſuch as come into *Holland* about *Weiringen*, and yearly taken there in great plenty, but till this time it was never known where they hatched their Eggs; ſo that ſome have written that they ſit upon Trees in *Scotland*, that hang over the Water, and ſuch Eggs as fall from them into the Water, become young Geeſe; but 'tis not to be wondred at, that no Man could tell where they breed their Eggs, becauſe no Man that ever we heard of, had ever been under 80 Degrees.

The 23d, we weighed Anchor, and ſailed N. W. but were ſoon ſtopt by the Ice, and ſo anchored in the ſame place again. In the Evening, the Sun at N. E. we took the height of it, and found it elevated above the *Horizon*, 13 Deg. 10 Min. his Declination being 23 Deg. 28 Min. which ſubſtracted, there reſt 10 Deg. 18 Min. which ſubſtracted from 90, the Pole was elevated 79 Deg. 42 Min. We ſet ſail again, and ſome of us went aſhoar to obſerve the variation of the Needle; in the mean time a great white Bear ſwam to the Ship, and would have climbed up into it if we had not made a noiſe: We ſhot at her with a Piece, whereupon ſhe left the Ship, and ſwam to land where our Men were, which we perceiving, ſailed with our Ship towards the Land, and gave a great Shout, wherewith our Men were much abaſhed, thinking we had fallen on a Rock, the Bear alſo being frighted, ſwam off again from the Land, and left our Men, which made us glad, becauſe they had no Arms with them: The Compaſs was found to vary 16 Deg.

Compaſs varies 16 Deg.

The 28th we met with a great number of Birds that flew againſt our Sails.

On the 30th we were in 75 Degrees.

July.

They ſeparate by conſent.

July the firſt, we ſaw *Bear* Iſland again; *Cornelíſon* and his Officers came aboard our Ship, to ſpeak with us about altering our Courſe, but we being of a contrary Opinion, it was reſolved that we ſhould follow our Courſe, and he his, which was, he (according to his deſire) ſhould ſail back to 80 Degrees again: for he was of opinion, that there he ſhould find a Paſſage thro', on the Eaſt ſide of the Land that lay under 80 Degrees, and ſo we parted, they ſailing Northward, and we Southward, becauſe of the Ice.

The ſecond we ſailed Eaſtward, and ſo continued an Eaſterly Courſe, as the Ice would give us leave, unto the 13th, when taking the height of the Sun, we found our ſelves in 73 Deg. and were of opinion that we were near *Willoughby*'s Land.

On the 16th we ſaw a great Bear lying upon the Ice, that leaped into the Water when ſhe ſaw us; we made towards her, which ſhe perceiving, got upon the Ice again. This Bear upon the Ice made us ſuppoſe that we were not far from *Nova Zembla*, we caſt our Lead, and had 100 Fathom.

The 17th we ſaw the Land of *Nova Zembla*, about *Lomsbay*, then altering our Courſe, we ſailed N. E. by N. as the Land lies.

The 19 we came to the *Croſs* Iſland, and could get no further by reaſon of the Ice: We anchored under the Iſland, and manning our Boat with eight Men, rowed to Land, and went to one of the Croſſes, where reſting a while, we went toward the next Croſs, but coming near it, we eſpied two Bears by the other Croſs, who roſe up upon their hinder Feet to ſee us, having ſmelt us before, for they ſmell further than they ſee; they came towards us, wherewith we were in no ſmall fear, having no Weapons about us: We retreated towards our Boat in all haſt, ſtill looking behind us to ſee if they followed us; but the Maſter ſtopt us, ſaying, he would thruſt the Hake-ſtaff he had in his Hand, into the Ribs of him that ſhould firſt offer to run, and ſaid, it was better for us to keep together, and ſee if we could make them afraid with hooping and hallowing; and ſo we went ſoftly towards the Boat, glad that we had eſcaped their Claws.

On the 21ſt we were in the Latitude of 76 Deg. 15 Min. and found the variation of the Compaſs to be * 26 Deg. We went aſhoar with our Arms, and coming to the Croſs, we found the Footſteps of two Bears, and perceived that they had followed us 100 Paces at leaſt.

* Perhaps 16.

The 22d we ſet up another Croſs, and made our Mark thereon, and lay before the *Croſs* Iſland till the fourth of *Auguſt*.

The 30th at a North Sun, a Bear came ſo near our Ship, that we might hit her with a Stone, and we ſhot her in the Foot, wherewith ſhe ran halting away. The ſame day at Noon we found the Variation to be 17 Degrees.

Auguſt.

On the fifth of *Auguſt* we ſet ſail, and on the ſixth got about Point *Naſſaw*, and ſailed E. and E. by S. along the Land.

The 7th we ſailed S. E. and S. E. by E. as the Land lies, and ſaw but little Ice, and then paſt by Truſt Point, which we had much longed for. At Evening the Wind came to Eaſt with miſty weather, ſo that we were forced to faſten our Ship to a piece of Ice which lay faſt on the Ground in 36 Fathom Water, and it was 10 Fathom above Water.

Ice 12 Fathom thick.

The 8th and 9th, lying ſtill faſt to the great piece of Ice, it ſnowed hard, and was miſty Weather, and when the Sun was South, we went upon the Hatches (for we always kept watch) where, as the Maſter walked along the Ship, he heard a Beaſt ſnuff with his Noſe, and looking over-board, ſaw a great Bear hard by the Ship, and was getting into our Boat, but we giving a ſhout, ſhe was afraid and ſwam away, but preſently came back again, and went behind a great piece of Ice, and climbing upon it, boldly came towards our Ship to enter into it, but we ſhot her into the Body, ſo that ſhe ran away, yet could not ſee whether ſhe went, by reaſon of the Snow falling ſo faſt, but we ſuppoſed ſhe lay behind ſome Hillock, whereof there were many upon the piece of Ice.

The 10th the Ice began mightily to break, and then we firſt perceived that the great piece of Ice whereunto we had faſtned our Ship, lay on the Ground; for the reſt of the Ice drove along by it, which put us in fear that we ſhould be encompaſſed with it, and therefore uſed all the means we could to get thence. We ſailed upon the broken Ice, and faſtned our Ship with our Sheet Anchor upon another piece; and when we had ſupped, the ſaid piece of Ice with once crack, burſt into at leaſt 400 pieces. We weighed our Cable and got off from it: It was ten Fathom under Water, and two Fathom above Water, and lay upon the Ground. We ſpied another great piece not far from us, that was as ſharp above as if it had been a Tower; we rowed to it, and caſting out our Lead, found that it lay 20 Fathom deep, faſt on the Ground, and 12 Fathom above Water.

On the 15th we came to the Iſland of *Orange*, where we were incloſed with Ice, and in great danger of looſing our Ship; but with great labour we got to the Iſland, and while we were buſy in turning to windward (the Wind being at S. E.) our noiſe awakned a Bear that lay there and ſlept, who coming towards the Ship, forced us to leave our Work, and to defend our ſelves. We ſhot her into the Body, and then purſuing her, ſtruck her on the Head with a Hatchet, yet had much ado to kill her, becauſe as often as we ſtruck at her with the Hatchet, ſhe duck'd under Water.

Bear killed.

The 16th, ten of us rowed to the firm Land of *Nova Zembla*, and when we had drawn up the Boat upon the Ice, we aſcended a high Hill to ſee the ſituation of the Land, and found that it reached S. E. and S. S. E. and then again S. which we diſliked, becauſe it lay ſo much Southward; but when we ſaw open Water S. E. and E. S. E. we were comforted again, thinking we had accompliſhed our Voyage, and knew not how to certify *William Barents* thereof.

The 18th we prepared to ſet ſail, but it was all in vain, for we had almoſt loſt our Sheet Anchor and two new Ropes, and with much labour got to the place again from whence we came. The Stream ran with a mighty Current, and the Ice drave ſo ſtrongly upon the Cables, that we feared we ſhould looſe all the Cable that was without the Ship, which was 200 Fathom, but God provided well for us, ſo that at laſt we got to the place again from whence we put out.

The 19th it was indifferent good weather, the Wind at S. W. the Ice ſtill driving, we ſet ſail and paſſed by Point *Deſire*, whereby we were once again in good hope, and being gotten about the Point, we ſailed S. E. to Seaward four Miles, but then entring into more Ice, we were conſtrained to return, and ſail N. W. to the Land again.

The 21 we ſailed a great way into the *Ice Haven*, and that Night anchored therein. The next day, the Stream going extream hard Eaſtward, we haled out and ſailed again to the Iſland Point, and being miſty weather, we faſtned our Ship to a piece of Ice, and then went upon it, much wondring at the ſtrangeneſs of the Ice; on the top it was full of Earth, and not like to other Ice, being of a perfect azure colour, like to the Sky, which cauſed great contention among us, ſome ſaying that it was Ice, others that it was frozen Land: It was cloſe to the Ground

Earth on the top of azure Ice.

in 18 Fathom Water, ten Fathom above the Water; we found above 40 Eggs upon it. There we ſtaied all that Storm, the Wind at S. W. by W.

The 23d we ſailed again S. E. into the Sea, but preſently met with Ice again, which forced us to return to the *Ice Haven.*

The next day it blew hard N. N. W. and the Ice came mightily driving in, whereby we were encompaſſed with it, and the Wind riſing, the Ice drave harder upon us, ſo that the Rudder and our Boat were broken in pieces, we expecting nothing elſe, but that the Ship alſo would be cruſht in pieces with the Ice.

The 25th, the Weather began to be better, and we laboured much to free our ſelves from the Ice wherewith we were incloſed, but it was all in vain. We now deſpairing to perfect our intended Diſcovery, thought to ſail Southward about *Nova Zembla* to the Streight of *Weygates*, but coming to the *Stream Bay*, the Ice lay ſo faſt thereabouts, that we were forced to go back again.

The 26th, we determined to ſail back to Point *Deſire*, and ſo home again; but when we had paſt the *Ice Haven*, the Ice began to drive with ſuch force, that we were incloſed with it, and had loſt three of our Men who were upon the Ice to make way for the Ship, if they had not been nimble and caught hold as the Ship drave by them, whereby they eſcaped a miſerable death. The ſame Evening we got to the Weſt ſide of the *Ice Haven*, where we were forced in great Cold, Poverty, Miſery, and Grief, to ſtay all that Winter, the Wind being then E. N. E.

The 27th, the Ice drave round about the Ship, and yet it was good Weather; ſome of us went aſhoar, and the Wind beginning to blow at S. E. the Ice came in with great force, and drave the Ship up four Foot high before, and behind it ſeemed as if the Keel lay on the Ground; ſo that they in the Ship thinking ſhe would be overſet, put out the Boat to ſave their Lives, and withal hung out a Flag for a ſign to us to come aboard. When we beheld the Ship lifted up in that manner, we began to deſpair of ſaving her, but coming to her, we found her in better caſe that we expected.

The 28th, we got ſome of the Ice from it, and the Ship began to ſet upright again, but before ſhe was fully upright, as *William Barents* and the other Pilot went forward to ſee how the Ship lay, and how much ſhe was riſen, the Ship burſt out of the Ice with ſuch a noiſe, and ſo great a crack, that they verily thought they had been all caſt away.

The 29th, the Ship lying upright again, we uſed all the means we could with Iron Hooks and other Inſtruments to break the Flakes of Ice that lay heaped upon one another, but all in vain, ſo that we determined to commit our ſelves to the mercy of God, and to attend aid from him.

The 30, the Ice began to drive one upon the other with greater force than before, and bare againſt the Ship with a boiſterous S. W. Wind and a great Snow, ſo that all the whole Ship was born up and incloſed, whereby all that was about it and in it, began to crack, ſo that it ſeemed burſting in a hundred pieces, moſt dreadful to ſee and hear, and made all the Hair of our Heads to riſe upright with fear.

The 31ſt, the Ship was driven up four or five Foot high at the Head, and the Stern being lodged in a cleft of Ice, we thought the Rudder had been ſafe from the force of the flakes of Ice, but it proved otherwiſe, for it brake in pieces, Staff and all, and if the hinder part of the Ship had been in the driving Ice, as the fore part was, then all the Ship had been driven upon the Ice, or elſe had run on ground, whereof we were much afraid, and ſet out our Boats upon the Ice to ſave our ſelves, if need were; but within four Hours the Ice drave away of its ſelf, to our great comfort, becauſe the Ship was then afloat again, and thereupon made a new Rudder, and hung it out ~~upon the~~ Hooks, that if we ſhould be forced again upon the Ice, it might be freed from it.

Septem.

The firſt of *September* being *Sunday*, while we were at at Prayers, the Ice began to gather again.

The ſecond it ſnowed hard with a N. E. Wind, and the Ship began to riſe higher upon the Ice, ſo that we thought good to put thirteen Barrels of Bread and two Hogſheads of Wine into our Scute, and to carry it aſhoar in that bad Weather, to ſuſtain our ſelves in time of need.

The third it blew hard at N. N. E. but ſnowed not ſo much.

On the fourth it cleared up, and we ſaw the Sun, but it was very cold, and the Wind being at N. E. we were forced to lie ſtill.

The fifth it was fair Sun-ſhine weather, and very calm; in the Evening the Ice incloſed upon us again, and the Ship began to lie on one ſide, and leak much, but by God's Grace, it became ſtaunch again. We then conſulted together and carried our old Sail, with Powder, Muskets, &c. aſhoar, to make a Tent about our Scute, and ſome Timber to mend it, that it might ſerve us in time of need.

The ſixth it was indifferent fair Weather, and the Wind Weſt, which gave us ſome hopes that the Ice would drive away, and that we might get thence again.

The ſeventh it was good Weather again, but we could perceive no opening of the Water, but lay hard incloſed with Ice.

Three of our Men went two Miles into the Land, and there found a River of ſweet Water, and great ſtore of Wood that had been driven thither, and the Fotſteps of Deer, as they ſuppoſe, by being cloven footed.

River of freſh Water, ſtore of drift Wood.

The eighth, it blew hard N. E. a direct contrary Wind to do us any good, and faſtned us more into the Ice.

The 9th we lay four Foot deep in Ice; in the Night two Bears came cloſe to our Ship, but we ſounding our Trumpet, and firing at them, they ran away.

The 11th, being calm weather, eight of us went aſhoar, every Man armed, to ſee if it were true what our Companions had ſaid, that there lay Wood about the River; becauſe we now began to deſpair of getting our Ship looſe from the Ice, and were therefore reſolved to build a Houſe upon the Land, to defend us from cold, and wild Beaſts, and ſo to commit our ſelves to the Tuition of the Almighty; and to that end we went further into the Land, to find out the moſt convenient place to raiſe our Houſe upon: We found certain Trees, Roots and all (as our Companions had told us) which had been driven upon the Shoar either from *Tartary*, *Muſcovy*, or elſe where, there being none growing in *Nova Zembla*. This Wood ſerved not only to build our Houſe, but alſo to burn during our long Winter, otherwiſe without doubt we had periſhed with extream cold.

They determin to winter there.

The 12th it was calm weather, and our Men went unto the other ſide of the Land, to ſee if they could find any Wood nearer to us, but there was none.

The 13th, it was calm, but very miſty, ſo that we would not venture into the Land, becauſe we could not ſee the wild Bears, and yet they could ſmell us.

The 14th it was Sun-ſhine, but very cold, and then we went into the Land and laid the Wood on heaps that it might not be covered with Snow.

The 15th, in the Morning, as one of our Men kept watch, he ſaw three Bears; one of them lay ſtill behind a piece of Ice, the other two came cloſe to the Ship: There was a Tub full of Beef that ſtood upon the Ice at a diſtance from the Ship; one of the Bears went unto it, and putting in his Head to take out a piece, as ſhe was ſnatching at it, we ſhot her in the Head, that ſhe fell down dead and never ſtirred; the other Bear ſtood ſtill and looked upon her Fellow, and after a while ſmelt to her, and perceiving that ſhe was dead, ran away, but we followed her with Halberts and other Arms, whereupon ſhe turned towards us, and riſing up upon her hinder Feet, to ramp at us, one of our Men ſhot her into the Belly, ſo that ſhe fell upon her Fore-feet again, and roaring aloud, ran away. That Night it froze two Fingers thick in the ſalt Water, and was exceeding cold, the Wind at N. N.

Salt Water freezeth two Fingers thick in one Night.

The 16th the Sun ſhone, we fetched Wood upon Sleds we had made; the like we did on the 17th. We drew five and five in a Sled, and the other three helped to lift behind; and in that manner we drew Wood twice a day to the place where we intended to build our Houſe.

The 23d our Carpenter died, we buried him under the Sedges, in the cleft of a Hill; for we could not dig up the Earth by reaſon of the Froſt: That day we fetched Wood twice.

The 25th it was dark Weather, the Wind S. W. and the Ice began to open a little and drive away, but it continued not long: The ſame day we began to raiſe our Houſe.

The 26th we had a Weſt Wind and an open Sea, but our Ship lay faſt, to our great grief, but it was God's Will, to which we moſt patiently ſubmitted, and began to make up our Houſe; ſo fetched Wood to burn, the reſt performed the part of Carpenters. We were in all 16 Men (the Carpenter being dead) and of thoſe 16, there was ſtill one or other ſick.

The 27th it blew hard at N. E. and froze ſo hard, that as we put a Nail into our Mouths (as Carpenters uſe to do) Ice would hang thereon as we took it out, and make the Blood follow. The ſame day an old Bear and a young one came towards us, as we were going all together to our Houſe (for we durſt not go alone) we thought to ſhoot at her, but ſhe ran away. Altho' it was fair Sun-ſhiny weather, yet the Ice came forcibly driving in, and it was ſo extream cold, that we could hardly work, but extremity forced us to it.

The 28th was fair weather, and the Sun ſhone, the Wind Weſt, and very calm, the Sea alſo was open, but our Ship lay faſt in Ice, and ſtirred not.

The 29th, we ſaw three Bears between us and the Houſe, an old one and two young ones; we notwithſtanding went on, drawing our Goods from the Ship to the Houſe, and got before them; looking behind us, we perceived they followed us, whereupon we hollowed as loud as we could, thinking they would have gone away, but they would not go out of their Path, but alſo got before us again; Then we and they that were in the Houſe, gave a great ſhout, which made them run away.

The 30th, the Wind eaſterly, it ſnowed ſo faſt all that Night and the next Day, that our Men could fetch no Wood.

Ground ſo frozen that it cannot be thawed.

We made a great fire without the Houſe to thaw the Ground, that we might lay the Earth about the Houſe, to make it the warmer; but it was loſt Labour, for the Earth was ſo hard, and frozen ſo deep, that we could not thaw it, and it would have coſt us too much Wood, and therefore we left off that labour.

What happened to them after their Houſe was built.

October.

The firſt of *October* the Wind was ſtiff at N. E. and after Noon it blew a great ſtorm at North, with ſuch a drift of Snow, that we could hardly go in the Wind. The Snow drave ſo hard in our Faces, that we could ſcarce draw our Breaths, and could not ſee two Ships length from us.

The ſecond, before Noon the Sun ſhone, ſtill weather, the Wind ſhifted from North to South. We went on with our Houſe, and placed upon it a May-pole made of frozen Snow.

The third, before Noon it was calm ſun-ſhiny weather, but ſo cold, that it was hard to be endured; after Noon it blew hard at Weſt, with ſo extream cold, that had it continued, we ſhould have been forced to leave our Work.

The fourth, the Wind came to the North with much Snow; we brought our Anchor upon the Ice to lay the faſter, and were not then above an Arrow ſhot from the Water, the Ice was ſo much driven away.

The fifth, it blew hard at N. W. and the Sea was very open, and without Ice, as far as we could diſcern; but we lay ſtill frozen as we did before, and our Ship lay two or three Foot deep in the Ice, which was there three Fathom and a half deep. The ſame day we brake up the lower Deck of the fore part of our Ship, and with thoſe Deals covered our Houſe, making it ſlope overhead that the Water might run off.

The ſixth, a great Snow, and ſo cold, that we could hardly thruſt our Heads out of the Door.

The ſeventh we caulk'd our Houſe, and brake the Ground about it at the Foot thereof: This day the Wind ſhifted round the Compaſs.

The eighth, it blew ſo hard and ſnowed ſo faſt, that we had been ſmothered if we had gone out into the Air; it was not poſſibly for any Man to have gone one Ship's length, tho' his Life had lain thereon.

The 9th, the Wind ſtill continued North, and it ſnowed hard, ſo that all that day we were forced to ſtay in the Ship, the weather was ſo foul.

nce it is robable that e Courſe of e Tides ere comes om the orth.

The 10th, the weather ſomewhat fairer, the Wind S. W. the Water flowed two Foot higher than ordinary, which we gueſſed to proceed from the former North Wind, which till then had blown. One of our Men going out of the Ship, chanced to meet a Bear, and was almoſt at him before he knew it, whereupon he preſently ran back to the Ship and the Bear after him; but ſhe coming to the place where before we had killed another Bear, and ſet her upright, and there left her to freeze, ſtood ſtill, whereby our Man had time to get into the Ship. In the Evening we carried the greateſt part of our Bread to the Houſe.

The 11th, the Wind South, ſomewhat warm, we carried our Wine and Victuals on Land, and as we were hoiſing the Wine over-board, a Bear whom we had awakened with the noiſe we made, came towards our Ship; we had ſeen her lie there, but thought her to be a piece of Ice; as ſhe came near to us, we ſhot at her, and ſhe ran away.

The 12th it blew North, and half our Men kept in the Houſe, being the firſt time that we lay in it, where we endured great cold, becauſe our Cabbins were not made, and beſides, we had not Cloaths enough, neither could we keep a Fire, becauſe our Chimney was not yet made.

The 13th, the Wind was N. and N. W. three of us went aboard, and when we had laded a Sled with Beer, to carry it to our Houſe, there aroſe ſuch a ſtorm, that we were forced to go into the Ship again, letting the Beer ſtand without upon the Sled. In the Ship we endured extream cold, having but few Cloths in it.

The 14th, as we came out of the Ship, we found the Barrel faſt frozen at the Heads, and the Beer that purged out, froze as hard to the ſides of the Barrel as if it had been glued on. In this thick Yeaſt that was unfrozen lay the ſtrength of the Beer, ſo that it was too ſtrong to drink alone. There was ſcarce any Beer left in the Barrel but what was frozen; this we melted and drank it mixt with the other, but it had neither ſtrength nor taſt.

Beer melted.

The 15th, the Wind eaſterly, we made a place to ſet up our Door, and ſhovelled the Snow away.

The 18, we fetched our Bread out of the Scute, which we had drawn upon the Land, and the Wine alſo, which was then not much frozen, altho' it had lain ſix Weeks therein. The Sea was now ſo covered with Ice, that we could ſee no open Water.

Bear aſſaults the Ship.

The 19th, there being but two Men and a Boy in the Ship, a Bear ſought to get into the Ship; the two Men ſhot at her, yet ſhe ventured upon them, and put them in great fear; the two Men leapt into the Ballaſt, and the Boy ran up into the Fore-maſt top; in the mean time ſome of our Men ſhot at her with a Muſquet, and then ſhe ran away.

The 20th, it was calm Sun-ſhine weather, and then again we ſaw the Sea open. We went aboard to fetch the reſt of our Beer, where we found ſome of the Barrels frozen in pieces, and the Iron Hoops that were upon the *Joſem* Barrels, were all frozen in pieces.

Barrels and Iron Hoops broken with the Froſt.

The 22d, a ſtiff Gale at N. E. with great Snow that we could not get out of doors.

The 23d, calm weather, we went aboard to ſee if the reſt of our Men would come home to the Houſe, but we feared it would blow hard again, and durſt not ſtir with the ſick Man, but let him lie ſtill that Day, for he was very weak.

The 24th, the reſt of our Men, being eight Perſons, came to the Houſe, and drew the ſick Man upon a Sled; then with great labour and pain, we drew our Boat home to the Houſe and turned the bottom upward, that we might uſe it hereafter, if God ſhould ſave our Lives this Winter, and there being now nothing leſs to be expected than the opening of the Water, we put our Anchor into the Ship again, that it might not be covered over and loſt in the Snow; for we always truſted in God, that he would deliver us in the Spring, one way or other. The Sun at the higheſt, began to be very low, and we uſed all the ſpeed we could to fetch all things with Sleds out of our Ship into the Houſe, not only Meat and Drink, but all other neceſſaries: The Wind at North.

Fight with Bears.

The 25th, when we had laden the laſt Sled, and ſtood ready to draw it to the Houſe, our Maſter ſpied three Bears behind the Ship coming towards us, whereupon he cried out aloud, to ſcare them away; by good fortune there lay two Halberds upon the Sled, the Maſter took one and I the other, and reſiſted them as well as we could, but the reſt of our Men went to ſave themſelves in the Ship, and one of them fell into a cleft of Ice, which grieved us much, becauſe we thought the Bears would have ran unto him and devoured him, but God defended him; for the Bears ſtill made towards the Ship after the Men that run thither to ſave themſelves: In the mean time we and the Man that fell into the Cleft, took our advantage, and got into the Ship on the other ſide, which the Bears perceiving, came fiercely towards us, who had no other Arms to defend our ſelves beſides the two Halberds, which we feared would not be ſufficient, and therefore gave them work to do, by throwing Billets and other things at them, and every time we threw, they ran after them as a Dog will do at a Stone caſt at him. We ſent a Man in the mean time under Hatches to ſtrike fire, and another to fetch Pikes, but we could get no Fire; at laſt as they came fiercely upon us, we ſtruck one of them with a Halberd upon the Snout, wherewith ſhe gave back and went away; which the other two, that were not ſo big, perceiving, ran away; and we thanked God that we were ſo well delivered from them, and ſo drew our Sled quietly to our Houſe, and informed our Companions what had hapned to us.

The 26th, the Wind at North, with indifferent fair Weather, we then ſaw open Water hard by the Land, but perceived the Ice to drive into the Sea towards the Ship.

The 27th it ſnowed ſo faſt that we could not work without door: That day our Men killed a white Fox and flaied him, and when they had roaſted him, eat him, his Fleſh taſted like that of a Rabbet. The ſame day we ſet up our Dial and made the Clock ſtrike; and we hung up a Lamp, wherein we uſed Bears Fat melted, inſtead of Oil.

The 29th, the Wind at N. E. we fetched Seggs from the Sea-ſide, and laid them upon the Sail that was ſpread upon our Houſe, that it might be the cloſer and warmer; for the Dea's were not driven cloſe together, and the foul weather would not permit us to do it.

November

November the firſt, the Wind ſtill continued N. E. we ſaw the Moon riſe in the Eaſt when it began to be dark, and the Sun was no higher above the *Horizon* than we could well ſee it: Much Snow, and ſo extream cold, that we could not go out of the Houſe.

Sun riſes S. S. E. and ſet, S. S. W.

The ſecond, the Wind W. by S. but in the Evening North with calm weather; we ſaw the Sun riſe S. S .E. and went down S. S. W. but it was not full above the Earth, but paſſed in the *Horizon* along by the Earth. One of our Men killed a Fox with a Hatchet, which was flaied, roaſted and eaten: Until the Sun began to decline, we ſaw no Foxes, and then the Bears left us.

The Wind N. W. with calm weather: The Sun roſe S. by E. and ſomewhat more ſoutherly, and went down S. by W. and ſomewhat more ſoutherly, and then we could ſee nothing but the upper part of the Sun above the *Horizon*, and yet the Land where we were, was as high as the Maſt of our Ship. We took the height of the Sun, then in the 11th Deg. and 48 Min. of *Scorpio*, his Declination being 15 Deg. 24 Min. on the South ſide of the Equinoctial Line.

They ſee the *Sun* no more after the 3d of *November*, *Stilo Novo*, or our *October* 24.

The fourth was calm weather, we ſaw the Sun no more: Our Chirurgion made a Bath in a Wine Pipe to bath us in, wherein we entred one after the other, and it did us much good. The Bears left us at the ſitting of the Sun, and came not again before it roſe, whereas the Foxes now came aboard, and we this day took one.

Moon continually ſeen in the Sun's abſence.

The fifth the Wind was North, and then we ſaw open Water upon the Sea, but our Ship lay faſt in the Ice, and when the Sun had left us, we ſaw the Moon continually, both Day and Night, and never went down when it was in the higheſt Degree.

The ſixth we fetched a Sled of Fire-wood, but by reaſon of the Sun's abſence, it was very dark weather.

The ſeventh, it was dark weather, and very ſtill, the Wind Weſt, we could hardly diſcern Day from Night. Our Clock ſtood ſtill, and we not riſing out of our Cabbins all that Day, unleſs to eaſe our ſelves, we were in doubt whether the light we ſaw, was the light of the Day or of the Moon; at laſt we found it to be the light of the Day, about twelve of the Clock at Noon.

Beer made inſipid by the Froſt.

The eighth was ſtill weather, the Wind S. W. we fetched another Sled of Fire-wood, took a white Fox, and then we ſaw open Water in the Sea. The ſame Day we ſhared our Bread, each Man having four Pound and ten Ounces for his allowance in eight days: We had no need to ſhare our Fleſh and Fiſh, having more ſtore thereof; but our Drink failed us, ſo that we ſhared that alſo: Our beſt Beer was for the moſt part without ſtrength, and had no ſavour at all.

The ninth, the Wind at N. E. we had not much day light, but was altogether dark.

The 10th, the Wind N. W. calm weather, our Men went into the Ship to ſee how it lay, and found the Ballaſt covered with Water, which was frozen and could not be pumped out.

The 11th, we made a Net of Cable Yarn to catch Foxes, and that day caught one.

The 12th, the Wind at Eaſt with little light; this day we began to ſhare our Wine, two Glaſſes a day to a Man, but our common Drink was Water made of melted Snow.

The 13th, was foul Weather and much Snow, the Wind at Eaſt.

The 14th was fair weather, with a clear Sky full of Stars, and an Eaſt Wind.

From the 15th to the 19th, dark and foul weather, the Wind Eaſterly.

The 20th, was fair ſtill weather, the Wind Eaſterly, we waſhed our Sheets, and when we had waſhed and wrung them, they preſently froze ſo ſtiff, that altho' we laid them by a great Fire, the ſide that lay next the fire thawed, but the other ſide was hard frozen, ſo that it was eaſier to tear them aſunder, than to open them, and we were forced to put them into ſeething Water again to thaw them.

The 21ſt was indifferent weather, the Wind N. E. then we agreed that every Man ſhould take his turn to cleave Wood, thereby to eaſe our Cook, who had work enough to do twice a day to dreſs meat, and to melt Snow for our Drink, but the Maſter and the Pilot were exempted.

The 22d, the Wind S. E. fair weather: we had now but 17 Cheeſes, whereof one we did eat among us, and the reſt were diſtributed to every Man one.

The 23d, we made Traps of thick Planks, whereon we laid Stones, and round about them placed pieces of Shards faſt in the Ground, that they might not dig under them, and by that means got ſome Foxes.

The 24th was foul Weather, the Wind N. E. four of us not being very well, went into the Bath, and when we came out, our Chirurgeon gave us a Purgation, which did us much good, and this day we took four Foxes.

The 25th was clear weather, the Wind at Weſt; this day we took two Foxes.

The 26th was foul weather, and a great ſtorm at S. W. with much Snow, whereby we were ſo cloſed up in the Houſe that we could not go out, but were forced to eaſe our ſelves within the Houſe.

The 27th, fair weather, the Wind S. W. we made more Springes to catch Foxes, which ſerved us for Meat, as if God had ſent them purpoſely for us.

The 28th was foul ſtormy weather, and the Wind blew hard out of the North, and the Snow ſo cloſed up our Doors, that we were again ſhut up in our Houſe.

The 29th, clear weather, the Wind Northerly, we got one of our Doors open, and found all our Traps and Springes covered with Snow, which we made clean and ſet them up again. The Foxes did not only ſerve us for Meat, but their Skins ſerved us to make Caps to keep our Heads warm.

The 30th, the Wind Weſt, clear weather, ſix of us well armed went to the Ship, and when we were under deck, we took a Fox alive in the Ship.

Decemb

The firſt of *December*, the Wind S. W. foul weather, and great ſtore of Snow, whereby we were once again ſtopt up in the Houſe, which ſmoak'd ſo much, that we could hardly keep a fire, and ſo were forced to lie all day in our Cabbins, but the Cook was neceſſitated to make fire to dreſs our Meat.

The ſecond we were detained in the Houſe by foul weather, and yet we could not ſit by the fire becauſe of the Smoak, but lay in our Cabbins, and heated Stones, which we put in our Cabins to warm our Feet, for both the Cold and the Smoak were inſupportable.

Ice two Fingers thick in the Houſe.

The third, we had the like weather, and as we lay in our Cabins we could hear the Ice crack in the Sea, altho' it was at leaſt half a Mile from us, making a huge noiſe, and we were of opinion that the great Hills of Ice we had ſeen in the Sea in the Summer, did now break one another, We making leſs fire for two or three days paſt than we uſed to do, by reaſon of the extream Smoak, it froze ſo hard within the Houſe, that the Walls and Roof were frozen two Fingers thick with Ice, and ſo likewiſe in our Cabins, during thoſe three days, we could not go out. We ſet up a Glaſs of twelve Hours, and when it was run out we ſet it up again, ſtill watching it, leſt we ſhould miſs our time; for our Clock was frozen and would not go, altho' we hung more weight on it than formerly.

Clock frozen.

The fourth and fifth was fair weather, the Wind at N. E.

The ſixth, it was foul weather again, with an Eaſterly Wind, and extream cold, almoſt not to be endured, whereupon we look'd pitifully upon each other, being in great fear, that if the cold ſhould increaſe, it would kill us all; for whatſoever fire we made, it would not warm us, and our Sack was frozen very hard, ſo that when we were every Man to have his part, we were forced to melt it at the fire. We ſhared every ſecond day about half a Pint for a Man; at other times we drank Water melted out of Snow.

Sack fro

The ſeventh continued foul weather, with a great ſtorm at N. E. which brought extream cold along with it, ſo that we knew not what to do; one adviſed to burn ſome of the Sea-coal we had brought out of the Ship, which would caſt a great heat and continue long: And ſo at Evening we made a great fire thereof, and to keep in the

the heat, we agreed to ſtop up all the Doors and the Chimney, and ſo went into our Cabbins to ſleep, where, when we had lain a great while talking together, we found our ſelves ill at eaſe, and ſome ſwounded and fainted away; whereupon ſome of us that were ſtrongeſt, ſtarted out of our Cabins, and firſt opening the Chimney, and then the Doors, he that opened the Door fell down into a ſwound upon the Snow, and was recovered by caſting Vinegar in his Face. As ſoon as the Doors were opened, we were all well again, and the Maſter gave every one of us a little Wine to comfort us.

The eighth was foul weather, the Wind Northerly, very ſharp and cold, but we durſt not lay on more Coals.

The ninth, was fair clear weather, the Sky full of Stars; then we ſet our Door wide open, which had been cloſed up with Snow.

The 10th was fair ſtar light, the Wind N. E. we took two Foxes, which were good Meat for us, becauſe our Victuals began to be ſcant.

The 11th was fair and clear, but very cold, our Shoes froze as hard as Horn upon our Feet, and were frozen white within, ſo that we could not wear them, but were forced to make great Pattins, the upper part of Shepsskins, which we put on over three or four pair of Socks to keep our Feet warm.

The twelfth was fair clear weather, the Wind N. W. but extream cold, ſo that our Walls and Cabins were frozen a Finger thick, yea, and the Cloths on our Backs were white all over with froſt; and altho' ſome were of opinion that we ſhould lay more Coals on the Fire, and let the Chimney ſtand open, yet we durſt not do it fearing the like Danger we had eſcaped.

The 13th, clear weather, the Wind at Eaſt; we buſied our ſelves in preparing our Springes, and if we ſtaid too long without doors, there aroſe Bliſters upon our Faces and our Ears.

The 14th was fair, the Wind N. E. and the Sky full of Stars; we took the height of the right Shoulder of the *Rens*, when it was S. S. W. and ſomewhat more Weſterly, (and then it was at the higheſt in our Compaſs) and it was elevated above the Horizon 20 Deg. 28 Min. his Declination being 6 Deg. 18 Min. on the North ſide of the Line, which taken from the height, there reſts 14 Degrees, which ſubſtracted from 90, the height of the Pole was 76 Deg.

The 15th was fair, the Wind Eaſt; we ſaw the Moon riſe E. S. E. when it was 26 Days old, in the ſign of *Scorpio*: This day we took two Foxes.

The 16th was clear weather; we had now no more Wood in the Houſe, but round about our Houſe there lay ſome covered with Snow, which with great labour we digged out of the Snow, wherein we were forced to uſe great ſpeed, not being able to endure long without the Houſe, altho' we had double Apparel upon our Backs.

The 17th and 18, the Wind N. E. fair weather; ſeven of us went to the Ship to ſee how it lay; we found that in our 18 days abſence, the Water in the Ship was riſen about a Finger high, but was all Ice, for it froze as faſt as it came in.

The 19th, fair weather, the Wind South; we comforted each other, becauſe the Sun was then almoſt half over, and ready to come to us again, which we much longed for, it being very tedious to us to be ſo long without the Sun, and want the greateſt Bleſſing God gives to Man upon Earth, and that which rejoices every living thing.

The 20th, there roſe a Storm in the S. W. with ſo great a Snow, that all the Houſe was incloſed with it.

The 21ſt, fair clear weather, the Wind N. E. we ſhovelled away the Snow from our Door, and made a Way to go out, but there fell ſo much Snow the next day, the Wind S. W. that our Door was ſtopt up again, and we were at the trouble of clearing it almoſt every day.

Sun in Capricorn the 23d of *December*, New Stile.

The 23d continued the ſame Wind and Weather, but we now hoped for better, the Sun being this day in the Tropick of *Capricorn*, the furtheſt diſtance Southward.

The 24th being fair, we opened our Door, and ſaw much open Water in the Sea; for altho' it was not day, yet we could ſee a great way. In the Evening it blew hard at N. E. with much Snow, ſo that the Paſſage we had made was ſtopt up again.

The 25th being *Chriſtmaſs-day*, was foul weather, the Wind N. W. we heard the Foxes run over our Houſe, which ſome of our Men fancied to be an ill ſign.

The 26th foul weather, the Wind N. W. and ſo cold, that we could not warm us, altho' we uſed all the means we could with great Fires, ſtore of Cloaths, hot Stones and Billets laid upon our Feet and Bodies as we lay in our Cabins; but notwithſtanding all this, in the Morning our Cabins were frozen, which made us behold one another with ſad countenances, but we comforted our ſelves again as well as we could, that the Sun was then as low as it could go, and was now coming to us again; altho' we found the Proverb true, that, *The Days begin to lengthen, the Cold begins to ſtrengthen.*

The 27th, the ſame Wind and Weather; we had not been out in three days together, nor durſt thruſt our Heads out of Doors, and within the Houſe it was ſo extreamly cold, that as we ſate before a great Fire, and ſeemed to burn on the fore ſide, we froze behind at our Backs, and were covered over with hoar Froſt.

The 28th, the Wind Weſt, foul weather, at Evening it began to clear, and one of our Men made a hole at one of our Doors, and went out to ſee how it was abroad, but found it ſo hard weather, that he ſtaid not long, and told us that it had ſnowed ſo much, that the Snow lay higher than our Houſe, and that if he had ſtaid out longer, his Ears had undoubtedly been frozen off.

The 29th was calm weather, and a pleaſant Air, the Wind being Southward; that day he whoſe turn it was, opened the Door, and making a Paſſage thro' the Snow, we went out of the Houſe upon Steps, as if it had been out of a Cellar, at leaſt ſeven or eight Steps high, each Step a Foot from the other, and then we cleanſed our Springes for the Foxes, having taken none of late.

The 30th was foul weather again, with a Storm at Weſt, and much Snow, ſo that all the pains we had taken in making Steps, was in vain.

The 31ſt continued foul weather, with a ſtorm at N. W. whereby we were faſt ſhut up in the Houſe, and it was ſo extream cold, that the Fire would ſcarce caſt any heat; for as we put our Feet to the Fire, we burnt our Hoſe before we could feel the heat; and if we had not ſooner ſmelt than felt them, we ſhould have burnt them ere we had known it.

After we had with great cold, danger, and divers Miſeries ended the Year 1596, we began the next Year in the ſame manner; for on the firſt of *January* we were incloſed in the Houſe by reaſon of the Snow, the Wind at Weſt. We then agreed to ſhare our Wine, to every Man a ſmall Meaſure full once in two Days.

1597. *January.*

The 2d, 3d, and 4th, it blew hard at Weſt, a great ſtorm with Snow and Froſt, ſo that we could not put our Heads out of the Doors, and altho' we had almoſt burnt all our Wood, yet we durſt not go out to fetch more, for there was no being without door; but ſeeking about, we found ſome pieces of Wood that lay over the Door, which we clove, and withal clove the Blocks whereon we uſed to beat our ſtock-Fiſh. The Wind ſhifted to S. W. and to know where the Wind blew, we thruſt a half Pike out of a Chimney, with a piece of Cloth or a Feather upon it, but it would be preſently froze as hard as a piece of Wood, and could not go about or ſtir with the Wind.

The 5th being pretty calm weather, we digged our Door open again, that we might go out, and carry out all the filth that had been made during our confinement: We fetch'd in as much Wood as was poſſible, fearing, leſt we ſhould be ſhut up again; after much pains this day, we prayed our Maſter that we might be merry that Night, it being *Twelfth-Even*, and told him that we were content to ſpend ſome of the Wine that Night, which we had ſpared, which was our ſhare every ſecond day, and whereof for certain days paſt we had not drank; and ſo that Night we made merry, and drank to the three Kings of *Cullen*, and had two Pound of Meal, wherewith we made Pancakes with Oyl, and every Man a white Bisket, which we ſopt in Wine; we alſo made Tickets, and our Gunner was King of *Nova Zembla*, which is at leaſt 200 Miles long, and lies between two Seas.

*Dutch Miles.

The ſixth was fair weather, the Wind N.E. we fetched more Wood.

The ſeventh was foul again, the Wind N. W. with Snow, and very cold, which put us in great fear to be ſhut up in the Houſe again.

Day light appears.

The eighth the Wind was North, fair weather, and then day light began to appear, which put us in no little comfort.

The ninth was foul weather, the Wind N. W.

The 10th was fair, with a North Wind; then ſeven of us went to our Ship well armed, which we found in the ſame ſtate we left it in, and in it found the Foot-ſteps of many Bears, both great and ſmall; we went under hatches, and ſtriking Fire, lighted a Candle, and found the Water riſen a foot higher in the Ship.

The 11th and 12th fair weather, the Evening being very clear, and the Sky full of Stars, we found *Oculus Tauri* to be elevated above the *Horizon* 29 Deg. 54 Min. his Declination being 15 Deg. 54 Min. on the North ſide of the Line, which ſubſtracted from the height aforeſaid, there reſts 14 Deg. which ſubſtracted from 90, leaves 76 Deg. for the height of the Pole in that place.

The 13th, 14th, and 15th, fair weather, with the Wind Eaſterly.

On the 16th it came Northerly; we went now and then out of the Houſe to ſtretch our Limbs, and about Noon ſaw a certain redneſs in the Sky.

The cold abates.

The next day, when we had a good fire, there fell down pieces of Ice from the Walls of our Houſe, and the Ice melted in our Cabins, and the Water drop'd down, which it would not do before, how great ſoever our fire was; but that Night it was cold again.

The 18th was clear weather, the Wind S. E. then we agreed to burn ſome of our Sea-coals, and not to ſtop up the Chimney, which we did, and found no harm thereby.

The 21ſt was fair, with a Weſt Wind, the Foxes now began to fail us, which was a ſign that the Bears would come again, as not long after we found to be true; for in the abſence of the Bears the Foxes came abroad, and upon the return of the Bears, the Foxes were ſeldom ſeen.

The 22d fair weather, the Wind at Weſt; we perceived that Day-light began to appear to us; but *William Barents* on the contrary, ſaid, that it was yet two Weeks too ſoon.

Sun appears again *Jan* 24 *New Stile.*

The 24th, three of us went to the Sea-ſide on the South ſide of *Nova Zembla*, where, contrary to our expectation, we ſaw the edge of the Sun, and returned immediately to tell the joyful news to *William Barents* and the reſt of our Company; but *Barents* would not believe it, ſaying, it was yet 14 days too ſoon.

The 25th and 26th was miſty weather, ſo that we could not ſee any thing; but the 27th being clear weather, we ſaw the Sun in his full roundneſs above the *Horizon*, whereby it manifeſtly appeared that we had ſeen it on the 24th Day. This appearance of the Sun ſo ſoon, being contrary to the nature and roundneſs of Heaven and Earth, and to the Opinions of all learned Men, made ſome of us to imagine, that becauſe in a long time we had ſeen no day, we had over ſlept our ſelves; but that could not be, for we uſed our Clock till it was frozen, and after that made uſe of our Hour-glaſs of 12 hours long; and for our better aſſurance, we conſulted *Joſephus Schala's Ephemerides*, printed in *Venice*, for the Years of our Lord 1582, till the Year 1600, and we found therein, that upon the ſaid 24th of *January*, when the Sun firſt appeared unto us, that at *Venice* at one of the Clock in the Night time, the Moon and *Jupiter* were in conjunction, whereupon we ſought to know when the ſame Conjunction was over the Houſe where we then were, and found it to be with us on the ſame day in the Morning, when the Sun was at Eaſt; for we ſaw the two ſaid Planets approach each other until the Moon and *Jupiter* ſtood juſt over each other at ſix of the Clock in the Morning, at which time the Moon and *Jupiter* were found by our Compaſs to be in conjunction over our Houſe in the North and by Eaſt Point, and the South part of the Compaſs was S. S. W. and there we had it right South, the Moon being eight days old; whereby it appears, that the Sun and the Moon were eight Points different, and this was about ſix of the Clock in the Morning; ſo that it is plain that we were five Hours (each Hour being 15 Degrees) more Eaſt than *Venice*, and conſequently that we had not failed in our Accounts.

Difference of Longitude between *Venice* and the place where they winter'd.

Note, that altho' a Degree under the Line be 15 Miles, yet in the Latitude of 76 Deg. where we wintred, a Degree is but three Miles and two third parts.

The 25th dark and cloudy, ſo that the ſeeing the Sun the day before, was again doubted of.

The 26th was clear weather, but there hung a white Cloud in the *Horizon*, ſo that vve could not ſee the Sun That Night our ſick Man, vvho had lain ill a long time, died.

The 17th vvas fair vveather, the Wind S. W. after reading ſome Chapters, and ſinging Pſalms, vve buried our Man in a hole vve had digged in the Snovv ſeven Foot deep. This day vve all ſavv the Sun in his full roundneſs a little above the *Horizon*, and then it vvas paſt doubt that vve had ſeen him the 24th of *January*, vvhich made us all glad, and vve gave God hearty thanks for his favour in ſhevving that glorious light unto us again.

The 28th vvas fair vveather, vvith a Weſt Wind, and vvent out to exerciſe our ſelves.

The 29 vvas foul vveather, vvith a N W. Wind, and ſo much Snovv, that our Houſe vvas again cloſed up.

The 30th vvas dark vveather, vvith an Eaſt Wind; vve made a hole thro' the Door, and ſeeing vvhat vveather it vvas, had no deſire to go abroad.

The next day being calm vveather, vve vvent out, and ſavv the Sun ſhine clear; a Bear came tovvards our Houſe, but as ſoon as vve ſhot at her, ſhe ran avvay.

February.

The firſt and ſecond of *February* vvas boiſterous vveather, vvith a great ſtorm at N. W. and much Snovv, ſo that our Houſe vvas cloſed up again.

The third vvas fair vveather, vvith an Eaſt Wind, but ſo miſty, that vve could not ſee the Sun, vvhich made us ſomevvhat melancholy; vve digged our Door open again, and fetched the Wood that lay vvithout the Door, vvhich vvith great labour vve digged out of the Snovv.

The fourth vvas foul vveather vvith much Snovv, the Wind at S. W. and being novv cloſed up again, vve took not ſo much pains as before, to dig open the Door, but vvhen vve had occaſion, climbed out of the Chimney, and vvent in again the ſame vvay.

The fifth and ſixth continued foul vveather, vvith much Snovv, the Wind Eaſt.

The ſeventh the ſame vveather, vvith a S. W. Wind.

The 8th it began to be fair, and then vve vvent out, and ſavv the Sun riſe S. S. E. and vvent dovvn S. S. W. by the Compaſs that vve made of Lead, and placed according to the Meridian of that place, but by our common Compaſs it differed tvvo Points.

The 9th, 10th, and 11th vvere fair vveather, the Wind Southerly, and vve then began to feel ſome heat from the Sun. At night vve heard ſome Foxes ſtirring, vvhich ſince the Bears came abroad, vve had not much ſeen.

Bear killed.

The 12th vvas clear vveather and very calm. While we were cleaning our Fox-traps, a great Bear came towards our Houſe, which made us all go in, and when ſhe came before our Door, we ſhot her, the Bullet paſſing thro' her Body, went out again at her Tail, and was as flat as a Counter; the Bear feeling the blow, leapt backward, and ran 20 or 30 Foot from the Houſe, and there lay down, whereupon we ran to her, and when ſhe ſaw us, reared up her Head as if ſhe would have done us ſome miſchief, but we truſted her not, having tried their ſtrength ſufficiently before, and therefore ſhot her twice into the Body again, wherewith ſhe died. We took at leaſt a hundred pound of Fat out of her Belly, which we melted and burnt in our Lamp; the Skin was nine Foot long and ſeven Foot broad.

A hundred pound of Fat in a Bears belly.

The 13th and 14th were fair clear weather, with a hard gale at Weſt.

The 15th was foul weather, with a great ſtorm at S. W. and much Snow, whereby the Houſe was cloſed up again. In the Night the Foxes came to devour the Body of the dead Bear, which put us in fear that all the Bears thereabouts would come thither, and therefore we agreed, as ſoon as we could get out of the Houſe, to bury her deep under the Snow.

The 16th was foul weather, with much Snow, the Wind S. W. it being *Shrove-Tueſday*, we made our ſelves ſomewhat merry in our great grief and trouble, and every one of us drank a draught of Wine.

The 19th was foul weather, the Wind S. E. we took the height of the Sun, which in long time before we could not do, becauſe the *Horizon* was not clear, as alſo becauſe the Sun mounted not high enough to give as much ſhadow as was requiſite; we found the Sun at the higheſt, to be elevated three Deg. above the *Horizon*.

The 20th was foul weather, the Wind S. S. W. with much Snow, whereby we were again ſhut up in the Houſe.

The 22d, the Wind S. W. fair weather, eleven of us well armed went to fetch Wood; but returning back with it, we were ſo tired, that we thought we ſhould never be able to fetch any more, and ſo muſt have periſhed with cold. When we came near our Houſe we ſaw much open Water in the Sea, which in long time we had not ſeen, and put us in good hope that things would be better.

The 25th was foul weather again, and much Snow, with a North Wind, whereby we were again cloſed up in our Houſe.

The 28th was ſtill weather, with a S. W. Wind; then ten of us went and fetch'd another Sled full of Wood, with no leſs pain and labour than we did before, for one of our Companions could not help us, becauſe the firſt joint of one of his great Toes was frozen off, and ſo he could do nothing.

March.

The firſt and ſecond of *March* fair weather, the Wind Weſt, but very cold, and we were forced to ſpare our Wood, becauſe it was ſo great labour for us to fetch it. In the day time we exerciſed our ſelves with running, going, and leaping, and gave hot Stones to them that lay in their Cabins: we found the Sun to be elevated 6 Deg. 48 Min. above the *Horizon*.

The third and fourth fair weather, with a Weſt Wind; five of us went to our Ship, and found the Bears had made mad work there, and had opened the Cook's Cupboard, and dragged it out of the Ship.

Great danger.

The ſeventh was foul weather, and much Wind, ſo that we were again ſhut up in our Houſe, and they that would go out muſt climb up thro' the Chimney. We ſaw more open Water in the Sea and about the Land, whereby we were in fear that the Ship in that foul weather, and driving of the Ice, would be looſe and drive away, while we were ſhut up in our Houſe, and had no means to prevent it.

The 8th continued foul weather, and much Snow, a S. W. ſtorm, whereby we could ſee no Ice in the North-eaſt, which made us think, that North-eaſt from us there was a great Sea.

The ninth we could ſee further from us, and perceive that the Water was open in the North-eaſt, but not from us towards *Tartary*, for there we could ſee the Ice in the *Tartarian* Sea; ſo that we were of opinion that there it was not very wide, and when it was clear weather, we often thought we ſaw the Land S. and S. E. from our Houſe.

The 11th was cold, but fair ſun ſhiny weather, the Wind N. E. we found the Sun to be elevated 10 Deg. 19 Min.

The 12th was foul weather, the Wind N. E. and then the Ice which the S. W. Wind had driven out, came mightily driving in again; it was then as cold as it had been in any time in Winter.

The 15th and 16 was fair weather; the VVind North, we opened our Door to go out, but the Cold rather increaſed than diminiſhed, and ſo continued till the 21ſt.

The 21ſt was fair weather, but very cold, the VVind North; the ſame day the Sun was in the Equinoctial, and at Noon we took the height of the Sun, and found it elevated 14 Degrees above the *Horizon*, vvhich ſubſtracted from 90 (there being no declination) there reſts 76 Deg. for the height of the Pole. VVe novv made Shooes of Felt or Rug, our old Shooes being as hard as Horns.

The 23d vvas very foul vveather, and moſt bitter cold, the VVind N. E. ſo that vve vvere forced to make more fire, it being then as cold as ever it had been.

The ſame vveather continued the 24th, vvith much Snovv, and a North VVind, vvhereby vve vvere once again ſhut up in our Houſe, and then the Coals vvere of great uſe to us, vvhich before, by reaſon of our bad uſing them vve diſliked.

The 26th was clear weather and calm, then we digged our ſelves out of the Houſe again, and fetch'd another Sled of Wood, for the great cold had made us burn up all we had.

The 28th fair weather, the Wind S. W. whereby the Ice drave away very faſt. Six of us went aboard the Ship to ſee how it lay, and found it as we left it.

April.

The ſecond of *April* was fair weather, the Wind N. E. the Sun was this day elevated 18 Deg. 40 Min.

Bear aſſaults the Houſe.

The ſixth being foul weather, with a ſtiff N. W. Wind, there came a Bear to our Houſe in the Night, and one of our Men levelling at her, the Piece miſt fire, whereupon the Bear came boldly towards the Houſe, and came down the Stairs cloſe to the Door, and ſought to break into the Houſe, but our Maſter held the Door faſt to; for being in great haſt and fear, he could not bar it with a piece of Wood we uſed for that purpoſe; the Bear finding the Door ſhut, went back again, and returned within two Hours, and went round about and upon the top of the Houſe, making ſuch a roaring as was dreadful to hear, and at laſt got to the Chimney, and made ſuch work there, that we thought ſhe would have broken it down, and tore the ſail that was made faſt about it, in many pieces, with a great and fearful noiſe: We made no reſiſtance, becauſe it was night and we could not ſee her; at laſt ſhe went away and left us.

The 14th, was fair clear weather, with a Weſt Wind; we ſaw greater Hills of Ice round about the Ship, than ever we had ſeen before, which was a fearful thing to behold, and much to be wondred at, that the Ship was not ſmitten in pieces.

The 15th fair weather, the Wind North, ſeven of us went aboard our Ship, to ſee in what caſe it was, but found no alteration. As we came back, a great Bear came towards us, and then made away from us again. We went to the place from whence ſhe came, to ſee her Den, where we found a great hole made in the Ice, about a Man's length in depth, the entry thereof being very narrow, and within wide, where we thruſt in our Pikes to feel if there were any thing within it, and perceiving it was empty, one of our Men crept into it, but not too far, it being fearful to behold. Thence we went along by the Sea ſide, and there we ſaw, that in the end of *March* and beginning of *April*, the Ice was ſtrangely riſen and piled up one upon the other, as if there had been whole Towns made of Ice.

The 16th was foul weather, the Wind N. W. whereby the Ice began to break.

The 17th was fair clear weather, with a S. W. Wind, and then ſeven of us went to the Ship, and from thence ſeeing open water in the Sea, we went over the Ice-hills as well as we could, to the Water, having not been ſo near it in ſix or ſeven Months before.

The 18th, the Wind S. W. fair weather, the Sun was elevated 25 Deg. 10 Min. we fetc'd more Wood in a Sled. In the Night another Bear came upon our Houſe, which we hearing, went all out with our Arms, and the Bear ran away.

The 28th fair weather, the Wind North, the Sun was elevated 28 Deg. 8 Min. above the *Horizon*.

The 29th and 30th, the Wind S. W. fair weather; this Night we ſaw the Sun in the North (when it was at the higheſt) juſt above the *Horizon*, and from that time ſaw the Sun both Night and Day.

CHAP. XVIII.

They depart in a Boat and Scute both open (that is, without Decks) and arrive at Cola, 318 Flemiſh *Miles. Their many Dangers by the way.*

May.

THE firſt of *May* we boiled the laſt Fleſh we had, which we had ſpared a long time, and was ſtill very good.

The ſecond and third was foul weather, with a ſtorm at S. W. whereby the Sea was almoſt clear of Ice, which made us begin to talk of getting thence, having kept houſe long enough there.

The fourth fair weather, the Wind S. W. five of us went to the Ship, and found it lying as faſt in the Ice as ever; in the middle of *March* it was but 75 Paces from the open Water, and now it was 500 Paces from the Water, and incloſed with high Hills of Ice, which put us in no ſmall fear how we ſhould bring our Scute and Boat over thoſe Hills into the Water, when we ſhould leave that place.

The ſixth was clear weather, with a great S. W. VVind, whereby we ſaw the Sea open both in the Eaſt and in the VVeſt, which made us rejoice.

The 7th the Wind *North*, and foul weather, with much Snow, whereby we were cloſ'd up again in our Houſe.

The 14th we fetch'd our laſt Sled of Fire-wood.

The 25th fair weather, the Wind at *Eaſt*; the Sun was elevated 34 d. 46 m.

The 26th the Wind came to *N. E.* and brought in the Ice again.

The 27th was foul weather, with a great *N. E. Wind*, which mightily drove in the Ice again, whereupon the Maſter, at the motion of the Company, order'd us to prepare to be gone.

A Bear aſſaults the Houſe.

The 29th, the Wind *Weſt*, fair weather, ten of us went to draw the Scute to the Houſe, to make it ready to ſail, but we were ſo weak that we were not able to do it; but the Maſter encouraging us, told us, *We muſt ſtrive to do more than we were able*, and that *if we could not get the Scute from thence, we muſt dwell there as Burghers of* Nova Zembla, *and make our Graves in that place.* While we were buſie at work, a great Bear came toward us, whereupon we retir'd into our Houſe, and ſtood to watch her in our three Doors, and one ſtood in the Chimney with a Muſquet. This Bear came on more boldly than ever any had done before, for ſhe came to the neareſt Step that went to one of our Doors, and the Man that ſtood in the Door ſaw her not, becauſe he look'd toward the other Door, but they that ſtood within ſaw her, and in great fear call'd to him, wherewith he turn'd about, and altho' he was in a maze, ſhot her thro' the Body, whereupon ſhe ran away. If the Piece had miſs'd fire, it had coſt him his Life, and it may be the Bear would have gotten into the Houſe. We ripp'd her open, and found a piece of a Buck with the Hair and Skin in her Belly.

Part of a *Buck* found in a *Bear's* Belly.

The 31ſt, fair weather, the Wind *S. W.* whereby the Ice drove away, and we wrought hard about our Boat to get it ready; and while we were at work there came another Bear (as if he had ſmelt that we would be gone and was deſirous to taſte a piece of ſome of us) and forc'd us to leave our Work and go into the Houſe: The Bear following us, we ſhot her, and ripping up her Belly, we dreſs'd the Liver and eat it, which taſted well enough, but made us all ſick, eſpecially three of our Company, who were ſo very ſick with it, that we verily thought we ſhould have loſt 'em, for all their Skins came off from Head to Foot, but they recover'd again.

June.

The 3d of *June* we were pretty well recover'd, and having now wrought ſix days upon our Boat, we at laſt got it ready; and the next day eleven of us went to our Scute and drew it to the Ship, which ten of us had attempted before, and could not perform it. And it being a Herring Scute, made narrow behind, we ſaw'd it off behind, and made it a broad Stern, and built it ſomewhat higher, that it might better brook the Seas.

While ſome were thus employ'd, the reſt were buſie in the Houſe to make all other things ready for our Voyage, and drew two Sleds with Victuals and other things unto the Ship, which lay about half-way between the Houſe and the open Water, that we might have ſo much the ſhorter way to carry our Goods to the Water-ſide when we ſhould go away.

The 5th was foul weather, with much Hail and Snow, the Wind *Weſt*, which made an open Water: We could then do nothing without the Houſe, but within made all things ready, as Sails, Oars, Maſts, Rudder, &c.

The 6th was fair weather, the Wind *N. E.* but it ſhifting to *S. W.* there aroſe very foul weather, with Snow, Hail and Rain, and we could not be dry in our Houſe, there being nothing but a Sail over it, for we had taken off the Deals to mend our Boat and Scute.

The 10th we drew our Goods in Sleds to the Ship; the *Wine* that was left we put into ſmall Casks, that we might divide it into both our Veſſels, and the eaſier hoiſt it in and out when we ſhould be encloſ'd with Ice, as we expected.

The 11th was foul weather, and it blowing hard at *N. N. W.* we could do nothing all that day, and were in great fear leſt the Storm ſhould carry the Ice and the Ship both away together (which might well have come to paſs) for then we had been in greater miſery than ever, becauſe our Victuals and Goods were then all in the Ship.

A Bear comes out of the Sea upon the Ice.

The 12th, being fair Weather, we went with Hatchets, Halberts, Shovels, and other Inſtruments, to level the Knobs and Hills of Ice which lay in the way between our Scute and Boat and the Water-ſide: We wrought hard with our Hatchets and other Inſtruments, and in the mean time a great lean Bear came out of the Sea upon the Ice towards us, which we ſuppoſe came out of *Tartary*, becauſe we have ſeen ſome of them 20 or 30 miles within the Sea. We having but one Muſquet with us, which our Surgeon carried, I ran towards the Ship to fetch one or two, whereupon the Bear ran after me, and was likely to have overtaken me, but our Company ſeeing that, left their work and ran after her, which made the Bear leave me, and turn towards them; but being ſhot into the Body by the Surgeon, ſhe ran away, and was ſoon overtaken by us and kill'd outright, having ſmote her Teeth out of her Head while ſhe was yet living.

They depart.

The 13th, being fair Weather and open Water, with a good *Weſt Wind*, the Maſter went to the Houſe and ſpake unto *William Barents*, who had been long ſick, telling him, that he thought it good (ſeeing it was a fit time) to go from thence, and ſo will'd the Company to drive the Boat and Scute down to the Water-ſide, and in the Name of God to begin our Voyage. Then *William Barents* wrote a Letter, which he put into the charge of a Muſquet and hung it up in the Chimney, ſetting forth how he came out of *Holland* to ſail to the Kingdom of *China*, and what had hapned to us in this place, with all our Croſſes, that if any Men ſhould chance to come thither, they might know what had hapned to us, and how we had been forc'd in our Extremity to build that Houſe, and to dwell ten months therein, and that now at laſt we adventur'd to Sea in two ſmall open Boats. The Maſter alſo wrote two Letters, to which moſt of us ſubſcrib'd, ſignifying how that we had ſtaid there upon the Land in great Trouble and Miſery, in hope that our Ship would be freed from the Ice, but that it fell out to the contrary, and the Time paſſing away, and our Victuals beginning to fail us, we were forc'd, for the ſaving our Lives, to leave the Ship and to ſail away in our open Boats, committing our ſelves to the protection of the Almighty. And ſo, having all things ready, we drew the Boat to the Water-ſide, and leaving a Man in it, went and fetch'd the Scute, and after that eleven Sleds with Goods and Victuals, which being put into the Sleds, we return'd to the Houſe and fetch'd *William Barents* and *Claes Adrianſon* (who had both been long ſick) upon Sleds to the place where our Scutes lay, and ſo entring into 'em, divided our ſelves equally, and put into each Boat a ſick Man, and ſo committing our ſelves to the Will and Mercy of God, with a *W. N. W. Wind* and an indifferent open *Water*, we ſet ſail and put to Sea.

The 14th in the morning we put off from the Land of *Nova Zembla* and the faſt Ice adjoyning, and ſail'd *E. N. E.* all that day to the Iſlands point, which was five miles: But our beginning was not very good, being encloſ'd again with Ice, which put us to no ſmall fear and trouble. Four of us went on Land, and kill'd many Birds with Stones upon the Cliffs.

The 16th we ſail'd again, and got to the Iſland of *Orange*, which is eight miles diſtant from the *Point* of *Deſire*; there we went on Land with two ſmall Barrels and a Kettle, to melt Snow and put the Water into the Barrels, and to ſeek for Birds and Eggs for our ſick Men. We put to Sea again, with a *S. E. Wind* and mizling *Weather*, and ſailing *Weſt* and *W.* by *S.* to the *Ice-point*, we faſtned our Scutes to a great piece of Ice; but the *Weather* grew worſe, ſo that we were again encloſ'd with Ice, and forc'd to ſtay there.

The 17th the Ice came ſo faſt upon us, that it made our Hair ſtand upright upon our Heads, for we drove away ſo hard with the Ice, and were ſo ſore preſs'd between Flakes of Ice, that we thought verily the Scutes would burſt in a hundred pieces. In this Extremity the Maſter ſaid, That *if we could take hold with a Rope upon the faſt Ice, we might therewith draw the Scute up, and ſo get it out of the great drift of Ice.* I being the lighteſt man in the Company, undertook this hazardous ſervice, and creeping from one piece of driving Ice to another, by God's help got to the faſt Ice, where faſtning a Rope to a high Hillock, they in the Scute drew it to the faſt Ice, and firſt in all haſte we took out our ſick Men, and laid them upon the Ice, having firſt put Clothes and other things under 'em, and then took all our Goods out of the Scutes, and ſo drew them upon the Ice, whereby for that time we were deliver'd from that great danger.

The 18th we repair'd our Scutes again, being much bruis'd and cruſh'd with the racking of the Ice, and were forc'd to drive all the Nails faſt again, and to piece many things about them, God ſending us Wood, wherewith we melted our Pitch, and did all other things neceſſary. Then ſome of us went upon the Land, with no ſmall danger between the Ice and the firm Land; we found four Birds, but could find no Eggs, which our ſick Men long'd for.

The 19th was indifferent Weather, the Wind *N. W.* and *W. S. W.* but we were ſtill encloſ'd with Ice, and ſaw no opening, which made us think that there would be our laſt abode, and that we ſhould never get from thence.

Will. Barents their Pilot dies.

The 20th *Claes Adrianſon* and ***William Barents*** died; the Death of the laſt put us in no ſmall diſcomfort, as being the chief Guide and only Pilot, on whom we repos'd our ſelves next under God.

The 22d in the morning it blew a good gale out of the *S. E.* and the Sea was reaſonably open, but we were forc'd to draw our Scutes over a piece of Ice fifty paces long, and there put them into the Water, and then draw them up on other Ice at leaſt an hundred paces over, before we could bring them to a good place, where we might eaſily get out; and being gotten unto the open Water, committed our ſelves to God, with an indifferent gale at *S. S. E.* and ſail'd *W.* by *S.* till Noon, and then were enclos'd with Ice again, but not long after it open'd like a Sluice, and we paſs'd thro' it and ſail'd along by the Land, but were preſently enclos'd with Ice, which we us'd all the means we could to break, but all in vain. At laſt (God be prais'd) it open'd of it ſelf, and we got out, and ſail'd along by the Land *W.* by *S.* with a *South Wind.*

The 23d we got to the *Truſt-point*, which is diſtant from the *Ice-point* 25 miles, and then could go no further, becauſe the Ice lay ſo hard and cloſe together, and yet it was fair weather. We took the height of the Sun, and found our ſelves to be in the Latitude of 76 d. 30 m. Altho' it was fair Sunſhine weather, yet it was not ſo ſtrong as to melt the Snow, that we might have Water to drink, ſo that we ſet all our Tin Platters and other things full of Snow to melt, and put Snow in our Mouths to melt it down our Throats, but all was not enough, ſo that we were compel'd to endure great Thirſt.

The 24th of *June* it ſtill blew hard out of the *South*; we row'd here and there among the Ice, to ſee where we might beſt get out, but could find no opening. When the Sun came to the South we got into the Sea, for which we thank'd God moſt heartily, that he had ſent us an unexpected opening, and an *Eaſt Wind*, which carried us luſtily forward, ſo that we hop'd to get about *Point Naſſaw*, which we could then ſee about three miles diſtant.

The 26th it blew hard at *South*, and brake in pieces the Ice whereunto we were faſtned, whereby we were driven into the Sea, and in danger to be caſt away. We row'd as much as we could to get near the Land, and the Waves went ſo hollow, that we ſaw nothing but Death before our Eyes: But God help'd us once again, and contrary to our expectation ſent us a *N. W. Wind*, whereby we got to the faſt Ice again. It was then miſty weather, and we had loſt ſight of our other Scute, much fearing that they were drown'd. We ſail'd a mile along by the faſt Ice, and not finding her, we fir'd a Muſquet, which they anſwer'd with another; at laſt we got near them, and finding them faſtned in Ice, we went over the Ice, and help'd them to unlade their Scute, which with great labour we drew over the Ice into the open Water again. While we lay by each other we ſod ſome Bread and Water together, and eat it warm, which did us much good.

The 28th we laid all our Goods upon the Ice, and then drew the Scutes upon the Ice alſo, becauſe we were ſo hardly preſs'd on all ſides, and the Wind came out of the Sea upon the Land, that we fear'd our Scutes would be cruſh'd in pieces. We laid Sails over our Scutes, and laid our ſelves down to reſt; and when the Sun was North three Bears came towards our Scutes, whereupon he that kept Watch cried, *Three Bears, Three Bears*, at which noiſe we leap'd out of our Boats with our Muſquets, that were laden with Hail-ſhot to ſhoot at Birds, and having no time to diſcharge them, ſhot at them therewith, which tho' it could not hurt 'em much, yet they ran away, and in the mean time gave us leiſure to lade our Muſquets with Bullets, and by that means we ſhot one of 'em dead, which the other two perceiving, ran away, and within two hours return'd again; but when they were almoſt at us, and heard us make a noiſe, they ran away.

Three Bears.

The next day they came again to the place where the dead Bear lay, and one of them took the dead Bear in his Mouth, and went a great way with it over the rugged Ice, and then began to eat it; which we perceiving, ſhot a Muſquet at her, whereupon ſhe ran away. Then four of us went thither, and ſaw that in ſo ſhort a time ſhe had eaten almoſt half. We laid the dead Bear upon a high piece of Ice, that if the Bear came again, we might ſee to ſhoot at her from our Scute; and we four had enough to do to carry the half Bear between us, which ſhews the great ſtrength of that Bear which carried the whole in her Mouth as lightly as if it had been nothing.

One Bear carries another in his Mouth.

July.

The 1ſt of *July* was indifferent fair, with a *W. N. W. Wind*; in the morning a Bear came from the driving Ice towards us, and ſwam over the Water to the faſt Ice whereon we lay, but hearing us make a noiſe, ran away.

At a *S. E. Sun* the Ice came in ſo faſt upon us, that all the Ice whereon we lay brake and ran one piece upon another, whereby moſt of our Goods fell into the Water, but we with great diligence drew our Scutes further upon the Ice towards the Land, which when we had done, and went to fetch our Goods, we ran into greater danger than we had hitherto met with; for when we laid hold upon one parcel, the reſt ſunk down with the Ice, which would alſo many times break under our Feet, which made us almoſt to deſpair of ſafety.

One of the Scutes, wherein was a ſick man, was broken in many places, ſo that we gave it over for loſt, and beheld each other in pitiful manner, not knowing what to do, our Lives depending thereon; but God ſo order'd it that the pieces of Ice drave from each other, vvherevvith vve ran to the Scute, and drevv it unto us again, in ſuch caſe as it vvas, and laid it by the Boat upon the faſt Ice, vvhere it vvas in more ſecurity.

This dangerous Labour laſted above ſeven hours, vvhich made us extream vveary; and vvas more dreadful to us than the dangers vve had eſcap'd vvhen *William Barents* died, and vve loſt this day tvvo Barrels of Bread, a Cheſt vvith Linnen Cloth, a dry Fat vvith Sailors Clothes, our Aſtronomical Ring, a Pack of Scarlet Cloth, ſome Cheeſes, a Rundlet of Oyl and a Rundlet of Wine, vvhich laſt vvas bilg'd vvith the Ice, ſo that vve could ſave none of it.

The 4th it vvas ſo fair clear vveather, that from the time vve vvere firſt in *Nova Zembla* vve had not the like.

The 5th fair vveather, the *Wind S. W.* the ſame day died *John Franſon* of *Harlem*.

The 7th fair vveather, vvith ſome Rain, the *Wind W. S. W.* vve vvent to the open Water, and there kill'd thirteen Birds, vvhich vve found upon a piece of driving Ice.

The 9th the Ice began to drive, vvhereby vve got ope Water on the Land-ſide: Then the faſt Ice vvhereon vve lay began to drive alſo, vvhereupon vve vvent to fetch the Pack and the Cheſt that ſtood upon the Ice, to put them into the Scute, and then drevv the Scutes at leaſt three hundred and forty paces to the Water, as vveak as vve vvere; and then vve ſet ſail vvith an *Eaſt Wind*, but vvere ſoon forc'd to make to the faſt Ice again.

The 10th vve took great pains to get thro' the Ice, and at laſt got thro' and rovv'd forth, until vve happen'd to fall betvveen two great flakes of Ice, that clos'd ſo that vve could not get thro', but vvere forc'd to dravv the Scutes upon them and unlade the Goods, and then to dravv them over to the open Water on the other ſide. When vve had done this, vve muſt fetch the Goods alſo to the ſame place, being at leaſt an hundred paces, and vvhen vve vvere in open Water, vve rovv'd forvvard as vvell as vve could, and had not rovv'd long e're vve fell betvven tvvo great flakes that came driving one againſt the other, but by God's help and our ſpeedy rovving vve got from betvven 'em before they clos'd up; and being thro', vve had a hard *Weſt Wind* right in our Teeth, vvhich conſtrain'd us to make tovvard the faſt Ice that lay by the ſhore.

A Bear kill'd 8 foot long.

The 11th in the morning, as vve ſate faſt upon the Ice, a great Bear came out of the Water, running tovvards us, and vvhen ſhe came vvithin thirty paces of us vve diſcharg'd three Muſquets at her, and kill'd her outright, ſo that ſhe ſtirr'd not a foot, and the Fat vvhich came out of the vvounds did ſvvim upon the Water like Oyl: VVe meaſur'd her Body, and found it to be eight foot thick.

Three of our Men vvent to an Iſland that lay before us, and being there, ſavv the *Croſs*-Iſland lying *Weſtward* from them, and vvent thither upon the Ice, to ſee if any *Ruſſian* had been there that Summer, but they could not perceive that any Man had been in it ſince vve vvere there. They got ſeventy Eggs there, but knevv not hovv to bring them to us; at laſt one of them put off his Breeches, and tying them faſt belovv, they carried them betvveen tvvo of 'em, and the third carried the Muſquet, and ſo came to us again after they had been 12 hours gone, vvhich put us in no ſmall fear to think vvhat vvas become of them. They told us, they had gone at leaſt ſix *Flemiſh* miles to and fro betvveen both Iſlands, and many times up to the Knees in VVater, vvhich made us vvonder hovv they could endure it, ſeeing we were all ſo weak. VVe were much comforted with the Eggs they brought, ſo that we found ſome relief in our great miſery, and then ſhared our laſt VVine amongſt us, whereof every one had three Glaſſes.

The 12th and 13th, the VVind Eaſterly, ſeven of our Men went to the firm Land to ſeek certain Stones, and found ſome, tho' not of the beſt ſort.

The 14th fair weather, with a good South VVind, and then the Ice began to drive from the Land, whereby we were in good hope to have an open VVater, but the VVind turning VVeſterly, the Ice lay ſtill again. Three of our Men went to the next Iſland, and ſhot a *Bercheynet*, which they gave amongſt us, for all our goods were common.

The 16th a Bear came to us from the firm Land, we could not diſcern it to be a Bear, becauſe it ſhewed ſo like the Snow, but at laſt when ſhe came near, we perceived her by her ſtirring, and ſhot and hit her, but ſhe ran away.

The next day five of our Men went again to the next Iſland, to ſee if there appeared any open VVater, and being half way thither, found the Bear which the Day before had been ſhot by us, lying behind a piece of Ice; as ſoon as ſhe heard them ſhe went away, but one of the Men following her with a Boat Hook, thruſt her into the Skin, wherewith the Bear roſe upon her hinder Feet, and as the Man thruſt at her again, ſhe ſtruck the Iron of the Boat Hook in pieces, wherewith the Man fell down upon his Buttocks, which our other two Men ſeeing, both of them ſhot her into the Body, and with that ſhe ran away, but the other Man went after her with his broken Staff, and ſtruck the Bear upon the Back, whereupon ſhe turned upon the Man three times one after the other, and then the other two came to her and ſhot her in the Body again, wherewith ſhe ſate down upon her Buttocks, and then they ſhot once again, wherewith ſhe fell down. All that day the VVind was N. E. cloſe weather.

The 18th in the Morning three of our Men went upon the higheſt part of the Land to ſee if there was any open VVater in the Sea, and returning to us, ſaid, that they had ſeen much open VVater, but it lay ſo far from the Land and the faſt Ice, that they feared we ſhould not be able to draw the Scutes ſo far; but neceſſity urging us, we were reſolved to try what we could do, and with indefatigable Pains ſurmounted all thoſe Difficulties, and ſetting ſail, we preſently fell among Ice again, and drew up our Scutes upon it.

The 19th, ſeven of our Men went to the *Croſs Iſland*, about a Mile from us, and being there ſaw great ſtore of open VVater in the VVeſt, wherewith they much rejoiced, and made what haſt they could to the Scutes, but before they came away, they got 100 Eggs. They told us they had ſeen open VVater in the Sea as far as they could diſcern, and were in good hopes this would be the laſt time we ſhould draw our Scutes over the Ice, whereupon we made ſpeed to dreſs our Eggs, and drawing our Scutes at leaſt 200 Paces over the Ice, got them into the VVater, and put to Sea with a good Gale at E. and E. N. E. and paſſing by *Croſs-Iſland*, ten Miles diſtant from Cape *Naſſaw*, the Ice left us, altho' we afterward ſaw ſome in the Sea, but it troubled us not, and ſo we held our courſe VV. by S. with a good Gale at E. N. E.

The 20th, at a S. E. Sun, we paſſed along by the *Black Point*, twelve Miles diſtant from *Croſs-Iſland*, and ſailing VV. S. VV. we ſaw the Admiral's Iſland at a VVeſt Sun, and paſt by it at a North Sun, diſtant from the *Black Point* eight Miles. In paſſing by it we ſaw about 200 Sea-horſes lying upon a flake of Ice, and we ſailing cloſe by them, drave them from thence, which was like to have coſt us dear; for they being of mighty force, ſwam round about our Scutes with a great noiſe, as if they would have devoured us, but we eſcaped from them by reaſon of our good gale of VVind, yet it was not wiſely done of us to diſturb them.

The 21ſt we paſt by Cape *Planeio*, lying VV. S. VV. eight Miles from the Admirals Iſland.

The 22d, having ſo good a gale of VVind, when we came to Cape *de Cant*, we went aſhoar to ſeek for Birds and Eggs, but finding none, we ſailed forwards, and ſaw a Clift that was full of Birds, and ſteering thither, we caſt Stones at them, and killed 22, and got 15 Eggs; we might have taken many more, but being unwilling to looſe that fair Wind, we ſailed along the Coaſt till we came to another Point, where we got 125 Birds, ſome of which we took with our Hands out of their Neſts, and killing ſome with Stones, they fell down into the Water. They had each of them but one Egg in their Neſts, and that lying upon the bare clift, without Straw or other thing under it, which ſeems ſtrange how they could breed their young ones in ſo great cold, but poſſibly they therefore ſit but upon one Egg, that the heat that is neceſſary in breeding ſo many, may be given wholly to one.

The 24th, fair weather, the Wind Northerly; we took the height of the Sun, and found our ſelves in the Latitude of 73 Deg. 10 Min.

The 27th we ſailed from Cape *de Cant*, along by *Coſtingſark*, to the *Croſs Point*, 20 Miles, our Courſe S.S.E. the Wind N. W.

The 28th fair weather, the Wind N. E. we ſailed along the Coaſt of St. *Lawrence* Bay, where finding two *Ruſſian Lodges* or Ships, we were not a little comforted to think we were come to a place where we found Men, but we were ſomewhat fearful of them, becauſe they were ſo many, for we ſaw at leaſt 30 of them, and knew not what they were. As ſoon as we came near the Shoar, they left off their work and came towards us, but without Arms, and we alſo went on Land, as many as were well (for divers of us were very ill with a great ſcouring) and ſaluted each other in friendly manner, they after their faſhion, and we after ours; the Maſter and I, who had been there the Year before, knew ſome of them to be the ſame Men which had been aboard our Ship when we paſſed thro' the *Weygates*, and we perceived that they were greatly aſtoniſhed that we who at that time were ſo well furniſhed with a great Ship, well provided with all things neceſſary, ſhould now appear in that Country ſo poor and deſtitute, in a couple of ſmall Scutes: And amongſt them there were two, that in friendly manner clapt the Maſter and me upon the Shoulder, as remembring us ſince the laſt Voyage, and ask'd us for our *Crable*, meaning our Ship, and we ſhewed them by ſigns as well as we could, that we had loſt our Ship in the Ice, whereupon they ſaid, *Crable pro pal* (which we underſtood to be, *Have you loſt your Ship?*) and made anſwer, *Crable pro pal*. They ſeemed to be ſorry for our loſs, and made us ſigns, that when we were there before, they had drank Wine in our Ship, and asked us what we had now; wherewith one of our Men went to the Scute, and drew ſome Water, and gave them a taſt of it, but they ſhaked their Heads, ſaying, *No dobbre*, that is, *It is not good*. Then our Maſter went nearer to them and ſhewed them his Mouth, to let them underſtand that we were troubled with a looſeneſs in our Bellies, and to have their advice how to help it; but they thought he had, made a ſign that we were hungry, wherewith one of them went to their Lodging, and brought a round Rye Loaf weighing about eight Pounds, and ſome Fowls, which we accepted thankfully, and gave them in exchange half a dozen of *Muſchuit*. Then our Maſter led two of the chief of them into his Scute, and gave them ſome of the little Wine we had left, being almoſt a Gallon. We went to the place where they lay, and ſod ſome of our *Muſchuit* with water by their fire, that we might eat ſome warm thing down into our Bodies: and indeed we were much comforted to ſee the *Ruſſians*, having not ſeen any Man, ſince we departed from *John Cornliſon*, being 13 Months before.

The 29th, was fair weather, and the *Ruſſians* prepared to ſet ſail, and digged ſome Barrels of Train Oil out of the Sedges, which they had buried there, and put them into their Ships.

The 30th, the VVind blew a great ſtorm at N. VV. with much Rain, ſo that altho' we covered our Scutes with our Sails, yet we could not lie dry, which was an unaccuſtomed thing to us, who had felt no Rain in a long time before.

The 31ſt, we rowed from that Iſland to another, vvhereon there ſtood tvvo Croſſes, hoping to find ſome Men there, but we found none. The VVind continued N. VV. and drave the Ice tovvards *Weygates*. VVe went aſhoar, and found great ſtore of *Leple* Leaves, which were of great uſe to us, many of us being then ſick, and moſt of us ſo troubled with a ſcouring in our Bodies, that vve vvere thereby ſo weak that we could hardly rovv; but by eating theſe Leaves, vve vvere preſently recovered to admiration, and gave God great thanks for that and many other his Mercies ſhevved unto us in this our dangerous Voyage. VVe eat them by handfulls, having heard in *Holland* of their great virtue, and found it to be much more than vve expected.

Leple Leaves or Scurvy-graſs cure their Scouring.

Auguſt.

The firſt of *Auguſt* the VVind continued hard at N. VV. and the Ice, that for a vvhile had driven tovvards *Weygates*, ſtaied and drave no more, but the Sea vvent very hollovv, vvhich made us remove our Scutes to the other ſide of the Iſland, and going aſhoar, found more *Leple* Leaves, vvhereby vve ſo recovered our healths, that ſome of us could eat Biſket again, vvhich before vve could not do.

The ſecond was dark miſty weather, the Wind ſtill blowing ſtill N. W. and our Victuals were near ſpent, having nothing left but a little Bread and Water, and ſome of us a little Cheeſe.

The third, at a North Sun, the weather being ſomewhat better, we reſolved to leave *Nova Zembla*, and ſo croſs over to *Ruſſia*, and ſo committing our ſelves to God, we ſet ſail with a N. W. Wind, and ſailed *S.* S. W. till the Sun was Eaſt, and then entred into Ice again, which put us in great fear, and about a S. W. Sun, got clear thereof, and entred into the large Sea, where we ſaw ſome Ice, and having ſailed and rowed about 20 Miles, we entred into Ice again, and it was then very cold.

The fourth, at a South-eaſt Sun, being gotten out of the Ice, we ſailed forward with a N. W. Wind, holding our courſe Southerly, and at Noon ſaw the Coaſt of *Ruſſia* before us, being very low Land, like a bare Strand that might be overflowed. We had ſailed from the Point of *Nova Zembla* thither 30 Miles, and thence running along the Coaſt with an indifferent Gale, we ſaw another *Ruſſian* Veſſel, and when we came near them, they came all above Deck, and we cried unto them *Candinaes, Candinaes*, but they anſwered *Pitzora, Pitzora*, intimating that we were thereabouts, whereas we thought verily that we had been far more to the Weſtward, and not far from *Candinaes*, altho' we were three days ſailing from it, as after we perceived. The cauſe of this Error in our courſe was, that we were deceived by our Compaſs, which ſtanding upon a Cheſt bound with Iron, made us vary at leaſt two Points, whereby we were not only much more ſoutherly than we thought our Courſe had been, but alſo far more eaſterly.

The Compaſs ſtanding on an Iron Cheſt deceives them.

The 12th of *Auguſt* in the Morning being fair weather, we ſaw a *Ruſſian Lodgie* come towards us, which we perceiving from the Strand where we lay with our Scutes, deſired the Maſter that we might ſpeak with them to get ſome Victuals of them. When we got to them, the Maſter went into the *Lodgie* to ask them how far we had to *Candinaes*; they held up five Fingers to us, but we knew not what they meant thereby, but we after perceived that their meaning was, that there ſtood five Croſſes upon it, and they brought their Compaſs out, and ſhewed us that it lay N. W. from us, which reckoning alſo we had made by our Compaſs. When we ſaw we could have no better intelligence from them, the Maſter went further into their Ship, and pointed to a Barrel of Fiſh, making ſigns to know if they would ſell it unto us, ſhewing them a piece of eight Rials; whereupon they gave us 102 Fiſhes, with ſome Cakes they had made of Meal, and about a South Sun we left them.

The 17th we ſaw a *Ruſſian Lodgie* that came ſailing out of the *White Sea*, to whom we rowed that we might have ſome inſtruction from him, and when we boarded him, he gave us a Loaf of Bread, and by ſigns ſhewed us that he had ſeen our Companions (who were ſeparated from us in miſty weather) pointing to the Scute, and holding up ſeven Fingers, thereby ſhewing that ſo many Men were in the other Scute, and that they had ſold them Bread, Fleſh, Fiſh, and other Victuals; and we ſaw a ſmall Compaſs in their *Lodgie*, which we knew to be our Boatſwains, and they acknowledged they bought it of him.

The 18th in the Morning we pulled up our Stone, which we uſed inſtead of an Anchor, and rowing along the Coaſt till Noon, we then ſaw the Point of *Candinaes*, with the five Croſſes ſtanding upon it, lying at the Mouth of the *White Sea*, which we were to croſs, and had long deſired to ſee. We paſt the Point at a N. W. Sun, and having a good N. E. Wind, ſet forward in the name of God, and all that Night and the next Day ſailed with a good Wind, and ſo likewiſe the Night following; in the Morning we ſaw Land on the Weſt ſide of the *White Sea*, which we knew muſt be the Coaſt of *Lapland*, for which we thanked God, who had helped us to ſail over the *White Sea* in 30 Hours, it being 40 *Dutch* Miles at the leaſt, our Courſe being Weſt, with a N. E. Wind.

The 20th, we ſpied certain Croſſes with Warders upon them, whereby we underſtood that it was a good Road, and ſo put into it, and being entred, we ſaw a great *Ruſſian Lodgie* at anchor, whereunto we rowed, and then went aſhoar to ſome Houſes, where they ſhewed us great Friendſhip. In theſe little Houſes we found 13 *Ruſſians*, who every Morning went to fiſh in the Sea; they lived very poorly, eating nothing but Fiſh and Bread. When we were returning to our Scute in the Evening, they prayed the Maſter and me to ſtay with them in their Houſes, which the Maſter thanked them for, but would not accept, and I alone ſtaid with them all Night. Beſides thoſe 13 *Ruſſians* there were two *Laplanders*, and three Women and one Child, who lived upon what the *Ruſſians* gave them, as a piece of Fiſh, and the Fiſhes Heads which the *Ruſſians* threw away, and they with great thankfulneſs took up; ſo that altho' we had little enough, yet in compariſon of their poverty, we thought our ſelves in a happy condition.

The 21ſt we met our other Company, and ſhewed each other how we had ſailed to and fro in great neceſſity and hunger, and yet they had endured more than us. We gave God thanks who had preſerved us alive and brought us together again; and the next day we prayed the *Ruſſian* Cook to bake a Sack of Meal for us, paying him for it, which he did, and our Maſter bought four Cods of the Fiſhermen, which we boiled, and while we were eating, the chief of the *Ruſſians* came unto us, and perceiving we had not much Bread, fetched a Loaf and gave it to us; and altho' we deſired them to ſit down and eat with us, yet we could by no means perſwade them to it, becauſe it was a faſting day with them, and we had poured Butter and Fat to our Fiſh: And ſo ſuperſtitious they were in their Faſting, that we could not get them once to drink with us, becauſe our Cup was ſomewhat greaſy, neither would they lend us any of their Cups, leſt they ſhould be greaſied alſo.

The 24th, the Wind at Eaſt, we got to the ſeven Iſlands, where we found many Fiſhermen, of whom we enquired for *Cola* and *Kilduin*, and they made ſigns that they lay Weſt from us. They caſt a Cod into our Scute, for which we gave them great thanks, much wondring at their courteſy. Paſſing between the ſeven Iſlands and the Land, ſome Fiſhermen rowed to us and asked us where our *Crable* was; we anſwered with as much *Ruſſian* as we had learned, *Crable pro pal*, that is, *Our Ship is loſt*, which they underſtanding, ſaid unto us, *Cool Brabouſe Crable*, whereby we underſtood, that at *Cola* there were ſome *Netherland* Ships, but we did not much regard their News, becauſe our deſign was to ſail to *Wardhouſe*, fearing leſt the Emperour of *Ruſſia* ſhould ſtay us at *Cola*.

The 25th we had ſight of *Kilduin*, where are five or ſix ſmall Houſes inhabited by *Laplanders*: We put in with the Land and asked of the *Laplanders* if that were *Kilduin*, who anſwered, that it was, and ſaid, that at *Cola* there lay three *Brabants Crables*, whereof two were to ſail from thence that day. Then we asked them if any of them would go with one of our Men by Land to *Cola*, promiſing to reward them well for their pains; but they excuſed themſelves, ſaying, They could not go from thence, but they would bring us over the Hill, where we ſhould find certain *Laplanders*, whom they thought would go with us; and ſo the Maſter and one of our Men going with them over the Hill, found ſome *Laplanders* there, of whom they got one to go with our Man, promiſing him two Rials of Eight for his pains. The *Laplander* took a Gun upon his Shoulder, and our Man a Boat-hook, and about Evening they ſet forward.

On the 29th we ſpied the *Laplander* coming alone, without our Man, whereat we wondred, but when he came unto us, he ſhewed us a Letter directed to our Maſter, which he opened before us, the Contents thereof being, *That the Writer of the Letter wondred much at our arrival in that place, and that long ſince he verily thought that we had been all caſt away, being exceeding glad of our happy deliverance, and that he would preſently come unto us with Victuals and all other Neceſſaries to ſuccour us.* It was ſubſcribed *John Cornelison Rip*. We wondred who this ſhould be that ſhewed us ſuch great friendſhip: for tho' it appeared by the Letter that he knew us well, yet we could not imagine (as it proved afterwards) that it was the ſame *John Cornelison*, who the Year before left us about *Bear Iſland*. We paid the *Laplander* his hire for his good news, and beſides that, gave him Hoſe, Breeches, and other Furniture, ſo that he was apparelled like a *Hollander*. This *Laplander* walked well, for our Man ſaid they were two Days and two Nights in going to *Cola*, and yet walked apace, whereas he was but one Day and a Night coming back to us; he brought us a Partridge which he had killed on the way.

The next day we ſaw a *Ruſſian Joll* come rowing with *John Cornelison* and our Companion, who being landed, we received each other with great joy. He brought us a Barrel of Roſwich Beer, Wine, *Aqua Vitæ*, Bread, Fleſh, Bacon, Salmon, Sugar, and other things, which were a great relief to us, and we rejoyced together for our unexpected meeting; and at that time gave God great thanks for his mercy ſhewed to us.

September

The ſecond of *September* in the Morning, we rowed up the River, and ſaw ſome Trees on the Bank ſide, which made us glad, as if we were come into a new Wor[illegible], for in all the time we had been out, we had not ſeen any Trees. In the Evening we got to *John Cornelison*'s Ship, and made merry with his Saylors who had been in the Voyage with him the laſt Year. Then we rowed forward, and late in the Night got to *Cola*, and were all exceeding glad that God of his mercy had delivered us out of ſo many Dangers and Troubles, and brought us thither in ſafety.

Their Scute and Boat laid up for a Monument more deſervedly than the *Argo*.

The 11th, by the conſent of the *Ruſſian* Governour, we brought our Scute and our Boat into the Merchants Houſe to ſtand for a Memorial of our long, dangerous, and never before ſailed Voyage, which (by God's help) was performed in thoſe open Scutes, being almoſt 400 *Dutch* Miles.

The 18th we ſailed from the River *Cola*, and on the firſt of *November* arrived at *Amſterdam*, in the ſame Cloaths we wore in *Nova Zembla*, with our Caps fur'd with white Fox Skins. The news thereof being ſpread abroad, it was alſo carried to the Prince's Court at the *Hague*, to which place we were brought by the Scout and two of the Burghers, and there in preſence of Prince *Maurice*, divers Embaſſadors, and the Burghermaſters, made a rehearſal of our long and dangerous Voyage.

We found by experience, that our greateſt hindrance was the Ice about *Nova Zembla*, under 73, 74, 75, and 76 Degrees, which was more than we met with at Sea between both Lands, altho' we were then much more Northerly, which ſhews that it was not the nearneſs of the North Pole, but the Ice that came from the *Tartarian* Sea about *Nova Zembla*, that made us feel the greateſt cold. And it is obſervable, that in *Greenland* under 80 Degrees, there is both Leaves and Graſs, whereon Deer and ſuch Beaſts as feed on Leaves and Graſs, do live; whereas on the contrary in *Nova Zembla*, there groweth neither Leaves nor Graſs, nor are there any Beaſts there, but ſuch as eat Fleſh, as Bears and Foxes, *&c.* altho' it lies four, five, and ſix Degrees more Southerly than *Greenland*: So likewiſe it is obſerved to be much hotter about the *Tropicks*, which are 23 Deg. and a half from the Line, than under the Line it ſelf. Our Pilot *William Barents* died in this opinion, being fully perſwaded that our intended Diſcovery had been perfected, if we had held a N. E. Courſe from the North Cape, which Courſe we could not hold from *Nova Zembla*, becauſe we were then entred into the Ice.

The following Notes were written by William Barents, *the Pilot before mentioned.*

THE 24th of *Auguſt*, *New Stile*, 1595, we ſpake with the *Samoieds*, and asked them how the Land and Sea did lie to the Eaſtward of *Weygates*: They ſaid, after five days journey going N. E. we ſhould come to a great Sea towards the S. E. The Sea to the Eaſtward of *Weygates*, they ſaid, was called *Marmora*, that is to ſay, *The calm Sea*, and the People of *Wardhouſe* told us the ſame. I asked them if it was frozen over at any time of the Year: They ſaid it was, and that ſometimes they paſſed it with Sleds; and the ſame was affirmed by the *Ruſſes* we met in a *Lodgie* or Bark the firſt of *September*, 1595, who told us that this Sea was ſometimes ſo frozen, that the *Lodgies* or Barks going from *Pechora* to *Gielhſidi*, are forced ſometimes to winter there. This laſt place was won by the *Ruſſes* from the *Tartars* three Years paſt.

As to the ebbing and flowing of the Sea, I could find none there, but with the Wind, ſo runs the Stream.

The third of *September* the Wind was S. W. and then I found the Water higher than with the Wind at N. or N. E. My Opinion is grounded on Experience, that if there be a Paſſage, it is ſmall, or elſe the Sea could not riſe with a Southerly Wind; and for the better Proof to know if there were a Flood and Ebb, on the ninth of *September* I went aſhoar on the South end of the *States Iſland*, and laid a Stone on the brink of the Water, and went round about the Iſland to ſhoot a Hare; and when I returned, I found the Stone as I left it, and the Water neither higher nor lower, which proves that there is no Flood nor Ebb.

CHAP XIX.

The Voyages and Diſcoveries of Henry Hudſon *towards the North Pole, ſet forth at the Charge of certain Merchants of* London.

1607. *May.*

THE firſt of *May*, 1607, we departed from *Graveſend*, our Ship's Crew conſiſting of ten Men and a Boy, beſides the Maſter, and on the 26th we were ſix Leagues to the Eaſtward of *Shotland*, in 60 Deg. 12 Min. We had 64 Fathoms at our ſounding, black, ozy, ſandy, with ſome yellow Shells. The Compaſs had no variation.

The 30th we were in 61 Deg. 11 Min. this day the Needle inclined 79 Deg. under the *Horizon*.

June.

The 11th of *June* we ſaw ſix or ſeven Whales near our Ship: We ſteered N. N. W. and on the 13th ſaw Land on Head of us, with ſome Ice: We called the Head Land *Young's Cape*, and a very high Mount near it, like a round Caſtle, we called the *Mount of God's Mercy*: Our Sails and Shrouds were frozen. We lay a hull from the 15th to the 17th, and perceived a Current ſetting to the S. W.

The 18th and 19th we ſteered N. E. purpoſing to ſee whether the Land we deſcried the 13 day, were an Iſland or part of *Greenland*; but it being a thick Fog, with much Wind at South, we changed our Courſe, and ſteered N. N. E. hoping for an open Sea to fall with the body of * *Newland*.

* Now called *Greenland*.

The 20th at two in the Afternoon it cleared up, and we ſaw the Sun, which vve had not ſeen ſince the ſecond of this Month. We kept a North-eaſterly Courſe, meeting vvith many Fogs and Calms, and much Ice driving in the Sea, and on the 27th vve deſcried *Greenland*. The Ice lay very thick along the Shoar, and having a fair Wind, vve coaſted it in a ſmooth Sea, and had no ground at 100 Fathoms four Leagues from the Shoar: We reckoned our ſelves to be in 78 Degrees, and not far from *Vogel Hook*: As vve ran along the Shoar, vve found no great cold: At eight at Night vve ſhaped our Coaſt N. W. and at ten ſavv great ſtore of Ice on head of us, vvhereupon vve tacked and ſtood avvay S. S. E.

Note, that altho' vve uſe the Word Night for diſtinction of time, yet the Sun vvas long before this, alvvays above the Horizon, but vve had not as yet ſeen him upon the Meridian North.

The 28th, it cleared up at 12 at Night, and vve found our ſelves betvveen the Land and the Ice, *Vogel Hook* bearing Eaſt of us.

The 29 and 30th vvere ſtormy, vve lay a hull.

The firſt vve ſtood N. E. for the Shoar, and vvere ſoon embayed vvith Ice; by our obſervation we were in 78 Deg. 42 Min. whereby we accounted our ſelves thwart of *The great Indraught*. In the Evening it cleared up, and we found our ſelves ſhot far into the Inlet, and had no ground at 100 Fathoms.

The ſecond, the Wind N. E. and clear weather, the Ice to the Northward of us, and an open Sea to the Southward under our Lee.

The third and fourth our Shrouds and Sails were frozen.

The fifth much Wind at N. E. we lay a Hull, being then near the Mouth of the Inlet.

The ſixth the Wind N. E. and the Sea grown, and very green; Latitude by Obſervation 77 Deg. 30 Min.

The ſeventh was clear, and we were encompaſſed with Ice, and were now entred again into a black Sea, which by proof we found to be an open Paſſage.

The eighth very foggy, we ſteered S. by E. we ſaw much drift Wood, and many Seals, and two Morſes.

NOVA ZEMBLA
Sinus Dulcis
Waygats

A Map of NOVA ZEMBLA and WAYGATS, as Diſcovered by ye order of ye Czar of Moſcovy, whereby it appears not an Iſland but joyned wth ye Continent and that ye Mare Glaciale. is not a Sea but a freſh-water Bay: but this Draught having no Latitude nor Scale, we dare not fully depend upon the truth of it

The 9th and 10th little Wind, we were encompaſſed with Ice, and ſaw many Seals.

This was written by *John Playce*, one of the Ships Company; that which follows ſeems to be taken from Mr. *Hudſon*'s own Notes.

The 11th was clear weather, the Wind at S. S. W. we were got into a green Sea again, and ſaw many Whales. We had the Sun on the Meridian S. by W. his greateſt height was 37 Deg. 20 Min. by this obſervation we were in 79 Deg. 17 Min. we had a freſh Gale and a ſmooth Sea, by means whereof our Ship had outrun us. Many of my Company were ſick with eating of Bears Fleſh the day before, unſalted.

The 12th was foggy, the Wind at South; in the Morning our Shrouds were frozen; at Noon we reckoned our ſelves under 80 Deg. we ſteered N. and N. E. until we ſaw Ice a head of us, and then we caſt about to the S. E. At twelve this Night it cleared up, and we ſaw *Greenland* out of the top, bearing S. S. W. twelve Leagues from us.

The 13th, the Wind at S. by E. we ſtood N. E. by E. and were by obſervation in 80 Deg. 23 Min. we ſaw many Whales: This Morning being very clear, we could not ſee any Ice out of the top, but at three in the Afternoon we ſaw ſo much Ice a head of us, that we were forced to alter our Courſe as the Ice would give us leave.

The 14th, was calm with Fog; at nine a ſmall gale at Eaſt, we ſteered S. E. by E. and met with a green Sea again, which we found by experience to be freer from Ice, than the azure or blew Sea: At this time we had more Birds than uſually. At Noon, being a thick Fog, we found our ſelves near Land, bearing Eaſt of us, and running further, we found a Bay open to the Weſt and by North. The Northern ſide of this Bay's Mouth being high Land, is a ſmall Iſland, which we called *Collins Cape*, by the name of our Boatſwain, who firſt ſaw it. Here we ſaw many Whales, and one came under the Keel of our Ship, and made her heel, yet by God's mercy we had no harm: At a S. W. Sun a Flood ſet into the Bay from the N. W. by N. At the Mouth of this Bay we had 30 Fathom Water, and then 26, but further in we had no ground at 100 Fathom, and therefore judged it rather a Sound than a Bay: On the Southern ſide lie three or four ſmall Iſlands or Rocks. *John Colman* my Mate, and *William Collins* my Boatſwain, with two others, went aſhoar, where they found and brought aboard a pair of Morſes Teeth in the Jaw, alſo ſome Whales Bones, and about a dozen Deers Horns: they ſaw the footing of other ſorts of Beaſts; they ſaw alſo ſome Rot-geeſe, with much drift Wood on the Shoar, and found a ſtream or two of freſh Water, with which they cooled their thirſt, it being hot on the Shoar. This Night proved clear, and we had the Sun on the Meridian, on the N. by E. part of the Compaſs: From the upper edge of the *Horizon* with the Croſs-ſtaff, we found his height 10 Deg. 40 Min. without allovving any thing for the Semidiameter of the Sun, or the diſtance of the end of the Staff from the Center in the Eye. Sun 10 Deg. 40 Min. high at Mid-night.

The 15th, clear vveather, the Sun ſhining vvarm; *Collins* Cape bore of us S. E. and vve could ſee the high Land of *Greenland* 20 Leagues from us to the N. E. By my account, the Northern part of this Land vvhich novv vve ſavv, ſtretched into 81 Deg. All this day vvas 81 Degrees. clear vveather, little Wind, and reaſonably vvarm.

The 16th, vvarm and clear vveather at North; vve vvere encompaſſed vvith Ice, and having novv run tovvard the furtheſt part of the Land by us diſcovered, vvhich for the moſt part trends N. E. and S. W. vve could diſcern more Land joining to the ſame, ſtretching far North into 82 Degrees, and by the bovving or ſhevving of the Sky much further, vvhich vvhen I firſt ſavv, I hoped to find a free Sea betvveen the Land and the Ice, and ſo to have compaſſed this Land by the North, but novv finding it impoſſible by reaſon of the abundance of Ice to the Northvvards of us, vvhich joined to the Land, vve bore up the Helm and returned; and this I They re can aſſure, that betvveen 78 Deg. 30 Min. and 82 Deg. by this vvay there is no paſſage. We ſteered W. S. W. from *Collins* Cape, in 81 Deg. 30 Min. bearing N. E. 81 Deg. 30 Min. from us. From this day to the 26th, vve ſteered various Courſes, in vvhich nothing hapned remarkable.

On the 27th, a thick Fog, calm, and the Sea very lofty; vve heard the rut or noiſe of the Ice and Sea, vvhich vvas the firſt Ice vve heard or ſavv ſince vve vvere at *Collins* Cape. The Sea heaving us tovvard the Ice, vve endeavoured vvith our Boat to tovv our Ship further from the danger; but the Sea vvent ſo high, that it vvas to ſmall purpoſe, and vve had here ended our Diſcovery if God had not given us a ſmall gale in our Diſtreſs. Here vve found the vvant of a good Ship-boat, and alſo of half a dozen long Oars to tovv in our Ship. We found by the Icy Sky and our nearneſs to *Greenland*, that there is no Paſſage that vvay, vvhich if there had been, I intended to return by the North of *Greenland* to *Devis* Streights, and ſo for *England*. Here having the benefit of a Weſterly Wind, vvhich hapned ſeldom during this Voyage, vve altered our Courſe and ſteered to the Eaſtvvard, and on the 28th found our ſelves in 76 Deg. 36 Min.

On the 29th vve heard the rut of land to VVindvvard, and I knevv it to be ſo by the colour of the Sea. It vvas ſo thick a Fog, that vve could hardly ſee a Cable's length from the Ship. VVe had ground at 25 Fathom, ſmall black pebble Stones; at the next ſounding 30 Fathoms, ſmall Stones like Beans; at the next caſt no ground at 60 Fathoms: VVe tacked and ſtood S. VV. all this day an extream thick Fog.

The 30th it cleared up, and vve ſavv part of *Greenland* bearing from us E. S. E. vve then reckoned our ſelves to be in the Latitude of 76 Deg.

On the 31ſt, the VVind at E. S. E. and being like to prove much VVind, contrary to our purpoſe, the Fogs more thick and troubleſome than formerly, divers things neceſſary vvanting, and our time vvell nigh ſpent to do further good this Year, I commanded to bear up for *England*, and ſteered avvay S. S. VV. The next Morning at four vve vvere thvvart of *Cherry*-Iſland, being a very ragged Land on the VVeſtern ſide, riſing like Haycocks.

On the 15 of *Auguſt* vve put into the Iſles of *Fere*, in 62 Deg. and arrived in the *Thames* the 15th of *September*. *Auguſt.*

CHAP. XX.

The ſecond Voyage of Mr. Henry Hudſon *for finding a Paſſage to the* Eaſt-Indies *by the North-eaſt: Written by himſelf.*

1608. *April.* APril the 22d, vve ſet ſail from St. *Katherins*, and fell down to *Blackwall*, our vvhole number being 15 Perſons.

May. The 20th of *May* vve vvere in Latitude of 64 Deg. 52 Min. the Needle then declined under the *Horizon* by the Inclinatory 81 Deg. and vve had then a ſmooth Sea, vvhereby I am aſſured my Obſervation vvas good.

The 22d vve reckoned our ſelves in 67 Deg. the Sea vvas ſmooth, the Needle declined 82 Deg.

The 27 we accounted our ſelves in 69 Deg. 40 Min. and the Needle inclined, being a ſmooth Sea, almoſt 84 Degrees.

The 29th vve ſavv the Sun on the North Meridian 5 Deg. 35 Min. above the *Horizon*; Latitude by Obſervation 73 Deg. 13 Min.

The 3d of *June* vve had ſight of the North Cape, bearing S. VV. eight Leagues from us: Obſerving the Variation, I found it to the VVeſtvvard 11 Deg. and having a ſmooth Sea, the Needle inclined under the *Horizon* 84 Deg. 30 Min. the neareſt I could find. *June.*

The 4th vve ſavv the Sun on the North Meridian 5 Deg. 40 Min. high.

The 7th vve had Snovv for four Hours; I accounted that vve vvere then in 74 Deg. 30 Min. here the

Needle inclined 86 Deg and the Sea vvas of a dark blevv colour.

The 9th, being in Latitude of 75 Deg. 29 Min. we entred into the firſt Ice we had ſeen this Voyage; we ſtood into it, hoping to get thro' it, and held a North-eaſterly courſe, looſing for one piece of Ice, and bearing up for another, till we were got four or five Leagues within it, and found the Ice a head of us ſo firm and thick, that we were forced to return as we went in, and at laſt got free of it.

A Mermaid ſeen.

The 15th, one of our Company looking over-board, ſaw a Mermaid, and calling up ſome of the Company to ſee her, one more came up, and ſhe was then come cloſe to the Ship ſide, looking earneſtly on the Men: Soon after a Sea came and overturned her. From the Navil upwards her Back and Breaſts were like a Womans, her Body as big as one of us, her Skin very white, and long black Hair hanging down behind: In her going down they ſaw her Tail, like the Tail of a *Porpus*, and ſpeckled like a Mackarel: Their Names that ſaw her were *Thomas Hills* and *Robert Rayner*.

On the 17th we were in Latitude of 74 Deg. 54 Min. clear weather: we had the Sun at loweſt on the North and by Eaſt part of the Compaſs: Here we ſaw Whales, Porpoiſes, and the Sea full of Fowls.

On the 18th we had the Sun on the Meridian N. by E. half a Point Eaſtward, his height 8 Deg. 40 Min. We had Ice in ſight to the Northward of us; and at this time I have ſome reaſon to think there was a Current ſetting to the Northward; the Courſe we held, and the Way we made between our Obſervations at Noon and Mid-night, made me ſuſpect it the more.

The 12th, in the Latitude of 75 Deg. 22 Min. the Needle inclined under the Horizon 89 Degrees and a half.

The 20th we heard Bears roar on the Ice, and ſaw an incredible number of Seals upon it. We had the Sun on the Meridian N. by E. half a Point Eaſterly; his height was ſeven Deg. twenty Min.

The 21ſt clear and warm weather; our Latitude at Noon being 74 Deg. 9 Min. it appeared that we were haled to the Northward beyond expectation.

The 22d, having a ſmooth Sea, we found the Needle to incline 85 Degrees; we had then the Sun on the Meridian N. by E. half a Point Eaſterly; his height 7 Deg. 45 Min. which made the Latitude 74 Deg. 43 Min.

The 23d we had Snow, the Sun at the loweſt was N. N. E. his height 7 Deg. 15 Min. the Poles height 74 Deg. 18 Min.

The 24th and 25th cool and clear, with ſome Snow: The Sun was on the Meridian on the S. W. by S. Point of the Compaſs ere it began to fall; Latitude 72 Deg. 52 Min. The Ice was to the Eaſtward of us, and our hope of a Paſſage was gone this way, by our nearneſs to *Nova Zembla*, and the abundance of Ice.

The 26th, we had the Sun on the Meridian on the S. E. by S. Point of the Compaſs, in Latitude of 72 Deg. 25 Min. and had ſight of *Swart-Clift* in *Nova Zembla*, bearing from us S. E. five Leagues off.

The 27th, we being but two Miles from the Shoar, and almoſt calm, I ſent *Robert Ivet* my Mate, and *John Cook* my Boatſwain on ſhoar, with four others, to fill two or three Caſks with Water; they told me they ſaw Graſs on the Shoar of the laſt Year, and young Graſs come up amongſt it a - - - - - long: That it was very hot on the Shoar, the Ground boggy, and that they ſaw the footing of many Bears, Deer and Foxes. There was a Croſs ſtanding on the Shoar, much drift Wood, and ſigns of Fires that had been made there. They brought aboard ſome VVales Fins, two Deers Horns, and the Dung of Deer, Moſs, Flowers, and other things that did there grow. The Sun was on the Meridian on the N. N. E. half a Point eaſterly before it began to fall; his height was 4 Deg. 45 Min. Inclination 22 Deg. 33 Min. which makes the Latitude 72 Deg. 12 Min.

The 29th and 30th calm, hot weather, and a ſmooth Sea, the Needle did incline 84 Deg. we anchored near an Iſland in the Mouth of a River in 71 Deg. 15 Min. and ſaw 40 or 50 Morſes ſleeping on a little Rock; all my Company went aſhoar, but my ſelf and Boy, yet they killed but one, the reſt eſcaping by being ſo near the VVater. At Mid-night our Anchor came home, and we tailed aground by the ſtrength of the ſtream, but heaved off again without hurt.

July.

The firſt of *July* I ſent my Mate with four more to ſearch a Sound or River in the bottom of the Bay, which ſent out a great ſtream to the Northwards, againſt the Tide which came from thence. This ſtream was ſo ſtrong, that it carried away the Ice or any thing elſe againſt the Flood, and it flows from the North three Hours and ebbs nine. VVe had the Sun on the Meridian on the S. by VV. Point, half a Point VVeſterly, Lat. 71 Deg. 24 Min.

The 2d our Company returned, with their Boat half laden with drift VVood, four dozen of Fowls, a great Deers Horn, and they ſaw ten white Deer in one Herd. They certified me that the great River or Sound, was two or three Leagues broad, and had no ground at 20 Fathoms, and that the ſtream did ſet ſtrongly out of it, and was of the colour of the Sea, and very ſalt. I had great hopes of this Northerly River or Sound, and ſent my Mate *Ivet* with five more in our Boat to ſearch it, who went up ſix or ſeven Leagues, and ſounded it from 20 to 23, and then to eight, ſix, and one Fathom, and laſtly to four Foot. Being returned, we ſet ſail to the S. VV. grieving that our labour was in vain, for had this Sound held as it made ſhew of, it might have yielded an excellent Paſſage to a more Eaſterly Sea. Generally, all the Land of *Nova Zembla* that we ſaw, was pleaſant to the Eye, much high land, with no Snow on it, looking in ſome places green, and Deer feeding thereon; it is no wonder that there is ſo much Ice in the Sea towards the Pole, there being ſo many Sounds and Rivers in *Nova Zembla*, *Greenland*, *Groenland*, *Tartary*, *Ruſſia*, and *Lappia*, to engender it; from whence I am apt to think there can be no navigable Paſſage this way. This place upon *Nova Zembla* is not the ſame which the *Hollanders* call *Coſting Sarch*; it is broad, and like to yield a Paſſage at *Waygates*, and my hope was, that by the ſtrong ſtream it would have cleared itſelf. But being now void of hopes of a N.E. Paſſage, I reſolved to ſail to the North-weſt, and to make trial of that place called *Lumbies In-let*, and the furious Over-fall mentioned by Captain *Davis*; but meeting with contrary VVinds, and having ſpent more than half the time, before I had gone the ſhorteſt part of the way, I ſhaped my Courſe homeward, and arrived at *Graveſend* the 26th of *Auguſt*, 1608.

A third Voyage towards *Nova Zembla* was attempted by Mr. *Hudſon* in the Year following, and written by his Mate *Robert Ivet*, wherein is ſet forth, that on the 21ſt of *May*, 1609, they had ſight of the North Cape of *Finmark*, and after much trouble from Fogs, Ice, and contrary VVinds, they returned to the Iſles of *Fero* in 62 Degrees, which he ſays are placed too far VVeſterly in our Sea Charts. Thence they ſailed to *Newfoundland*, Cape *Cod*, and *Virginia*, which being a Voyage well known, and nothing remarkable happening in it, I ſhall proceed to his laſt Voyage, where he was treacherouſly expoſed by his Mate *Ivet*, and others of his Ships Company.

CHAP.

CHAP. XXI.

A Journal of Mr. Hudſon's *laſt Voyage for the Diſcovery of a North-weſt Paſſage: Written by* Abacuk Pricket.

1610. WE ſailed from St. *Katharins* the 17th of *April*, 1610, and on the 5th of *May* were at the Iſles of *Orkney*, and on the 11th fell with the Eaſtern part of *Iſland*: VVe ſaw Mount *Hecla* caſt out much fire, which was thought to be a ſign of foul weather approaching. VVe put into a Harbour, called by the *Engliſh Louſy Bay*, where we bathed our ſelves in a Bath on the Shoar, the VVater whereof was ſo hot that it would ſcald a Fowl.

From hence, the firſt of *June*, we put to Sea for *Groenland*, which we raiſed on the fourth, the Land vvas very Mountainous, and covered vvith Snovv, and there vvas ſo much Ice on the Coaſt, that we could not come near the Shoar. VVe ſteered on betvveen the VVeſt and North-vveſt, until vve raiſed the Iſland *Deſolation*, and from thence ſhaped our Courſe N. VV. the VVind being againſt us, or elſe vve had gone more Northerly, and about the end of *June* raiſed Land to the North of us. In our Courſe vve met with great Iſlands of floating Ice, and ſavv one of them overturn, vvhich vvas a good vvarning for us not to come near them. VVe continued our Courſe as the Ice did lie, and vvere at laſt ſo incloſed that vve could go no further. Here our Maſter vvas in deſpair, and (as he aftervvards told me) thought he ſhould never get out of it, but there have periſhed; he therefore brought forth his Card, and ſhevved all the Company, that he was entred above 100 Leagues further than ever any *Engliſh* Man had done, and left it to their choice, vvhether they vvould proceed any further yea or nay: VVhereupon ſome vvere of one mind, and ſome of another, ſome vviſhing themſelves at home, and ſome not caring vvhere, ſo they vvere out of the Ice; but there vvere VVords then ſpoken by ſome, vvhich vvere remembred a great vvhile after. *June.*

There vvas one vvho told the Maſter, that if he had 100 *l.* he vvould give 90 to be at home; to vvhom the Carpenter anſwered, that if he had 100 Pound, he would not give ten upon any ſuch condition, but ſhould think it as good Money as ever he had, and to bring it as well home by the leave of God. After many words, we went to work all Hands to get clear of the Ice, and after much labour and time ſpent, we got into open Water, and ſteering N. W. on the eight of *July* we raiſed Land to the S. W. covered with Snow, which our Maſter named *Deſire Provokes*, lying in the Latitude of 60 Degrees. Here we heard the noiſe of a great Over-fall of a Tide that came out of the Land, and were now ſenſible that we had been embayed before; and we were now ſo well acquainted with the Ice, that in foggy or foul weather, we ſought out the broadeſt Iſland of Ice, and there anchoring, we went out and ſported upon the Ice, and filled Water that ſtood in Ponds upon the Ice, very ſweet and good. Being now in the Tide's way, the Ice was opened by being carried firſt one way and then another, whereas in Bays it is unmovable; and in that Bay where we had been ſo troubled with Ice, we ſaw many of thoſe Mountains of Ice aground in ſix or ſeven ſcore Fathom Water. We ſtill plied to the Weſtward as the Ice would give us leave, and fearing a ſtorm, we found an Harbour at the Weſt end of an Iſland, whereinto we went at a full Sea, over a Rock which had then two Fathom and a half Water upon it, and the next Morning was two Fathoms above Water. Our Maſter named it the *Iſland of God's Mercies*. The Water flows here better than four Fathoms, and the Flood comes from the North, flowing eight the change day; Lat. 62 Deg. 9 Min.

Then plying to the S. W. we were on the 16th in the Latitude of 58 Deg. 50 Min. but found our ſelves embayed, and much peſter'd with Ice, whereupon we ſtood to the N. W. until we ſaw the Land, which our Maſter named *Hold with Hope*, and being gotten again into a clear Sea, our Maſter ſtood to the Weſt along by the South Shoar, and raiſed three Capes or Head-lands lying one beyond another, which he named *Cape Henry, Cape James*, and *Queen Ann's Foreland*; we alſo raiſed a high Hill, which our Maſter named Mount *Charles*. We paſſed on in ſight of the South Shoar, till we raiſed a fair Head-land (which our Maſter took to be part of the main North Land, but is an Iſland), and named it *Deep's Cape*; and the Land on the South ſide now falling away to the South, makes another Cape or Head-land, which our Maſter named *Worſenham's Cape*. The Maſter ſent me and the Carpenter, with ſome others aſhoar near *Deeps Cape*; we there ſaw ſome Deer, 12 or 16 in a Herd, but could not come within ſhot of them; we found plenty of Sorrel and Scurvy-graſs, and ſaw ſome round Hills of Stone, like to Graſs-cocks, and when we came to them, I turned off the uppermoſt Stone, and found them hollow within, and full of Fowls hanged by their Necks. We went aboard and told the Maſter what we had ſeen, and what refreſhment might there be had, intreating him to ſtay a day or two in this place, but he was not pleaſed with the motion, nor could be perſwaded to ſtay. Then ſtanding Southward, we loſt ſight of the main Land, that we had all this while followed, and came into ſhallow Water, broken Ground and Rocks, and paſſed down ſo far northward, till we had Land on both ſides, and the Water ſhoaling apace, we came to an Anchor.

From hence we ſtood back again towards the North, and one day a Debate ariſing concerning our coming into this Bay, and how we ſhould get out again, our Maſter took occaſion to revive old matters, and to diſplace *Robert Ivet* his Mate, and the Boatſwain, for Words ſpoken in the firſt great Bay of Ice, and made *Robert Billet* his Mate, and *William Wilſon* our Boatſwain. We plied to and fro from the North to the South, and thence to the North again, till we came into Shoal Water, where we anchored in ſeven Fathom, and there lay eight days, in all which time we could not get one hour to weigh our Anchor; but the 8th day the Wind beginning to ceaſe, our Maſter would have the Anchor up, againſt the mind of all that knew what belonged thereunto. Well, ſo it went, and when we had brought it to a Peak, a Sea took her, and caſt us all off from the Capſton, and hurt many of us. Here we loſt our Anchor, and if the Carpenter had not been nimble, we had loſt our Cable too, but he fearing ſuch a matter, was ready with his Ax, and ſo cut it. Diſcord.

From hence we ſtood to the South, and then upon divers Courſes until we came to a Bay near the North ſhoar, where we anchored. While we lay there, we ſaw a Ledge of Rocks to the Southward, about a League long, which were covered at full Sea, for a ſtrong Tide ſets in here. At Mid-night we weighed, and ſtood to go out as we came in, and had not gone long, before the Carpenter told the Maſter, that if he kept that Courſe he would be upon the Rocks; the Maſter conceived that he was paſt them, when preſently we ran on them, and there ſtuck faſt twelve hours, but by the mercy of God we got off unhurt. Strike on a Rock.

We ſtood to the Eaſt, and anchored in a Bay; here the Maſter ſent me and the Carpenter in the Boat to ſeek a place to winter in, and it was time, the Nights being long and cold, and the Earth covered with Snow, having ſpent three Months to no purpoſe, and it being now the laſt day of *October*.

On the firſt of *November* we found a place whereunto we brought our Ship, and haled her aground.

On the 10th we were frozen in; and now it concerned us to take care of what we had, and ſo to ſpend, that we might have wherewith to keep us alive, until we ſhould come to the Capes where the Fowl bred, for there was all the hope we had of finding ſubſiſtance to bring us home. Our Maſter therefore propounded a reward to them that killed Beaſt, Fiſh, or Fowl. We were victualled for ſix Months in good proportion, and of that which was good, and if our Maſter would have had more, he might have been ſupplied at home and in other places; and it is ſtrange that he did not prevent the Hunger we endured, which occaſioned the overthrow of himſelf and many other honeſt Men.

About the middle of *November* our Gunner *John Williams* died, and his Cloaths were ordered to be ſold at the Main-maſt to the higheſt Bidder, as is uſual.

The Gunner had a grey Cloth Gown, and *Henry Green* prayed the Maſter to befriend him ſo much as to let him have it, paying for it as another would give; the Maſter promiſed him he ſhould have it, and told others who deſired to buy it, that *Green* ſhould have it, and none elſe.

This *Green* was born in *Kent*, of good Parentage, but by his lewd life, had loſt the good will of all his Friends, and ſpent all he had. This young Man our Maſter kept in his Houſe at *London*, and would have him to Sea with him, becauſe he could write well. He was much in the Maſter's Favour, and was indeed a ſerviceable Man every way for manhood. When he was aſhoar at *Iſland*, he ſo beat our Surgeon, that we had much ado to get him aboard again; which Action of his ſet all the Company in a rage, and when I told the Maſter of it, he bid me let it alone, for (ſaid he) the Surgeon had a Tongue that would wrong the beſt Friend he had. But *Robert Ivet* the Maſter's Mate, being drunk, told the Carpenter a long tale, that the Maſter had brought in *Green*, to crack the credit of any one that ſhould diſpleaſe him; which words coming to the Maſters Ears, he would have gone back to *Iſland*, when he was 40 Leagues from it, to have ſent home *Ivet* in a Fiſherman; but was at laſt otherwiſe perſwaded, and the Breach made up.

Now out of ſeaſon, the Maſter called on the Carpenter to go in hand with an Houſe on ſhoar, which at the beginning our Maſter would not hear, when it might have been done. The Carpenter told him that the Snow and Froſt were ſuch, as he neither could, nor would go in hand with ſuch work, which when the Maſter heard, he ferreted him out of his Cabin, calling him by many foul names, and threatning to hang him. The Carpenter told him, that he knew what belonged to his place better than himſelf, and that he was no Houſe Carpenter; ſo this paſſed, and the Houſe was afterward made, but to no end.

It was an order amongſt us, that no Man ſhould go alone, but one with a Gun, and another with a Pike, and it happened ſo, that the next day after the claſhing between the Maſter and Carpenter, the Carpenter going abroad, took his Piece and *Henry Green* with him. This ſo exaſperated the Maſter againſt *Henry Green*, that he ordered *Robert Billet* his Mate, to have the Gunners Gown, and it was delivered to him, which when *Henry Green* ſaw, he challenged the Maſter's Promiſe, but the Maſter railed on him with many diſgraceful Words, telling him, that all his Friends would not truſt him with 20 Shillings, and therefore why ſhould he? As for Wages he had none, nor none ſhould have, if he did not pleaſe him well. Yet, it was ſaid, the Maſter had promiſed him to make his Wages as good as any Mans in the Ship, and to procure him to be one of the Prince's Guard at our return. This ſo wrought upon *Green*, that from thenceforth he ſought all means to diſcredit the Maſter, and at laſt conſpired with others to thruſt him and other honeſt Men out of the Ship.

Green's conſpiracy.

It would be tedious to relate the Hardſhips we endured while we wintred in this place; the Cold was ſo extream, that it lamed moſt of our Company. But I muſt not forget God's great mercy to us in ſending us ſuch ſtore of white Partridges during the firſt three Months, that we killed above a hundred dozen, beſides others of ſundry ſorts. The Spring approaching, the Partridges left us, and were ſucceeded by other Fowl, as Swans, Geeſe, Ducks, and Teal, but hard to come by. They came from the South and flew to the North; but if they be taken ſhort by a Northerly Wind, then they fall and ſtay till the Wind ſerve them, and then fly to the Northward. As the Summer came on, theſe Fowls were gone, and few or none to be ſeen. Then we ſearched the Woods, Hills and Valleys, for any thing that might ſerve for Food, though never ſo vile, the Frogs (in the time of their engendring as loathſome as Toads) were not ſpared, nor the Moſs that grew on the Ground. But amongſt divers ſorts of Vegetables, *Thomas Woodhouſe* brought home a Bud of a Tree, full of a Turpentine ſubſtance; of this our Surgeon made a Decoction to drink, and applied the Buds hot to ſuch as were troubled with Aches in any part of their Bodies; and I muſt confeſs I received great and preſent eaſe of my pain.

Store of Partridges.

As ſoon as the Ice began to break out of the Bays, a Savage came to our Ship, being the firſt we had ſeen in all this time. Our Maſter entertained him well, promiſing to himſelf great Matters by his means, and therefore would have to his own uſe, all the Knives and Hatchets which every Man had, but received none, except from *John King*, the Carpenter, and my ſelf. To this Savage our Maſter gave a Knife, a Looking-glaſs and Buttons, who received them thankfully, and made ſigns, that after he had ſlept he would come again, as he did. When he came again, he drew after him a Sled, and upon it two Deer Skins, and two Beaver Skins; he laid the Knife upon one of the Beaver Skins, and his Glaſſes and Buttons upon the other, and ſo gave them to the Maſter, who received them, and the Savage took thoſe things the Maſter had given him, and put them into his Scrip. Then the Maſter ſhewed him an Hatchet, for which he would have given the Maſter one of his Deer Skins, but the Maſter would have them both, and ſo he had, but not willingly. After many ſigns of People to the North and to the South, and that after ſo many Sleeps he would come again, he went his way, but never came more.

The Sounds being now clear of Ice, ſo that our Boat could go from one place to another, *Wilſon*, *Green*, and five more, were ordered to go a fiſhing with our Net; they caught the firſt day five hundred Fiſhes as big as large Herrings, which put us all in good hopes to have our Wants ſupplied; but theſe were the moſt that ever they caught in one day, and many days they got not a quarter ſo many. In this time of their fiſhing, *Green*, *Wilſon*, and ſome others, plotted to take the Net, and the Shallop which the Carpenter had newly ſet up, and ſo to ſhift for themſelves; but the Shallop being ready, our Maſter would go in it himſelf to the South and South-weſt, to ſee if he could meet with People, for that way we could ſee the Woods burning; ſo taking with him as much Victuals as would ſerve for eight or nine days, he went toward the South, and ſet no time for his return, becauſe he was perſwaded if he could meet with People, he ſhould have Fleſh of them, and that good ſtore, but he returned worſe than he went forth; for altho' he was ſo near them, as to ſee them ſet the Woods on Fire, yet could he not by any means come to the ſpeech of them.

Being come aboard, he fitted all things for his return, and firſt delivered all the Bread out of the Bread-room, which came to a Pound a piece for every Man's ſhare, and delivered alſo a Bill of Return, willing them to have that to ſhew, if it ſhould pleaſe God they ſhould come home, and wept when he gave it to them. But to help us with ſome relief in this poor eſtate, our Boat went to work on *Friday* Morning and ſtaied till *Sunday* Noon, and brought fourſcore ſmall Fiſhes, a poor Relief for ſo many hungry Bellies. Then we weighed and ſtood out of our Wintring place, and anchored without in the Mouth of the Bay, where our Bread being gone, that ſtore of Cheeſe we had was to ſtop a gap, whereof there were five; at which time the Company grudged, becauſe by their reckoning there ſhould have been nine; but thoſe that were left were equally divided by the Maſter, altho' he was adviſed to the contrary, becauſe there were ſome who could not govern themſelves. I have known *Wilſon* the Boatſwain to eat his Fortnights Bread in one day, and was ſick for two or three Days afterwards; and *Henry Green* gave his Fortnights Bread to another to keep for him, and prayed him not to let him have any until next *Monday*, but he never let him reſt until he had it again, which was before *Wedneſday* Night. The reaſon of the Maſter's delivering the Cheeſe, was, becauſe they were not all of one goodneſs, and that they might ſee they had no wrong done them, but every Man ſhould have alike, the beſt and worſt together, which was three Pounds and a half for ſeven days.

We weighed and ſtood to the N. W. and on the 18 of *June* fell into the Ice, and lay there in ſight of Land; here the Maſter told *Nicholas Simmes*, that there would be a breaking up of Cheſts to ſearch for Bread, and willed him if he had any, to bring it to him, whereupon he delivered the Maſter 30 Cakes in a Bag. This Deed of the Maſter (if true) hath made me often to wonder, why he did not ſooner prevent the Hunger we now endured, but let it grow to that extremity, as to cauſe the overthrow of himſelf and many others.

Being thus in the Ice on *Saturday* 21ſt of *June* at Night, *Wilſon* the Boatſwain and *Henry Green* came to me lying in my Cabin lame, and told me that they and their Aſſociates would ſhift the Company, and turn the Maſter and all the ſick Men into the Shallop, and let them ſhift for themſelves; for there was not 14 Days Victuals left for all the Company at that poor allowance we were at, and that there we lay, the Maſter not caring to go one way or other; and that they had not eaten any thing theſe three days, and were therefore reſolved either to mend or end, and what they had begun, they would go thro' with it, or dye. When I heard this, I told them I marvelled to hear ſuch things from them, conſidering that they were married Men, and had Wives and Children, and that for their ſakes they ſhould not commit ſo foul a Sin in the ſight of God and Man; for why ſhould they baniſh themſelves from their Native Country? *Henry Green* bid me hold my peace, for he knew the worſt, which was, to be hanged when he came home, and therefore of the two, he would rather be hanged at home, than ſtarved abroad, but for the good will they bare me, they would have me to ſtay in the Ship. I thanked them, and told them I came into her, not to forſake her, yet not to hurt my ſelf and others by any ſuch deed. *Henry Green* anſwered, that then I muſt take my fortune in the Shallop. If there be no remedy (ſaid I) the will of God be done.

Away went *Green* in a rage, ſwearing to cut his Throat that ſhould go about to diſturb them, and left *Wilſon* with me, with whom I had ſome diſcourſe, but could not prevail with him, for he was perſwaded that there was now no Remedy, but to go on while it was hot, leſt their party ſhould fail them, and the miſchief they intended to others, ſhould fall on themſelves. *Green* returned, and demanded of him what I ſaid; *Wilſon* anſwered, he is in his old Song, ſtill patient: Then I deſired *Green* to ſtay three days, in which time I would ſo deal with the Maſter, that all ſhould be well; when they would not yield to that, I deſired them to forbear but two days, nay, twelve Hours, but they replied, that there was no way but to do it out of hand. I then told them, that if they would ſtay till *Munday*, I would join with them to ſhare all the Victuals in the Ship, and would juſtify it when I came home; but this would not ſatisfy them; wherefore I told them, they had ſome worſe matter in hand than they made ſhew of, and that it was Blood and Revenge they ſought, or elſe they would not at ſuch a time of Night undertake ſuch a Deed: Whereupon *Green* took up my Bible that lay before me, and ſwore that he would do no Man harm, and what he did was for the good of the Voyage, and for nothing elſe, and that all the reſt ſhould do the like; *Wilſon* alſo did ſwear the ſame.

Green went away, and preſently came *Ivet*, who becauſe he was an ancient Man, I hoped to have found more moderate; but he was worſe than *Green*, and ſwore plainly that he would juſtify this Deed when he ſhould come home. After him came *John Thomas* and *Michael Perce*, Birds of a Feather, of whom I ſhall ſay no more, becauſe they are ſince dead. Laſtly came *Moter* and *Bennet*, of whom I demanded, if they were well adviſed what they had taken in hand: They anſwered, they were, and therefore came to take their Oaths.

Now, becauſe I am much condemned for this Oath, as one that plotted with them, and that by an Oath I ſhould bind them together to perform what they had begun, I thought good to ſet down to the view of all, how well their Deeds agreed with their Oath, which was this, *You ſhall ſwear truth to God, your Prince and Country; you ſhall do nothing but to the Glory of God, and the Good of the Action in hand, and harm to no Man.* This was the Oath without adding or diminiſhing: I expected more of their Companions, but there came no more. It was then dark, and they in a readineſs to put this Deed of Darkneſs in execution. I called to *Green* and *Wilſon*, and prayed them not to go in hand with it in the dark, but to ſtay till Morning: I hoped that every Man would go to his reſt, but wickedneſs ſleeps not; for *Green* kept the Maſter company all Night, and others were as watchful as he. *Green* brought me ſome Bread, which his Cabin-Mate gave him, and I then asked him, whom he would put out with the Maſter; he ſaid, the Carpenter, and *John King*, and the ſick Man. I ſaid, they would not do well to part with the Carpenter, becauſe they knew not what need they might have of him. The reaſon why they had no more regard for the Carpenter, was, becauſe he and *John King* were condemned for wrong done in the Victual; but the chief cauſe was, becauſe the Maſter loved him, and (diſplacing *Robert Billet* when we came from out wintring place) had made him his Mate, at which the Conſpirators did grudge, becauſe he could neither write nor read; and ſaid, that the Maſter and his ignorant Mate would carry the Ship whether the Maſter pleaſed, the Maſter forbidding any Man to keep account or reckoning, and having taken from all Men, whatſoever might ſerve for that purpoſe. At laſt I obtained of *Green* and *Wilſon* that the Carpenter ſhould ſtay in the Ship, by whoſe means I hoped that the Maſter and the poor ſick Man might be taken into the Ship again. This Night *John King* was late up, and they thought he had been with the Maſter, but he was with the Carpenter, who lay on the Poop, and coming down from him, was met by his Cabin-Mate *Robert Billet*, as if it had been by chance, and ſo they went to their Cabin together. It was not long ere it was day, then came *Bennet* the Cook for Water for the Kettle, *King* the Quarter-maſter roſe and went into the Hold to give him ſome, and when he was in, the Hatch was ſhut upon him (but who kept it down I know not) and *Bennet* returned upon the Deck.

In the mean time *Green* and another went to the Carpenter, and held him in talk, till the Maſter came out of his Cabin (which he ſoon did) then *John Thomas* and *Bennet* came before him, while *Wilſon* bound his Arms behind him. He asked them what they meant; they told him he ſhould know when he came into the Shallop. While this was doing, *Ivet* went to *John King* in the Hold, who was provided for him, having gotten a Sword, and had killed him if others had not come to help him. The Maſter called to the Carpenter, and told him that he was bound; but I heard no anſwer he made, *Arnold Ledlo* and *Michael Bute* were all this while railing at *Green* and his Companions, telling him that their Villany would ſhew it ſelf. Then was the Shallop haled up the Ships ſide, and the poor ſick and lame Men were called upon to come out of their Cabins into the Shallop. The Maſter called to me to ſpeak with him at the Hatch way. I came out as well as I could, and on my Knees beſought them for the love of God to remember themſelves, and to do as they would be done unto. They bid me keep my ſelf well, and get me into my Cabin, and would not ſuffer the Maſter to ſpeak with me; but as he went over the ſide, he called to me at the Horn which gave light into my Cabin, and told me that *Ivet* would overthrow us all; Nay, ſaid I, it is that Villain *Henry Green*.

The Carpenter, who was all this while at liberty, asked them if they would be hanged when they came home, and as for himſelf, he ſaid, he would not ſtay in the Ship unleſs they would force him: They bid him go then, for they would not ſtay him. I will (ſaid he) ſo I may have my Cheſt and all that is in it: They ſaid he ſhould, and preſently they put it into the Shallop. Then he came down to me to take his leave of me; I urged him to ſtay, which if he did, he might ſo work that all ſhould be well. He ſaid, he believed they would be glad to take them in again (being perſwaded by the Maſter that there was not one in all the Ship that could tell how to carry her home) but if we muſt part, ſaid he, (which we will not willingly do, for we will follow the Ship) he prayed me, if we came to the Capes before them, that I would leave ſome token that we had been there, near to the place where the Fowls breed, and he would do the like for us; and ſo with tears we parted. Now were the ſick Men driven out of their Cabins into the Shallop; but *John Thomas* having a kindneſs for *Francis Clements*, and *Bennet* for the Cooper, ſome high words paſſed between them and *Green*, who ſaid they ſhould go, and the other ſwore they ſhould not go, but ſuch as were in the Shallop ſhould return. When *Green* heard that, he was compelled to give place, and to put out *Arnold Ledlo* and *Michael Bute*, which with much ado was done.

Now were all the poor Men in the Shallop, whoſe name were, *Henry Hudſon*, *John Hudſon*, *Arnold Ledlo*, *Sidrach Faner*, *Philip Staff*, Carpenter, *Thomas Wydewſe*, *Adam Moor*, *Henry King*, *Michael Bute*. The Carpenter got of them a Peece, and Powder, and Shot, ſome Pikes, an Iron Pot, with ſome Meal and other things. They then ſtood out of the Ice, the Shallop being faſt to the Stern of the Ship, and as ſoon as they were out, they cut her Headfaſt from the Stern, and out with their Top-ſails, and ſtood towards the Sea in a clear Sea: Then taking in their Top-ſails, they righted their Helm, and lay under their Fore-ſail till they had ranſacked and ſerched all places in the Ship. In the Hold they found one of the Veſſels of Meal whole, and the other half ſpent, for we had but two; we found alſo two Firkins of Butter, 27 pieces of Pork, and half a Buſhel of Peaſe; in the Maſters Cabin we found 200 Bisket Cakes, a Peck of Meal, and about the quantity of a But of Beer. Now the Shallop was come in ſight again, whereupon they let fall the Main-ſail, and out with their Top-ſails, as if they had fled from an Enemy.

Then I prayed them yet to remember themſelves; but *William Wilſon* (more than the reſt) would hear of no ſuch matter. Coming nigh the Eaſt Shoar, they caſt about and ſtood to the Weſt, and anchoring near an Iſland, ſet the Boat and Net aſhoar, to ſee if they could have a draught, but could not for Rocks and great Stones. Here they gathered good ſtore of that Weed which we called *Cockle-graſs* in our wintring place, and we lay there that Night and beſt part of next day, in all which time we ſaw not the Shallop, nor ever ſaw her after. *Henry Green* came to me and ſaid, that it was the Companies Will, that I ſhould come up into the Maſter's

Cabin, and take charge of it. I told him it was more fit for *Robere Ivet*; he ſaid, he ſhould not come into it, nor meddle with the Maſter's Card or Journals: So I went up, and *Green* gave me the Key of the Maſter's Cheſt, ſaying, that he had laid the Maſter's beſt things together, which he would uſe himſelf when time ſhould ſerve; the Bread was alſo delivered to me by tale.

The Wind ſerving we ſtood to the North-eaſt, and this was *Robert Billets* courſe, contrary to *Ivet*, who would have gone to the North-weſt. We had a ſtout Gale of Wind in the Night, and ſtood afore it till we met with Ice, into which we ran till we could get no further: It lay ſo thick a head of us, and the Wind brought it after us aſtern, that we could not ſtir backward nor forward, but lay embayed 14 days in worſe Ice than we had hitherto met with; for tho' we had been where there was greater ſtore, yet it was not ſo broad upon the Water as this, ſome pieces of it being half a Mile or a Mile in compaſs. We had a deep Sea, and a Tide of Flood and Ebb, which ſet N. W. and S. E. At laſt, being clear of it, we continued our courſe in ſight of the Eaſtern ſhoar, till we raiſed four Iſlands which lay North and South, where anchoring between the two Northermoſt, we ſent our Boat aſhoar to ſee if they could find any thing, but there was nothing to be had but *Cocle-graſs*, whereof they brought ſtore aboard. Before we came to this place, I could well perceive that I was kept in the Ship againſt *Henry Green*'s mind, becauſe I favoured their Proceedings no better. He then began very ſubtilly to perſwade me to take upon me to ſearch for thoſe things which himſelf had ſtolen, and accuſed me of a matter no leſs than Treaſon amongſt us, that I had deceived the Company of 30 Cakes of Bread. They had now many Devices in their Heads, and began to talk among themſelves that *England* was no ſafe place for them, and *Green* ſwore that the Ship ſhould keep the Sea, and not put into any place, till he had his Majeſties Hand and Seal to ſhew for his ſafety; for *Henry Green* was now their Captain, and ſo called of them.

From theſe Iſlands we ſtood N. E. and raiſed thoſe Iſlands, which Mr. *Hudſon* called *Rummies* Iſlands, between which and the ſhallow Ground to the Eaſt of them, he went down into the firſt great Bay. We kept the Eaſtern Shore in ſight, and coming thwart of the low Land, ran on a Rock ~~that~~ lay under water, and ſtruck but once, otherwiſe we had been made Inhabitants of that place. We continued our courſe, and raiſed land a head of us, which ſtretched out to the North; whereupon they ſaid, that *Billet* by his Northerly Courſe, had left the Capes to the South, and that it were beſt to ſeek down to the S. in time, for relief, before all was gone, for we had but ſmall ſtore left; but *Billet* would follow the Land to the North, ſaying, that he hoped in God to find ſomewhat to relieve us that way as ſoon as to the South. We ſtood to the Eaſt, leaving the main Land to the North, and anchored in a narrow Gut between two Iſlands. The Boat went aſhoar, but found nothing but *Cockle-graſs*, which was a great relief to us, for without it, we ſhould hardly have got to the Capes for want of Victuals.

The next day we weighed and doubled the Point of the North Land, which is high Land, and ſo continues to the Capes, lying North and South 25 or 30 Leagues. We ſtood to the North to find ſtore of thoſe Fowls that breed in the Capes: We raiſed the Capes with joy, but bearing in for them between the rocky Iſlands, we ran on a Rock that lay under water, and there ſtuck faſt eight or nine Hours. It was ebbing Water when we came on, calm and fair weather, and the Flood ſet us afloat: The Ebb came from the Eaſt and the Flood from the Weſt: we ſtood nearer to the Eaſtern Shore, and there anchored.

July.

The next day, being the 27th of *July*, the Boat went to fetch ſome Fowl; they had a great way to row, and ſo could not reach to the place where the Fowl bred, but found ſtore of Gulls on the Rocks and Clifts, whereof they killed about 30, and towards Night returned. They had now brought our Ship nearer to the Streights Mouth, and there anchored upon a Shelf of Ground in 18 or 20 Fathom Water, and when they had weighed anchor again, and ſtood nearer to the place where the Fowl bred, they could not find it again, nor no place like it; but were fain to turn to and fro in the Mouth of the Streight in danger of Rocks, becauſe they could not find Ground to let fall an Anchor in, the Water was ſo deep.

The 28th the Boat went to *Digge*'s Cape for Fowl, and made directly for that place where the Fowl bred; and being near, ſaw ſeven Boats come about the Eaſtern Point towards them. When the Savages ſaw our Boat, they cloſed together, and drew their leſſer Boats into the bigger, then rowed towards our Boat, and made ſigns to the Weſt; our Men in the mean time made ready for all Aſſays. The Savages came to them, and by ſigns they grew familiar one with another, ſo as our Men took one of theirs into our Boat, and they took one of ours into their Boat. Then they carried our Man to a Cove where their Tents ſtood, toward the Weſt of the place where the Fowl bred. Our Boat went to the place where the Fowl bred, and our Men were deſirous to know how the Savages killed theirs: One of them ſhewed the manner how, which was thus; They take a long Pole with a Snare at the end, and putting it about the Necks of the Fowls, pluck them down. Our Men ſhewed the Savage the uſe of our Pieces, which at one ſhot would kill ſeven or eight. Our Boat's-Crew went to their Cove for our Man and to deliver theirs; when they came the Savages made great joy, with dancing, leaping, and ſtroaking their Breaſts; they offered divers things to our Men, who took only ſome Morſes Teeth in exchange for a Knife and two Glaſs Buttons; and having received our Man, they came aboard, much rejoicing at this chance, as if they had met with the moſt ſimple and kind People in the World.

The next day being the 29th of *July*, they weighed anchor, and ſtood as near to the place where the Fowl bred as they could, and becauſe I was lame, I was to go in the Boat, to carry ſuch things as I had in the great Cabin, under my care, of every thing ſomewhat; and ſo with more haſt than good ſpeed (and not without ſwearing) away we went, *Henry Green*, *William Wilſon*, *John Thomas*, *Michael Perſe*, *Andrew Moter*, and my ſelf. When we came near the Shoar, the People were on the Hills, dancing and leaping; we came to the Cove, where they had drawn up their Boats, and brought our Boat to the ſide of the Cove, cloſe to the Rocks. Aſhoar they went, leaving me in the Boat, which they faſtned to a great Stone on the Shoar. The People came, and every one had ſomewhat in his Hand to barter; but *Green* ſwore they ſhould have nothing till he had Veniſon, for ſo they by ſigns had promiſed him. As ſoon as our Men were landed, the Savages made ſigns to their Dogs, (whereof there were many like Mungrels, but as big as Hounds) and pointed to their Mountain and to the Sun, clapping their Hands, *Green*, *Thomas*, and *Wilſon* ſtood hard by the Boat's Head, *Perſe* and *Moter* were got upon the Rocks, gathering Sorrel; not one of them had any Weapon about him, not ſo much as a Stick, ſave *Henry Green* only, who had a piece of a Pike in his Hand; nor ſaw I any thing the Savages had wherewithal to hurt us. *Green* and *Wilſon* had Looking-Glaſſes, Jews-Trumps, and Bells, which they were ſhewing to the People, and while the Savages were ſtanding round about them, one of them came into the Boat's Head to me to ſhew me a Bottle: I made ſigns to him to get him aſhoar, but he made as tho' he had not underſtood me, whereupon I ſtood up and pointed him aſhoar; in the mean time another ſtole behind me to the Stern of the Boat, and as ſoon as I ſaw him aſhoar that was in the Head of the Boat, I ſate down again, when ſuddenly I ſaw the Leg and Foot of a Man by me, and caſting up my Head, ſaw a Savage with his Knife in his Hand, who ſtruck at my Breaſt over my Head; I caſting up my Right-arm to ſave my Breaſt, he wounded my Arm, and ſtruck me into the Body under my right Pap; he made a ſecond blow, which I met with my Left-hand, and then he wounded me in the Right-thigh, and had like to cut off the little Finger of my Left-hand; I got hold of the String of the Knife, and had wound it about my Left-hand, and he ſtriving with both his Hands to make an end of what he had begun, I found him but weak in the gripe (God enabling me) and getting hold of the Sleeve of his Left-arm, bore him from me; his left-ſide then lay bare to me, which when I ſaw, I held the String of the Knife faſt in my Left-hand, and having my Right-hand at liberty, I ſought for ſomewhat to ſtrike him (not remembring my Dagger at my ſide) but looking down I ſaw it, and therewith ſtruck him into the Body and the Throat.

Savages Treachery.

While I was thus aſſaulted in the Boat, our Men were ſet upon on the Shoar, *John Thomas* and *William Wilſon* had their Bowels cut, and *Michael Perſe* and *Henry Green* being mortally wounded, came tumbling into the Boat together; *Andrew Moter* ſeeing what had happened, came running down the Rocks, and leaping into the Sea, ſwam to the Boat, hanging on the Stern thereof till *Michael Perſe* took him in, who manfully defended the Head of the Boat againſt the Savages that preſſed ſore upon us: I ſaw him ſtrike one of them with a Hatchet, that he lay ſprawling in the Sea; *Green* cried *Coragio*, and laid about him with his Truncheon; I called to them to clear the Boat, and *Andrew Moter* called to be taken in. The Savages then betook them to their Bows and Arrows, which they ſent among us, and ſlew *Henry Green* outright.

right; *Michael Perſe*, who had received many wounds, cleared the Boat, and put it from the Shoar, and helped *Andrew Moter* in. In turning of the Boat, I received a cruel wound in my Back with an Arrow. *Perſe* and *Moter* rowed the Boat away, which when the Savages ſaw, they ran to their Boats, and I feared they would have launched them to follow us, but they did not. Our Ship was all this while in the middle of the Chanel, and could not ſee us.

When they had rowed a good way from the Shoar, *Michael Perſe* fainted, and could row no more; then was *Andrew Moter* forced to ſtand in the Boat-head, and waft to the Ship, which at firſt ſaw us not, and when they did, they could not tell what to make of us; but in the end they ſtood for us, and ſo took us up. *Henry Green* was thrown out of the Boat into the Sea, and the reſt were put aboard, the Savage being yet alive, yet without ſenſe; but they died all there that day, *William Wilſon* ſwearing and curſing in a moſt fearful manner; *Michael Perſe* only lived two days after, and then died. Thus you have heard the tragical end of *Henry Green* and his Mates, whom they called Captain, theſe four being the only luſty Men in all the Ship.

The poor number that were left, were to ply our Ship to and fro in the Mouth of the Streight, there being no place to anchor in near hand; beſides, they were to go in the Boat to kill Fowl to bring us home, which they did, altho' with great danger to us all; for if the Wind blew, there was an high Sea, and the Eddies of the Tides would carry the Ship ſo near the Rocks, as it frightned our Maſter *Robert Billet*, for ſo I will now call him. After they had with great labour killed about 200 Fowls on the South Cape, we ſtood to the Eaſt, but when we were ſix or ſeven Leagues from the Capes, the Wind came up at Eaſt, whereupon we ſtood back to the Capes again, and killed 100 Fowls more: Then the Wind coming at Weſt, we ſtood along the North Shoar, till we fell into broken ground about the *Queen's Foreland*, and there anchored.

Thence we went to the Iſland of *God's Mercies*, and ſo to the Iſlands in the Mouth of the Streight, not ſeeing the Land till we were ready to run our Boats-ſpit againſt the Rocks in a Fog. As ſoon as it cleared a little, we ſaw our ſelves incloſed with rocky Iſlands, and could find no ground to anchor in. We ſtood to the Eaſt, and put our ſelves to hard allowance of half a Fowl a day, with the Pottage, having nothing now left of our old ſtores, but ſome Meal; we made trial of every thing that was eatable; we flaid our Fowls, for we could not pull them, and burning the Feathers, eat the Skins, nor was the Garbidge thrown away.

We continued our Courſe E. S. E. to raiſe the *Deſolations*, and thence to ſhape our Courſe for *Ireland*; but the Wind coming againſt us, we altered our Courſe, by the perſwaſion of *Robert Ivet*, who told us that we ſhould find great relief in *Newfound-land*, if our Country-men were there; and if they were gone before we came, we ſhould find great ſtore of Bread and Fiſh left aſhoar by them; ſo we ſtood to the S. W. to 57 Deg. when by the will of God the Wind came up at S. W. Then the Maſter asked me if he ſhould take the benefit of this Wind, and ſhape his Courſe for *Ireland*. I told him I thought it beſt to go where we knew Corn grew, and not to ſeek it where it was caſt away, and not to be found. So we ſtood towards *Ireland*, with proſperous Winds for many days together. Now was all our Meal ſpent and our Fowl ruſty and dry; but, there being no remedy, we were content with the ſalt Broth for Dinner, and a half Fowl for Supper. Next went our Candles to wrack, and *Bennet* our Cook made a Meſs of Meat of the Bones of our Fowl, frying them with Candle-greaſe till they were criſp, and with Vinegar put to them, made a good Diſh of Meat. Our Vinegar was ſhared, and to every Man a Pound of Candles for a Week, as a great Dainty. *Robert Ivet* reckoned us to be within 60 or 70 Leagues of *Ireland*, when we had 200 thither. 'Tis probable our Courſe was ſomewhat the longer, by reaſon of our bad ſteerage, for our Men were ſo weak that they could not ſtand at the Helm, but were fain to ſit.

Then *Robert Ivet* died for meer want, and all our Men were in diſpair, ſaying, we were paſt *Ireland*, and our laſt Fowl were now in the Steep-tub. The Maſter was much grieved to ſee his Men in this condition, for ſome of them would ſit and ſee the Fore-ſail or Main-ſail fly up to the Tops, the Sheets being broken, and would neither help it themſelves, nor call to others for help. Now in this extremity it pleaſed God to give us ſight of Land, not far from the place our Maſter ſaid he would fall withal, which was the Bay of *Galloway*, whereas we fell to the Weſt of the *Derſes*, and ſo ſtood along by the Coaſt to the S. W. In the end there was a joyful cry, *A Sail a Sail*, towards which we ſtood, and called to him; his Bark was of *Fowy*, and was at anchor a fiſhing. This Man carried us into *Bere* Haven, where we ſtaied a few days, and dealt with the *Iriſh* to ſupply our Wants, but found no relief; for in this place there was neither Bread, Drink, nor Money; wherefore they adviſed us to deal with our Country-men, who were there a fiſhing, which we did, but found them ſo cold in kindneſs, that they would do nothing without preſent Money, whereof we had none in the Ship. At laſt one *John Weymouth*, Maſter of the Bark that brought us into this Harbour, furniſhed us with Money, and received our beſt Cable and Anchor in pawn for the ſame. With this Money our Maſter bought Bread, Beer, and Beef, of the Maſters of ſome Veſſels that were there fiſhing.

We agreed with ſome of our Country-men to give them 3 *l.* 10 *s.* a Man to bring our Ship to *Plimouth* or *Dartmouth*, and to give the Pilot 5 *l.* The Men would not go with us, unleſs *Weymouth* would paſs his Word for their Wages, which by the perſwaſion of one Captain *Taylor* (who was much our Friend) he did, and accepted of a Bill for our Cable and Anchor; and ſo from *Bere* Haven we came to *Plimouth*.

CHAP. XXII.

Foraſmuch as this Narrative of Pricket, *who returned with that Company which had ſo cruelly expoſed* Hudſon, *may be ſuſpected by ſome as not friendly to* Hudſon, *I have therefore added the Report of* Thomas Wydowſe, *one of the expoſed Company, who aſcribes the Occaſions of thoſe unhappy Diſcords to* Robert Ivet.

A Note found in the Desk of *Thomas Wydowſe*, Student in the Mathematicks, being one of thoſe who was put into the Shallop.

THE 10th of *September*, 1610, after Dinner, Mr. *Hudſon*, our Maſter, called all the Company together, at the requeſt of *Robert Ivet*, that the Maſter might redreſs ſome Abuſes and Slanders (as he called them) raiſed againſt him, the ſaid *Ivet*, by ſome of the Company; and after a full hearing ſo many and great Abuſes, and mutinous Matters againſt the Maſter and the Action, were proved againſt *Ivet*, that there was danger to have ſuffered them longer, and it was fit time to puniſh and cut off further Occaſions of the like Mutinies.

I. It was proved to his Face by *Bennet Mathew* our Trumpeter, that upon our firſt ſight of *Iſland*, he told the ſaid *Bennet*, he believed that in the Voyage there would be Manſlaughter, and that it would prove bloody to ſome.

II. At our coming from *Iſland*, in hearing of the Company, he did threaten to turn the Head of the Ship home from the Action; which Words were at that time by our Maſter wiſely paſt by, in hopes of amendment.

III. It was depoſed by *Philip Staff* our Carpenter, and *Arnold Lodlo*, to his Face upon the Holy Bible, that he adviſed them to keep Swords in their Cabins, and Muſkets ready, for they ſhould be charged with Shot ere the Voyage were over.

IV. We being peſter'd in the Ice, he had uſed mutinous Words, tending to the diſcouragement and ſlander of the Action, which eaſily took effect in thoſe that were timerous; and had not the Maſter in time prevented it, might eaſily have overthrown the Voyage; and now lately being embayed in a deep Bay, which the Maſter had a deſire to ſee, for Reaſons beſt known to himſelf, his Words tended altogether to put the Company into a mutiny, by telling them of wintring in cold, and jeſting at our Maſter's hope of ſeeing *Bantam* by *Candlemas.*

For theſe and divers other baſe Slanders againſt the Maſter, he was depoſed, and *Robert Billet*, who had behaved himſelf honeſtly, reſpecting the good of the Action, was made Maſter's Mate in his ſtead.

Alſo *Francis Clement* the Boatſwain, was at this time put from his office, and *William Wilſon*, a Man thought more fit, preferred to his place: This Man had baſely carried himſelf to our Maſter and to the Action.

Andrew Moter was appointed Boatſwain's Mate, and a Promiſe from the Maſter, that from this day *Ivet*'s Wages ſhould remain to *Billet*, and the Boatſwain's overplus of Wages ſhould be equally divided between *Wilſon* and *John King*, one of the Quarter-maſters, as the Owners ſhould think fit.

The Maſter promiſed, that if the Offenders ſhould behave themſelves henceforth honeſtly, he would endeavour their Good, and forget Injuries.

Chap. XXIII.

The Ten ſeveral Voyages of Captain Thomas Edge *and others to* Greenland *(called by the* Dutch Spitsbergen*) at the Charge of the worſhipful* Muſcovia *Company.*

1610. IN the Year 1610, the Company ſet out two Ships, *viz*, the *Lioneſs*, *Thomas Edge* Maſter, for *Cherie*-Iſland, called by the *Dutch Bear*-Iſland, in Latitude of 74 Degrees; and the *Amity* for a Northern diſcovery, whereof *Jonas Pool* was Maſter, who in the Month of *May* fell with a Land, and called it *Greenland*, which Land was diſcovered by Sir *Hugh Willoughby*, in the Year 1553. This Ship continued on the Coaſt, diſcovering the Harbours and killing of Morſes, until the Month of *Auguſt*, and then returned for *England*, having gotten 12 Tuns of Goods and an Unicorn's Horn.

1611. In the Year 1611, the Company ſet forth two Ships for *Greenland*, the *Mary Margaret* 160 Tuns, *Thomas Edge* Maſter, and the *Elizabeth*, 60 Tuns, *Jonas Pool* Maſter. They departed from *Blackwal* the 20th of *April*, and arrived at the *Foreland* in *Greenland*, in Latitude of 79 Degrees, the 20th of *May* following. This being the firſt Year the Company ſet out for the killing of Whales in *Greenland*, they ſent aboard the Admiral ſix *Biſcainers*, expert in killing Whales, who on the 12th of *June* killed a ſmall Whale, yielding 12 Tuns of Oil, being the firſt Oil that ever was made in *Greenland*.

Two Shallops which they had ſet up, went to ſearch the Harbours for Whales, and the 25th of *June*, rowing into Sir *Thomas Smith*'s Bay, ſaw great ſtore of *Sea-horſes* or *Morſes*, and preſently rowing to the Ship, which was ſeven Leagues off, acquainted Captain *Edge* what they had found, who ordered the Maſter to take 50 Tuns of empty Casks into the Ship, and ſail into *Foul Sound*, the Captain in the mean time taking with him ſix Men, with Launces, went away in one of the Shallops, and coming to the Morſes, ſet on them, and killed 500, and left about 1000 alive.

The next day, the Ship being well mored at the place where the Morſes were killed, moſt of the Men belonging to the Ship went aſhoar to work and make Oil of the Morſes, and when they had wrought two or three days, a ſmall quantity of Ice came out of *Foul Sound*, and put the Ship from her Moring. The Maſter and ten Men being then aboard the Ship, let go the Sheet Anchor, which brought the Ship up to ride; but the Ice coming upon her again, brought her Anchor home, and run the Ship aſhoar, where by the Maſters weak judgment, ſhe was caſt away.

The *Mary Margaret* caſt away in *Greenland*.

The Ship thus loſt, without hope of recovery, the Commander *Thomas Edge* gave order, that all the Morſes that were alive aſhoar, ſhould be let go into the Sea, and ſo gave over making of Oil, and preſently haled aſhoar, his two Shallops, and three Boats, ſetting the Carpenters to trim them, and the Sailors to make Sails fit to ſerve them at Sea. Then dividing his Men into them equally, with as much Victuals as they could well carry, after Prayers ſaid altogether on the Land, they departed from the place where they loſt their Ship the 15 of *July*, with a Southerly Wind, being 50 Perſons, and after rowing 40 or 50 Leagues to the Southward, they loſt company of two of their Boats, which meeting with a *Hull* Ship, acquainted him with the loſs of the *London* Ship, and that ſhe had left on land, Goods worth 1500 *l.* ſo thoſe Men conducted the *Hull* Ship to *Foul Sound*, to take in the Companies Goods, and to kill *Morſes* for themſelves. The other three put from the Coaſt of *Greenland*, and ſet their Courſe for *Cherie*-Iſland, ſometimes ſailing, and ſometimes rowing, where arriving the 29th of *July*, in a great ſtorm at N. W. having been 14 days at Sea, with much difficulty they landed on the South ſide of the Iſland.

Being on Shoar, Captain *Edge* ſent three of his Sailors over land unto the North Road, three Miles diſtant, to ſee if the *Elizabeth* was there; they ſaw a Ship riding in the North Road, and being overjoyed, returned to the Captain to acquaint him with it, without ſtaying to ſpeak with any of the *Elizabeth*'s Company; but by good hap, the Maſter of the *Elizabeth*, who was then weighing Anchor to ſet ſail for *England*, eſpied Men on the Shoar, upon which he ſtaied, and ſent the Boat aſhoar to ſee what Men they were; and the *Elizabeth*'s Men coming aſhoar, and finding them to be the Men of the *Mary Margaret*, haſtened back to acquaint the Maſter, who immediately weighed anchor, and came to the South of the Iſland, and took in Captain *Edge* with his Company, who underſtanding what a poor Voyage the *Elizabeth* had made, gave order to the Maſter to ſail for *Greenland*, there to take in ſuch Goods as the ſaid Captain had left in *Foul Sound*. They departed from *Cherie*-Iſland the firſt of *Auguſt*, and arrived at *Foul Sound* the 14th, where they found the Crew of the two Boats which had been ſeparated from them at Sea, and were all ſafe aboard the *Hull* Ship. The *Cargo* which the *Elizabeth* had brought from *Cherie*-Iſland, conſiſting of Sea-horſe-hides and Blubber, being little worth, Captain *Edge* ordered the Maſter to clear his Ship of it, and to take in the Oil and Whale-fins left aſhoar by the *Mary Margaret*'s Company, and the Maſter in unlading his Ship, brought her ſo light, that he overſet her. Both the *London* Ships thus loſt, Captain *Edge* agreed with the Maſter of the *Hull* Ship, to take in the Goods that were ſaved, and departing from *Greenland* the 21ſt of *Auguſt*, being 90 Men, arrived at *Hull* the ſixth of *September*, 1611.

The *Eliz* beth loſt i *Green*

The

1612. The Company ſet forth two Ships the next Year, the *Whale* 160 Tuns, aud the *Sea-horſe* 180 Tuns, under the command of *John Ruſſel* and *Thomas Edge*, in which Voyage they killed 17 Whales and ſome Sea-horſes, whereof they made 180 Tuns of Oil. This year a Ship of *Holland* was conducted to *Greenland* by one *Sallowes* an *Engliſh*-man, who had been for many Years employed by the *Muſcovian* Company in the Northern Seas, and leaving his Country for debt, was entertained by the *Hollanders* as Pilot to *Greenland*; but the Companies two Ships meeting with the *Dutch* Ship, commanded them to depart, and to frequent thoſe Parts no more. There was alſo a *Spaniſh* Ship arrived there, whereof one *Woodcock* was Pilot, who had formerly been employed by the Company, upon whoſe complaint he was impriſoned 16 Months at his return to *England*, for conducting the *Spaniſh* Ship thither: This Ship got her full lading in *Greenharbour*.

1613. The next year the Company ſet out ſeven Ships, under command of ***Benjamin Joſeph*** and T*homas Edge*, who departed from *Graveſend* the 26th of *April*, and arrived in *Greenland* the 14th of *May*. The Company had now obtained the King's Patent under the Broad Seal of *England*, forbidding all Strangers and others, except ſuch as were of the Company, to uſe the Coaſt of *Greenland*. The *Engliſh* met with 15 Sail of great Ships, two whereof were *Dutch*, the reſt were *French*, *Spaniſh*, and four *Engliſh* Interlopers. The Companies Ships forced them all from the Coaſt, not ſuffering any of them to make a Voyage, and took ſome Goods from the two *Dutch* Ships, whereby they loſt their own time of fiiſhing, and returned home with two or three hundred Tuns dead Fraight. This Year was *Hope*-Iſland, and other Iſlands to the Eaſtward, diſcovered by the Company.

1614. In the Year following, the Company ſet out 13 great Ships and two Pinnaces, under command of *Benjamin Joſeph* and *Thomas Edge*, well appointed with all manner of Artillery. The *Hollanders* alſo ſet out 18 great Ships, whereof four were of the States Men of War, and being much ſtronger than the *Engliſh*, they ſtaied and fiſhed for the Whale by force, whereby the *Engliſh* returned half laden, and the *Dutch* made but a poor Voyage. This Year *Thomas Sherwin* and *William Baffin*, employed by the Company, in the Ship *Thomazen*, diſcovered to the Northwards, as far as 80 Deg. odd Min.

1615. The next Year the Company ſet out two Ships and two Pinnaces, under the Command of *Benjamin Joſeph* and *Thomas Edge*, who arriving on the Coaſt of *Greenland* the ſixth of *June*, found it much peſter'd with Ice, and being foggy weather, ran into it ſo far, that they were faſt in it 14 days before they could clear themſelves of it. The *Hollanders* alſo ſet out 14 Sail, whereof three were States Men of War, of great force: They killed Whales in *Horn Sound*, *Bell Sound*, and *Fair Haven*, whereby the *Engliſh* returned half laden. This Year alſo the King of *Denmark* ſent three of his Men of War to *Greenland* (whereof one *Vaden* an *Engliſh*-man was Pilot) to demand Toll of the *Engliſh*, who meeting with Captain *Edge* at a Fore-land in 79 Deg. he refuſed to pay them any Toll, alledging that *Greenland* belonged to the King of *England*: Theſe were the firſt *Daniſh* Ships that ever came to *Greenland*.

1616. The Company now ſet out eight great Ships, and two Pinnaces, under the Command of *Thomas Edge*, who arrived in *Greenland* the fourth of *June*, and laded all their Ships with Oil, and what their Ships could not take in, they left behind them in the Country. One of the Pinnaces of 20 Tuns and 22 Men, diſcovered the Eaſt part of *Greenland*, as far as 78 Degrees, and killed a thouſand Sea-horſes on *Edge*'s Iſland, and brought their Teeth to *London*. This Year the Company had made 12 or 1300 Tuns of Oyl in *Greenland* by the 14th day of *Auguſt*, and was the firſt Year wherein all their Ships returned with full lading: They all arrived in the *Thames* in *September*. The *Hollanders* had this Year but four Ships in *Greenland*, and made but a poor Voyage.

1617. The Company ſet out 14 Ships well manned, under the Command of Captain *Edge*, who departed from *Graveſend* the 24th of *April*, and arrived in *Greenland* the 28th of *May*, where meeting a *Dutch* Ship of 200 Tuns, he commanded the Maſter aboard, who told him there were ten ſail of *Dutch* upon the Coaſt, and two Men of War. Captain *Edge* ſhewed him the King's Commiſſion, and commanded him by virtue thereof to depart the Coaſt, willing him to acquaint the reſt of his Countrymen with it; and further told him, that if he met with him, or other *Dutch* Ships hereafter, he would take from them what they had gotten; and having entertained him courteouſly, diſmiſſed him without taking any thing from him. The *Dutch*-man promiſed to ſtay no longer than to meet with two of his Conſorts, which he had loſt the day before, and would then go directly for *Fluſhing*, and acquaint his Merchants that the *Engliſh* would not ſuffer him to ſtay upon the Coaſt of *Greenland*; but meeting with his Conſorts, they agreed to go all together into *Horn Sound*, where they killed a few Whales, which they ſaved in Blubber. Captain *Edge* hearing of it, ordered his Vice-admiral to ſail to *Horn Sound*, and put the Flemings from thence, and take what they had gotten, which he did accordingly; but the Goods he took from them being nothing but Blubber and Fins, were not worth 20 *l.* to the *Engliſh*, who had already killed as many Whales as would lade all their Ships. The *Engliſh* made this Year 1900 Tuns of Oyl, and all their Ships arrived ſafely in *Auguſt* and *September*. This Year the *Hull* Men (who always followed the Steps of the *Londoners*) ſet out a ſmall Ship or two to the Eaſtward of *Greenland*, where the Company had diſcovered *Witches* Iſland, and many other Iſlands as far to the Northwards as 79 Degrees, and after a Year or two, the *Hull* Men gave out that they were the firſt Diſcoverers, which is falſe and untrue, as by Oath in the Admiralty doth appear: The *Dutch* likewiſe practice the ſame Courſe.

1618. The *Zealanders* ſending over to *England* for reſtitution of the Goods taken from them by the *Engliſh* the laſt Year, a Grant for a new Company, conſiſting of *Engliſh*, *Scots*, and *Zelanders*, was procured by Sir *John Cunningham*, and many of the Old Companies Servants were hired by the New, and much Shipping and Proviſions agreed for; which Project, if it had taken effect, might have utterly ruined the Trade of the firſt Diſcoverers. To avoid this Inconvenience, it was agreed that the *Scot*'s Patent ſhould be diſſolved, and that the *Eaſt-India* Adventurers ſhould join ſtock with the *Muſcovian*, and become one joint Company for the Trade of *Greenland*. They ſet forth 13 Ships and two Pinnaces, under the command of the aforeſaid Captain *Edge*, who arriving on the Coaſt the beginning of *June*, ſeparated themſelves to ſeveral Harbours, the moſt part being Ships of no force. Soon after, divers Ships of *Zealand* of great force, arrived in all the Harbours where the *Engliſh* were, with full purpoſe to drive them thence, and to revenge the Injury (as they termed it) done to them the laſt Year, by taking Goods out of the *Zealand* Ship, as alſo by diſſolving the Scottiſh Patent, wherein many *Flemings* were intereſſed. And accordingly ten ſail of *Zelanders* did ſet upon ***William Heley***, Vice-admiral of the *Engliſh*, uttering many uncivil Speeches againſt his Majeſty, and deſpiſing his Commiſſion; alledging, that there was good Law in *Flanders* for what they did. The *Engliſh* defended themſelves till moſt of their Men were killed or wounded; and being at laſt forced to ſubmit, the *Zealanders* rifled their Ship, taking from them all their Goods and Artillery, and burning ſuch Goods as were on the Shoar. The reſt of the *Engliſh* Ships being far diſperſed, could not join together, and were in all places overpowered by the *Flemings*, to the great loſs and charge of the Company, moſt of their Ships returning home without any Goods.

1619. This Year the *Muſcovia* and *Eaſt-India* Companies ſet out nine Ships and two Pinnaces, under the command of Captain *Edge*, five of which went to the two Northermoſt Harbours, but were diſappointed in their Expectation, by reaſon of divers *Holland* Ships, which were arrived there before them. Whereupon the Shallop with ten Men was ſent from Captain *Heley* to acquaint Captain *Edge* with their ill ſucceſs; which Shallop was caſt away, and all the Men loſt, to the great hindrance of the Voyage. The *Hollanders* this Year brought over great quantity of Whale Oil, and ſold it at under rates, ſo that the Company were forced to keep theirs on their Hands twelve Months, and ſell it afterwards at a very ſmall price, and loſt one Ship homeward bound near *Yarmouth*, all which did ſo much diſhearten them, that they thought verily to adventure no more thither, their ſucceſs the two years paſt, in which the *Eaſt-India* Company joined with them was ſo bad, that any that would buy their Proviſion, might enjoy the benefit of the Trade there. At which time the worthy and famous Merchant Adventurers, *Ralph Freeman*, *Benjamin Deicrow*, *George Stroud*, and Captain *Edge*, all Brethren of the *Muſcovia* Company, pitying the downfall of ſo worthy a traffick, wherein ſo many poor Land-men yearly received great comfort, and many Mariners were bred, at their own charge compounded with the ſaid Company, and took that Trade into their own Hands; and in the Year 1620 ſet out ſeven Ships under command of *William Goodlad* and *William Heley*, but by reaſon of *Flemings* and *Danes* in the Northermoſt Harbours, they returned half laden, with 700 Tuns of Oyl. 1620.

1621. The next Year, 1621, the Adventurers aforeſaid hired and ſet forth ſeven Ships for the Whale Voyage, and one for diſcovery towards the South-eaſt of *Greenland*, in which Voyage the *Flemings* and *Danes* being to the Northwards, had put the Whale by her Courſe, whereby they were out of hope of earning their Bread; yet it pleaſed God, that afterwards meeting with Whales in ſome Harbours, they brought home 1100 Tuns of Oil, to the great encouragement of the Adventurers, otherwiſe the Trade had been utterly overthrown.

1622. The Year following, 1622, the ſaid Adventurers ſet out nine Ships, one of the biggeſt of which, having in her 200 Tuns of Casks, Coppers, and divers Proviſions, was unfortunately caſt away againſt a piece of Ice, four Leagues from the Shoar, wherein 29 Men periſhed, and 23 remaining, were by the Providence of God, miraculouſly ſaved in a Shallop, after they had coaſted 30 Leagues to meet with ſome other Ships, and were three days in the Shallop, without Bread, Drink, or any manner of Suſtenance: Some of their Hands and Feet rotted off, and many died when they came aſhoar. The reſt of the Ships could not get their full lading, by reaſon of the *Flemings* and *Danes* being to the Northward; however, they met with ſome Whales, and returned home with 1300 Tuns of Oyl.

A Deſcription of Greenland.

The Nature of it is nothing like the Name, there being no place in the World, yet diſcovered, that is leſs green than it: Both the lower Lands and Mountains are covered with Snow till about the beginning of *June*. The Land is very Mountainous, bearing neither Tree nor Graſs, except ſuch as grows in the North of *England*, called *Heath* or *Ling*. This grows when the Snow melts, and the Ground begins to be uncovered, and the Deer feed on it in the Summer, and become very fat in a Month, but how they live in Winter, is not eaſy to be imagined; for the Ground being covered with Snow at the end of *May*, it is probable that there is no part bare in Winter, eſpecially while the Sun is totally depreſſed under the Horizon, *viz*. from the 18th of *October* to the 4th of *February*.

It is not inhabited, yet poſſibly Men might live there, carrying ſtore of Victuals, and all things neceſſary againſt the Cold, which muſt be vehement in Winter by reaſon of the Sun's continuing under the Horizon.

The Southermoſt part is in 76 Deg. 30 Min. called by the *Engliſh*, *Point look out*, who have diſcovered all the Weſt ſide as far as 80 Deg. odd Minutes, and on the Eaſt ſide as far as 78 Deg. and had diſcovered farther, if they had not been diſturbed by the *Dutch*.

Of the ſeveral ſorts of Whales, and manner of killing them.

A Whale of an ordinary ſize is about 65 Foot long, and 35 Foot thick, his Head is a third part of him, containing a very great Tongue, and there are about 250 Fins growing on each ſide of his upper Chop, which ſpread over his Tongue on both ſides of his Mouth: The longeſt are in the middle of his Mouth, ſhortning by degrees, from 10 or 11 Foot, to four Inches in length; his Eyes not much bigger than thoſe of an Ox; the forepart of his Body almoſt round, growing narrower from his Belly towards his Tail, which is about 20 Foot broad, and of a tough ſolid ſubſtance, as are alſo his two ſwimming Fins. He appears often above Water, ſpouting eight or nine times before he goes down again, whereby he may be deſcried two or three Leagues off. Then the Whale-killers in two Shallops row towards him, but commonly he is gone down again before they come near him, and continues a good while before he riſes, ſo that ſometimes they row beyond him. In the mean time they endeavour to find his way under water, which they call his *Wake*, and as ſoon as he comes above Water, row towards him very reſolutely, and one ſtanding up in the Head of the Boat, darts his Harping Iron at him with both Hands, whereupon the Whale deſcending to the bottom, they veer out a Rope of 200 Fathom, which is faſtned to the Harping Iron, and lies coiled in the Boat. They let him have as much Rope as will reach to the bottom, and when they perceive him riſing, they hale in the Rope to get near him, and as ſoon as he appears above water, lance him near his Fins, and as low under water as they can, whereupon he friſks and ſtrikes with his Tail ſo forcibly, that oftentimes he ſplits a Shallop in pieces, and maims or kills ſome of the Men; *Swimming* is therefore very neceſſary in this buſineſs, and may ſave a Man's life when he hath loſt his Boat, and another is not near to help him.

The Whale thus wounded, ſpouts Blood, but before he dies, he will ſometimes draw the Shallop three or four Miles from the place, and as he is dying, turns his Belly upwards; then faſtening a Rope to his Tail, they tow him towards the Ship with his Tail forward: Then laying him croſs the Stern of the Ship, they get upon him, and cut the Fat (which we call Blubber) into ſquare pieces with a cutting Knife three or four Foot long; then to raze it from the Fleſh, there is a Crane or Capſton placed on the Poop of the Ship, from whence there deſcends a Rope, with a Hook to take hold on a piece of Blubber, and as the Men wind the Capſten, ſo the Cutter with his long Knife, looſens the Fat from the Fleſh, and when a piece is cut off, they let down the Blubber to float upon the water, making a hole in ſome part of it to put a Rope thro' it, and ſo proceed to cut off more, faſtening ten or twenty pieces together to be towed aſhoar at one time at the Stern of the Boat. The Blubber being thus brought to the Shoar, is drawn up by a Crane, or carried up by two Men on a Barrow unto a Stage, there to be cut into thin ſmall pieces about a Foot long; thence it is carried to the Choppers by two Boys, with two little Hand-hooks, taking in each Hand a piece, who put it into half-Tubs which ſtand behind the Choppers, who are at the ſide of a Boat raiſed of an equal height to the Furnace. The Boat being fitted with all things neceſſary for the Choppers, they place the Chopping-blocks made of the Whale's Tail, and the Blubber is laid ready for them in ſmall pieces upon the Board whereon they ſtand: Then the Choppers take it up with Hooks, and laying it on the Blocks, chop it in thin pieces, and thence rake it into the Shallop; and thus do ſix or eight Men ſtand chopping on one ſide of the Boat, and the Furnaces and Coppers are placed and heated about two or three Yards diſtance on the other ſide of the Boat. Between the Boat and the Coppers is laid a broad thick Plank, on which ſtands a Hogſhead, containing as much as is put into the Copper for one boyling, and when the Tub is emptied, it is made to ſlide back to the Boat, and there filled again: When it is boiled enough, the ſmall pieces of Blubber, called *Fritters*, will look brown as if they were fried. Then are they taken out with Ladles, and put into a Barrow made cloſe to drain the Oyl, which ſtands over another Boat that is ſet on the back ſide of the Furnace, which Boat is always kept half full of Water, not only to cool the Oil before it run into the Cask, but alſo to cleanſe it from Droſs, which deſcends to the bottom of the Boat, from whence it runs 30 or 40 Yards in Troughs or Gutters, and ſo into Casks, which are towed aboard the Ship in Rafts.

As to the Fins, which grow as I ſaid in his upper Chop, they are ordered in this manner. While the Whale is floating at the Stern of the Ship, they cut off his Head, and tow it with a Boat as near the Shoar as it will come; but it will be a ground in 12 or 13 Foot Water; then at high Water they draw it near the Shoar, that Men at low Water may cut off the Blubber and Fins, which are drawn aſhoar by the Cranes, and the Fins being ſevered with Axes, are made clean, and packed up by 50 in a Bundle, and ſo ſhipped.

There are eight ſorts of Whales; The firſt is called the *Grand-Bay*, from a place in *New-found-land*, where they were firſt killed; he is black, with a ſmooth Skin, and white underneath the Chaps: This Whale yields about 100 Hogſheads of Oyl.

The ſecond is called *Sarda*, of the ſame colour, but ſomewhat leſs, and yields about 70 or 80 Hogſheads; he hath white things growing on his Back like to Barnacles.

The third is called *Trumpa*, as long as the firſt, but thicker forwards, grayer than the former, and but one Spout in his Head, whereas all the reſt have two. He hath Teeth about a Span long, and as thick as a Man's Wriſt, but no Fins; his Head is bigger than either of the former, and in it the *Sperma Ceti* is lodged in a Hole like a Well: He yields about 40 Hogſheads of Oil.

The fourth is called *Otta Sotta*, of the ſame colour with the *Trumpa*, his Fins all white, but not above half a Yard long; he is thicker than the *Trumpa*, but not ſo long, and yields the beſt Oil, but not above 30 Hogſheads.

The fifth is called *Gibarta*, of the ſame colour, and as big as the firſt, and hath a Fin half a Yard long on the top of his Back. His Fins are worth little, being not above half a Yard long, and yields about 12 Hogſheads of Oil, which comes out of his Back, his Belly yielding none at all.

The ſixth is called *Sedeve*, of a white colour, and bigger than any of the former: His Fins are not above a Foot long, and yields but little or no Oil.

The ſeventh called *Sedeva Negre*, is black, with a Bump on his Back: Altho' he be very big, he yields neither Oil, Fins, nor Teeth.

The eighth is called *Sewria*, as white as Snow, not bigger than a Wherry, has no Fins, and yields not above a Hogſhead or two of Oil, and is good Meat to be eaten.

CHAP.

Chap. XXIV.

The Firſt Voyage of Martin Frobiſher *to the North-weſt,* Anno 1576. *Written by* Mr. Hall, *Maſter of the* Gabriel.

1576. WE departed from *Deptford* the 8th of *June*, in two Barks, *viz.* the *Gabriel* and the *Michael*, with a ſmall Pinnace of ten Tun, and paſſing by the Court at *Greenwich*, her Majeſty was pleaſed to bid us Farewel, by ſhaking her Hand at us out of the Window.

On the 11th of *July* we had ſight of *Friſeland*, bearing W. N. W. from us, riſing like Pinnacles of Steeples, and all covered with Snow; Latitude 61 Deg. we had no Ground at 150 Fathom: The Captain endeavoured to get aſhoar in his Boat, but was hindred by the Ice. Not far from hence the Pinnace was loſt, wherein were four Men; and the *Michael* ſtood away privately, and returned home.

The 18th, I found the Sun to be elevated 52 Deg. and I judged the variation of the Compaſs to be two Points and a half to the Weſtward.

The 28th, upon clearing up of the Fog, we had ſight of Land, which I ſuppoſed to be *Labrador*, but could not come near it for the Ice.

On the 11th of *Auguſt* we were in Latitude of 63 Deg. 8 Min. and this day we entred the Streight.

The 16th was calm, and without Ice, but in two Hours time it was frozen round about the Ship a quarter of an Inch thick; we were then at anchor in *Prior's* Bay.

The 19th in the Morning, the Captain and I with eight Men rowed aſhoar, to ſee if we could find any People; and going to the top of the Iſland, we ſaw ſeven Boats rowing towards us, whereupon we returned aboard, and ſent our Boat with a white Cloth and five Men in her to ſee whether they rowed; they followed our Boat along the Shoar, till they ſaw our Ship, and then returned: Then I went aſhoar, and giving to every one of them a Point made of Thread, one of them came aboard with me, where he did eat and drink, and then we carried him aſhoar again; whereupon all the reſt came aboard in their Boats, being 19 Perſons, but we could not underſtand their Language. They are like the *Tartars*, with long black Hair, broad Faces, and flat Noſes, of a tawny colour, the Men and Women clad in Seal Skins, of the ſame faſhion, but the Women are known by blew ſtreaks down their Cheeks and round their Eyes. Their Boats were made of Seals Skins, with a Keel of Wood within the Skin, flat bottom'd, and ſharp at both ends.

The next day we weighed and went to the Eaſt ſide of the Iſland, where the Captain and I with four Men went aſhoar, and there we ſaw their Houſes, and the People ſpying us, came towards our Boat; whereupon we haſtened to our Boat, and being in it and they aſhoar, they called to us, and we rowed to them, and one of them came into our Boat, and we carried him aboard and gave him a Bell and a Knife. Then we ordered five of our Men to ſet him aſhoar at a Rock, and not among the Company they came from; but their wilfulneſs was ſuch, that they would go to them, and ſo were taken by the Savages, and our Boat loſt. Five Engliſh taken by the Savages.

The next Morning we ſtood near the Shoar, and ſhot off a Falconet, and ſounded our Trumpet, but could hear nothing of our Men; ſo we plied out of this Sound, which we named *The five Men's Sound*, and anchoring all Night in 30 Fathom, the Snow in the Morning lay a Foot thick upon our Hatches. We then weigh'd and returned to the place where we loſt our Men, where we ſaw 14 Boats, but could hear nothing of our Men. Snow a Foot thick in *Auguſt.* We enticed one of them in his Boat to our Ship's ſide with a Bell, and in giving it to him, we took him and his Boat, whereupon, finding himſelf in captivity, his Choler and Diſdain were ſuch, that he bit his Tongue in two within his Mouth; yet he died not thereof, but lived until he came to *England*, and then died of cold taken at Sea. One of the Savages taken.

The 26th we weighed to come homeward, and the firſt of *September* had ſight of *Frieſland*, eight Leagues diſtant, but could not come nearer to it for the Ice. *September*

The ſeventh we had a terrible Storm, and one of our Men was blown from our Waſt into the Sea, but catching hold of the Fore-ſheet, was pull'd into the Ship by the Captain.

On the 25 we had ſight of *Orkney*, and anchored at *Harwich* the ſecond of *October*.

After the Captain's arrival at *London*, it happened that one of the Adventurers Wives threw a piece of black Stone into the fire, which the Captain had brought home this Voyage, which being taken forth and quenched in Vinegar, gliſter'd like Gold; whereupon ſome Refiners in *London* making an Aſſay of it, reported that it held Gold, and that very richly for the quantity, and promiſed great matters from it, if any ſtore could be found, offering themſelves to adventure for the ſearching of thoſe parts; and ſome ſecretly endeavoured to get a Leaſe from her Majeſty, thereby to ingroſs the whole profit to themſelves.

The hopes of more of the ſame Ore, kindled a great Opinion in the Hearts of many, to advance the Voyage again; whereupon preparation was made for a new Voyage againſt the Year following, and the Captain was directed by his Commiſſion to ſearch for a further diſcovery of the Paſſage, but eſpecially for more of this Gold Ore.

Chap. XXV.

The Second Voyage of Capt. Frobiſher *to the North-weſt,* 1577.

1577. *May.* WE departed from *Blackwal* on *Sunday May* the 26th, in one of her Majeſties Ships called the *Aid*, of 200 Tun and 100 Men, and two Barks, the *Gabriel* and the *Michael*, each about 30 Tun. In the firſt were 18 Men, commanded by Mr. *Fenton*, a Gentleman of the Earl of *Warwicks*; and in the laſt 16 Men, commanded by Mr. *York*, a Gentleman of the Lord Admirals; all victualled for ſix Months.

The next day we all received the Communion aboard the *Aid* from the Miniſter of *Graveſend*, and prepared our ſelves as good Chriſtians and reſolute Men for all Fortunes, and that Night fell down to the *Hope*.

The next day we came to *Harwich*, where we ſtaid till *Friday* to take in Victuals; in which time came Letters from the Lords of the Council, ſtraitly commanding our General not to exceed his Complement, which was 120, whereupon he diſcharged many proper Men, who with unwilling minds departed; he alſo diſmiſſed all his condemned Men, which at firſt he thought might have been uſeful for ſome Purpoſes; and putting to Sea the laſt of *May*, we arrived at *Orkney* the 7th of *June*. *June.*

In ſtands in Latitude of 59 Deg. 30 Min. abounds with Poultry, Eggs, Fiſh, and Fowl; for their Bread they have Oaten Cakes, and Ewes Milk for Drink, and in ſome parts Ale. Their Houſes are poor and ſluttiſh, they burn Heath and Turf, there being no Wood.

On the 8th we ſet ſail, traverſing the Sea 26 Days without ſight of any Land, and met with much drift Wood, and whole Bodies of Trees.

July.

On the fourth of *July* we came in ſight of the South part of *Frieſland*, in Latitude of 60 Deg. 30 Min. we met with great Iſlands of Ice ten or twelve Leagues from Shoar, ſome of which were half a Mile or more in compaſs, and 30 or 40 Fathom above Water, and, as we ſuppoſe, faſt on Ground, the depth being about 80 Fathom. None of theſe Iſlands were ſalt to the taſt, which ſhews that they were not congealed of Sea-water, but muſt be produced by melted Snow from the Tops of Mountains, or by continual acceſs of freſh Rivers, which mingling with the Salt Water, may cauſe ſome part of it to freeze, ſo as to make it taſt brackiſh, but otherwiſe the main Sea freezeth not.

Ice in the Sea freſh to the Taſt.

On the 16th we raiſed the Land, which our General the Year before had named the *Queen's Foreland*, at the entrance of *Frobiſher*'s Streight, which at our coming ſeemed to be ſhut up with Ice, to our great diſcouragement; but the General with two ſmall Pinnaces, paſſed thro' the Streight to the Eaſt Shoar, (the reſt lying off at Sea) where ſome of the Natives ſhewed themſelves, leaping and dancing with great Shrikes and Cries; whereupon two of our Men went and met two of theirs, neither Party having Weapons; they would not come ſo near our Men as to take any thing from their Hands, but ours leaving a Knife or other thing upon the Ground, and then withdrawing, they came and took it up, leaving ſomething of theirs to countervail the ſame. The day being near ſpent, we retired to our Boats, which the People perceiving, with great Tokens of Affection, they earneſtly called us back again, and followed us almoſt to our Boats; whereupon the General taking the Maſter with him, went unarmed to meet two of them, who came down without Weapons, intending, if they could lay ſure hold upon them, forcibly to bring them aboard, and to diſmiſs one of them after courteous Reception, and beſtowing on him ſome Toys and Apparel, and to retain the other for an Interpreter. After ſome dumb Signs and mute Congratulations, they exchanged ſome things, and one of the Savages cut off the Tail of his Coat, and gave it to the General for a Preſent, who giving the Word to the Maſter, they ſuddenly laid hold on both the Savages, but the Ground being ſlippery, they loſt their hold, and their Prey eſcaping, ran away, and preſently recovered their Bows and Arrows, which they had hid not far from them behind the Rocks, and purſued our General and Maſter to the Boats, hurting the General in the Buttock with an Arrow. Our Souldiers who kept the Boat, came ſpeedily to their reſcue, and the Savages hearing the Report of one of our Muſkets, ran away, and our Men followed them. One *Nicholas Conger*, a good Foot-man, and not cumbred with any Arms, having only a Dagger at his Back, overtook one of them, and being a *Corniſh* Man and a good Wreſtler, ſhewed the Savage ſuch a *Corniſh* trick, as made his ſides ach againſt the Ground, and brought him back, but the other eſcaped.

A Savage taken.

On the 19th, the North-weſt and Weſt Winds having driven the Ice into the Sea, we entred the Straits, and found a Harbour on the Weſtern Shoar, which we named after our Maſter's Mate, *Jackman's Sound*. Upon a ſmall Iſland within this Sound, called *Smiths Iſland* (becauſe he firſt ſet up his Forge there) was found a Mine of Silver, but could not be gotten out of the Rocks without great labour. Here our Refiners made aſſay of the Ore, and found it to hold Gold in good quantity: Here we alſo found a great dead Fiſh like to a *Porpus*, about twelve Foot long, with a Horn of two Yards long growing out of his Snout; it is wreathed and ſtrait, and may be thought to be the Sea-Unicorn, and is now reſerved in her Majeſties Wardrobe.

The 23, the General with ſuch as could be ſpared from the Ships, being ſeventy Perſons, marched with Enſign diſplaied upon the Southern Land, part of the ſuppoſed Continent of *America*, and having travelled about five Miles toward the Tops of the Icy Mountains, we returned to our Ships without ſight of any People, or likelyhood of Habitation. Here divers of the Gentlemen deſired the General to permit 20 or 30 of them to march 30 or 40 Leagues into the Country; but he, conſidering his Inſtructions and the ſhort time he had, thought it better to ſeek for Ore to frait his Ships, and leave the further diſcovery to be accompliſhed hereafter; and therefore on the 26th departed to the Northern Land with the two Barks (the *Aid* ſtill riding in *Jackman's Sound*) where finding a very rich Mine, as it was ſuppoſed, and having got almoſt 20 Tun of Ore together, we were forced thence by the Ice which came driving in upon us, and for haſt left the Ore we had digged behind us. We went further up the Streights, and having ſailed five Leagues, we diſcovered a Bay, which being fenced on each ſide with ſmall Iſlands, did break the force of the Tides, and made it free from any In-draughts of Ice; here we anchored under a ſmall Iſland, which we named *Warwick*-Iſland: This is the fartheſt place that we were at within the Streights, diſtant from *Queen's Foreland* 30 Leagues. Here we found good ſtore of the Ore, which in waſhing, held Gold to our thinking, plainly to be ſeen; whereupon it was thought better to load here than to ſeek further, and the General having ſet the Miners to work, ſent the *Michael* over to *Jackman's Sound* for the *Aid* and her whole Company to come to us.

Their Habitations deſcribed.

From the Iſland we could diſcern the poor Dwellings of the People, which are commonly ſituated at the Foot of a Hill to ſhelter them from the cold Winds, with the Door always to the South: the Foundation is two Fathom under ground, with Holes like a Coney-berry, to viſit their Neighbours, and theſe places are under-trenched with Gutters, that the Water falling from the Hills above them, may ſlide away without annoying them: From the Ground upwards they build with Whales Bones for lack of Timber, which bending one over another, are handſomly compacted in the top together, and covered with Seals Skins: But it ſeemed to us by divers Circumſtances that they change their Habitations often, and are a diſperſed and wandring Nation, living in Hords and Troops like the *Tartars*.

The laſt of *July* the *Michael* returned to us with the *Aid* from the Southern Land: Captain *York* reported, that coaſting along the Shoar, he eſpied two Tents of Seals Skins, and going with his Company aſhoar, entred into them, but the People were all fled. They found there raw and new killed Fleſh of unknown ſorts, with dead Carcaſes and Bones of Dogs, alſo a Doublet of Canvas after the *Engliſh* faſhion, a Shirt, a Girdle, and three Shooes of the Men we loſt the Year before, about 50 Leagues from this place, further within the Streights. The Captain left a Letter there, with Pen, Ink, and Paper, that our poor Captive Country-men might, if they were alive, be advertiſed of our being there, and return an Anſwer; He left alſo ſome Trifles, as Glaſſes, Bells, Knives, *&c.* not taking any thing of theirs except one Dog.

Auguſt.

The next day being the firſt of *Auguſt*, all the Gentlemen and others that could be ſpared from the Ship, went aſhoar under the Conduct of Mr. *Philpot*, to try if by fair means they could allure the People to familiarity, or otherwiſe, to take ſome of them, and thereby attain to ſome knowledge of the Men that were loſt the Year before.

At our return to the place where their Tents had been, we found they had removed them further into the Bay, that they might if they were driven from the Land, fly with their Boats into the Sea: We parting our ſelves into two Companies, and compaſſing a Mountain, came ſuddenly upon them by Land, who eſpying us, fled to their Boats, leaving moſt part of their Oars behind them, and rowed down the Bay, where our two Pinnaces meeting them, drave them aſhoar; but if they had had all their Oars, it had been in vain to chaſe them.

When they were landed, they fiercely aſſaulted our Men with their Bows and Arrows; we wounded three of them, who perceiving themſelves hurt, deſperately leapt from the Rocks into the Sea, and drowned themſelves: The reſt fled into the Mountains, except one old Woman, and another with a Child, whom we took. The old Wretch, whom our Sailors ſuppoſed to be a Witch, had her Buſkins pull'd off to ſee if ſhe were cloven footed, and being very ugly and deformed, we let her go, the young Woman and Child we brought away.

Another Savage taken.

Having now got a Woman Captive to comfort our Man, we brought them together: They at firſt beheld each other very wiſtly for a good ſpace, without uttering a word, with great change of Colour and Countenance, as if the Grief and Diſdain of their Captivity had deprived them of their Speech: At laſt the Woman very ſuddenly, as tho' ſhe diſdained or regarded not the Man, turned away, and began to ſing as tho' ſhe minded another matter; but being again brought together, the Man with a ſtern and ſtaid countenance, began to tell a long ſolemn tale to the Woman, whereunto ſhe gave good attention, and did not interrupt him till he had finiſhed, and afterwards being grown more familiar, they were turn'd together; but we could never perceive that they uſed as Man and Wife, tho' the Woman ſpared not to do all neceſſary things belonging to a good Houſwife, as making clean their Cabin, killing, flaying, and dreſſing of Dogs for their Diet, and making him clean when he was Sea ſick. They ſeemed to be very modeſt, for the Man would never ſhift himſelf until he had cauſed the Woman to depart out of his Cabin, and they were both very ſhy leſt any of their Privy Parts ſhould be diſcover'd by each other, or by any other Body.

On the third we left the Weſtern ſhoar, ſuppoſed part of the Continent of *America*, and on the fourth came to our General at *Warwick*-Iſland, where he fraited the Ship and Barks with ſuch Stone or ſuppoſed Gold-mineral, as he thought might countervail the Charges of both his Voyages to theſe Countries.

On the 6th, while we were all at work, we perceived many of the Natives upon the top of a Hill over againſt us, waſting a Flag, and making great Out-cries unto us; whereupon the General taking the Savage Captive with him, and ſetting the Woman where they might beſt perceive her in the higheſt place of the Iſland, went over to talk with them. Our Captive at the firſt encounter of his Friends, burſt out into tears, and could not ſpeak a word in a long time, but after a while, he diſcourſed at a diſtance with his Companions, and beſtowed friendly upon them ſuch Toys and Trifles as we had given him. Our General by ſigns required his five Men which they made Captives the laſt Year, and promiſed not only to releaſe thoſe which he had taken, but alſo to reward them with great Gifts. Our Savage made ſigns in anſwer from them, that our Men were yet living, and ſhould be deliver'd to us, and made ſigns likewiſe to us that we ſhould write Letters to them, but becauſe it was late they departed without any Letter, altho' they called earneſtly in haſt for the ſame; and the next Morning early they called again for the Letter, which being deliver'd to them, they ſpeedily departed, making ſigns with three Fingers and pointing to the Sun, that they would return in three days. The Letter was as follows.

> ‘IN the Name of God in whom we all believe, who (I truſt) hath preſerved your Bodies and Souls amongſt theſe Infidels, I commend me unto you. I will be glad to ſeek by all means you can deviſe for your deliverance, either with force or with any Commodities within my Ships, which I will not ſpare for your ſakes, or any thing elſe I can do for you. I have aboard of theirs, a Man, a Woman, and a Child, which I am contented to deliver for you; but the Man which I carried away from hence the laſt Year, is dead in *England*. Moreover, you may declare unto them, that if they deliver you not, I will not leave a Man alive in their Country; and thus, if one of you can come to ſpeak with me, they ſhall have either the Man, Woman or Child in pawn for you. And thus unto God, whom I truſt you do ſerve, in haſt I leave you, and to him we will daily pray for you. This *Tueſday* Morning, the ſeventh of *Auguſt*, 1577.
>
> Yours to the uttermoſt of my Power,
>
> *Martin Frobiſher.*

On *Saturday* the 11th, the People ſhewed themſelves again, and called unto us from a Hill over againſt us: The General, hoping for an Anſwer to his Letter, and hear of his Men, went over to them; no more than three appeared in ſight, who by ſigns endeavoured to train our Boat about a Point of Land from ſight of our Company; but we ſuſpecting them, kept aloof, and yet ſet one of our Company aſhoar, who took up a great Bladder which one of them had laid down, and leaving a Looking-glaſs in the place, returned to the Boat. In the mean time our Men upon the Iſland, who could better diſcern than thoſe in the Boat, made a great out-cry to our Men in the Boat, becauſe they ſaw many Savages creeping behind the Rocks towards our Men; whereupon the General returned without tidings of his Men.

Our Captive made ſigns to us that this Bladder was ſent him to keep Water and Drink in, but we rather ſuſpected it was given to him to help his eſcape by ſwimming; for he and the Woman ſought often to make their eſcapes, having looſed our Boats from aſtern our Ships, and had prevailed if they had not been timely diſcover'd.

The 14th, our General with two ſmall Boats, well appointed, went up a Bay, where he ſaw ſome of the Natives, who made great Out-cries, and with a Flag made of Bladders ſowed together with the Guts and Sinews of Beaſts, waſted us a main unto them, not ſhewing above three of their Company; but when we came near them, we could perceive a great multitude creeping behind the Rocks; whereupon we made ſigns to them, that if they would lay their Weapons aſide, and come forth, we would deal friendly with them, altho' we perceived their intent; but for all the ſigns of Friendſhip we could make, they came ſtill creeping towards us from behind the Rocks to get more advantage of us, as tho' we had no Eyes to ſee them. Their Spokes-man earneſtly perſwaded us with many fair ſhews, to come aſhoar and eat and ſleep, and clapping his bare Hands over his Head in token of Peace and Innocence, willed us to do the like; But the better to allure our hungry Stomachs, he brought us a piece of raw Fleſh, which with our Boat-hook, we caught into our Boat. Then one of his Fellows came halting from behind the Rocks towards the Sea-ſide, and in ſuch places where he ſeemed unable to paſs, the other took him upon his Shoulders, and ſetting him down by the Water-ſide, went away and left him, hoping that one of us would venture aſhoar, and not be afraid to make his part good with a lame Man; but the General ſuſpecting their treachery, commanded a Soldier to fire at him, who ſent him away a true and no feigned Cripple; whereupon the reſt came out of their lurking holes to the Sea-ſide, and deſperately maintained a Skirmiſh with their Bows, Arrows, Slings, and Darts, without fear of our Shot. They had belayed the Coaſt for us, and we ſaw above 100 of them, and had cauſe to ſuſpect a greater number. All their Arrows and Darts fell ſhort of us, ſo that we return'd to our Ship without harm.

Treachery of the Savages.

Our work being now finiſhed, having laden almoſt 200 Tun of Ore, we prepared to return; and the 22d of *Auguſt* we plucked down our Tents, and making a Bonfire on top of the Iſland, we gave a Volly of Shot, and ſo departed aboard.

They return.

The 23d of *Auguſt* we ſet ſail, the Wind at Weſt, and the next day left the *Queen's Fore-land* a-ſtern of us, and had Snow half a Foot deep on the Hatches.

The 29th the *Michael* loſt company of us, and ſhaping her Courſe towards *Orkney*, arrived at *Yarmouth*.

The 30th the Maſter and Boatſwain of the *Gabriel* were ſtruck over-board by the force of the Wind and Surge of the Sea. The Maſter, who was a young Man and able Mariner, had been very pleaſant all that Morning, and told his Captain that he dream'd that he was caſt over-board, and that the Boatſwain had him by the Hand, and could not ſave him; which came to paſs accordingly, for the Boatſwain held him by one Hand, having hold on a Rope with the other, until his ſtrength failed, and the Maſter was drowned.

Maſter of the *Gabriel* drowned.

The firſt of *September* the ſtorm was grown very great, and the *Gabriel* not able to bear ſail to keep Company with us, our Ship being higher in the Poop whereon the Wind had more force to drive, went ſo faſt away, that we loſt ſight of them, and left them to God and their good fortune at Sea.

September

On the 17th we arrived at *Padſtow* in *Cornwal*, which being a bad Road, we put to Sea again, and anchored at *Milford* Haven, from whence our General writ to the Court, who order'd the Ship to *Briſtol*, where the Ore was lodged in the Caſtle: Here we found the *Gabriel* arrived in ſafety. In this Voyage we loſt but two Men; one blown over-board, as was mentioned, and one that died at Sea, who was ſick when he came aboard, and was ſo deſirous to go this Voyage, that he rather choſe to die, than not to make one in this noble Adventure.

CHAP. XXVI.

The Third and laſt Voyage of Captain Frobiſher *to the North-weſt*, Anno 1578.

1578. THE ſuppoſed Gold Ore brought home the laſt Voyage, made ſhew of great Riches and Profit, and the hope of paſſage to *Cathaia*, was greatly increaſed; ſo that her Majeſty appointed ſpecial Commiſſioners, who upon ſufficient trial and proof made of the Ore, and upon ſundry Reaſons and ſubſtantial Grounds being convinced of the probability of a Paſſage, advertiſed her Majeſty that the Voyage was of importance, and worthy to be advanced again. Whereupon 15 Sail of good Ships were ordered to be got ready, whereof all were to return again with their Lading of Gold Ore at the end of Summer, except three Ships, which ſhould be left for the uſe of Captain *Fenton*, Captain *Beſt*, and Captain *Philpot*, who were to tarry in the Country, with 40 Mariners, 30 Miners, and 30 Soldiers, in which laſt are included the Gentlemen, Refiners, Bakers, Carpenters, and other neceſſary Perſons. They carried with them a ſtrong Houſe of Timber framed here, and to be ſet up there.

The Names of the Ships, with their Captains.

The *Aid*, Admiral,		*Frobiſher.*
The *Thomas Allen*, Vice admiral,		*York.*
The *Judith*, Rear-admiral,		*Fenton.*
Anne Francis,		*Beſt.*
Hopewell,		*Carew.*
Bear,		*Philpot.*
Thomas of *Ipſwich*,		*Tanfield.*
Emmanuel of *Exeter*,	Capt.	*Courtny.*
Francis of *Foy*,		*Moyles.*
Moon,		*Upcot.*
Emmanuel of *Bridgwater*,		*Newton.*
Solomon of *Weymouth*,		*Randal.*
Bark, *Dennis*,		*Kendal.*
Gabriel,		*Harvey.*
Michael,		*Kinnersſley.*

We departed from *Harwich* the 31ſt of *May*, and coaſting the South part of *England*, we paſſed Cape *Clare* the ſixth of *June*.

June. The 20th of *June*, at two in the Morning we deſcried *Frieſland*, and ſailing along the Coaſt, we ſpied one place pretty clear of Ice, where the General well accompanied went aſhoar, and ſaw ſome Tents made of Skins, wherein they found, Fleſh, Fiſh, Skins, and a Box of Nails. The General commanded his Men to take nothing away with them, only two white Dogs, for which he left Pins, Points, Knives, and other Trifles, and ſo returning aboard, we hoiſed Sail and continued our Courſe, and on the laſt of *June* met with many great Whales, one of which received ſuch a blow from the *Solomon*, who came upon him with a full Stern, being under both her Courſes and Bonnets, that the Ship ſtood ſtill, and ſtirred neither forward nor backward: The Whale made a great and ugly noiſe, and caſt up his Body and Tail, and ſo went under Water. Two days after, a great dead Whale was found floating on the Sea, which we ſuppoſed to be the ſame that the *Solomon* ſtruck. One of the Ships runs againſt a Whale.

July. The ſecond we fell with the *Queen's Foreland*, where we met with ſo much Ice, that we thought it impoſſible to enter the Streight; ſome of the Fleet where they found the Ice open, ventured in, and whilſt others were following them with full Sails, the Ice would cloſe, and the Bark *Dennis* (wherein was part of our Houſe which was to be erected for them that ſhould ſtay all Winter) was ſo bruiſed, that ſhe ſunk in our ſight, but we manned our Boats and ſaved the Men.

The Fleet in great diſtreſs. This was a dreadful Spectacle, becauſe the Storm which followed, threaten'd the like danger to us all; for having left much Ice behind us, thro' which we had paſſed, and finding more before us, thro' which it was not poſſible to paſs, there aroſe a terrible Storm at S. E. which blowing from the main Sea directly upon the Streights Mouth, brought upon us all the Ice we had left behind us, and debarred us from getting Sea-room again: we took down our Top-maſts, and hanged over-board pieces of old Cables, Beds, Planks of three Inches thick, which were cut aſunder at the ſides of our Ships, ſome of which were heaved up out of the Sea between Iſlands of Ice, near a Foot above their Water Mark, having their Knees and Timbers within board bowed and broken therewith. In this diſtreſs it pleaſed God to ſend us a favourable Wind the next day at W. N. W. which diſperſed the Ice, and then the whole Fleet plyed off to Sea-ward, till the Sun ſhould conſume, or the Winds diſperſe the Ice that lay in the Streights Mouth.

The ſeventh we ſtood in again, and deſcried Land, which ſome, and thoſe not the worſt Mariners, judged to be the North Foreland, tho' others were of a contrary Opinion. The new fallen Snow does yearly ſo much alter the ſhape of the Land, that it takes away the Mariners Marks. Mr. *Hall* the chief Pilot declared publickly, that he had never ſeen the Coaſt before, and that he could not make it for any place of *Frobiſher*'s Streights.

The 10th, the weather ſtill continuing thick and dark, ſome of the Fleet loſt ſight of the Admiral, and ſtood back again to Sea-ward; the reſt following the General, paſſed 60 Leagues within the ſaid doubtful and ſuppoſed Straits, having always a fair continent on their Star-board ſide, and an open Sea before them.

The General, altho' 'tis probable he was ſenſible of the Error, and that this was not the old Streights, yet he diſſembled his Opinion, the better to induce the Fleet to follow him, he being then in great hopes of diſcovering a Paſſage this way; and ſome of the Company reported, that he hath ſince declared, that if it had not been for the charge and care he had of the Fleet and fraited Ships, he would and could have gone thro' to the South Sea, and diſſolved the long doubt of a Paſſage to *Cathaia*.

The 26th there fell ſo much Snow that it lay half a Foot deep upon the Deck. Snow in July.

On the 31ſt we anchored in *Warwick*-Sound, in the entrance whereof, the *Aid* having a little before weighed her Anchor a Cock-bill, ran againſt an Iſland of Ice, which ſtruck the Flook of the Anchor thro' the Ships Bow under Water, and cauſed ſo great a Leak, that they had much ado to preſerve her from ſinking.

At our Arrival here, we found the *Michael* and the *Gabriel*, who had been long miſſing, and whom we never expected to hear of again; for which we heartily praiſed God, and Mr. *Wolfall*, a learned Man, appointed by her Majeſties Council to be our Miniſter, made a Godly Sermon, exhorting us to be thankful to God for our manifold deliverances in theſe dangerous places, and putting us in mind of the incertainty of Man's life, willed us to make our ſelves ready as reſolute Men to accept thankfully whatſoever adventure his Divine Providence ſhould appoint. This Man being well ſeated in his own Country in a good Benefice, well eſteemed, having a virtuous Woman to his Wife, and very hopeful Children, refuſed not to undertake this painful Voyage, for the care he had to ſave Souls, and to reform thoſe Infidels, if it were poſſible, to Chriſtianity; and would have ſtaid there the whole year if occaſion had ſerved, being in every neceſſary action as forward as the reſoluteſt Man of us all: So that he may be called a true Paſtor and Miniſter of God's Word, who for the good of his Flock, ſpared not to venture his own life.

Captain *Fenton* in the *Michael* arriving, as was ſaid, ten days before us, ſpent his time in ſearching for Ore. He alſo diſcover'd ten Miles up into the Country, which was very barren, as all the reſt that we have ſeen, nor did he ſee any likelyhood of Habitation. His Ship had been ſtruck thro' and thro' on both ſides, and his falſe Stern born quite away. When they found an Iſland of Ice bigger than the reſt, they moored an Anchor upon it, and then rode under the Lee of it, to guard themſelves from the danger of the leſſer driving Ice. They met with one piece of Ice, which by meaſure was found to be 65 Fathom above Water. Ice 65 Fathom high

The

Auguſt. The ninth of *Auguſt* the General called a Council to conſider about erecting a Houſe or Fort for thoſe who were to inhabit there the whole Year; and it was found that only two ſides of the Houſe were arrived, and thoſe not perfect and entire; for many pieces were broken in uſing them for Fenders when they were diſtreſſed in the Ice. Neither was there Drink and Fuel to ſerve 100 Men (the number appointed to inhabit there) the greateſt ſtore whereof was in thoſe four Ships which were not yet arrived. Then Captain *Fenton* ſeeing the ſcarcity of the neceſſary things aforeſaid, was contented, and offered to inhabit there with 60 Men. Whereupon the Carpenters and Maſons were asked in what time they could erect a leſs Houſe for that number, they required eight or nine Weeks, if there were Timber ſufficient; whereas we had but 26 Days to tarry in that Country; it was therefore reſolved in Council that no Habitation ſhould be there this Year.

The 24th, the General with two Pinnaces well mann'd, went to try if he could encounter and apprehend any of the People, who often ſhewed themſelves, ſometimes with ſeven or eight Boats in a Company, as if they had deſigned to attack ſome of our People who were working at the Mines in no great numbers; wherefore we endeavour'd with our Pinnaces to encompaſs an Iſland they haunted, hoping to intercept ſome of them; but they kept ſuch watch in the Mountains, that they conveyed themſelves away before we could come near them.

The 20th, the *Anne Francis*, which with the other Ships had now joined us, was brought aground, and had eight great Leaks mended which ſhe had received by the Rocks and Ice. They had ſtruck upon a Rock, where they lay more than half dry until the next Flood, when by God's Providence, contrary to all expectation, they came afloat again, being forced all that time to under-ſet their Ship with their Main-yard. Mr. *Wolfall* after Sermon, celebrated the Communion upon the Land, as he had before done in ſeveral Ships, becauſe our whole Company could never meet in one place.

The Fleet being now in good readineſs, the General called the Captains and Gentlemen together, and told them that he intended not only by God's help to bring home his Ships laden with Ore, but alſo to make a further diſcovery of theſe parts. After long debate, it was judged impoſſible at this time for the Reaſons following; Firſt, It freezed ſo hard every Night, that if they ſhould be kept in by contrary Winds, it was to be feared they ſhould be ſhut up the whole Winter, to their utter deſtruction. Secondly, Drink was ſo ſcarce thro' all the Fleet, by reaſon of great leakage, that not only the Proviſion laid in for the Habitation was waſted, but alſo the Proviſion of each Ship was ſpent and loſt. The cauſe of this Leakage was the great Timber and Sea-Coal, which lay ſo weighty upon the Barrels, that it brake, bruiſed and rotted the Hoops aſunder.

On the laſt of *Auguſt* we left the Country, and that Night aroſe a furious tempeſt, which ſeparated our Fleet, ſo that not any of us met together again until the 28th of *September*, which day we fell on the Coaſt of *England*, between *Sylley* and the *Lands-end*, and the reſt of the Fleet arrived about the ſame time, ſome in one place and ſome in another. There died in this Voyage not above 40 Perſons, which number is not great, conſidering how many Ships were in the Fleet, and the many Hardſhips we had endured.

CHAP. XXVII.

The firſt Voyage of Mr. John Davis *for diſcovery of the North-weſt Paſſage,* An. 1585: *Written by* John Janes.

1585. SOme Noblemen, Gentlemen, and Merchants, deſirous to advance the Glory of God and the Good of their native Country, conſulted together about a diſcovery of the North-weſt Paſſage, which having been heretofore attempted, but unhappily given over by reaſon of ſome unexpected Accidents, they reſolved after good deliberation to become Adventurers, and accordingly did ſet forth two Barks, *viz.* the *Sun-ſhine* of 50 Tuns and 23 Men, *John Davis* Captain; and the *Moon-ſhine* 35 Tuns, 19 Men, *William Bruton* Captain.

June. We departed from *Dartmouth* the ſeventh of *June*, and were forced to put into *Falmouth* and *Scilly*, by reaſon of contrary Winds.

July. On the 28th we departed thence, and on the 20th of *July* diſcover'd Land covered with Snow, which appeared over the Fog like a white Liſt in the Sky. The rouling of the Ice which reached from the Shoar a League off into the Sea, made a great noiſe: Our Captain named this place *The Land of Deſolation.*

The 21ſt, the Wind being Northerly, we ſtood S. S. W. along the ſhoar, for we perceived that we were run into a very deep Bay, where we were almoſt compaſſed with Ice. The next day we hoiſed out our Boat, and rowed toward the Shoar, but when we came within a League of it, we met with ſo much Ice that we could not get to Land. We tried to get ſome Fiſh with our Lines, becauſe we ſaw many *Seals* on the Coaſt, and Birds beating on the Water, but all was in vain. We had ground in 120 Fathom, the Water black and thick like a ſtanding Pool. We ſaw much Wood floating upon the Coaſt, and the *Moon-ſhine* took up a Tree in the Sea 60 Foot long and 14 Handfulls about it, with the Root upon it.

The 25 we loſt ſight of this Land, and ſteered N. W. till the 29th, when we diſcovered Land in 64 Deg. 15 Min. bearing N. E. from us. Coming near the Coaſt we found many fair Sounds and great Inlets into the Land, whereby we judged it to be a great number of Iſlands ſtanding together. We went aſhoar on a ſmall Iſland to ſeek for Water and Wood, and perceived there had been People, for we found a ſmall Shoe, and pieces of Leather ſowed with Sinews. Then we went upon another Iſland, and the Captain, Maſter and I being got upon the top of a high Rock, the People of the Country eſpying us, made a lamentable noiſe, which we thought at firſt had been the howling of Wolves; then I hollowed again, and they anſwered; at laſt, perceiving where they ſtood, ſome on the Shoar, and one rowing in a *Canoa*; we made a great noiſe, partly to allure them to us, and partly to warn our Company of them: Whereupon Mr. *Bruton* and others of the *Moon-ſhine*, haſtned to our reſcue, and brought with them our four Muſicians to allure them to us if poſſible: Our Muſicians plaied, and we danced, making many ſigns of Friendſhip. At laſt there came ten *Canoa's*, two of which came ſo near us that they talked with us. Their Pronunciation was very hollow, and their Speech ſuch as we could not underſtand. One of them pointing to the Sun, ſmote his Breaſt ſo hard that we could hear the blow; this he did many times, till at laſt one of our Men, pointing to the Sun, ſtruck his Breaſt in the ſame manner, whereupon one of them came aſhoar, to whom we threw our Caps, Stockins, and Gloves, and ſuch things as we had about us, playing with our Muſick, and Dancing, till the Night coming on, we returned aboard.

The next Morning, the 30th of *July*, 37 *Canoa's* came rowing by our Ships, calling to us to come aſhoar; we not making any great haſt, one of them went up to the top of the Rock, where he leaped and danced, ſhewing us a Seals Skin: Whereupon we manned our Boats, and rowed to their *Canoas*, and having ſworn by the Sun after their faſhion, I ſhook Hands with one of them, and he kiſſed my Hand, and we became very familiar. They gave us whatſoever we asked of them, and were ſatisfied with whatſoever we gave them. We bought their Cloths from their Backs, which were all made of Seals Skins, or Birds Skins with the Feathers on them: We bought alſo five of their Canoa's, with ſome Oars and Darts. They are a tractable People, void of Craft or double Dealing, but ſeem to be Idolaters, and worſhip the Sun.

We found no freſh Water among theſe Iſlands, but only Snow Water, whereof we found great Pools. The

Clifts were all of ſuch Oar as Captain *Frobiſher* brought from *Meta Incognita.* We found here Fir, Spruce, and Juniper, which whether it floated hither, or grew in ſome great Iſlands near this place, we know not, but we ſuppoſed it might grow thereabouts, becauſe the People had great ſtore of Darts and Oars, which they exchanged with us for ſmall Trifles. When they perceived that we deſired Skins and Furs, they made ſigns that they would go into the Country and bring them the next day; but the Wind coming fair, we departed on the firſt of *Auguſt*, and proceeded towards the North-weſt on our Diſcovery.

Auguſt. On the ſixth we diſcovered Land in 66 Deg. 40 Min. clear of Ice; we anchored in a fair Road under a Mount, the Clifts whereof were as orient as Gold; we named it Mount *Raleigh.* As ſoon as we had anchored, we eſpied four white Bears at the Foot of the Mount; one of them we ſhot in the Neck, who after he had roared a little, took the Water, and we following him with our Boat, killed him with Boar-ſpears, and two more that Night: We found nothing in their Maws, but judged by their Dung that they fed upon Graſs. The next day we went on Shoar to another Bear, who when we came near him, was faſt aſleep; my Piece miſſing fire, he looked up and laid down his Head again: Then I ſhot him in the Head, and we all ran upon him with Boar-ſpears, and thruſt him into the Body, yet he grip'd away our Spears and went towards the Water, and ſwam to a Cove where we killed him: The breadth of his Fore-foot was 14 Inches.

The 8th we coaſted along the Shoar, and on the 11th came to the Southerly Cape of this Land, which we named the *Cape of God's Mercy,* being the place of our firſt entrance for the diſcovery. We coaſted the Shoar, and when the Fog brake up, we found our ſelves ſhot into a fair entrance or Paſſage, in ſome places 20 Leagues broad, and clear of Ice, which gave us great hope of a Paſſage. Having ſailed N. W. 60 Leagues therein, we ſaw ſome Iſlands in the middle, whereupon we divided, one ſailing on the North ſide and the other on the South ſide of them, the Wind at S. E. very foggy and foul Weather.

The 14th we went aſhoar and found ſigns of People, for we ſaw Stones laid up together like a Wall, and the Scull of a Man or Woman.

The 15th we heard Dogs howl, which we thinking to be Wolves, went on ſhore to kill them; the Dogs came very gently to our Boat, but we fearing they came to prey upon us, ſhot at them, and killed two; about the Neck of one was a Leathern Collar. There were 20 of them, like Maſtives, with prick'd Ears, long buſhy Tails, and a Bone in their Tizels. Then going further we found two Sleds like ours in *England*, one was made of Fir, Spruce, and Oaken Boards; the other all of Whalebone: We ſaw here Ravens, Larks and Patridges.

The 17th we went aſhoar, and in a kind of Oven made with Stones, we found a ſmall *Canoe* of Wood, a piece of Wood like an Image, a Bird made of Bone, and other Trifles. The Coaſt was very barren, without Wood or Graſs: The Rocks looked like Marble veined with divers Colours.

The Captain and Maſter conſulted what was beſt to be done, and gave theſe Reaſons for the probability of a Paſſage.

I. The Water being of one colour with the main Ocean, whereas we never came into any Bay, but the Water was altered very blackiſh. Reaſons for the Probability of a Paſſage.

II. We ſaw to the Weſt of theſe Iſlands three or four Whales, which we judged to come from a Weſterly Sea, becauſe we ſaw no Whale to the Eaſtward.

III. As we were rowing into a very great Sound lying S. W. from whence theſe Whales came, on a ſudden there came a violent counter-check of a Tide from the South-weſt againſt the Flood which we came with, not knowing from whence it was maintain'd.

IV. In ſailing 20 Leagues within the Mouth of this Entrance, we had ſounding in 90 Fathoms, fair, grey, ozy Sand, and the farther we ran to the Weſtward, the deeper was the Water, ſo that hard aboard the Shoar among theſe Iſlands, we had no ground in 330 Fathoms.

Laſtly, It did ebb and flow ſix or ſeven Fathom up and down, the Flood coming from divers parts, ſo as we could not perceive the chief maintenance thereof.

Theſe things conſider'd, it was reſolved if the Weather brake up, to make further ſearch.

The 20th the Wind came directly againſt us; and the 23d it came at S. E. very ſtormy and foul weather, and ſeeking for harbour, we fell into a fair Sound, and anchored in 25 Fathoms.

The 24th, the Wind coming fair, we directed our Courſe homeward, and on the 10th of *September* fell with the Land of *Deſolation*, and that Night a ſtorm ariſing, we loſt ſight of the *Moon-ſhine*, and on the 30th of *September* we came into *Dartmouth*, where the *Moon-ſhine* was arrived two Hours before.

CHAP. XXVIII.

The ſecond Voyage attempted by Mr. John Davis *for diſcovery of a North-weſt Paſſage,* Anno 1586: *Written by himſelf.*

1586. IN my firſt Voyage, not experienced in the Nature of thoſe Climates, and having no direction by Chart, Globe, or any certain Relation, in what altitude that Paſſage was to be ſearched, I ſhaped a Northerly Courſe, and fell on the Coaſt of *Greenland*, 500 Leagues from the *Derſes* W. N. W. Northerly, the Land very high and full of mighty Mountains, all covered with Snow no Wood, Graſs, or Earth to be ſeen, and the Sea two Leagues from the ſhoar ſo full of Ice, that no Ship could come near the Land. Thence coaſting the ſhoar towards the South, in the Latitude of 60 degrees, I found it to trend towards the Weſt, and following it 50 or 60 Leagues, it failed, and lay directly North, which I ſtill followed, and in 30 Leagues ſailing upon the Weſt ſide of this Coaſt, by me named *Deſolation*, we were paſt all Ice, and ſaw many green and pleaſant Iſlands bordering upon the ſhoar, but the hills on the main land were covered with ſnow. Then ſhaping our courſe W. N. W. we fell with another ſhoar in Latitude of 66 Deg. and found a paſſage 20 Leagues broad directly Weſt into the ſame, which we entred 30 or 40 Leagues, and found it neither to widen nor ſtraiten. But not knowing the length of it, and the year being far ſpent, we thought it our beſt courſe to return. And acquainting Secretary *Walſingham* and the reſt of the Honourable and Worſhipful Adventurers with our Proceedings, I was again appointed to ſearch the bottom of this Strait. In this ſecond attempt the Merchants of *Exeter*, and other places of the Weſt, became Adventurers. And on the 7th of *May* 1586. I ſet out from *Dartmouth* with Four Sail, *viz.* the *Mermaid* of 120 Tuns, the *Sun-ſhine* of 60 Tuns, the *Moon-ſhine* of 35 Tuns, and a Pinnace of 13 Tuns, called the *North Star.*

We coaſted the South ſide of *Ireland*, and on the 13th ſteered away N. W. till we came to the Latitude of 60 Deg. at which time I divided my Fleet, and ordered the *Sun-ſhine* and the *North Star* to ſeek a Paſſage Northward, between *Greenland* and *Iſland*, to the Latitude of 80 Deg. if Land did not hinder them.

I departed from them the ſeventh of *June*, and on the 15th diſcovered Land in Latitude of 60 Deg. and in Longitude from the Meridian of *London* Weſtward, 47 Deg. The Ice lay in ſome places 10, in ſome 20, in ſome 50 Leagues off the Shoar, ſo that we were conſtrained to bear into 57 Deg. to double the ſame, and to get a free Sea, which thro' God's favourable Mercy we at length obtained.

The 29th, after many Storms, we again diſcovered Land in Longitude from the Meridian of *London* 58 Deg. 30 Min. and in Latitude 64 Deg. being Eaſt from us; into which ſince it pleaſed God by contrary Winds to force us, I thought fit to bear in with it, and to ſet up our Pinnace, which we had provided in the *Marmaid* to be our Scout for this diſcovery, and ſo much the rather, becauſe the Year before I had been in the ſame place, and found it very convenient for ſuch a Purpoſe, being inhabited by a People of tractable converſation, and the Sea void of Ice.

The Ships being within the *Sounds*, we ſent our Boats to ſearch for ſhoal Water, where we might anchor, which in this place is very hard to find. The People of the Country eſpying them, came in their *Canoas* towards them with Shouts and Cries; but when they ſaw in the Boat ſome of our Company that were there the laſt Year, they rowed to the Boat, and taking hold on the Oar, hung about the Boat, expreſſing a great deal of joy, and making ſigns that they knew all thoſe that had been with them the Year before. I went aſhoar with others of the Company, and took with me 20 Knives: We had no ſooner landed, but they leap'd out of their Canoa's and came running to us, and embraced us with many ſigns of hearty welcome: There were 18 of them, and I gave to each of them a Knife; they offered me Skins for a Reward, but I made ſigns that they were not ſold, but freely given to them, and ſo diſmiſſed them for that time, with ſigns that they ſhould return after certain hours.

The next day with all poſſible ſpeed the Pinnace was landed upon an Iſland, there to be finiſhed, and while it was ſetting up, the People came continually unto us, ſometimes 100 Canoa's at a time, bringing with them Seal Skins, Stags Skins, white Hares, Seals, Salmon-peal, ſmall Cod, dry Caplin, with other Fiſh, and ſome Birds.

I ſent one of the Boats to ſearch one part of the Land, while I went to another part, with ſtrict command that there ſhould be no injury offered to any of the People, nor any Gun ſhot: They found Tents made of Seal Skins, wherein was ſtore of dried Caplin, being a little Fiſh no bigger than a Pilchard, ſome Bags of Trane Oyl, many little Images cut in Wood, and Seal Skins in Tan-tubs, whereof they diminiſhed nothing.

When they had paſſed ten Miles within the Snowy Mountains, they came to a plain Champion Country with Earth and Graſs, like to our moory and waſte Grounds in *England*. They went ten Leagues up into a River, which in the narroweſt place was two Leagues broad, finding it ſtill to continue, they knew not how far. But I with my Company took another River, which altho' at firſt it offered a large Inlet, yet it proved but a deep Bay, the end whereof I attained in four Hours, and there leaving the Boat well manned, went with the reſt of my Company three or four Miles into the Country, but found nothing, nor ſaw any thing but Gripes, Ravens, and ſmall Birds, as Larks and Linnets.

The third of *July* I manned my Boat, and went with 50 Canoa's attending upon me into another Sound, where the People by ſigns willed me to go, hoping to find their Habitation. At laſt they made ſigns that I ſhould go into a warm place to ſleep, at which place I went on ſhoar, and deſired they would leap with our Men, which they agreed to, but ours did over-leap them. From Leaping they went to Wreſtling; we found them ſtrong and nimble, and to have ſkill in Wreſtling, for they caſt ſome of our Men that were good Wreſtlers.

Croſs over a Grave.

The fourth, the Maſter of the *Mermaid* went to certain Iſlands to ſtore himſelf with Wood, where he found a Grave with divers buried in it, covered with Seal Skins only, and a Croſs laid over them.

The People are of good ſtature, well proportioned, with ſmall ſlender Hands and Feet, broad Viſages, ſmall Eyes, wide Mouths, the moſt part unbearded, great Lips, and cloſe toothed: They are much given to bleed, and therefore ſtop their Noſes with Deers Hair, or that of an Elan.

How they kindle Fire.

One of them kindled a Fire after this manner; He took a piece of Board wherein was a hole half thro', then he put into the Hole the End of a round Stick like a Bedſtaff, wetting the End thereof in Trane, and (as your Turners do) with a piece of Leather, by the violent motion he ſpeedily produced fire; this done, he made a fire with Turfs, into which, with many Words and ſtrange Geſtures, he put divers things, which we ſuppoſed to be a ſacrifice: They deſired me to go into the Smoak, and I willed them likewiſe to ſtand in the Smoak, which they would by no means do: I then thruſt one of them into the Smoak, and commanded one of my Men to tread out the fire, and ſpurn it into the Sea, to ſhew them that we did contemn their Sorcery. The are very ſimple in their Converſation, but marvellouſly theeviſh, eſpecially of Iron, which they have in great eſteem: They cut away the *Moon-ſhine*'s Boat from her Stern, they cut our Cables, and our Cloth where it lay to air, tho' we did carefully look unto it: They ſtole our Oars, a Caliver, a Boar-ſpear, a Sword, with divers other things, which ſo grieved the Company, that they deſired me to diſſolve this new Friendſhip, whereupon I ordered a Caliver to be ſhot among them, and immediately upon the ſame a Falcon, which ſtrange noiſe did ſo amaze them, that they departed with all ſpeed; but within ten Hours they returned, and intreated a Peace, which being granted, they brought us Seals Skins and Salmon-peal, but when they ſaw Iron, they could not forbear ſtealing, which when I perceived, I commanded that in no caſe they ſhould be any more hardly uſed, but that our own People ſhould be more vigilant to keep their things. They did eat all their Meat raw, they live moſt upon Fiſh, drink ſalt Water, and eat Graſs and Ice with delight: They make fiſhing Nets of Whales Fins. 'Tis probable they have Wars with thoſe on the main Land, many of them being ſore wounded, which Wounds they received upon the main Land, as by ſigns they gave us to underſtand. We learned theſe following Words among them.

Nets made of Whale Fins.

Keſinyoh,	Eat ſome.
Madlycoyte,	Muſick.
Aginyoh,	Go fetch.
Yliaoute,	I mean no harm.
Ponameg,	a Boat.
Paaotyck,	an Oar.
Aſanock,	a Dart.
Sawygmeg,	a Knife.
Uderah,	a Noſe.
Aoh,	Iron.
Blete,	an Eye.
Unuicke,	Give it.
Tuckloach,	a Stag or Ellan.
Panigmah,	a Needle.
Aob,	the Sea.
Myſacoah,	waſh it.
Lethickſaneg,	a Seal Skin.
Canyglow,	Kiſs me.
Ugnera,	my Son.
Acu,	Shot.
Conah,	Leap.
Maatuke,	Fiſh.
Sambah,	Below.
Maconneg,	Will you have this?
Cocah,	Go to him.
Aba,	fallen down.
Icune,	come hither.
Awenny,	Yonder.
Nugo,	No.
Tucktodo,	a Fog.
Lechickſah,	a Skin.
Maccoah,	a Dart.
Sugnacoon,	a Coat.
Gounah,	come down.
Saſobneg,	a Bracelet.
Ugnake,	a Tongue.
Ataneg,	a Seal.
Macuah,	a Beard.
Pignagogah,	a Thread.
Quoyſa,	Give it to me.

The ſeventh of *July* I went aſhoar in our new Pinnace, and with the moſt part of my Company went to the top of an high Mountain, hoping from thence to ſee into the Country, but the Mountains were ſo many and ſo mighty, that we could not ſee far, whereupon returning to the Pinnace, we ſaw a ſtrange ſight, which was, a mighty Whirlwind, continuing three Hours with little intermiſſion, which taking up the Water in great quantity, furiouſly mounted it into the Air. The next Morning the Storm being over, we failed into a mighty great River, directly into the Body of the Land, and found it to be no firm Land, but huge, waſt and deſert Iſlands, with mighty Sounds, and Inlets paſſing between Sea and Sea.

A ſtrange Whirlwind.

On the ninth we returned to our Ships, where our Mariners complained heavily againſt the People, that they had ſtoln an Anchor from us, had cut one of our Cables very dangerouſly, and ſpared not to fling Stones at us of half a Pound weight. The next day I went aſhoar, and uſed them with much courteſy, and when I returned, they followed me in their Canoa's. I gave ſome of them Bracelets, and ſeven or eight of them came aboard, whom I uſed kindly, and let them depart. As ſoon as the Sun was ſet, they began to practice their deviliſh nature, and with Slings threw Stones very fiercely into the *Moon-ſhine*, and knock'd down the Boat-ſwain, whereupon we purſued them with our Boats, and ſhot at them, but they rowed ſo ſwiftly that we could not reach them.

On the 11th, five of them came to make a new Truce; the Maſter acquainted me with their coming, and deſired they might be kept Priſoners until we had the Anchor again; but when he ſaw the chief Ringleader and Maſter of Miſchief was one of the five, he was then very urgent to have him ſiezed, and ſo it was determined to take him. He came crying *Iliaout*, and ſtriking his Breaſt, offered a pair of Gloves to ſell, the Maſter offered him a Knife for them: So two of them came to us, one of them we diſmiſſed, but the other was ſoon made Captive among us: Then we pointed to him and his Fellows for our Ancher, which being had, we made ſigns he ſhould be ſet at liberty. About an Hour after, the Wind came fair, and we ſet ſail, and brought him away with us: One of his Companions following our Ship in his *Canoa*, talked with him, and ſeemed to lament

They ſieze upon one of the Natives.

lament his condition, we ſtill uſing him well, and ſaying to him, *Iliaout*, i. e. *We mean no harm*: At laſt he aboard ſpake four or five Words to the other, and clapping both his Hands on his Face, the other did the like, and ſo parted: We judged the covering his Face and bowing down his Body, ſignified his death. After ſome time he became a pleaſant Companion among us; I gave him a new Suit of Frize of the *Engliſh* faſhion, of which he was very joyful: He trimmed up his Darts and all his fiſhing Tools, and would make Okam, and ſet his Hand to a Ropes end: He fed upon *Caplin* and dry *Newland* Fiſh.

The 17th, being in latitude of 63 Deg. 8 Min. we fell with a mighty maſs of Ice, very high like Land, with Bays and Capes, and ſuppoſing it to be Land, we ſent our Pinnace to diſcover it, but at her return we were aſſured that it was only Ice, which cauſed great Admiration to us all, and the rather becauſe in this place we had very ſtickle and ſtrong Currents.

We coaſted this mighty maſs of Ice until the 30th, finding it a great Bar to our purpoſe. The Air was now ſo foggy and the Sea ſo peſter'd with Ice, that all hope of proceeding was baniſhed; for on the 24th our Shrouds, Ropes and Sails were ſo frozen and compaſſed with Ice, only by a groſs Fog, as ſeemed to me very ſtrange, who the laſt year found this Sea free and navigable, without Impediments.

Our Men thro' this extremity began to grow ſick and feeble, and withal hopeleſs of good ſucceſs; whereupon very orderly and diſcreetly they intreated me to regard our preſent ſtate, and withal adviſed me, that in conſcience I ought to reſpect the preſervation of my own life and theirs, and that I ſhould not thro' my over-boldneſs leave their Widows and Fatherleſs Children to give me bitter Curſes. This did move me to commiſerate their condition, yet conſidering the Importance of this Diſcovery if it could be accompliſhed, the great hope of a Paſſage, by what we had ſeen the laſt Voyage, and that there was yet a third way attempted, I thought it would turn to my diſcredit if the Action ſhould fail thro' my neglect, and therefore reſolved to proſecute it; and conſidering that the *Mermaid* by reaſon of her Burthen, was not ſo nimble and convenient for this Purpoſe as a ſmaller Bark, and was 100 *l.* a Month charge to the Adventurers, I determined to re-victual the *Moon-ſhine*, and proceed as God ſhould direct me. Whereupon I alter'd my Courſe to recover the next ſhoar where this might be performed, and the first of *Auguſt* diſcovered Land without Snow or Ice, in Latitude of 66 Deg. 33 Min. and in Longitude from the Meridian of *London*, 70 Deg.

Auguſt. The ſecond we anchored in a very good Road, where with all ſpeed we graved and re-victualled the *Moon-ſhine*; we found it here very hot, and were much troubled with *Muskito's*, which did ſting grievouſly. The People of the Country caught a Seal, and with Bladders faſt tied to him, ſent him to us with the Flood, ſo as he came right with our Ships, which we took as a friendly Preſent from them.

The 5th, I went on top of a Hill, and eſpying three *Canoa's* under a Rock, went to them, and found in them Skins, Darts, &c. whereof we diminiſhed nothing, but left upon every Boat a Silk Point, a Bullet of Lead, and a Pin. The next day the People came to us without fear, and bartered with us for Skins: Our Savage kept cloſe, and made ſhew that he would fain have another Companion.

Being thus provided, I departed the 12th of *Auguſt*, leaving the *Mermaid* at Anchor: Her Crew finding many Occaſions of Diſcontent, and being unwilling to proceed, here forſook me.

The *Mermaid* forſakes them and returns.

The 14th, ſailing Weſt 50 Leagues, we diſcovered Land in Lat. 66 Deg. 19 Min. and the next day we ſtood to the South, and on the 18th diſcovered a very fair Promontory North-weſt from us, in 65 Deg. having no Land on the South, which gave us great hopes of a Paſſage.

The 20th I went to the top of an high Hill, whence I perceived that this Land was all Iſlands; we coaſted this Land towards the South from 67 to 57 Deg.

The 28th, having great diſtruſt of the Weather, we arrived in a fair Harbour, and ſailed ten Leagues into the ſame, being two Leagues broad, with fair Woods on both ſides. Here we continued till the firſt of *September*, in which time we had two very great Storms. I went ſix Miles into the Country and found the Woods were Fir, Pine-apple, Elder, Yew, Withy, and Birch: Here we ſaw a black Bear, and ſtore of Birds, as Pheaſants, Patridges, wild-Geeſe, Ducks, Black-Birds, Jayes, Thruſhes, and other ſmall Birds.

September The firſt we ſet ſail, and coaſted the Shoar with fair weather. The fourth we anchored in a good Road among many Iſlands. Eight Leagues to the North of this place, we had ſtrong hopes of a Paſſage, by reaſon of a mighty Sea paſſing between two Lands Weſt. We greatly deſired to go into this Sea, but the Wind was directly againſt us.

The ſixth we ſent five young Men aſhoar to an Iſland, to fetch ſome Fiſh, which we had left there covered all Night: The Savages who lurked in the Woods, ſuddenly aſſaulted our Men, which we perceiving, let ſlip our Cable, and under our Fore-ſail, bare into the Shoar, and diſcharged a double Muſket upon them twice; at the noiſe whereof they fled, having killed two of our Men with their Arrows, and grievouſly wounded two more, the other eſcaped by ſwimming, with an Arrow ſhot thro' his Arm. This Evening it pleaſed God further to increaſe our Sorrows, with a furious Storm at N. N. E. which laſted to the tenth: We unrigged our Ship, and intended to cut down our Maſts, the Cable of our Sheet Anchor brake, ſo that we expected to be driven aſhoar and become a Prey to the Canibals. Yet in this deep diſtreſs, God gave us ſuccour, and ſent us a fair Lee, ſo as we recovered our Anchor again, and new mored our Ship, where we ſaw that God had manifeſtly delivered us, for two Strands of our Cable were broken.

Two of the *Engliſh* ſlain by Savages.

The 11th, the Wind coming fair at W. N. W. we departed with truſt in God's mercy, ſhaping our Courſe for *England*, and arrived in the Weſt Country the beginning of *October*, where the *Sun-ſhine* arrived few days before us. She had been at *Iſland*, and from thence to *Groenland*, and ſo to *Eſtoliland*, and thence to *Deſolation*, where ſhe trafficked with the People, ſtaying in the Country 20 days. They loſt ſight of the Pinnace, called the *North Star*, on the third of *September* in a very great ſtorm, and lay a hull to tarry for her all the next day, but ſaw her no more: The ſaid Pinnace never return'd home.

The Third Voyage attempted by Mr. John Davis, *for diſcovery of a North-weſt Paſſage,* Anno 1587.

IN my laſt Voyage, in Latitude of 54 Deg. 30 Min. on the third of *September* the Fiſh did ſwim ſo thick about our Bark, as is incredible; and altho' we were unprovided of Fiſhing Tackle, yet with a Hook made of a long Spike Nail, and faſtned to one of our Sounding-Lines, before the Bait was changed we took more than 40 great Cods, which divers Fiſher-men that were with me ſaid, were the largeſt and beſt fed Fiſh that ever they ſaw. This encouraged ſome of the Honourable and Worſhipful Adventurers to continue their Favour and Charge (tho' all the Weſt Country Merchants, and moſt of thoſe in *London* fell from the Action) and three Ships were appointed, *viz.* the *Elizabeth*, the *Sun-ſhine*, and the *Helene*, two of them for the Fiſhing, and one for the Diſcovery.

We departed from *Dartmouth* the 19th of *May*, and diſcovered Land on the 14th of *June*. *June.*

On the 16th we anchored among many low Iſlands which lay before the high Land; the People came to us, crying *Iliaout*, and ſhewing us Seals Skins.

On the 20th I left the two Ships to follow their Fiſhing, taking their faithful Promiſe not to depart until my return unto them, which ſhould be in the end of *Auguſt*; but they finiſhing their Voyage in 16 Days, preſently return'd for *England*, without regard of their Promiſe, whilſt I not diſtruſting any ſuch hard meaſure, proceeded on the Diſcovery.

On the 24th, in Latitude of 67 Deg. 40 Min. the Weather was very hot; thirty Savages came to us in their *Canoas*, 20 Leagues from the Land, intreating us to go aſhoar. I coaſted the Shoar of *Groenland* from the 21ſt to the 30th, having the Sea all open towards the Weſt, and the Land on the Star-board ſide Eaſt from me: The weather extreamly hot, and very calm: The Sun was five Degrees above the Horizon at midnight, Lat. 72 Deg. 12 Min. The Compaſs in this place varied 28 Deg. towards the Weſt.

July The third of *July* we fell again with Ice, and on the ſixth put our Bark thorough it, ſeeing the Sea free on the Weſt ſide, and when we had ſailed five Leagues

Weſt, we fell with another mighty Bank of Ice, which we could not paſs, and therefore returning again, we got clear on the eighth at midnight, and recovered the open Sea thro' God's favour, by giving us fair Winds and calm weather.

On the 15th, in Lat. 67 Deg. 45 Min. a great Current ſet us to the Weſt ſix Points from our Courſe.

On the 19th, we had ſight of Mount *Raleigh*.

On the 30th, we croſſed over the Entrance of a great In-let or Paſſage, being 20 Leagues broad, and ſituate between 62 and 63 Deg. in which place we had eight or nine great Races, Currents, or Over-falls, like the Water under *London-bridge*, and bending their Courſe into the ſaid Inlet.

The 31ſt, in Lat. 62 Deg. coming cloſe by a Foreland, we fell into a mighty Race, where an Iſland of Ice was carried by the force of the Current as faſt as our Bark could ſail with all Sails bearing. This Cape, as it was the Southerly Limit of the Gulph, we paſſed over yeſterday, ſo was it the North Promontory or Beginning of another great Inlet, which we paſſed over this Night, where we ſaw the Sea falling down toward the Inlet, with a mighty Over-fall, and circular Motions like Whirlpools, in the ſame manner as forcible Streams paſs thro' the Arches of Bridges.

Auguſt.

On the 13th of *Auguſt*, as we were ſeeking for our Ships that went to fiſh, being among many Iſlands, we ſtruck on a Rock, and had a great Leak. The next day we ſtopped our Leak in a ſtorm, and on the 15th being in Lat. 62 Deg. 12 Min. and not finding our Ships, nor (according to their Promiſe) any Mark, Token, or Beckon, which I willed them to ſet up, and they proteſted to do upon every Headland or Cape within 20 Leagues every way from their fiſhing place, and we having but little Wood in our Ship, and half a Hogſhead of freſh Water, I ſhaped my Courſe for *England*, and arrived at *Dartmouth* the 15th of *September*.

Chap. XXIX.

The Voyage of Sir Humphry Gilbert *in the Country of* Devon, *Knight, for diſcovery of Countries to the Northwards of the Cape of* Florida, Anno 1583: *Written by* Edward Haies, *Capt. of the* Hind.

1583.

When firſt Sir *Humphry* had procured Letters Patents from her Majeſty for inhabiting ſuch places in *America* as were not in actual Poſſeſſion of ſome Chriſtian Prince, many Gentlemen of good eſteem aſſociated him in ſo laudable an Enterpriſe; but when Shipping was prepared, and Men ready upon the Coaſt to go aboard, ſome failed in performing their Contracts, and others deſerted who promiſed to accompany him, ſo that he was forced to put to Sea with a few of his aſſured Friends, where meeting with Misfortunes, and looſing one of his Ships, he returned home.

Having thus buried a great deal of Money only in a preparation, and much impaired his Eſtate, yet his Mind was not daunted, but continuing his purpoſe, granted Aſſignments out of his Commiſſion to divers Perſons of mean ability to plant and fortify in the North Parts of *America*, about the River of *Canada*, from whence no great matter was expected, to whom if God ſhould give good ſucceſs, he thought it would much advance the Hopes of the South; but time paſſing away, and nothing done by his Aſſigns, he was neceſſitated to take a Voyage in Perſon to keep his Patent in force, which was to expire if he got not actual poſſeſſion in ſix Years, and four Years were then elapſed.

After many Difficulties and croſs Accidents, he ſet out five Ships, *viz.*

June.

The *Delight*, 120 Tuns, Admiral, wherein he went in Perſon.

The *Bark Raleigh*, 200 Tuns, ſet forth by Mr. *Walter Raleigh*.

The *Golden Hind*, 40 Tuns.

The *Swallow*, 40 Tuns.

The *Squirril*, 10 Tuns, a ſmall Frigat for ſearching Creeks and Harbours.

We were in all about 260 Men, among whom were Ship-wrights, Maſons, Carpenters, Smiths, Refiners and Muſicians. Our Fleet aſſembled at *Plimouth*, where it was reſolved to put to Sea before our Proviſion and the Summer were too far ſpent. But a Doubt aroſe whether we ſhould begin our Diſcovery from the South Northward, or from the North Southward.

The firſt ſeemed without controverſy to be the beſt, becauſe we ſhould have the Current with us, which ſets Northwards from the Cape of *Florida*, and it being now *June*, we were not to ſpend time in Northerly Courſes, where we ſhould be ſurprized with Winter, but to haſten to the South, where the Winter would be milder and ſhorter than in the North.

July.

On the other ſide it was alledged, that ſince our Victuals were diminiſhed, and not ſufficient for ſo long a Voyage and the wintering of ſo many Men, we ought to ſhape our Courſe moſt likely to miniſter ſupply, and that was, to take *Newfoundland* in our way, which is but 700 Leagues from our own Coaſt, where a multitude of Ships reſorting yearly to fiſh, and tarrying until the end of *Auguſt*, we ſhould be abundantly ſupplied with Neceſſaries, which after the fiſhing ended, they might well ſpare, and freely impart to us. This done, we might proceed Southward and follow the Sun, until we arrived at places more temperate. Whereupon it was reſolved to begin our Diſcovery Northwards ſubmitting to Neceſſity, which muſt be ſupplied; altho' we had juſt reaſon to fear the Currents from the Cape of *Florida* towards Cape *Briton* and Cape *Raſe*, would be great Impediments to our further proceeding this Year, and compell us to winter in thoſe cold Regions, ſubject to continual Fogs, thick Miſts, and tempeſtuous weather.

On the 11th day of *June*, we ſailed from *Plimouth*, and on the 13th the Vice-admiral ſignified unto us, that the Captain and many of the Men were fallen ſick and about midnight they forſook us, altho' we had the Wind at Eaſt, fair and good: I could never underſtand the reaſon. It was afterwards reported, that they were infected with ſome contagious diſtemper, and arrived greatly diſtreſſed at *Plimouth*. I am confident no coſt was ſpared by Mr. *Raleigh*, their Owner, in ſetting forth; therefore I leave it unto God.

By this time we were in 48 Deg. of Latitude, not a little grieved at the loſs of the moſt puiſſant Ship in our Fleet, after whoſe departure the *Golden Hind* removed her Flag from the Mizen to the Fore-top.

From the 15th of *June* to the 28th, we never had a fair day, without Fog or Rain, and contrary Winds, moſt part at W. N. W. whereby we were driven Southward to 41 Deg.

At this time of the Year, the Winds about *Newfoundland* are commonly within two Points of the Weſt, either to the North or South, which makes the Courſe thither to be long and tedious after *June*, which in *March*, *April*, and *May*, hath been performed from *England* in leſs than 22 Days. We had the Wind ſo ſcant, that our traverſe was great, running to almoſt 41 Deg. South, and then to 51 Deg. North: We were alſo ſo peſter'd with Fogs and Miſty, that we loſt Company of the *Swallow* and *Squirrel*.

The Bank of Newfoundland.

About 50 Leagues on this ſide *Newfoundland*, we paſſed the Bank, which is a high Ground or Mountain under Water, beginning in 52 or 53 Deg. Northwards, and extending to 42 Deg. Southward. Its breadth is in ſome places more, in ſome leſs; we found it about 10 Leagues over where we paſſed. There is ſeldom leſs than 25 or 30 Fathom Water upon it, but we had no Ground on either ſide, with almoſt 200 Fathom of Line. While the

Fiſhing Seaſon laſts, a Man may know without ſounding when he is upon the Bank, by the incredible number of Sea-fowls hovering over it, to prey upon the Offals of Fiſh thrown out by Fiſhermen, and floating on the Sea. The *Portugueze* and *French* have a mighty trade of fiſhing on this Bank.

On the 30th of *July* we had ſight of Land, which we could not well diſcern by reaſon of the great Fog upon the Coaſt. We followed the Coaſt to the Southward until we came to the Bay of *Conception*, where we met again with the *Swallow*, and wondred to find all her Men in other Apparel. They hapned to meet with a *French* Veſſel homeward bound, and therefore deſired the Captain to give them leave to go aboard the ſaid Veſſel to borrow ſuch Proviſion as might be ſpared. Leave given, with ſtrict charge to deal favourably, they entred, and rifled her of Tackle, Sails, Cables, and rob'd the Men of their Cloaths, winding Cords about their Heads to make them diſcover what they had hidden. As they were returning in their Boat, the over-ſet by the Ships ſide, and ſome of them were drowned, the reſt were ſaved, and delivered ſafely aboard the *Swallow* by thoſe poor Creatures whom they had ſo barbarouſly uſed. They had alſo newly taken a *French* Veſſel laden with Wines, and another with Salt, both which we ſet at liberty, and taking the *Swallow* with us, we held on our Courſe Southerly until we came to the Harbour of St. *John*'s, where we found the *Squirril* at Anchor: There were then of all Nations within the Harbour 36 Sail. The Maſters of the *Engliſh* Ships came aboard to know the cauſe of our Arrival there; the General ſhewed his Commiſſion to take poſſeſſion of thoſe Countries for the Crown of *England*, and advancement of Chriſtian Religion, requiring their lawful aid for repairing his Fleet, and ſupply of ſome Neceſſaries ſo far as might conveniently be afforded him, out of that and other Harbours adjoining. in recompence whereof he offered to gratify them with any Favour and Priviledge they ſhould demand, which they could not expect to obtain hereafter upon ſuch reaſonable Terms. The Maſters promiſed to uſe their beſt endeavour to ſatisfy his reaſonable requeſt, and departed.

Every Ship of our Fleet was order'd to deliver to the Maſters of Ships in the Harbour, a Note of all their Wants, and Commiſſioners were appointed, part of our own Company and part of theirs to go into the adjoining Harbours, and levy our Proviſion, who were to tax all Ships as well *Engliſh* as Strangers, at an eaſy rate to ſupply us; the *Portugals* above other Nations, did moſt willingly and liberally contribute.

On the fifth of *Auguſt* the General had his Tent ſet up, and being well accompanied, ſummoned the Merchants and Maſters, both *Engliſh* and Strangers, to be preſent at his taking poſſeſſion of theſe Countries, before whom was openly read and interpreted his Commiſſion, by virtue whereof he took poſſeſſion of the ſaid Harbour of St. *John's*, and 200 Leagues every way, and (after the cuſtom of *England*) had a Rod and Turf of the ſame Soil delivered to him in token of poſſeſſion of the ſame, for him, his Heirs, and Aſſigns for ever; and ſignified unto all Men that from that time forward, they ſhould take the ſame Land as a Territory appertaining to the Queen of *England*, and that all Perſons coming thither hereafter to inhabit or traffick, ſhould be governed by ſuch Laws as he ſhould ordain, which ſhould be agreeable (as near as conveniently might be) to the Laws of *England*; and for a beginning, declared three Laws to be in force immediately. Firſt, For Religion, which in publick Exerciſe, ſhould be according to the Church of *England*. Secondly, For maintenance of her Majeſties Right and Poſſeſſion of theſe Countries, againſt which, if any thing were attempted, the Party offending to be executed as in caſe of high Treaſon. Thirdly, If any Perſon ſhould utter Words to the diſhonour of her Majeſty, he ſhould looſe his Ears, and (if a Merchant or Maſter of a Ship) to have his Ship and Goods confiſcate.

After Publication, Obedience was promiſed as well by Strangers as *Engliſh*, praying for continuance of this new Government. The Arms of *England* alſo were engraven in Lead and fixed on a Pillar of Wood; and the General granted in fee farm divers parcels of Land by the Water-ſide, whereby the Owners were for the future aſſured of a convenient place to dreſs and dry their Fiſh in, whereof before they were prevented by them that came firſt into the Harbour, for which they covenanted to pay a certain yearly Rent to Sir *Humphry* and his Aſſigns.

We had with us one *Daniel* a *Saxon*, well skilled in Minerals, who brought a parcel of Ore to the General, and proteſted that if Silver were the thing which might ſatisfy him and his Followers, there it was, and adviſed him to ſeek no farther, offering to engage his life upon it, which (he ſaid) was as dear to him as the Crown of *England* to her Majeſty.

I was not ſatisfied with this confident Aſſertion of the Refiner, but took occaſion to ask the General's opinion therein: He anſwered, *Content your ſelf, I have ſeen enough, and were I only to ſatisfy my own private humour, I would no further, but the Promiſe I made my Friends to diſcover the South Countries within Compaſs, now near expired, does alone induce me to go further; and as to the Ore, I have ſent it aboard, and would have no talk made of it while we are in harbour, where ſo many* Portugals, Biſcains, *and* French-*men are: When we are at Sea, proof ſhall be made, and if it anſwer our Expectations, we may the ſooner return again.*

While ſome of us were occupied in providing neceſſaries for our Voyage, others were watching for an opportunity when the Captains lay aſhoar, to ſteal away with our Ships by night; others got away in a Ship laden with Fiſh, which they ſiezed in an adjoining Harbour, and ſet the poor Men aſhoar; many hid themſelves in the Woods, watching an opportunity to return home by ſuch ſhipping as daily departed from the Coaſt; ſome were ſick of Fluxes, and licenced by the General to return, and many dead; ſo that upon a review we found our Company ſo diminiſhed, that we wanted Men to furniſh our Ships; wherefore the General thought good to leave the *Swallow* with ſuch proviſion as could be ſpared, to carry home the ſick People.

Our Ships being now ready, *viz*, the *Delight*, the *Golden Hind*, and the *Squirrel*, wherein was the General, we departed from St. *Johns* the 20th of *Auguſt*. which we found by exact Obſervation to be in 47 Deg. 40 Min. and the next day were at Cape *Raſe*, 25 Leagues S. S. W. from St. *Johns*, it is a low Land, in Latitude 46 Deg. 25 Min. Thence we ſhaped our courſe for the Iſle of *Sablon*, lying about 25 Leagues to Seaward of Cape *Briton*, upon intelligence given us by a *Portugueſe* at St. *Johns*, who told us that he was there 30 Years paſt, when the *Portugals* left in the ſame Iſland both Neat and Swine to breed, which were ſince exceedingly multiplied. This ſeemed happy tidings to us, to have ſuch ſtore of Cattle in an Iſland ſo near the place we intended to plant upon, from whence we might be ſupplied with Victuals for the preſent and the future.

From Cape *Race* to Cape *Briton* is 87 Leagues, in which Navigation, we ſpent eight days with indifferent good Winds, and never had ſight of Land, being hindred by the Current; at laſt we fell among ſuch Flats that it was a wonder any Ship eſcaped.

I ſhall ſet down the beſt Reckonings that were kept by expert Men the Maſter and Mate of the *Hind*, in our Courſe from Cape *Race* towards Cape *Briton* and the Iſland of *Soblon*.

		121	

On the 17th of *Auguſt* we had 35 Fathom, white Sand, Lat. 44 Deg.

The 28th, the Wind came South, and we followed the *Delight*, who bare with the Land all that Night, contrary to the mind of the Maſter of the *Hind*, who could not perſwade them to hold other Courſe, they alledging they could not make the Ship work better, nor to lie otherways.

The Delight loſt.

The Evening was fair and pleaſant, tho' not without token of Storms approaching: They in the *Delight* ſounded their Trumpets, and winded their Cornets. The next day being the 29th of *Auguſt*, the Wind blew vehemently at S. by E. with Rain and thick Miſts, that we could not ſee a Cable's length before us, and finding our ſelves encompaſſed with Flats and Sands, we made ſigns to the *Delight* to caſt about to Seaward, but they kept ſo ill a Watch, that they knew not the danger before they felt it, and ſtriking upon a Breach, her Stern was ſoon beaten in pieces; whereupon the General in the *Squirrel* and we in the *Hind* caſt about to Seaward, it not being in our power to give them any ſuccour, the Sea going mightily high, yet all that day and part of the next, we beat up and down as near the Wreck as was poſſible, looking out to ſee if perhaps any of them had ſaved themſelves in Boats, or upon Rafters, or other ways. There periſhed in her near 100 Men, among whom was a learned *Hungarian* born in *Buda*, who out of Piety and Zeal to good Attempts, adventured in this Action, intending to record in the *Latin* Tongue ſuch things as ſhould happen in this Voyage worthy of remembrance. Here alſo periſhed our *Saxon* Refiner and Diſcoverer of ineſtimable Riches, as many of us were fully perſwaded; alſo Captain *Maurice Brown*, a virtuous, honeſt and diſcreet Gentleman.

Miraculous Deliverance.

As God would have it, the day before was very calm, and a Souldier having killed a Fowl with his Piece, deſired the Boat might be hoiſed out to fetch it, which was granted, and was not hoiſed in again that Night, and when the Ship was caſt away, the Boat was aſtern, being in burthen about a Tun and a half; there was left in the Boat one Oar, and nothing elſe. Some of the Company that could ſwim, recovered the Boat, and haled as many Men out of the Water as they could, but eſpecially watched for the Captain or the Maſter, the firſt of which they could never ſee, but got hold of the Maſter, and when 16 were in the Boat, they cut off the Rope, and committed themſelves to God's mercy, deſtitute of Food, and not a drop of freſh Water, but were forced to drink their own Urine, without any other ſuſtenance for ſix days together.

They return.

A Sea Monſter.

After this heavy chance, we in the *Hind* and *Squirrel* continued beating up and down, expecting when the weather would clear up, that we might bear in with the Land. The *Squirrel*'s Company being pinched with ſhort allowance and want of Cloaths, beſought the General to return for *England* before all periſhed; whereupon moved with compaſſion towards his poor Men, in whom he ſaw no want of good will, but of means to perform the Action, he reſolved to return, and calling the Captain and Maſter of the *Hind*, he gave them many Reaſons inforcing his unexpected return, withal proteſting himſelf ſatisfied with what he had ſeen and known already, reiterating theſe Words, *Be content, we have ſeen enough, and take no care of Expence paſt; if God ſend us ſafe home, I will ſet you forth royally the next Spring, therefore I pray you let us no longer ſtrive here, where we fight againſt the Elements.* So upon the 31ſt of *Auguſt* in the Afternoon we changed our Courſe and returned for *England*, at which very inſtant, juſt as we were winding about, there paſſed between us towards the Land, a very Lion to our thinking, in Shape, Hair, and Colour, with his whole Body in ſight except the Legs; he turned his Head to and fro, ſhewing his long Teeth and glaring Eyes, and coming right againſt the *Hind*, he roared much like a Lion. The General took it for a good *Omen*, rejoicing that he was to war againſt ſuch an Enemy, if it were the Devil.

The ſecond of *September* we paſſed in ſight of Cape *Race*; the General came aboard the *Hind*, which was our laſt meeting. He much lamented the loſs of his great Ship, and of his Books and Notes, and ſomething elſe for which he was out of meaſure grieved, which I could not draw from him, but I gueſs it to be the Ore which *Daniel* the *Saxon* brought to him in *Newfoundland*, the remembrance whereof touched him ſo deep, that he at the ſame time beat his Boy in a great rage, becauſe when he was formerly ſent aboard the *Delight* to fetch ſome things, this, being the chief, was forgotten and left behind; after which time he never had an opportunity of ſending again.

The General at our firſt ſetting out, had no good opinion of theſe Northern Parts, and was willing to grant Aſſignments to ſuch as required them, whereas now he became contrarily affected, refuſing to make any Grants, eſpecially of St. *John's*, which ſome *Engliſh* Merchants made ſuit for, offering to employ their Money and Travel upon the ſame; yet neither by their own Suit, nor of others of his Company, whom he was willing to pleaſure, could it be obtained.

Alſo ſpeaking of his Reſolution to reattempt this Voyage the next Spring, he aſſigned the South part to the Captain and Maſter of the *Hind*, and reſerved the North to himſelf, affirming that this Voyage had won his Heart from the South, and that he was now become a Northern Man altogether. And when we asked him what Means he had at his arrival in *England*, to compaſs the Charges of ſuch an Expedition, he determining upon two Fleets, one for the North, and another for the South: Leave that to me (he replied) I will ask a Penny of no Man; I will bring good Tidings to her Majeſt, who will be ſo gracious to lend me 10000 *l.* willing us therefore to be of good cheer, for he thanked God, he ſaid, with all his Heart for what he had ſeen, the ſame being enough for us all, and that we needed not to ſeek any further. Theſe laſt Words he would often repeat with great fervency, being very confident and ſetled in belief of ineſtimable good by this Voyage; but the greater number of his Followers were of a contrary opinion.

The Captain, Maſter, and others of the *Hind*, endeavoured to perſwade him to ſail in her, and not to venture in the *Squirrel*, which was over-charged with Nettings and ſmall Artillery, more for ſhew than ſafety, being too cumberſon for ſo ſmall a Boat, and was afterward the occaſion of her loſs; but his anſwer was, I will not forſake my little Company, with whom I have paſſed ſo many Storms and Perils. When we ſaw we could not divert him from his Reſolution we ſupplied him with Proviſion out of the *Hind*, and ſetting him aboard the *Squirrel*, committed him to God's protection, we being then more than 300 Leagues on our way home.

When we came into the Latitude of 50 Deg. we met with very foul weather, the Seas breaking ſhort and high like Pyramids, ſo that thoſe aboard us who had uſed the Sea all their life-time, never ſaw more terrible Seas. We had alſo upon our Main-yard, an Apparition of a little Fire by Night, which Seamen call a *Corpuſant*, or *Caſtor* and *Pollux*, and is uſually ſeen in great Sorms. We had only one, which is commonly believed to be a ſign of more tempeſt to come.

Caſtor and *Pollux*.

On *Munday* the 6th of *September*, in the Afternoon the *Squirrel* was near caſt away, oppreſſed by Waves, yet at that time recovered, and ſhewed ſigns of Joy. The General ſitting abaft with a Book in his Hand, cried out unto us in the *Hind*, as oft as we approached within hearing, *We are as near to Heaven by Sea as by Land*, Reitering the ſame Speech, well beſeeming a reſolute Soldier of *Jeſus Chriſt*.

The ſame Night about twelve a clock, the *Squirrel* being a head of us, ſuddenly her Lights were out, and our Watch cried out, the General was caſt away, which proved too true. Yet we ſtill looked out all that Night, and ever after till our arrival in *England*. After much bad weather, we arrived in *Falmouth* the 22d of *September*, 1583.

Sir Humphry Gilbert drowned.

A Relation of Richard Clark, *Maſter of the* Delight, *written to vindicate himſelf from the fault of caſting away the Ship, imputed to his Overſight.*

DEparting from St. *Johns* Harbour the 20th of *Auguſt* unto Cape *Raze*, from thence we directed our Courſe to the Iſle of *Sablon*, but when we came within 20 Leagues of it, the General came up in his Frigat, and demanded of me what courſe was beſt to keep; I ſaid that W. S. W. was beſt, becauſe the Wind was at South and Night at hand, and unknown Sands lay off a great way from the Land. The General commanded me to go W. N. W. I told him that the Iſle of *Sablon* was W. N. W. and but 15 Leagues off, and that he ſhould be upon the Iſland before day if he went that courſe. The General ſaid my reckoning was untrue, and charged me in her Majeſties Name, and as I would ſhew my ſelf in her Country, to follow him that Night. I fearing his threatnings, becauſe he repreſented her Majeſties Perſon, obeyed his command, and about ſeven in the Morning

ing the Ship ſtruck aground and was caſt away. Sixteen of us got into the Boat, which was ſo little, and ſo crouded with Men, that we expected every moment to be ſwallowed by the Sea. When we had remained in this condition two Days and two Nights, and ſaw that it pleaſed God that our Boat ſtill lived in the Sea, and might bring ſome of us to Land, if not over-charged: One *Headly* a Souldier made a motion that all but my ſelf ſhould caſt Lots, and thoſe four which had the ſhorteſt Lots, ſhould be thrown over-board; but I refuſed, and adviſed to abide God's pleaſure, who was able to ſave all as well as a few. He then asked me if my remembrance was good; I replied, I gave God praiſe it was good, and that I knew how far I was from the Land, where I hoped we ſhould come within two or three Days, and to put them in comfort, told them it was but 60 Leagues, altho' it were 70. Thus we continued the third and fourth day, without any ſuſtenance, but Weeds that ſwam on the Sea, and ſalt Water to drink. The fifth day *Headly* died, and one more; then we all deſired to die, being pinched with hunger, and the weather ſo foul, that in all theſe five days we ſaw the Sun but once, and the Stars but one Night. Thus we remained the ſixth day, and the Company were very importunate, and doubted they ſhould never come to Land; I comforted them as well as I could, and promiſed they ſhould come to land the next day, or elſe they ſhould caſt me over-board; and accordingly the ſeventh day at eleven we had ſight of the South part of *Newfoundland,* and at three came aſhoar. All theſe ſeven days the Wind kept at South; had it ſhifted we had never got to Land (having but one Oar) and the Wind came up at North within half an Hour after our arrival. We were ſo weak that one could ſcarce help another out of the Boat, yet with much ado, being all come aſhoar, we kneeled down and praiſed God that he had dealt ſo mercifully with us. Then the ſtrongeſt helpt the reſt to freſh Brook, where we ſatisfied our ſelves with Water and Berries very well. We made a little Houſe with Boughs, where we reſted that Night: In the Morning I diſperſed the Company three and three to ſeek every way for Food, appointing them to meet all again at Noon. They found great ſtore of Peaſe, as good as we have in *England,* wherewith having refreſhed our ſelves three days, and made new Oars, we rowed along the Shoar five days, and when we were hnngry, went aſhoar and gathered Peaſe and Berries. At laſt we hapned on a Ship of St. *John de Luz,* which brought us to *Biſcay*; the Maſter was our Friend, or elſe we had been put to death; for when the Viſitors came aboard, as is the cuſtom in *Spain,* they demanding what we were, he ſaid we were poor Fiſher-men, who had loſt our Ship in *Newfoundland,* and ſo they enquired no more. As ſoon as Night was come, he put us on Land, bidding us ſhift for our ſelves; we had not above ten or twelve Miles into *France,* which we walked that Night, and were then out of danger, and ſhortly after came into *England* toward the end of the Year 1583.

An Account of Sir Humphry Gilbert*'s Voyage to* Newfoundland: *Written by* Stephanus Parmenus Budeus.

To the Reverend Mr. *Richard Hakluyt,* Maſter of Arts and Philoſophy at *Chriſt-Church* in *Oxford.*

My Friend and Brother,

I had not purpoſed to write to you, when the Promiſe of your Letters came to my mind; you had thoughts of following us your ſelf in *June* laſt, and therefore I deſired Doctor *Humphry* to acquaint you how it was with me; But that not ſatisfying you, I ſhall repeat the ſame, having no leiſure at this time to multiply words.

On the 11th of *June,* we did at laſt ſet ſail from *Plimouth* in good earneſt, our Fleet conſiſting of five Ships, the greateſt of which the * Admiral's Brother had lent us, withdrew her ſelf from us the third day, we know not upon what occaſion; the reſt of us kept company till the 23d of *July,* at which time the great Miſts intercepting our ſight, we were diſperſed. Our Ship being alone, we deſcried Land the firſt of *Auguſt,* about the Latitude of 50 Deg. after we had run beyond the Latitude of 41 Deg. in hope of Southerly Winds, which did not blow at that time, as uſually.

* Mr. Rawleigh.

The Iſland is by the *Engliſh* called *Pengwin,* becauſe of the multitude of Birds of the ſame name; but we ſaw no Birds, nor came near the Land, the Wind being fair for our deſigned Port, where, by the goodneſs of God, and to our great Joy, we arrived in two hours. The place is ſituate in *Newfoundland,* between 47 and 48 Deg. call'd St. *Johns.* The Ship's Company aboard the Admiral, were ſomewhat ſickly, by reaſon of the multitude of Men and ſmalneſs of the Ship, and two of them were dead of a Flux, of the reſt we have good hope. Of our Ship's Company (for I am ſhipp'd aboard *Maurice Brown,* a gallant young Gentleman) two were caſually drowned, the reſt are in ſafety, and ſtrong, and as for my own part, I was never more healthy. We arrived here the third of *Auguſt,* and on the fifth the Admiral took poſſeſſion of the Country, for himſelf and the Kingdom of *England,* ordaining and publiſhing certain Laws concerning Religion, and Obedience to the Queen of *England.* At preſent our Fare is ſomewhat better and daintier than it was before; and Experience having taught us what contrary Winds we have met with, and what we may yet feel, we ſhall take order that nothing be wanting. We found in this place about 20 *Portugal* and *Spaniſh* Ships, beſides *Engliſh,* who being inferiour to us in Power, muſt not let us ſuffer by Hunger. The *Engliſh,* altho' they were ſtrong enough, and ſafe from our Force, yet ſeeing our Authority under the Queen's Letters Patents, they ſhewed us all manner of Duty and Humanity.

The Country and Manners of the People remain next to be ſpoken of: But what ſhall I ſay, my *Hakluyt,* when I ſee nothing but a very Wilderneſs? Of Fiſh here is an incredible plenty, from whence ariſes great profit to the Undertakers: The Hook ſcarce reaches the bottom, before ſome goodly Fiſh is taken. The whole Land is full of Hills and Woods: The Trees are for the moſt part of Pines, whereof ſome are decayed, and others ſpringing up. Many of the old being fallen down, ſtop the way, and hinder the ſight of Travellers, that they cannot go forward. The Graſs and Herbs are long and tall, little differing from ours. Nature it ſelf ſeems to endeavour the Production of Corn; for I found ſome Blades and Ears in a manner bearded, ſo that by mannuring and ſowing, they might eaſily be made fit for the uſe of man. The Buſhes and Strawberries ſpringing up in the Woods, caſt a pleaſant odour. Bears do ſometimes appear about the Fiſhermens Cottages, and are three killed, but they ſeem by their Skins to be white, and are leſs than ours. Whether there be any People in the Country is uncertain; I could never meet with any Man that had ſeen any, and indeed how is it poſſible he ſhould, when the Country is impaſſible. For the ſame reaſon it is unknown whether the Mountains contain any Metals, altho' the colour of them ſeems to promiſe ſome Mines in them. We moved the Admiral to fire the Woods, that we might march and view the Country; which Motion did not diſpleaſe him, had it not been for fear of great inconvenience that might enſue; for it was reported and confirmed by very credible Perſons, that when the like happened by chance in another Port, the Fiſh never came near the place in ſeven Years after, by reaſon of the Water being made bitter by the Turpentine and Roſin of the Trees, which ran into the Rivers. The Weather is now ſo hot, that unleſs the Fiſh which is laid out to be dried in the Sun, be every day turned, it will be parched and ſpoiled. How cold it is in Winter, the great Mountains of Ice in the midſt of the Sea, have taught us. Some of our Company report, that in *May* they have been incloſed with Ice 16 days together, ſome of which Iſlands of Ice were 60 Fathoms high, and when the ſides next the Sun were melted, it would ſo alter the ballance of them, that the bottom part would riſe upward, to the great Peril of thoſe that were near them. The Air upon the Land is indifferently clear, but at Sea towards the Eaſt are nothing but perpetual Miſts; and in the Sea about the Bank (40 Leagues diſtant from ſhoar) there is no day without Rain.

When we have ſupplied our Neceſſity in this place, we purpoſe by the help of God to paſs towards the South, with ſo much the more hope every day, by how much the greater the things are, that are reported of thoſe Countries we intend to diſcover: So much to our preſent condition.

Now I deſire to know ſomewhat of your Affairs, but I fear in vain, and chiefly I deſire to know how my Patron Mr. *Henry Umpton* bears my abſence. My Obedience and Duty ſhall always be ready towards him as long

as I live; and I hope this our Voyage will anſwer his Expectations. It remains that you believe me to be ſtill yours, and ſo yours as no Man more. The Son of God bleſs all our Labours, ſo far as that you alſo may partake of them. Adieu moſt friendly, moſt ſweet and moſt virtuous *Haklayt*, from St. *John's-Port* in *Newfoundland*, the 6th of *Auguſt*, 1583.

Yours, *Stephen Parmenius* of *Buda*.

CHAP. XXX.

An Extract of divers Voyages attempted by Engliſh *Navigators, at the Charge of the* Muſcovia *Company, for Diſcoveries towards the North Pole.*

The Voyage of Mr George Weymouth

1602. ANno 1602, the *Muſcovia* Company did ſet forth two Fly-boats, of 70 and 60 Tuns, victualled for a Year and a half, to diſcover the North-weſt Paſſage, under the command of Mr. *George Weymouth*, who departing from *Redcliſ* the ſecond of *May*, met with ſo much Ice, Froſt and Fog in the middle of *July*, in Lat. 68, 53, that his Men being diſcouraged, would proceed no further, alledging this reaſon, That if it were granted, they might winter between 60 and 70 Degrees of Latitude, with ſafety of their Lives and Veſſels, yet it would be in *May* next before they could unmore them and launch them into the Sea again; and therefore if the Merchants would proceed in the diſcovery of theſe North-weſt Parts of *America*, their Ships might be in the ſaid Latitudes from *England* by the firſt of *May*, and ſo be better furniſhed with Men and Victuals to proceed in the Action: Whereupon they ſhaped their Courſe for *England*, and arrived at *Dartmouth* the fifth of *September*.

The Voyage of Mr. John Knight.

1606. ANno 1606, the ſaid Company did ſet out a Bark of 40 Tuns, for diſcovery of a Northweſt Paſſage, under the command of Mr. *John Knight*, who departing from *Graveſend* the 18th of *April*, deſcried *America* on the 19th of *June*, Lat. 56 Deg. 48 Min.

The 24th it blew a Storm at North, and ſo much Ice came in, that their Rudder was driven from their Stern; ſo that they were forced to hale into a Cove, to ſave their Cloaths, Furniture and Victuals, and when the Ship was a-ground, worked hard in getting the Water out of her, ſtopping her Leaks, and ſaving as much Bread as they could, whilſt others were buſied in building a Shallop.

The 26th, in the Morning the Maſter, his Mate, and four more took the Boat, carrying with them four Piſtols, three Muſkets, five Swords and two half-Pikes, to go over to a great Iſland, not above a Mile from the Ship, to ſearch for a better place to mend their Ship. When they were gone to the other ſide, the Maſter, his Mate and two more went on ſhoar, leaving two Men in the Boat, with one Muſket, one Sword, and a half Pike, to keep it, who ſtaied in the Boat from ten in the Morning till eleven at Night, but could hear no news of them after they went up the Hill. Then the Trumpeter ſounded two or three times, and the other diſcharged his Muſket as often, and ſo returned to the Company on the other ſide, who ſeeing no more than two, enquired for the Maſter and the reſt, and were anſwered, that they could tell no news of them after their departure out of the Boat, but that they ſaw them go up the top of the Iſland. Which report ſtruck them all with great fear, conſidering the extremity they were in, wanting their Maſter and three of their beſt Men, and their Ship lay ſunk, ſo that they had nothing to truſt to but their Shallop, which was not half finiſhed. They lay aſhoar that Night in a Tent between two Rocks, keeping a good watch, and hoping that if the Maſter and his Company ſhould travel, ſo far that they could not come again before Night, they would fire a Muſket, and our People might hear them.

Mr. Knight with three more taken by the Savages.

The next day it was reſolved that ſeven of them ſhould go over in the Boat, with Muſkets, Swords, and Targets, to try if they could ſee or hear of the Maſter and his Company, whom they feared were ſurpriſed by Savages, or devoured by wild Beaſts; but when they came to the Sea ſide, they could not get over for Ice, and ſo returned to the Ship, to ſave what things they could that day.

The next day being fair weather, they got all things out of the Ship, and made her clean in hold, keeping her as light as they could, that ſhe might not beat and bruiſe her Hull, becauſe ſhe lay upon hard Rocks. At nine at Night it began to rain, and continued all Night, and about one, the Boatſwain and Steward being upon the watch, the Steward went aboard to pump, leaving the Boatſwain at watch about a Muſket ſhot from the Tent. While he was pumping, many of the Country People came over the Rocks towards the place where the Boatſwain was, who when they ſaw him, ſhot their Arrows at him, running towards him as faſt as they could; whereupon he diſcharged his Muſket at them, and fled to the Tent. The Steward hearing the Muſket go off, came out of the Ship, and perceiving the Savages to run towards the Shallop, cried out to thoſe that were aſleep in the Tent, to haſten to the reſcue of the Boatſwain and Shallop. They made what haſt they could, but before they could get to the Shallop, the Savages were got into it; whereupon they ſent two of their Men back to the Tent, and the reſt, being eight Men and a great Dog, advanced towards them, the Dog formoſt, and diſcharging three or four Muſkets at them as they ſtood in the Shallop, they held up their Hands, calling to one another, and then ran away toward their Boats. They were about 50 little People, tawny, thin Beards and flat Noſes. Their Boats were very large, and as they were rowing away they ſtuck faſt in the Ice, which the *Engliſh* perceiving, went as near as they could, and made about a dozen ſhot at them before they could get clear, which made them to cry out bitterly.

The Savages aſſault our Men in the Night.

Deſcription of the Savages.

The 29th was ſpent in getting ſuch things aboard as they could, leſt the Savages ſhould return in a greater number and beſet them. Then all hands went to work with Axes and Pickaxes, to break the Ice and make way for the Ship, and the next Night they got her out, and with Oars rowed her away among the broken Ice, with little hopes of recovering their Country, ſhe being very leaky, and no Rudder to ſteer her. This labour continued till the third of *July*, when faſtening the Ship to an Iſland of Ice, they went to work in ſtowing their things to make her ſtiff, there being no Ballaſt in her. The Carpenter made what ſhift he could to hang the Rudder: They broke the Maſter's Cheſt, and with the Iron Bands of it, made faſt two Pickaxes for two Pintels; ſo as that Night they hanged the Rudder, having but two Pintels and a Cable thro' the middle of it, to keep it to with two Tacks.

Pintels are Iron Pins faſtned to the Rudder to hang it to the Stern-poſt

The next day they diſcovered a great Leak cloſe abaſt their fore-Foot, where the Keel was ſplintered in two or three places, and the Sea came running in ſo faſt, that it was not poſſible to keep her free with both Pumps, and they could not come to ſtop it, becauſe it was under the Timbers; whereupon they baſted their main Bonnet with Occum, and put it over-board right againſt the Leak, which eaſed them 4 or 500 ſtrokes in an hour. It was then reſolved to ſhape their courſe towards *Newfoundland*, hoping to meet with ſome *Engliſh* or *French*, and on the 24th of *July* they ſpied about a dozen Shallops, who were fiſhing two Leagues from them, who conducted them to the Bay of *Fego*, where they continued till the 22d of *Auguſt* in repairing their Ship and refreſhing themſelves; and then putting to Sea, arrived at *Dartmouth* the 20th of *September*, 1606, from whence they wrote to the Owners at *London*, of the loſs of the Maſter and his three Companions, and of the doleful ſucceſs of the Voyage.

CHAP. XXXI.

The Voyages of Mr. Jonas Pool.

1609. I Weighed from *Blackwall* the firſt of *March*, 1609, in a Ship called the *Amity*, of 70 Tuns, having 14 Men and one Boy. On the 23d of *May* I was within thtee Leagues of Cape *Cold* in *Greenland*, in 78 Deg. 43 Min. I am fully perſwaded that a Paſſage may be as ſoon attained this way by the Pole, as any other way whatſoever, by reaſon of the great heat of the Sun in this Climate; and I obſerved the Ice here to be nothing ſo big as I have ſeen in 73 Deg.

The firſt of *June* we ſaw near 100 Morſes ſleeping upon a little rocky Iſland, as we went towards them, we eſpied ſome Deer, whereof we killed four, but when we came to the Rock, the Ice that the *Morſes* lay on was hollow and ſloping, and while we were killing them, it broke, and Ice and Morſes ſlid into the Sea together, carrying one of our Men with it, who was much bruiſed, not only by the weight of dead Morſes and Ice, but by the Morſes that were alive, who ſtruck at him in the Water. We ſaw great ſtore of Deer in this Country, which have neither Buſh nor Trees to ſhelter them from the nipping cold of Winter, of whom we killed 37, beſides the four before-mentioned, moſt of them two or three Inches thick of fat on the Haunches. There is alſo great ſtore of Fowl in this Country, of which we killed ſome, and we alſo killed above 20 Bears.

41 Deer killed.

I found the Air here to be temperate, and not near ſo cold as I found at *Cherie*-Iſland, in five ſeveral Voyages, altho' the Iſland be five Degrees more ſoutherly.

The 23d, at a North Sun I was near *Black-point*, which hath many ſunken Rocks on the Southermoſt end of it, therefore you muſt come no nearer than 25 Fathoms.

On the firſt of *Auguſt* I ſtood for *England*, and arrived at *London* the 21ſt, bleſſed be God, for ever and ever.

The Second Voyage of Jonas Pool, *for the diſcovery of* Greenland, *and towards the Weſt of it: Set forth by the* Muſcovia *Company*, Anno Dom. 1611.

1611. WE ſailed from *Blackwall* the 11th of *April*, with four Ships, *viz.* the *Mary Margaret* of 150 Tuns, 49 Men and Boys; the *Elizabeth* (whereof I *Jonas Pool* was Maſter) of 60 Tuns, 18 Men and Boys; the *Amity*, 70 Tuns, 24 Men and Boys; the *Reſolution*, 16 Men and Boys. The *Mary Margaret* was appointed to kill Whales, for which purpoſe ſhe had ſix Men of St. *John de Luz*, with all things fitting for that purpoſe: The *Elizabeth* was ordered to keep her company as far as *Greenland*, and thence to ſearch thoſe Seas for a Paſſage towards the Pole: The *Reſolution* was bound to S. *Nicholas*, in hope to make two Voyages thither this Year; but before we were as far as the Latitude of 65, we were all ſeparated by foul weather. The *Elizabeth* was ſtoked, that the Water that was in her could not come to the Pump, but lay upon the Ballaſt, whereby we could bear no ſail to keep the *Mary Margaret* company.

I came to *Cherie*-Iſland the 13th of *May*, where I ſtaid till the 16th of *June*, in which time we ſet up our Shallop, and ranged ſome part of the Coaſt. We had a Storm at South, which ſunk our Shallop, and I ſaw the
80 Degrees. Ice lie cloſe to the Land in 80 Deg. wherefore perceiving it impoſſible to paſs that way, and there running very ſtrong Tides, in which it is dangerous dealing with the Ice, I ſtood to the ſouthwards along the ſaid Ice, to ſee if I could find the Sea open that way, and ſo get to the weſtward of it; but I found it to lie S. S. W. and ran along it about 120 Leagues, at which time I ſuppoſed my ſelf near *Hold with Hope* in *Groenland*. I ran near 40 Leagues to the Weſtward of the Eaſtermoſt part of the ſaid Land, as it is laid down, and by my account was to the Southward of it, near the Latitude of 74 Degrees, where I ſaw many Whales by the ſides of the Ice. We commonly ſounded every Watch, but had no ground at 200 Fathoms.

The 27th of *June*, the Wind coming to the North, I ſtood for *Cherie*-Iſland, where I arrived the 29th, and ſaw about 300 Morſes on Land, but a ſtorm coming, they went all into the Sea.

The 12th of *July*, we killed above 200, and laded the Ship with their Fat, Hides, and Teeth.

On the 25th at Night, I went aſhoar, and met with ſome of the *Mary Margaret*'s Men, who told me that their *Mary Margaret* lost.
Ship was caſt away in *Greenland*, and that Captain *Edge*, with Mr. *Bennet* the Maſter, and others, to the number of 30 Perſons, were arrived on the South ſide of the Iſland in three Boats. I took them in, and at Night ſet ſail for *Greenland*, where I anchored near the *Mary Margaret* on the third of *Auguſt*, and found there a Ship of *Hull*, whereof one *Marmaduke* was Maſter, who had killed above 130 Morſes, which Mr. *Edge* left on Land when he came from thence in the Boats aforeſaid, and we intended to kill at our arrival. As ſoon as the Ship was moored, we got out our Blubber, and ſent it aſhoar to be made into Oyl, and followed our work till the 17th, at which time having Oyl by the Ships ſide, we put out all the Blubber which was in Hold, ſave two Tuns and a half, not doubting but the Ship had Ballaſt enough in her, there being 12 Tun of Hides (which were the chief cauſe of the loſe of the Ship) and nine Tun of Oyl, and The *Elizabeth* loſt.
ſeven Tun of Ballaſt, beſides half a Tun of Stones, a Hogſhead and a Barrel of Teeth, in all about 29 Tuns, which to any Man's judgment had been ſufficient to ſhift a Bark of 60 Tuns; but as the laſt *But* went out of her, the Ship began to heel, and withal a great many Men went to leeward, there being above 40 aboard; whereupon the Hides in the Hold ſlid to leeward, and brought her altogether down, and then every Man ſhifted to ſave his life: I being then far from the Hatches, could not get up ſo ſoon as others did. I ſaw death before mine Eyes two ways; if I ſtaid in Hold I was ſure to be drowned, and if I went up the Hatches, I muſt run the hazard of being killed; for down at the Hatches there fell Hogſheads of Beer, and divers weighty things, the leaſt of which was ſufficient to break a Man's Bones, and in attempting to get up, I was beaten down twice and hurt; but it was not the will of God to take my life from me then, but to pluck me from the very Jaws of Death, and by ſwimming and crawling, I got into the Sea clear of the Ship, where a Boat took me up, and bleſſed be God no Man periſhed in this dangerous Accident. We being all got into three Boats, went to the *Hull* Ship, where we found but ſmall comfort, *Marmaduke* telling us plainly we ſhould not come aboard his Ship, and cauſed Pikes and Launches to be brought to keep us out. Then Mr. *Edge* and others deſired him to let me come aboard, and with much ado I got aboard with many Wounds and Bruiſes.

In this our great diſtreſs, the Maſter of the *Hull* Ship ſaid he would try if he could recover our Ship; but he deferred the time a whole week, till ſhe was full of Oze, ſo that when we came to weigh her, both her Cables burſt, and ſo we ſorrowfully left her, without hope of recovery. Then we went aboard the *Hull* Ship, which

God

The *Margaret's* Men and *Elizabeth's* Men return in the *Hull* Ship. God had prepared for our Succour, where our Merchants agreeing for the Frait, we got the Goods aboard, *viz*, about 21 Tun of Oyl, a Barrel of Bears Oyl, about ten Tun of Whale-Fins, and five Hogſheads of Morſcs Teeth.

The 19th of *Auguſt* we directed our Courſe for *England*, and arrived at *Hull* the 8th of *September*.

At our firſt coming to *Greenland*, the Mountains and Vallies, except ſome few places, were covered with Snow; but before we came away, the tops of the Hills as well as the Vallies, appeared green with Moſs, and ſome little quantity of Graſs. This Country and the adjacent Seas, are ſubject to thick miſty weather, eſpecially when the Sun with his forcible heat melts the Ice and Snow, whoſe Vapours obſcure the Light of the Sun, that there is but ſmall difference between the Day and Night.

We found many fat Deer, which we killed with our Pieces and Dogs: There are alſo many white Bears, and white, gray, and dun Foxes. We ſaw abundance of Fowl, as Culvidines, Sea-pidgeons, white Patridges, wild Geeſe, Willocks, and one we called an *Allen*, which would beat the ſmaller Birds when they had got any thing, till they caſt up what they had eaten, which he laying hold of, devoured; and ſo with little Meat in their Gorges, and few Feathers on their Backs, leaves them to get more. There is ſtore of freſh Water in every Valley, proceeding from melted Snow, and plenty of drift Wood, but not a Buſh or Tree as far as we have diſcovered. No Tree or Buſh in *Greenland*.

The 3d Voyage of Jonas Pool *to* Greenland, *who was baſely murthered betwixt* Ratclif *and* London, *after his return from this Voyage; ſet forth by the* Muſcovia *Company*, A.D. 1612.

1612. WE ſailed from *Blackwall* the ſeventh of *April* with two Ships, the *Whale* and the *Sea-horſe*, and the third of *May* arrived at *Cherie*-Iſland, where we found a Ship of *Holland*, in which one *Allen Sallows* an *Engliſh*-man was Pilot, The next day *Sallows* went aboard our Admiral, and Maſter *Ruſſel* ſent for Mr. *Edge*, Mr. *Arthington*, Mr. *Maſon*, and my ſelf, where we conſulted about detaining him and bringing him to *England*, but in the end he was let go.

The 5th we weighed and ſtood to the Weſtward.

The 8th we ſaw the *Hollander* ſtanding with us, and at ten at Night came to us, whereupon the Admiral ſent his Shallop aboard him, commanding him to be gone out of our Company, and at a North Sun he ſtood away from us.

The 20th, we ſpoke with our Conſort, who told us they had almoſt ſplit their Ship with a piece of Ice which broke nine of their Timbers, ſo that they had five Foot Water in Hold.

The firſt of *June* we ſtood into *Fowl Sound*, where we ſpake with *Thomas Marmaduke* of *Hull*, in a Ship called the *Hopewell*, who, as we were afterwards informed, diſcovered as far as 82 Degrees, two Degrees beyond *Hakluyt's* head-Land. 82 Degrees. We had in our two Ships ſix *Biſcayners*, expert in killing the Whale; and on the 27th as we rode in harbour, we ſaw ſix Whales cloſe by the Ships ſide, and within an hour, ſo many that we could not count them: Some ran againſt our Cables, ſome againſt the Ship, and one againſt the Rudder; Many Whales one lay under the Beak-head, and ſlept there a long time: Our Carpenter having then hung a Stage over the Water to lay his Tools on, we durſt not diſturb the Whale, for fear he ſhould over-throw the Stage, and drown all the Tools: In the end he went away, and carried the Ship's Head round, his Tail being foul of the Cable.

We killed 17 Whales and ſome Morſes, of which we made 180 Tuns of Oyl, with which having fraited our two Ships, we returned for *England*.

CHAP. XXXII.

A Voyage to Greenland, *with ſix Ships and a Pinnace, ſet forth by the* Muſcovia *Company, under the Command of* Benjamin Joſeph *and* Thomas Edge, Anno Dom. 1613: *Written by Mr.* William Baffin.

1613. WE departed from *Queenborough* the 13th of *May*, with ſix good Ships, the *Tigre*, the *Matthew*, the *Gamaliel*, the *Deſire*, the *Annule*, and the *Richard* and *Bernard*; the *John* and *Francis* was ſhortly to follow.

The 21ſt we had ſight of the Coaſt of *Norway*, in Lat. 61 Deg. 30 Min. the Variation at *Scoutſneſs* was 8 Deg. Eaſt.

The 23d, we were in Lat. 65 Deg. 45 Min. the Needle declined under the *Horizon* 63 Deg. 30 Min. by the Inſtrument which declined 54 Deg. at *London*.

Greenland attained in 18 Days. The 30th we deſcried *Greenland* in 76 Deg. 55 Min. near *Horn Sound*; the Compaſs varied 13 Deg. Weſt.

June the ſecond, at five in the Morning, our Admiral ſent his Shallop to a ſmall Pink that lay under the Shoar, to command their Maſter and Pilot to come aboard, which they did. The Maſter told us that he was conſorted with another Ship that was his Admiral, commanded by one *Fop* of *Dunkirk*, now upon the Coaſt: We kept the Maſter and Pilot aboard of us, and ſending ſome of our Men aboard of her, brought her under our lee; and then we ſent their Maſter aboard again, charging them to follow us. In the Afternoon we took their Shallop, wherein were two *Engliſh*-men and one *Scot*.

The fourth, in the Morning was the firſt Whale killed; we had no Night ſince the 23d of *May*.

On the ſixth we met with four Ships in *Poepy* Bay, two of them being *Hollanders*, one a *Rocheller*, and the other of *Burdeaux*. The Maſters of the *Hollanders* came aboard the Admiral, and produced a Commiſſion from *Greve Maurice* to fiſh in this Country, but when they ſaw our King's Commiſſion granted to the *Muſcovia* Company, they told the *Admiral* they would depart the Coaſt, he giving them a Certificate to ſhew to their Adventurers, that they had been there, and had made their Port, and that we would not permit them to fiſh. We anchored cloſe by the *Burdeaux* Ship, wherein *Allen Sallowes* was Pilot, being ready to fight if they refuſed to come aboard us; ſo we ſent our Shallop, and the Maſter and Surgeon came aboard, who could ſpeak *Engliſh*. At firſt they denied that *Sallowes* was aboard them, but being hardly urged, they confeſſed that he and one *Fiſher* an *Engliſh*-man were aboard, who were both preſently ſent for.

On the 8th, the Maſter of the *Burdeaux* Ship, being about 200 Tun, agreed to give the Admiral half the Whales he ſhould kill, that he might ſtay and fiſh on the Coaſt. The Maſter of the *Rochel* Ship promiſed to depart the Coaſt; Lat. 78 Deg. 24, Variation 15 Deg. 21 Weſt.

The 10th we ſet up a Croſs of Wood, and nailed the King's Arms upon it, upon a Point of Land called *Low-neſs*

The 13th, we ſpied ſix Ships at anchor in a ſmall Bay, one of them was Captain *Fop* the *Dunkirker*, four of them were *Biſcains*, and the ſixth was a Ship of *Amſterdam*, wherein was one *Bonner*, Maſter and Pilot, and above 20 *Engliſh*-men more. All the *Biſcains* came aboard of us as ſoon as we were at anchor, but *Bonner* refuſed to come, being ſent for by our Admiral, who thereupon commanded our Gunner to fire at him; he thinking to get from us, cut his Cable and ſet ſail, but we ſhot him thro' three or four times, and then he came aboard. Our Admiral kept the Ship for the uſe of the *Muſcovia* Company, and charged the *Biſcains* to depart as ſoon as they had filled freſh Water, which they ſaid they wanted. I obſerved the Latitude by a Quadrant of four Foot Semidiameter, and found it to be 76 Deg. 55 Min. the Declination of the Needle under the *Horizon* was 76 Deg. 30 Min. pointing to the Northwards, but pointing to the Southwards it was 80 Deg. Variation was 12 Deg. 14 Min. Weſt from the true Meridian, but from our common ſailing Compaſs 17 Deg. becauſe the Compaſs is touched five Degrees and a half to the Eaſtward, and the Variation is to the Weſtward.

Declination 67 Deg. 30 Min Variation 12 Deg. 14 Min.

The 20th we had news that the *John* and *Francis* was come two days ago, and had killed 23 Whales. We anchored in *Green*-Harbour, where a S. W. Moon makes full Sea.

July the 10th, our Admiral went aſhoar and killed four Deer; the next day we perceived five Ships in *Bell-Sound*, and came to an Anchor by them with our three Ships, the *Tiger*, the *Matthew*, and the *Richard* and *Bernard*, having made all things ready to fight. Theſe five Ships were the two *Hollanders* which we found the 6th of *June* in *Poopy*-Bay, a great Ship of *Biſcay* of 700 Tun, a ſmall Pink of *Amſterdam*, and a ſmall Ship of *Rochel*. This great Ship of *Biſcay* which we expected would have fought with us, ſent their Maſter aboard our Admiral, and ſubmitted; but the two Ships of *Amſterdam* would gladly have fought with us, if the *Biſcain* would have aſſiſted them.

The 15th we came to the Ships in *Green*-Harbour, where we found they had killed 18 Whales; four of theſe Ships were *French*, which had killed eight Whales for the Company, according to agreement with our Admiral, which was, that they ſhould kill eight for us, and what they could kill more, ſhould be for themſelves.

The 14th of *Auguſt* we weighed Anchor to go homeward, and entred the *Thames* the ſixth of *September*.

CHAP. XXXIII.

Extract of two Voyages for diſcovery of Seas, Lands and Iſlands, to the Northwards; ſet forth at the Charge of the Muſcovia *Company.* Anno Dom. 1614, 1615; *Written by* Robert Fotherby.

ON the fourth of *May* I departed from *Lee* Road, in company of ten Ships more and two Pinnaces, all bound for *Greenland*, under the command of * Captain *Benjamin Joſeph*.

* Afterwards ſlain in a Fight with a *Portugal* Carrick.

The 25th, in Lat. 75 Deg. we met with ſtragling Ice; we plied thro' it till the 21th, and being then in ſight of Land, were all ſo incloſed with Ice, that we could not go forward or backward.

On the ſecond of *June* we attained an open Sea, where leaving the reſt to purſue their Voyage, I proceeded to *Fair Foreland*, and thence to the Northward, hoping to find the Shoar free from Ice; but it fell out contrary to my expectation; for when we came to the Lat. of 79 Deg. 34. we ſaw much Ice betwixt us and *Hakluit's Head-land*, ſo that not being able to paſs further, we anchored in *Maudlin* Sound, which we found open.

On the 10th of *June* we departed thence, and coaſted to the Northward till we were paſt *Hakluit's Headland*, but then we ſaw the Ice lie before us, that it was not poſſible to paſs further that way.

We came to an anchor in *Croſs-road*, and ſet up our Shallop which we had brought from *England* in pieces; and while Mr. *Baffin* went in her to the Northwards, I went in the other Shallop into *Maudlin Sound*, there to ſet up the King's Arms: I cauſed a Croſs to be ſet up, and the Kings Arms to be nailed thereon, under which I nailed a piece of Sheet Lead, with the *Muſcovy* Companies Mark, Day of the Month, and Year of our Lord. Then cutting up a piece of Earth, carried it aboard, and in the hearing of the Men, ſaid to this effect.

'I take this piece of Earth as a ſign of lawful Poſ-
'ſeſſion of this Country of *King James's Newland*, and
'of this particular place, which I name *Trinity Harbour*,
'taken on behalf of the Company of Merchants, called
'the Merchants of New Trades and Diſcoveries, for
'the uſe of our Soveraign Lord *James*, by the Grace of
'God, King of great *Britain*, *France*, and *Ireland*, whoſe
'Royal Arms are here ſet up, to the end that all People
'who ſhall here arrive, may take notice of his Majeſties
'Right and Title to this Country, and to every part
'thereof. God ſave King *James*.

On the 23d Mr. *Baffin* returned in the Shallop from the Northwards; he ſaid he had been at Cape *Barren*, three or four Leagues from *Hakluyt's Head-land*, but could not paſs further for Ice which lay cloſe to the Shoar.

On the 27th I went again in the Shallop to the Northward; we rowed to Cape *Barren*, and a League beyond. In the mean time it began to ſnow, and grew to be a great ſtorm at W. N. W. which continued from *Munday* Night till *Friday* Morning, during all which time we had been but eleven Leagues from our Ship, yet we went as far as we could have gone, had the weather been never ſo fair.

On *Friday* Morning we returned to our Ship in *Fair-haven*, where we tarried till the ſixth of *July*, and then ſailing thence to make trial if we could get to the Weſtward of the Ice, and ſo proceed to the Northward. We had ſent away the other Shallop the day before, provided with 20 days Bread, to coaſt along the Shoar, and ſet up the King's Arms at places convenient, hoping thereby to prevent the *Hollanders*, who had two Ships now in *Fair-haven*, ſet forth for a Diſcovery, and ready to take poſſeſſion of ſuch Harbours as they ſhould find.

We ſailed Weſtwards from *Fair-haven* ſeven Leagues, and then met with a main Bank of Ice. The Sea appeared open to the Northwards as far as we could ſee, ſo we plied that way ſeven or eight Leagues, and then the Ice lay ſo thick on every ſide that we could proceed no further. Then ſtanding into the Shoar, we met with Mr. *Baffin* in the other Shallop, who told us the Shoar to the Eaſtward was much peſter'd with Ice, and the weather being now clear, Mr. *Sherwin*, Mr. *Baffin*, and I, reſolved to go upon ſome high Mountain, from whence we might ſee what likelyhood there was of further proceeding: Accordingly we mounted a very high Hill, from whence we ſaw the Sea covered with Ice every way, except to the Eaſtwards, and thought we ſaw open Water beyond the Ice, which put us in hope we ſhould e're long get a Paſſage with our Shallops along the Shoar, if we could not paſs with our Ship. We then returned aboard our Ship, and plied towards *Fair-haven*, where we arrived the 12th, between which time and the 15th of *Auguſt* we made ſeveral Attempts with both our Shallops to the Northwards, but were always forced back by Ice, Snow and ſtormy Weather. The Snow lying an Inch thick on the Water, did hinder our Shallops way, and our Men began to fear, that if it ſhould now freeze as it did one Night ſince we came out, we ſhould be here frozen up, and it now beginning to blow much Wind, and the Sea running high, we paſſed over *Broad-bay*, to *Point Welcome*, where I had ſet up a Croſs above a Month ago, and nailed a Sixpence thereon with the King's Arms; and whilſt I was gone up a Mountain to look into the Sea, our Men finding the Sixpence taken from the Croſs, and another Poſt ſet by it, with the Arms of Prince *Maurice* thereon, they pulled it down, and I cauſed the King's Arms caſt in Lead to be nailed upon the Croſs. From thence we proceeded to our Ship, and the 19th of *Auguſt* came aboard of her in *Fair-haven*.

A Whale lay ſunk 14 days. The 22d the Maſter of the *Gamaliel* came to deſire help to haul up a Whale, which had been ſunk 14 days in 120 Fathom Water, or elſe to pull the Warp and Harping Iron out of her, for now it was time to take her or forſake her. We manned our Long-boat, and coming to the place where the Whale was ſunk, as ſoon as we began to hale, ſhe preſently roſe, bolting ſuddenly up with a thundring crack made with the burſting of her Body; and notwithſtanding ſhe had lain ſo long, yet had ſhe all her Fins faſt.

The 27th we ſailed from *Fair-haven*, and made another Attempt towards the N. E. till we could paſs no further for Ice. We then ſtood homeward, and on the 10th of *September* we ſaw a light upon the Fore-bonnet, which the Sailers call a *Corpo Santo*; it appeared like the Flame of a Candle, and (as Seamen obſerve) always preſages a Storm. A Corpo Santo ſeen. It continued very foul Weather all that day, and was ſo vehement the Night following, that the Sea of-times over-raked our Ship.

The fourth of *October* the Ship came to *Wapping*, with the whole number of Men ſhe carried forth, being 26, all in good health.

Mr. Fotherby's *Second Voyage*, Anno Dom. 1615.

I departed from *Harwich* the 12th of *May*, in company of eight Ships bound for *Greenland*; I arrived in *Fair-haven* the 19th of *June*, from whence I ſailed to the Northwards the third of *July*, but meeting with Ice in Lat. 79 Deg. 50 Min. I anchored in *Croſs-road*, and departing thence on the 17th, I proceeded towards the S. W. till I was 200 Leagues from *Greenland*, in Lat. 71 Deg. and am verily perſwaded we were not then far from Land, altho' we could not ſee it by reaſon of thick foggy weather, but the Wind coming up at S. W. and blowing hard, I took the benefit of it to return to the N. E. again, and came to an Iſland, which I named Sir *Thomas Smiths Iſland*, about ten Leagues long, high Land, at the North end whereof is a Mountain of a wonderful height, covered with Snow, which I called *Mount Hakluyt*: It lies in 71 Deg. where the Needle varies eight Deg. Weſt. The Land is rocky and barren, worſe than I have ſeen in *Greenland* under 80 Deg. here being no Graſs but Moſs, and where I firſt landed upon low Ground, all the Stones were like to a Smith's Cinders in colour and ſhape, and the Sand is generally mixed with a Corn like Amber. The Beaches are ſtored with drift Wood, and many Stones like Pumice, which will ſwim on the Water. I ſaw many traces of Foxes and Bears, but not any ſign of Deer or other living Creatures, and few Fowl.

The Wind coming up N. E. ſo that I could not proceed that way, I reſolved on another Courſe, which was this, Having peruſed *Hudſon*'s Journal, wherein he had ſight of certain Land, which he named *Hold with Hope*, I found that by his own reckoning it ſhould not be more than 100 Leagues diſtant from *Greenland*, and in Lat. 72 Deg. 30 Min. or thereabouts; therefore ſeeing I could not proceed to the Northwards, I purpoſed to go to the S. W. to have a ſight of this Land, and diſcover it, if Wind and Weather would permit: So I ſtood away S. W. and W. S. W. till I had run 130 Leagues, and was by account in Lat. 72 Deg. 30 Min. where having the Wind contrary to proceed Weſtward, I ſtood Eaſtward till I had run 30 Leagues, in which I ſhould have ſeen this Land, if credit might be given to *Hudſon*'s Journal, but I ſaw not any, and it being now the 28th of *Auguſt*, and the Wind at North, I directed my Courſe for *England*, and on the 8th of *September* had ſight of the Coaſt of *Yorkſhire*.

Abſtract of a Letter from Mr. Fotherby *to Captain* Edge, *written in* Croſs-road *this Voyage, the* 15th *of* July, 1615

S I R,

‘WHen I came in hither, here were three Ships and a Pinnace of the King of *Denmark*'s; the Admiral came to an anchor cloſe by me, and ſent to intreat me to come aboard of him; I went aboard and was courteouſly entertained by him. He asked me by what right the *Engliſh* Merchants did reſort and fiſh in this place: I told him by the King of *England*'s Right, who had granted a Patent to the *Muſcovy* Company of Merchants, whereby he authoriſes them, and forbids all others to frequent theſe places. Then he intreated me to go with him to the two *Engliſh* Ships in Sir *Thomas Smith*'s Bay. I told him it would be loſs of time to me, becauſe I had ſome buſineſs here to do at preſent, and muſt then go to Sea again and proſecute my diſcovery. He ſaid that he would have me go with him to be witneſs to what paſſed betwixt him and you, for he had Matters of importance to acquaint you withal, which concerned our King and theirs, and therefore intreated me preſently to weigh and ſet ſail, for I muſt needs go with him. I replied again, that it would be a great loſs of time to me, and I knew not how to anſwer it; but he told me peremptorily that I muſt go with him; ſo ſeeing no remedy, I order'd the Maſter to weigh, and the *Daniſh* Admiral weighing, kept me aboard of him, but afterwards metting with the two Captains that came from you, he returned and anchored again in *Croſs-road*. I had very courteous entertainment from the Admiral, Vice admiral and Captain *Killingham*, but the laſt ſeemed to go away diſcontented from aboard my Ship, becauſe I refuſed to give him a young *Morſe* I have aboard, and told me as he went off, that he would ſhoot down my Flags; and ſoon after there came a ſhot from the Admiral, which flew over us, and I expected another, but preſently there came a Man aboard from the Admiral, to ſee if any of your Men in the Shallop would go with them into the Bay, and he ſwore unto me that the Shot was made to call their Boat aboard, becauſe they were ready to weigh. As far as I can perceive, their purpoſe is to ſee what Grant the King of *England* hath made unto the Company, for they pretend that the Right of this Land belongs neither to the *Engliſh* nor *Hollanders*, but to the King of *Denmark*. Thus with my hearty Commendations, *&c.*

Abſtract of a Letter from William Heley.

S I R,

‘YOU may pleaſe to underſtand, that thro' God's Bleſſing, our Voyage is performed in all the Harbours in the Country this Year, with a greater overplus than our Ships will carry; ſo that in ſome places we muſt leave good ſtore of Oyl and Blubber behind for the next Year. We are all ready to ſet ſail, being full laden; only I deſire to ſee the Coaſt clear of Interlopers, whereby our Proviſions may be left in ſecurity. We took in *Horn-Sound* a Ship of *Fluſhing*, called the *Noah's Ark*, having out of him 200 Hogſhead of Blubber, with two Whales and a half to cut up, a great Copper, and divers other Proviſions, and ſent him away ballaſted with Stones. There were two more of them who were gone laden with Blubber before we could get thither, having intelligence of our coming. There were alſo two *Danes*, who made 100 and odd Tuns of Oyl, and left the Country the ſixth of *Auguſt*. The ſmall Ship *Elln* is returned from the S. E. having made a further diſcovery, and killed about 800 Morſes, and laden the Teeth, and 30 Tun of Hides; the reſt of his Lading is Oyl. The Whales killed this Year in the Country are about 150; and the Oyl will be about 1800 and odd Tuns, beſides the Blubber left for want of Caſk.

Portnick the 12th of *Auguſt*, 1617.

A Letter from Mr. Salmon *in Sir* Thomas Smith*'s Bay, the 24th of* June, 1618, *to Mr.* Sherwin *in* Bell-Sound.

SIR,

'A Northerly Storm has brought in ſo much Ice upon us, that we have been incloſed eight days; there went ſuch a Sea in the Ice, beating our Ships for 24 Hours, that I thought they had been ſpoiled; the Ice brake two of our Anchors. Here are five *Flemings*, which have 14 and 16 Pieces of Ordnance in a Ship, and they do man out 18 Shallops; ſo that with theirs and ours, here are 30 Shallops in the Bay, too many for us to make a Voyage; they have at leaſt 1500 Tuns of ſhipping. We have reaſonable good quarter with them, for we are merry aboard of them, and they of us. They have good ſtore of Sack, and are very kind to us, profering us any thing that we want. The Company muſt take another courſe next year, if they mean to make any benefit of this Country; they muſt ſend better Ships, and beat theſe Knaves out of it; for, as far as I can underſtand by them, they intend to continue the Trade. They have every one of them *Grave Maurice's* Commiſſion under his own Hand and Seal. We have killed 13 Whales, but they yielded but little, becauſe the Ice much hindred us at our work: We are all well, &c.

Abſtract of a Letter written to Mr. Heley, *from* Fair-haven, *the 12th of* July, 1618.

SIR,

'I Am very ſorry to underſtand of the Annoyances by the *Flemings*, both with you and at other places; we have been ſo peſter'd with Ice theſe 20 days, that we have not been able to put to Sea above twice with our Shallops, and could do no good by reaſon of foul Weather and Fogs, nor have ſeen any more than one Whale in all that time, which after ſhe was killed, gave us much trouble, and we were forced at laſt to leave her in the Ice, where the Bears made a Prey of her, and I fear will ſpoil her before ſhe can be recovered. All the Sea to the Northwards of *Hakluit's Head-land*, and both Eaſtward and Weſtward there is pack'd ſo full of Ice, that I fear it will over-throw our Voyage; ſo wiſhing you health. &c.

A Letter to Mr. Heley *from* Bell-Sound, *the 16th of* June, 1619.

SIR,

A ſad Diſaſter.

'I Am forced to write in tears unto you for the loſs of our Men, by the moſt uncouth accident, that ever befel unto poor Men. The 13th of *June* laſt, we were put aſhoar in the *Ice-Bay*, our Shallops being not aboard; but as ſoon as we heard of it, we made what haſte we could, and haling our Shallops upon the Ice, went aboard our Ship. By that time we had been there an Hour, uſing what means we could to get her out, a main piece of Cliff fell, being the fearfulleſt ſight that ever I beheld, and expected nothing elſe but death to us all; but tho' we were paſt all hope of Life, yet God of his great mercy and providence delivered us, that we were not then appointed to die. The Ice was ſo great, and fell down from ſuch a height, that it carried away our Fore-maſt, brake our Main-maſt, ſprung our Boulſprit, and made the Ship fetch ſuch a Carreer, that ſhe heaved a Piece of Ordnance over-board from under our Half-deck, hove me over-board, and yet I thank God I was not hurt, altho' others were ſpoiled and killed cloſe by me. My Mate, and *Nicholas Green*, and *Allin* the Butcher, are killed, and many more hurt, who I hope will recover by the help of God, and the Means of a good Surgeon. I take my leave, &c.

In the Year 1622, nine Ships were employed, of which one for Diſcovery: Their diſaſtrous Succeſs I have ſpoken of before. The laſt Fleet, Anno 1623, *was ſet forth by the former Adventurers, under the Command of Captain* William Goodlard, William Heley *being Vice-admiral; of the Succeſs whereof you may read the Letter following.*

Fair-Haven, *the 24th of* July.

Mr. *Heley*,

'WE arrived here with both our Ships in ſafety on the third Inſtant, and by the eighth had killed 13 Whales, and on the 15th two more, which being all boiled but the Heads, will hardly make paſt 80 Tuns, which is a very ſmall quantity.

'As touching our Order for the *Flemings*, we went Yeſterday aboard them, ſuppoſing that we ſhould have found the *Danes* there, but they are not yet arrived. The *Flemings* are five Sails; the *Admiral* 500 Tuns, the *Vice-admiral* of the ſame burden, the other three 200 Tun apiece; they have 24 Shallops belonging to their five Ships: They told us they expected one or two Ships more every day. After ſome time, we had conference with the Admiral, concerning the Order given us, and told him that the time granted them to fiſh was expired, and thereupon his Majeſty had granted to our Principles a Commiſſion under the Broad Seal of *England*, for the depreſſing of any Interloper or *Fleming* whatſoever, that we ſhould meet upon this Coaſt; yet notwithſtanding it pleaſed our Principals to appoint us to go aboard them, and in a loving manner to inform them thereof, which if they would condeſcend unto, and deſiſt from Fiſhing, they ſhould manifeſt themſelves Friends to our Principals, if otherwiſe, they would cauſe them to compel them by force, who had rather perſwade by love. Unto which he anſwered, That he heard of no ſuch Matter in *Holland*, and if there were, it ſhould have been certified by Writing. We replied, That Sir *Nowell Carroon* their Agent was not ignorant of it, who ought to have given information. He ſaid, he had a Commiſſion from the Prince of *Orange*, for the making of his Voyage upon this Coaſt, which was procured by his Merchants for his defence; and this was all that could be gotten from him by Words.

'On the 23d we killed three Whales more; and thus we doubt not by degrees to accompliſh our Voyage.

I am yours, &c.

A Letter from Captain Goodlard *in* Bell-Sound, *the 8th of* July, 1623.

Mr. *Heley*,

'TO certify you of our Proceedings, we have killed here in *Bell-Sound* 33 Whales, and loſt many more by Irons broken, yet I hope we ſhall have ſufficient to fill our Ships. We have boiled 180 Tuns, of which 160 are aboard our Ship, and make account 60 Tuns more will fill our Hold. Our Whales here prove very watriſh and lean, which maketh bad Oyl, and hindreth us much in boiling. They have killed at *Fair-haven* 18 Whales, which prove very ſmall, yielding but 120 Tuns. There are in that Harbour five *Flemings*, well fortified, ſome of them of 500 Tuns, and two more expected every day, which I fear will much hinder our Ships in their fiſhing this year, and in my judgment not to be removed from hence; for they having a Commiſſion from the States to fiſh upon this Coaſt, were our whole Fleet there, and could put them away, yet would they fly to one of our Southern Harbours, and ſo ſhould we ſpend our time in following them, and thereby looſe our Voyage. There were two *French* Ships of St. *John de Luz* at *Fair-haven*, which were put away by the *Flemings* and our Ships, and 'tis thought are gone for the Cape.

Peter Goodland drowned.

‘ With a heavy heart I write you the lamentable Accident which happened here the 28th of *June*. Our Shallops being all out in chaſe, and my ſelf aſleep, my Brother *Peter* having a Shallop lying by his Ships ſide, and eſpying a Whale going into the *Ice-Bay*, followed him and ſtruck him, and his Rope being new, ran out with kinks, which overthrew his Shallop, where he loſt his life, with my Boy *Bredrake*, being, as we think, carried away with the end of the Rope. Never any loſs went ſo near my heart, &c.

Extract of a Letter from William Baffin, *who had been twice employed by the* Muſcovia *Company, for diſcovery of a Paſſage to the North-weſt.*

To the Right Worſhipful *John Woſtenholm* Eſq; &c.

SIR,

‘ HAving coaſted all or near all the Circumference of *Davis*'s Streights, we found it to be no other than a great Bay, and no hopes of a Paſſage; however Mr. *Davis* was not to be blamed for his Report, the Sea being open, and of an unſearchable depth as far as *Hope Sanderſon*, which is in 72 Deg. 12 Min. only the Tides keep no certain courſe, nor riſe but a ſmall height, as eight or nine Foot, and the Flood comes from the Southward; and in all the Bay beyond that place, the Tide is ſmall and not much to be regarded, yet by reaſon of Snow melting on the Land, the Ebb is ſtronger than the Flood, by means whereof, and the Winds holding Northerly the fore part of the Year, the great Iſles of Ice are ſet to the Southward, ſome into *Hudſon*'s Strait, and others towards *Newfoundland*; for in all the Channel where the Sea is open, are many of them driving up and down, and till this year not well known where they were bred.

‘ In the next place I ſhall acquaint you what profit may be made by this Voyage, if it ſhall be again attempted. In this Bay are great numbers of thoſe Whales, called by the *Biſcainers* the *Grand Bay Whales*; for we being but one day in *Whale-Sound* (ſo called for the many Whales we there ſaw ſleeping on the Water) might have ſtruck more than would have made three Ships a ſaving Voyage, had we been provided with Men and other things neceſſary.

‘ But here ſome may object and ask, why we ſearched that Coaſt no better? To this I anſwer, That the Weather was ſo exceeding foul, we could not; for when we anchored in *Woſtenholm-ſound*, our Ship preſently drove with two Anchors a head, ſo that we were forced to ſtand forth with a low ſail. The next day in *Whale-Sound* we loſt an Anchor and Cable, and could fetch the place no more; and if we had found a good Harbour, yet having but our Ship's Boat, we durſt not ſend her far from the Ship, having but 17 Men, and ſome of them very weak. But the chief cauſe we ſpent ſo little time in ſeeking a Harbour, was our great deſire to perform the diſcovery, having the Sea open in all that part, and a continual probability of a Paſſage; but when we had coaſted the Land ſo far to the Southward, that hope of Paſſage was none, then the Year being too far ſpent, and many of our Men very weak, we hoped that ſome Ships would be ſent next Year to kill Whales, which might better do it than we.

‘ Having thus briefly ſet down what hope there is of making a profitable Voyage, it is not unfit you ſhould know what hindrance may happen to the ſame. The chiefeſt and greateſt cauſe is, that ſome years by reaſon of the Ice lying between 72 Deg. and a half, and 76 Deg. the Ships cannot come into thoſe places till toward the midſt of *July*, ſo that want of time to ſtay in the Country may be ſome hindrance; yet they may tarry till the laſt of *Auguſt*, in which ſpace good ſtore of Oyl may be made, and what cannot be made into Oyl, may be brought home in Blubber. Another hindrance may be, becauſe the bottom of the Sounds will not be ſo ſoon clear of Ice as might be wiſhed, whereby a Whale may ſometimes be loſt, yet I am perſwaded they will be all clear before the 20th of *July*. Furthermore, there being little Wood to be expected hereabouts, Coals muſt be brought from *England*.

Compaſs varied 56 Deg. to the Weſtward.

‘ And now altho' we have not performed what we deſired (that is, to have found a Paſſage) yet I hope you will think that we have not ſpent our time in vain, conſidering how much Ice we paſſed, and the difficulty of ſailing upon a Traverſe ſo near the Pole, and above all the wonderful variation of the Compaſs in this Bay, increaſing and decreaſing ſo ſuddenly and ſwiftly, that in Sir *Thomas Smith*'s *Sound* in 78 Deg. by divers good Obſervations, I found it varied above five Points or 56 Deg. to the Weſtward, ſo that a N. E. by E. is true North, a thing incredible, and matchleſs in all the World beſides. In fine, whatever my Labours are or ſhall be, I eſteem them too little to expreſs my thankful mind for your many Favours, &c.

William Baffin.

CHAP. XXXIV.

The ſtrange and dangerous Voyage of Captain Thomas James, *in his intended Diſcovery of a North-weſt Paſſage into the South Sea,* 1631.

1631.

THE worſhipful Company of Merchant Adventurers of the City of *Briſtol*, underſtanding that our Soveraign Lord *Charles* the firſt, had an earneſt deſire to be certified whether there were any Paſſage or not, by the North-weſt into the South Sea, did fit and ſet forth a choice, well-conditioned, ſtrong Ship, called the *Henrietta Maria*, of the burthen of 70 Tuns, victualled for 18 Months.

I was ever of opinion that this Action might be better effected by one Ship than two, becauſe in thoſe Icy Seas ſo much ſubject to Fogs and Storms, they might be eaſily ſeparated; and a place of meeting in Diſcoveries cannot ſurely, or without much hindrance be appointed; wherefore I reſolved to have but one Ship, the Ship-boat, and a Shallop.

A great Ship (as by former experience I had found) was unfit to be forced thro' the Ice, I therefore made choice of a Ship of the burthen aforeſaid, which the Carpenters made as ſtrong and ſerviceable as poſſibly in their underſtanding they could.

The Baker, Brewer, Butcher, and others, undertake their Offices upon their Credits, knowing it to be a geral buſineſs, and their utter undoing if they failed in performance; but truly they proved themſelves Maſters in their Arts, and have my praiſe for their honeſt care, wherein conſiſted a great part of the performance of the Voyage.

The number of Men thought convenient to manage this buſineſs was 22, whereof 19 were choice able Men, two Younkers, and my ſelf; voluntary Loiterers I diſclaimed, and publiſhed I would have none but approved able Seamen, and unmarried. The whole Company were ſtrangers to me and each other, but privately recommended to me by worthy Merchants, for their Ability and Fidelity. I was ſought to by divers that had formerly been in places of the chiefeſt command in this Action, and others alſo that had uſed the Nothern Icy Seas; but I utterly refuſed them all, and would by no means have any with me that had been in the like Voyage or Adventures, for ſome private Reaſons, unneceſſary here to be related. Thus keeping the Power in my own Hands, I had all the Men to acknowledge immediate dependance upon my ſelf alone, both for directing the Navigation, and diſpoſing all other things whatſoever.

May.

On the ſecond of *May*, 1631, accompanied with divers Merchants of the City of *Briſtol*, Adventurers in this Action, I went aboard, where the Reverend Mr. *Palmer* preached a Sermon, exhorting us to continue brotherly love amongſt us, and to be bold to profeſs the true Chriſtian Religion wherever we ſhould happen to come. After they had received ſuch entertainment as I could afford them, they returned to *Briſtol*, and the next day, after Prayers for a proſperous Voyage, we ſtood down the Channel of *Severn*, with little Wind, and got to the Weſtward of *Lundy*, when the Wind coming againſt us, we anchored in *Lundy*-road, where we remained until the eighth, and then ſetting ſail, we were forced to put into *Milford* Haven, where we remained till the 17th, whence with the firſt fair Wind, we proceeded and doubled Cape *Clare* in *Ireland*. Here I ordered a W. N. W. Courſe to be kept as near as the Wind would give leave.

June.

The fourth of *June* being very thick foul weather, we made the Land of *Greenland*, and the next day at two in the Morning, were encompaſſed with Ice, and endeavouring to clear our ſelves of it, were the more engaged, becauſe we could not ſee far about us, and we ſtruck many fearful blows againſt it. At laſt we faſtned to a very great piece (it blowing a Storm) and wrought all day and night to keep off the Ice, in which labour we brake all our Poles.

The ſixth, at two in the Morning we were beſet with many extraordinary great pieces of Ice, that came upon us, as it were with wilful violence, and doubtleſs had cruſhed us to pieces, if we had not let fall ſome Sail, which the Ship preſently felt. In eſcaping that danger we ran againſt another great piece, that we doubted whether our Ship had not been ſtaved to pieces, but pumping, we found ſhe made no Water. The former pieces of Ice had cruſhed our Shallop all to pieces, wherefore I ordered our Long-boat to be had up from betwixt the Decks, and put over-board, by help whereof we recovered our broken Shallop, and had her up on the Decks, intending to rebuild her. All this day it blew a ſtorm, and in the Evening we were incloſed with pieces of Ice as high as our Poop, and ſome of the ſharp blew corners of them did reach quite under us. All theſe great pieces (we being near the outward part of the Ice) did heave and ſet, and ſo beat us, that it was wonderful how the Ship could endure one blow of it; but it was God's only preſervation of us, to whom be all Honour and Glory. In this extremity we let fall all the Sail we could, and the Ship forced her ſelf thro' it, tho' ſo toſſed and beaten, as I think never Ship was. When we were clear, we tried the Pumps, and found her ſtanch, upon which we went inſtantly to Prayer, and to praiſe God for his merciful deliverance.

The 7th, 8th, and 9th, we endeavour'd to double Cape *Farewell*, lying W. N. W. from the *Blaſques* in *Ireland*, and in Latitude of 59 Deg. the diſtance about 410 Leagues. The variation of the Compaſs 30 Leagues to the Weſtward of *Ireland*, in Latitude 52 Deg. 30 Min. is about three Deg. to the Eaſtward. When we were about 310 Leagues W. N. W. from the *Blaſques*, in Latitude of 57 Deg. the Compaſs varied nine Deg. to the Weſtward. About 40 Leagues to the Eaſtward of Cape *Farewell*, in Lat. 59 Deg. 15 Min. the Variation was about 14 Deg. 45 Min. In this Courſe I obſerved whether any Current did ſet to the N. E. as ſome have written there did, and that as well in calm weather as otherwiſe, but I could not perceive any. The Winds we found variable, and the Sea of an unſearchable depth; we ſaw no Whales or other Fiſh. The weather for the moſt part was foggy and miſty, and Wets as bad as rain.

The 10th was very foul weather, and a high grown Sea, altho' we had Ice not far from us, and ſome pieces as high as our Top-maſt-head. Our Long-boat, which was towed at ſtern (becauſe we were building our Shallop on our Decks) broke away, and put us to ſome trouble to recover her again; at laſt we got her into the Ship, tho' very much bruiſed, and two Men were ſore hurt and like to be loſt in getting her in. At eight in the Evening we were ſhot up as high as Cape *Deſolation*, in Lat. 60 Deg. and the Land from Cape *Farewell* to it, trends N. W. the diſtance about 40 Leagues. From Cape *Deſolation* to the South end of the Iſland of *Reſolution*, is about 140 Leagues, the Courſe Weſt half a Point North. About 12 Leagues to the Weſtward of Cape *Deſolation*, the Variation is 16 Deg. 00 Min. In this Courſe we were much tormented with Ice, many pieces higher than our Main-top-maſt-head; we ſaw many *Grampuſſes*. The weather was for the moſt part a ſtinking Fog, and the Sea very black, which I conceive to be occaſioned by the Fog.

The 17th, at Night we heard the rut of the Shoar, as we thought, making an hollow and hideous noiſe, like an Over-fall of Water. We ſtood off from it till break of day, and at four in the Morning found it to be a rut againſt a Bank of Ice that lay on the Shoar, and ſaw the Land above the Fog, which we knew to be the Iſland of *Reſolution*. This Night all our Rigging and Sails were frozen. Here runs a quick Tide into the Streight, but the Ebb is as ſtrong as the Flood. The Fog was of ſuch a piercing nature, that it ſpoiled all our Compaſſes, and made them ſo heavy that they would not traverſe; wherefore I adviſe thoſe that ſhall travel this way hereafter, to provide Compaſſes of *Muſcovia* Glaſs, or ſome other matter that will endure the moiſture of the weather. As the Fog cleared up, we could ſee the entrance of the Streight, which was all full of Ice cloſe thronged together. Endeavouring to go forward, we were faſt incloſed in it, and ſo drove to and again with it, finding no ground at 230 Fathom four Leagues from the Shoar.

Sails frozen in *June*.

Compaſs ſpoiled with Fogs.

No Ground at 230 Fathom.

The 20th we got about the Southern Point of the Iſland, and the Wind coming up at Weſt, drove both us and the Ice upon the Shoar. When we were driven within two Leagues of the Shoar, we came among the ſtrangeſt whirlings of the Sea that poſſibly can be conceived. There were divers great pieces of Ice aground in 40 Fathom water, and the Ebb coming out of the broken Grounds of the Iſland amongſt theſe Iſles of Ice, made ſuch a diſtraction, that we were carried round, ſometimes cloſe by the Rocks, ſometimes ſo near thoſe high pieces of Ice, that we feared they would fall upon us. With our Kedger and Grapnels we made faſt two great pieces of Ice to our ſides, that drew nine or ten Fathom, that ſo they might be aground before us if we ſhould be driven aſhoar. Our Boat being now finiſhed, I ſent her to find ſome place of ſecurity, but ſhe was preſently incloſed, and forced to hale up on the Ice, or elſe ſhe had been cruſhed in pieces. They ran her over the Ice from piece to piece, and in the mean time with the whirling and encountring of the Ice, the two pieces broke away from our ſides, and carried away our Kedger and Grapnels. Then we made ſigns to the Boat to make all the haſte they could to us, and we made ſome ſail, and got to that piece of Ice which had our Grapnel on it, and recovered it again. By this time our Boat was come, and we put a freſh Crew into her, and ſent them to fetch our Kedger, with much danger both of Boat and Men. The Ship in the mean time was driven ſo near the Shoar, that we could ſee the Rocks under us and about us. We went over Rocks that had but 12 or 13 Foot Water on them, and then let fall an Anchor, which had never been able to wind up the Ship, but that by good fortune ſhe ran againſt a great piece of Ice that was aground. This ruſh brake the main Knee of her Beak-head, and tore away four of our main Shrouds. We had but 15 Fathom Water, being alſo in the Tides way, where all the Ice would drive upon us. Not ſeeing our Boat, wherein was the third part of our Company, we feared ſhe had been cruſhed in pieces, but at laſt we ſaw her come about a Point amongſt the Rocks, having recovered our Kedge Anchor, which made us joyful. With all ſpeed we laid out Hawſers to the Rocks, and every one worked to the beſt of his ſtrength to warp her out of this dangerous place to the Rocks ſide, where we had three Fathom Water, and were under the ſhelter of a great piece of Ice which was aground, and kept off the Ice that otherwiſe would have driven upon us. Here we lay very well all the Ebb, but when the Flood came, we were aſſaulted with pieces of Ice that made us almoſt deſpair. At full Sea our great piece of Ice, which was our Buckler, was afloat, and do what we could, got away from us, and left us in moſt eminent danger, by reaſon of the Ice that drave in upon us; but as ſoon as the Ebb was made, this great piece of Ice came aground again, and ſhelter'd us. We wrought hard all Night in ſhifting our Cables and Hawſers, and faſtning them aloft on the Rocks, that the Ice might the better paſs under them. It ſnowed hard all day and night, and blew a Storm at Weſt, which drove in all the Ice out of the Sea upon us. In working againſt the violence of the Ice, the Flook of our Kedge Anchor, two Arms of our Grapnels, and two Hawſers were broken, and our Shallop again very much bruiſed.

Ice aground in 40 Fathom.

Snow in *June*.

The 21ſt the Harbour was choak'd with Ice, but when the Ebb was made, it did move. Some great pieces came aground, which alter'd the Courſe of the other Ice, and put us on the Rock. Here, notwithſtanding all our utmoſt endeavours, ſhe ſetled upon a ſharp Rock, about a Yard abaft the Main-maſt, and as the Water ebbed away

The Ship ſtrikes on a Rock.

way, ſhe hung after the Head, and heel'd to the Offing. We faſtned Cables and Hawſers aloft to her Maſt and ſo to the Rocks, ſtraining them taut with our Tackles; but as the Water ebbed away, ſhe ſunk ſtill, and at laſt was ſo turned over, that we could not ſtand in her. Having now done all to the beſt of our underſtanding (tho' to little purpoſe) we went all to prayers upon a piece of Ice, beſeeching God to be merciful unto us. The Ship was ſo turned over, that the Portals of the Fore-caſtle was in the Water, and we looked every minute when ſhe would overſet; indeed at one time the Cables gave way, and ſhe ſunk down half a Foot at that ſlip; but unexpectedly it began to flow, and the Water roſe apace, and the Ship withal; whereupon we all on our Knees praiſed God for his mercy in ſo miraculous a deliverance.

A great Deliverance.

As ſoon as ſhe was freed from this Rock, we wrought hard to get her further off. All the Flood we were pretty quiet from the Ice, but when the Ebb was made, all the Ice came driving again upon us, and put us to great extremity. We got as many pieces betwixt us and the Rocks as we could, to defend us from them. There came a great piece upon our Quarter, which was above 300 of my Paces about, but it came aground, as did divers great pieces beſides, which was the cauſe of the Harbour's being quite choak'd up this tide, ſo that a Man might walk over it from ſide to ſide. When it was three quarters Ebb, thoſe great pieces that came aground, began to break with a moſt terrible noiſe, which put us in great fear that thoſe about us would break us all to pieces, but God preſerved us.

The 22d, in the Morning the Water ebbed lower by two foot than the laſt Tide it had done, whereby we ſaw God's Mercies apparent in our late Extremity. That Flood we had ſome reſpit, but after full Sea, our Hopes ebbed too. The great piece that was by us ſo ſtop'd the Channel, that the Ice came all driving upon us, ſo that now undoubtedly we thought we ſhould looſe our Ship. To work we went, with Axes, Bars of Iron, and any thing proper for ſuch a purpoſe, to break the Corners of the Ice, and make way for it to drive from us. It pleaſed God to give good ſucceſs to our Labours, and we made way for ſome, and fended off the reſt. This day I went aſhoar, and ſet up a great Beacon with Stones upon the higheſt place of the Iſland, and putting a Croſs upon it, named it the *Harbour of God's Providence*. In the Evening the Harbour was fuller of Ice than ever it had been ſince our coming, and the Ship lay as it were in a Bed of Ice.

The 23d, the Ice with the Ebb drove all out, except one extraordinary great piece, which coming aground not far from us, ſetled it ſelf in ſuch a manner, that we much feared it; but there came no more great Ice after it, otherwiſe we muſt have expected as great danger as at any time before. I went aſhoar upon the Eaſtern ſide to ſee if I could find any place freer from danger than this unfortunate place, where amongſt the Rocks I found a likely place. From the top of the Hill where I was, I could ſee the Ship, and it being then almoſt low Water, the foreſaid piece of Ice brake with a terrible noiſe into four pieces, which made me fear it had ſpoiled the Ship, it being full half maſt high. I made what haſte I could to be ſatisfied, where I found all well, God be thanked, and preſently ſent away the Boat to ſound the way to a Cove that I had found. At her return we unmoored the Ship, and warp'd away from this terrible Ice. We were not a Mile from it when it brake all to pieces, and we had ſurely born it company, had not God been merciful to us. When we had brought the Ship to the Cove, we made faſt to the Rocks, and I went aſhoar again to ſee what I could diſcover. I found it all broken rocky Grounds, without Tree, Herb, or Graſs upon it. I ſaw ſome Ponds of Water which were not yet thawed, and therefore not ready for the Fowl. I found not any footing of Deer or Bears in the Snow, but ſaw one or two Foxes. We found where the Savages had been, but it was long ſince: They had made Hearths, and left ſome Fire-brands about them, with ſome Heads and Bones of Foxes, and ſome Whale-bones. I cannot conceive to what purpoſe they ſhould come thither, there being little or no Wood, and no Fiſh at all, tho' we daily endeavour'd to take ſome, but it may be, the Seaſon was not yet come. The Fire-brand had been cut with ſome Hatchet or other Inſtrument of Iron. From the top of the Hills we could ſee the Iſlands on the South Shoar, called Sir *Thomas Buttons Iſles*, 14 or 15 Leagues diſtant. It flows here ſeven a Clock and a half upon the change day, and the Tide highed at moſt three Fathom: The Flood comes from the Eaſtward, and thither it returns.

The 24th in the Morning there ſprung up a fair gale of Wind at Eaſt. After prayers we ſet ſail, ſteering between great pieces of Ice that were aground in 40 Fathom, and twice as high as our Top-maſt-head. We endeavouring to gain the North Shoar, kept our ſelves within a League of the Iſland of *Reſolution*, where we had ſome clear Water to ſail thro', whereas the Ice was very thick in the Offing. By 12 we were faſt incloſed, and notwithſtanding it blew very hard at Eaſt, yet we could make no way thro' it, and the hard Corners of the Ice did grate us with that violence, that I verily thought it would have grated the Planks from the Ships ſides. Thus we continued in torment till the 26th day, driving to and again in the Ice, not being able to ſee an Acre of Sea from the Top-maſt-head. I cauſed the Men to lay out ſome Fiſhing Lines, but to no purpoſe, for I could not perceive the Baits had been touched. The Nights were very cold, ſo that our Rigging was frozen, and freſh Ponds of Water ſtood upon the Ice above half an Inch thick.

Ice twice as high as Top-maſt-head.

The 27th, a ſmall Gale at S. E. and the Ice did ſomewhat open; hereupon we let fall our Fore-ſail, and forced the Ship thro' it. In the Evening the Wind came contrary at W. N. W and blowing hard, we faſtned to a great piece till the 29th.

I am ſatisfied by many Experiments I have made, that here is no Current; namely, by taking Marks on the Land, and noting our Drift to and again, with the Ebb and Flood for many days together, and as well in calm weather as otherwiſe. By all which, I found exactly that the Tide was no ſtronger there than between *England* and *France*.

From this 29th to the 5th of *July*, we ſailed thro' the Ice with variable Winds and Fogs, and ſaw *Salisbury*-Iſland, and ſoon after Prince *Charles* Cape. The Sea to the N. N. W. peſter'd with Ice, which grieved me very much, becauſe having determined to proſecute the diſcovery to the North-weſtward, I now ſaw it was not poſſible this Year; wherefore I order'd to ſteer away W. S. W. in which Courſe we ſtruck more fearful blows againſt the Ice than we had ever yet done. This was the firſt day that we went to half allowance of Bread on Fleſh Days. In the Evening we anchored, and I ſent the Boat aſhoar to try the Tides. They brought me word that whilſt the Boat was aſhoar, it flowed three Foot, and we found by the Ship and the Ice, that the Water at that time came from the W. S. W. and that the higheſt Tides (ſo far as they could perceive) had not highed above two Fathom. They found that Savages had been there, but ſaw no Tracks of any Beaſts beſides Foxes.

July.

Next Morning being the 17th, the Shoar being pretty clear of Ice, we ſtood along it S. and S. by W. ten Leagues, and then the Wind coming contrary, we anchor'd, and I went aſhoar to be reſolved of the Tide, and found whilſt I was aſhoar that it did flow two Foot, and at that time the Flood came from the S. W. by W. I doubted it was an half Tide, which afterwards I found to be true. It flows on the Change Day about eleven a clock.

The 18th we ſteered away Weſt, being come as we thought, into an open Sea, but our Joy was ſoon quailled; for by ten at Night we heard the rut of the Ice. We ſtood along it, hoping to weather it to the Southward, till we became ſo blinded with Fog, and ſo encompaſſed with Ice, that we could go no further.

Thus we continued till the 21ſt, in Lat. 60 Deg. 33 Min. and then looking what damage our Ship had received, we perceived, that below the Plate of Iron which was before her Cut-water, ſhe was all bruiſed and broken, the two Knees ſhe had before to ſtrengthen her, ſpoiled and torn, and many other Defects, which we could not by any means come to mend: Notwithſtanding all which, and the extraordinary thick Fog, that we could not ſee a Piſtol ſhot about us, we proceeded with the hazard of all till the 27th, being the firſt time we had clear Weather to look about us. The Water now began to ſhoal, for whereas the depth was ordinarily 120 Fathom, it was now but 80.

The 28th and 29th, we were ſo faſt incloſed with Ice, that notwithſtanding we had put aboard all the Sail we had, and that it blew a very hard gale of Wind, the Ship ſtirred no more than if ſhe had been in a dry Dock. We all went boldly out upon the Ice to recreate our ſelves, letting her ſtand ſtill under all her Sails. It was large flat Ice, the worſt to deal with that we had yet found: I meaſured ſome pieces, which were 1000 of my Paces long. This was the firſt day our Men began to murmur, thinking it impoſſible to get either forwards or backwards. I comforted and encouraged them the beſt I could; and to put away theſe Cogitations, we drank a health to his Majeſty on the Ice, not one Man in the

Ship, and ſhe ſtill under all her Sails. I muſt ingenuouſly confeſs, that their murmuring was not without cauſe. And doubting that we ſhould be frozen up in the Sea, I order'd Fire to be made but once a day, the better to prolong our Fewel whatſoever ſhould happen. We put out our Hooks to try to catch ſome Fiſh, but to no purpoſe; for there is not any in this Bay.

Auguſt. From the firſt to the 11th was thick foggy weather. On the third we ſaw a little open Water to the N. W. and felt a ſwelling Sea from the Weſt, which aſſured us there was an open Sea to the Weſtward.

On the 11th we ſaw the Land; it is from *Digs* Iſland to this Weſtern Land, about 160 Leagues. The Tides do ſet in the middle of the Bay Eaſt and Weſt (as we have often tried by our Lead aground) but nearer the Shoars, as they are forced by the Land. I am of opinion, that in the Ocean or in large Bays, the Tides do naturally ſet Eaſt and Weſt, and that this therefore gives little hopes of a Paſſage. The greateſt depth in the Bay is 110 Fathom, and ſo ſhoalding as you approach to Land. We coaſted this little Bay, which is about 18 Leagues deep, and had 8 and 6 Fathom Water, and in the bottom of it we were in two Fathom and a half, and ſaw the Firm-land almoſt round about us. Then we proceeded to the Southward, within ſight of the Breach of the Shoar, keeping the Lead continually going, and in the Night anchored with our Kedger, but in weighing of it, we loſt it, having no more aboard us.

The 12th, we were in Lat. 58 Deg. 46 Min. two Leagues from the Shoar. The variation about 17 Degrees.

The 13th, Afternoon, being ſomewhat hazy, we ſaw ſome Breaches a head of us; our depth was nine or ten Fathom, and luffing to clear our ſelves of them, we ſuddenly ſtruck upon the Rocks, the Ship then under our two Top-ſails, Fore-ſail, and Sprit-ſail, with a freſh Gale of Wind. In this fearful Accident, we ſtruck all our Sails amain, and it pleaſed God to ſend two or three good ſwelling Seas, which heaved us over the Rocks into three Fathom, where chopping to an Anchor, we eſſaied the Pumps, and found ſhe made no Water, altho' ſhe had three ſuch terrible blows, that we thought her Maſt would have ſhiver'd to pieces, and that ſhe had been aſſuredly bulged. We hoiſed out the Boat to find a Way out of this perilous place; ſhe was no ſooner gone, but there roſe a Fog, ſo that we were fain to ſpend ſome Powder, that ſhe might hear whereabouts we were. The Wind dull'd ſomething, or elſe it had been doubtful whether ſhe could ever have recovered us again. After ſhe had been abſent two Hours, ſhe brought us word that it was all Rocks and Breaches round about us, but that ſhe had found a Way where there was not leſs than two Fathom and a half, and that afterwards the Water did deepen. We preſently weighed and followed the Boat, and paſt over two Ledges of Rocks, whereon was ſcarce 14 Foot Water, which we ſaw the next day dry above Water, whereby I know it flows here two Fathom at leaſt.

They ſtrike on a Rock with full Sails.

The 15th, in the Evening our Cable galled off, by reaſon of which perilous and ſudden Accident, in which we had not time to put a Buoy to it, we loſt our Anchor, and were driven into four Fathom Water before we could ſet our Sails, and it growing dark, we anchored again, and rode a good ſtreſs all Night.

The 16th, in the Morning a freſh gale at North, we ſet ſail, and by nine a clock it grew to be a very ſtorm. The next day at Noon, Lat. 57 Deg. 15 Min. we reckoned our ſelves ſix or ſeven Leagues to the Southward of Port *Nelſon*: Here the colour of the Water changed, and was of a puddliſh and ſandy red colour. We could not ſee the Land from Top-maſt-head, and Night coming on, we ſtood off again.

On the 20th we ſaw the Land, being a very low flat Land, which I named *The New Principality of South Whales*, and drank a health in the beſt Liquor we had, to Prince *Charles*, whom God preſerve. We ſtood along it till the Evening, and then anchored: The Tide did ſet N. W. by W. and S. E. by E. There went a chopping ſhort Sea, and the Ship did labour exceedingly, leaping in Sprit-ſail-yard, Fore caſtle and all. At nine at Night it was very dark, and blew hard: We perceived by the Lead that the Ship did drive, wherefore bringing the Cable to Capſton to heave in our Cable, (for we thought we had loſt our Anchor) the Anchor hitch'd again, and upon the chopping of the Sea, threw the Men from the Capſton. A ſmall Rope in the dark had gotten foul about the Cable, and about the Maſter's Leg too, but with help of God, he cleared himſelf, tho' not without ſore bruiſing. The two Mates were hurt, one in the Head, the other in the Arm. One of our luſtieſt Men had ſuch a blow on the Breaſt with a Bar, that he lay ſprawling for Life; another had his Head betwixt the Cable, and hardly eſcaped; the reſt were flung, and ſore bruiſed. But our Gunner, an honeſt diligent Man, had his Leg caught between the Cable and Capſton, which wrung off his Foot, and tore all the Fleſh from his Leg, cruſhed the Bone to pieces, and ſorely bruiſed his whole Body: In which miſerable condition he remained crying, till we had recovered our Memories and Strengths to clear him. Whilſt we were putting him and the reſt down to the Chirurgion, the Ship drove into Shoal Water, which put us all in fear; but it pleaſed God the Anchor held again, and we rode it out all Night. By midnight the Chirurgion had taken off the Gunner's Leg at the gartering place, and dreſt the others that were hurt and bruiſed, after which, we comforted each other as well as we could.

Many Men hurt by the Cable.

The Gunner's Leg loſt.

The 22d, we weighed and ſtood into deep Water, and proceeded along the Shoar till the 27th, when we anchore in five Fathom. I ſent off the Boat well mann'd and arm'd, with order in writing what they were to do, and a charge to return again before Sun-ſet. When Evening came, we had no news of our Boat; we ſhot and made falſe fires, but had no anſwer, which much perplexed us, doubting ſome diſaſter had befaln her, and in her we ſhould looſe all: We aboard were not able to weigh our Anchor nor ſail the Ship. At laſt we ſaw a Fire on the Shoar, which made us the more doubtful, becauſe they did not anſwer our Shot nor falſe Fires with the like: We thought alſo that it had been the Savages, who now triumphed in their Conqueſt. At laſt they returned all ſafe, and excuſed themſelves, in that upon their coming aſhoar, it ebbed ſo ſuddenly, that a Bank of Sand that lay without them, was preſently dry, and they could not come away till that was covered again. They reported that they found great ſtore of drift Wood on the Shoar, and that there was Wood growing on the Land: That they ſaw the Tracks of Deer and Bears, good ſtore of Fowl (whereof they kill'd ſome) but no ſign of People: That it flowed very near three Fathoms, as appeared by the Shoar: That it was low water at four a clock: That it flowed half Tide, and that the Flood came from the N. W.

The 29th, in the Morning as it cleared, we ſaw a Ship three or four Leagues to Leeward of us, and bearing up with her, found her to be his Majeſties Ship, Captain *Fox* Commander. We ſaluted each other according to the manner of the Sea, and the next Morning he with his Friends came aboard me, and were entertained in the beſt manner I could, with ſuch freſh Meat as I had gotten from the Shoar. I made known to him all the Dangers of this Coaſt, as far as I had been. He told me that he had been in Port *Nelſon*, and had made but a curſory diſcovery hitherto, and that he had not been on Land, nor had many times ſeen the Land. In the Evening, after I had given his Men ſome Tobacco and other things which they wanted, he departed aboard his Ship, and next Morning ſtood away S. S. W. ſince which time I never ſaw him, and we ſtood in for the Shoar, and proceeded in ſight of it. This Month of *Auguſt* ended with Snow and Hail, and the Weather as cold as at any time I have felt in *England*.

They met with Capt. *Fox*.

September the firſt, we coaſted along the Shoar, and on the ſecond had a violent Storm. *Septemb*

On the third we deſcried a Head-land, which we named Cape *Henrietta Maria*, in Lat. 55 Deg. 5 Min. It is diſtant from Port *Nelſon* about 130 Leagues: The Variation taken by Amplitude is about 16 Degrees: A moſt ſhoal and perilous Coaſt, in which there is not one Harbour to be found. In the Afternoon we had a tearing Storm at North, which continued till midnight with extream violence.

The fourth, in the Morning the Storm brake up, and we ſtood in again, ſounding continually. At Noon we ſaw the Land trending S. by E. and the Tides did ſet along it with a quick motion. In the Evening there came a great rowling Sea from the N. N. E. and by eight a clock it blew very hard at S. E. and by reaſon of the encounter of the Wind and the great Sea, the Sea was all in a breach, and to make up a perfect Tempeſt, it did ſo lighten, ſnow, rain, and blow all the Night long, that I was never in the like. We skip'd many Seas, but one moſt dangerous, which raked us fore and aft, that I verily thought it had ſunk the Ship. The Ship did labour moſt terribly in this deſtraction of Wind and Waves, and we had much ado to keep all things faſt in the Hold and betwixt Decks.

The fifth, in the Morning the Wind ſhifted S. W. but continued its fury. In the Afternoon it ſhifted again to the N. W. and there ſhewed its utmoſt malice, with that tearing violence, that neither I, nor any that were with me, ever ſaw the Sea in ſuch a terrible breach. Our Ship did ſo labour with taking it in on both ſides, and at both ends, that we were in moſt miſerable diſtreſs in this unknown place. At eight at Night it brake up, and we had ſome quietneſs, none of us having ſlept a wink in 30 Hours before. If this ſtorm had continued Eaſterly as it was at firſt, without God's goodneſs we had all periſhed.

The ſixth, the Wind being at S. W. we could do no good to the Weſtward; we ſpent the time therefore in trimming our Ship; we brought our Coals and other things towards the Stern to lighten her before; others did pick our Bread, much whereof was wet, for do what we could, we ſhipp'd abundance of Water, which ran into the Hold and Bread-room; we overlooked our Tacks and Shoots, with other Riggings of Streſs, becauſe henceforward we were to look for no other but winter weather. This Evening our Boatſwain, a painful Man, who had laboured extreamly theſe two or three days, was very ſick, ſwounding away three or four times, ſo that we verily thought he would preſently have died.

We ſtood off and on in thick foggy weather, amongſt Sands, Rocks, and Breaches, until the 11th, when I went aſhoar on an Iſland to ſearch for Scurvy-graſs, Sorrel, or ſome Herb or other to refreſh our ſick People, but finding none, I returned aboard, and ſent many of our ſick Men to another part of the Iſland to ſee if they themſelves could fortunately find any relief for their Griefs: In the Evening they returned comfortleſs. I could not perceive that the Tide flowed above two Foot. There was much drift Wood on the Shoar, and ſome of it drove up very high on the North ſide of the Iſland, whereby I judged that the Storms were very great at North in the Winter.

The Ship ſtrikes againſt the Rocks.

The 12th, in the Morning it began to blow hard, and the Ship began to drive, it being ſoft ozy Ground; we heaved in our Anchor, and ſailed under two Courſes, and whilſt moſt were buſy in heaving out of Top-ſails, ſome that ſhould have had ſpecial care of the Ship, ran her aſhoar upon the Rocks, out of meer careleſneſs, in not looking out nor heaving the Lead, after they had ſeen the Land all night long, and might even then have ſeen it, if they had not been blinded with ſelf-conceit, and been enviouſly oppoſite in Opinions. The firſt blow ſtruck me out of a dead ſleep, and as I was running out of my Cabin, I thought I had been wakned to provide my ſelf for another World.

After I had controuled my Paſſion, and check'd ſome bad counſel that was given me, to revenge my ſelf upon thoſe that had committed this Error, I firſt order'd all our Sails to be halled a back-ſtaies, but that did no good, but made her beat the harder. Whereupon we ſtruck all our Sails a-main, and furled them up cloſe, tearing down our Stern to bring the Cable thro' the Cabin to Capſton, and ſo laid out an Anchor to heave her a-ſtern. I cauſed all the Water in the Hold to be ſtaved, and ſet ſome to pump it out again, and did intend to do the like with our Beer. Others I put to throw out all our Coals, which was ſoon and readily done. We quoiled out our Cables into our Long-boat; all this while the Ship beating ſo fearfully, that we ſaw ſome of the Sheating ſwim by us. Then we ſtood as many as could to the Capſton, and heaved with ſuch a good will, that the Cable broke, and we loſt our Anchor, whereupon with all ſpeed we put out another. We could not yet perceive whether ſhe did leak or no, by reaſon we were employed in pumping out the Water which we had bulged in the Hold, tho' we much doubted ſhe had received her Death's Wound. Wherefore we put into the Boat the Carpenter's Tools, a Barrel of Bread, a Barrel of Powder, ſix Muſkets, with ſome Match and Tinder-box, Fiſh-hooks and Lines, Pitch and Okam, and to be brief, whatever could be thought on in ſuch extremity.

All this we ſent aſhoar to prolong a miſerable life for a few days: we were five Hours thus beating, in which time ſhe ſtruck above 100 blows, inſomuch that we thought every ſtroke had been the laſt that it was poſſible ſhe could have endured. We could not perceive the Water in all this time to flow any thing at all; at laſt it pleaſed God that ſhe beat over all the Rocks, but not knowing whether ſhe were ſtanch, all hands went to pumping till we made the Pump ſuck, and then we ſaw how much Water ſhe made in one Glaſs. We found her to be very leaky, ſo went to Prayer, and gave God thanks that it was no worſe, and fitting all things again, got further off and came to an Anchor. In the Evening it began to blow very hard, which if it had done whilſt we were on the Rocks, we had loſt our Ship without any redemption. With much ado we weighed our Anchor, and let her drive to the Eaſtward, amongſt the broken Grounds and Rocks, the Boat going before ſounding. At laſt we came amongſt Breaches, and the Boat made ſigns to us that there was no going further; amongſt the Rocks therefore we again came to an Anchor, where we rode all Night. I obſerved, that when the Wind was at South, it flowed very little or no Water at all, ſo that we could not bring our Ship aground to look to her, and we did pump almoſt continually.

The 13th we weighed and ſtood to the Weſtward; but in that Courſe was all broken Grounds, Shoals and ſunken Rocks. Then we ſhaped our Courſe to the Northward, and after ſome conſultation, I reſolved to get about this Land, and go down to the bottom of *Hudſon's Bay*, and ſee if I could diſcover a way into the River of *Canada*, and if I failed of that, then to winter on the main Land, where more comfort may be expected than among Rocks or Iſlands. When it was Night we ſtood under our Fore-ſail, the Lead ſtill going. The Water ſhoaled upon us to ten Fathom, and it began to blow hard. We tacked about, and it deepned to twelve and fourteen Fathom, but by and by it ſhoaled again to eight Fathom; then tacking again, it ſuddenly ſhoaled to ſix and five Fathom; ſo we ſtruck our Sails amain, and chop'd to an Anchor, reſolving to ride it out for life and death. We rode all Night a great ſtreſs, ſo that our Bits did riſe, and we thought they would have been torn to pieces.

The 14th, at break of day we were joyful Men, and looking about, deſcried an Iſland two Leagues off, and this was the Shoal that lay about it. We got up our Anchor, and ſtood to clear our ſelves of this Shoal. In the Evening it begun to blow a ſtorm not ſail-worthy, and the Sea went very high, and was all in a Breach. Our Shallop, which we did now tow at Stern, being moored with two Halſters, was ſunk, and did ſpin by her Moorings, with her Keel up twenty times in an Hour. This made our Ship to hull very broad, ſo that the Sea did continually overrake us, yet we endured it, thinking to recover her. The Storm continued with violence all Night, with ſome rain in the Morning, and very thick weather. The Water ſhoaled apace, with ſuch an overgrown Sea withal, that a ſail was not to be endured; and what was worſe, there was no truſting to an Anchor; now therefore we began to prepare our ſelves to make a good end of a miſerable tormented Life. About Noon it clearing up, we ſaw two Iſlands under our Lee, and bearing up to them, ſaw an opening betwixt them, and endeavour'd to get in before Night; for there was no hope of us if we continued at Sea that Night; therefore come Life, come Death, we muſt run this hazard. We found it to be a good Sound, where we rode ſafely all Night, but before we got into this good place, our Shallop moored with two Halſers, broke away, and we loſt her to our great grief. We had now none left but the Ship-boat, and ſhe much torn and bruiſed. Here we remained till the 19th, in all which time it did nothing but ſnow and blow extreamly, ſo that we durſt not put our Boat over-board.

The 19th, we weighed and ſtood to the Southward, and anchored under another Iſland, on which I went aſhoar, and named it *The Earl of Briſtol's Iſland*. I wandred up and down, but could not perceive there had been any People on it; nor was there any Fiſh, Fowl or Herb. The Tides highed about ſix Foot, the Winds being Northerly: The Flood comes from the North, and it flows half Tide: It was full Sea this day at one a clock. Here ſeeing the Winds continue Northerly, that we could not get about to go into *Hudſon's Bay*, we thought it beſt to look out for a wintring place; ſome adviſed to go for Port *Nelſon*, becauſe we were certain there was a Cove where we might bring in our Ship. I liked not that Counſel, becauſe it is a perilous place, and it might be ſo long e're we could get thither, that we might be debar'd by the Ice; beſides, it being ſo cold in this Latitude, that our Rigging was frozen every Night, and that ſome Mornings we ſhovel'd the Snow half a Foot thick off our Decks, I thought it would be far worſe in the other place, and thereupon reſolved to ſtand again to the Southward, there to look for ſome little Creek or Cove for our Ship.

The 21ſt, we weighed and ſtood to the Southward; in the Evening the Wind increaſed, and blew hard: We took in all our Sails, and let her drive to the Southward, heaving the Lead every Glaſs. Our depth when we took in our Sails was 30 Fathom, and increaſed to 45, which was a great comfort to us in the dark. At midnight it ſuddenly decreaſed, and as faſt as the Lead could be heaved, it ſhoaled to 20 Fathom, wherefore we chop'd to an Anchor, and trimmed our Ship Aft, to mount on the Sea, and fitted all things to ride it out: There was no need to bid our Men watch. We rode it out well all Night, altho' the Sea went very lofty, and that it blowed very hard.

The 22d, in the Morning we ſaw an Iſland a League off under our Lee, all being Shoals and Breaches betwixt us and it. At Noon, with the help of the Windward Tide, we attempted to have up our Anchor, altho' the Sea ſtill went very lofty. Joining all our Strengths, God be thanked, we got it up; but before we could ſet our Sails, were driven into nine Fathom; whereupon we endeavouring to double a Point, and get under the Lee of the Iſland, the Water ſhoaled to ſeven, ſix, and five Fathom, but when we were about, it deepned again, and we anchored in a very good place, and it was well for us that we did, for the Wind increaſed to a very ſtorm. Laſt Night and this Morning it ſnowed and hailed, and was very cold. I went aſhoar to look for ſome Creek or Cove to have in our Ship, for ſhe was very leaky, and the Company were ſickly and weak with much pumping and extream labour. I aſcended the top of a Hill, but could not ſee what I looked for: I named it Sir *Thomas Roe's Iſland*. At Noon we weighed, ſeeing an Iſland that bare S. S. E. of us, four Leagues off; but as we came near it, it ſuddenly ſhoaled to ſix, five and four Fathom; wherefore we ſtruck our Sails amain, and chop'd to an Anchor, but it was very foul ground, and we had but three Fathom at her Stern. Holding it not ſafe to ſtay longer here, we ſetled every thing in order for the Ship to fall the right way. We had up our Anchor, and ſtood over again for Sir *Thomas Roe's Iſland*, which by Night we brought in the Wind of us two Leagues off, and did well ſhelter us.

The 24th, in the Morning it threatned a Storm, whereupon we weighed with the Windward Tide to get nearer under the Iſland. It was very thick foggy weather, and as we ſtood to the N. E. we came to very uncertain depths; at one caſt twenty Fathoms, the next ſeven, then to five, eight, and three, and coming upon the other tack, we were worſe than we were before. It pleaſed God we got clear of them, and endeavour'd to get under the Lee of the Iſland; but not being able to effect it, we were forced to anchor in 35 Fathom two Leagues off the Shoar. All this Night it ſnowed and hail'd, and was very cold.

The 25th we weighed, and as we tacked to and again, the Wind ſhifted ſo in our Teeth, that it put us within a quarter of a Mile of the very ſhoar, where we chop'd to an Anchor, and rode it out for life and death. Such Miſeries we endured amongſt theſe Shoals and broken Ground. Our Sheet Anchor was down twice or thrice a day; and this continued till the laſt of *September*, which we thought would have put an end to our Miſeries, there being nothing but Rocks, Shoals, Overfalls, and Breaches round about us.

October.

The firſt of *October* was indifferent fair, and our Boat ſounded a Channel to help us out of this perilous place. She returned in two Hours, telling us ſhe had been a way where there was not leſs than twelve Fathom. We preſently weighed, but found it otherwiſe, the Water ſhoaling to ſix Fathom; but there was no remedy, we muſt go forward. It pleaſed God ſo to direct us, that we got thro' it, ſometimes twenty Fathom, then on a ſudden ſeven, ſix and five, ſo we ſtruck all our Sails amain, and chop'd to an Anchor, where we rode till midnight for life and death, it blowing a mercileſs gale of Wind, and the Sea going very lofty, and all in a Breach; the Ground was foul alſo, ſo that we doubted our Cable every Minuit.

The ſecond, in the Morning was little Wind; we ſent the Boat to ſound; which returning in two Hours, told us they had found a place of ſome ſafety to ride in, and had been in no leſs water than 5 Fathom. We weighed, and found our Cable galled in two places, which had ſoon failed us if the foul weather had continued. We ſtood the ſame way the Boat directed us, and anchoring in 18 Fathom, I went aſhoar on an Iſland to the Southward of us, which I named the *Earl of Danby's Iſland*. From the higheſt place in it, I could ſee it all broken Grounds and Shoals to the Southwards, and rather worſe than better than that which we had been in. I found that People had been upon it, and that it was full of Wood. Towards Evening it began to blow hard, wherefore we made towards the Ship, and rowing for Life to recover her, we put to Leeward of her; but they in the Ship putting forth a Buoy and a Warp, we got hold of it and haled up to her. It blowed a violent gale all night, with ſnow and Hail.

The third, the wind dull'd, and weighing, we ſtood further into the Bay, into four Fathom and a half water. I went preſently aſhoar to ſee what comfort I could find on this Iſland, being the ſame we did after winter upon. I found the Tracks of Deer, and ſaw ſome Fowl; but that which I rejoiced at moſt was, that I ſaw an Opening into the Land like a River; we made to it with all ſpeed, but found it barred, and not two Foot water at full Sea on the Bar, and yet within an excellent fine Harbour, having four Fathom water.

The fourth, it ſnowed and blew very hard; I and four more went four or five Miles up into the Country, but could find no relief for our ſick Men, beſides a few Berries. When we had wearied our ſelves in the troubleſome Woods, we returned aboard with no good News. It continued foul weather till the 6th, when we ſtood nearer to the Shoar and moored our Ship.

The 7th, it ſnowed all day, and blew a ſtorm withal; it froze ſo, that all the Bows of the Ship, with the Beak-head, were all Ice, and the Cable was as big as a Man's Middle. The Bows of the Boat were frozen half a Foot thick, ſo that we were ſain to hew and beat it off. The Sun ſhining very clear, we tore the Top-ſails out of the Tops, which were hard frozen in them, and let them hang a ſunning all day, in a very lump, the Sun not having Power to thaw them. Seeing now the VVinter to come ſo extreamly upon us, and fearing that we ſhould not be able to go to and again with the Boat, we rowed aſhoar with much difficulty, and filled the Boat with VVood, and ſent the Carpenter and others to cut Wood, we having but little aboard. It was miſerably cold already aboard the Ship, every thing freezing in the Hold and by the fire-ſide; and ſince we could now no longer make uſe of our Sails, we began to fear that here we muſt ſtay and VVinter. VVhen we had brought as much VVood aboard as we could conveniently ſtow, and enough as I thought would have laſted two or three Months, the ſick Men deſired that ſome little Houſe or Hovel might be built aſhoar, whereby they might be ſhelter'd, and recover their healths. I took the Carpenter and others, and chooſing out a place, they went immediately to work upon it. In the mean time I with ſome others wander'd up and down in the VVood to ſee if we could diſcover any ſigns of Savages, that ſo we might the better provide for our ſafeties againſt them: VVe found no appearance that there was any on this Iſland or near it. The Snow by this time was half Leg high, and ſtalking thro' it, we returned comfortleſs to our Companions, who had wrought hard upon our Houſe. They in the Ship took down our Top-ſails, and making a great fire upon the Heath in the Hatch way, thawed them and folded them up, and put them betwixt Decks, that if we had any good weather, they might bring them again to Yard: In the Evening we return'd aboard.

They build a Houſe.

The 12th, we took our Main-ſail from the Yard, and carried it aſhoar to cover our Houſe, having firſt thawed it by a great fire. By Night they had cover'd it, and had almoſt hedged it about, and the ſix Builders deſired to lie in it that Night, which I granted, having firſt furniſhed them with Muſkets and other Arms, and charging them to keep good watch all Night. They had alſo two Greyhounds, a Dog and a Bitch, which I had brought from *England*, to kill us ſome Deer if we ſhould ſee any.

The 13th, our Houſe was ready, and our ſix Builders deſired they might travel up into the Country to ſee what they could diſcover.

The 14th, early, being fitted with Munition, and order'd to keep together (but eſpecially to ſeek out ſome Creek or Cove for our Ship) they departed. We aboard took down our two Top-maſts and their Rigging, intending if we ſhould remove, to make uſe of our Fore-ſail and Mizen.

They kill a Deer.

The 15th, in the Evening our Hunter returned very weary, and brought with him a ſmall lean dear in four Quarters, which made us all rejoice, hoping we ſhould have more of them. They reported that they had wandred above twenty Miles, and had brought this Deer above twelve Miles, and had ſeen nine or ten more: That laſt Night they had a very cold lodging in the Woods, and ſo it appear'd, for they all looked as if they were almoſt ſtarved, nor could they recover themſelves in three or four days after. They ſaw no ſigns of People or wild Beaſts, nor any place for Harbour.

The Gunner's Mate drown'd.

The 17th, my Lieutenant and five more deſired they might try their Fortunes in travelling about the Iſland; but they had worſe luck than the others, and returned comfortleſs and diſabled with cold; but what was worſe than all, they loſt one of their Company, *John Barton* our Gunner's Mate, who being very weary, rather than go about, would go over a Pond a quarter of a Mile over, where when he was in the very middle, the Ice brake and cloſed upon him, and they never ſaw him more. Being now certain that there were no Savages upon the Iſland, nor on the Main neither as far as we could diſcover, and the cold being now ſo extream, that they could not come to us if there were any; we comforted and refreſhed our ſelves by ſleeping the more ſecurely, and changed our Garriſon every Week.

From the 10th to the 29th it did for the moſt part ſnow and blow ſo hard, that we could ſeldom get aſhoar with the Boat, without wading in the thick congeal'd Water, and carrying one another.

November The firſt, I reckoned with the Steward concerning our Victuals, the third part of our time being this day out.

The third, the Boat endeavour'd to get aſhoar, but could not ſet thro' the congeal'd Water. The next day they found a place to get aſhoar, and carried Beer to our Men aſhoar in a Barrel, which would freeze firmly in the Houſe in one Night. The Icy Beer being thawed in a Kettle, was not good, and they brake the Ice of the Ponds to come at Water to drink. This Pond-water had a loathſome ſmell with it, ſo that fearing it might be infectious, I cauſed a Well to be ſunk near the Houſe, where we had very good Water, flattering our ſelves that it taſted like Milk.

The 10th, having ſtore of Boards for ſuch purpoſe, I order'd the Carpenter to make a little Boat, which we might carry, if occaſion were, over the Ice, and make uſe of her where there was Water. At Noon I found the Latitude to be 52 Degrees.

The 12th, our Houſe took fire, but we ſoon quenched it; we were fain to keep an extraordinary fire Night and Day, and if our Houſe and Clothing had been burnt, we had been in a miſerable condition. I lay aſhoar till the 17th, all which time our Miſeries did encreaſe. It ſnowed and freezed extreamly, and the Ship looked like a piece of Ice reſembling a Ship; Our Cables froze in the Hawſe, wonderful to behold. I got aboard, where I ſpent the long Nights with tormenting Cogitations, and in the day time I could not ſee any hopes of ſaving the Ship: This I was ſure of, that it was impoſſible to endure theſe Extremities long. Every day the Men muſt beat the Ice off the Cables, while ſome within board with the Carpenter's long Calking Iron, digged the Ice out of the Hawſes; in which work the Water did ſo benum them, that they could hardly get into the Ship without being heaved in with a Rope.

The 19th, our Gunner, who as you may remember had his Leg cut off, grew very weak, deſiring that for the little time he had to live, he might drink Sack altogether, which I order'd he ſhould do.

The Gunner dies.

The 22d, in the Morning he died; an honeſt and a ſtrong hearted Man. He had a cloſe boarded Cabin in the Gun-room, and as many Cloaths on him as was convenient, with a Pan of Coals continually in his Cabin; notwithſtanding which, his Plaiſter would freeze at his Wound, and his Bottle of Sack at his Head. We put him into the Sea at a good diſtance from the Ship.

Sack frozen.

The 23d, the Ice increaſed extreamly: In the Evening after the Watch was ſet, a great piece came athwart our Hawſe, and four more followed after it, the leaſt of them a quarter of a Mile broad, which in the dark did much aſtoniſh us, thinking it would have carried us out of the Harbour. It being newly congealed, and not above two Inches thick, we brake thro' it, the Cable and Anchor enduring an incredible ſtreſs, ſometimes ſtopping the whole Ice. We fired three Muſquets, ſignifying to our Men aſhoar that we were in diſtreſs; who anſwered us again, but could not help us. By ten a clock it was all paſſed, nevertheleſs we watched carefully, and the weather was warmer than we had felt it any time this Month: In the Morning I ſent for our Men aboard. Many pieces of Ice drove by the Ship, tho' not ſo large as the former, yet much thicker: One of them came foul of the Cable and made the Ship drive. As ſoon as we were clear of it we got up our Anchor, and now I reſolved to bring the Ship aground, for no Cables nor Anchors could hold her. The reaſons why I brought her no ſooner aground were, 1ſt, It was all ſtony ground, ſome Stones lying dry three or four Foot above Water, ſo that we had reaſon to ſuſpect that it was the like all about us. Secondly, it ordinarily flowed but two Foot and a half, and if ſhe ſhould bed deep in the Sands, we could never come to dig her out again, becauſe ſhe would not be dry by four or five Foot. Thirdly, It was a looſe Sand, which might riſe with the Surf, or ſo mount about her, that all our weak Powers would not be able to heave it away the next Spring time. Fourthly, We doubted the Tides would not high ſo much in the Summer as they now did. Fifthly, We could not bring her out of the Tide's way, which run ſomewhat quick here, and the Ice might drive and mount upon her, and ſo over-ſet her, or tear her, and carry away Planks and Iron Work, ſo that we ſhould have nothing left to ſet up a Pinnace. Sixthly, If it blowed a Storm at N. W. or thereabouts, the Water would flow ten Foot and upwards, and that Wind being off the Shoar, would blow away all the Ice, and there would come in an extraordinary Surf about the Shoal Eaſter Point, which was occaſioned by a deep Over-fall. Moreover, ſhe would beat extreamly, and if ſhe ſhould be put up by the Sea or that Surf, it was very doubtful that we ſhould never heave her off again.

They bring the Ship aground.

For theſe Reaſons we endured all extremity, ſtill hoping for ſome good and fortunate accident; but we now ſaw all our provident Deſigns become fooliſhneſs, and that we had ſpent a great deal of labour in vain. The Wind was now South, which blew upon the Shoar, and made the loweſt Tides. We brought the Ship into twelve Foot Water, and laid out one Anchor in the Offing, and another in ſhoal Water to draw her aland at command. Our hope alſo was, that ſome Stones to the Weſtward of us would ſend off ſome of the Ice. We then being about a Mile from the Shoar, about ten a clock in a dark Night, the Ice came driving upon us, and our Anchor came home. She drove about two Cables length, and the Wind blowing on the Shoar, ſhe came aground at two a clock, and ſtopp'd much Ice, yet ſhe lay well all Night, and we took ſome reſt.

The 25th, the Wind ſhifted Eaſterly, and put abundance of Ice upon us. When the Flood was made, I cauſed our two Top-ſails to be had up from betwixt Decks, and hoiſing them up with Ropes in all haſt, forced the Ship aſhoar, when ſhe had not half a Cables length to drive on the rocky Shoals. In the Evening we brake away thro' the Ice, and put an Anchor to ſhoarward in five Foot water, to keep her to the Shoar if poſſible. Here Sir *Hugh Willoughby* came into my mind, who without doubt was driven out of his Harbour in this manner, and ſo ſtarved at Sea; but God was more merciful to us. At nine at Night the Wind came up at N. W. and blew a Storm: This Wind was off the Shoar, and blew away all the Ice from about us, long before we were afloat. There came in a great rowling Sea withal, accompanied with a great Surf on the Shoar; and now were we left on the Ground to the mercy of the Sea. By ten ſhe began to rowl in her Dock, and ſoon after began to beat againſt the Ground. As many as could ſtood at the Capſton, others at the Pumps, thinking every fifth or ſixth blow would have ſtaved her to pieces: We heaved to the utmoſt of our Strengths, to keep her as near the Ground as we could. By reaſon of this Wind, it flowed very much Water, and we drew her up ſo high, that upon ſecond thoughts we doubted if ever we ſhould get her off again. She continued thus beating till two a clock next Morning, and then ſetled again; whereupon we went to ſleep to reſtore nature, expecting the next Tide to be tormented again.

The next Morning our Ship did not float: After Prayers I called a conſultation of the Maſter, my Lieutenant, Mates, Carpenter, and Boatſwain, to whom I ſaid, that ſince we were now put to our laſt ſhifts, they ſhould tell me what they thought of it; namely, Whether it were not beſt to carry all our Proviſion aſhoar, and when the Wind ſhould come Northerly, to draw her farther off and ſink her. After many reaſonings, they allowed of my purpoſe, and ſo I communicated it to the Company, who all willingly agreed to it; and ſo we fell to getting up our Proviſions; firſt our Bread, whereof we landed this day two dry Fats, with a Hogſhead of Beef. In the Evening the Wind came up at N. E. and choaked the Bay with Ice.

The 27th, the Bay was ſtill full of Ice, and I hoped would ſo continue, that we might not be put to ſink our Ship. This day we could land nothing.

The 28th, at break of day three of our Men went aſhoar over the Ice, unknown to me, and the Wind coming up at Weſt, drove the Ice from betwixt us and the Shoar. I made the Carpenter to fit a place againſt all ſudden Extremities, becauſe with the firſt Northerly Wind I meant to effect our laſt project. In the Run of her, he cut away the Seeling and the Plank to the Sheathing, four or five Inches ſquare, four Foot high from the Keel, that ſo it might be boared out in an inſtant. We brought the remainder of our Bread out of the Bread-room into the great Cabin, and all our Pouder, ſetting our light dry things betwixt Decks.

The 29th, at five in the Morning the Wind came up at W. N. W. and began to blow very hard: It was ordinary for the Wind to ſhift W. by N. round about. I order'd the Cooper to go down into the Hold and look to all our Caſks; thoſe that were full, to maul in the Bungs of them; thoſe that were empty, to get up, or if they could not be gotten up, to ſtave them. Then I order'd all our Cables to be quoiled upon our lower Tire, and to lay on our ſpare Anchors, and any thing that was weighty, to keep them down from riſing. By ſeven a Clock it blew a ſtorm at N. W. our bitter Enemy: The Ship was already bedded about two Foot in the Sand, and whilſt it was flowing water, ſhe muſt beat; yet we had been ſo ferreted by her laſt beating, that I reſolved to ſink her right down, rather than run that hazard. By nine a clock ſhe began to rowl in her Dock, with an extraordinary great Sea; and this was the fatal Hour that put us all to our wits end; wherefore I went down in Hold with the Carpenter, and taking his Auger, bored a hole in the Ship, and let in the Water; then with all ſpeed we began to cut out other places, and to bore thorow, but every place was full of Nails. By ten the lower Tire was covered with Water, and ſhe beat in her Dock more and more, ſo that we could not ſtand to do any thing in her; nor would ſhe ſink ſo faſt as we would have her, but continued beating double blows abaft and before, that it was wonderful how ſhe could endure it a quarter of an Hour. By twelve a clock her lower Tire roſe, and did ſo counterbeat on the inſide, that it beat the Bulk-heads of the Bread-room and Powder-room all to pieces; and when it came betwixt Decks, the Cheſts fled widely about, and the Water did flaſh and fly wonderfully, ſo that we expected every minuit when the Ship would open and break to pieces. At one a Clock ſhe beat off her Rudder, and that was gone we knew not which way. Thus ſhe continued beating till three a clock, and then the Sea came upon the upper Deck, and ſoon after ſhe began to ſettle. We were forced to ſink the moſt part of our Bedding and Cloaths, and the Chirurgion's Cheſt. Our Men that were aſhoar ſtood looking upon us, almoſt dead with cold and ſorrow, to ſee our miſeries and their own. Dark Night came on, and I order'd the Boat to be haled up, and commanding my loving Companions to enter, I went laſt out of the Ship.

They ſink the Ship.

We were 17 poor Souls in the Boat, and thought we were now leapt out of the Frying-Pan into the Fire. The Ebb was made, which we thought would certainly have carried us away into the Sea; we thereupon double manned four Oars, and with the help of God got to the Shoar, haling up the Boat after us. The Water was thick congealed with Snow, notwithſtanding which, there went a great ſwelling Sea. Being arrived upon the Land, we were ſo frozen all over, Faces, Hair and Apparel, that we could not know each other by our Habits or Voices.

The Winds ſince we came hither have been very variable and unconſtant, and till within this Fortnight the Southerly Wind was the coldeſt. The reaſon I conceive to be, becauſe it blowed from the main Land which was all covered with Snow, whereas the North Winds came out of the Bay which was hitherto open.

A N. W. a N. W. by N. and a N. N. W. Wind, if it blew a Storm, would riſe the Tides extreamly; and in ſhort, from the W. N. W. to N. N. E. the Tides would riſe in proportion as they blew from the middle Point. The Wind being on the oppoſite Points, if it blew, it would flow very little at all; the harder it blowed, the leſs water it flowed. The Tides do ordinarily high about three Foot, but when forced by the foreſaid Winds, upward of ten Foot. I could perceive no difference betwixt Neap and Spring Tides: It flows half Tide, that is, the Flood comes from the Northwards, and thither returns again two Hours before it be high water, as is commonly ſeen in Bays and Inlets.

The Wintering.

After we had haled up the Boat, we went along the Beach ſide in the dark towards our Houſe, where we made a good fire, and with it and Bread and Water, we thawed and comforted our ſelves. We then beginning to reaſon with one another concerning our Ship, I required every one to ſpeak his mind freely: The Carpenter was of opinion that ſhe was foundred, and would never be ſerviceable again; he alledged, that ſhe had ſo beaten, that it was not poſſible but that all her Joints were looſe, and Seams open; and by reaſon it flowed ſo little Water, and no Creek nor Cove near, wherein to bring her aground, he could not deviſe how he might come to mend it; moreover, her Rudder was loſt, and he had no Iron to hang on another. Some alledged, that we had heaved her up ſo high upon the Sands, that they thought we ſhould never have her off again, and that they were aſſured ſhe was already dock'd three Foot. Others, that ſhe lay in the Tide's way, and that the Ice might tear her to pieces off the Ground: Beſides which, we could not now get two of our Anchors from under the Ice, which would be of a great thickneſs by the Spring, and when it breaks, would break our Anchors to pieces, and then (ſuppoſing we ſhould get off the Ship, and that ſhe proved ſound alſo) we ſhould have no Anchors to bring us home. I comforted them the beſt I could with words to this effect; Country-men and faithful Companions, be not diſmaied for any of theſe Diſaſters, but let us put our whole truſt in God; it is he that gives and he that takes away; he throws down with one Hand, and raiſes up with another; his Will be done: If it be our fortune to end our days here, we are as near Heaven as in *England*; and we are much bound to Almighty God for giving us ſo large a time of repentance, who as it were daily calls upon us, to prepare our ſelves for a better life in Heaven. I make no doubt but he will be merciful to us, both here on Earth, and in his bleſſed Kingdom. He doth not in the mean time deny, but that we may uſe all honeſt means to ſave and prolong our natural Lives; and in my judgment we are not yet ſo far paſt hope of returning into our native Country, but that I ſee a fair way by which we may effect it. Admit the Ship to be founder'd (which God forbid, I hope the beſt) yet have thoſe of our own and other Nations, when they have been put to theſe extremities, out of the Wrack of their loſt Ship built a Pinnace, and return'd to their Friends again. If it be objected that they have hapned into better Climates, both for temperate Air and pacifick and open Seas, and provided with all of abundance of freſh Victuals; yet there is nothing too hard for couragious minds, which hitherto you have ſhewn, and I doubt not will ſtill do to the utmoſt.

They all proteſted to work to the beſt of their ſtrength, and that they would refuſe nothing that I ſhould order them to do, to the utmoſt hazard of their Lives. I thanked them all, and to the Carpenter for his encouragement, I promiſed ſo much Plate preſently as ſhould be worth ten Pounds Sterling; and if ſo be I went to *England* in the Pinnace, I would give her to him freely, and 50 Pounds in Money over and above; and would moreover gratify all them that I ſhould ſee painful and induſtrious.

Thus we reſoved to build a new Pinnace with the Timber we ſhould get upon the Iſland, that ſo in the Spring, if we found the Ship not ſerviceable, we might tear her up, and plank her with the Ship's Planks; and ſo for this Night we ſetled our ſelves cloſe about the fire, and took ſome reſt till day light.

The firſt thing we were to do, was to get our Cloaths and Proviſion aſhoar: The Maſter and his Company were to get things out of the Hold; the Cookſwain and his Gang to bring things aſhoar; my ſelf with the reſt, to carry it half a Mile thro' the Snow, to the place where we intended to build a Store-houſe; as for the heavier things, we purpoſed to lay them on the Beach. In the Afternoon the Wind was at S. S. W. and the Water ebbed ſo low, that we lanched our Boat, and rowed thro' the congealed Water, thinking we might get ſomething out of our Hold. It froze very hard, and I ſtood on the Shoar with a troubled mind, thinking verily that with the Ebb the Boat would be carried into the Sea, and then we had been all loſt Men; but by God's aſſiſtance they got ſafely to the Ship, and made a fire there, to ſignify their arrival aboard. They fell preſently to work, and got ſome things out of the Hold upon the Decks, but Night coming on, they durſt not adventure to come aſhoar, but lay on the Bed in the great Cabin almoſt ſtarved.

Dec. the firſt was ſo cold, that I went over the Ice to the Ship, where the Boat had gone Yeſterday. This day we carried upon our Backs in Bundles, 500 of our Fiſh, and much of our Bedding and Cloaths, which we were fain to dig out of the Ice in the Ship. *December*

The ſecond was mild weather, and ſome of the Men going over the Ice, fell in, and very hardly recover'd, ſo that this day we could land nothing. In the Evening the Wind came up at Weſt, and the Ice did break and drive out of the Bay, that we feared it would have ſpoiled the Ship.

The third, divers great pieces of Ice came thwart the Ship, and ſhe ſtopp'd them, yet not ſo, that we could go over them. We found a way for the Boat, but when ſhe was loaden, ſhe drew four Foot water, and could not come within a flight ſhot of the Shoar; ſo that the Men were forced to wade thro' the thick congealed Water, and carry all things upon their Backs. As they waded thro', they ſeemed like walking pieces of Ice, moſt lamentable to behold. There being now ſmall hope that the Boat ſhould go to and again any more, they cut away as much Ice from her as they could, and pick'd it with Hand-ſpikes out of her, and endeavour'd to hoiſe her into the Ship, but uſe what means they could, ſhe was ſo heavy, that they could not hoiſe her in, but were fain to leave her in the Tackles by the Ship's ſide.

The 4th, being Sunday, we reſted, and performed Chriſtian Duties.

The 5th and 6th were extream cold, and we made Bags of our ſtore Shirts, and in them carried our looſe Bread over the Ice aſhoar upon our Backs. We alſo digged our Cloaths and new Sails with Hand-ſpikes of Iron out of the Ice, and carrying them aſhoar, dried them by a great fire.

The 7th was ſo extreamly cold, that our Noſes, Cheeks and Hands did freeze as white as Paper.

The 8th and 9th it ſnowed much, yet we continued our Labour in carrying and rowling things aſhoar. In the Evening the water raiſed the Ice very high, and brake two thaughts of our Boat, and brake in the ſide of her, but for that time we could not help it.

The 10th, our Carpenter found Timber to make a Keel and a Stern for our Pinnace: The reſt wrought about our Proviſions till the 13th day, which was ſpent in digging our Boat out of the Ice, which we were fain to do to the very Keel, and dig the Ice out of her, and then we got her up on the Ice. The cold increaſed extreamly, ſo that by the 19th we could get no more things out of our Hold, but were forced to leave five Barrels of Beef and Pork, all our Beer, and divers other things, which were all firmly frozen in her.

The 21ſt was ſo cold, that we could not go out of the Houſe.

The 23d, we endeavour'd to have our Boat aſhoar, running her over our Oars, but by ten a clock there came ſuch a thick Fog, that it was as dark as Night. I made them give over and haſten to the Shoar, which we had much ado to find; at laſt we all met at the Houſe the moſt miſerably frozen that can be conceiv'd: The Cold had raiſed Bliſters upon ſome as big as Walnuts: Our Well was now frozen, ſo that dig as deep as we could, we can come by no Water: Melted Snow-water is unwholſome, either to drink or to dreſs our Victuals; it made us ſo ſhort breath'd, that we were ſcarce able to ſpeak. All our Sack, Vineger, Oil, and every thing elſe that was liquid, was now frozen as hard as a piece of Wood, and we muſt cut it with a Hatchet. Our Houſe was all frozen on the inſide, and it froze hard within a yard of the Fire-ſide. When I landed firſt upon this Iſland, I found a Spring under a Hill's ſide, and cauſed ſome Trees to be cut for Marks to know the place again: It was about three quarters of a Mile from our Houſe, and I ſent three of our Men who had been formerly with me, who wading thro' the Snow, at laſt found the place, and ſhoveling away the Snow, made way to the very head of it. They found it ſpring very ſtrongly, and brought me a Can of it, for which I was very joyful. This Spring continued all the Year, and did not freeze ſo much, but that we could break the Ice and come to it. We laboured very hard theſe three or four days in bringing Wood to the Houſe, which was very troubleſome thro the deep Snow.

Sack, Oil, &c. frozen.

A Spring found which did not freeze.

We then ſetled our Bedding and Proviſion, in order to keep *Chriſtmas-day* holy, which we ſolemnized in the joyfulleſt manner we could: ſo likewiſe did we St. *John's day*, upon which we named the Wood we wintered in, *Winter's Forreſt*, in memory of that honourable Knight Sir *John Winter*. And now inſtead of a *Chriſtmas* Tale, I will here deſcribe the Houſe we lived in, with thoſe adjoining.

December

Deſcription of their Houſe.

When I firſt reſolved to build a Houſe, I choſe the warmeſt and moſt convenient place near the Ship. It was amongſt a Tuft of thick Trees, under a South Bank, about a flight Shot from the Sea ſide. True it is, that we could not dig into the Ground to make us a Hole or Cave in the Earth (which had been the beſt way) becauſe in two Foot digging we found water, and therefore that Project failed. It was a fine white Sand, ſo that we could by no means make up a mud Wall. As for Stones, there were none near us, and if there had, they were all now covered with Snow.

The Houſe was about twenty Foot ſquare, as much as our Main-courſe would well cover: Firſt we drove ſtrong Stakes into the Earth, which we watled with Boughs as thick as might be, beating them down very cloſe: This our firſt work was ſix Foot on both ſides, but at the ends almoſt up to the very top, where we left two Holes for the light to come in, and let out the Smoak: At both ends we ſtuck up three rows of thick Buſh Trees, as cloſe as poſſibly might be: Then at a diſtance from the Houſe we cut down Trees, proportioning them into lengths of ſix Foot, with which we made a Pile on both ſides ſix Foot thick, and as many high: We left a little low Door to creep into, and a Portal before it, made with Piles of Wood, that the Wind might not blow into it: We then faſtned a rough Tree over all, upon which we laid our Rafters, and our Main-courſe over them, reaching down to the Ground on either ſide; and ſo much for the Outſide. On the Inſide we faſtned our Bonnet-ſails round about; then we drove in Stakes and made Bedſtead Frames, which Bedſteads were double, one under another, the lowermoſt being a Foot from the Ground: Theſe we firſt filled with Boughs, then laid on ſome ſpare Sails, and then our Bedding and Cloaths: We made a Hearth or Cauſy in the middle of the Houſe, laying ſome Boards round about it to ſtand upon, that the cold damp ſhould not ſtrike up into us; with our waſte Cloaths we made us Canopies and Curtains. Our ſecond Houſe was not paſt twenty Foot diſtant, and made much after the ſame manner, but leſs, and covered with our Fore-courſe. It had no Piles on the South ſide, but inſtead of them we piled up all our Cheſts on the Inſide, and indeed the reflex of the heat of the Fire againſt them, did make it warmer than the Manſion Houſe. In this Houſe we dreſt our Victuals, and the inferior Crew did refreſh themſelves all day in it. A third Houſe, which was our Store-houſe, we built twenty Paces off from this, for fear of firing. This Houſe was only a rough Tree faſtned aloft, with Rafters laid from it to the Ground, and covered over with our new ſuit of Sails. On the Inſide we had laid ſmall Trees, and covered them over with Boughs, whereon we laid our Bread and Fiſh, about two Foot from the Ground, the better to preſerve them: The diſtance from our Houſe to the Ship was about a Mile. Long before *Chriſtmas* our Manſion-houſe was covered with Snow, almoſt to the very Roof, but our Store-houſe all over, by reaſon we made no fire in it. We made Paths in the Snow about the length of ten Steps, and one of them was our beſt Gallery for the Sick Men, and for my own ordinary walking.

January

The 6th, I obſerved the Latitude to be 51 Deg. 52 Min. this difference is becauſe here is a great refraction.

The 21ſt, I obſerved the Sun to riſe like an Oval, twice as long as it was broad, and as it got up higher, it recovered its roundneſs.

The 26th, I obſerved when the Eaſtern Edge of the Moon did touch the Plannet *Mars*, the *Lions Heart* was then in the Eaſt Quarter 21 Deg. 45 Min. above the *Horizon*; but this was not done with that exactneſs as I have done other Obſervations.

The 30th and 31ſt, there appear'd in the beginning of the Night more Stars than ever I had before ſeen by two thirds. I could ſee the Cloud in *Cancer* full of ſmall Stars, and all the *Via Lactea* nothing but ſmall Stars, and a great many amongſt the *Pleiades*. The Wind for the moſt part of this Month hath been Northerly and very cold. We employed our ſelves for the moſt part in fetching Wood, and working upon our Pinnace. In the beginning of this Month the Sea was all firmly frozen over, ſo that we could ſee no Water any way. I ſhall here deliver my opinion how all this Ice comes to be engendred.

The Land that encircles this great Bay (which is full of Iſlands and dry Sands) is for the moſt part low and flat, and hath flat Shoals adjoining to it, half a mile or a Mile, that are dry at low water. Now, as I have ſaid, it flows half Tide, that is, from whence the Flood comes, the water thither returns two hours before it be high water or full Sea. It ſeldom rains after the middle of *September*, but ſnows, and that Snow will not melt on the Land or Sands. At low water when it ſnows, the Sands are covered over with it, which the half Tide officiouſly carries twice in 24 Hours into the great Bay, which is the common *Rendevouz* of it. Every low water are the Sands left clear, to gather more to the encreaſe of it. Thus daily gathering in this manner till the end of *October*, it by that time brings the Sea to ſuch coldneſs, that as it ſnows, the Snow will lie upon the Water in flakes, and as Winter comes on, will freeze on the Surface two or three Inches or more in a Night, which being carried with the half Tide, ſoon meets with ſome Obſtacle, and then crumples and runs upon it ſelf, that in a few Hours it will be five or ſix Foot thick: The half Tide ſtill flowing, carries it ſo faſt away, that by *December* it is multiplied extreamly; and thus by this ſtoring of it up, the cold predominates in the Sea (which alſo furniſhes the Springs in the low flat Lands) and cools it like it ſelf. Our Men found it much colder to wade thro' the Water in the beginning of *June*, when the Sea was full of Ice, than in *December* when it was increaſing. Our Well alſo, which yielded Water in *December*, had none in *July*.

The Ground frozen ten Foot deep.

The Ground at ten Foot deep was frozen, and yet I am not of opinion that the Bay freezes all over; for the Wind blowing a Storm at North, we perceived the Ice to riſe ſomething in the Bay.

February.

The Cold was extream this Month, and many of our Men complained, ſome of ſore Mouths, all their Teeth looſe, their Gums ſwoln with black rotten Fleſh, which muſt every day be cut away; others of pain in their Heads and Breaſts; ſome of weakneſs in their Backs; others of aches in their Thighs and Knees, and ſwellings in their Legs. Thus were two thirds of the Company under the Chirurgion's hand; and yet they muſt work daily, and go abroad to fetch Wood and Timber, altho' they had no Shooes to put on. Their Shooes upon their firſt coming to the fire out of the Snow, were ſo burnt and ſcorched, that they would not come upon their Feet, and our ſtore Shooes were all ſunk in the Ship. Our Carpenter alſo was now fal'n ſick, to our great diſcomfort.

I practiſed ſome obſervations by the riſing and ſetting of the Sun, calculating the times of his riſing and ſetting by very true running Glaſſes. As for our Clock and Watch, notwithſtanding that we ſtill kept them by the Fire-ſide in a Cheſt wrap'd in Cloths, yet they were ſo frozen that they could not go. My Obſervations by theſe Glaſſes I compared with the Stars coming to the *Meridian*. By this means I found the Sun to riſe twenty Minutes before it ſhould, and in the Evening to remain above the *Horizon* twenty Minutes longer than it ſhould do, and this by reaſon of the Refraction.

Clock frozen by the Fire's ſide.

When we went upon the Ice to our Ship, the cold was ſometimes ſo extream, that it would freeze the Hair of our Eye-lids, ſo that we could not ſee; and I verily believe it would have ſtifled a Man in a few Hours. The Cold alſo in the Woods would freeze our Faces, or any part of our Fleſh that was bare, but was not ſo mortifying as the other. Our Houſe on the Outſide was covered two third parts with Snow, and on the Inſide hung with Iceſickles. The Cloaths on our Beds would be covered with hoar froſt, tho' not far from the Fire. The Cooks Tubs wherein he water'd his Meat, ſtanding about a yard from the fire, and which he did all day ply with melted Snow water, would in the Night time while he ſlept but one watch, be firm frozen to the bottom; ſo that he was forced to water his Meat in a Braſs Kettle cloſe to the fire; and I have many times felt by putting my hand into it, the ſide next the fire to be warm, while the other ſide was an Inch frozen. The Chirurgions Syrups and other Liquids, altho' he had hung them as conveniently as he could to preſerve them, yet they were all frozen. Our Vinegar, Oil, and Sack, which we had in ſmall Caſks in the Houſe was all firmly frozen. It is further remarkable, that in the beginning of *June* the Sea was not broken up, and that the Ground was then frozen, as we found by experience in burying our Men, in ſetting up the King's Standard towards the latter end of *June*, and by our Well at our coming away in the beginning of *July*, altho' at the ſame time it was very hot weather.

Ground frozen in *June*.

March.

The firſt of this month being St. *David's-day*, we kept Holy-day, and prayed for his Highneſs *Charles* Prince of *Wales*.

The 15th, one of our Men thought he had ſeen a Deer, and he with two or three Men deſired if they might go and try if they could kill him; but they returned at Night ſo diſabled with cold which had raiſed bliſters as big as Walnuts on the Soals of their Feet, and on their Legs, that they were not well in a Fortnight after.

The 26th, three more deſired that they alſo might go and try their fortunes; but they returned more diſabled than the former, and almoſt ſtifled with cold. This Evening the Moon roſe in a very long Oval along the *Horizon*.

By the laſt of this Month the Carpenter had ſet up 17 Ground-Timbers, and 34 Staddles, and made what progreſs he could, tho' he was ſo weak that he was led to his labour.

All this Month was very cold, the Wind about N. W. the Snow as deep as it hath been all this Winter, but whereas it may be objected, You were in a Wood, and therefore might make fire enough to keep you from the cold: To this I anſwer, It is true, we were in a Wood, and under a South Bank too, or elſe we had all ſtarved: But I muſt tell you withal, how difficult it was to have Wood in a Wood; and firſt ſhall make a muſter of the Tools we had: The Carpenter in his Cheſt had two Axes indeed, but one of them was ſpoiled in cutting down Wood to pile about our Houſe before *Chriſtmas*; we had but two whole Hatchets when we came firſt aſhoar, which in a few days were broken two Inches below the Sockets; I called for three of the Coopers Hatchets; the Carpenter's Ax, and the Cooper's beſt Hatchet I locked up, and order'd the other two Hatchets to be new helved, and the Blades of the two broken Hatchets to be put into a cleft piece of Wood, and then to be bound about with Rope-yarn as faſt as might be, which was repaired every day; and theſe were all the cutting Tools we had before *Chriſtmas*. The Carpenter in *February* had out his beſt Ax, and one of the Company in his abſence, by indiſcreet handling of it, brake that to, two Inches below the Socket; whereupon I order'd the Carpenter ſhould have one of the Coopers Hatchets, they that look'd for Timber in the Woods the other; and they that cut down Wood to burn, were to have the two pieces.

Objection.

Thoſe that were appointed to look for crooked Timber, did ſtalk and wade (ſometimes on all four) thro' the Snow, and when they ſaw a Tree likely to fit the Mould, they muſt heave away the Snow to ſee if it would fit the Mould; if not, they muſt ſeek further: If it did fit the Mould, they made a fire to it to thaw it, otherwiſe it could not be cut: Then they cut it down, and fitted it to the length of the Mould, and dragged it a Mile thro' the Snow.

April.

The firſt of this Month being *Eaſter-day*, we kept holy; this day and the two following days were extream cold; and now ſitting all about the Fire, we reaſoned together about our preſent condition: We had five Men (whereof the Carpenter was one) not able to do any thing; the Boatſwain and many other were very infirm; and of all the reſt, we had but five that could eat of their ordinary allowance. The time and ſeaſon of the Year came forward apace, and yet the cold did very little mitigate. Our Pinnace was in an indifferent forwardneſs, but the Carpenter grew worſe and worſe. The Ship (as we then thought) lay full of ſolid Ice, which was weight enough to open the Seams of any new and ſound Veſſel, eſpecially of one that had lain ſo long upon the Ground as ſhe had done. After much arguing, I reſolved upon this Courſe, that with the firſt warm weather we would begin to clear the Ship: In the next place, we looked to thoſe Tools we had to dig the Ice out of her; we had but two Iron Bars (the reſt being ſunk in the Ship) and one of them was broken to. We fitted thoſe Bars, and four broken Shovels, wherewith we intended (as after we did) to dig the Ice out of her, and lay it upon a heap upon the Lar-board-bow, and to ſink down the Ice ſo faſt to the Ground, that it might be a *Barricado* to us when the Ice ſhould break up, which we feared would tear us all to pieces.

The 6th was the deepeſt Snow we had all this Year: It was moiſter and greater than any we had before; for formerly it was as dry as duſt, and as ſmall as Sand, and would drive like duſt with the Wind. The weather continued with this extremity until the 15th, at which time our Spring was harder frozen than it had been all the Year before.

Their Spring more frozen in *April* than before.

The 16th was the moſt comfortable ſunſhiny day that came this Year. I put ſome to clear off the Snow from the upper Decks of the Ship, and to dry the great Cabin, by making fire in it. Others I put to dig down thro' the Ice to come by our Anchor that was in Shoal water, which the next day we got up and carried aboard.

The 18th, I put them to dig down thro' the Ice near the place where we thought our Rudder might be; they digged down and came to water, but could not find it. We feared it might be ſanded, or that the Ice might have carried it away the laſt year. If we could not recover it by digging before the Ice ſhould break up, there would be little hope of it.

The 19th, we continued our mining work aboard the Ship, and in the Evening ſupped aſhoar. The Maſter and two others deſired that they might lie aboard, which I condeſcended to; for indeed they had lain very diſcommodiouſly all the Winter, and with ſick Bedfellows, as I my ſelf had done, every one in that caſe taking their Fortunes. By lying aboard, they avoided the hearing the miſerable groanes and lamentations of the ſick Men, who endured (poor Souls) intolerable torments.

On the 21ſt, we had laboured ſo hard in digging out the Ice in the Ship, that we ſaw a Caſk, and could perceive there was ſome water in the Hold. This we knew could not be thawed water, becauſe it did ſtill freeze Night and day.

On the 23, we came to pierce the fore-mentioned Caſk, and found it full of very good Beer, which did much rejoice us all, eſpecially the ſick men, notwithſtanding it did taſt a little of bulge Water. By this we at that time thought that the holes we had cut to ſink the Ship were frozen, and that this Water had ſtood in the Ship all the Winter.

The 24th, we went betimes in the Morning to work, but found that the Water was riſen above the Ice, where we had left work, about two foot, by reaſon the Wind had blown very hard at North the Night before. In the Morning the Wind came to South, and blowing hard, we expected a lower Veer of Water: I thereupon put them to work on the outſide of the Ship, that we might come to the lower hole which we had cut in the Sternſhoots. With much labour by Night we digged down thro' the Ice to it, and found it unfrozen (as it had been all the Winter) and to our great comforts we found that on the inſide the Water was ebbed even with the hole, and that on the outſide it was ebbed a Foot lower. Hereupon I cauſed a board to be nailed on it, as tight as might be, to try if the Water came in any other way. We had digged to the other two Holes on the inſide, and found them frozen: Now I did this betimes, that if we found the Ship founder'd, we might reſolve of ſome courſe to ſave or prolong our Lives, by getting to the Main before the Ice was broken up; for as for our Boat, it was too little, and bulged beſides. Our Carpenter was by this time paſt hope, and conſequently we had little hope of our Pinnace. But what was worſt of all, we had not four Men able to travel thro' the Snow; in ſuch miſerable condition we were at preſent.

The 25th, we ſatisfied our longing; for the Wind coming Northerly, the Water roſe by the Ship ſide (where we had digged down) a Foot and more above the Hold, and yet did not riſe within board. This did ſo encourage us, that we fell very luſtily to digging, and heaving the Ice out of the Ship. I put the Cook and ſome others to thaw the Pumps, who by continual pouring hot Water into them, by the 27th in the Morning had cleared one of them, which we found would deliver water very ſufficiently, and having cleared two Foot water, we then left off, to have a ſecond trial. Continuing thus to dig the Ice, on the 28th we had cleared our other Pump, which we alſo found to deliver water very well: We found likewiſe that the Water did not riſe in the Hold.

The 29th, it rained all day long, a ſure ſign that Winter was broke up.

The 30th, we were betimes aboard at our work; this day and the next were very cold, with Snow and Hail, which pinched our ſick Men more than any time this year. We returned late to our Houſe, and it being *May* Even, made a good fire, and choſe Ladies, and did ceremoniouſly wear their Names in our Caps, endeavouring to revive our ſelves by any means: And becauſe you hear us in this merry humour, I ſhall next make known to you what good cheer we kept at *Chriſtmas* and *Eaſter*, and how we had dieted our ſelves all the Winter.

At our coming from *England*, we were ſtored with all ſorts of Sea Proviſion, as Beef, Pork, Fiſh, &c. but now having little hope of refreſhing, we order'd it in this manner.

The Beef which was to ſerve on Sunday Night for Supper, our Cook did boil on *Saturday* Night in a Kettle full of Water, with a quart of Oatmeal, about an Hour; then taking out the Beef, he boiled the reſt till it came to half the quantity, and this we called Porridge, which we did eat with Bread as hot as we could, and after it, had our Ordinary of Fiſh. On *Sunday* at dinner we had Pork and Peaſe, and at Night the former boiled Beef made more Pottage. In this manner our *Tueſday*'s Beef was boiled on *Munday* Nights, and the *Tourſday*'s upon *Wedneſday* Nights; and thus all the Week except *Friday* Night, we had ſomething warm in our Bellies for Supper, which certainly did us a great deal of good. But ſoon after *Chriſtmas* many of us fell ſick, and having ſore Mouths, could eat neither Beef, Pork, Fiſh nor Pottage; their diet was only this: They would pound Bread or Oatmeal in a Mortar to Meal, then fry it with a little Oyl, and ſo eat it: Some would boil Peaſe to a ſoft Paſt, and feed as well as they could upon that: For the moſt part of the Winter, Water was our Drink. In the whole Winter we took not above a dozen Foxes, many of which had been dead in the Traps two or three days, and when the Blood was ſetled, were unwholſome: But when we took one alive that had not been long in the Trap, we boiled him, and made Broth for the weakeſt of the ſick Men, who eat the Fleſh alſo after it was well boiled: Some white Patridges we killed, but not worth the mentioning.

Some of our ſick Men were ſo weak, that they could not turn themſelves in their Beds; others were almoſt cripled with Aches; the reſt had ſore Mouths: Our Surgeon was up betimes every Morning, and whilſt he picked their Teeth and cut away the dead Fleſh from their Gums, they bathed their own Thighs, Knees, and Legs: The manner whereof was this; There was no Tree, Bud, or Herb, but we made trial of it, which being firſt boiled in a Kettle, and poured into ſmall Tubs and Baſons, they put it under them, and covering themſelves with Cloths, the grieved parts were ſo mollified thereby, that tho' they could ſcarce ſtand when they roſe out of their Beds, yet within half an hour they would be able to go (and muſt go) thro' the Snow to the Wood, and to the Ship. By Night they would be as bad again, and then they muſt be again bathed, anointed, and have their Mouths dreſt before they went to bed. And with this Diet, and in this manner we went thro' our Miſeries.

I ever feared that we ſhould be weakeſt in the Spring, and therefore had reſerved a Tun of *Alicant* Wine unto this time: Of this, by putting ſeven parts of Water to one of Wine, we made ſome weak Beaverage, which was litlle better than Water, the Wine being frozen, having loſt its virtue. The ſicker ſort had a pint of *Alicant* a day by it ſelf, and a little Dram of ſuch poor *Aqua Vitæ* as we had, every Morning next their Hearts. And thus we made the beſt uſe of what we had, according to the Seaſons.

May the firſt, we went aboard betimes to heave out the Ice. May.

The ſecond, it did ſnow and blow, and was ſo cold, that we kept in the Houſe all day. This unexpected cold at this time of the Year, did ſo vex our ſick Men, that they grew worſe and worſe; we could not now take them out of their Beds but they would ſwound, and we had much ado to fetch life into them.

The third, thoſe that were able went aboard betimes to heave out the Ice. The Snow was now melted in many places upon the Land, and ſtood in plaſhes, and now there came ſome Cranes and Geeſe to it.

The fourth, whilſt the reſt wrought aboard, I and the Surgeon went with a couple of pieces to ſee if we could kill any of theſe Fowl for our ſick men; but never did I ſee ſuch wild Fowl; they would not endure to ſee any thing move, wherefore I returned in two Hours, not being able to endure ſtalking thro' the Snow and wet Plaſhes.

The chief Mate dies.

The ſixth *John Warden*, our chief Mate, died, whom we buried in the Evening in the moſt Chriſtian manner we could, upon the top of a bare Hill of Sand. The weather continued very cold, freezing ſo hard in a Night, that it would bear a Man.

By the 9th, we were come to, and got up our five Barrels of Beef and Pork, and found our four Buts of Beer, and one of Cider, which God had preſerved for us. It had lain under water all the Winter, yet we could not perceive that it was any thing the worſe; God make us ever thankful for the comfort it gave us.

The 13th, it ſnowed and blowed ſo cold, that we could not ſtir out of the Houſe; yet the Snow vaniſheth away apace upon the Land.

The 11th, we were aboard betimes, to heave out Ice. By the 12th at Night we had cleared all the Ice out of the Hold, and found likewiſe our ſtore Shooes, which had lain ſoaking in water all the Winter; but we dried them by the fire, and fitted our ſelves with them. We ſtruck again our Cables into the Hold, and there ſtowed a But of Wine alſo, which had been all the Winter on the upper Deck, and continued as yet firmly frozen. We fitted the Ship alſo, making her ready to ſink her again when the Ice ſhould break up. We could hitherto find no defect in her, and therefore hoped that ſhe was ſtanch. The Carpenter nevertheleſs did earneſtly argue to the contrary, alledging, that now ſhe had lain on the Ground in her Dock, and that the Ice had filled her Defects, which for the preſent kept out the Water, but when ſhe ſhould come to labour in the Sea, then doubtleſs ſhe would open; and indeed we could now ſee quite thro' her Seams betwixt Wind and Water. But that which troubled us moſt was the loſs of our Rudder; and that ſhe now lay in the very ſtrength of the Tide, which whenever the Ice ſhould drive, might tear her to pieces; but we ſtill hoped the beſt.

The 13th, being the Sabbath-day, we ſolemnly gave God thanks for thoſe Hopes and Comforts we daily had. The Weather by day was pretty warm, but it did freeze by Night. We could now ſee ſome bare patches of Land.

The 14th, the Boatſwain and others ſought the reſt of our Rigging aſhoar, which was much ſpoiled by pecking it out of the Ice, and then fitted and ſerved it. I ſet the Cooper to fit our Caſk, my intent being to paſs ſome Cables under the Ship, and ſo to buoy her up with theſe Caſk, if we could not otherwiſe get her off. Some I order'd to go and ſee if they could kill ſome wild Fowl for our ſick Men, who now grew worſe and worſe. We had no ſhot but what we made of the Aprons of our Guns, and ſome odd old Pewter that I had; for the Carpenter's Sheet-Lead we durſt not uſe.

The 15th, I manured a little patch of Ground that was bare of Snow, and ſowed it with Peaſe, hoping to have ſome of the Herbs of them ſhortly to eat; for as yet we can find no green thing to comfort us.

The Carpenter dies.

The 18th, our Carpenter *William Cole* died, a Man generally bemoaned by us all, as much for his innate goodneſs as for the preſent neceſſity we had for a Man of his profeſſion. He had endured a long ſickneſs with much patience, and made a very godly end. In the Evening we buried him by Mr. *Warden*, accompanied with as many as could go; for three more of our principal Men, lay then expecting a good hour. Before his extream weakneſs, he had made the Pinnace ready to be boulted and trenail'd, and to be joined together to receive the Plank; ſo that we were not ſo diſcouraged by his death, but that we hoped of our ſelves to finiſh her, if the Ship proved unſerviceable.

Pinnace deſcribed.

This our Pinnace was 27 Foot by the Keel, 10 Foot by the Beam, and five Foot in the Hold: She had 17 Ground-timbers, 34 principal Staddles, and eight ſhort Staddles: He had contrived her with a round Stern, to ſave labour, and indeed ſhe was a well proportioned Veſſel: Her burthen was 12 or 14 Tun.

In the Evening, the Maſter after Burial returning aboard Ship, and looking about her, diſcovered ſome part of our Gunner under the Gun-room-ports. This Man we had committed to the Sea, at a good diſtance from the Ship, and in deep Water, near ſix Months before.

The Gunner's body found.

The 19th, I ſent Men to dig him out, he was faſt in the Ice, his Head downward, and his Heel upward, for he had but one Leg, and the Plaiſter was yet at his Wound. In the Afternoon they had digged him clear out, and he was as free from noiſomneſs as when we committed him to the Sea, the Ice, Water, and Time having wrought this only alteration on him, that his Fleſh would ſlip up and down upon his Bones, like a Glove on a Man's Hand: In the Evening we buried him by the others. The Snow was by this time pretty well waſted in the Woods, and we having a high Tree on the higheſt place of the Iſland, which we called our *Watch-tree*, from the top of it could ſee into the Sea, but ſaw no appearance of breaking up yet.

The 20th, being *Whitſunday*, we ſadly ſolemnized: The next day was the warmeſt ſunſhine day that came this year: I ſent two a fowling, and my ſelf, the Maſter, Surgeon, and one more, with our Pieces and Dogs, went into the Woods, and wandring eight Miles from the Houſe, returned comfortleſs, not finding an Herb or Leaf that was eatable: Our Fowlers had as bad ſucceſs. The Snow in the Woods was partly waſted away, and the Ponds were almoſt unthawed, but the Sea appeared all firm frozen.

Snow exhaled by the Sun, and not melted.

The Snow doth not melt here with the Sun or Rain, and ſo make Land-floods as in *England*, but is exhaled up by the Sun, and ſuck'd full of holes like Honey-combs, ſo that the Sand whereon it lies, will not be at all wetted. We obſerved alſo, that let it rain never ſo much, we had no Land-floods after it.

The 22d, we went aboard the Ship, and found that ſhe had made ſo much Water, that it was now riſen above the Ballaſt, which made us doubt again of her ſoundneſs; we fell to pumping, and pump'd her quite dry. We had now ſometimes ſuch hot glooms, that we could not endure the Sun, and yet in the Night it would freeze very hard. This unnaturalneſs of the Seaſon tormented our men, that they now grew worſe and worſe daily.

The 23d, our Boatſwain, a painful man, having been long ſick, which he had heartily reſiſted, was taken with ſuch a pain in one of his Thighs, that we verily thought he would preſently have died: He kept his Bed all day in great extremity; and it was a Maxim among us, that if any one kept his Bed two days, he could riſe no more; this made every man ſtrive to keep up for life.

They find their Rudder.

The 24th, was a very warm ſunſhine day, and the Ice did conſume by the Shoar's ſide, and crack'd all over the Bay with a fearful noiſe. In the Afternoon we perceived the Ice with the Ebb to drive by the Ship, whereupon I ſent with all ſpeed to the Maſter, ordering him to beat out the hole, and ſink the Ship, as likewiſe to look for the Rudder betwixt the Ice. This he preſently performed, and a happy Fellow pecking betwixt the Ice, ſtruck upon it, and crying that he had found it, the reſt came, and got it upon the Ice, and ſo into the Ship. In the mean time with the little drift the Ice had, it began to riſe and mount into high heaps, againſt the Shoars and Rocks, and alſo againſt the heap of Ice which was our *Barricado*. We were forced to cut away 20 Fathom of Cable, which was frozen in the Ice. After an hour the Ice ſetled again, not having any vent outwards. This was a joyfull day to us all, and we gave God thanks for the hopes we had of it.

The 25th, was a fine warm day, and with the Ebb the Ice drove againſt the Ship, and ſhook her ſhrewdly.

The 26th, I took the Chirurgion with me, and went to that Bay where *John Barton* was loſt laſt year, but could find no ſign of him; and having wandred in the Woods, we returned without any relief.

The 28th, it was pretty clear betwixt the Ship and Shoar, and I hoped the Ice would no more dangerouſly oppreſs us, wherefore I cauſed the lower hole to be firmly ſtopp'd, the Water then remaining three Foot above the Ballaſt.

The 29th, being Prince *Charles* his Birth-day, we kept Holyday, and diſplayed our Colours aboard and aſhoar, and named our Habitation *Charles Town*, by contraction *Charlton*, and the Iſland *Charlton Iſland*.

The 30th, we lanched our Boat, and had intercourſe betwixt the Ship and Shoar by Boat, which was news to us.

The laſt of this Month, we found on the Beach ſome Vetches appearing out of the Ground, which I cauſed to be picked up and boiled for our ſick Men. This day we had fitted all our Rigging and Sails, and it being a very hot day, we dried and new made all our Fiſh in the Sun, and aired all our other Proviſions. There was not a Man of us at preſent able to eat of our ſalt Proviſions, but my ſelf and the Maſter of my Ship. It may be here remembred, that all this Winter we had not been troubled with any Rheums or phlegmatick Diſeaſes. All this Month the Wind was variable, but for the moſt part Northerly.

June.

June, the four firſt days it did ſnow, hail, and blow very hard, and was ſo cold, that the Ponds of Water did freeze over, and the Water in our Cans did freeze in the very houſe; our Cloaths alſo that had been waſhed and hung out to dry, did not thaw all day.

The fifth, it continued blowing very hard in the broad ſide of the Ship, which did make her to ſwag and wallow in her Dock, and much ſhake her, altho' ſhe was ſunk; the Ice withal did drive againſt her, and give her many fearful blows. I reſolved to endeavour to hang the Rudder, and when God ſent us water (notwithſtanding the abundance of Ice that was yet about us) to have her further off. In the Afternoon we underrun our ſmall Cable to our Anchor, which lay aſtern in deep water, and with ſome difficulty got it up. This Cable had lain ſlack under Foot, and under the Ice all the Winter, and we could not have a clear ſlatch from Ice to get it up before now; we found it not a jot the worſe. I put ſome to make Cole-rakes, that they might go into the water and rake a hole in the Sands to let down our Rudder.

The 6th, we went about to hang it, and our young luſtieſt Men took turns to go into the water and rake away the Sand, but they were not able to endure the cold of it half a quarter of an hour, it was ſo mortifying, and would make them ſwound away. We brought it to the Stern Poſt, but were then fain to give it over, being able to work at it no longer. Then we plugged up the upper holes within board, and pump'd out the water again.

The 7th, we wrought ſomething about our Rudder, but were forced again to give over, and to put our Cables over board, with Meſſengers to them, the Anchors lying to that paſs, that we might keep her right in her Dock, when we ſhould bring her light.

By the 8th at Night, we had pump'd all the water out of her, and ſhe would float in her Dock at high water, tho' ſhe was ſtill dock'd in the Sands almoſt four Foot. This made us conſider what was beſt to be done: I reſolved to heave out all the Ballaſt, becauſe the bottom of her being ſo ſoaked all the Winter, I hoped was ſo heavy as to bear her. If we could not get her off that way, I then thought to cut her down to the lower Deck, and take out her Maſts, and ſo with our Caſk to buoy her off.

The 9th, we hoiſted out our Beer and Cider, and made a raft of it, faſtening it to our Shoar Anchor.

The Beer and Cider ſunk preſently to the Ground, which was not ſtrange to us, becauſe any Wood or Pipe-ſtaves that had lain under the Ice all the Winter, would ſink down as ſoon as it was heaved over-board: This day we heaved out ten Tun of Ballaſt. And here I muſt remember God's goodneſs to us in ſending the aforeſaid green Vetches; for now our ſick Men that could not ſtir theſe three Months, were able to walk about the Houſe, and it was wonderful to ſee how ſoon they were recovered. Twice a day we gathered the Herb or Leaf of theſe Vetches, as they firſt appeared out of the Ground, then waſhed and boiled them, and ſo with Oyl and Vinegar that had been frozen, did eat them. It was an excellent ſuſtenance of refreſhing; moſt part of us did eat nothing elſe: We alſo bruiſed them, and mixed the Juice with our Drink, and did eat them raw with our Bread.

The ſick Men recover by eating Vetches.

The 11th, being very warm weather, we did hang our Rudder: The Tides now very much deceived us, for a Northerly Wind would raiſe the Water but very little, which made us doubt of getting off our Ship.

The 14th, we heaved out all the Ballaſt, and carried all our Yards and other weighty things aſhoar, ſo that the Ship was now as light as poſſibly could be.

The 15th, I went to our *Watch-tree*, but the Sea (for any thing I could perceive to the contrary) was ſtill firmly frozen, and the Bay we were in, all full of Ice, having no way to vent it.

The 16th was wondrous hot, with ſome thunder and lighting, ſo that our Men went into the Ponds aſhoar to ſwim and cool themſelves; yet was the Water very cold ſtill. Here lately appeared divers ſorts of Flies, as Butter-flies, Butchers-flies, Horſe-flies, and ſuch an infinite abundance of blood thirſty *Muskito's*, that we were more tormented with them, than ever we were with the cold weather: Theſe (I think) lie dead in the old rotten Wood all Winter, and in Summer revive again. Here be likewiſe infinite Companies of Ants, and alſo Frogs in the Ponds, but we durſt not eat them, they looked ſo ſpeckled like Toads. By this time there were neither Bears, Foxes nor Fowl to be ſeen, they are all gone.

Store of Flies and Muskito's.

The 17th, the Wind came Northerly, and we expecting a high Tide, in the Morning betimes, put out our ſmall Cable aſtern out of the Gun-room-port, but the Morning Tide had not water by a Foot. In the Evening I had laid Marks by Stones, and obſerving the Water to flow apace, I made ſigns for the Boat to come aſhoar, and taking with me aboard all that were able to do any thing, altho' at high water ſhe wanted ſomething to riſe out of her Dock, yet we heaved with ſuch a good will, that we heaved her thro' the Sand into a Foot and a half deep Water; further than ſo, we durſt not yet bring her, becauſe the Ice was all thick about us. After we had moored her, we went all to Prayers, and gave God thanks for giving us our Ship again.

They heave the Ship from the place where ſhe lay ſunk all the Winter.

The 18th, ſome filled freſh water, others piled Stones on heaps, which were carried aboard in the Boat. We firmly ſtopped the two upper holes, and fitted convenient places to make others if occaſion were.

The 19th, we were betimes at work; theſe two days our Ship did not float, and it was a happy hour when we got her off, for we never had ſuch a high Tide all the time we were here. I went up to our *Watch-tree*, and this was the firſt time I ſaw open water: This put us in ſome comfort that the Sea would ſhortly break up, which we knew muſt be to the Northwards, being certain there was above 200 Leagues of Sea that way.

The 20th, the Wind at N. N. W. the Tide roſe ſo high, that our Ship floated, and we drew her off into a foot and a half deeper Water: Thus we did it by little and little, becauſe the Ice was ſtill very thick about us.

The 22d, there drove much Ice about us and within us, and brought home our Stern Anchor. At high water we heaved our Ship further off, that ſhe might lie afloat at low water.

The next low water we ſounded all about our Ship, and found it very foul ground: We diſcovered Stones three foot high above the Ground, two of which were within a Ship's breadth of the Ship, whereby manifeſtly appeared God's mercy to us; for if when we forced her aſhoar, ſhe had ſtruck one blow againſt thoſe Stones, it had bulged her. Many ſuch Dangers were in this Bay, which we now firſt perceived by the grounding and riſing of the Ice againſt them. In the Evening we towed off the Ship to the place where ſhe rode laſt Year, and there moored her.

Danger eſcaped.

The 23d, we laboured in fetching our Proviſions aboard, being forced to wade a flight ſhot to carry them to the Boat; and whereas I had formerly cut down a very high Tree, and made a Croſs of it, I now faſtned to the upper part of it, the Pictures of the King and Queen drawn to the life, and ſo cloſely wrapped in double Lead, that no weather could hurt them. Betwixt them I affixed his Majeſties Royal Title, *viz.* Charles *the* I. *King of* England, Scotland, France, *and* Ireland, *as alſo of* Newfoundland, *and of theſe Territories, and to the Weſtward as far as* Nova Albion, *and to the Northward to the Latitude of* 80 *Degrees*, &c

On the outſide of the Lead I faſtened a Shilling and a Sixpence of his Majeſties Coin, under that we faſtened the King's Arms fairly cut in Lead, and under that the Arms of the City of *Briſtol*; and this being *Midſummer-day*, we raiſed it on the top of a bare Hill where we had buried our Men.

The Wind continuing Southerly, and blowing hard, put all the Ice upon us, ſo that the Ship now rode amongſt it in ſuch apparent danger, that I thought verily we ſhould have loſt her: We laboured Flood and Ebb with Poles and Oars, but it was God that preſerved us; for it was paſt any Man's underſtanding how the Ship could endure it, or we by our Labour ſave her. In the Night the Wind ſhifted to the Weſtward, and blew the Ice from us, whereby we had ſome reſt.

The 25th, we fetch'd the reſt of our Proviſions aboard, and began to rig the Ship. At ten at Night, when it was ſomewhat dark, I took a Lance in my Hand, and one with me a Muſket and ſome Fire, and went to our *Watch-tree* to make a fire on the moſt eminent place of the Iſland, to ſee if it would be anſwered: Such Fires I had formerly made, to try if there were any Savages on the Main, or the Iſlands about us. Had there been any, my purpoſe was to have gone to them, to get intelligence of ſome Chriſtians, or ſome Ocean-Sea thereabouts. When I came to the Tree I laid down my Lance, and ſo did my Conſort his Muſket, and while I climbed up to the top of the Tree, I ordered him to put fire to ſome low Tree thereabouts. He unadviſedly put fire to ſome Trees that were to windward, ſo that they and all the reſt being very dry, took fire like Flax, and the Wind blowing it towards me, I haſtened down the Tree, but before I was half way down, the fire took in the bottom of it, and blazed ſo fiercely upwards, that I was forced to leap off the Tree, and with much ado eſcaped burning: The Moſs on the Ground was as dry as Flax, and would run like a Train along the Earth: The Muſket and Lance were both burnt. My Conſort at laſt came to me, and was joyful to ſee me, for he thought verily I had been burnt; and thus we returned together, leaving the fire increaſing, and ſtill burning moſt furiouſly. At break of day I went again to the Hills, from whence I ſaw it ſtill burning moſt vehemently both to the Weſtward and Northward, but could ſee no anſwer of it. Leaving one upon the Hills to watch it, I came home immediately, and made them take down our new ſuit of Sails, and carry them to the Sea ſide, ready to be caſt in if occaſion were. About Noon the Wind ſhifted Northerly, and our Centinel came running home, bringing us Word that the Fire did follow hard at his Heels like a Train of Powder: It was no need to bid us take down and carry all away to the Sea-ſide. The Fire came towards us with a moſt terrible ratling noiſe, bearing a full Mile in breadth, and by that time we had uncovered our Houſes, and laid hand on our laſt things, the Fire had ſeized our Town, and in a thrice burnt it down to the Ground: We loſt nothing of any value in it, having brought all away into a place of ſecurity. Our Dogs in this combuſtion would ſit down on their Tails and howl, and then run into the Sea on the Shoals, and there ſtay. This Night we lay all together aboard Ship, and gave God thanks that had ſhipp'd us in her again.

The Captain narrowly eſcapes burning.

Their Houſes burnt.

The 27th, 28th, and 29th, we wrought hard in getting our things aboard, and in fetching drift Wood, our Tools being ſo ſpoiled that we could cut none: I had cauſed our Pinnace to be ſawed in pieces, wherewith we ſtowed our Caſk, and intended to burn it at low waters, and ſuch other times as we could not work in carrying things aboard.

The 30th, we brought our Sails to Yard, labouring hard to finiſh our buſineſs with the Week and the Month, that we might the better ſolemnize the Sabbath aſhoar to morrow, and ſo take leave of our wintering Iſland.

The Bays were now clear of Ice, for it was all gone to the Northwards. The manner of its breaking up was thus; Firſt you muſt know that it doth not freeze naturally above ſix Foot, as we found by experience in digging to our Anchors; the reſt is by accident, ſuch as that Ice here which is ſix Fathom thick. When the heat increaſes in *May*, it thaws firſt on the Shoals by the Shoar-ſide, and then the courſes of the Tides do ſo ſhake the main Ice that it cracks and breaks, and having thus got room for motion, one piece of it runs upon another, until it

The Sea does not freeze naturally above ſix Foot.

come to a vaſt thickneſs. The Seaſon in this ſandy Country is moſt unnatural, for in the day time it will be ſo hot as not to be endured in the Sun, and in the Night again it will freeze an Inch thick in the Ponds, and Tubs in and about our Houſe; and all this towards the end of *June*.

The *Muskito's* upon our coming away were moſt intolerable; we tore an old Enſign in pieces, and made Bags to put our Heads in, yet notwithſtanding they would find ways and means to ſting us, and were more tormenting to us than all the cold we had endured.

July.

July the firſt, being Sunday, we adorned our Ship the beſt we could, our Enſign on the Poop, and the King's Colours on the Main-top. I had provided a ſhort Narrative of all the Paſſages of our Voyage to this day, in what ſtate we were at preſent, and how I intended to proſecute the Diſcovery both to the Weſtward and the Southward, concluding with a requeſt to any noble minded Traveller that ſhould take it down, that if we ſhould periſh in the Action, then to make our Endeavours known to our ſoveraign Lord the King; and thus with our Arms, Drum and Colours, Cook and Kettle, we went aſhoar, and firſt march'd up to our eminent Croſs, adjoining to which we had buried our dead Fellows, where we read Morning Prayer, and then walked up and down till Dinner time. After Dinner we walked to the higheſt Hills to ſee which way the Fire had waſted; we deſcried that it had conſumed to the Weſtward 16 Miles at leaſt, and the whole breadth of the Iſland; it could not come near our Croſs and Dead, being upon a bare ſandy Hill. After Evening Prayer, as I walked along the Beach, I found an Herb reſembling Scurvy-graſs, which we boiled with our Meat at Supper: It was excellently good, and far better than our Vetches. After Supper we all went to ſeek and gather more of it, and got about two Buſhels, which much refreſhed us; and now the Sun was ſet, and the Boat come aſhoar for us, whereupon we aſſembled and went up to take the laſt view of our dead, where leaning upon mine Arm on one of their Tombs, I utter'd theſe Lines, which tho' perchance they may procure laughter in the wiſer ſort (which I ſhall be glad of) they yet moved my young and tender hearted Companions at that time with ſome Compaſſion.

The Fire had conſumed 16 Miles.

I were unkind unleſs that I did ſhed,
Before I part, ſome Tears upon our Dead:
And when my Eyes be dry, I will not ceaſe
In heart to pray, their Bones may reſt in peace:
Their better parts (good Souls) I know were given,
With an intent they ſhould return to Heaven:
Their Lives they ſpent to the laſt drop of Blood,
Seeking God's glory, and their Countries good.
And as a valiant Souldier rather dies,
Than yields his Courage to his Enemies;
And ſtops their way with his hew'd Fleſh, when Death
Hath quite depriv'd him of his Strength and Breath;
So have they ſpent themſelves; and here they lie,
A famous Mark of our Diſcovery.
We that ſurvive, perchance may end our Days,
In ſome Employment meriting no praiſe,
And in a Dung-hill rot; when no Man names
The memory of us, but to our ſhames.
They have outliv'd this fear, and their brave ends
Will ever be an honour to their Friends.
Why drop you ſo mine Eyes? Nay rather pow'r
My ſad departure in a ſolemn Show'r.
The Winter's Cold that lately froze our Blood,
Now were it ſo extream, might do this good,
As make theſe Tears bright Pearls, which I would lay
Tomb'd ſafely with you till Doom's fatal Day.
That in this ſolitary place, where none
Will ever come to breath a ſigh or groan,
Some remnant might be extant, of the true
And faithful love, I ever tendred you.
Oh! reſt in peace, dear Friends, and let it be
No pride to ſay the ſometime part of me.
What pain and anguiſh doth afflict the Head,
The Heart and Stomach, when the Limbs are dead.
So griev'd, I kiſs your Graves, and vow to die,
A Foſter-Father to your memory.

Farewel.

We then took Boat and departed: The Iſland was very full of Spruce and Juniper Trees, but the biggeſt Tree I ſaw was but a Foot and a half over. At our firſt coming we ſaw ſome Deer, and kill'd one, but never any ſince. We ſaw many Foxes all the Winter, and kill'd ſome dozens of them, but they went all away in *May*; we ſaw but few Bears, and kill'd none. In *May* there came ſome Fowls, as Ducks and Geeſe, of which we kill'd very few: We ſaw ſome white Patridges, but in ſmall numbers, nor had we any Shot to ſhoot at them. Fiſh we could never ſee in the Sea, nor no Bones of Fiſh on the Shoar-ſide: we ſaw indeed a few Cockle-ſhels, but nothing in them.

They leave their wintering Iſland.

No Fiſh in this Bay.

Our Diſcovery, and coming home.

July, 1632, *Munday* the 2d, we ſtowed and fitted out Ship, and weighed our Anchors, and when the laſt was a trip, went to prayers, beſeeching God to continue his mercy to us, and rendering him thanks for having thus reſtored us. We found no defect in our Ship; had abundance of ſuch Proviſions as we brought out of *England*; were in indifferent health, and gathered ſtrength daily. The Wind at N. W. we ſet ſail, and ſtood over to *Danly* Iſland to take in more Wood. I went aſhoar in the Boat, becauſe ſome of the Company told me they ſaw ſome Stakes the laſt year driven into the Ground: I went to the place, and found two Stakes driven about a Foot and a half into the Ground, and Fire-brands by them; I pull'd up the Stakes, which were about the bigneſs of my Arm, and cut ſharp at the ends with a Hatchet, or ſome good Iron Tool: They were diſtant about a Stones throw from the Water-ſide. I cannot conceive to what purpoſe they ſhould be there ſet, unleſs it were for ſome Marks for Boats. In the Evening we returned with a Boat's lading of Wood.

The third, at break of day we weighed, and with our Lead ſounding for a Channel among theſe perilous Shoals, and were many times in five and four Fathom. We ſtood away Weſt, and by Noon ſaw all Ice to the Northward of us, endeavouring therefore to compaſs the Weſtern Point of *Charlton* Iſland, and ſo ſeek to the Southwards, we found it all Shoals, Rocks and Breaches. By four we ſaw the Weſtern Land, all full of Ice, whereupon we ſtood along it to the Northward.

The 4th was calm, but ſo thick a Fog, that we could not ſee a Piſtol-ſhot from us. The next day we weighed, but Ice being all about us, we knew not which way to turn us; and thus we continued peſtered and tormented with Ice and Fogs till the 22d. We ſtruck ſuch blows againſt the Ice, that the Fore part of the Ship would crack again, and make our Cook and others run up amazed, thinking the Ship had been beaten all to pieces; and twenty times in a day the Men wou'd run down into the Hold to ſee if ſhe were bulged.

Sometimes when we had made her faſt in the Night to a great piece of Ice, we ſhould have ſuch violent ſtorms, that our faſtening would break, and then the Storm would beat us from piece to piece moſt fearfully: Sometimes we were incloſed with Ice as high as our Poop; this was made, as I formerly obſerved, by one piece running upon another, which made it draw eight or ten Fathom Water. Sometimes the lowermoſt would riſe from underneath, and ſtrike us under the Bulge with pieces of ſix or eight Tun, that many times we have pump'd clear Water for an Hour together, before we could make the Pump ſuck. Among theſe hourly Dangers, I over-heard the Men murmur and ſay, that they were happy that I had buried, and that if they had a thouſand Pounds, they would give it, ſo they lay fairly by them; for we (ſaid they) are deſtined to ſtarve upon a piece of Ice. I was forced to endure all with patience, and to comfort them again when I had them in a better humour.

The 22d, after a ſtormy Night, we ſaw Cape *Henrietta Maria*, and hoiſting out our Boat, took our Arms and Dogs, and went aſhoar: We erected a Croſs upon the moſt eminent place, and faſtened the King's Arms, and the Arms of the City of *Briſtol* to it; and then ſeeking about, we ſaw about a dozen Deer, very goodly Beaſts; we ſtole towards them with the beſt ſkill we had, and then put our Dogs on them, but the Deer ran away from them at pleaſure. We tired the Dogs, and wearied our-ſelves to no purpoſe, neither could we come to ſhoot at them. We took half a dozen young Geeſe, by wading to them in the Pools, and ſo returned to our Boat, vexed that we had found a place where there was Refreſhment, and could get none of it. Whereas therefore we had kept our Dogs with a great deal of inconvenience, aboard the Ship all the Winter, and had pardoned them many Miſdemeanors (for they would ſteal our Meat out of the Steeping-tubs) in hopes they might hereafter do us ſome ſervice, and ſeeing they now did not, and that there was no hope they could hereafter, I left them aſhoar: They were a Dog and a Bitch, Buck Dogs of a very good Race. I ſaw no ſign of any Savages, nor

They ſpy ſome Deer.

found any Herbs or other refreſhment here. In the Evening returning aboard, we made ſail, hoping for an open Sea to the N. W. and ſailing amongſt ſhatter'd Ice till the 30th, it will be needleſs to relate every particular day's Paſſage, which was much alike to us. Our Ship was now become very leaky, ſo that we muſt pump every half watch. Here I called a Conſultation, and we were all of the ſame opinion, that it was impoſſible to get to the Northwards or the Eaſtwards, by reaſon of the Ice; wherefore I reſolved to ſtand to the Weſtward, and cauſed the Ship to be fitted, and places convenient again prepared to ſink her the ſecond time, if we ſhould be put to extremities.

Auguſt.

The 5th, we were in Latitude of 55 Deg. 30 Min. The Cape bearing S. E. by E. ſome 12 Leagues off, and this is all we have gotten ſince the 22d of *July*. It blew a violent gale of Wind all Night at W. N. W. and about Midnight our Hawſer by which we had made faſt to a piece of Ice, broke, and we loſt 14 Fathom of it. We beat all Night moſt fearfully, being toſt from piece to piece, becauſe in the dark we durſt not venture our Men to go forth on the Ice for fear of looſing them. The Storm continued all the 6th, and drove us again with the Ice almoſt to the Cape.

The 7th, was the moſt comfortable day we had ſince we came out of our wintring place: our Leak ſtop'd of its own accord.

The 8th, we anchored in eight Fathom, the main Ice two Miles to windward of us. The Wind increaſing about Midnight, the Ship did drive, and was quickly in five Fathom, whereupon we let fall our Sheet-Anchor, and both held her. But that which troubled us moſt was, that we expected every Minute when the main Ice would come upon us, and then we muſt be put aſhoar.

The 9th, I cauſed all our empty Caſk to be filled with Water, and the Ship to be left unpump'd, and the places looked to that we had prepared to ſink her, we being at preſent in as apparent danger, as any time this Voyage. It was all foul rocky Ground, and if we made faſt to a piece of Ice, then as ſoon as it came aground upon theſe Rocks, it would break all to pieces, and betray us to our deſtruction. At Noon the point of a Rand of Ice came foul of us, and we perceiving open Water beyond it, drop'd an Anchor, thinking to ride and break thro' it; thruſting therefore and fending with our Poles, at laſt a great piece came thwart our Hauwſe, and the Ship fell upon it ſo violently, that I expected every blow ſhe would beat out her Bows; at length ſhe drove with it, ſo that I thought the Cable had been broken: We brought it to Capſton, and found that our Sheet-Anchor was broken in the middle of the Shank: We ſet our Sails, and a dark Night coming on, we made faſt to the biggeſt piece we could find. If any Man aſk, why we kept ſo near the Shoar in this continual danger? I anſwer, Becauſe the Ice was ſo thick in the Offing, that we could make no way thro' it.

On the 15th, we had a moſt violent Storm, which did break the Ice into pieces as big as a Boat of three or four Tons, and gave us many a heavy blow in the dark Night: And thus we continued for the ſpace of ſix Weeks, as it were in the Jaws of Death. When we were two days together faſtned to a piece of Ice, we uſed to ſet Marks on it to ſee how it did conſume, but could not in that time perceive any diminution by the ſinking of it or otherwiſe; Nevertheleſs I think it is ruined with Storms, or conſumed with heat ſome Years, or elſe the Bay would be choaked with Ice. I have in *July* and the beginning of *Auguſt*, taken ſome of the Ice into the Ship, and cutting it two Foot ſquare, put it into the Boat, where the Sun did ſhine on it with a very ſtrong reflex about it, and notwithſtanding the warmth of the Ship (for we kept a good fire) and all our Breathings and Motions, it would not be melted in eight or ten days.

The 24th, we had a violent Storm at S. S. E. ſo that we took in our Fore-ſail, and let her drive N. W. The Storm continued all the next day in its utmoſt malice, and did ſo perplex us, that there were but few that did ſleep or eat a bit theſe 24 hours.

The 26th, by two in the Morning we were ſuddenly come in amongſt the Ice. When day appeared, we could from Top-maſt-head ſee the Ice to the N. N. W. the N. W. and ſo round about by the South to the Eaſt: It was all flat ſound Ice in main Rands, and the Sea as ſmooth as a Well amongſt it. This ſtruck us all into a Dump, whereupon I called a Conſultation of my Aſſociates, *viz.* the Lieutenant, Maſter, his Mate, the Chirurgion, and Boatſwain, requiring them to adviſe and counſel me how to proſecute our buſineſs to effect. They went together and reaſoned among themſelves, and then brought me their Opinion in writing under their Hands, *viz.*

The Officers Reaſons for their return.

Our Advice is, that you repair homeward, from this preſent 26th, and that for theſe Reaſons: Firſt, Becauſe the Nights are long, and ſo extream cold withal, that we can hardly handle our Sails and Rigging. Secondly, The times are now ſubject to ſtormy and guſty weather, as witneſs the preſent Seaſon, it having continued a ſtorm ever ſince the 24th, and is yet no weather to diſcover in. Thirdly, We doubt whether *Hudſon's Straits* will be ſo clear of Ice as to be paſſable, Winter coming on apace. Fourthly, we muſt have a ſet of fair weather to paſs the Strait, which we may ſtay for a long time, if we neglect the firſt Opportunity. Fifthly, Becauſe our Ship is very leaky, ſo that in foul weather we are forced to pump every Glaſs; and we know her to be ſo ſorely bruiſed with Rocks and blows of the Ice, that ſhe is no more to be adventur'd amongſt it; and beſides all this, our Men grow very weak and ſickly with extream labour. Sixthly, The Seaſon of the Year is ſo far ſpent, that we can expect no other weather than we have had, *viz.* Snow and Fog, freezing our Rigging, and making every thing ſo ſlippery, that a Man can ſcarce ſtand; and all this with the Wind Southerly, which if it ſhould come to the Northward, then we are to expect far worſe. Seventhly and laſtly, That the Ice lies all in thick Rands, in the very way we ſhould go; and therefore we conclude as aforeſaid, that there is no poſſibility of proceeding further; wherefore we here counſel you to return homeward, hoping that God will give us a favourable Paſſage, and return us home ſafe to our native Country, if we take time, and not tempt him too far by our wilfulneſs.

Indeed moſt of theſe Reaſons were in view, and I knew not how to oppoſe them, nor any reaſon could I give how we might proceed further; wherefore, with a ſorrowful Heart God knows, I conſented that the Helm ſhould be born up, and a Courſe ſhaped for *England*, well hoping that his Majeſty would graciouſly cenſure my Endeavours, and pardon my return; and altho' we have not diſcover'd populous Kingdoms, and taken ſpecial notice of their Magnificence, Power, and Policies, brought Samples home of their Riches and Commodities, pried into the Miſteries of their Traffick, nor made any great fight againſt the Enemies of God and our Nation; yet I wiſh our Willingneſs in theſe deſert parts, may be acceptable to our Readers. When we bore up the Helm, we were in Lat. 65, 30, at leaſt, N. W. by N. from *Nettingham*-Iſland.

The Cauſes of the abundance of Snow in theſe parts.

The 27th, we were thwart of Cape *Charles*; it ſnowed much laſt Night, and was very cold, ſo that all our Rigging and Sails were frozen, and all the Land covered with Snow; and having formerly ſpoken of the much Snow in theſe parts, it will not be amiſs to conſider the Reaſons of it. When I was upon *Charlton*-Iſland in *June*, I did in the Nights (and ſome of them following the hotteſt days) obſerve whether there fell any Dew or no, but could never perceive any, and indeed from Moſs and Sand little was to be expected; nor of what was exhaled from the ſnowy Ice and cold Sea, could there probably be returned but the like again.

The laſt of the Month we were in the Narrow of the Streight, which is about 15 Leagues over, the South ſhoar much peſter'd with Ice.

September

September the third, we ſaw the South end of the Iſland *Reſolution*; the Wind coming Eaſterly, we felt another Sea out of the Ocean, and the Ship laboured with another motion than ſhe had done, with any Sea that came from the Weſtward.

On the 8th, we were got clear out of the Streights, but were now come into ſuch a tumbling Sea, that the Ship did ſo labour and roll, that we thought ſhe would have rolled her Maſts by the Board. This made her ſo leaky, that we were forced to pump every Glaſs, and her Seams did ſo open aloft, that we lay all wet in her.

This was the laſt day we ſaw any Ice, and the Wind now favouring us, we made all the haſt we could homeward. As we came along, I perfected my Obſervations concerning the feaſibleneſs of the Action intended, which was to find a Paſſage into the South Sea, and here offer it to the judicious Reader.

What hath been long ago fabled by ſome *Portugals*, that came this way out of the South Sea, I leave to be confuted by their own vanity. Theſe Hopes have from time to time ſtirred up the more active Spirits of our Kingdom to reſearch that meerly imaginary Paſſage. For my part, I give no credit to them at all, their Diſcourſes being abſur'd, and the Plats (by which ſome have practiſed to deceive the World) are meer Falcities, making Sea where there is main Land, and Land where is nothing but Sea.

Moſt certain it is, that by the only induſtry of our own Nation, the Northern Parts of *America* have been diſcover'd to the Latitude of 80 Deg. and upwards, and they have brought this ſuppoſed Paſſage to this paſs, as to be certain that it muſt be to the Northwards of 60 Deg. of Latitude; a cold Climate, peſter'd with Ice and other Incommodities, which the *Spaniards* Diſpoſitions and their weak Ships can hardly long endure. And withal it is known, that the Entrance of *Hudſon*'s Streight is but 15 Leagues bread, in the middle not ſo much; and between *Salisbury*-Iſland and the Main is but eight Leagues; then proceeding to the Northwards, it is but 15 Leagues from Main to Main. This in length is about 140 Leagues, infinitely peſter'd with Ice until *Auguſt*, and ſome Years not paſſable then: Yea, I believe the Streight is never clear of Ice thorowly.

Now moſt probable it is, that there is no Paſſage, and that for theſe Reaſons following.

Reaſons againſt a Paſſage.

I. There is a conſtant Tide of Flood and Ebb ſetting into *Hudſon*'s Streight: The Flood ſtill coming from the Eaſtward, which, as it proceeds, alters his time of full Sea, according to the diſtance; this alſo entring into Bays and broken Grounds, becomes diſtracted, and reverſes with half Tides.

II. Here is no ſmall Fiſh, as Cod, *&c.* and very few great ones, which are rarely to be ſeen: Nor are there any Bones of Whales, Sea-horſes, or other great Fiſh to be found on the Shoar, nor any drift Wood.

III. That we found the Ice in the Lat. of 65 30, lying all over the Sea in Rands, and I am moſt certain that the Shoals and Shoal Bays are the Mother of it. Now had there been any Ocean beyond it, it would have been broke all to pieces; for ſo we found it coming thro' the Streight, into the Sea to the Eaſtward.

IV. The Ice ſeeks its way to the Eaſtward, and ſo drives out at *Hudſon*'s Streight, which I have often obſerved, being aſhoar upon the Iſland *Reſolution*, and driving amongſt the Ice in the Streights.

Now admit there was a Paſſage, yet it is known to be narrow, and peſter'd with Ice for 140 Leagues, as hath been ſaid; comparing therefore ſome Obſervations taken at *Bantam*, *Gilolo*, and *Firando* in *Japan*, and the diſtance between *Japan*, and the Weſtern part of *California*, with the Obſervations taken at *Charlton*-Iſland, the diſtance between the Meridians of Cape *Charles* and the Weſtern part of *California*, will be found to be about 500 Leagues, in the Latitude of 66 Degrees, where the Meridians incline very much together.

To this may be added, that near about Cape *Charles*, the Variation is 29 Deg. to the Weſt, which makes it probable that there is much Land that way; and this Streight (if any be) muſt be very long, and you have no time to paſs it but in *Auguſt* and *September*, when the Nights are long, and the weather ſo cold, that it will not be indurable.

Add to this, that neither can any great Ships which are fit for carrying Merchandiſe, endure the Ice without extraordinary danger. Moreover, 1000 Leagues is ſooner and with more ſafety ſailed to the Southward, and about the Cape of *Good Hope*, where the Winds are conſtant, than 100 in theſe Seas, where you muſt daily run the hazard of looſing Ship and Lives: neither is comfort for the Sick or refreſhment for your Men, to be had in theſe Parts.

Towards the latter end of *Auguſt* and in *September*, the weather grows tempeſtuous, and the Winds incline to be Weſterly, that there will be but ſmall hope of performing your Voyage this way.

But let us by way of imagination, inlarge this ſuppoſed Streight in its breadth, and free it of Ice, yet what advantage in ſpeedy performance will be gotten by this Paſſage if the Winds be withal conſider'd? To *Japan*, *China*, and the Northern Parts of *Aſia*, it may be the nearer cut; but to the *Eaſt-Indies*, and other parts where we have the greateſt commerce, the other way is as near.

What benefit of Trade might have been obtained in thoſe Northern Parts of *Aſia* (if our Diſcovery had ſucceeded)? I will not preſume to ſpeak of believing there is a great difference between thoſe parts and the Northern parts of *America*, but am ſure there is none in any place where I have been all this Voyage.

The 22d of *October* we arrived in the Road of *Briſtol*, having been hindered and croſs'd with contrary tempeſtuous Winds and Weather. The Ship being brought into Harbour and haled dry aground, it was there found that all her Cut-water and Stem were torn and beaten away, as alſo 14 Foot of her Keel, much of her Sheathing cut away, her Bows broken and bruiſed, and many Timbers crack'd within board; under the Bulge a ſharp Rock had cut thro' the Sheathing, the Plank, and an Inch and an half into a Timber that it met withal. Many other Defects there were beſides, ſo that it is miraculous how this Veſſel could bring us home again. We went all to Church, and gave God thanks for preſerving us amidſt ſo many dangers. I very well know that what I have written, will never diſcourage any noble Spirit, that is minded to bring this ſo long tried Action to perfection; to whoſe Deſigns I wiſh a happy ſucceſs. Now altho' I have ſpent ſome Years of my ripeſt age, in procuring vain intelligence from foreign Nations, and have travelled to divers Honourable and Learned Perſons of this Kingdom for their Inſtructions; have bought up whatever I could find in print or manuſcript, and what Plat or Paper ſoever conducing to this buſineſs, that poſſibly I could procure, and have ſpent above 200 *l.* of my own Money; yet I repent not, but take a great deal of comfort and joy, that I am able to give a reaſonable Account of thoſe parts of the World, which heretofore I was not ſo well ſatisfied in.

CHAP. XXXV.

An Account of a Voyage made towards the South Terra-incognita; *taken from the Journal of Captain* Abel Johnſon Taſman, *who not only diſcovered a New Paſſage by Sea to the South of* Nova Hollandria, Vandiemen's *Land*, &c. *and ſailed round a vaſt Tract of* Land and Sea, *but alſo made very uſeful Obſervations concerning the Variation of the Magnetical Needle in Parts of the World, almoſt* Antipodas *to us, with ſeveral other curious* Remarks *concerning thoſe Places and its Inhabitants: Publiſhed in* Low-Dutch *by* Dirk Rembrantſe, *and ſince done into* Engliſh *from Dr.* Hook's *Collections.*

An. 1642. Aug. 14. Septem. 5.

HE ſet ſail from *Batavia*, with the *Heemskirky* Yatcht, and a Fly-boat called the *Seahane*, and came to an anchor at *Mauritius* Iſle, at 20 Deg. S. Lat. and 83 Deg. 48 Min. Longit., They found this Iſle 50 *Dutch* Miles more to the Eaſt than their Computation allow'd, which make 3 Deg. 33 Min. Longit. They ſteer'd thence to the South till 40 or 41 Deg. having N. W. variation 23, 24, and 25 Deg. till the 22d of *October*, where they bore away E. by S. till the 29th of

Oct. 8.

October,

1643. *October*, to 45 Deg. 47 Min. S. Lat. Longit. 89 Deg. 44
Min. Variation N. W. 26 Deg. 45 Min.
Nov. 6. They were at 49 Deg. 4 Min. S. Lat. Longit. 114 Deg.
56, Variation N. W. 26 Deg. with miſty windy wea-
Nov. 15. ther, and a hollow Sea, Wind S. W. and S. they came
to 44 Deg. 3 Min. South Lat. Longit. 140 Deg. 32 Min.
Variation N. W. 18 Deg. 30 Min. which decreaſed
apace; for on the 21ſt, being then at the Long. of 158
Nov. 22. Deg. the Variation was only 4 Deg. The next day the
Compaſs would not ſtand upon any one of the eight
Points, which made them gueſs that ſome Mines of
Loadſtone muſt be thereabouts. They were at 42 Deg.
Nov. 24. 25 Min. South Lat. and their middle Longit. of 163 Deg.
50 Min. About ten Miles diſtant from them to the E. by
N. they diſcovered Land, which they called *Anthony Van*
Van Diemen's Land. *Diemen's Land*: Here they found the Compaſs to ſtand in
the Longit. of 163 Deg. 50 Min. Being much peſtered
with Tempeſts, they ſtood away S. by E. along the
Coaſt to 44 Deg. South Lat. where the Land runs a-
way E. and afterwards N. E. and N.

Dec. 1. They came to an Anchor in Longit. of 167 Deg. 55
Min. and Lat. 43 Deg. 10 Min. in a Bay, unto which
Frederick Hendrick's Bay. they gave the Name of *Frederick Hendricus Bay*. They
fancied they heard the noiſe of ſome Men, but ſaw none:
The Muſick they heard was like that of a *Jew's* Trumpet,
and at no great diſtance. They ſaw here Trees of two
Fathom and a half in circumference, and 60 or 68 Foot
high, below the Branches: The Bark of them was cut
with Flint in form of Steps, for the Natives to climb up
theſe Trees, to take the Birds Neſts: Theſe Steps being
near five Foot aſunder, ſeem'd to intimate, that they are
either beyond the ordinary ſize of other Men, or have a
peculiar way of climbing up by theſe Steps. They alſo
ſaw the Footſteps of *Tigers*, and ſome other wild Beaſts,
ſome Gum of the Trees, and Gum Lac of the Ground:
The Ebb and Flood was only three Foot here; the Trees
were not incumbred with Buſhes and Water-wood: And
tho' they could not get ſight of the Natives, they diſ-
covered the Smoak of their Fires in ſeveral places; ſo
they only ſet up a Pole with the Company's Mark, and a
Prince's Flag faſtned to it: The Variation was here three
Deg. N. E.

They left *Van Diemen's Land* at 41 Deg. 34 Min. South
Dec. 5. Lat. and 169 Deg. Longit. running to the Eaſt to the
Longit. of 195 Deg. to find the Iſlands of *Solomon*: They
Dec. 9. were at 42 Deg. 37 Min. South Lat. Longit. 136 Deg.
Dec. 12. 29 Min. Variation N. E. 5 Deg. the hollow Waves
from the S. W. ſhew'd us that no Land was to be ex-
pected on that ſide. They deſcried high and hilly Land,
Dec. 13. call'd in the Charts now, *New Zealand*, at 42 Deg. 10
New Zealand. Min South Lat. Longit. 188 Deg. 28 Min. Variation
N. E. 7 Deg. 30 Min. they ſail'd along the Coaſt N. E.
as the Maps direct, till they came to an Anchor in a Bay
at 40 Deg. 50 Min. South Lat. Longit. 191 Deg. 41
Min. Variation N. E. 9 Deg.

Dec. 18. The Natives of this Country were groſs of Body, be-
1642. twixt a yellow and brown Complexion, with a harſh
Voice, and black Hair, ty'd upon the Crown of the
Head like the *Japoneſes*, and near as long and thick,
upon which they wear a large white Feather: Their
Cloaths were of Mats and Callicoe, but the upper part
of their Bodies naked. They play'd upon a kind of a
Mooriſh Trumpet, we anſwer'd them with ours.

These Antipodes began not to be ſo miſtruſtful as before,
Dec. 19. but came in good Numbers to truck with our People;
The Inhabitants of Murtherers Bay. The Commander beginning to fear the ſafety of his Peo-
ple, ſent ſeven of his Men in a Boat, to advertiſe the reſt
not to truſt theſe *Barbarians*; and his foreſight proved too
true, for ſome of them going too far from the Yacht,
unarm'd, were ſet upon by the Natives, and four of them
kill'd, the reſt ſaving themſelves by ſwimming. They
call'd this *Murtherers Bay* (as it is mark'd in the Maps)
and would have revenged the death of their Compani-
ons, had they not been prevented by the High Sea. They
went in to the Eaſt, but found themſelves ſurrounded
with Land, which appear'd very fruitful, but the bad
Weather and Wind made it very difficult for them to get
out.

The Wind not permitting them to go North, and be-
Dec. 24. ing uncertain whether they ſhould find a Paſſage to the
North, and the Flood coming from S. E. they returned
Dec. 26. into the Bay, but the Wind turning more favourable,
they ſteer'd North, ſomewhat to the Weſt. They came
Jan. 4. to the N. W. Cape of this Land, at 34 Deg. 35 Min.
1643. South Lat. Longit. 191 Deg. 9 Min. Variation N. E.
8 Deg. 40 Min. the hollow Waves out of the N. E.
ſhew'd that there muſt be a great Sea in the N. E. Here
The Three Kings Iſle. they ſaw an Iſle, which they call'd *The three Kings Iſle*; as
they came near the Shoar to refreſh themſelves, they ſaw
at ſome diſtance upon the Hills, 30 or 40 Men, very tall,
arm'd with Clubs, who call'd to them with a harſh Voice, 1643.
they perceived them to make very large ſteps. In turn-
ing about the Land, they ſaw but few more Men, and lit-
tle cultivated Ground, but met with a freſh water River,
where they intended to get ſome freſh Water, but being
prevented by an unlucky Accident, they reſolved to pro-
ceed an Eaſt Courſe to the Longit. of 220 Deg. then N.
to the South Lat. of 17 Deg. and ſo Weſt to the *Coco's*
and *Horneſe* Iſles, firſt diſcovered by *William Scoute*; for
they had met with nothing at *Van Diemen's Land*, and
never touch'd the Shoar at *New Zealand*.

They came to 30 Deg. 25 Min. S. Lat. Longit. 192 Jan. 8.
Deg. 10 Min. Variation N. E. 9 Deg. great Waves from
S. E. At 30 Deg. 5 Min. S. Lat. Longit. 195 Deg. 27 Jan. 12.
Min. Variation 9½ Deg. N. E. they had hollow Waves
from the S. E. and S. W. and came at 26 Deg. 29 Min.
S. Lat. Longit. 166 Deg. 32 Min. Variation N. E. 8 Deg.
They ſaw a high, ſteep and barren Iſle, two or three Jan. 16.
Miles in compaſs, at 22 Deg. 35 Min. S. Lat. Longit. 204 Jan. 19.
Deg. 15 Min. Variation N. E. 7½ Deg. The S. E. and
S. S. E. Winds hindred them from approaching nearer to
it: They called it *Piilſterts-Iſle*, from the great multitude
of thoſe Fowls. The next day they got ſight of two other
Iſlands; they came to the Northermoſt of theſe Iſlands, Jan. 21. The Iſle of Amſteldam.
being alſo the biggeſt and higheſt, they call'd it *Amſtel-
dam*, and another *Middlebourgh*. On the firſt they found
ſtore of Hogs, Hens, Fruits; the Natives appeared very
harmleſs, without any Weapons, but were ſomewhat
addicted to Theft. Here is but a ſlender Current, the
Ebb runs N. E. and the Flood S. W. The S. W. Moon
makes high Water when it flows above ſeven or eight
Foot; the Wind continually S. E. and S. S. E. freſh wa-
ter was very hard to be gotten here.

After having paſs'd in ſight of ſeveral ſmall Iſlands, Jan. 25. The Iſle of Rotterdam.
they came to the Iſle call'd *Rotterdam* (as you ſee it
mark'd in the Charts). The Natives were the ſame as
the former; they found the *Cocoe* Trees planted in vaſt
numbers and very good order, and Gardens and Or-
chards well regulated and planted with all ſorts of Fruit-
trees, moſt commonly in a right Line, affording an a-
greeable ſight and ſmell. After they left this Iſle, they
ſaw ſeveral others mentioned in the Chart, with a deſign
to ſteer to the North till 17 Deg. S. Lat. and then W.
with a S. E. and E. S. E. Wind, for fear of miſſing the
Traytors and *Horneſe* Iſland. They were got in among Feb. 6.
18 or 20 Iſles, environ'd with Rocks and Shoals, theſe
Iſlands are in the Maps called Prince *William's Iſlands*,
and *Heemskirk's Shoals*. They had very hard Rains at 15 Feb. 8.
Deg. 29 Min. S. Lat. Longit. 199 Deg. 31 Min. it blew
hard from N. E. and N. N. E. and the weather hazy,
making them fear to fall to the South of *Novo Guinea*,
on unknown Coaſts, they reſolved to go N. or N. N. W.
to 4, 5, or 6 Deg. S. Lat. and then W. to *Nova Guinea*.
Till now they had been always peſter'd with Rain and Feb. 14.
Storms, but this being a calm day, they halled the *Sea-
bene*, and found their Accounts to agree at 16 Deg. 30
Min. S. Lat. Longit. 193 Deg. 35 Min. Dark rainy Feb. 20.
weather at 13 Deg. 45 Min. S. Lat. Longit. 193 Deg.
35 Min. the Wind variable, and the Sea coming out of
all Quarters. The Wind conſtantly at N. W. not one Feb. 26.
day without rain in 21, at 9 Deg. 48 Min. S. Lat. Longit.
193 Deg. 43 Min. variable Wind and Weather at 9 Deg.
11 Min. S. Lat. Longit. 192 Deg. 6 Min. Variation Mar. 2.
N. E. 10 Deg. weather and wind the ſame, at 7 Deg. Mar. 8.
46 Min. S. Lat. Longit. 190 Deg. 47 Min. They came Mar. 14.
to the S. Lat. of 10 Deg. 12 Min. Longit. 186 Deg. 14
Min. Variation N. E. 8 Deg. 45 Min. They were at 15
Deg. 15 Min. S. Lat. Longit. 181 Deg. 16 Min. Variati- Mar. 20.
on N. E. 9 Deg. the weather began to grow better.
They got ſight of Land four Miles Weſt from them, Mar. 22.
Wind E. at 5 Deg. 2 Min S. Lat. Longit. 178 Deg. 52
Min. This proved ſome Iſlands, 20 in number, call'd in
the Charts, *Onthony Java*, 90 Miles diſtant from the
Coaſt of *Nova Guinea*. They came up with the Iſle of
Mark, diſcovered by *William Scouten* and *John de Mair*, Mar. 25.
14 or 15 in all, at 4 Deg. 35 Min. S. Lat. Longit. 175
Deg. 10 Min. Variation 9 Deg. 30 Min. The Natives
were Savages, having their black Hair ty'd up like thoſe
of *Murtherers Bay* in *New Zealand*.

They paſs'd by the *Green* Iſle, and the 30th St. *John's Iſle*: Mar. 29.
They reached the Coaſt of *Novo Guinea*, at the Cape April 1.
call'd by the *Spaniards Cabo S. Maria*, at 4 Deg. 30 Min.
S. Lat. Longit. 171 Deg. 2 Min. Variation 8 Deg. 45
Min. They ſail'd along the Coaſt which lies N. W.
to *Anthony Caen's Iſle*, *Gardners Iſle*, and *Fiſhers Iſland*,
to the Cape call'd *Struyſbeak*, where the Land falls away
S. and S. E. which they followed, and went South till
they ſhould diſcover the Land, or find a Paſſage to the
South.

They

1643. *April* 12. They were ſurpriſed with a ſudden Earthquake, which ſo ſhook the Ship, that they thought ſhe had ſtruck againſt a Rock, but could find no Ground by ſounding at 3 Deg. 45 Min S. Lat. Longit. 167 Deg. 00 Min. Variation N. E. 10 Deg. They were then within the *Struyſhook*, *April* 14. ſtanding into the Bay of *Good Hope*: They ſaw the Land from the E. N. E. into the South, and ſo on to the S.S.W. at 5. Deg. 27 Min. S. Lat. Longit. 166 Deg. 57 Min. Variation N. E. 9 Deg. 15 Min. they were in hopes of finding a Paſſage between both, but perceiving it to be all one continued Tract of Land into the Weſt, they turn'd their Courſe W. along the Coaſt, with much Calms.

April 20. The *Burning Iſle*. By Night, paſſing by the *Burning Iſle*, they ſaw a great Fire iſſue from the top of the Hill; at 5 Deg. 4 Min. S. Lat. Longit. 164, 27 Min. Variation N. E. 8 Deg. 30 Min. (*Scouten* mentions this Iſland) they paſs'd betwixt it and the Main, and ſaw many Fires towards the middle of a high Hill near the Shoar, which made them conjecture that this Iſland was well inhabited. All along the Coaſt of *Guinea* they were often becalmed, and ſaw much drift Wood, as ſmall Trees, Bamboes, &c. carried thither by the Currents of the Rivers. The 21ſt, they paſs'd the *Burning Mountain*, ſailing along the Shoar W. N. W.

April 27. The Iſle of *Jama*. They being at 2 Deg. 10 Min. S. Lat. Longit. 156, 47 Min. thought to have ſeen the Iſle of *Moa*, but found themſelves near *Jama*, another Iſle more E. than *Moa*; here they provided themſelves with *Coco-nuts*, and ſeveral other Neceſſaries. The Natives were very black, but docile, being able to repeat every word they heard us ſay; their Pronunciation muſt be difficult, becauſe they uſe the Letter *R* frequently two or three times in one word. 1643. *April* 28. The Iſle of *Moa*. They came to *Moa*, where by contrary Winds, they were detained till *May* the 6th, which gave them opportunity to truck near 6000 *Coco-nuts*, 100 Bundles of *Pyſanghs*, and other Refreſhments. One of our Ship's Company happening to be ſhot with an Arrow by one of the Inhabitants (whether on purpoſe or by accident we knew not) the Ship was order'd nearer the Land, which ſo frightned the Natives, that they brought him who ſhot the Arrow to us, to be diſpoſed of as we ſhould think fit, and were very tractable ever after; ſome of our People would take pieces of Iron Hoops, fit them into Wooden Hafts, make them a little bright and ſharp, and ſo ſell them for Knives. Perhaps they had not forgot what befel them in 1616, with *Scouten* and *Le Mair*, who on account of ſome treacherous Dealing with them, frightned theſe poor Wretches with their Cannon Bullets, into a complaiſant Temper.

May 12. They paſſed on the North ſide of *William Scouten's Iſle*, being well inhabited, and 18 or 19 Miles in length, at 0 Deg. 54 Min. S. Lat. Longit. 153 Deg. 17 Min. Variation N. E. 6 Deg. 30 Min.

May 18. They had paſſed the *Cape of Good Hope*, and come from the Weſt end of *Novo Guinea*, a broken Point of Land, at 0 Deg. 26 Min. S. Lat. Longit. 147 Deg. 55 Min. Variation N. E. 5 Deg. 30 Min. They were much peſter'd with Calms and variable Winds, and Rains.

May 27. Hence they ſailed to the North ſide of *Seram*: They went on thro' the Streights to the North of *Boure* or *Bouton*, and arrived the 15th of *June* at *Batavia*, at 6 Deg, 12 Min. S. Lat. and Longit. 127 Deg. 18 Min. having ſpent ten Months in this Voyage.

CHAP. XXXVI.

An Account of a Voyage for the Diſcovery of the N. E. Paſſage to China *and* Japan, *in his Majeſties Ships, the* Speedwel *and* Proſperous Pink, *in the Year 1676, where is ſhewed the Probability of that Paſſage, before the Attempt, with divers uſeful Obſervations made in that Voyage, by Captain* John Wood.

1676. MY Intention being to give you the Reaſons that induced me to the undertaking of this Voyage, and its Event, it would be ſuperfluous to enter upon a Relation of all ſuch as have attempted the N. E. Paſſage to *China* and *Japan*, (being alſo recorded in *Hackluit* and *Purchaſs*) yet it may not be amiſs to ſhew wherein theſe failed in the ſaid Voyages.

Sir Hugh Willoughby, 1553. The firſt that ever attempted this Paſſage was Sir *Hugh Willoughby*, who ſet ſail with three Ships to the N. Cape of *Finmark*, and thence to the Lat. of 72, where he ſuppoſed he ſaw Land, which according to my Opinion, was only a Fog-Bank, becauſe in my return near the ſame place, (where the Maps put this Land) I could diſcern none; he was forced by Tempeſts in *Arzena*, a Harbour of *Lapland*, where he was frozen to death with his whole Ships Company.

Stephen Burrough, 1556. The ſecond Attempt was made by Captain *Stephen Burrough*, who after he had paſs'd the North Cape, ſail'd more Eaſt, and diſcover'd the Streight of *Weygats*, or that Streight which runneth betwixt *Nova Zembla* and the *Samoyedes*, where he entred, and believing that *Sinus* to the Eaſt of the Streights to be an open Sea, he return'd with an opinion of having found a Paſſage that way to *China* and *Japan*.

Captain *Pett* and *Jackman*, 1580. This gave encouragement to the third Attempt, made by Capt. *Arthur Pett* and *Charles Jackman*, who being ſent to follow the Tract of *Burroughs*, paſs'd thro' the Streights of *Weygats* into the Sea to the Eaſt, but met with ſuch vaſt quantities of Ice and ſuch tempeſtuous weather, that with great hazard and difficulty, they were forced to return, but looſing one another in a Storm, *Pett* was never heard of ſince; ſince which time that Deſign being look'd upon as impracticable, was laid aſide in *England*, but not long after purſued by the *Dutch*.

1676. *Will. Barrens*, 1606. 1707. *William Barrens* ſaill'd out of *Holland* for the Streights of *Weygats*, where being entered, he met with the ſame Obſtacles, *viz.* the Ice, that others had done, but found the Water not brackiſh but freſh; an Experiment none of the reſt had made before him. He return'd, but being reſolved to venture a ſecond Attempt for a Paſſage to the North of *Nova Zembla*, he ſail'd to the Coaſt of *Nova Zembla*, at 73 Deg. Lat. where meeting with much Ice, he coaſted the Shoar to 76 Deg. Lat. where he was forced aſhoar by the Ice, and his Ship broken to pieces: They were forced to winter there, and after they had endured the greateſt extremity of Cold, they got in two Boats to *Cola* in *Lapland*, but before their arrival there, Mr. *Barrens* died.

Mr. *Hudſon*, 1610. After theſe, Mr. *Henry Hudſon* an *Engliſh-man*, * attempted the ſame Paſſage once more, but being diſcouraged by the Fate of *Barrens*, did not venture very far. The Deſign of this Paſſage lay for many Years after dormant, till within theſe two Years, by ſome novile Accidents, the Opinion of the N. E. Paſſage was revived, and ſomething relating thereunto printed in the Tranſactions of our Royal Society. I will now proceed to give you the Reaſons which indnced me to the Belief of a Probability of this Paſſage, and of the Undertaking of this Voyage.

* But of theſe and of others you have an Account before.

Reaſons for the Probability of this Paſſage. The 1ſt Reaſon was grounded on the Opinion of Capt. *Barrens*, which was, That there was a diſtance of 200 Leagues betwixt *Nova Zembla* and *Greenland*, and that the Ice on both ſides did not reach above 20 Leagues from the Shoar; that if he had ſteer'd N. E. from the North Cape, to the mid-way betwixt theſe two Shoars, he ſhould have found an open Sea, whereas his keeping too near to the Shoar of *Nova Zembla*, was the overthrow of his Deſign: He intended to have undertaken another Voyage upon this Suppoſition.

The ſecond Reaſon.

The 2d, was a Letter ſent from *Holland*, and publiſhed in the *Tranſactions* of the *Royal Society*, which aſſures us, that by a peculiar Survey of *Nova Zembla*, by the *Czar* of *Muſcovy*'s order, they had found it adjoining to the Continent of the *Great Tartars*, and that to the North of it there was an open Sea.

The third Reaſon.

The 3d, was a Diary printed in *Holland*, of a Voyage made from *Batavia* to *Japan*, in which they were caſt upon *Corea*, a *Demi* Iſle of *China*, and made Slaves by the Natives. The Author of this Journal, after 16 Years ſlavery, made his eſcape to *Japan*, where among other things he obſerved, that on the Coaſt of *Corea* did at ſundry times drive Whales with *Engliſh* and *Dutch* Harpon-Irons in them, which if to be credited, is a very ſtrong Argument for a Paſſage that way.

The fourth Reaſon.

My 4th Reaſon was founded upon what I heard Mr. *Joſeph Mexon* ſay, who being in *Holland* 20 Years ago, heard a *Dutch* Sea-man ſay, (which he believed to be truth) that he had been under the Pole, and found it as warm there as at *Amſteldam* in Summer.

The fifth Reaſon.

The 5th Reaſon was furniſhed me by Capt. *Goulden*, who having made 30 Voyages to *Greenland*, made the following Relation to his Majeſty, *viz.* That being 20 Years ago in company of two *Dutch* Ships, to the Eaſt of *Edge*'s Iſle, and there being but few Whales to be ſeen there, the two *Hollanders* left him in order to go more North among the Ice; they returned to their former Station in 14 days time, and told him, that they had been at the Lat. of 89 (within 1 Deg. of the Pole) where they met with no Ice, but an open Sea, and that the Sea run as hollow there as in the Bay of *Biſcay*: Mr. *Wood* being ſomewhat incredulous, they ſhewed him four Journals kept in the two Ships, which teſtified the ſame, and agreed within 4 Min. of one another.

The ſixth Reaſon.

The 6th Argument I had from the before-mentioned Capt. *Goulden*, who told me that all the drift Wood they found in *Greenland*, was eaten to the very Heart with the Sea-worm, which if granted, muſt come from a hot Country; for as we are convinced by experience that this Worm bites in no cold Country, it muſt needs come from *Jedzo*, *Japan*, or ſome Country thereabouts.

The ſeventh Reaſon.

The 7th and laſt Reaſon was another Relation printed in the Tranſactions of the *Royal Society*, of two Ships that had lately attempted this Paſſage, and ſailed 300 Leagues to the Eaſt of *Nova Zembla*; but the Proſecution of their Voyage was ſtopp'd by a Difference aroſen betwixt the Undertakers and the *Eaſt-India* Company, who being the moſt powerful, ſuppreſt it, as contrary to their Intereſt.

Theſe ſeven Arguments (if taken for matter of Fact) were ſufficient to induce me into an Opinion of a North Paſſage of *Nova Zembla* to *China* and *Japan*, beſides which, I had ſome collateral Reaſons founded in Nature, which confirm'd me in the ſame, provided there were no Land or Ice in the way to hinder it.

The firſt Argument for the N. E. Paſſage.

The firſt Argument was, that near the North Pole, it might be in Summer as warm as under the *Artick* or *Antartick* Circle, or at leaſt warmer than with us in Winter; for under the Pole, the Sun being in *June* 23 Deg. high, and that without any Depreſſion towards the *Herizon*, but always continuing at the ſame height, muſt illuminate that part of the *Hemiſphere*, with more Heat than with us in Winter, when the Sun is not above 15 Deg. at the higheſt on the Meridian, and but eight hours above the Horizon; or, that in all likelyhood you might meet with as much warmth, as in any place near either of the two Polar Circles; for the Sun having a declination there towards the *Horizon*, the *Atmoſphere* has as much Interval to cool, as it has time to heat, which under the Pole continues without intermiſſion. What confirm'd me in this Opinion was, That I had heard ſeveral *Greenland* Navigators affirm, that the nearer they went to the North on that Coaſt, they meet with more green Herbs and Graſs, than they do to the South, and alſo with more Deer.

The ſecond Argument.

The ſecond was, That as I fear'd moſt the foggy weather, I hoped it would not blow hard at the ſame time, it being a general Obſervation in all other Climates, that the Wind diſperſes the Fogs; ſo that either you might lie by, or elſe have the Opportunity of looking about you.

The third Argument.

The third was, The Solution of a Doubt I had been certainly convinced of before, *viz.* That the Pole of the World and of the Magnet are ſo far different, that you might ſafely paſs under the Pole of the World, if not prevented by Land or Ice; with this Proviſo however, that you muſt know where the Magnetick Pole is, to allow the Variation that will happen there, whereas according to the common received Opinion, that the Pole of the World and of the Magnet are the ſame, the Septentrional Declination of the Needle of the Compaſs would quite be loſt near the Pole.

Theſe being the Reaſons and Arguments that imprinted into my mind the Probability of this Paſſage. The following Deducements prevailed upon me to undertake this Voyage. (1) The Honour of my King, and the Intereſt of the Nation. (2) Want of Employment at home, the Averſion I had to an idle life, and the Approbation I met with from many Eminent Perſons in *London*. (3) The Deſire I had to be ſatisfied concerning the Nature of a certain Hypotheſis I had framed of the Motion of the two Magnetical Poles (for two ſuch there be) and by the Obſervations of moſt all that have writ upon that Subject, with my own Obſervation and Experiments in many places of the Terreſtrial Globe; I ſay, I having found out very near their Motion, and thereby the Inclination of the Magnetical Needle, under the Horizon, in all Latitude and Longitude, and Variation of the Compaſs in any part of this World, without the Aſſiſtance of any other Luminary, it prompted my Inclination to be fully ſatisfied in this matter, which as it could not be done without coming ſo near the Pole as was ſuppoſed, this was the moſt prevailing Argument to me to go on in this Deſign.

Thus being reſolved on this Voyage, I made a Polar Draught, wherein I traced all thoſe that had attempted the N. E. Paſſage; this I preſented to his Majeſty and Royal Highneſs, with the before-mentioned Reaſons, together with the Advantages which were likely to attend the Nation by the diſcovery of this Paſſage; as the vending of our Woollen Manufactory on the Coaſt of the *Grand Tartary*, which now they have from *Muſcovy*, with vaſt charge: The performing this Voyage to *Japan* in ſix Weeks, which now is not performed but in nine Months, with great hazard, by reaſon of the many Sands and Shoals betwixt *Bantam* and *Japan*, and the perpetual fear theſe Ships are in from the *Dutch*, who deſtroy us if they can; and that the Voyage being ſo ſhort, the King might ſend ſome Men of War to *Japan* to force them to trade, which cannot be done now for want of Proviſions, and for the Diſtempers that attend Ships with ſo many Men aboard in ſo long a Voyage, and hot a Climate. His Majeſty and his Royal Highneſs, after mature deliberation with ſome Merchants and Sea-men uſed to ſail to the North, order'd the *Speedwel* to be mann'd and victualled, but as the many Accidents that attend a ſingle Ship in ſuch Voyages, makes the Enterprize very hazardous, it was thought fit by the eight following Honourable Perſons, to buy a Pink called the *Proſperous*, burthen 120 Tuns, and to fit the ſame for Sea with Men, Ammunition, Proviſions, and ſuch Commodities as were likely to turn to the beſt Account on the Coaſt of *Tartary* and *Japan*. The eight Perſons at whoſe Charge the Veſſel was ſet out, were, His Royal Highneſs the Duke of *York*, the Honourable *John* Lord *Barklet*, Sir *Joſeph Williamſon*, Sir *John Banks*, Mr. *Samuel Peeps*, Capt. *Herbert*, Mr. *Dupey*, and Mr. *Hoopgood*. The *Speedwel* being extraordinary well ſtrengthened and ſheathed, and both the Ships as well fitted for a diſcovery as ever any Ships were, with 16 Months Proviſion for each Ship, 68 Men and Boys in the *Speedwel*, and 18 Men in the *Proſperous*, we were now ready to go to Sea with the firſt opportunity.

Two Ships equipp'd for the diſcovery of the N. E. Paſſage.

A Journal in his Majeſties Ship the Speedwel, *Captain* John Wood *Commander, bound for the Diſcovery of a Paſſage to the* Eaſt-Indies, *by the* N. E. *about* Nova Zembla, *and* Tartary, *and ſo to* Japan, 1676.

They began the Voyage Sunday May 28.

WE ſet ſail from the *Buoy* of the *Noar*, with S. W. Wind, in company of the *Proſperous*, Captain *Fawes* Commander, bound upon the ſame Diſcovery with us. At eight at Night the *Naze* Land bore W. N. about ſix Leagues, we ſteer'd N. E. and N. N. E.

Monday May 29.

A briſk Gale at S. W. and W. S. W. with Rain; Courſe *per* Compaſs betwixt the N. E. and N. diſtance ſailed by the Log. 73 Miles, true Courſe producted ſince laſt Night eight a Clock, to this Day twelve, N. 28

1676. Deg. E. difference of 68 Miles, and departure E. from the *Naze* Land, 36 Miles Lat. by Judgment, as in the Margent.

Tueſday May 30. From Yeſterday at twelve till this day at twelve, the Wind variable from S. W. to S. E. cloudy weather, with a freſh Gale, Courſe *per* Compaſs N. N. W. and N. W. by N. diſtance ſail'd by the Log. 95 Miles, true Courſe is N. 28 Deg. W. diſtance of Lat. 83 Miles, departure W. 45 Miles, Lat. *per* Judgment, Merid. diſtance W. 9 Miles.

Wedneſ. May 31. From Yeſterday at twelve till to day at twelve, variable Winds, with calm rainy weather, Courſes *per* Traverſe, true Courſe protracted, with all Impediments allow'd, is N. 43 Deg. W. 60 Miles, difference of Lat. 42 Miles, departure W. 40 Miles, Lat. *per* Judgment 54 Deg. 13 Min. Lat. by a good Obſervation at Noon, 55 Deg. 30 Min. the Land betwixt *Newcaſtle* and *Berwick*, bore then W. 8 or 9 Leagues, Meridian diſtance Current from the bearing of the Land, and the Lat. is 88 Miles, 50 Fathom Water; we ſaw two Ships to the S without Colours.

Thurſday June 1. From Yeſterday at twelve till to day at twelve, a freſh Gale from W. by S. to the S. W. Courſe *per* Compaſs between N. and N. W. diſtance ſail'd by the Log. 76 Miles, true Courſe protracted is N. 16 Deg. W. Lat. by a good Obſervation, 56 Deg. 41 Min. departure W. 21 Miles. At noon we came up with a *Scotch* Fiſherman, of whom having bought ſome Fiſh, we ſteer'd with a ſtiff Gale N. about 7 or 8 Leagues from the Land between *Montroſs* and *Edinborrough*; we continued the Courſe N. by E. till eight a clock.

Friday June 2. From *June* the firſt at twelve, till the ſecond at twelve, variable Winds, but fair weather, Courſe *per* Compaſs N. diſtance ſail'd by the Log. 117 Miles, but by a good Obſervation 120 Miles, Lat. 58 Deg. 41 Min. Wind W.S.W. and S. W. At two a clock a ſtorm, Wind N.W. with Rain.

Saturday June 3. From Yeſterday at twelve till to day at twelve, true Courſe protracted Leeward way, and all Impediments allow'd, is N. ½ E. 24 Miles, Lat. by a good Obſervation, is 59 Deg. 23 Min. Meridian diſtance from the *Naze* Land 100 Miles; at Noon we ſaw the ſmall Iſland of *Forit* to the South of *Shetland*, bearing four Leagues W. N. W. little Wind in the Afternoon. *N. B.* We found the Ship more to the Weſt than we expected, occaſioned by a Variation of 6 or 7 Deg. E.

Sunday June 4. Little Wind in the Morning, and Calms till twelve, when it beginning to blow hard from W. N. W. we ply to Windward, and turning into *Brace*-Sound, anchored at nine Fathom, oppoſite to the Town of *Lerwick*, where you ſee the Ruins of a Fort, erected during the late War with *Holland*, but ſince demoliſhed. *Lerwick.*

Saturday June 10. Brace-ſound. We ſtaied here till this day at ſeven, when we weigh'd anchor, Wind at S. W. and with the aſſiſtance of a Pilot, ſail'd thro' the North end of *Brace*-Sound, three Fathom water at the ſhalloweſt place. The next day at four in the Morning, *Scau* bore W. by N. 6 Leagues, a freſh Gale at S. W. hazy weather. From four in the Morning till 11 at Midnight, Courſe N. N. E. diſtance ſail'd by the Log. 38 Miles, true Courſe allow'd from the bearing of the Land, is N. E. 41 Miles, difference of Lat. 30 Miles, Lat. by Judgment 61 Deg. 26 Min. Meridian diſtance from *Shetland*, 30 Miles Eaſt. From Yeſterday at twelve at Noon to this day at twelve, a ſtrong Wind at S W. W. S. W. and W. and W. N. W. Courſe *per* Compaſs N. N. E. diſtance ſail'd by the Log. 147 Miles, difference of Lat. 135 Miles, departure E. 56 Miles, Lat. by Judgment 63 Deg. 42 Min. Meridian diſtance Eaſt 86 Miles, cloudy Weather, little wind at Noon.

Tueſday June 13. From the 12th at Noon till to day at Noon, little but variable Wind, with Calms from N. W. to N. N. E. we ply to the Windward. True Courſe protracted, all Impediments allow'd, is N. N. E. 23 Miles, difference of Lat. 21 Miles, N. departure E. 8 Miles, Lat. by Judgment 64 Deg. 3 Min. Meridian diſtance 94 Miles, Lat. by a good Obſervation 64 Deg. 3 Min.

Wedneſ. June 14. From the 13th at Noon till to day at twelve, variable Winds, with Rain, Courſe *per* Traverſe, between the N. E. and the N. diſtance ſail'd by the Log. 92 Miles; true Courſe protracted, all Impediments allow'd, is N. 18 Deg. difference of Lat 81 Miles, departure E. 30 Miles, Meridian diſtance 142 Miles.

Thurſday June 15. From the 14th at Noon till this day at twelve, variable winds and calms W. S. W. Courſe *per* Compaſs N. N. E. diſtance ſail'd by the Log. 67 Miles, true Courſe protracted, with allowance, is N. 22 ½ Deg. E. difference of Lat. 62 Miles, departure E. 26 Miles, Lat. *per* Judgment 66 Deg. 26 Min. Meridian diſtance 150 Miles Eaſt.

1676. *Friday June 16.* From Yeſterday at twelve till this day at Noon, a freſh Gale at W. N. W. and W. S. W. with Rains; Courſe *per* Compaſs N. N. E. and N. E. by N. diſtance ſail'd *per* Log. 126 Miles, true Courſe protracted is N. 30 Deg. E. difference of Lat. 108 Miles, departure E. 63 Min. Lat. *per* Judgment 68 Deg. 14 Min. Meridian diſtance 223 Miles.

Saturday June 17. From Yeſterday at Noon till to day at twelve, a freſh Gale at W. N. W. and W. with Rain, Courſe *per* Compaſs N. E. diſtance ſail'd by the Log. 127 Miles, difference of Lat. 90 Miles, departure E. 90 Miles, Lat. *per* Judgment 69 Deg. 48 Min. Meridian diſtance 303 Miles, but by a good Obſervation at Noon, Lat. 69 Deg. 53 Min. difference of Lat. between the dead Account and Obſervation is 9 Miles, imputed to a Weſt Variation, which is found by an *Azimuth* 7 Deg. Meridian diſtance corrected, is 300 Miles, the weather fair.

Sunday June 18. From Yeſterday at twelve, till to day at Noon, fair weather, wind W. N. W. and W. S. W. Courſe *per* Compaſs N. E. by E. diſtance ſail'd by the Log. 83 Miles, true Courſe protracted, and Variation allow'd, is E. 33 Deg. N. difference of Lat. 47 Miles by Obſervation, departure 66 Miles, Lat. by a good Obſervation 70 Deg. 30 Min. Meridian diſtance 367 Miles E. we ſaw many Whales.

Munday June 19. From the 18th at Noon till this day at twelve, a freſh Gale at W. by S. rainy weather, at ſeven in the Forenoon we ſaw many Sea-fowls and Jubarteſſes, at ten we ſpied the Land, being ſome Iſlands 20 Leagues to the Weſt of the North Cape; true Courſe allow'd for Variation is N. N. E. diſtance ſail'd *per* Log. 135 Miles, difference of Lat. 50 Miles, departure E. 30 Miles, Lat. *per* Judgment 71 Deg. 20 Min. Meridian diſtance 497 Miles. At Noon the Iſle *Sanden* bore S. by E. 8 or 9 Leagues off this Iſle, is a high craggy Land, with ſome Snow upon it.

Tueſday June 20. From the 19th at Noon to this day at twelve, Courſe *per* Compaſs betwixt the E. N. E and N. E. diſtance ſail'd *per* Log. 128 Miles, true Courſe allow'd for the Variation, is North, 43 Deg. Eaſt, difference of Lat. 91 Miles, departure 88 Miles, E. Lat. *per* Judgment 72 Deg. 51 Min. Meridian diſtance 585 Miles. From Yeſterday Noon till twelve this day, the firſt twelve hours a freſh Gale at S. W. but the laſt twelve hours a ſtrong Wind with ſmall Rain; ſaw many Sea-fowls.

Wedneſ. June 21. From the 20th till this day at Noon, a ſtill Gale, with ſmall Rains, Courſe *per* Compaſs N. E. diſtance ſail'd *per* Log. 35 Miles, true Courſe allow'd by Variation, is N. 40 Deg. E. difference of Lat. 103 Miles, departure E. 86 Miles, Lat. *per* Judgment 74 Deg. 34 Min. Meridian diſtance 671 Miles, cloudy weather; ſaw many Sea-fowls.

Thurſday June 22. From the 21ſt to this day at Noon, Courſe *per* Compaſs N. E. diſtance ſail'd *per* Log. 116 Miles, true Courſe alter'd by Variation and Leeward way, is N. 43 Deg. E. difference of Lat. 85 Miles, departure E. 79 Miles, Lat. *per* Judgment 75 Deg. 59 Min. Meridian diſtance 750 Miles, E. Wind, at N. W. weather variable, but very cold. At Noon we ſaw Ice a head about a League off, we ſail'd cloſe to it, and found it to lie E. S. E. and W. N. W. we bore away E. S. E. along the Ice, in the Afternoon very cold ſnowy weather.

Friday June 23. From the 22d till this day at twelve, ſteering along the Ice, we found it to have many Openings, which we ſail'd into, and found them to be Bays; our true Courſe ſail'd along the Ice, the Variation allow'd, was E. 14 Deg. S. 77 Min. Lat. *per* Judgment 75 Deg. 41 Min. difference of Lat. 19 Min. departure 74 Miles, Meridian diſtance 842 Miles, Wind N. N. W. At Noon we had 158 Fathom ſoft green Oar: The Current ſet S. S. E. we found it very ſmooth to the Leeward of the Ice, and ſome pieces of Ice driving a Mile from the Main of the Body of the Ice, repreſenting the Shapes of Trees, Beaſts, Fiſhes, and Fowls. The main Body of the Ice was low, but craggy, many pieces lying together and a top of each other: In ſome places we ſaw Hillocks of a blue Colour, but the reſt of the Ice was white like Snow; we ſaw alſo ſome drift-wood among the Ice: The Ice melted, affords good freſh Water.

Saturday June 24. From the 23d till this day at Noon, little Wind at N. by W. we ſteer'd cloſe along the Ice, ſailing into every Opening, but could find no Paſſage thro, neither could we ſee over the Ice from our Top-maſt-head: True Courſe protracted as we ſailed along the Ice, is E. 34 Deg. S. difference of Lat. 24 Min. S. departure E. 34 Miles, Lat. *per* Judgment, 75 Deg. 18 Min. but by a good Obſervation at Noon, the Lat. 74 Deg. 50 Min. the difference between the Dead Lat. and the Obſerved Lat. is 28 Min. which difference is cauſed by the Current ſetting S. S. E. At Noon we had 128 Fathom

Water, the Current ſtill S. S. E. fair weather, with little Wind, ſmall Fogs, not laſting above half an hour at a time, Meridian diſtance 858 Miles.

Sunday June 25. From Yeſterday to this day at twelve, Calms and foggy weather, ſo we durſt not venture in the Ice; true Courſe protracted is E. 30 Deg. S. difference of Lat. 13 Miles, S. departure E. 19 Miles, Lat. *per* Judgment 74 Deg. 37 Min. Meridian diſtance 877 Miles Eaſt, Wind variable from the N. W. to the W. S. W. At one in the Afternoon the Fog broke, and we had freezing weather.

Munday June 26. Since Yeſterday till this day at Noon, little Wind from N. W. to N. Courſe *per* Compaſs, between W. S. W. and N. E. diſtance ſail'd *per* Log. 67 Miles, difference of Lat. 7 Miles, N. departure E. 58 Miles, true Courſe protracted is E. 7 Deg. N. Lat. *per* Judgment is 74 Deg. 40 Min. Meridian diſtance 935 Miles. About Noon, ſtanding in cloſe with the Ice, we thought we ſaw ſome Sea-horſes or Morſes, our Boat's Crew diſcover'd two of them, and ſhot at them, but tho' they were much wounded, they got under the Ice. Theſe 24 Hours the Ice bore away E. 70 Fathom green Oar at Night. At nine a clock we ſaw Land, the North part of it bearing Eaſt, and the South part S. E. high Land, covered with Snow, 15 Leagues diſtant we had 125 Fathom.

Tueſday June 27. From the 26th to this day Noon, little wind from N. W. to N. by E. with Calms; we kept cloſe to the Ice, and found it join to the Land of *Nova Zembla*: True Courſe protracted is E. by N. 30 Miles, difference of Lat. 16 Miles, departure E. 29 Miles, Lat. *per* Judgment 74 Deg. 46 Min. Meridian diſtance 964 Miles; at Noon 83 Fathom water ſix Leagues from the Shoar, the Ice five Leagues from the Shoar; we killed a young Sea-horſe or Morſe upon the Ice, and ſaw many more, but without the reach of our Fowling-pieces, for theſe Creatures lie always at the brink of the Ice, and take the Sea in an inſtant. We had 80 Fathom green Oar, the Water being ſmooth, we could diſcern the Ground very plain; Meridian diſtance from the Ship to the Land 15 Miles, which maketh Meridian diſtance from the ----- Land to this place 980 Miles.

Wedneſday June 28. Calm weather, wind N. to W. true Courſe protracted W. N. W. 10 Miles, Lat. *per* Judgment 74 Deg. 46 Min. Meridian diſtance 970 Miles. In the Afternoon we came cloſe to the Ice, and found it adjoining to the Continent, ſtood off again at Night.

Thurſday June 29. Rainy weather, with little wind, we ſtood away from the Ice, true Courſe allow'd is S. 27 Deg. W. 20 Miles, difference of Lat. 16 Miles, departure eight Miles, Lat. *per* Judgment 74 Deg. 40 Min. Meridian diſtance 964 Miles. At Noon the wind W. and W. by S. foggy weather, we ſtood away S. from the Ice. At eleven at Night the *Proſperous Pink* fired a Gun, and bearing down upon us, cry'd out, Ice on the Weather Bow; we clap'd the Helm hard a weather, veered out the main Sheet, to ware the Ship, but before the Ship could ware, and bring to upon the other Tack, ſhe ſtruck on a Ledge of Rocks that lay under water.

The Speedwel ſtrikes upon the Rocks. From Noon till eleven at Night, foggy weather, wind N. W. to the W. by S. and S. by W. cloſe haul'd; the *Proſperous Pink*, as I told you, ſeeing the Sea break on the Weather-bow, cry'd out it was Ice, ſo we preſently bore up round to bring to upon the other Tack, but our Ship not wearing round, run and ſtuck faſt againſt a ledge of Rocks; but Captain *Flawes* Ship wearing rounder, got clear; we gave notice of our Diſtreſs by firing ſeveral Guns, and uſed all poſſible means to get off by throwing over-board our Proviſions, &c. for the Water did ebb, and the Ship ſued above three Foot, but the Flood brought a great Sea with it, ſo that the Ship making water more than we could pump, we cut our Maſts by the board, and ſent our Yacht aſhoar to look for a landing place; word being brought, after their return, that there was landing, we got ready our Bread and Carpenters Tools, to make uſe of to rebuild our Long-boat, in caſe Captain *Flawes* ſhould not come near us. At Noon we got all our Men aſhoar, except two who were drown'd in the Pinnace, the Sea breaking into her full as ſhe put off from the Ship ſide, with all the Bread, Powder and Proviſions, which was loſt; ſo having nothing left but the Long-boat, which could not carry above 30 Men out of 70. By this time the Ship being fill'd up to the upper Deck, we could ſave only two Bags of Bread with a few pieces of Pork and a little Cheeſe; this, with what other Neceſſaries we had ſaved, we carried upon a Hill, where the firſt thing we met with was a prodigious large white Bear, at which we ſhot, but ſhe got away: We made up a kind of a Tent with ſome Canvas we had ſaved, which we faſtned to our Oars and Spars, and made a kind of Fence or Trench round it; but being very wet and without firing, we ſuffered much by the Extremity of Cold.

Friday June 30. Foggy weather, with a great Sea, our Ship ſplit upon the Rocks, and much wreck coming aſhoar, we got Oars, Spars, and Deals ſufficient to make us Tents and for Fuel; our greateſt grief was, that the weather continuing foggy, we could not expect Captain *Flawes*; wind W. N. W.

Saturday July 1. The Ship ſplit againſt the Rock. Wind N. W. a freſh Gale, the Ship broke to pieces, much wreck, and Proviſions was caſt aſhoar which we ſaved, *viz.* two Caſks of Flower, ſome Brandy, a Butt of Beer, and a Caſk of Oil.

Sunday July 2. Weſt Wind, and foggy weather; we ſaved more Flower, Butter, and ſome Beef and Pork; our Gunner was ſeized upon by a great white Bear, but by the aſſiſtance of ſome of our Men, was ſaved, and the Bear kill'd; ſhe was very fat and good meat.

Saturday July 8. Wind W. N. W. but being a foggy day, we deſpair'd of ſeeing Captain *Flawes*; we then began to conſider of our miſerable ſtate, the Long-boat not being able to carry above 30 Men, with a Deck built on her, and her Waſt raiſed; we intended to lengthen her twelve Foot, in order to carry our whole Company, but what with the want of Materials and the little Confidence we had in our Carpenter, this was laid aſide, for fear ſhe ſhould not be lengthened: It was propoſed to travel by land towards *Weygats*, in hopes of meeting with ſome *Ruſſian*, but ſoon after, to our unſpeakable joy, we eſpied Captain *Flawes*; we made immediately a great Fire, which he perceiving, ſent in his Boat to help off our Men; we broke off the new work we had begun in our Long-boat, and about Noon got all aboard Captain *Flawes*.

CHAP. XXXVII.

A Journal aboard the Proſperous, *Captain* William Flawes *Commander, from* Nova Zembla *to* England, 1676.

1676. Sunday July 9. FRom yeſterday twelve at Night till this day at Noon, variable wind and rainy weather; we ſtood off to the Weſt; true Courſe protracted with allowance for Variation, is Weſt 8 Deg. S. difference of Lat. 8 Miles, departure 67 Miles, Lat. *per* Judgment 73 Deg. 42 Min. Meridian diſtance from Point *Statero*, the Weſtermoſt Land of *Nova Zembla*, and the laſt we ſaw, 67 Miles; cold weather

Munday July 10. From the ninth at Noon till this day at twelve, variable Winds; from the S. W. by W. to the W. and ſo to the N. and N. N. E. with ſmall rain and cold weather; true Courſe protracted is Weſt 35 Miles, variation allowed 12 Deg. W. Meridian diſtance 102 Miles, a high Sea from the Weſt.

Tueſday July 11. Variable Winds from N. N. E. to N. W. Courſe *per* Compaſs W. by S. diſtance ſail'd *per* Log. 102 Miles, true Courſe allowed for Variation, is W. 68 ; S. diſtance of Lat. 34 Miles, departure 96 Miles, Lat. *per* Judgment 73 Deg. 6 Min. Meridian diſtance 198 Miles, cloudy and cold weather.

Wedneſday July 12. From yeſterday at twelve till this day at Noon, little but variable Winds with Fogs and ſmall Rains, diſtance ſail'd *per* Log. 27 Miles, between the W. by N. and W. by S. true Courſe allow'd with all Impediments, is Weſt: At Noon Lat. by Obſervation 73 Deg. 34 Min. which is 34 Miles more N. than expected; the Variation, as I ſuppoſe, did come from the Lat. we departed from on *Nova Zembla*; Meridian diſtance corrected, is 222 Miles Weſt, calm and fair weather about Noon.

Thurſday July 13. From yeſterday till this day at Noon, variable Wind, from W. to S. S. W. we ply to the Weſt cloſe haul'd; Courſe *per* Compaſs between S. S. W. and W. N. W. true Courſe protracted all Impediments allow'd, is W. by N. ½ N. 69 Miles, difference of Lat. 17 Miles, departure 59 Miles, Lat. *per* Judgment 73 Deg. 51 Min. Meridian diſtance 279 Miles, cold and cloudy weather.

Friday July 14. From yeſterday Noon till twelve to day, variable Winds from S. S. W. to W. N. W. we ply to the Weſt, ſometimes on one Tack and ſometimes on the other; true Courſe protracted all Impediments allow'd, is W. S. W. ½ S. difference of Lat. 9 Miles South, departure Weſt 20 Miles, Lat. *per* Judgment 73 Deg. 35 Min. Meridian diſtance 299 Miles.

Saturday July 15. Strong Winds with guſts from the N. W. to the W. we ply to the Weſtward, ſometimes to the South; diſtance ſail'd *per* Log 70 Miles; true Courſe protracted is S. W. 33 Deg. 45 Min. difference of Lat. 52 Miles, departure 34 Miles, Lat. *per* Judgment 72 Deg. 43 Min. Meridian diſtance 333 Miles.

Sunday July 16. From the 15th at Noon till this day at twelve, wind at W. S. W. and W. by S. true Courſe protracted Leeward way and variation allow'd, is N. by W. ¼ W. 31 Miles, difference of Lat. 30 Miles, departure W. 7 Miles, Lat. *per* Judgment 73 Deg. 13 Min. Meridian diſtance 340 Miles, rainy weather.

Munday July 17. Little wind from W. by N. to the W. with Rains and Fogs, we ply to the Weſt cloſe upon a wind, true Courſe protracted all Impediments allow'd, is W. by S. ¾ W. diſtance of Lat. 3 Miles, departure 23 Miles, Lat. *per* Judgment 73 Deg. 10 Min. Meridian diſtance 360 Miles, at eleven in the Forenoon foggy weather, wind at S. S. E.

Tueſday July 18. From yeſterday at 12 till to day at Noon, the winds from the S. to W. S. W. we ply to the Weſt, cloſe haul'd between W. and N. W. diſtance ſail'd *per* Log. 87 Miles; true Courſe protracted is W. by N. ¼ N. 8 Miles, diſtance of Lat. 18 Miles, departure 77 Miles. Lat. *per* Judgment 73 Deg. 28 Min. Meridian diſtance 437 Miles, foggy weather.

Wedneſ. July 19. Thick Fogs, wind S. W. and S. S. W. Courſe *per* Compaſs W. N. W. and W. cloſe haul'd; diſtance ſail'd *per* Log. 74 Miles, true Courſe, Variation and Leeward way allow'd, is W. N. W. ½ N. 70 Miles; difference of Lat. 32 Miles, departure 60 Miles, Lat. *per* Judgment 74 Deg. Meridian diſtance 497 Miles, much Wind at Night.

Thurſday July 20. Much Wind and Fogs from W. S. W. and S. W. we ply cloſe upon a wind N. W. by W. and W. N. W. diſtance ſail'd *per* Log. 65 Miles; true Courſe, Variation and Leeway allow'd, is N. N. W. ¾ W. diſtance of Lat. 55 miles, departure 33 miles, Lat. *per* Judgment 74 Deg. 55 Min. Meridian diſtance 530 Miles.

Friday July 21. From the 20th at Noon till this day at twelve, wind S. W. to the W. Courſe *per* Compaſs S. by W. upon one Tack, and W. N. W. on the other, cloſe haul'd; diſtance ſail'd *per* Log. 61 miles, true Courſe protracted, all Impediments allow'd, is S. by W. ¼ W. 48 Miles, diſtance of Lat. 45 miles, departure 16 miles, Lat. *per* Judgment 74 Deg. 12 Min. cold and foggy weather, clears up about Noon.

Saturday July 22. From yeſterday till this day morning at four, wind at S. W. by W. and W. with Fogs, Courſe W. by N. and N. N. W. 46 miles, we ſaw many Willocks and other Sea-fowls, which made me judge we were near the *Cherry-Iſland*, we found 60 Fathom rough Sand, we tack'd and ſtood off S. S. E. and S. E. by E. nine miles, till Noon, at which time we found 78 Fathom; Lat. by Judgment at four in the Morning 74 Deg. 26 Min. Meridian diſtance 589 miles, when according to my reckoning I was 13 Leagues Weſt from *Cherry-Iſland*, according to the Meridian diſtance I made from the Cape to *Nova Zembla*, and from thence back here; Lat. at Noon *per* Judgment, 74 Deg. 20 Min. Meridian diſtance 582 miles.

Sunday July 23. Foggy weather and variable winds from S. S. E. to W. N. W. Courſe *per* Compaſs between S. W. and W. diſtance ſail'd *per* Log. 91 miles, true Courſe protracted is S. W. by S. 87 Miles, difference of Lat. 76 miles, departure 43 miles, Lat. *per* Judgment 73 Deg. 8 Min. Meridian diſtance 625; no ground at Noon at 160 Fathoms.

Munday July 24. Little winds but variable, true Courſe allow'd is S. S. W. ¼ W. 22 miles, diſtance of Lat. 18 miles, departure 11 miles, Lat. *per* Judgment 72 Deg. 50 Min. Meridian diſtance 636 miles.

Tueſday July 25. From the 24th at Noon till this day at twelve, variable and briſk winds from the N. by W. to the E. with Fogs, Courſe between W. S. W. and W. diſtance ſail'd *per* Log. 88 miles, true Courſe allow'd for 9 Deg. Variation, is S. W. ½ W. diſtance of Lat. 54 Miles, departure 69 miles, Lat. *per* Judgment 71 Deg. 56 Min. Meridian diſtance 705 miles.

Wedneſ. July 26. Foggy weather, with variable winds from E. by N. to S. diſtance ſail'd *per* Log. 73 miles, Courſe *per* Compaſs between S. W. by W. and W. N. W. true Courſe protracted is W. ½ S. diſtance of Lat. 7 Miles, departure 67 miles.

Thurſday July 27. The wind from S. to S. W. with Fogs, diſtance ſail'd *per* Log. 687 Miles, true Courſe allow'd W. ½ S. difference of Lat. 7 Miles, departure 62 Miles Weſt.

Friday July 28. From the 27th at Noon till this day at twelve, wind from S. S. W. to S. E. Courſe *per* Compaſs between W. by N. and S. by W. cloſe upon a wind; diſtance ſail'd *per* Log. 85 Miles, true Courſe protracted is S. W. by W. ¼ 80 Miles, diſtance of Lat. 46 Miles, S. departure 64 Miles W. thick Fogs and ſmall Rains.

Saturday July 29. From Yeſterday at Noon till this day at twelve, ſtrong S. and S. W. winds, true Courſe allow'd is W. 15 Miles.

Sunday July 30. From the 29th Noon till this day at twelve, variable winds from S. E. to S. and ſo to N. W. at eight in the Morning much wind at N. W. with ſudden Guſts; true Courſe protracted, all Impediments allow'd, is S. S. W. 66 Miles, diſtence of Lat. 60 Miles, departure 25 Miles.

Munday July 31. Much wind at N. W. with rain, Courſe *per* Compaſs S. W. by S. and S. W. diſtance ſail'd *per* Log. 104 Miles, true Courſe allow'd for Leeward way and Variation, S. by W. ½ W. difference of Lat. 103 Miles, departure 11 Miles, Lat. *per* dead Account 68 Deg. 13 Min. but by Obſervation 68 Deg. 00 Min. departure corrected accordingly 15 miles, Meridian diſtance 953 Miles.

Tueſday Auguſt 1. The wind variable from N.W. to S.W. by W. diſtance ſail'd *per* Log. 80 Miles, we ply to the windward; true courſe protracted, Variation and Leeward way allow'd, diſtance VV. S. VV. difference of Lat. 72 Miles, departure 51 Miles, rainy and foggy weather.

Wedneſ. Aug. 2. From the firſt Noon till this day at twelve, wind S. by VV. and S. VV. with thick Fogs, Courſe *per* Compaſs between VV. by S. and VV. N. W. diſtance ſail'd *per* Log. 51 Miles, true Courſe allow'd VV. by N. difference of Lat. 12 Miles, departure 49 miles, Lat. *per* Judgment 67 Deg. 50 Min. but by a good Obſervation Lat. 67, 55 Min. at Noon.

Thurſday Aug. 3. VVind VV. and S. S. VV. with Fogs and Rains, Courſe *per* Traverſe; we ply to windward; true Courſe protracted is S. S. VV. diſtance of Lat. 21 miles, departure 10 miles, much wind at S. at Night.

Friday Aug. 4. From eight at Night till to day at Noon, a ſtorm from the S. and S. S. VV. true Courſe, drift and all Impediments allow'd, is N. VV. by N. ½ VV. difference of Lat. 18 miles, departure 16 miles, little wind at Noon.

Saturday Aug. 5. VVind from VV. by S. to N. VV. with a cold ſtorm; true Courſe allow'd is S. by E. difference of Lat. 75 miles, departure 15 miles; little wind in the Afternoon.

Sunday Aug. 6. VVind from VV. N. VV. to VV. S. VV. true Courſe allow'd S. ¼ E. diſtance of Lat. 67 miles, departure 8 Miles, wind at S. and S. VV.

Munday Aug. 7. Sometimes ſtormy and ſometimes calms; true Courſe allowed *per* Judgment VV. N. VV. ½ N. 53 miles, difference of Lat. 22 miles,, departure W. 47 miles; the wind turn'd W. N. W. at noon, and at eight a Storm at N. W.

Tueſday Aug. 8. From Yeſterday eight at Night till to day at Noon, a ſtorm from N. W. Courſe *per* Compaſs S. S. W. diſtance ſail'd by the Log. 116 Miles, true Courſe allow'd, is S. diſtance of Lat. 107 miles, departure W. 5 miles.

Wedneſ. Aug. 9. The Iſles of *Fero.* At three in the Morning we ſaw many Willocks and other Sea-fowls, and at five the Land E. S. E. of us, high Lands, being the Iſles of *Fero*; Lat. at Noon by a good Obſervation 61 Deg. 45 Min. the weſtermoſt of theſe Iſles bore then Eaſt eight Leagues from us; diſtance ſail'd from the 8th at Noon till this day at twelve, 120 miles, true Courſe allow'd S. by W. ¾ W. diſtance of Lat. 116 Miles, departure 26 Miles, Lat. by Judgment 62 Deg. 4 Min. diſtance between the dead Lat. and the obſerved Lat. 20 Miles, ſo that the Ship is 20 Miles more South, and conſequently more Weſt, Meridian diſtance 1129 Miles, by correction 1136; we gave chaſe to a ſmall Veſſel, but ſhe got away.

Thurſday Aug. 10. A briſk Gale at N. W. Courſe between the S. and E. S. E. to get clear of the Iſlands, diſtance ſail'd by the Log. 102 Miles, true Courſe protracted, is S. E. by E. ½ S. diſtance of Lat. 58 miles,, departure 76 Miles, we ſpoke with the before-mention'd Ship, which proved a

Lymane.

Friday Aug. 11 *Lynmano.* Wind at N. N. W. Courſe *per* Compaſs S. E by E. diſtance ſail'd by the Log. 83 Miles. At Noon the Iſle of *Foule* bore N. E. by E. three Leagues off; the wind turn'd South.

Saturday Aug. 12. The Orkney Iſles. Variable wind with great guſts. At Noon the *Orkney* Iſlands bore Weſt four Leagues: thoſe of the *Orkney* Iſles we ſaw, are low, but the *Fair-Iſle* we diſcover'd at the ſame time, was high Land, ſix Leagues off. The Tide of Flood ſets very ſtrong betwixt the *Orkney* and *Fair-Iſles.* *Catneſs.* At eight at Night *Catneſs* bore about eight Leagues off W. by S. we turned away S. E. the wind at W. S. W. it blew a ſtorm.

Sunday Aug. 13. From laſt Night at eight, till this day four in the Afternoon, it blew very hard; wind from W. by S. to W. N. W. We made her good by Judgment 58 Deg. 16 Min. Departure from *Catneſs* 47 miles E. we ſaw many Pitterals about the Ship; leſs wind at Night.

Munday Aug. 14. From Yeſterday Noon to this day at twelve, a freſh Gale, Courſe *per* Compaſs S. Lat. by a good Obſervation 56 Deg. 38 Min.

Tueſday Aug. 15. Little wind at W. N. W. Courſe *per* Compaſs S. Diſtance ſail'd by the Log. 53 miles; fair weather, at Noon wind at S. we ſtood in for the Land, and ſpake with two Fiſhing-boats under *Engliſh* Colours, but were *Dutch*; at ſix at Night we got in with the Land, two Leagues North of *Tinmouth* Caſtle, we tack'd and ſtood off, the wind South. *Tinmouth Caſtle.* *Wedneſ. Aug. 16.* The wind continued S. to the S. S. E. At Noon *Tinmouth* Caſtle S. W. two Leagues off, we ply to the South.

Thurſday Aug. 17. Wind at W. S. W. pretty high at Noon, we ſtand along the Shoar to the S. at two a clock *Flamborough-head*, Weſt about two Miles. *Friday Aug. 18.* Wind at W. S. W. at Noon, we came to an Anchor a League to the North of *Cromer*, the Tide being ſpent. *Saturday Aug. 19. Yarmouth.* At ſix the next Morning we weighed with the Tide, and turning up *Yarmouth*-Roads, came to an anchor juſt againſt the Town; at eight at Night we turn'd up above the Peer, and anchor'd again; the Tide being ſpent, wind S. W.

Sunday Aug. 20. Southwole Bay. At eight next Morning weighed with the Flood, and turned up windward; we anchored at four in the Afternoon with ebb Tide in *Southwole* Bay, at eight Fathom water, the Church bearing N. N. W. a freſh Gale from S. S. W. to S. S. E. At eight at Night we left the Bay with the Flood, and turned up *Albrough* Road, where we came to an anchor. *Munday Aug. 21. Albrough Road.* At nine in the Morning we weighed with the Tide of Flood, with a freſh Gale at W. S. W. and turn'd into the *Sleeway*, where we anchored at five in the Evening at nine Fathom water, the *Naze* Land bearing W. by N. *Tueſday Aug. 22.* At four a clock we turn'd windward with the Flood, wind at W. S. W. At five anchor'd upon the Tide of Ebb, two Miles below the middle ground; at Noon we weighed with the Flood, and turn'd to windward, wind at W. by S. at ſix we anchored below the Shoar. *Wedneſ. Aug. 23. Return to the Buoy of the Noar.* At four in the Morning we weigh'd anchor, and turn'd up a Mile above the *Buoy* of the *Noar*, wind at W. N. W. we anchored upon the Ebb, about eight a clock, and weighing anchor again at one, wind at W. N. W. turned up the River.

After the Journal, I will give you my Thoughts of the ſaid Voyage, and a true Relation of our Miſcarriage, with ſome Obſervations I made during the Voyage.

My firſt Error was, to follow the Opinion of *William Barrans, viz.* to ſteer from the North Cape directly N. E. and ſo to fall in the middle-way betwixt *Nova Zembla* and *Greenland*: Accordingly having made the Land to the Weſt of the North Cape, I ſteer'd the 19th of *June* N. E. by the Compaſs, which was not ſo much by the true Courſe, becauſe of the Weſt Variation. The 22d of *June* we diſcover'd the main Body of Ice, at the Lat. of 76 Deg. 60 Leagues Eaſt of *Greenland*. At firſt, I ſuppoſed it to have been the Ice that is adjoining to *Greenland*, and conſequently, that, if I did ſteer more to the Eaſt, I ſhould meet with an open Sea; ſo I went along cloſe by the Ice E. S. E. and W. N. W. Every League, leſs or more, we met with a Point of Ice, but when we came round, we could ſee no Ice to the North; ſo ſtanding in N. E. an hour at a time, we ſtill ſaw more Ice a head; ſo we were forced to continue coaſting the Ice, ſometimes in hopes of an open Sea, and ſometimes quite diſheartened with ſeeing more Ice, till we were paſt all hopes of having ſight of *Nova Zembla*, and the Ice adjoining to it. This convinced me of the Error of Mr. *William Barrans*, and of the Falſity of the *Dutch* Relations, as well as of thoſe of our own Country-men: for it is now my Opinion, that if there is no Land to the North of 80 Deg. of Lat. the Sea is all frozen and always will be ſo: for I could not get beyond the 76 Deg. and yet found it frozen without intermiſſion; and, it is very probable, that the ſame Ice we ſaw on the main Body of it, and had been conveyed ten Deg. to the South, would have required ſome Ages to thaw it; and the looſe Ice we ſaw about the Edges of the main Bulk, was ſcarce a Foot thick above the Surface of the water, whereas the reſt of the Cake was 18 Foot under water. This made me conjecture, that all theſe vaſt Mountains of Ice, muſt be of neceſſity reaching from the Shoar into the Sea, which I was confirm'd in by the ſhallowneſs along the Ice in the mid-way between the two Lands, being no more than 70 Fathom; a ſign that there is Land to the North, and that *Nova Zembla* and *Greenland* are the ſame Continent; for, if there were a Paſſage, there would alſo be a Current, of which I could perceive hardly any, and what little there was run E. S. E. along the Ice, being only a ſmall Tide that riſeth about eight Foot.

Nova Zembla and Greenland the ſame Continent.

The 29th of *June* was the fatal day to our Ship, which proving exceeding foggy, the wind ſtrong at Weſt, and we believing the Weſtermoſt Land of *Nova Zembla* bore E. S. E. of us, Captain *Flawes* fired a Gun, and call'd there was Ice a head: I no ſooner looked, but perceiv'd it to be a Rock: I did all I could to get clear, but in vain, for ſhe ſtruck againſt the Rock; but Captain *Flawes* having a rounder Ship, eſcaped, by God's ſingular Providence, and ſtood off to Sea: we uſed all poſſible means to ſave her, but as it blew very hard, and our Anchors could do us no ſervice, we were reduced to the utmoſt deſpair. About five hours, to our great amazement, we ſaw Land cloſe under our ſtern; (the Fogs being then diſperſed) ſo we got out our Boats, and the Pinnace was ſent aſhoar to ſee whether there were any laading; they returned with this doleful news, That the roughneſs of the Sea, and the ſnowy Cliffs aſhoar, made it impoſſible for us to land: we had then recourſe to Prayers, to recommend our Souls to God Almighty, as ſeeing no hopes of relief. After Prayers the weather proved ſomewhat clearer, when looking over the Stern, I diſcover'd a ſmall Beach, where I thought we might poſſibly land: I ſent the Pinnace thither, but they durſt not land; but the Boat with about twenty Men, got ſafe aſhoar, and then were follow'd by the Pinnace: ſome of them returned with both the Boats, and I order'd them to put into the Pinnace two Barrels of Powder, ſome ſmall Arms, Mony, Proviſions and my Papers; which was no ſooner done, but ſhe was over-ſet by a high Sea, but the Men were all ſaved by the Long-boat, except one who was drown'd: They would needs compel me and my Secretary to quit the Ship, which we did at laſt, and afterwards ſent the Boat back to fetch the reſt, who were all brought aſhoar except one, who having not recovered himſelf ſince the over-ſetting of the Pinnace, was forced to be left behind. We made Tents of ſome Canvas and our Oars, and raiſed the Long-boat two Foot, and made a Deck to keep out the Sea, intending with her to ſail or row to *Ruſſia*; but as ſhe could not carry above 30 Men, this occaſioned no ſmall Diſcontent among us, every one challenging the ſame right with the others: All I could do in this Exigency, was, to let the Brandy-bottle go round, which kept them always fox'd, till the eighth of *July* (the ninth day after we had been aſhoar) Captain *Flawes* came ſo ſeaſonably to our relief.

A Deſcription of Nova Zembla.

Nova Zembla, i. e. *New Land* in the *Ruſſian* Language, is unknown hitherto whether it be an Iſle, or adjoining to the Continent of *Great Tartary*: It is moſt always covered with Snow; the Ground Boggy, upon whoſe Superficies grows a kind of Moſs, which beareth a ſmall blew Flower. About two Foot under the Superficies of the Ground, is an entire firm body of Ice: In other Climates the Snow melts ſooneſt near the Sea-ſide; but here the ſnowy Cliffs are continually ſeen near the Shoar, in ſome places as high as the *Fore-lands* in *Kent*. At ſome diſtance from the Sea ſide, we found the tops of ſome Mountains without Snow: we found the Track of Bears, large Deer, and Foxes: we ſaw a little Creature not unlike a Coney, but no bigger than a Rat, and ſome ſmall Birds like Larks. Abundance of ſmall Rivulets run from the Hills into the Sea, near which you ſee abundance of black Marble with white Veins; but upon the Hills nothing but Slate-ſtone. Unto the Point where we loſt our Ship, I gave the name of *Speedill*; unto the High Hills that of *King Charles's Snow-Hills*; and to the next Point to the South, being the Weſt Point of *Nova Zembla*, the name of *James's Foreland*: the North Point I call'd *York Point.* Point *Speedill* lies at 74 Deg. 30 Min. North Lat. and in Longitude Eaſt from *London*, 63 Deg. 00 Min. The Variation of the Compaſs is 13 Deg. Weſt; it is full Sea at S. W. Moon. The Tide riſes directly eight Foot, and ſets directly upon the Shoar, a certain ſign that there is no Paſſage to the North. The Sea Water near the Ice and Shoar, is much ſalter than any I ever taſted before, and much heavier, but ſo clear and tranſparent, that at 80 Fathom (or 480 Foot) Water, I could plainly ſee the Shells at the bottom. Had I ſucceeded in this Voyage, I would have given you a more exact Account of every thing, which I am now forced to ſuperſede, by reaſon of the loſs of my Papers in the Pinnace: But my Experiments of the Magnet, I intend to publiſh in a peculiar Treatiſe.

CHAP. XXXVIII.

A Brief Diſcourſe of a Paſſage by the North-Pole to Japan, China, &c. pleaded by three Experiments, And Anſwers to all Objections that can be urged againſt a Paſſage that way; By Joſeph Moxon, Fellow of the Royal Society.

This was one of the Tracts induced Captain *Wood* to undertake his Voyage.

AMong the many Eſſays that have been made to find a neer Paſſage to *Japan*, *China*, &c. the moſt probable and likely hath as yet (in my Opinion) been over-ſeen, or at leaſt not attempted; and therefore I ſhall hereby communicate my Conceptions to publick Approbation or Cenſure. It is, that a Paſſage may very probably be about the *North-Pole*; and the Reaſon inducing me to conceive ſo, is, That we have no Certainty from all the Diſcoveries that have been made of any Land lying within eight Degrees about the Pole; but on the contrary, that I have credibly been informed by a Steer-man of a *Dutch Greenland* Ship, that there is a free and open Sea under the very Pole, and ſomewhat beyond it: and I for my own part give credit to his Relation, and do conceive that any ſober ingenious Man would do the like, did he know in what an honeſt manner, and by what an un-intereſſed Accident I happened to hear it; for thus it was: Being about 22 Years ago in *Amſterdam*, I went into a Drinking-houſe to drink a Cup of Beer for my Thirſt, and ſitting by the publick Fire, among ſeveral People, there happened a Sea-man to come in, who ſeeing a Friend of his there, who he knew went in the *Greenland* Voyage, wondred to ſee him, becauſe it was not yet time for the *Greenland* Fleet to come home, and aſk'd him what Accident brought him home ſo ſoon; his Friend (who was the Steer-man aforeſaid, in a *Greenland* Ship that Summer) told him, that their Ship went not out to fiſh that Summer, but only to take in the Lading of the whole Fleet, to bring it to an early Market, &c. But, ſaid he, before the Fleet had caught Fiſh enough to lade us, we, by order of the *Greenland*-Company, ſailed unto the *North-Pole*, and came back again. Whereupon (his Relation being *Novel* to me) I entred into diſcourſe with him, and ſeem'd to queſtion the Truth of what he ſaid: but he did enſure me it was true, and that the Ship was then in *Amſterdam*, and many of the Sea-men belonging to her to juſtify the truth of it; and told me moreover, that they had ſailed two Degrees beyond the Pole. I aſk'd him, if they found no Land or Iſlands about the Pole? He told me No, there was a free and open Sea: I aſk'd him if they did not meet with a great deal of Ice? He told me No, they ſaw no Ice: I aſk'd him what Weather they had there? He told me fine warm Weather, ſuch as was at *Amſterdam* in the Summer time, and as hot. I ſhould have aſk'd him more Queſtions, but that he was ingaged in diſcourſe with his Friend, and I could not in modeſty interrupt them longer. But I believe the Steer-man ſpoke matter of Fact and Truth, for he ſeem'd a plain honeſt and unaffectatious Perſon, and one who could have no deſign upon me.

But though I believe this ſtory, yet methinks I hear many object againſt it, and are apt to urge three ſeeming Reaſons to prove it falſe, or at leaſt ſome Particulars of his Relation. And firſt, That it cannot be warm under the Pole, becauſe that about *Greenland*, and many other parts leſs Northerly, the Sea is ſo full of great Bodies of Ice, that Ships can hardly ſail for it. Secondly, Or if warm, yet not ſo warm as at *Amſterdam* in the Summer time, becauſe the farther Northerly, the colder Weather. Thirdly, Or if they were under the *Pole*, that they could not tell how to come back, but that they might as well go farther from, as return nearer to home; becauſe the *Needle* pointing always *North*, they muſt needs looſe themſelves in the *North-Pole*, where it muſt indifferently reſpect all Points of the Horizon alike.

One Anſwer may ſerve to the firſt and ſecond Objection; That it cannot be warm under the *North-Pole*, &c, if we conſult the Experience of Travellers and Navigators; we are told, that between the *Tropicks*, nay, under the *Equinoctial*, is generally as moderate weather as here in *England* in Summer-time. Why may it not then be as warm under the Pole, as here or at *Amſterdam* in the Summer time? The ſmall height the Sun hath there, can be no Exception; for then we having the Sun in its Summer Solſtice in leſſer Altitude than between the Tropicks, it muſt needs be much colder here, which is contradicted. But one Reaſon why it is as warm here as between the Tropicks, is, becauſe between the Tropicks, the Sun remains ſcarce above 12 hours of 24 above the Horizon to warm it, when as here it remains almoſt 17 hours of 24 above the Horizon, and therefore leaves a greater impreſſion of heat upon it; and the farther Northward we go, the longer it remains above the Horizon, and leſs under the Horizon every 24 hours, till we come within the Arctick Circle, where the Sun remains for half a year together, *viz.* all the Summer above the Horizon, and never ſets: And therefore tho' his Beams are not ſo perpendicular, yet they muſt needs cauſe a great degree of heat upon the Horizon.

And if it be argued that it is ſo cold about *Greenland*, &c. and the Seas ſo full of Ice, that Ships can hardly ſail for it; yet cannot that Argument prove that it is ſo about the *Pole*: becauſe the Ice is made about ſhoars of Land, but never in open Sea, and comes there only by ſtrength of Currents, or high Winds, which do indeed carry it ſome ſmall diſtance from the ſhoar. But as this Relator ſaid, there is under the *Pole* a free and open Sea, &c. and conſequently void of Ice, in Summer time at leaſt. Beſides, Experience tells us, that all Land-briezes are colder than thoſe that come from Sea, and therefore it may be cold about *Greenland*, becauſe of the Land, and yet warm under the *Pole*, where the Sea is open, &c.

The third Objection is, that if they were under the *Pole*, they could not tell how to come back, becauſe of the indifferency the *Needle* ſhould bear to every point of the *Horizon*.

I examined not my Relator upon this Argument, tho' when I was parted from him, I was ſorry I did not. But it is eaſy to apprehend how to guide a Ship, either forward or backward by an Obſervation of the Sun, a little before you enter the *Pole*; for by finding in or near what Meridian it is, or upon what part of the Ship it bears, whether on Head or Stern, or Star-board or Larboard, you may meaſure Time near enough with a Glaſs, to know ſeveral days after, in or near what Meridian the Sun is at any known or eſtimate time, and conſequently know how to proceed forewards, or come back with your Ship: or if the Moon have *North* Latitude, you may do the ſame by the Moon. But if the *Pole* were Traded, in ſhort time it might be found by Variation of the *Needle*, for there is doubtleſs Variation in it, and in all the Meridians about it, ſeveral Variations.

Thus far it appears there is a free and open Sea in Summer-time (at leaſt) about the *North-Pole*. But I ſhall add another Relation of *James Ben*, whoſe Father lived about five Years ago in Crown-Court in *Ruſſel-ſtreet* in *Covent-Garden*, and himſelf now lives in *Wapping*. This Mr. *Ben* ſailed to *Japan* with the *Dutch*, as a Carpenter of the Ship, and he told me that that Year, *viz.* 1668. he was newly come home from *Japan*: I aſk'd him how long they were under-way home from thence? He told me, he could not well tell, becauſe when they ſet out from *Japan*, the Captain commanded the Steerman

man to ſail due North, and they did ſail from thence about 400 *Dutch* Miles, which is almoſt 27 Degrees due North. I aſk'd him whether they met with no Land or Iſlands, as I had done before the *Dutch Greenland* Steer-man: He told me No, they ſaw no Land, but that there was a free and open Sea ſo far as they ſailed, nor any ſign of Land appeared. I aſk'd him why they ſailed ſo far Northward? He told me he could not tell, only the Captain commanded it, *&c.* But I ſuppoſe the *Eaſt-India* Company commanded the Captain, either to make a Diſcovery of Land to encreaſe Trade, or to ſatisfy themſelves with the Knowledge of an open Sea, that when they ſaw Reaſon, they might expedite their Voyages between *Holland* and thoſe Parts that way. I was thus inquiſitive with him, becauſe ever ſince I heard the former Relation of the *Greenland* Steer-man, I harped at a Paſſage through or about the *North Pole* to *Japan*, *China*, &c. and by theſe two diſcoveries, it appears very probable that there is ſo, and that it is paſſable in Summer-time.

I come to a third Relation, not only of the Probability, but of the Certainty of a Paſſage found by the *Ruſſians* this laſt Year, as it came to the Hands of the Secretary of the *Royal Society* from *Amſterdam*, by a Correſpondent of his; which in *Tranſact.* Numb. 101. runs in theſe words.

A Letter, and Map, not long ſince ſent to the Publiſher, by an Experienced Perſon reſiding at Amſterdam, *containing a true Deſcription of* Nova Zembla, *together with an Intimation of the Advantage of its Shape and Poſition.*

SIR,

‘I Herewith ſend you what I have received out of *Muſcovy*, which is a New Map of *Nova Zembla* and *Weigats*, as it hath been diſcover'd by the expreſs order of the *Czar*, and drawn by a Painter, called *Panelapoetski*, who ſent it me from *Moſco* as a Preſent, by which it appears, That *Nova Zembla* is not an Iſland, as hitherto it hath been believed to be; and that the *Mare Glaciale* is not a Sea, but a *Sinus* or Bay, the Waters whereof are ſweet, which is the ſame with what the *Tartars* do alſo aſſure us, who have taſted thoſe Waters in the very midſt of the *Sinus*. The *Samojeds* as well as the *Tartars*, do unanimouſly affirm, that paſſing on the Back of *Nova Zembla*, at a conſiderable diſtance from the Shoar, Navigators may well paſs as far as *Japan*. And 'tis a great fault in the *Engliſh* and *Dutch*, that ſeeing to get to *Japan* on the South ſide of *Nova Zembla*, they have almoſt always paſſed the *Weigats*. The Letter O in the great River *Oby*, marks the place of a Cataract or fall of Water; the Letter *K* denotes the conjunction of *Zembla* with the Continent. The River marked *L*, runs towards *China*, called *Kitaie*, which is not every where navigable, by reaſon of the Rocks and other Inconveniencies that obſtruct the paſſing of Veſſels. *Weigats* it ſelf is very difficult to paſs, becauſe of the great quantity of Ice continually falling into it out of the River *Obey*, whereby that ſtraight Paſſage is ſtopp'd up. The *Samajeds* go every year a fiſhing upon the ſaid ſweet Sea, and that on *Nova Zembla*'s ſide. This Map of *Nova Zembla* is here omitted, becauſe here is ſet forth a Map of all the Lands neareſt about the *North-Pole*.

CHAP. XXXIX.

The firſt Part of the Voyage to Spitzbergen *and* Greenland, *containing an Account of the Voyage thither, and of the Weather, from* April *the* 15*th, to* Auguſt *the* 21*ſt*, 1671.

The Voyage from the *Elbe* to *Spitzbergen*. WE ſet ſail from the *Elbe*, wind N. E. in the Ship call'd the *Jonas in the Whale*, *Peter Peterſon* of *Frieſeland* Maſter.

The 27th, at 71 Deg. we had cold weather, wind N. E. by E. we diſcover'd the Iſle of *John Marjen*, S. W. by W. ten Miles off.

The 29th foggy weather, we came to the Ice and ſail'd back again, as you may ſee in the Plate, A The 30th foggy and ſnowy weather, wind North

May 3. Snow and Hail, wind N. W. by W. the Sun ſet no more after this day.

May 4. Cold but ſun-ſhiny weather, wind N. W. we ſaw abundance of *Seals*.

May 5. Moderate weather, wind N. W. by N. we ſaw many Ships ſailing about the Ice, which aſk'd one another how many Whales they had caught: they would anſwer by ſigns with their Hats; and if they had their full Freight, they hung out the Great Flag; ſo that if any would ſend a Meſſage, he might deliver it to them, as you ſee in the Plate, A. by A.

May 7. Snow with rain. In the Afternoon we diſcover'd *Spitzbergen*, the South Point of the North Foreland, appearing like a dark Cloud full of white Streaks.

May 9. The ſame weather, wind S. W. by W. In the Afternoon we miſtook a Finfiſh for a Whale. From the 25th of *April* till this day, we had not taken the Sun's Altitude, which we found 70 Deg. 3 Min.

May 12. Stormy cold weather, wind North, with exceſſive Froſt.

May 14. Fine Sunſhiny weather, wind N. W. at 75 Deg. 22 Min. Here the Sea is ſmooth, even after a Storm, if the wind blows from the Ice; but if from the Sea, it is very rough: we ſaw a Whale but could not catch her.

May 19. A calm ſun-ſhiny day, wind North; we killed two *Seals* or *Sea-dogs*, and ſaw a vaſt number of them on the Ice.

May 20. It was very calm but cold, wind North; the longer
we ſaill'd the bigger Ice we met with. We ſail'd deeper
into the Ice in the Forenoon with another *Hamburger* *May* 21.
Ship, call'd the *Lepeler*, and eight *Dutch-men*, and ſaw
about 30 Ships in all lying in a Harbour of Ice, as you
may ſee at No (1).

May 30. Fair and calm weather, wind S. W. we ſaw a Whale when the Sun was in the Eaſt, which we brought to the Ship, and found him ſpent with ſwimming, having a *Harpoon-Iron* ſtuck in his Fleſh, which ſtunk vehemently, and the Birds call'd *Mallemucks*, i. e. *Fooliſh Gnats* (a kind of Sea Guls) fed upon it alive. We fill'd 70 Barrels with the Fat, but the Steam inflamed our Eyes. See No (2) The ſame Night *Cornelius Seamen* loſt his Ship in the Ice, call'd the *Weſt Ice* by the Seamen, becauſe it extends to the Weſt. See No (3)

June 2. A very ſevere froſt, we ſaw the Moon look as pale in the Night time, as it looks by us in a clear day.

June 4. Wind N. E. by N. we came very near to a Whale; but juſt as the Harpooner was ready to fling the Harpoon, he got under the water, holding up his Head, and ſo ſunk like a Stone. See No (4).

June 8. A foggy and ſnowy day; we ſaw many Seals or Sea-dogs, and kill'd 15 of them.

June 12. A cold ſtormy day, and ſun-ſhiny Night, but one muſt be very nice to diſtinguiſh betwixt day and night.

June 13. In the Afternoon foggy and windy weather at 77 Deg. the Ice Eaſt towards *Spitzbergen*: ſee No (5) The ſame Night we ſaw above 20 Whales ſwimming towards the Ice; we got our ſecond Fiſh, which being wounded with Lances, bled ſo vehemently, that the Sea was tinged red; we brought him aboard when the Sun was at North; for you muſt know that the Sun is our Clock at *Spitzbergen*.

June 14. A cold, windy, foggy Night; we arrived at *Spitzbergen*; firſt we came to the *Foreland*, thence to the ſeven *Ice Hills*, and ſo to the *Hamburghers* Harbour, *Magdelens*, *Engliſhmen* and *Danes*, and into the South Bay; we were followed by three *Hamburgers* and four *Dutch* Ships; as you ſee at N° (6) In our Voyage thither, we ſaw no Ice till we came to *Spitzbergen*, becauſe the wind had blown it another way; we fill'd 65 *Kardels* with the Fat of the befor-mentioned Whale. We ſaw another the ſame night, and flung three Harpoons into him; but they breaking out, we loſt him. We ſaw alſo two Morſes or Sea-horſes upon the Ice; we covered the hole thro' which they were come out, and ſo kill'd them; we ſaw alſo many White-fiſh.

June 22 Fair weather, near the *Reben-field* (*Deer-field*) we ſaw ſix Whales, and got one of them. In the Night the Sun did ſhine very bright.

July 1 We ſaw two Whales ready to couple; we kill'd the Female, but ſhe firſt overturned one of our Boats. The ſame Morning another Whale appear'd near the wide Harbour, but a *Dutch* Ship took him.

July 2 It was ſun-ſhine and pretty warm all day and night long; we caught another Male Whale, and being in haſt, cut the Fat off and flung it into the Fore-caſtle.

July 3 We ſaw more Whales than in all our Voyage, and got the

July 5 ſixth Whale: we ſtruck another before the *Weigat*, but he got looſe again. About Noon, wind South, we got a ſeventh Fiſh, we ſail'd a little thence to the *Muſhle Harbour*, where we anchored.

July 8 The wind turning N. W. with ſnow and rain, the Ice came ſo hard upon us, that we were glad to leave of our Anchors behind;

July 9 we got the eighth Whale, wherewith we fill'd 54 *Kardels*.

July 12 We ſail'd with three Boats into the Ice before *Weigats*, and took an old white Bear with two young ones; they would ſwim in the water like Fiſh; we ſaw alſo abundance of *Sea-horſes*, and kill'd ten of them, and the reſt beat ſo fiercely againſt our Boats, that they beat ſeveral holes in their ſides: We might have got Sea-horſes enough, but were afraid of looſing our Ship, by going too far into the Ice; whenever they happen to looſe their Ships, they diſcharge a Cannon from the Ship, or ſound the Trumpet or Hautboys.

July 13 Wind N. E. by E. the Ice coming apace, we ſail'd from the S. E. Land to the W. and had enough to do to get thro' by the North ſide from the *Bear-haven*; we ſail'd to the *Deer-field*, and thence to the *Vogelſong* (*Birds Song*) as you ſee at N° (7) *July* 14 We turned to the Eaſt with a N. E. wind, in Company of 12 Ships more. It was a Fog mix'd with Sun-ſhine, with a Rain-bow of white and pale yellow'd, curiouſly mix'd.

July 15 A windy, cold, and foggy day, wind N. W. we ſaw many Ships beſet in the Ice in the *Deer* or *Muſhle Bay*. We kept along the Shoar, and at Night entered the South Harbour, mark'd with N° (8). The ſame Night we fetch'd water from the Shoar near the *Cookery* of *Harlingen*, out of a hole, mark'd with N° (9).

July 16 We ſaw the Moon in the Morning, and the 18th being becalm'd, we towed with a Boat into the *Daniſh* Harbour, to gather ſome Herbs among the Rocks. *July* 19 We had fair weather, and ſtormy at Night, which continued the 20th, wind S. W. The 21ſt it rained all day long.

Our Return from *Spitzbergen* to the *Elbe*.

July 22d, we ſaill'd out of *S. Haven*, the Sun N. E. we ſaw abundance of *Fin-fiſhes*, it being a foggy day and ſun ſhiny at Night.

The 24th the Sun did ſhine ſo warm, as to melt the Tar of our Ship before *Magdalens* Bay.

The 25th foggy weather and cold, wind S. W. we came to the *Forelands*.

July 28 We turned from the *Forelands* to the Weſt, the Sun at S. E. and ſail'd S. W. and by W. towards the Sea; afterwards we changed our Courſe S. and ſtood S. E.

July 29, 30 and 31. we ſail'd along the Shoar S. E. by S. The South ſide of the *Foreland* being eight Leagues N. E. from us: then we ſail'd S. W. by S. the wind cold at N. W. we ſaw abundance of *Fin-fiſhes*, but no more Whales.

Aug. 9 A windy day, wind at S. E. we took the Meridian height of the Sun at 66 Deg. 47 Min. and ſaill'd S. W. all along the North ſhoar of the Country.

Aug. 13 A ſtormy and rainy Morning, wind at N. W. but a clear Moon and ſtar-light at Night. In the Morning we ſaw the North ſide of *Hitland*, and ſailing South after the rain, kept our Courſe betwixt *Hitland* and *Fairfole*, firſt S. W. afterwards S. VV. by S. and then S.

Aug. 20 A fair warm day; we ſaw *Hilgeland*, (the *Holy Iſle*) S. E. of us, and ſailing S. E. took in a Pilot, and came the 29th at anchor by the firſt *Buoy* in the *Elbe*; (call'd the *Red Buoy*) In the Afternoon we ſail'd to *Kacks Haven*, where we anchored in a rainy and ſtormy Night.

CHAP. XL.

A Voyage to Spitzbergen; *Part* II. *Containing a Deſcription of* Spitzbergen.

Of the External Appearance of *Spitzbergen*.

THE lowermoſt Parts of theſe Countries call'd *Spitzbergen*, i. e. *Peaked Hills*, are ſituate under 76 Deg. 30 Min. we ſail'd to 80 Deg. beyond which no Ship ventured that year; it being unknown to this day how far this Country extends to the North, tho' by reaſon of the firmneſs of the Ice, it ſeems as if there were Land not far behind it: Thoſe Countries are encloſed with high Hills, or perhaps the whole Country is the ſame, becauſe one ſees many Hills behind one another: However at the *Muſhle Haven* we found the Country ſomewhat more level; and the further you come to the Eaſt, the Ground groweth lower, and you don't ſee the Hills ſo high over one another as before; the Ground is all ſtony.

How the Beaſts came thither.

The Beaſts that are ſeen here, I ſuppoſe to come in the Spring over the Ice, whilſt it ſtands firm, and to go back again when the long Nights begin. Of the Birds we ſhall ſay more anon.

June 18 At our arrival at the *Foreland* of *Spitzbergen*, the Foot of theſe Mountains appear'd like fire at a diſtance (the tops being covered with Fogs) the Snow marbled in various ſhapes, made a glorious Refract in the Air; this fiery appearance is look'd upon as the Forerunner of a Storm.

The Ice and Rivers.

You meet with more or leſs Ice on theſe Coaſts, according as the winds blow, as if it be Eaſt, from *Nova Zembla*; if N. VV. from *Greenland* and the Iſle of *John Mayen*: ſometimes the Coaſt is ſurrounded with Ice all the Summer; which when it is ſet a floating in too great a quantity, the Ships make to the Harbours, Bays, or Rivers; theſe laſt have no freſh water, nor did I ever meet with a Spring here: The Riſe of ſome of theſe Rivers is known, but of others not, by reaſon of the vaſt quantity of Ice and many Rocks underneath the water, but diſcover'd by a violent breaking and foaming of the Sea.

Havens.

You will find the Names of the Havens (as far as I have ſeen) in the Map of *Spitzbergen*; the beſt and ſafeſt among them are the *Safe-Harbour*, and the *South* and *North Bay*; the reſt lying for the moſt part either open to the Sea, or are infeſted with too much Ice and Rocks. In the South or North Bay I have often ſeen 10, 20, and 30 Ships at anchor, as you may ſee at N° (10) and (11).

Moſt of the Birds are ſeen here on or near the Land, eſpecially when they are hatching their Eggs; their Neſts are not made up with far-fetch'd things.

Herbs.

Moſt of the Herbs that grow here, are ſuch as are fit for the curing of the Diſeaſes incident to this Climate; they grow moſt where the water runs from the Hills (and where the North and Eaſt winds leaſt affect them) which always carries a kind of Moſs along with it, which is animented by the Dung of the Birds. Near the *Low Lands* of *Spitzbergen*, we ſaw vaſt numbers of Sea-horſes, but ſcarce any Seals.

Ice Mountains.

At the Foot of the Mountains ſtand Ice Hills, reaching to the Tops of the rocky Mountain; the Cliffs are fill'd with Snow: Theſe Mountains make a ſtrange appearance of Trees, Branches, Leaves, &c. at a diſtance. There are ſeven of theſe ſnow Mountains betwixt the Rocks, of a fine blew colour, with a great many Cracks and Caves in them, hollowed out by the running down of the ſnow water; they are encreaſed continually by the melted Snow and Rain that falls from the Rocks, ſo, that they may be diſcover'd a great way at Sea, and as you ſail under them, a Ship with its Maſts is no more to be compared to them, than a ſmall Houſe to a lofty

Steeple: The Snow appear'd dark from the ſhade of the Skies, and about the middle ſome foggy Clouds appear'd.

The rocky Mountains.

The true Rocks appear of a fiery Colour, but could ſcarce ſee the tops of them, by reaſon of the Clouds; ſome of them are one entire Stone from the top to the bottom, repreſenting in ſhape a decay'd Wall; they have a ſweet ſmell, like our Fields in the Spring, after Rains; ſee No (17) The Stones of theſe Rocks are full of white, red, and yellow Veins like Marble; upon any alteration of the weather, the Stones ſweat, which together with the Rains, tinges the Snow red. At the Foot of the high Rocks lye looſe Rocks, with Caves and Coles of a grey colour, with black Veins gliſtening like Silver Oar. On theſe grow divers ſorts of Herbs, and Moſs in two Months, *viz.* in *June* and *July*. The Birds build their Neſts in the Cracks of the Mountains, tho' they ſeek for their Food in the water; ſome live upon the carrion of Fiſhes, others upon ſmall Fiſhes and Shrimps; as the white Bears here do upon the dead Carcaſſes of the Whales or Men; the Foxes upon Birds and their Eggs; and the Deer upon Herbs and Moſs. Moſt of the high Rocks reach in a cloudy day half ways up into the Clouds: ſee N° (13)

Their ſituation.

We went one Night arm'd with Guns and Lances (for fear of the Bears) upon one of theſe Rocks which look'd black, near the *Engliſh* Haven, which was of ſuch a height, that we could ſcarce diſcern the Long-boats below in the Harbour. The Mountains I took particular notice of here, are ſituated thus; The higheſt extend from the *Fore-land* to the *Muſhle-haven*; after the *Fore-land* follow ſeven Ice Mountains, placed between the rocky Mountains: Theſe laſt are not ſo peaked on the top here, as the two foremoſt Rocks at *Magdalen's-Haven*; then cometh the Haven of the *Hamburghers*, *Magdalen*, the *Engliſh*, the *Daniſh* Harbour, and at laſt the *South-haven*.

And of the Harbours.

Magdalen Harbour.

Magdalen Harbour is encloſed with Rocks in form of a Semi-Circle; on each ſide cloſe to one another, ſtand two high hollow Mountains, with Points and Cracks on the tops like Battlements. In the Valley ſtands an Ice Hill, reaching in ſhape of a Tree with Branches, as high as the top of the Mountain it ſelf.

The South Haven.

In the *South-haven* the Ships ride alſo betwixt the Mountains; on the left as you ſail into it, you ſee a Hill call'd the *Beehive* (from its ſhape) mark'd with N° (14) Adjoining to this is a huge high Mountain, call'd the *Devils Hook* or *Cornet*, and is ſeldom ſeen without thick Fogs, which when the wind blows, darken the Harbour like Smoak: On the very top of it are three white Hills covered with Snow, two of them ſtanding cloſe to one another; you ſee them marked with N° (15). Juſt in the middle of this Harbour lies an Iſle marked with N° (16) called the *Dead-man's Iſle*, becauſe here they bury their dead Men in Coffins, and afterwards lay great heaps of Stones upon them, notwithſtanding which, the white Bears will ſometimes dig them up; for it is obſervable, that dead Carcaſſes will remain entire here, without the leaſt ſigns of Putrefaction, for ten years and longer. There are ſeveral more Iſlands in this Harbour, which by one general name are call'd the *Birds Iſles*, from the great quantity of the Eggs of Mountain-Ducks and *Kirmews* found there.

Schmerenburgh.

The next is call'd *Schmerenburgh*, where formerly the *Dutch* uſed to boil their Train-oyl; ſome of them were left there once for all the Winter, but all periſh'd: ſee N° (17). There were yet remaining ſeveral Houſes like a ſmall Village; and over againſt *Schmerenburgh* likewiſe divers other Houſes, with Chambers and Warehouſes low built at the Foot of a high Mountain; as alſo a Kettle, with Smiths Thongs, and ſome other Inſtruments belonging to it; this they call the *Cookery* of *Harlem*. The place where they bury their dead, was made of ſomething like Earth, and laid level on purpoſe. The adjacent River is what they call the *South Harbour*, where they refit their Ships, where in the Valleys betwixt the Mountains, and in the Clifts of the Ice Hills, they gather vaſt quantities of freſh water from the Snow and Rain. The Shoar is here not very high, but the water deep, and at that time without any Ice; whence I conjecture, that it had been no very hard winter; for tho' the Ice melts much ſooner in ſalt than in freſh water, yet could not the thick Ice have been melted quite away ſo ſoon. We obſerved alſo the Snow to melt at the ſame time on the Mountains and in the Valleys, tho' the former are much colder than it is below, contrary to what I took notice of ſince on the Coaſt of *Spain*, when a N. W. Wind producing very ſevere Rains in the bottom, the adjacent Mountains were on the tops covered with Snow.

The Cookery of Harlem.

Dec. 1672.

The North Harbour.

In the *North Harbour* you ſee a high Mountain, flat at top, call'd the *Birds Song*, becauſe the Birds make a hideous noiſe here; mark'd with N° (18) More Iſlands are ſet down in the Map, as the *Clifted Rock*, &c. The *Rochen-field*, or *Deer-field*, is a low Ground, compoſed, as I was told, of Slates ſet edge ways, and covered with Moſs. Behind lies a Ridge of flattiſh Mountains, and near it runs up a River into the Country, call'd from its ſhape, the *Half-moon-Bay*: On the other ſide are many more Mountains quite flat on the top, with great Cracks fill'd with Snow. Next you come to *Liefde Bay*, which has two Hills ſtanding together, like at *Magdalens Bay*; they are both not unlike one another. Hence we came to the Lower Ground behind the *Muſhle-Harbour*, where the Graſs reached above our Ancles.

Deer-field.

Live Bay.

Muſhle Harbour.

The *Weibegat*, or the *Streights of Hindelopen*, is ſo call'd from the *Weiben*, i. e. *Blowing hard*, becauſe a ſtrong S. W. wind blows continually out of it. The Land on the *Bear-Haven* is covered with red Stones. Behind the *Weibegat* lies the *South-weſt Land*, which is very low, yet has ſome ſmall Hills. The ſeven Iſlands we could not ſee; for no Ship went further, nor do at any time, as far as I could learn; nor dare they venture ſo far to the Eaſt every year. The beſt fiſhing betwixt the Iſle of *John Mayen* and *Spitzbergen*, is in *May* and *June*; but in *July* and *Auguſt*, they go Eaſt beyond *Spitzbergen*; at the latter end, we obſerved many Whales ſwimming to the *Weibegat*. Whether this Haven paſſes thro' the Country or not, is unknown as yet; but this is a different Harbour from the famous *Streights of Weibegats*.

The *Weibegat*.

The South-Weſt Land.

Of the Sea.

The Waves of the Sea here, ſwell by degrees ſlowly, with the continuance of the Wind, till they riſe as high as Mountains, and then breaking themſelves, daſh and foam over the Ship, eſpecially when they are ſhort; but when they move before the wind, they follow one another with a ſucceſſive motion: (ſee K in the Cut D.) For, when the wind changes, the Waves croſs one another, and toſs the Ship, that ſhe is hardly able to live. In a Tempeſt the Froth of the Sea drives like Snow or Duſt upon the Land. Near the Shoar I found the water neither ſo clear nor ſo ſalt as near the Ice; perhaps, by reaſon of the ſhallow bottom.

Motion of the Waves.

They regulate their manner of ſailing according to the Degrees of the Wind: In a freſh Gale they uſe all their Sails; in a ſtorm the two lowermoſt only. The firſt Sail is call'd the *Fock* or *Fore-ſail*, the middlemoſt *Sebumſer* or *Main-ſail*, and the third the *Baſan* or *Mizen-ſail*: In a hard ſtorm they furl the *Fore-ſail*, and make uſe only of the other two; and in a very ſevere Tempeſt, half furl'd up.

How they regulate their ſailing.

In and after a Tempeſt, the Ship is often viſited by Black-birds, Starlings, and other ſmall Birds, which having loſt their way, ſeek for a Refuge in the Ships; but we ſaw no *Lumbs* or other water-Fowl. When great Fiſhes, ſuch as Whales, &c. appear in great numbers, leaping about the Ship, it preſages a ſtorm; ſome call it playing, but I am apt to imagine this violent motion, rather proceeds from ſome pain or other they are afflicted with againſt bad weather. When the Stars appear at Sea, not only of a larger ſize, but alſo more in number than uſual, it prognoſticates great Fogs after the changing of the Froſt, which is followed by tempeſtuous weather. When the Sea ſhines bright, (the Sea-men call it *Burning*) in a dark Night, it is the Forerunner of a South or Weſt wind.

Forerunners of a ſtorm.

Thus much of the *North Sea*; now of that betwixt *Spitzbergen* and *Hitland*, near which we found the Stream running with a rapid motion to the North, and the Waves of this Sea run longer, like in the *Spaniſh Sea* beyond the Channel of *England* and *France*: They riſe as high as Mountains, tho' there be little wind, and run as far as you can well diſcern them, which is followed commonly by a hard Gale. In a ſtorm they rowl after the ſame manner, but with curling and foaming. They are a great deal larger than thoſe of the *North-Sea*, but don't daſh ſo often over the Ship: The Waves of the *North Sea* are ſoon laid after a ſtorm, but theſe continue turbulent for three days; and, tho' it be calm, quote the Ship ſo violently, as to create the Sea-ſickneſs or Vomiting, which by ſome is attributed to the Sea-water, tho' I conceive it to be the effect of the exceſſive agitation of our Bodies, which cauſes an averſion to eating, giddineſs in the Head, inclination to vomiting, and

The Sea betwixt *Spitzbergen* and *Hitland*.

The Sea-Diſtemper.

coſtiveneſs in the Body, with a high tinged Urine. The beſt Remedies againſt it, are the Aromaticks, ſuch as Cinnamon, Cloves, Ginger, Nutmegs, *&c.* chaw'd in the Mouth: To eat and drink plentifully, not to ſleep too much, but keep in the Air, and look into the Wind.

There is almoſt as great a difference in the Swiftneſs and Motion of Ships, as there is in Horſes: A Ship ſwims near a Foot higher at Sea than in freſh water, with the ſame burthen.

How far you may ſee at Sea.

You may diſcern a Ship three or three and a half *German* Leagues in a calm Sea: At a League and a half's diſtance you ſee half the Ship only; at two Leagues you diſcover no more than the uppermoſt Maſt; and at three Leagues only the Flag. But Land and Mountains are diſcover'd at a much greater diſtance at Sea: We ſaw *Spitzbergen* twelve *German* Leagues off, like a black Cloud full of white ſtreaks; as you ſee it mark'd at No (19, 20, 21). Near the Ice of this Sea (where there is no depth for anchoring) the Sea-water is very clear, which changes its colour according to the colour of the Skies. We found by our driving, that among the Ice the Stream did run to the South, tho' at *Muſſle-haven* it ran North. For the reſt, all the Account that can be given of the ebbing and flowing here, is, That after ſtormy weather, the water is higher near the Land than otherwiſe: For, were there any continual ebbing and flowing, the Eggs of the Birds would be ſpoil'd upon the Iſles.

Of the Ice.

In *April* and *May*, the Weſt Ice being broken, drives in the Sea betwixt the Iſle of *John Mayen* to *Spitzbergen*. See at No (24). The Ice of *Spitzbergen* is neither ſo ſmooth, tranſparent, nor cutting, as that of our Country, but much harder, and looks like Loaf-ſugar. Where the Ice is fix'd upon the Sea, there appears a ſnow white brightneſs in the Air, occaſioned by the Reflection of the Snow; but where there are only ſmall Ice-fields, you perceive nothing of that brightneſs. By the daſhing of the Sea againſt the Ice-fields (which are a great deal deeper above than under water) many Figures, as Steeples, Tables, Chappels, *&c.* are occaſioned upon the Surface of them; and this is of a pure blue Vitriol like Colour, whereas that part under water is ſomething paler. The Ships are forced to ſail among theſe leſſer Ice-fields till they are ſtop'd by the great ones; for the catching of a Whale being not unlike hunting, they muſt look for them every where; it often happening that one Ship catches more than they are able to carry, whereas another at half a Leagues diſtance can't ſee one. Every Maſter of the Ship is left at his own liberty, however, to go into the Ice, or not, as he ſees occaſion, for tho' in the Spring, the Whales are in great numbers among the Weſt Ice, yet it being very foggy, dark, and ſtormy in that ſeaſon, and great numbers of ſmall Ice-fields ſwimming up and down the Sea, they are in great danger of looſing the Ship; and the deeper they ſail in among the Ice, the greater Ice-fields they meet with; eſpecially about the Weſt, where there are larger Ice-fields than about *Spitzbergen*, quite white at the top, covered with Snow; as you may ſee No (25 and 26). We ſaw the Prints of the Bears footing, and of the Foxes near the edges of the Ice-fields; and were not a little ſurprized to find the Waves pretty ſmooth betwixt the Ice-fields, tho in ſtormy weather. The greateſt danger there, is, from the different bigneſs of the Ice-fields, which ſwimming accordingly, one faſter than the other, crowd upon one another, and break the Ship betwixt them, as you ſee in the Plate B, marked at A. This the Sea-men endeavour to prevent by Ice-hooks, tho' ſometimes to little purpoſe; the worſt is, that the danger is the ſame in ſtill and tempeſtuous weather; becauſe the Ice drives as well with the ſtream as the wind, as either of them is the moſt prevalent. The dead Carcaſs of a Whale is look'd upon as a good defence, to preſerve the Ship if tied to the ſides of it; and ſome make uſe of the Tails and Fins of this Creature, in the ſame manner, and for the ſame purpoſe, with good ſucceſs.

How they go in ſearch of the Whales.

The ſtriking together of the vaſt Ice Hills at Sea, make a moſt dreadful noiſe; and I have obſerved, that the Ice towards the bottom is very ſpongy, and conſequently melts there in the Summer Seaſon; without which, it muſt before now have reached the bottom of the Sea, tho' never ſo deep. They have a way of faſtning their Ships (when among the Ice) to the greateſt Ice-fields, by the means of great Ice-hooks faſtned to ſtrong Cables: But this is not always without danger; for by the ſtrong motion of the Sea, theſe Ice-fields, tho' never ſo big, break, and grinding againſt one another, break the Ship to pieces.

It was in the Month of *April*, when we came to the 71 Deg. where we met with the firſt Ice, but durſt not venture in it, being too early in the Year. We afterwards, *viz.* in *May*, ſail'd to 77 Deg. 24 Min. into the Ice to the South, where then are the moſt Whales, which running to the Eaſt afterwards, we commonly follow them to *Spitzbergen*. Near to the Land the Ice-fields are not ſo big, as deeper at Sea; becauſe as the Ice can't give way there, they grind and break againſt one another. Beſides, that from the Ice-mountains upon the Shoar, ſometimes rowl into the Sea great pieces of Ice, which are more compact than the reſt; and ſometimes reſemble various ſhapes, as Houſes, Churches, Steeples, Pillars, Tables with Pillars underneath. (See at No 27) Near unto *Muſſle-haven*, ſuch a great piece of Ice drove near our Ship, which reached ſo deep under water, that it took up our Anchor, which lay 15 Fathoms deep. The Ice, as far as it is above water, taſtes like other Ice, but under the water, ſalt like Sea-water. When we came firſt to *Spitzbergen*, the Ice near *Rehenfeld* ſtood yet firm, but in a few days after, was put in motion by the wind. We found at that time, that the Ice reach'd from the other ſide of *Spitzbergen*, and the Ships ſail'd betwixt the Land and the Ice, like in a River; but as ſoon as the Ice is drove thither, the Ships muſt ſeek for refuge into the Harbour, till the wind has blown the Ice thence. I did not ſee many Sea-dogs, but abundance of Sea-horſes, Birds, and Fowl on this Ice. We ſail'd in ſight of the *Seven Iſles*, but could go no further.

Some Obſervations of the Ice.

Of the Air.

They told us, that in *April* and *May*, the hardeſt Froſts happen about 71 Deg. in thoſe Parts; which is the reaſon that they don't ſend their Ships ſo early now as they did formerly. After the third of *May* the Sun ſets no more; for being then at 71 Deg. we could ſee as well by night as by day. The weather is very changeable here in theſe two Months; and if the wind changes, the moſt ſerene Air ſoon becomes foggy; and when the Hills appear fiery, it is from Fogs, which ſoon ſpread themſelves over the Sea.

May 14.

The Air was very bright and clear, yet exceſſive cold: The other three Months *June*, *July*, and *Auguſt*, were very calm. As to the degrees of Cold, the ſame depend in a great meaſure on the Winds: For, when the North and Eaſt wind blow hard, it freezes ſo exceſſively, that you are ſcarce able to keep your ſelf alive; whereas the South and Weſt winds, if ſomewhat conſtant, produce Snow, ſometimes Rains, and moderate Cold. The other winds differ or change by the Clouds; for nothing is more common here, than, that whilſt the wind is S. W. and by S. in one place, at two or three Miles diſtance, it is quite contrary. Skilful Harponiers commend thoſe years for Whale-catching, which have the feweſt foggy and cloudy days. However there are no ſuch ſerene Skies with marbled Clouds to be ſeen at *Spitzbergen*, as with us in the Summer Seaſon, but many dark and cloudy ones. I never obſerved any Thunder-Clouds, nor ever heard of any. The Air always appears white over the Ice, whence we conjecture where the firm or fix'd Ice ſtands. We found the Sun Beams ſo hot before *Weibegats* in *July*, that it melted the Tar between the Seams of the Ship.

There is no remarkable difference of Cold betwixt night and day; but it is not the ſame with the Light, which in the Night-time appears to thoſe that obſerve it attentively, only like a very bright Moon-light; ſo that you may look with the ſame eaſe into the Body of the Sun, as you do upon the Moon, the only thing by which you may diſtinguiſh Night from the day, there being no increaſe of cold or changing of the Compaſs as far as we went. The ſecond of *Auguſt*, in our Voyage homewards, we firſt obſerved the Sun to ſet.

Meteors generated in the Air.

As for the Meteors generated in the Air, here I took notice of a *Rime*, which fell down like ſmall needles of Snow, and covered the Sea, like as if it were ſprinkled with duſt: As theſe Needles encreaſed, they lay croſs one another, and appear'd like a Cobweb: As they are form'd by the cold Air, ſo they encreaſe ſometimes to that degree, that the Sea is cover'd with them, like with a Skin or thin Ice, which has no brackiſh taſte. It happens in clear Sun-ſhine, and very cold weather, and falls down inviſibly like our Dew: If it be a cloudy day, you can't perceive it; but if you look to a ſhady place when the Sun ſhines, it ſparkles like Diamonds, but never ſticks to your Cloaths to wet them.

We obſerve ſomething like theſe ſmall Needles in the *Rime* of our Country, which being a kind of ſmall Snow, viſible both in the Shade and Sun, falls from the Trees like Duſt. In the falling Needles of the North, you

ſee

Of the Plants Birds Beasts &c. of Spitzbergen.

ſee the Bow like the Rain-bow, of two colours, white and a pale yellow; occaſioned by the Reflection in the dark ſhades of the Clouds.

The Sea-bow.

There is another *Phenomenon* (in theſe parts) in the Air, call'd the *Sea-bow*, which is never ſeen but in a bright day, in the Atmoſphere of the Sea-water, which being blown up by the winds, appears like a Fog: It is commonly ſeen before the Ship, and ſometimes behind to the Leeward, over againſt the Sun, in the place where the ſhadow of the Sail falleth: It appears of divers Colours, like the Rain-bows in the Skies.

A Parelion or Weather-gall

In the Clouds near the Sun, alſo ſometimes appears a Light like a *Parelion* or Mock-Sun, call'd *The Weather-gall* by the Sea-men: This appears in the ſhady dark Clouds in the inferiour Region of the Air, where the Sun is repreſented as in a Looking-glaſs: For the Sun having changed the Water-drops into Vapours or Fogs, the Sun repreſents it ſelf thus, and produces theſe Colours diſtinctly, viz. *Blew*, *Yellow*, and *Red*, the three chief Colours of the Bow. I took particular notice of this Phenomenon at *Spitzbergen*, which I found to move about with the Sun both by day and night, and appear'd much bigger in the Morning, Night and Evening, than in the Day-time.

Whirl-winds

Whirl-winds are unknown in this cold Climate, except that ſomething like them proceeds ſometimes from the recoiling of the Winds betwixt the high Mountains. It is further obſervable, that the Sea, and other Waters near *Spitzbergen*, ſend forth certain Vapours, when the cold encreaſes, which turning into Rain or Snow, ſmell like Fogs or ſteaming water. But, if you perceive theſe Vapours to riſe with very little intermiſſion in a Sunſhiny day, without any wind, the cold weather is going to remit: But when the Air is full of theſe Vapours, they diſperſe the Clouds, and continue a great while with a conſtant wind. Theſe Vapours in the Air ſtick to our Cloaths and Hair like ſweat.

Different ſorts of Snow and its generation.

Theſe ſmall vaporous Drops are the ſame out of which the Snow is generated: Firſt you ſee a ſmall drop no bigger than a ſingle Sand, mark'd with N° (28) this being encreaſed by the ſame Fog, becomes a ſix-corner'd Plate, tranſparent as Glaſs, the Fog ſticking like drops to the ſix corners, as N° 29. Then freezing, it ſplits aſunder, and produces the Figure of a Star, like N° (30) which being in time parted one from the other, you ſee a Star with ſix Points, as at N° (31) but ſome wet drops hang ſtill on theſe Points, till at length it is brought by the Froſt to the form of a perfect Star, with ſerrated Points on the ſides, like *Ferne*, as you ſee at N° (32) This is the Formation of the ſnowy Star, which falls in the ſevereſt Froſts, but at laſt looſes its Points, as you ſee at N° (33). Concerning the different ſorts of Snow, that mark'd with N° (34) repreſents the Snow as it falls when it is tolerably cold only, with rain, when it falls like unto ſmall Roſes, Needles, and ſmall Corns. When the cold abates, the Snow falls like Stars, with Points like Ferne-leaves, as in N° (35). If it ſnoweth much, with Fog, it appears as in N° (36). If in exceſſive cold and windy weather, as in N° (37). If the weather be very cold without wind, the Snow falls like Stars, but in cluſters, as being not ſeparated by the wind; like N° (38). In ſtormy and cloudy weather, wind at N. W. there fell a kind of Hail, round and oblong, but full of prickles, and of the ſame bigneſs as mark'd at N° (39). There are divers other ſorts of ſtarry Snows, and ſome of the ſhape of a Heart, but all generated after the before-mentioned manner, by the Eaſt and North winds: But the needly Snow is produced by the Weſt and South winds. I have further obſerved, that when it is exceſſive cold, the North wind generates both ſtarry and other ſorts of Snows, as well in theſe Countries as about *Spitzbergen*.

CHAP. XLI.

A Voyage to Spitzbergen; *Part* III.

Of the Plants of Spitzbergen.

THE Figures of the following Plants were for the moſt part drawn to the life upon the place, whilſt yet freſh, and of their natural ſize, except the *Rock-plant*, with one Leaf, and the Plant like *Horſe-tail*, which were too big to be inſerted thus: Many ſmall Herbs which I had no time to delieneate, I intend to preſent to the World hereafter, when I have made my ſecond Voyage: I omitted alſo the *White-poppy* (the whole Plant being a ſpan long) and the *Red-Sorrel*; of which kind I ſaw one at *Bremen*, at the *Dutch* Gardener's, being of the ſame ſize with that of *Spitzbergen*, but the Leaves of the *Northern Sorrel* were red.

All the Herbs and Moſſes grow here upon the Grit of the Rocks, where the water runs down from the tops, and chiefly on that ſide of the Mountains, where the Eaſt and North winds can't reach them. The Birds dung alſo contributes much to their growth. They come to perfection in a ſhort time; for when we arrived at *Spitzbergen* in *June*, they were ſcarce green, and in *July* moſt of them were in flower, and ſome half their Seeds ripe; whence you may gueſs at the length of the Summer. I will begin this Deſcription of the Plants with thoſe that put forth their Leaves only at and about the Roots, having few or no Leaves on the Stalks: Then thoſe that have pairs of Leaves on their Stalks, or oppoſite ones; afterwards thoſe with three Leaves, and laſtly the imperfect Plants.

Of a Plant with Aloe-*Leaves*.

It is a Herb with thick, prickly and dark green Leaves, like thoſe of the *Aloes*, a brown naked Stalk, half a Finger long, on which hang round Heads of fleſh colour'd Flowers in bunches, ſcarce diſcernable by the Eye, one Flower cloſe above another. See N° (40). One Plant produces ſometimes two Stalks, yet each of them has two Flowers. The Root conſiſts of ſmall Fibers: The Seed I could not delieneate for want of time. We ſaw great plenty of it the 17th of *July*, in a running water behind the *Cookery of Harlem*. I know not whether this be of the kind mentioned by *Caſpar Bauhin*, under the Name of *Limonium Maritimum*, which he ſays has round ſmall and thick Leaves like *Houſeleek*, between which come forth ſmall Stalks, with pale red Flowers; but his Root is long, red, and parted at top, whereas ours is not red, and conſiſts of many Fibres.

In Prodromo to his Amphitheat. L.5. C. 15.

Of ſmall Houſeleek.

This Plant has indented Leaves like thoſe of our Daſies, but are more juicy and thicker, like thoſe of our *Leſſer Houſeleek*: They grow about the Root, and betwixt them a ſmall Stalk of a Finger long, round and hairy, without Leaves, except where it emits another Stalk, at which place it has one Leaf. The Flowers come forth in ſcaley heads (like the Flower of *Stæchas*) are of a brown colour, with eight pointed Leaves, and as many ſmall Chives within, like the Flowers of *Wall-pepper* or *Stone-Crap*: The Seed was not ripe as yet. The Root is thick and ſtrait, with many thick Fibres iſſuing from the ſides of it. It may be call'd the *Small crenated Houſeleek*, with ſcaly heads. We found it the 18th of *July* in the *Daniſh* Harbour: See N° (41).

Of Crowsfoot, *four kinds*:

Some of theſe Plants are repreſented at N° 42, 43, 44 and 45. Theſe four Plants are all *Crowsfeet*, diſtinguiſh'd only by their Leaves.

The firſt and fourth kind

The firſt and fourth at N° (42 and 43) are very like one another in reſpect of their Leaves; of which they have both two ſorts, the undermoſt broad, and not much cut; the uppermoſt ſmaller and deeper carved: Their chief difference is, that the firſt grows not ſo high with many Leaves out of one Root; but the fourth produces one long ſtalk with one ſingle Leaf. This laſt has yellow Flowers, but I don't remember whether the firſt had the ſame. The Flowers of the fourth hath five Leaves, broader at the ends than at the bottom, and grow out of a rough *Perianthium* or Cup, that is ſplit into five alſo. The Flowers of the firſt have ſix ſmall Leaves; the Seed Veſſels are like one another.

The Roots are very different, for the firſt hath many ſmall Fibres, whereas the fourth has a thick and long Root, with ſmall tender Fibres: The Leaves of the firſt burn the Tongue like our *Perſicaria* or *Flea-bane*, yet not quite ſo ſtrong; but thoſe of the fourth don't burn ſo much. I found them both in the *Daniſh* Harbour, the firſt in great quantities: they bear Flowers in *July*.

The ſecond kind.

The ſecond has different Leaves from the two beforementioned; for, tho' the lowermoſt agree with thoſe of the firſt, yet are they not ſo big, and thoſe that grow above the lowermoſt, are deeper cut in two places; ſo that the firſt part of the Leaf ſtands out before not unlike a Tongue; but the two ſides are only a little indented. See N° (44). There is alſo a difference in the Leaves of this Plant, thoſe neareſt to the Flower being ſmaller and deeper cut, and burn the Tongue. The Flower, tho' very ſmall, yet has ſix, and ſometimes ſeven Leaves. The Seed Veſſel is like the two former, only leſs: The Root like that of the firſt, only with more Fibres: The Stalk is alſo ſurrounded with a thick Sheath, like that of the fourth. I found it growing near the firſt in the *Daniſh* Harbour *July* the 16th.

The third kind.

The third is the leaſt of all, with many Leaves, but much leſſer, and not ſo deep cut, tho' with four Inciſions: I did not perceive any difference betwixt the lowermoſt and uppermoſt Leaves: It is mark'd with number (45). The Flower has five white leaves; the Seed Veſſel I could not yet ſee: Its Roots are ſmall Fibres. I found it in the *South-haven* the 16th of *July*: The Leaves are thick and juicy, and burn the Tongue.

In the ſame place I ſaw another little Plant, like to theſe, except that the Leaves were not ſo juicy, and the Flowers of a Purple Colour: I took no Draught of it.

Of Scurvy-graſs.

This *Scurvy-graſs* produces many Leaves from one Root, ſpreading upon the Ground. Out of the middle of them ſprouts forth the Stalk, much lower than in our Country, with a few Leaves underneath the Sprouts. The Flowers have four white Leaves, many growing on the ſame Stalk, one above the other, and as one fades, another ſucceeds in its room: The Seed comes forth in a longiſh Box, whereas ours is produced in a round one. It has a thick, ſtreight and white Root, with ſome ſmall Fibres below. I found a great quantity of it on the Rocks in the *South*, *Engliſh*, and *Daniſh* Harbours, where they were not much expoſed to the Eaſt and North Winds. It ſeeds in *July*, and its Leaves have but little ſharpneſs at *Spitzbergen*; ſo that we did eat it with Sallad, which we could not do with ours. See N° (46). My Figure is like that of (a) *Matthiolus*.

(a) L. 3. c. 35. of his *Germ.* Herb.

Of an Herb like Stone-Crop.

This Plant is without queſtion a kind of *Stone-Crop*, tho' its Leaves are rough or rather hairy, not ſo thick nor juicy, nor biting like ours. Before it comes into the Flower, it appears like that of the *Eſula*; but when full blown, it has a Purple Flower, with five, ſix, and ſometimes nine Leaves: I did not tell the *Stamina* of the Flower, or ever ſaw the Seeds: The Root is very ſmall. We found this Plant on the Low Lands at the *Engliſh-harbour*, and among the Moſſes, *June* the 26. It is mark'd with N° (47).

Of a Snake-weed.

This is a kind of a ſmall *Snake-weed*, not frequently found at *Spitzbergen*: The undermoſt Leaves, tho' bigger than the reſt, are not above the breadth of a Man's Nail, growing ſingly on the Stalk, but not above three of them, beſides the lowermoſt: The nearer the Flower, the ſmaller they are: Not far from the Edges, they have many little Spots anſwering to the Points of the Leaves, wherein the Veins terminate: The Leaves are ſomewhat wrinkled at the Brims. The Root brings forth ſometimes a ſingle and ſometimes a double Stalk, the By-ſtalk being never ſo tall as the Head-ſtalk.

The Flower grows in a cloſe Spike, with many fleſh-colour'd Flowers, but ſo ſmall, that I neglected to tell the Leaves: The Seeds were not ripe. The twiſted Root ſufficiently ſhews it ſelf to be of the *Biſtorta* kind; it is about the thickneſs of a little Finger, with ſmall Fibres, brown without and fleſh-colour'd within, and of an aſtringent taſte. We found this Plant in the *Daniſh*-harbour. My Figure agrees with that given by *Camerarius* (b). It is mark'd with N° (48).

(b) L. 4. c. 3. in *Matthiol.*

Of a Plant like unto Mouſe-ear.

This Plant has rough Leaves like *Mouſe-ear*, by pairs, but ſmooth-edged: The Stalks are ſmooth at their firſt ſprouting forth, but afterwards turn rough as far as the uppermoſt Leaves grow, and are roundiſh at the bottom. At the Extremity of the Stalk, comes forth a white Flower out of its *Perianthium*: I did not count the Leaves nor obſerved the Seeds; but the Root is round and ſmall, with ſlender Fibres: It appears like the hairy or rough *Aſine*, of the third or fourth kind of *Dodoneus*, (c) but that the Leaves of his are cut, and theſe are not. I found it in the *South-harbour*, *July* the 17th: See N° (49).

(c) L. 5. c. 10. of his firſt *Lat.* Herb.

Of an Herb like the Periwinkle.

This Plant has roundiſh Leaves by Pairs on Stalks, creeping upon the Ground: The Leaves are not unlike thoſe of the *Periwinkle*, except that they are ſomething more round, and the largeſt of them bent inward before: The Stalk is knotty and woody.

The Flower ſeems at firſt as if wrap'd up like a Leaf, but afterwards diſcovers it ſelf growing out betwixt the Leaves on the ſame Stalk: I had not the opportunity of obſerving the colour and ſhape of the Flowers (they being not well blown) nor to gather the Seed. The Root is long, ſlender, round, woody and knotty, with ſmall branched Fibres at the bottom: We ſaw it in the *South-bay* behind the *Cookery of Harlem* the 19th of *June*, and *July* the 17th. I am not able to determine whether it be the *Pyrola minima* deſcribed by *Cluſius*, (d) or the *Pſeudochamæ bunus* of the *Hortus Eichſtetenſis*, mentioned by the ſame *Cluſius*, (e) under the name of *Aoronymos Coluteâ fl.* and by *Camerarius*, under the name of *Anonymos Pervincâ fol.* See N° (50).

(d) L. 5. c. 20. *Plant. exot.*

(e) At c. 72.

Of an Herb like the Strawberry.

This Plant has three cut-Leaves at the Extremity of the Stalks, like the *Strawberry*; the Flower is alſo like it, ſometimes with four, but generally with five Leaves: The Stalks are round and rough, and ſo are the Leaves. On the Stalks you ſee two Leaves oppoſite to one another, of a different Figure and Bigneſs; one reſembling a Hand, the other a Finger. The Flower is yellow, compoſed of roundiſh Leaves, but I did not take notice of how many. The Root is round and thick, with ſmall Fibres, a little ſcaly at the top: Its taſte is aſtringent like *Tormentil*. In all the Herbals I found none more like it than that call'd by *Lobelius*, (a) *Fragaria Sylveſtris minime Veſca ſive Sterilis*; tho' the Leaves of ours are cut deeper, and the Flower of his is whiter. See N° (51).

(a) L. 17. c. 70. in his *Iſer* [illegible] *Herba*.

Of the Rock-Plant.

This is the ſame Plant call'd *Wier* by the *Dutch*, and *Fucus* in *Latin*. The Stalk is broad and flat like a Leaf, out of which ſprout many Leaves no leſs broad, like Twigs out of a Tree: At the top of the Stalks grow ſometimes five, ſometimes ſeven yellow longuiſh Leaves (as the Herb is alſo) tranſparent like Glew. Cloſe to theſe you ſee other longuiſh Leaves, hollow, and, as it were, blown up with wind, with many leſſer Bladders round about, cloſe to one another: Whether theſe contain any Seed or not, I am not able to conjecture; but the Leaves have nothing but wind in them: For when I preſs'd them together, they gave a little bounce.

If we may credit the Sea-men, the ſmall Sea-ſnails are progenerated out of the Seeds of this Plant, but whether it be ſo or not, I will not determine; perhaps it may be after the ſame manner, as we ſee on the Leaves in our Country, Bladders fill'd with the Seeds of Caterpillars; but this is only gueſs. The Root grows out of the Rocks (whence it has got its name) with ſome Fibres, and is ſometimes round. I found it in great plenty in the *South-Bay* near the *Cookery of Harlem*; in the *Muſhle-haven* at *Spitzbergen*; and afterwards at *Cales* in *Spain*.

After it is dried, it is of a dark-brown Colour, but gives again as ſoon as the South or Weſt wind blows; but when the Wind turns Eaſt or North, it becomes dry and ſtiff again.

The only Figure reſembling this, which I have met with, is in the *Iſerduniſh Herbal*, (b) under the Name of *Alga Marina Platyceros poroſa*; but this is more ſpongy and white. See N° (52).

(b) L. 39 c. 50.

The Great rockplant.

The Leaves of the *Greatrockplant*, reſemble in ſhape a Man's Tongue, curled on both ſides, but plain before: Thro' the middle of it run two black ſtroaks to the Stalk; and on the out-ſide of them many black Specks, within the black Nerves, on each ſide, to the middlemoſt plain Stroke: The Plant is curled, except in the middle, where it is ſmooth quite to the Stalk; and at the beginning of the Leaf next to the Stalk, are two white Veins or Nerves reaching to the middle of the Leaf, bending towards one another in ſuch a manner, that, if they were quite cloſed, they would make a perfect oval. The Leaf of it is above ſix Foot long, and yellow: The Stalk is of the ſame colour, much longer, round and ſmooth, thick near the Root, and ſmells like Muſhels. The Root has many Branches, ſubdivided into others, which ſtick cloſe to the Rocks under water: It grows ſometimes many Fathoms deep in the Sea. We often uſed to pull up a great quantity of it with our Anchors, and together with it a certain hairy Plant growing near the former, reſembling a Horſe's Tail, with ſome ſmall knobs like nitty Hair, or ſuch as are ſplit at the ends. The whole Plant was browner than the other, the Roots being entangled with it. We found ſome red Worms wrap'd up in this laſt, not unlike Caterpillars, with many Legs. See theſe at N° (53). This Plant being like the *Dodder*, it may be call'd *Water* or *Rock-Silk*: It reſembles moſt the Draught given by (a) *Anthony Donat*, of a certain Herb growing about *Venice*, call'd *Muſcus argenteus Marinus ſimilis Plumæ*; but this is not white, but yellow, or rather brown. Both theſe Plants we found in great quantities in the *South-harbour*, *July* 20th, and 21ſt.

Rock-ſilk.

(a) L. 2.

Sea-graſs.

The *Engliſh-harbour* produces another ſort of a *Sea-plant*, which I call'd *Sea-graſs*: It grows likewiſe under water, and is above eight Foot long, with yellow Leaves (like Glew) three Fingers broad; tranſparent, and terminating in a blunt point: They grow from the Root round about it, ſmooth-edg'd at the top, without prickles, but plain and even. See N° (54).

CHAP. XLII.

The Voyage to Spitzbergen, *Part* IV.

Of the Animals of Spitzbergen.

THE Animals of *Spitzbergen* are either ſuch as have two, or four Legs; beſides which, they have certain Creatures living only in the Water, without Legs, inſtead whereof, they have Fins jointed like Legs underneath the Skin; yet ſome are amphibious Creatures, and have either two or four Legs. We will begin with the Birds, whereof the moſt live in the Water, and few upon the Land or Ice.

Of Birds with divided Feet.

The Snite.

I obſerved here but one Land-bird, *viz.* the *Snite*, call'd alſo the *Strand-runner* (as keeping near the *Strand*) is no bigger than a *Lark*, with a thin narrow-corner'd Bill; are ſo broad and roundiſh, with croſs notches like thoſe of our Snites, which are alſo larger than the Snites of *Spitzbergen*, but otherwiſe like one another both in ſhape and colour. The Bill both above and below is four ſquare, about two Inches long, and of a browniſh colour: The Head is round, and no thicker than the Neck. They have three divided Claws before, and a ſhort one behind, with ſhort Legs. They are of the colour of a Lark, but ſhew like a Duck's Neck in Sunſhiny weather. Their Food is Worms and Shrimps. We ſhot ſeveral of them in *South-harbour* near the *Cookery of Harlem*; they did not taſte in the leaſt after Fiſh. See Tab. K. N° (55).

The Snow-bird.

The *Snow-bird* is of the bigneſs of a *Sparrow*, and the ſhape of a *Linnet*, as alſo of the ſame colour. Its Bill is ſhort, and pointed; the Head no thicker than the Neck: The Legs are alſo like the Linnet's, with three divided Fore-claws, and long crooked Nails; the hinder Claw ſomething ſhorter, with a long-bended Spur: The Legs are ſhort, and of a grey colour. Their Backs and Wings are grey; but from the Head down over the Belly to the Tail, they are as white as Snow: The young ones are grey all over. They uſed to come into our Ship in whole Flocks, near the Iſle of *John Mayen*, and were ſo tame, that you might take them with your Hands. They are only ſeen upon the Ice, whence they are call'd *Snow-birds*. We kept ſome of them in a Cage, but they ſoon died. Thoſe we eat were very lean, but of no ill taſte. See N° (56).

The Ice-bird.

I got ſight of a moſt curious *Ice-bird* in the *Engliſh-harbour*, of the bigneſs of a ſmall Pigeon, and ſhining like Gold; but being afraid we ſhould ſpoil his curious Feathers by ſhooting it ſo near at hand, it eſcaped us, and ſo I could not delineate it, this being the only I ſaw of the kind.

Of the Broad-footed Birds.

Of theſe there are divers ſorts at *Spitzbergen*; ſome with pointed, other with thick and broad Bills. Among the thick-bill'd ones, ſome have them parted as the *Mallemucken* (or *Fooliſh Gnats*), others undivided, as the *Parrets* (as they call them). Another difference is in the Heels of theſe Birds; for ſome of them have Heels, as the *Mountain-duck*, *Kirmew*, and *Mallemucken*: Others have none, as the *Burgermaſter*, *Rathſher*, *Struntjayer*, *Kutyegehf*, *Parret*, *Lumbe*, *Pigeon*, and the *Red-gooſe*. No Water ſticks to the Feathers of theſe Birds, no more than to the Swans and other Water-fowl. Some are alſo Birds of Prey, others not. There is alſo a great difference in their flying: the *Pigeon* flies like a *Partridge*; the *Lumbe* and *Red-gooſe* like a *Swallow*; the *Mallemucken*, *Rathſher*, and *Struntjayer*, like the *Metes*; and the *Burgermaſter* like the *Stork*.

Birds of prey.

The Birds of Prey are, the *Burgermaſter*, *Rathſher*, *Struntjayer*, *Kutyeghef*, and *Mallemucken*; and their Fleſh is different accordingly: The Fleſh of the Birds of Prey is ſcarce eatable, unleſs you hang them up for ſome days by their Legs, that the Air may conſume the Train-oil; without which, it would make you vomit.

The *Pigeons*, *Parrets*, *Red-geeſe*, and *Ducks*, are pretty fleſhy, and the *Rotjes*, *Kirmews*, and young *Lumbs*, eat tolerably well, boil'd or fry'd, provided the Fat be taken away, which otherwiſe would turn your Stomach. All theſe Birds, except the *Struntjayer*, *Kirmew*, and *Mountain-duck*, build their Neſts upon the Rocks, tho' ſome higher than others. About the latter end of *June* and the beginning of *July* (their hatching-time) they flock together in ſuch vaſt numbers, that when they fly up, they darken the Sky like a Cloud: But the *Kirmews* *Mountain-ducks*, and the *Struntjayers*, make their Neſts in the low Grounds of the little Iſles, where we uſed to take up vaſt quantities of Eggs.

How they build their Neſts.

The *Mountain-duck* builds his Neſt of the Feathers of his own Belly, mix'd with ſome Moſs: But theſe Feathers are not the *Edder Down*, brought us from *Iſland*; for theſe are taken from a large Bird call'd *Edder*, a Pound of which, when cleanſed from the Moſs, is ſold at a Crown *per* Pound: But the Down of theſe Northern *Mountain-ducks*, the Sea-men uſed to be put into their Pillows and Straw-ſacks, which might be worth conſiderably, if they were well cleanſed. The *Kirmews* as well as the *Rotjas*, lay their Eggs among the Moſs: The Neſts of the other Birds being too high among the Rocks, we could not come at them. All theſe Birds fly directly to their own Neſts, let it be never ſo dark. As to the Names of the Birds, I have inſerted them, juſt as the Sea-men have given them formerly. Some of theſe Birds, as *Lumbs*, *Struntjayers*, *Mallemucken*, *Kirmews*, and the *Mews* call'd *Kutjegehf*, I have alſo ſeen on the Coaſt of *England*, *Scotland*, and *Ireland*, as alſo in the *Spaniſh-Sea*, and the two laſt even upon the *Elbe*, the River of *Hamburgh*.

The *Rathſher*.

The *Rathſher* (or Alderman) is a thin-bill'd Bird, with three Claws, being ſo call'd from his ſtately and handſome aſpect, but is leſs than the Bird call'd the *Burgermaſter*.

This Bird has a ſharp and thin Bill, and three Claws join'd by a black Skin, without any Spur or Claw behind: Its Legs are ſhort and black, and ſo are the Eyes. It is ſo white, that you may even diſtinguiſh it beyond the Snow: Its Tail is indifferently long, and very broad, like a Lady's Fan: It cries lower than the little *Kirmew*, and ſpreads its Wings and Tail in flying, like the *Struntjayer* or *Crow*. It does not much care to ſwim in the water as the other Birds do here, tho' it is very fond of Fiſh. I have ſeen them feed upon the Sea-horſes dung upon the Ice, upon whoſe Body they will reſt, whilſt alive. They fly alone, except when they flock together in great numbers about a Prey. I did delineate them at *Spitzbergen*, *July* the 10th, and they were ſo tame, that inſtead of ſhooting, we could have knock'd them down with our Guns, N° (56).

The *Pigeon*.

The *Pigeon*, or rather *Pigeon-diver*, is a beautiful Bird, of the bigneſs of a Duck, with a thin ſharp-pointed Bill, about two Inches long, red and hollow within, the upper Bill being a little crooked at the end. It has a ſhort Tail, and ſhort red Legs, with three red Toes, and crooked Claws. Some of theſe Birds are black all over, but ſome about the Wings and in the middle, are py'd with black, and are altogether white underneath the Wings. Their Tongue is red and hollow, and they cry like young Pigeons, whence they have got their name, they having nothing elſe like them: In their Crops I found Shrimps and ſmall Land-ſtones. Their flight is not very high, at moſt like the Partridges, and generally by Pares, or elſe alone: They can keep a conſiderable time under water, eſpecially if they are purſued or ſhot. Their Fleſh is not ill to eat, if fry'd in Butter, after the Fat is taken away. I ſhot the firſt on the Ice, *May* the 23d, and afterwards at *Spitzbergen*, where they are more frequent. See N° (58).

The *Lumb*.

The *Lumb* reſembles in its Bill the *Diving-pigeon*, except that it is more crooked and ſtronger. Its Feet are black, with three Toes, and as many black Claws; the Legs are alſo black and ſhort. Its cry is almoſt like a Raven, bigger than the *Diving-pigeon*, about the ſize of a midling Duck: I was told that they feed alſo upon ſmall freſh River-fiſh. The old ones carry their young ones from the Rocks to the Water, where they teach them to ſwim; and are ſo fond of them, that they will ſwim conſtantly about them, and defend them againſt the Inſults of the *Burgermaſters*. They are not eaſy to be ſhot; for ſo ſoon as they ſee fire, they get away, or under water. They fly together in Flocks, with pointed Wings like Swallows, and of a ſwift motion. The young *Lumbs* are not eaſily diſtinguiſh'd from the old ones, unleſs you take exact notice of their Bills, the upperpart whereof turns beſide the undermoſt part, at the Point, and the undermoſt beſide the uppermoſt: This is commonly done in the 15th, 16th, or 20th year of their age. The old ones are very fleſhy, but dry and tough, and therefore ſcarce eatable, unleſs you boil them well, and after you have taken away the Fat, fry them in Butter. I ſaw thouſands of them on the South and Weſt ſides of the Mountains (where the Herbs grow) near the *Daniſh-harbour*; but did not meet with ſo many near St. *Magdalens-haven*, where I drew my Figure, *July* the 25th. I met with ſome of them afterwards in the *Spaniſh-Sea*, and the North Sea near *Heggigeland*. See N° (59).

The *Mew* call'd *Kutyegelf*.

This is a kind of handſome *Mew*, call'd *Kutyegelf*, from its cry: Its Bill is bent ſomething like that of the *Burgermaſter*, with a ſmall knob on the undermoſt part of the Bill. His black Eyes are ſurrounded with a red circle, like the *Burgermaſter*; his three Claws are join'd with a black Skin: The Legs are of the ſame colour, and ſhort, the Tail long and broad like a Fan. He is as white as Snow on the Belly, but grey on the Back and Wings, the Points whereof are black. His bigneſs is the ſame as other *Mews*, but ſomewhat leſs than the *Struntjayer*. His Food is the Fat of the Whales, which the Seamen tie to their Hooks for a bait, and ſo catch not only theſe, but moſt other Birds of Prey: he never dives, but flies with ſmall Wings: He is hunted by the *Struntjayer* (or *Dunghunter*) till he dungs, which the *Struntjayer* eats: I have been frequently an Eye-witneſs of this: This which I delineated, was taken at the *South-haven*. I took notice, that this Bird, as well as all the others in thoſe parts, ſwim upon the Water, holding up their Heads againſt the Wind, let it blow never ſo hard: This they do, that their Feathers may not be opened and entangled, and conſequently they faulter in their flight. This Bird has but little meat upon him: I have ſeen ſome of them both in the *Spaniſh* and in the *North-Sea*, but ſomewhat different from theſe. See N° (60).

The *Burgermaſter*.

The *Burgermaſter* (or Major) has got its name from its bigneſs (being almoſt equal to a Stork) before all the other Birds of *Spitzbergen*, He has a crooked, thick, narrow, and yellow Bill, the undermoſt ſomewhat knobby at the Extremity, more than the *Kutyegehf*, with long Noſtrils, and a red Circle about his Eyes: His Legs are not quite ſo long as the Stork's, and grey, as are his three Claws: He has a broad and white Tail like a Fan: The Wings and Back are of a plale colour; the firſt tip'd with white, and ſo is the whole Body. They build their Neſts high among the Cliffs of the Rocks, beyond any body's reach, but will flock in great numbers to a dead Whale to feed upon his Fat, where we uſed to ſhoot them. His cry is like the Raven's, and his flight like a Stork; he feeds upon young *Lumbs* and the Fat of Whales, as alſo the *Sea-horſe*'s dung. He commonly flies alone, except when they meet at their Prey: They love to reſt on the water, but ſeldom dive. The *Mallemucken* (whilſt they are feeding upon the dead Whale) lie quietly down before the *Burgermaſter*, rather than to leave their Meal, who bites them in the Neck, which they don't regard, by reaſon of the thickneſs of their Skin; we ſhot one *July* the 10th, before the *Weibegat*. You ſee him at N° (61).

The *Rotges*.

The *Rotges* is a diving Bird, with a crooked, ſhort, thick, and black Bill, ſhort Legs of the ſame colour, and three Claws and black Nails, join'd by a black Skin. Some are pied with black on their Wings, like the *Diving Pigeon*; their Feathers are like Hair on a thick Skin, and their Tails very ſhort: For the reſt, they reſemble both in ſhape and flight the *Swallows*, and fly in flocks; they walk wabbling from one ſide to another, and cry, *Rottet*, *tet*, *tet*, *tet*, *tet*, firſt high, and lower by degrees, whence they have got their name. As they have a ſhrill Voice, ſo they make a moſt hideous noiſe, tho' moſt of the other Birds of *Spitzbergen* are not inferiour to them, except that they cry lower. The *Rotges* are ſomewhat bigger than Starlings; build for the moſt part their Neſts in the Cliffs of the Rocks, and ſome on the Mountains among the Moſs. Their Food is a certain grey Worm like Craw-fiſh (delineated hereafter) as alſo red Shrimps or Prawns. The firſt we got *May* the 29th, on the Ice, and afterwards many more at *Spitzbergen*. They afford very good Food, and the beſt, next to the *Strand-runner*, being both fleſhy and fat; we eat them boil'd and roaſted. See N° (62).

The *Struntjager*.

The *Struntjager* (*Dung-hunter*) has a thick black Bill, ſomewhat crooked, and blunt before. His Legs are not very long, and his three Claws join'd with a black Skin. The Tail is like a Fan, with one Feather ſtanding out before the reſt: The top of his Head is black, and ſo are his Eyes: About his Neck he is adorn'd with a dark-yellow Ring, his Wings and Back brown, but underneath the belly white. He is ſomething larger than the *Kutyegelf*, whom he hunts in the Air, flying ſometimes above, ſometimes below her, till ſhe caſts her Dung, which he catches before it falls into the Water, (whence he has got his Name) and, as I ſuppoſe, ſerves him inſtead of drink, his ordinary Food being the Fat of the Whale. His Neſt he builds not very high, and walks upright like the *Burgermaſter* and *Ratſher*: His Fleſh is no more eatable than that of the other Birds of Prey: He cries *I. Ja*, or *Je han*, with a ſhril Voice. I ſhot him *July* the 11th, near the *Deer-haven* (or *Rehenfeld*) at *Spitzbergen*, and ſaw another of them on the back of *Scotland*, being otherwiſe a rare Bird, that commonly flies alone, not unlike a Crow, but his Wings are more pointed at the end. See N° (63).

The *Diving-Parret.* This Bird, commonly call'd the *Parret*, having a peculiar Bill, among all the other web-footed Birds, has got the name of a *Parret*, tho' his Bill is not like that of a true *Parret*, being broad, and full of ſmall ſtreaks of divers colours, *viz.* red. white, and the broad part black: Both the upper and undermoſt are pointed; the uppermoſt Arch red, with a thin bended Hook on the upper-Bills; the undermoſt Arch is yellowiſh, which towards the end downwards, is cut off ſloping: Both the upper and under part is three Fingers broad, and three long: On the upper Bill he has four arched and oblong pitted holes, and as many on the lower, tho' the furthermoſt is not quite ſo plain: Theſe holes on both Bills, make together a Half-Moon, as do the elevated parts betwixt them: For, by theſe holes are as many raiſed parts, the uppermoſt being as broad as the three furthermoſt ones, together; and has underneath on each ſide, an oblong hole, which doubtleſs are the Noſtrils; but the undermoſt on the under-Bill, is about a Straw's breadth broader; the upper broad part is blackiſh, and ſometimes blew.

On this broad part of the upper-Bill, that is thus raiſed, is towards the Eye an oblong piece of a white *Cartilage* full of holes, whereon you ſee towards the inner part of the Mouth a certain Nerve, which reaching to the under part, there ends, and gives motion to the opening and ſhutting of the Bill. His Legs are ſhort and red, with three Claws join'd with a red Skin, and three ſtrong Nails: He has a wabbling Gate. The Eyes are ſurrounded with a red Circle, above which, ſtands upright a little Horn, and underneath the Eyes is another ſmall oblong black horn croſt over: The Head is black as far as to the Horn, but the Cheeks white, with a black Ring about the Neck: The Back and Wings are of the ſame colour, but the Belly white. They fly either ſingly or by Pairs, with pointed Wings like *Lumbs*. They can keep a great while under water, and feed upon Shrimps, ſmall Fiſh, Worms, Sea-ſpiders, and Star-fiſh. This Bird is fleſhier than the *Diving-pigeon*, which affords very good Food: I never ſaw any of them among the Ice. This, whereof I have given you the Draught, I ſhot at *Schmerenbergh*, near *Spitzbergen*, *June* the 20th, and got ſeveral more afterwards. See N° (64).

Of the Web-footed Birds with four Claws.

We will now proceed to the web-footed Birds with four Claws, of which I met with three ſorts about *Spitzbergen*, viz. the *Mountain-duck*, the *Kirmew*, and *Mallemucken*.

The *Moun-tain-duck.* The *Mountain-duck* is rather a wild Gooſe than a kind of a Duck, being of the bigneſs of a middle-ſized Gooſe, and like her about the Bill: It is a beautiful Bird, with fine ſpotted Feathers; For the reſt, they dive under water as our Ducks do: The Drake is pied with black and white, but the Duck of the colour of our Partridges; and the Tail bobb'd like that of an ordinary Duck: The hindermoſt Claw is ſhort and broad, with a ſhort Nail: I found nothing in their Gizzards but Sand-ſtones: They fly in Flocks, and if they eſpy any Body, ſtretch out their Necks. Their Neſts they make of the Feathers of their Bellies mix'd with Moſs, upon the low Iſlands.

We found two, three and four Eggs in a Neſt, ſome whereof were rotten, but the reſt afforded good Food, being pale-green, ſomething bigger than our Duck-eggs: The Fleſh of theſe Birds is excellently good, if you throw away the Fat, which taſtes like Oil. That which I have delineated here, we ſhot in the *South-haven* at *Spitzbergen*, *June* the 18th. See N° (65).

The Kirmew. The *Kirmew* has a thin ſharp-pointed Bill, as red as Blood: Its long Wings and Feathers in the Tail, makes it ſhew very big; tho' without them it is no bigger than a Sparrow. It has pointed Wings, and a Tail longer than a Swallow: It is call'd the *Kirmew* from its Crys, which is *Kir, Kir*: Both the Claws and Skin that join them, are as red as Blood, and the Nails on the four Claws black, the hindermoſt being the leaſt. The Legs are alſo red, and ſhort; the top of the Head black, but the ſides white, the reſt of the Body of an Aſh-colour: The Wings and Tail white underneath, and one ſide of the Feathers of the Wings black. Theſe different Colours, together with the red Legs, Feet, and Bill, render this Bird very beautiful to the Eye: Its Feathers are hairy; it flies moſt ſingly, unleſs it be near their Neſts, whither they flock in vaſt numbers; theſe are made of Moſs. Both the Neſts and Eggs are of an Aſh colour, but the laſt have black Specks, and are of the bigneſs of a Pigeon's Egg; I ate ſome of them, and they taſted like Lap-wings Eggs: The Yolk is very red, and the White blewiſh; they are ſharp pointed at one end. It is a kind of a Hawk, that feeds upon ſmall grey Worms and Shrimps. I did not taſte its Fleſh, becauſe we got but one, which was ſhot quite to pieces: The Feathers of theſe Birds at *Spitzbergen*, are much finer than thoſe of our Country, which are grey. That delineated here, was ſhot *June* the 20th, at the *Birds-ſong* near *Spitzbergen*. See N° (66).

The Malle-mucke. The *Mallemucke* has a Bill ſeverally divided: The uppermoſt has ſmall longiſh Noſtrils next to the Head; and underneath them grows out as it was a new Bill, riſing up crooked, and into a ſharp point. The under part of the Bill is compos'd of four pieces, two whereof meet in a point downwards, exactly with the point of the upper Bill; the other two gape upwards. The Claws and Skin betwixt them is grey, as well as the hindermoſt, which is ſmaller than the reſt: The Tail is broad, and the Wings longiſh like the *Kirmew*. Some are grey all over, ſome only on the Back and Wings, but the Head and Belly white. It flies like a *Great Mew*; it does not much care for diving, flies ſingly, has but ſmall Wings, and wabbles a good while before it can raiſe it ſelf from the Ground. As they feed upon the Fat of the Whale, ſo they follow him in great numbers, eſpecially after he is wounded, where they follow the Track of the Blood in the Water, by which means the Whale is often diſcover'd.

It has got the name of *Mallemucke* from its ſuffering it ſelf to be kill'd without ſtirring; for *Mall* ſignifies as much as fooliſh or ſilly, and *Mucke* a Gnat: It is a very devouring Bird, and will eat till it can ſtand no longer: It is the firſt and moſt common Bird you ſee in *Greenland*; their cry, is, at a diſtance like the Frogs: It has the leaſt Meat of any Bird of Prey I ever ſaw; and what it has of it, is very tough and ſtrong; ſo that if they are to be eaten, you muſt hang them up for ſometime by their Legs; and afterwards lay them in freſh water before you fry them. It builds its Neſt high into the Mountains, but not ſo high as the *Burgermaſter*. They are frequently ſeen all over in the *North-Sea*: This was delineated among the Ice *June* the firſt. See N° (67).

Of ſome other Birds not delineated here.

Beſides theſe before-mentioned Birds, I ſaw a certain kind of Geeſe, call'd *Red Geeſe*, with long Legs, and flying in Flocks: Theſe are alſo frequently ſeen in *Ruſſia*, *Norway*, and *Jutland*.

I ſaw another handſome Bird (call'd *John of Ghent*) of the bigneſs of a Stork, and of the ſame ſhape: It is a kind of a Hawk, pied white and black, very ſharp-ſighted: The Brains of this Bird are highly valued in theſe Northern Parts, but for what, I am not able to tell. They are ſeen every where in the *North-Sea*, eſpecially where they catch Herrings: I have alſo ſeen them in the *Spaniſh Sea*. Theſe as well as all the other Birds of *Spitzbergen*, come hither at certain times, abide here as long as the Sun ſhines, and afterwards return in great flocks whence they came before: They reſt both in the Water and upon the Land; but which way thoſe Birds that have divided Claws, perform their Voyage over Sea (as the *Ratiſher*, the *Snite*, the *Snow-bird*) I am not able to tell.

Of the Four-Leg'd Creatures.

The Deer. The Deer of *Spitzbergen* is not unlike a Hart, with cloven Feet, and Horns not unlike unto an Elke, and of a greyiſh Colour like our Deer: It has three or four Branches on each ſide about two Inches broad, and a Foot long, with long Ears and a ſhort Tail: They run away at the firſt ſight of a Man, but as ſoon as you ſtop, they ſtand alſo, and then you muſt fire at them: They are every where about *Spitzbergen*, but eſpecially near the Harbour, call'd the *Rehenfeld* (or *Deer-field*) and upon the Fore-land of *Muſcle-haven*. Their Meat is very good Food, but at our firſt arrival they were very lean, which makes me imagine that they remain here all the Winter long. See N° (68).

The Fox. There is but little difference betwixt the Foxes of our Country and thoſe of *Spitzbergen*, except that the laſt have a black Head and a white Body: They live upon Birds and Eggs. They will not go into the Water, tho' never ſo ſtraitly purſued. See N° (69).

The White Bear. The Bears of *Spitzbergen* are of a quite different ſhape from thoſe of our Country, being more like Dogs, with a long Head and Neck, and the barking of Dogs; beſides, that they are not ſo bulky, and much ſwifter than other Bears. They dreſs their Skins at *Spitzbergen* in the following manner: They heat Saw-duſt, and tread the Skins in it, which ſucking up the Fat, renders the Skin dry: They have long and ſoft Hair. The Noſe and Mouth is black; the Fat of their Feet is a good Remedy againſt Rhumatick Pains, and a good Sudorifick, and eaſes Women in travel.

Their Fleſh is whitiſh like that of Sheep, but I did not care to taſte it: Their Milk is alſo very white and fat; and they have a Head ſo thick and firm, that tho' we ſtruck ſome of them with Cudgels, enough to knock down a Bullock, yet they did not matter it, and we were forced to kill them with our Launces. They ſwim from one Ice-field to another, and will dive for a conſiderable time: Sometimes they are alſo ſeen upon the Land. The young ones are diſtinguiſh'd from the old ones, by nothing but their Teeth, which in the firſt are hollow within, where thoſe of the old ones are ſolid and cloſe. Theſe Teeth burnt to powder, and given inwardly, diſſolves the coagulated Blood. The young ones keep generally ſo cloſe to the old ones, that they would rather be kill'd than leave them. Their Food is the Carcaſſes of Whales or Men, the laſt of which they will dig out of their Burying places: They will alſo run often at a living Man, if they think they can maſter him: They eat alſo Birds and Eggs. That repreſented at N° (70), we caught *July* the 13. How the Foxes and Bears live in the Winter-time, I am not able to tell.

The Sea-dog or Seals. The *Seale* (call'd the *Sea-dog*, and *Rubbe* by the *Germans*) is an amphibious Creature, with five Claws on its Feet, join'd together with a thick Skin, like a Gooſe: The Head is not unlike that of a Dog, with crop'd Ears; tho' ſome have rounder, longer, and leaner Heads than others. About the Mouth it has ſomething like a Beard, and Hair on the Noſe and Eye-lids, but ſeldom above four: It has hollow, large and bright Eyes: The Skin is cover'd with a ſhort Hair of divers colours, with yellow, red, grey, black and white ſpots, like a Tyger: Its Teeth reſemble thoſe of Dogs, and are ſo ſharp, that they can bite thro' a Stick of the thickneſs of a Man's Arm: The Claws are alſo very ſharp, black, and long, but the Tail is but ſlender. The old ones bark like hoarſe Dogs, but the young ones mew like Cats: They are all lamiſh behind; notwithſtanding which, they make ſhift to climb up on the Ice, where they love to repoſe themſelves and ſleep, when the Sun ſhines; eſpecially on the Weſtern ſhoar, where we ſaw enough to have ſerved for loading for ſeveral Ships: And there are many Inſtances, that for want of Whales, ſome Ships have made their loading with them. The worſt is, that they are very troubleſome to flea, and are ſeldom very fat at the time when the Ships arrive on this Coaſt.

It is a general rule, that where the *Sea-dogs* are ſeen in great numbers, but few Whales appear; becauſe the firſt devour all the ſmall Fiſh, Worms, *&c*, before them. Thoſe we opened had nothing but whitiſh Worms of a Finger's length in their Stomacks.

How they are taken. When we have a mind to take them, we get upon one of the Ice-fields, where they lie, and making a great noiſe, ſo aſtoniſh them, that they pull up their Necks as long as Grey-hounds, and in the fright, gives us an opportunity to ſtrike them with Poles and Half-pikes upon their Noſes, till they are half dead. Some of them recover themſelves, and bite at the Men, running after very ſwiftly, notwithſtanding their lameneſs; for they move like the Eel to the Water, where they hide themſelves by diving, and leaving a yellow Dung behind them, which they ſquirt at thoſe that purſue them, (as the Hern does) and ſtink abominably.

We took one of their young ones alive, but were forced to kill it, becauſe it would not eat. The biggeſt are from five to eight Foot long: That which you ſee delineated here, was eight Foot long: The Fat lies three or four Inches thick betwixt the Skin and Fleſh: The Fat affords the beſt Train-Oil, and the Fleſh is very black: It is very full of Blood, the Lungs, Liver, and Heart are exceſſive large: Theſe we lay in Water, and afterwards boil them, but they taſte very rank. It has alſo abundance of ſmall Guts, without any Fat within: The Parts deſtined for Generation, conſiſt of one Bone, of a Span long, like that of a Dog; ſome were ſcarce a Finger long, but all covered with Sinews. The Cryſtal of their Eyes is not much bigger than a good Pea, ſometimes white, ſometimes of a yellowiſh or red colour: If you have a mind to keep them, you muſt let them dry by degrees, and ſo lay them in a Linnen Rag, in a moiſt place, elſe they will crack to pieces. They are accounted very fierce whilſt they are coupling, when no body dares to approach them upon the Ice, but they kill them out of their Long-boat: They are ſo tenacious of Life, that one of eight Foot long, after it had received prodigious blows on its Head and Noſe, nay, after it was flead, and part of the Fat taken off, it took hold with its Teeth, of a ſhort Pike, ſo that we were forced to run a Launce thro' its Heart and Liver, whence iſſued forth as much Blood as if it had been from an Ox. At another time I run one of theſe Creatures thro' with my Sword upon the Ice, in ſeveral places, notwithſtanding which, it got away from me into the Water. See N° (71).

The Sea-horſe or Morſe. The *Sea-horſes* are near of the ſame ſhape as the *Seals*, with five Claws both on their fore and hinder-feet, but ſomewhat ſhorter Nails; but their bulk is much larger, being of the ſize of a Bullock: Their Heads are alſo rounder and thicker than thoſe of the Seals. Their Skin, eſpecially about the Neck, is very thick, and covered with a ſhort reddiſh or grey Hair, and ſometimes of a Mouſe Colour. About their Joints you ſee certain ſtreaks or ſmall Pleats, like the Lines in a Man's Hand. They have two large Teeth in their upper-Jaw-bone, of one, two, and more Foot long, extending below their under Lips: thoſe of the young ones are not ſo big. Their two great Teeth.

Some of the old ones have only one, perhaps becauſe they have loſt one in fighting, or by chance; for I obſerved ſome of them hollow and rotten; whereas otherwiſe they are cloſe, firm, and heavy, (the Root only excepted) and then they are valued beyond Ivory, being both whiter and dearer; and are uſed to make Knive-hafts Bones of: In *Jutland* they make Buttons out of their leſſer Teeth for their Cloaths. Their Mouth is broad like that of an Ox; have ſeveral Briſtles both above and underneath, hollow within of the bigneſs of a Straw; of theſe the Seamen twiſt Rings againſt the Cramp. Above the uppermoſt Briſtles they have two Semicircular Noſtrils, out of which they ſpout Water like unto a Whale, but with leſs noiſe and force. The Eyes are at a conſiderable diſtance above the Noſtrils, of a red colour all over, like Blood, with Eye-lids like other four leg'd Beaſts. Their Ears ſtand above, but very near to the Eye-lids, and are not unlike thoſe of the *Seals*. Their Tongue is no leſs than a Neat's Tongue, and if eaten ſoon after it is boil'd, eats tolerably well; but if kept two or three days, turns rank: As they have a very thick Neck, they generally turn their Eyes about inſtead of their Head. Their Fleſh is like Hogs Fleſh, but affords no conſiderable quantity of Fat: Sometimes we did eat the Heart and Liver for want of better food.

Their Yards. Their Yards are of a hard Bone, about two foot long, thick at the bottom, and leſs towards the end, ſomewhat bent in the middle: The ſide towards the Belly is flat, but the exteriour ſide round, and covered all over with Sinews: Theſe they alſo uſe to make Knife Hafts of. Food. I judge that they feed both upon Herbs and Fiſhes; the firſt I conclude from their Dung, which is like Horſe-dung; and for the other, they are often ſeen to play with the Whales Skins upon the Water, after they have been thrown away: The Bird call'd the *Burgermaſter*, eats the Sea-horſe Dung. They are moſt ſeen about *Spitzbergen*, lie upon the Ice about the 12th of *July*, like the *Seals*, and roar moſt dreadfully; and will dive under water like the Seals: They will ſleep both upon the Ice and the Surface of the Water, ſo, that we ſometimes miſtook them for dead ones.

Their fierceneſs. They are very fierce Creatures, and will not leave one another till the laſt gaſp, when attack'd by the Sea-men, ſome dive under the Water, and with their Teeth cut holes in the Long-boat, whilſt the reſt endeavour to get into it, by erecting themſelves with half the Body out of the Water. One of our Har-

pooniers

poniers had been likely to have been drawn into the Water, had not the Waſt-band of his Breeches, in which one of theſe Creatures had faſtened his Tuſks, broke. They don't give over as long as any of them are alive; and, if by reaſon of their vaſt multitude, the Boat is forced to fly, they purſue it till they quite looſe ſight of it: This happened to us *July* the 12th.

How they are taken.

When they lie upon the Ice in great numbers, the Sea-men hear them roar, and ſo make towards them with the Boat; as ſoon as the Sea-horſe ſee them approach, the firſt gives warning to the next, by ſtriking him with his Tooth, and ſo it goes on ſucceſſively, till they all take the alarm, and then they riſe, roar and look terribly, make up to the brink of the Ice-field, and throw themſelves into the Sea with ſuch fierceneſs, that, unleſs they keep off aloof in the Boat, till moſt of them are jump'd into the Water, they will leap into the Boat and over-ſet her. Their chiefeſt ſtrength lies in their Heads and Necks, their Skin thereabouts being thicker and more ſolid than that of an Elk. The Harponier commonly takes the opportunity of ſtriking or darting the Harpoon-Iron at a Sea-horſe, when he is throwing himſelf from the Ice into the Sea, or is diving with his Head under Water, his Skin being then extendded, whereas, whilſt he lies aſleep, it is looſe and wrinkled, and the Harpoon will not ſo eaſily enter the Skin. After he is ſtruck with the Harpoon, he runs on for ſome time, till he is tired, when the Sea-men by drawing the Line, bring him to the Boat, where he bites, and makes all imaginable reſiſtance, till he is fully diſpatch'd with Lances. After the Sea-horſe is kill'd, they take only the Head into the Ship, they being taken only for the Head's ſake, tho' ſcarce one in a hundred has two very good Teeth, ſome being only ſmall, others having but one, and many more none at all.

The Harpoon.

The Harpon, and Launce or Javelin for a Sea-horſe, are not above a Span and a half long, and an Inch thick, but the wooden Staff thereof is ſix Foot long. The Harpoon for the Whale is not ſtrong enough to pierce the Skin of this Creature. We ſaw once ſo vaſt a multitude of them lying upon an Ice-field, that the weight of them had preſs'd down the Ice even with the Surface of the Water; but after they had thrown themſelves off into the Sea, it was riſen ſo high above the Sea, that we could ſcarce get upon it out of our Boat. I had it from creditable Hands, ſuch as uſed the *Greenland*-Trade, that at a certain time, when they could meet with no Whales, they rowed with their Boat to the *Muſs Iſle*, where meeting with vaſt multitudes of Sea-horſes, they kill'd a great many of them, but their number encreaſing faſter than they could kill them, they made a kind of Fence of the dead Sea-horſes laid upon one another, leaving only a place of the bigneſs of a Gate, for the reſt to come in one after another; and by this Stratagem kill'd a ſufficient number to make a good Voyage of it: For ſome Years theſe Teeth were much deerer than now. The Figure of this Beaſt is delineated at N° (72).

Of the Teſtaceous Fiſhes.

Of Teſtaceous Fiſh, we met only with two ſorts, viz. *Crawfiſh* and the *Starfiſh*: Of the firſt we obſerved four different ſorts, *viz.* the *Sea-Spider*, (as the *French* call it) the *Red Prawn*, the *Small Prawn* or *Shrimp*, and the *Whale-Louſe*.

The Sea-Spider.

The *Sea-Crawfiſh* or *Sea-Spider*, has ſix Feet and two Claws, but no Tail, being in ſhape not unlike a Lobſter, of a dark-brown Colour, prickly on the Back, and hairy all over the Body. I have ſeen ſome of them in my Voyage to *Spain*, (which I intend to publiſh in time) but they differ from thoſe of *Spitzbergen* in their bigneſs and head, thoſe Northern ones having Heads like Lobſters, whereas the other reſemble with Head and Tail, the ſhape of a Lute. I did not taſte thoſe of *Spitzbergen*, neither had I time to delineate them, tho' we caught ſome *June* the 19th, in the *Engliſh Harbour*. Afterwards paſſing thro' the North-Sea, not far from *England*, we bought a large *Tarbut* from a *Hilge-land* Fiſher-man, which had in its Stomach one of thoſe *Crawfiſhes*, of two ſpans long.

Comm. Prawn.

There is ſcarce any difference betwixt our *Prawns* and thoſe of *Spitzbergen*, except that theſe laſt are red before they are boil'd. The Head is broad, conſiſting of two parts, with divers Horns: The Eyes ſtand out at the end of the Head, like thoſe of the Crawfiſhes: The Scale of the Back is fitted to the Body like a Back-piece of Armour, a little bended behind the Head, in the Neck; and behind it is a Prickle. After that, follow ſix Plates, with as many black Spots at the Brims, lying exactly round, one upon another: The Tail is compoſed of five Parts, which when expanded, are not unlike a Bird's Tail. This *Shrimp* or *Prawn* has two Claws before, reſembling at the Extremities, the Phangs of a Tooth-drawer, and 18 Legs, the ſhorteſt being next to the Claws: The firſt eight Legs conſiſt of four Joints each, the uppermoſt being the longeſt, and the undermoſt the ſhorteſt, and not hairy: Among the ten hindermoſt Legs, the furthermoſt are the longeſt, and the uppermoſt Joint thicker and ſhorter than the lowermoſt; they have but two Joints, the Feet whereof are a little bent, and hairy: And the hindermoſt and undermoſt Joints come out two Shoots, but on the reſt but one. We ſaw them about the bigneſs as they are delineated here; they afford Food for the Birds.

Of the leſſer Prawn.

We met alſo in this Voyage, with another ſort of *Shrimps*, with Heads like our Flies, and two Horns on the fore part of the Head: Their Scales were like thoſe of the *Hog-lice*, with a round Back, broad downwards, and twelve Legs: They have three Legs on each ſide of the foremoſt Scales, and after you have told four Scales more, you will find three Legs more on each ſide. They are of the bigneſs as you ſee them delineated at Tab. N° (73), and are the beſt Food of the Birds in thoſe parts. I ſaw them in vaſt multitudes in the *Daniſh Harbour*, underneath the Stones in the Water; and *July* the eighth, in the *Muſſle Haven*: I obſerved them alſo in the Seed of the Whales, that ſwam upon the Water.

The Whale-Louſe.

The Whale-louſe is a Teſtaceous Animal, having no reſemblance to our Lice, except in the Head, which has four Horns, two ſhort ones ſtanding out before, with two Knobs like Kettle-drum-ſticks; and two bended Horns very ſharp before: Its Scales are as hard as thoſe of the Shrimps. It has two Eyes, but only one Noſtril; and the Neck is covered only with a Skin like that betwixt the Scales of a Lobſter. The Back is covered with ſix Plates, the foremoſt of which is like a Weaver's Shuttle; and the Feet belonging to it ſhaped like a Scythe; toothed like a Saw on the inſide, and ſharp pointed at the Extremities. On each ſide of the ſecond and third Plate, are four Legs on each ſide, which ſerve inſtead of Oars, with a ſhort Joint below, wherein theſe Oars are moved: When they feed upon the *Whales*, they lay them croſs one anothtr upon their Backs: The ſix hindermoſt Legs were like thoſe of the Crawfiſh: Each Leg has three Joints, the foremoſt being crooked like a Half Moon, and ſo ſharp pointed, that they ſtick ſo cloſe to the Whales Skin, as not to be removed alive thence by any art, unleſs you cut a piece of the Skin of the Whale out with them: The Tail is very ſhort. They commonly fix betwixt the Whales Fins, on his *Genitalia*, on the Lips, and ſuch other parts of the Body where he cannot eaſily rub them off; and ſo bite him moſt vehemently. Theſe Lice are not found on all the Whales, and (as I was credibly informed) more in warm than cold weather. The Figure you ſee at N° (74), I delineated at the *Muſkle-Harbour*.

The Starfiſh.

Of *Star-fiſhes*, I obſerved no more than two ſorts in this Voyage.

The firſt ſort.

The firſt hath five Points like Legs, being of a far different ſhape from thoſe I have ſeen in the *North-Spaniſh* and *Mediterranean Seas*. It is of a dark-red colour: On the upper ſide, or plain of its Body, it has five double rows of pointed Knobs, and between each of theſe double rows, another ſingle row of the ſame Knobs; which fifteen rows, make together a Star of five outward bended points. For the reſt, it appears like the Back of a Spider; but on the other ſide, it has in the middle a five-corner'd plain Star, which being its Mouth, it opens and draws it together like a Purſe: This is ſurrounded with little black ſpecks in rows, making the ſhape of a Star; and about the middle Star, (or the Mouth) is one broader, reſembling the Flower of the Crowsfoot. From the middle Star proceed five Legs, without Knobs at the beginning, but afterwards, juſt behind the Flower-like Star, begin to have ſome on both ſides to their Extremities. Theſe Knobs are ſoftiſh like the Skin of an Egg: Its Legs are ſcaly, three Inches long, broader at the beginning where they have Knobs, and growing narrower towards the end. Betwixt the Scales on both ſides the Knobs, come out commonly three or four together like Warts: Theſe Knobs when it ſwims, are ſpread as the Birds do their Feathers when they are going to fly. See N° (75).

The ſecond ſort.

We ſaw here another ſort of fine Star-fiſh, which from its reſemblance to the Branches of Coral, ought rather to be call'd the Coral-fiſh, being of a bright red Colour: The Body has ten corners; and on the upper ſide a Star, with as many Rays; each of theſe are broad at the end, but narrower where they meet, like a Pigeon's Tail, and feel rough. The under part of the Body is very curious, having in the middle a Star or Mouth, with ſix Points: All about it, it is ſoft to the place where the Legs begin; and betwixt the beginning of theſe Legs are ſoft Concavities. The Legs begin where they are largeſt, having in the middle a kind of hollowneſs like a Gutter, which feels ſoft: On the Brim they are covered with Scales, lying one over another: Underneath the Scales are twiſted, and have in the middle forwards, ſmall black Streaks, and are jointed like the Plates of the Crawfiſh. Beſides, where the Legs proceed from the Body, they ſpread themſelves into double Twigs, hollow in the middle, as far as to the place, where they are ſeperated into divers other Branches, growing ſlenderer by degrees towards the Extremities: The undermoſt ſmall Branches are ſcaly all round, but not twiſted, and ſharp pointed like the Spiders Feet, whence ſome Sea-men have given them the name of Sea-Spiders. In ſwimming they draw their Legs together, but can't live long out of the Water, and their Body breaks to pieces ſoon after they are dead. When they are a dying, they bend their Legs towards the Mouth. I got one of both ſorts *July* the fifth, before the *Weibegat*, where they ſtuck alive to our Harpoon Line: I had one of the laſt ſort afterwards, of a ſpan long from the end of one Foot to the other, but that repreſented at N° (76), was leſs: The biggeſt are always the handſomeſt. *Rondeletius* (a) has delineated one of the ſame kind, but as his is black, and without Plates, it can't be the ſame Species.

(a) Lib. de piſc.

Of the Finned Fiſhes.

Some Finned Fiſhes I alſo met withal in this Voyage; ſome whereof propagate by ſhooting of their Row, others by bringing forth their young ones alive. We will begin with the firſt kind, and among them with the Mackril.

The Mackrel.

This Fiſh is in ſhape like a Herring, but with a large Fin on his Back, and a ſmall one a little below it; ſomething lower is another broad one, but not ſo large as the firſt; and ſtill lower you ſee five ſmall ones more of the ſame bigneſs, and at an equal diſtance from one another, beſides a very little one near the Tail; ſo that on his Back he has two great Fins and ſeven little ones. On each ſide near unto the Fins, is another Fin, and another like the former on each ſide underneath the Belly: And towards the Tail, one more of the ſame bigneſs with the third on the Back. Below this are five more of an equal bigneſs, and below theſe ſtill a leſs one; ſo that thoſe of the lower part of the Belly, are equal to thoſe of the lower part of the Back. On the Cover of his Gills, and under the Eyes, are a great many ſmall holes. This Fiſh has moſt glorious Colours when alive; for the uppermoſt part of his Back is blew, and ſomewhat lower greeniſh, and the Belly white as Silver, as are alſo his Fins: Beſides, that from his Back down the ſides, run down certain black marbled Streaks; his Eyes are alſo black: This I am now deſcribing to you, was catch'd in the North-Sea. In the Year 1673, *June* the 27th, we catch'd ſome of them near the Iſle of *Kilda* on the back of *Scotland*, which were half blind: For, in the Winter, when they run far to the North, a Skin grows over their Eyes, which falls off again in the Summer: In the Summer Seaſon I have ſeen them alſo on the *Spaniſh* Coaſt. We uſed to catch them with a Line and Hook, baited with a piece of red Cloth, or a piece of Herring.

Is ſometimes blind.

The Dragon-fiſh.

The *Dragon-fiſh* has two Fins on his Back, the foremoſt compoſed of Strings two Inches high above the Back; the hindmoſt is not quite ſo broad, but extends a great way along the Back, but without Strings. Inſtead of Gills he has two holes in the Neck, on each ſide of which, are two ſhort Fins, and under theſe a broad one on each ſide: Underneath the Belly is a long narrow Fin reaching to the Tail. His Head is longiſh and bony, with a riſing Noſe, and a Tail of an Inch broad. The whole Body is long, round and thin, in ſhape not unlike a young Hay or Shark, of a bright Silver colour. They are taken betwixt *Spitzbergen* and the *Bears-Iſle*: Our Cook got one by chance near *Hitland*, in drawing up his Bucket out of the Water, with ſome other Fiſhes of the length of a Joint of of a Finger, in ſhape not unlike our Herrings. The Sea-men ſay there are divers other ſorts of ſuch Fiſh in the deep holes betwixt the Mountains, near the *South-haven*.

The Dolphin.

The Dolphins are ſeen in great numbers jumping at Sea before a Storm: Their Heads are like that of the *Place*, and the Mouth full of ſmall ſharp Teeth. On the middle of the Back is a Fin, hollowed out towards the Tail like a Half Moon; and two more Fins on the Belly, like thoſe of the Whale: All theſe Fins are bony, join'd together with a thin Skin, fleſhy all over, and covered with a thick Skin. The Tail is broad, like that of a Whale, but not cut in, and crooked like a Sickle: The Eyes are ſmall and round. They are black, except on the Belly, where they are white, and five or ſix Foot long. I did not think fit to delineate it, the ſame being ſo frequently done before by others.

The Butskopf or Flounder's Head.

The *Butskopf*'s Head is blunt at the Extremity; its Beak of an equal bigneſs all along, whereas the Dolphins is thick behind, and pointed at the end. The Fins are very like thoſe of the Dolphin, but his Tail more like the Whale's; and he has one Spout-hole above the Neck: Some of them are ſixteen, eighteen, and twenty Foot long. Their Head and Back is brown, but the Belly white; they will follow the Ship for a great while (contrary to what moſt other Fiſh do) and ſwim againſt the Wind as well as the Whales, Finfiſh, Dolphins, &c. You ſee theſe ſort of Fiſh ſometimes tumbling in the Sea, which, tho' by ſome called playing, I believe to proceed from a certain pain they are ſubject to at that time, it having been obſerved, that the ſame ceaſes as ſoon as the Eaſt Wind changes to another Corner. We ſaw another ſort of *Butskopf*, with quite blunt Heads, and a large Fin ſtanding up three times higher than the others: They were of the ſame bulk, but ſomething more inclining to a dark-brown. They were neither Swordfiſh, nor what we call Tumblers, ſuch as are often ſeen between the *Hilgeland*, and the River *Elbe*.

The Whiteſiſh.

This is a ſort of Whitefiſh, different from ours, being of the ſize of a large *Butskopf*, not unlike a Whale, without Fins on his Back, but two on his Belly, as I was told, by thoſe that have caught them. His Tail is alſo like the *Whale*'s, and he has an Hoffel on his Head, like that Animal, and a ſpout-hole near the Neck: Its Colour is pale-yellow. When the Sea-men ſee plenty of them, they preſage themſelves good ſucceſs in catching of *Whales*, becauſe they live upon the ſame Food. I ſaw a vaſt multitude of them *June* the 19th.

The Unicorn.

I had not the good fortune to meet with the ſight of the Fiſh call'd the *Unicorn* in this Voyage; tho' ſometimes they appear in good numbers. I was told that he has no Fin on his Back, but has a *Spout-hole* on the Neck, which does not agree with the Cuts I have ſeen of them. They ſwim in Shoals, holding their Teeth out of the Water: In ſhape they are not unlike the *Seals*; but the undermoſt Fins and the Tail reſemble the *Whale*'s. Some are black, others dappled grey, but white on the Belly: They are ſixteen, eighteen, or twenty Foot long, and ſwim with ſuch ſwiftneſs, as not to be caught without much difficulty.

The Sword-fiſh.

The *Sawfiſh* or *Swordfiſh*, has got its name from a broad Bone fix'd to its Noſe, with many bony-pointed-pegs or Teeth on both ſides, like a Saw or Comb. On its Back are two Fins; the furthermoſt like the *Butskopf*'s; the hindermoſt has towards the Tail, a hollowneſs like a Sickle. Underneath the Belly are four Fins, two on each ſide; thoſe towards the Head are the broadeſt and longeſt; but the lowermoſt,

The *Dolphin.*

The *Butskopf* or Flounder's Head.

The *Whale-fish.*

The *Unicorn*

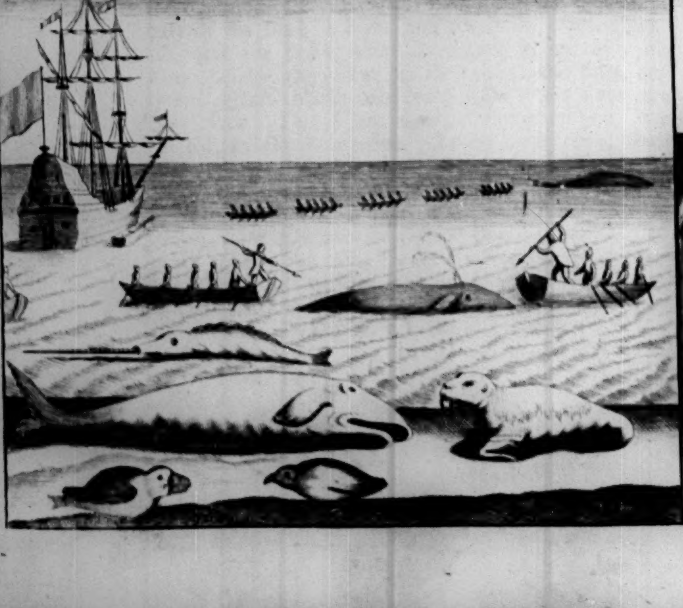
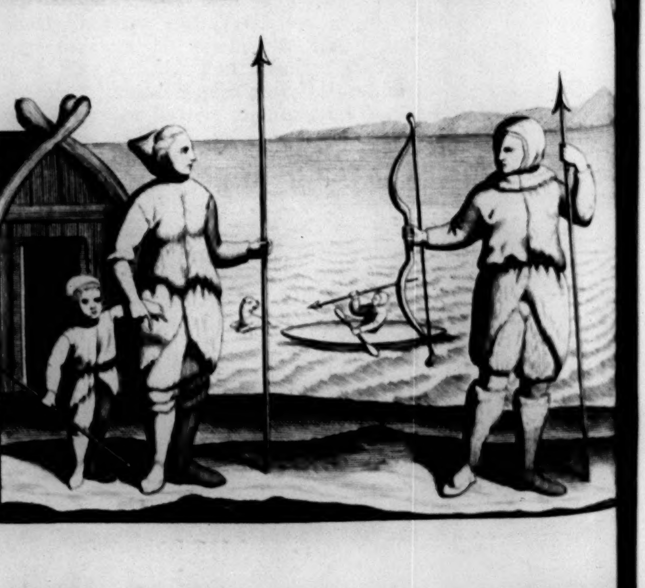
The Whale fiſhing & killing of Morſes



The Habits of the Gronelanders



which ſtand directly oppoſite to the uppermoſt Fins of the Back, are both ſhorter and narrower. The Tail is not cut or divided, but reſembles a piece of board, on which the Diers ſtretch their Stockings, being pointed behind and underneath, and thinner towards the lower Fin of the Back: Its Shape from the Head to the Tail reſembles a Man's Arm ſtretch'd out naked: The Noſtrils are longuiſh; the Eyes ſtand high out of the Head, with a Mouth directly underneath them. They are from two to twenty Foot long.

Their Enmity to the Whale.

This Fiſh is a profeſs'd Enemy of the *Whale*: they get about him in great numbers, and don't ceaſe to aſſault him till they have kill'd him, and then eat his Tongue only, leaving the reſt to the Seamen, who take up the *Whale*; which, if they ſhould do before, they fright away the *Sword-fiſh*.

The Shark or Hay.

Of the *Shark* or *Hay* there are divers ſorts: Thoſe we ſaw had two Fins on the Back, the foremoſt whereof is like to the uppermoſt of the *But*'s Head; but the lowermoſt of an equal breadth all over, but hollowed out like a Sickle: Underneath the Belly are ſix Fins; The two foremoſt are the longeſt, of the ſhape of a Tongue; the two middlemoſt a little broader than thoſe near the Tail, and of the ſame ſhape; and the two laſt by the Tail, of an equal breadth from the top to bottom, but a little ſhorter than the middle ones. One half part of the Tail is like that of the *Swordfiſh*, but ſplit below; and the other part reſembles in ſhape the Leaf of a *Lilly*. They have long Noſes and Mouths like the *Swordfiſh*, full of very ſharp Teeth, three upper and three under rows, one by the other: The Eyes are longuiſh and very clear, ſtanding out more before than behind. They have five Gills on each ſide like the *Swordfiſh*: Their Skin is hard, thick, and rough, inclining to a grey: They are long, round, and thin; thickeſt towards the Head, and from one to three Fathom in Length. They are very voracious, and will not only bite great pieces out of the Whale, but alſo devour a Man if they can lay hold of him, being very eager after Man's Fleſh. The Fleſh of their Back, if hung up for three or four days in the Air, and afterwards boil'd or roaſted, eats tolerably well. In *Spain* they ſell theſe Fiſh for good Meat, but the little ones are the beſt. When they have a mind to catch them, the Sea-men faſten a large Iron Hook to a ſtrong Iron Chain, and having baited it with a piece of Fleſh, let it hang down into the Sea, and ſo catch this greedy Fiſh.

Of the Whale.

The *Whale*, properly ſo call'd, brought by our Ships from *Spitzbergen*, differs from other Whales both in his Fins and Mouth, which has no Teeth, but in lieu thereof, certain long, black, broad, and hairy Flakes, jagged like Hairs. From the *Finfiſh* he differs in his Fins: for, whereas the *Finfiſh* has a great Fin on his Back, the *Whale* has none there, but only two behind his Eyes, covered with a thick black Skin, but delicately marbled with Veins both yellow and white, as you ſee the Veins in ſome Woods. When theſe Fins are cut up, you diſcover underneath the thick Skin, certain Bones reſembling a Man's Hand, with expanded Fingers, and betwixt them ſtiff Sinews, out of which you may cut pieces of the bigneſs of a Man's Hand, which if ſqueezed together, and thrown againſt the Ground, will rebound very high, like the Balls made of the Sinews of Sturgeon, and ſome other Creatures. The *Whale* having no other Fins, theſe ſerve him inſtead of Oars.

His Tail lies Horizontal, like that of the *Finfiſh*, *Butskopf*, &c. and is three, three and a half, and four Fathoms broad.

His Head.

The Head makes up a third part of the whole Fiſh; tho' ſome have bigger Heads than others. Some Hairs grow on the upper and under Lips, which are quite plain, bended almoſt like an S. and enter the Eyes before the two Fins. Upon the uppermoſt Lip are black, or rather dark-brown Streaks, as crooked as the Lips: Theſe are both ſmooth, and quite black, round like the quarter of a Circle: when ever they draw them together, they lock into one another: Nay, on the under Lip is a certain Concavity, unto which the upper Lip is ſo exactly adapted, as a Sheath is to the Knife. I am of opinion, that thro' this he draws in the Water, which he afterwards blows out again.

The Whale-bone.

Within, on the uppermoſt Lip, lies the *Whale-bone*, of a brown, black, and yellow Colour, with ſtreaks of different colours, like the Bones of the *Finfiſh*. The *Whale-bones* of the young ones are blew or blewiſh. In one of the Cuts you ſee the *Whale-bone*, N° (77); but in the other Cut you don't ſee it, his Mouth being ſhut up. The *Whale-bone* within the Mouth is all hairy, like Horſe-hair (as you ſee alſo in the *Finfiſhes*) and hanging down on both ſides all about his Tongue. In ſome *Whales* the *Whale-bone* is bended like a Cimetar; in others like unto a Half Moon. The ſmalleſt *Whale-bone* is before in the Mouth, and behind towards the Throat; the longeſt and biggeſt in the middle, being ſometimes of two or three Men's length. whereby you may gueſs at the Bulk of the whole Fiſh. The *Whale-bone* lies in a flat row one piece by the other, ſomewhat bended and towards the Lips like a Half-Moon. On each ſide are 250 Pieces, which makes 500 in all, beſides the ſmall *Whale-bone* which grows underneath the Root, where the other *Whale-bone* is broadeſt, moſt of which is not cut out, as being very narrow where the two Lips meet. This ſmall *Whale-bone* does not grow bigger, but is of an equal bigneſs from one end to the other. The great *Whale-bone* is broadeſt at the top, where it is join'd to the upper Lip, over-grown with white and hard Sinews near the Root; ſo that betwixt two pieces of *Whale-bone* you may put in your Hand. Theſe Sinews look like boil'd *Sea-cats* or *Blackfiſh* (call'd *Cattula la Mar* by the *Spaniards*) ſmell pleaſantly enough whilſt freſh, but ſtink horribly when rotten; they are not tough, and of no ill taſte. The *Whale-bone* is underneath narrow and pointed, and covered with Hairs, but without hollow like a Gutter, and jointed over one another like the Plates of *Craw-fiſh*, or Tiles of a Houſe. I am of opinion that theſe Hairs might be employed, as the *Spaniards* do with the wild *Sempervive Aloes* (call'd by them *Savila*) which they dreſs like Flax or Hemp, and make Packthreads and Stuffs out of them.

Where and how it grows.

His Mouth and Tongue.

The bottom of the Mouth of the *Whale* is generally white, and ſo is the Tongue, but edged with black ſpots: It is very large, and ty'd cloſe to the undermoſt Chap. Its Subſtance is a ſoft ſpongy Fat, which being very ſoft, and conſequently very difficult to cut, is commonly thrown away, tho' otherwiſe it would afford ſix or ſeven Barrels of Train Oil. On his Head he has a Bump or Knob before the Eyes and Fins: On the top of it is on each ſide a Spout-hole, directly oppoſite to one another, bended like an S, thro' which he blows the Water with ſuch violence (like the Wind in a Cave) that you may hear it at a League's diſtance; but when he is wounded, he forces it out with ſuch a fierceneſs, that it roars like the Wind in a Tempeſt. Behind this Knob his Head is ſomething more bended in, than that of the *Finfiſh*; neither is it round at the top, but flattiſh, and ſloping down to the under Lip, which is broader than the *Whale* in any part of his Body, tho' before and behind it is ſomewhat narrower: In ſhort, the whole Fiſh reſembles in ſhape a Shoe-maker's Laſte, if you look upon it from beneath.

His Eyes and Ears.

The Eyes, which are betwixt the Knob and the Fins, are not much bigger than thoſe of an Ox, with Eye-lids and Hair like Men's Eyes. The Cryſtal of the Eyes (which does not exceed the bigneſs of a Pea) is clear, white and tranſparent, and yellowiſh in ſome: Theſe Eyes are placed as low as the Extremity of the upper Lip. Some ſhew certain bones, which they ſay lie very deep in the Whale's Head, and pretend they are his Ears: Concerning theſe, I can affirm nothing; but this is certain, that when the Whale ſpouts out the Water, he can't hear, and therefore is eaſieſt to be ſtruck then.

Their colour.

Moſt of them are red on the Back and Belly; the Mane of them are white underneath the Belly, and ſome alſo coal black: Others are marbled on the Back and Tail. Among the black ones, ſome approach to the colour of a Tench. One of our Harponiers told me, He caught once a Whale at *Spitzbergen*, that was white all over. Half white ones I have ſeen ſeveral, and among the reſt, once a beautiful Female, marbled all over with black and yellow; but they looſe the beauty of their Colours when the Skin is dry'd by the Sun, or otherwiſe. They are as ſlippery as an Eel, but their Fleſh being very ſoft, you may ſtand upon them ſecure enough. The outward Skin is as thin as Parchment, full of large Pores, which is eaſily pull'd off after the Whale has over-heated himſelf; or the Skin is otherwiſe dry'd by the Sun, but ſmells ſtrong of Train Oil.

Their Members of Generation.

The Yard of the Whale is a ſtrong Sinew, of ſix, ſeven, or eight Foot long, according to the bigneſs of the Animal: Where it is fixed, it has a double Skin, lying juſt like a Knife in a Sheath. The Members of Generation in the Female, are abſolutely like thoſe of the four-leg'd Beaſts; only that on the ſides thereof ſtand out two Breaſts with Nipples, like thoſe of our Cows: Theſe Breaſts are ſometimes white, ſometimes ſpeckled with black and white ſpots. They are not very large, if they have no young ones; of which 'tis ſaid, they have never any more than two at a time. How long they go with them, is very difficult to be determin'd, tho' ſome allot them the ſame time as to a Cow; but without the leaſt certainty, I was credibly inform'd, that when they couple together, they ſtand upright, cloſe to one another, with their Heads out of the Water.

Breaſts.

Their Sperm

The Sperm of the *Whale* before it cools, is white and viſcid, ſo that you may draw it like Sealing-wax or Glew, and ſmells like Wheat boil'd in Water; but afterwards it turns to a Muſk Colour, ſmells rank, and little red Worms grow in it, like unto the grey ones delineated at N° (78). Tab. P. mark'd with C. I try'd ſeveral ways to preſerve it, and to make it like the *Sperma Cati* of the Drugſters, but in vain. I dry'd it in the Sun; but after the thin ſlime was evaporated, it look'd like the *Fila Meteorica*, but ſomewhat thicker and heavier. Some I boil'd in Sea-water, which after it was evaporated, left nothing but ſome Sea-ſalt, and a naſty brown Slime. The third Experiment I made by boiling it in freſh Water, and afterwards in Sea-water, but the longer I kept it the more it ſtunk, and turn'd quite hard. The fourth Parcel I laid in Sea-water, with an intention to carry it to *Hambourgh* but it diſſolved by degrees, and ſtunk ſo vehemently, that I was forced to throw it away: This Sperm ſwims in abundance upon the Surface of the Water, eſpecially in calm weather, as does alſo that of the Sea-horſes and Seals.

Divers Experiments of it.

Where the Yard begins, it is four ſquare, conſiſting of many ſtrong Sinews, which if dry'd, are as tranſparent as Fiſh-glew, and ſerve the Sea-men to twiſt Whips of.

Their Bones.

Their Bones are as hard as thoſe of the four-legg'd Beaſts, but very porous; ſo that when they are dry'd and the Marrow is conſumed, they will hold a great deal of Water. Two ſuch large Bones ſuſtain the under-Lip, lying one againſt the other, both making the Figure of a Half Moon, but one alone the Figure of a quarter of the Moon. I ſaw ſome of them lying near the Shoar, at *Spitzbergen*, of twenty Foot long, very white, and calcined by the Sun: for before they are dry'd, they ſtink filthily, by reaſon of the marrow they contain.

Fleſh.

Their Fleſh is hard like Bull's meat, interſperſed with many Sinews, and as all the Fat lies betwixt the Skin and the Fleſh, ſo it is very dry and lean when boil'd; and ſoon turns black and ill-ſcented: The tendereſt and beſt part is on the Tail, which is eatable enough; and the *French* feed upon it every day when they are in thoſe parts.

Their Fat.

The Fat is about ſix Inches thick on the Back and Belly, and ſometimes a Foot; and on the under Lips two Foot thick, tho' ſome are fatter than others. The Fat is intermix'd with ſmall Nerves, which contain the Oil; the other ſtrong Sinews terminate moſt near the Extremity of the Tail, which ſerves this great Fiſh for a Rudder, as his Fins do inſtead of Oars, wherewith he ſwims with incredible ſwiftneſs, leaving a Track in the Sea like a great Ship under ſail.

The Whales of the *North-Cape* (or ſuch as are caught betwixt *Spitzbergen* and *Norway*) being not ſo big, afford not above ten, twenty, or thirty Cardels of Fat; whereas the middle-ſized ones of *Spitzbergen* yield ſeventy, eighty, or ninty, and are betwixt fifty and ſixty Foot long. Our biggeſt was 53 Foot long, and fill'd us 70 Cardels. *Peter Peterſon* of *Frieſland* told me, he had once taken a dead Whale, the Fat whereof fill'd 130 Cardels; tho' he was not much longer than ours: whence I infer, that they don't grow much longer, but only in thickneſs or fatneſs.

The Fat is, beſides the thin outward Skin, covered with another about an Inch thick, of the ſame colour as the outward Skin of the Fiſh: It is neither ſtiff nor tough, but brittle when dry'd, and conſequently of no great uſe. The Guts of the Whale are of a Fleſh colour, containing, beſides much Wind, a yellow dung.

Their Food

The Food of the Whales is ſuppoſed to be the ſmall Snails, mentioned in another place (See N° 79). I was told of a Whale taken near *Hitland*, that had above a Barrel of Herrings in his Belly. For the reſt, the Whale ſeems to be no couragious Fiſh, conſidering his vaſt bulk; for he runs away under Water at the ſight of the Ship, and hurts no body, unleſs forced thereunto by neceſſity. After he is ſtruck with the Harpoon, he will ſwim away faſter than a Bird can fly, and draw ſome thouſands of Fathoms of Rope-line after him.

In the Spring the Whales have their Station to the Weſt of *Spitzbergen*, near *Old Greenland* and the Iſle of *John Mayen*; afterwards they go to *Spitzbergen*: As ſoon as the *Finfiſh* appear, you ſee no more Whales, probably they go to other places. I ſaw *Finfiſhes* in the *Spaniſh*-Sea in 1671 in *December*, and in 1672 in *January*; and in 1673 in the Streights of *Gibraltar* in *March*, and alſo in the *Mediterranean*. The Whales ſeem alſo to be ſubject to certain Diſtempers: An ancient Harponier aſſured me, that he once caught a Whale, the Skin whereof (eſpecially near the Tail) hung as looſe as Rags; he afforded but little Fat, which was white, and as empty as a Honey-Comb. They are much tormented with Lice: the Draught of which, ſee N° (74). The Wounds given them by the Harpoonin the Fat, heal up again, as may be ſeen by the white Scars that appear in many Whales that are caught afterwards.

How they catch the Whale.

If they meet with many *Seals* (which devour the Food of the Whales) they promiſe themſelves not many Whales; as on the other hand if they ſee good ſtore of *White-fiſh* and ſmall Sea-Snails, delineated at N° (79), they look upon them as the Forerunners of many *Whales*, which they take in the following manner. As ſoon as they ſee or hear a Whale ſpout, they call out *Fall, Fall*, when every one haſtens to the Long-boat he belongs to (ſix or ſeven to a Boat) and ſo they row towards the *Whale*: When they are come near him, the Harponier, who ſits always before in the Boat, with the Harpoon-Iron near him, ſtrikes the *Whale* with the firſt opportunity, (a) who perceiving himſelf wounded, runs with incredible ſwiftneſs to the bottom, drawing the Rope after him with ſuch force, that he would certainly pull it into the bottom, if they did not give him Rope enough. The Rope ty'd next to the Harpoon-Iron, is call'd the Forerunner, about ſix or ſeven Fathom long, and an Inch thick, made of the ſofteſt and moſt pliable Hemp. Then the Line-furniſher (b) ſupplies the Ropes (lying betwixt the Seats of the Benches) of ſeveral thouſand Fathoms long: Theſe are thicker and ſtronger than the Forerunner, made of tough Hemp, and tarr'd over. They muſt be very careful that the Lines be not entangled, or that they run not out on the ſide of the Long-boat, but juſt before (call'd the *Stave*) without which, they would be over-ſet. To prevent the Rope and Wood from catching Fire by the violent motion, the Harponier wets the Wood continually with a wet Mop. The other Men in the Long-boat, take alſo care of the Ropes, both at letting out and taking in again: The Steer-man ſtands behind in the Long-boat, ſteering it with an Oar, as occaſion requires: The Harponier endeavours to dart the Harpoon as near as he can behind the Spout-hole, or the Privy Parts, which ſooner enfeebles the Whale, than if he hits him in the Belly; and if he ſtrikes him upon the Head, he does him but little hurt; becauſe the Fat being but thin upon the Bones, the Harpoon eaſily breaks out, and the Whale gets away.

(a) See N. (80).

(b) See N. (81).

(c) See N. (82).

The Harpoon Iron.

The Harpoon is ſhaped like an Arrow before (See in Tab. Q. at F.) with two Beards ſharp at the Edge, but broad back'd like a Hatchet, elſe it could tear out. The Iron Handle is thicker behind than before, and hollow, wherein is fix'd the Stick (d). Before this hollow part, the Forerunner is faſtened (e). The beſt Harpoons are made of fine Steel, but not much

(d) See N. (83).

(e) See N. (84).

much hardened, elſe they would ſnap, and many Whales (one whereof is worth two hundred Pounds) be loſt. The wooden Stick is faſtened within the Iron Funnel with Packthread wound all about the Iron. Somewhat higher, about two Spans off, is a Hole made thro' the Stick, where the Forerunner is faſtened to it (e). After the Whale is ſtruck with the Harpoon, the other Long-boats run out before, and take notice which way the Line ſtands, and ſometimes pull (f) whether the Whale ſtill draws with all his ſtrength, or grows feeble, and that the Line begins to hang looſe; then they begin to pull in the Rope again, which the Line-furniſher takes care to lay round one row upon another, that, if the Whale ſhould draw again, it may be ready without being entangled (h). If the Whale runs upon a level, they muſt not give him too much Rope, for fear he ſhould wind it about ſome Rock, and ſo tear out the Harpoon. When they come near the Whale again, they kill him with Lances; the longer the Whale lies dead in the Water, the higher he ſwims above it; ſome a Foot high, others to the middle.

(e) See N°. (85)
(f) See N°. (86)
(h) See N°. (81)

If the wounded Whale gets among the Ice Sheets, where the Boats can't follow him, the Harponier at the Head of the Long-Boat, tries whether the Line be ſtiff, and if he fears the Whale will draw the Boat under water, he takes the Chopping Knife (i) and after having drawn the Rope in as much as they can, he chops it off; ſo that ſometimes they looſe thus the Lines of many hundred Fathoms length, and the Whale eſcapes their Hands (k); and, if timely care be not taken, the Long-boat is daſhed and ſplit againſt the Ice. When they are wounded, they ſpout out Water and Blood, that it roars like a Cannon, and tinges the Sea; but this Noiſe abates by degrees, as they become feeble. They blow out at the ſame time a certain fattiſh ſubſtance, which ſwims upon the Sea; and as this affords the moſt delicious Food to the *Mallemucken*, ſo they follow the Whale by thouſands (a). If one Harpoon breaks out, the Long-boats of another Ship dart in theirs, and often carry off the Whale: If two Harpoons belonging to ſeveral Ships ſtrike the Whale at the ſame time, they divide the Fiſh equally (b). The Steerſman muſt be careful to obſerve how the Whale turns and winds, that they may cry *row on*, or *ſtrike*, i. e. row near to the Whale, or keep off, that the Harponier may reach him with his Launce. This Launce has a wooden Handle of two Fathom long, pointed before like a long Pike, with a tough Steel, (c) of near a Fathom long, wherewith after they have made a great hole in the Body of the Whale, they poke into it every way, as they do when they poke Eels (d). And, if one remains ſticking in his Body, they take another, every Boat having five, ſix, or ſeven of theſe Launces.

How they manage the dead Whale.

After the Whale is kill'd, they cut off the Tail, which lying croſs the Boat, hinders it in its Courſe: Before the Tail they faſten a piece of Rope, and at the other end, at the Stern of the laſt Sloop, four or five (e) of them thus faſtened, rowing one behind, the other to the Ship. When they have brought the Whale to the great Ship, they faſten that part where the Tail is cut off, to the fore part, and the Head about the middle towards the Stern, near the great Shrowds of the Main-maſt, on the Larboard ſide (for ſeldom any Whale reaches further) The Larboard is that ſide of the Ship at the Right-hand as you go from the Poop to the Stern, as that ſide on your Right-hand, when you go from the Stern to the Fore-part, is call'd the Star-board. They frequently climb up the Maſts to ſee whether they can ſee a Whale, for the firſt Diſcoverer has a Ducat for his Pains.

(e) See N°. (92)

The dead Whale being thus faſtened to the Ship, two Sloops on the other ſide of the Whale, are haul'd by a Man by means of a Hook, to the Ship; in theſe ſtand two Harponiers, who cut off the Fat, for which they have a Reward of four or five Rix-dollars. The firſt piece they cut from behind the Head by the Eyes, being larger and wider than all the reſt they cut. This they call the *Kenter-piece*, and reaches from the Water to the Cradle (or the round Circle about the Middle-maſt) by which you may gueſs at the bulk of a Whale. A ſtrong and thick Rope is drawn thro' a hole in this *Kenter-piece*, whereby the Whale is born out of the Water, being faſtened to the Cradle; whence you may gueſs at the Toughneſs of this Fat (f). Then they cut another piece near this, which is alſo haulled up to the Ship, and there cut into leſs pieces of a Foot ſquare (g). The Knives of the two Men that cut the ſquare pieces, as well as of thoſe that cut the Fat from the Whale, are with the Hafts about ſix Foot long: The more they have cut off of the Fat, the more they lift up the Whale with their Pullies, that they may come the eaſier at the reſt; which is alſo the Reaſon they often ſtand upon Nails faſtened into the Body of the Whale. Two Men ſtand in the Ship with large Hooks five Foot long, wherewith they hold up the great piece of Fat, till it is cut into ſquare pieces, which are received by another Man ſtanding hard by, by means of a ſhort Hook, and laid upon a Dreſſing-board, where they are cut by others into leſs pieces: Theſe ſtand upon the Starboard-ſide, (a). The Fat of ſome Whales is white, of ſome yellow, and of others red. The White is full of little Sinews, and yields not ſo much Oil as the yellow, which looks like Butter, and is the beſt. The red comes from dead Whales: The ſmall or minced Fat is thrown into a kind of a Gutter, with a kind of Bag at the end, reaching down into the Ship, whence the Fat runs into a wooden Veſſel, and is afterwards put up in Cardels (as they call them) and ſo is kept till they try it up into Train-Oil. After the Fat is cut off from one ſide of the Whale, before they turn him, they cut out the Whale-bone in one entire piece, and afterward that of the other ſide in the ſame manner, either of which is ſo heavy, that the whole Ship's Crew has enough to do to pull it up, by means of a certain Crane made like a Beam of a Pair of Scales, with two ſharp Points on each end, which being fixed in the Whale-bone, they draw it up with Ropes. The dead Carcaſſes of the Whales, after their Fat is cut off, are thrown into the Sea, and ſerve for Food to the Birds of Prey, but eſpecially to the *White-bears*, who at that time (I ſuppoſe by reaſon of their feeding upon Carrion) ſhed their Hair and turn yellow, ſo that their Skins are of little value, (b).

(a) See N°. (91).
(c) See N°. (94)

How they try the Train-Oil from the Fat.

Formerly the *Dutch* uſed to try out their Train-Oil at *Spitzbergen*, at the *Cookery of Harlem* (of which before). The *French*-men generally try it up in their Ships, which having occaſioned the burning of ſeveral Ships, our Country-men have ſince pitch'd upon another way, *viz.* to put up the Fat into Veſſels, wherein it ferments like Beer, and the greateſt part turns Train-Oil in them. At *Hambourgh* they put the Fat out of the Veſſels into a large wooden Tub, whence it is emptied in a great Copper ſet in Brick-work and flattiſh like a Frying-pan, containing a hundred and twenty, a hundred and thirty, and often a hundred and forty Gallons. After it has boil'd for ſome time, it is taken out of the Copper with ſmall Kettles, and put into a Sieve, that the liquid part may run into a great Tub, underneath the Sieve, and half fill'd with Water to cool the Train-Oil, and to ſeparate the unclean and dirty part from the clear Train-Oil, which ſwims upon the Water, the reſt ſetling on the bottom. This great Tub has a Spout or Tap almoſt at the top, by which the Train-Oil is let out into another Tub, alſo half fill'd with Water, wherein it is more cooled, and rendered clearer than before: Another Tap in this Tub conveys the clear Train-Oil into a Vatt in the Ware-houſe, whereout they fill it into the Train-Oil Barrels, which hold thirty two Gallons a-piece, but a Cardel holds ſixty four. Some uſe but two Tubs, and try a brown Train-Oil, the ſecond time out of the Greaves; others fling them away after the firſt trying.

The Finfiſh.

The *Finfiſh* is much of the ſame length of the Whale, tho' the laſt has three times his bulk: The firſt is diſtinguiſh'd by the Fin on his Back near the Tail, and his fierce ſpouting out of the Water, beyond what the Whale does: His Knob on the Head is alſo ſplit in length at his Blowing-hole, and his Back is not ſo much bended. His Lips are browniſh, and like a twiſted Rope; and on the uppermoſt hangs the Whale-bone, like in the Whale. Some ſay he can't open his Mouth, but that is a Fable. Betwixt the Whale-bone is all hairy; the new-grown Whale-bone is blew, but the other dark-brown, with yellow Streaks. He is not ſo black as ſome of the Whales, but rather of the colour of a Tench. As he is not ſo fat as the Whale, and more dangerous to be catch'd, the Sea-men ſcarce think him worth their Labour.

The Train-Oil of the Whale is uſed by the Frize-makers, Curriers, Cloath-workers, and Soap-boilers; but the greateſt part is uſed in Lamps. The *Greenland* Ships carry from thirty to forty Tun, according to their bigneſs, and have either five or ſix Sloops belonging to them: Their burthen is from four hundred to a thouſand Cardels of Fat. When they go out in the Long-boats or Sloops, there remain only aboard the Ship, the Steers-man, the Barber, the Chyrurgeon, the Cooper, and a Boy; the Maſter goes along with the reſt. Each Ship has ſixty Lances, ſix Sea-horſe Lances, forty Harpoons, nineteen long Harpoons, wherewith they ſtrike the Whale under Water, ſix ſmall Sea-horſe Harpoons, thirty Lines or Ropes of eighty or ninty Fathoms each. Beſides Fevers and Impoſtumes, the Scurvy is the moſt general Diſtemper in this Voyage; but ſuch as are active and uſe continual exerciſe, are not much afflicted with it.

The Rotz-fiſh *and* Sea-Qualm:

The *Rotz-fiſh* (or *Slime-fiſh*) is nothing but a tranſparent ſlime I have ſeen divers kinds of them; ſome whereof have ſomething reſembling Fins, like that which I call the *Sea-May-Flie*: Others reſemble the flat Snails, except that in lieu of Fins they have Stalks not unlike Feathers. I obſerved beſides theſe, four other ſorts very different from the former, being only a thick coagulated Scum of the Sea: The Seamen call them *Sea-Qualms*, and others *Sea-Nettles* (after the *Latin*) becauſe they burn like Nettles. All the filth of the Sea ſtick to them, juſt as a Burr does unto Cloath.

The Sea-May-Flie.

The *Sea-May-Flies* are alſo tranſparent, and will diſſolve in your Hand like the *Sea-Nettles*: They have two Fins near the Neck, not unlike thoſe of the Whale: they are broad and thick in the middle, and pointed at both ends; for the reſt, their Bodies reſemble our *May-flies*, except that the Body is thicker all along, and pointed at the end. The Head is broad and round, and ſplit in the middle, with Horns of a Straw's breadth only: Before on the Head are two rows of ſix ſmall Knobs (three in a row); whether theſe be the Eyes, I will not determine: The Mouth is ſplit alſo, whence downwards you ſee yellow and blackiſh Guts thro' the Skin, by reaſon of its tranſparency: The out-ſide of the Fiſh is of the Colour of the White of an Egg, and he moves in the Sea like a *Sea-nettle*. I ſuppoſe he affords Food to the *Lumbs*, *Pigeon-divers*, &c. becauſe they are moſt ſeen where theſe Sea-inſects are found. The ſame you ſee delineated at N° (96) according to their bigneſs, we found the 20th of *June* in the *South-bay* at *Spitzbergen*.

The Snail-ſlime-fiſh.

The *Snail-ſlime-fiſh* is flat, and turn'd like a Snail, ſuch as we find the Shells of ſometimes upon the Land; for the reſt, it is tranſparent like the *Sea-nettle*. Out of its utmoſt part come two brown hairy Stalks, wherewith it moves like the *Sea-nettle*. They ſwim in prodigious numbers in the Sea, and are by ſome ſuppoſed to afford Food to the Whales; but as they are ſcarce nouriſhing enough to produce ſo much Fat, I conjecture that the *Lumbs* and ſuch like Birds feed upon them. They reſemble a Spider at a diſtance, but for the reſt, have not the leaſt affinity to them. We ſaw many of them *June* the 20th, in the *South-bay* at *Spitzbergen*, but never any among the Ice.

The Hat-ſlime-fiſh.

The *Hat-ſlime-fiſh*, or *Salk-ſlime-fiſh* (ſo call'd from its ſhape) is like a Toad-ſtool, with a round and thick Stalk reaching up into the middle of the Head, which is a blew Button, or knob of double the thickneſs of the Stalk; like a Woman's Straw-hat. From the Stalk downwards it grows round and thick again, yet much leſs than the Head. They will get under Water and come up again, juſt as a Stick forced under Water, rebounds up again. I got ſeveral in the *North-Sea*, between *Hilgeland* and the *Elbe*; as alſo at *Kuck's-Haven* within the Mouth of the *Elbe*. Some told me that they come up that River as far as *Freyburg*.

The Roſe *like* Slime-fiſh.

The *Roſe like* ſhaped a *Slime-fiſh*, is round in Circumference, but a little indented between his double Streaks or Rays, of which there are ſixteen ſpringing out ſingly from the middle of the Body, but ſubdivide themſelves afterwards into two Branches; they are red-brown, and have their Riſe from the Circumference of a ſmall Circle in the middle of the Body: At the Extremities of theſe Rays, near the outward Circumference, are thirty two ſpots: The Body is white and tranſparent, which it draws together and extends again at pleaſure: It is hollow within, which I ſuppoſe to be the Belly, becauſe I found two or three Shrimps in this Concavity. Round about it hang down ſeven ſmall brown Threads like ſpun Silk: The whole extent of its Body was about a Span in length, and might weigh about half a Pound; the Threads were of the ſame length. We got ſome of theſe near *Hitland*; for theſe three firſt ſorts of *Sea-Qualms* are almoſt infinite in the *North-Sea*, but are not ſo numerous about *Spitzbergen*: They ſwim upon the Water in calm Weather, but go to the bottom in a Storm.

The Slime-fiſh *like a Cap.*

July the eighth, near the *Muſhle-haven* at *Spitzbergen*, we ſaw in a calm Day two ſorts of *Slime-fiſh*, one whereof was ſix-corner'd, the other with eight Corners: The firſt had ſix Purple ſtreaks, with blew Brims; betwixt which, the Body was diſtinguiſh'd into ſix Ribs, like a Pumpion. From the middle of the Body did hang down two Threads of ſmall Hairs, red and rough, ſhaped like the Letter V. I did not find them to move in ſwimming: Within the Body were other broader Streaks of a Purple Colour, with light-blew Edges: They repreſented like the Letter W. The whole Body was milk-white, not ſo tranſparent as that of the next following, about as big again, as you ſee it delineated at N° (97): It weigh'd two Ounces: It did not burn my Hand, but diſſolved in it like a Slime; Its ſhape is like a Cap with Corners.

The Slime-fiſh *like a Fountain*:

The laſt *Slime-fiſh* is very remarkable: At the top it has a roundiſh hole like a Gooſe-quill (which I ſuppoſe to be the Mouth) terminating into a Cavity like a *Funnel*: From this hole ariſe four Streaks, two and two exactly oppoſite to one another, two of which are cut tranſverſeway, the other two not: The laſt are about half the breadth of a Straw, and the firſt (which reſemble the Back-bones of a Snake) full as broad as a Straw: From the middle of the Funnel proceed four other Streaks, like the Back-bones of a Snake, but come down lower than the former, and make up eight in all: As we turn'd and look'd upon them, they repreſented to us all the Colours of the Rain-bow, and like a Fountain with eight Spouts, whence ſome have given it the Name of the *Fountain-fiſh*. From the end of the Funnel within the Body, ariſes ſomething like a Cloud, divided into Branches, which I ſuppoſe to be the Entrails. At the Extremities of the before-mentioned outward Streaks, the Body firſt bends a little inward, and afterwards turns off round, and has many ſmall Streaks. It was of the ſame bigneſs as you ſee it repreſented at N° (98): It weigh'd about four Ounces, and was white all over: It did not burn ones Skin, but diſſolved into Slime. Some others of theſe *Sea-Nettles* I ſaw ſince in the *Spaniſh-Sea*, of a purple, blew, yellow, and white colour, and weigh'd ſeveral Pounds: They burnt ſo vehemently, that they raiſed Bliſters, and even Inflamations, of which I reſerve the Draught and Deſcription for another Opportunity.

CHAP. XLIII.

A Supplement to Captain **Wood's** *and* **Marten's** *North-Eaſt Voyage, containing their Navigations and Obſervations to the North-Weſt of* **Greenland**, *and other Northern Regions.*

Cherry and other Iſlands.

Northern Iſlands. G*Reenland* is by our Navigators ſuppoſed to be a great number of Iſlands very near one another, or elſe a broken Land: It has been diſcover'd on the Weſt ſide to eighty two Degrees. The North Point they call'd *Point Purchas*, where they found many Iſles, unto which they have given no Names, except ſix or eight Harbours. On the Eaſt ſide they never went beyond ſeventy eight Degrees, being diſturbed by the *Dutch*.

The Hope-Iſland. Here are ſome Iſlands, as the *Hope-Iſland*, diſcovered in 1613, which perhaps is the ſame the *Dutch* call *Willoughby's Land*, or *John Majen's Iſle*; tho' it has no great reſemblance to either, being a ſmall Iſland, lying North-Eaſt and South-weſt; whereas the Country near which Sir *Hugh Willoughby* ſail'd ſo many Days about, muſt be a large Country, lying North to South.

Edge's Iſle and Wyche's Iſle. *Edge's Iſle* owes its diſcovery to Captain *Thomas Edge*, as *Wyches Iſle* owes its name to a Gentleman of that name, and was diſcover'd in 1617. By the Relation given by *Ottrear* the *Norwegian*, to *Alfred* King of *England*, where he ſays that the Morſes were hunted for their Teeth, it appears that Whale and Morſe-fiſhing was uſed above 800 years ago.

Cherry Iſle. The time of the firſt diſcovery of *Cherry-Iſle* is unknown, but not the Year when it received its name (in 1603) from Sir *Francis Cherry*, who ſet out a Ship thither, which found ſome Lead and a Morſe's Tooth there; but could not ſtay by reaſon of the advanced Seaſon. But in 1604, another Ship was ſent *April* the fifteenth, from *London*, which arriving at *Coln* in *Lapland May* the firſt, ſtaid there till *July* the firſt, and *July* the eighth came to an anchor on the S. S. E. ſide of *Cherry-Iſle*; but being prevented from landing by the rapidneſs of the Stream, they were forced to go round about the Iſle, where one of them landing, kill'd with his Gun as many Fowl as loaded their Boat; for the reſt, they ſaw no other Beaſts but Foxes: This Port was at 74 Degrees 45 Minutes. Morſe-fiſhing *July* the tenth, they came to an anchor in another Bay at eight Fathoms, where coming aſhoar, they ſaw a vaſt number of *Morſes*, and ſhot at them ſeveral times with three Guns; but tho' they lay huddling together like Hogs, they could not kill above fifteen out of a thouſand; but before the thirteenth kill'd a hundred more, and only kept their Teeth. In 1605 the ſame Ship and Perſons arrived there a ſecond time, *July* the ſecond, and going aſhoar *July* the ſixth, kill'd abundance of Morſes, having now found the way to diſpatch them with Lances. They alſo brought away about thirty Tun of a Lead Oar, found near *Mount-miſers*. In 1606 they went once more and landed *July* the third, at 74 Degrees 55 Minutes; they ſtaid till the Shoar was cleared of the Ice (for the Morſes will not come aſhoar before) where at once they ſlew betwixt ſeven and eight hundred Morſes, with their Teeth fill'd three Hogſheads, and made twenty two Tuns of Oil of their Fat. In 1608, it was ſo hot, that the Pitch of the Ship was melted; in ſeven hours they kill'd nine hundred Morſes; they fill'd two Hogſheads with their Teeth, and made thirty one Tuns of Oil: They alſo took alive two young Morſes, a Male and Female; the Female died at Sea, but the Male lived ten Weeks in *England*. In 1610, two other Ships were ſent thither, who after they had kill'd many Bears, Fowl, and Seals, took poſſeſſion of the Iſle for the *Muſcovia* Company *June* the fifteenth. In *Gull-Iſland* they diſcover'd three Lead Mines, and a Coal Mine on the North ſide of it. Three more Ships came to fiſh at *Cherry-Iſland*; they kill'd five hundred Morſes at one time, and at another time three hundred more. The Deſcription of the Morſe or Sea-horſe, ſee in the Voyage to *Spitzbergen*. Some ſuppoſe *Cherry-Iſland* to be the ſame with what the *Dutch* call *John Mayen's Iſle*, tho' erroneouſly; for the Northermoſt Point of that lies at 71 Degrees 23 Minutes; whereas this (according to the Calculation of the *Dutch*) is at 74 Degrees 55 Minutes. Beſides, *Cherry-Iſland* is round, and not frequented by Whales. This our Men travell'd on Foot from North to South, which can't be done in *Mayens Iſle*, neither do they make any mention of the *Bears Mountain*. *Hope-Iſland* is indeed a long Iſle, like *Mayens Iſland*, but lies more to the North.

John Mayen's Iſle. *John Mayen's Iſle*, has got its Name (as the *Dutch* pretend) from its firſt Diſcoverer; the *Engliſh* generally miſtake it for the *Hope-Iſland*: It extends from S. W. to N. E. being very narrow in the middle. Formerly this Iſle was much frequented by the Whale-fiſhers in the Summer-Seaſon, but ſince theſe Animals are gone further to the North, thoſe Fiſher-men have been forced to follow them to *Greenland*. In the Spring the Weſt Shoar is pretty free from Ice; but the North-ſide, where it runs out with a ſharp Point into the Sea, behind the *Beerenburgh*, i. e. *Mountain of Bears*, the Ice continues all the Year long for ten Miles diſtance from the Shoar; which is the reaſon the Mariners take all imaginable care to make the Weſt Shoar; and, if by chance they come to the Eaſt ſide, they are forced to fetch a Compaſs about to the North of the Iſle, where they are in no ſmall danger from the ſtormy Whirlwinds that come from the *Bears Mountain*, but alſo of the floating Ice; for the Sea here flows from S. to N. and ebbs from N. to S. At the North end of the Iſland is the *Bears Mountain* (ſo call'd from the vaſt number of Bears ſeen there) the bottom whereof reaches from the Eaſt to the Weſt Shoar; but on the North ſide is ſome level Ground betwixt it and the Ocean. It is inacceſſible, by reaſon of its ſteepneſs, and of ſo prodigious a height, as to be ſeen 30 Leagues at Sea. The Sea-Coaſt is diſtinguiſh'd thus: (1), The *Nordſkoeck*, or North Point, jetting out to the North. (2), The *Weſtboeck*, or the Eaſt Point *Tibergh*, mark'd 1, 2, 3, are three Mountains of Ice, or rather of Snow, which are faln from the top of the *Bears Mountain*. (3), The *Zuydoeſthoeck*, or S. E. Point, whence the Shoar extends from E. to W. towards a little Iſle, and thence winds to W. and S. (4), *Kleyn-Sand-bay*, or *Little-Sand-bay*, *Egerland*, i. e. *Egg-land*, ſo call'd from certain adjacent Rocks full of Birds: Within a Muſquet ſhot from the Shoar, there is 60 Fathom Water, but a little further off, no bottom to be found. (5), *Groote-hout-bay*, i. e. the *Great-wood-bay*, from the vaſt pieces of rotten Timber found there: Here being the narroweſt part of the Iſland, you may from ſome Mountains be heard on both ſides of the Shoar. (6), *Kleyn-Hout-bay*, or *Little-wood-bay*. (7).

The *Engliſh-bay*, beſides ſeveral others not worth mentioning.

Greenland and its ſituation.

Greenland, or *Groenland* (formerly *Engroenland*) lies according to the Account of the *Iſlanders*, extended in form of a Half-Moon to the North of their Iſle, at about four days ſailing diſtance; tho' it ſeems not to ly ſo far to the Eaſt, but rather to the North of *America*. Its extent from *Cape Farewel* on the South, at 60 Deg. 30 Min. to the North, is unknown. To the Eaſt and Weſt it is encompaſſed by two great Oceans, but to what Degrees of Longitude, is not diſcover'd hitherto, except that Mr. *Fotherby* found it 71 Degrees near the Coaſt of *Greenland*, and the South of it above 200 Leagues.

Its diſcovery.

Its Diſcovery is owing to a certain *Norwegian* Gentleman, call'd *Erix Rotcop*, i. e. *Red-head*, who having committed a Murther in *Iſland*, fled to theſe parts, and having paſs'd the Winter in a ſmall Iſland, in the Spring went over to the Continent, which, from its Green Valleys, he call'd *Greenland*. Afterwards having obtained his Pardon from *Olaus Trugger*, King of *Norway*, a Colony was ſettled there, and the Country divided into the Eaſt and Weſt Diſtrict, and two Cities were built, *viz. Garde* and *Albe*, the laſt whereof was the Vice-roy's Reſidence, ſent thither from *Norway*, had a Cathedral Church, dedicated to St. *Anthony*, and an Epiſcopal See.

However, what the *Norwegians* were poſſeſs'd of, was inconſiderable in reſpect of the whole: The *Norwegians* themſelves acknowledge a certain potent Nation there, call'd *Skrelingers*, that inhabited the inland part of the Country; and ever ſince 1349 (for what reaſon is unknown) ſcarce any true Intelligence has been had of this part of *Greenland*. The King of *Denmark* ſent a Fleet that way in 1389, to endeavour the Recovery thereof, but being caſt away, this Deſign was laid aſide afterwards, till King *Christian* IV. attempted the ſame again. 'Tis true, in 1406, the Archbiſhop of *Drontheim* in *Norway*, ſent a Biſhop thither named *Andrew*, but he was never heard of afterwards..

Some latter Diſcoveries by the *Engliſh*.
Sir Martin Frobiſher's Voyage.

The ſearch after a N. E. Paſſage to *China*, having proved abortive, the *Engliſh* began to look for the ſame on theſe Coaſts to the N. W.

The firſt that attempted that Paſſage was *Martin Frobiſher*, in 1576: He came with two Barks to 62 Deg. where finding a great Inlet (which he call'd *Frobiſher*'s *Straits*) he ſail'd 60 Leagues into it, with main Land on both ſides, where he found ſome Oar like Gold, but proved only Black Lead. The next year they diſcovered a Silver Mine, but it lay too deep to be dug. They alſo melted ſome Gold (but in ſmall quantity) out of certain Stones they found in *Smith*'s *Iſle*, on that Coaſt, and ſaw a dead Fiſh twelve Foot long, not unlike a *Purpoiſe*, with a Horn ſix Foot long (commonly call'd the Unicorn's Horn) growing out of the Snout, which is ſtill kept at *Windſor*. In 1571, he took poſſeſſion of part of this Country for Queen *Elizabeth*, unto which he gave the Name of *Meta in cognita*.

Sir Humphry Gilbert and *Mr. Davis's* Voyages.

In 1583, Sir *Humphry Gilbert*, being ſent upon the ſame Deſign, came to the River of St. *Lawrence*, took poſſeſſion of the Country, and ſettled a Fiſhery there. In 1585, Mr. *John Davis* being employ'd upon the ſame Account, with two Barks, he came to the *Greenland* Shoar, and call'd it the *Land of Deſolation*: afterwards he ſail'd to *Gilbert*'s *Sound*, at 64 Deg. 15 Min. where he found ſome of the ſame Oar *Frobiſher* brought into *England*, and ſome *Lapis Specularis*. Thence they ſail'd to Mount *Raleigh*, *Tortneſs Sound*, &c. at 66 Deg. 40 Min. but ſaw nothing but Shrubs. He made another Voyage in 1586, to the ſame place, where they truck'd ſome Copper Oar, and black and red Copper with the Natives. Thence they went further to the Weſt. In 1587, he made a third Voyage as far as 72 Deg. 12 Min. the Compaſs varying to 82 Deg. Weſt: The Country he call'd *London-Coaſt*: He found an open Sea, and 40 Leagues betwixt Land and Land: He gave it the name of *Davis*'s *Streights*.

Mr. Hudſon.

In 1610, Mr. *Hudſon* ſail'd 100 Leagues further that way, than any had done before; and gave Names to ſeveral places, as *Deſire provokes*, the Iſle of *God's Mercy*, Prince *Henry*'s *Cape*, King *James*'s *Cape*, Queen *Ann*'s *Cape*, &c. The Ice and mutiny among his Ship's Crew, prevented his going further.

James Hall.

In 1612, *James Hall*, and with him *William Baffin*, returned into *England*, having diſcover'd *Cockin*'s *Land*, at 65 Deg. 20 Min. differing in Longit. from *London*, 60. Deg 30 Min. Weſt. They try'd the Mine at *Cunningham* River, dug before by the *Danes*, but found it not worth working. They ſaw fine Rocks whiter than Alabaſter, and abundance of *Angelica*: *James Hall* was kill'd by a Native.

Mr. *Baff*

In 1615, Mr. *Baffin* ſail'd again to thoſe Parts, and found *Fair-point* to differ in Longitude from *London* 74 Deg. 5 Min. Weſt. They found *Davis*'s *Streights* to be only a Bay. In 1616, he went once more, and ſail'd to Sir *Thomas Smith*'s *Sound*, at 78 Deg. Lat. Variation of the Compaſs 56 Deg. Weſt; the greateſt that is known any where. Since that time no Attempts of the N. W. Paſſage were made by the *Engliſh*, till Capain *Thomas James* went upon the ſame Deſign in 1631.

Capt. *James*. Of all theſe you have the Particulars before.

He was much peſtered with Ice in the N. W. Seas in *June* and *July*: He ſail'd from *Cape Farewell* by the Iſle of *Reſolution* to *Mills*, *Nottingham*, and *Mansfield* Iſlands, whence taking his Courſe to the Weſt, croſs a great Bay near Port *Nelſon*, he call'd the Land *New South-Wales*. He afterwards moved all up and down theſe Seas, giving certain Names to his new Diſcoveries; As Cape *Henrietta Maria*, Lord *Weſton*'s Iſle, the Earl of *Briſtol*'s Iſle, Sir *Thomas Roe*'s Iſle, the Earl of *Danby*'s Iſle, and *Charlton*'s Iſle: In this laſt he wintered, at 52 Deg. 03. Min. Lat. and return'd in 1632, having made many Diſcoveries, beyond *Hudſon*, *Baffin*, &c.

Charleton's Iſle.

Charleton's Iſle (according to Captain *James*'s Account) as well as all the reſt, and the main Land it ſelf, is a light white Sand, covered with a white Moſs, and full of Shrubs, and many Trees, ſuch as Spruce, Firs, and Juniper, as alſo good ſtore of Scurvy-graſs, which boil'd, ſerved for a good refreſhment, as well as a ſort of Vetches that grew there in great plenty. Of Beaſts, they ſaw ſome Deer, a few Bears, and many Foxes: Ducks and Geeſe in abundance in *May*, as alſo white Partridges: No Fiſh nor Fiſh-bones, except a few Cockle-ſhells. In *June* and *July*, the Days were exceſſive hot, and the Froſts in the Night ſo ſharp, that the Ponds had Ice of an Inch thick. They were much peſter'd with *Muskitoes*, Flies, Butter-flies, Horſe-flies, Ants, and Frogs, and found the Winter as ſevere here, as in any Place lying 30 Deg. more to the North.

Diſcovery made by the Danes.

Cunningham

In 1605, the King of *Denmark* ſent two Ships and a Pinnace, under the Command of Captain *Cunningham*, a *Scot*, and *Godske Lindenaw*: The laſt arrived in ſome part of *Greenland*, whence he brought two of the Natives into *Denmark*: The other two Ships ſail'd from *Cape Farewell* to *Frobiſher*'s *Streights*, whence they alſo carried away three of the Natives, and certain Stones they found in a place call'd *Cunningham*'s *Ford*, a hundred Pound weight of which, yielded 26 Ounces of Silver.

Lindenaw's

In 1606, *Godske Lindenaw* ſail'd with four Ships and a Pinnace, thither, and carried off five of the Natives.

In 1607, *James Hall* (formerly head Pilot to *Lindenaw*) was ſent upon the ſame Deſign, but his Ships Crew mutinying, was forced to return to *Denmark*.

Some time after the King of *Denmark* ſent two Ships more, with *Norwegian* and *Iſland* Mariners, under the Command of *Chriſtian Richardſon*, a Native of *Holſtein*, but they returned before they got ſight of the *Greenland* Shoar.

and *Munk's* Voyages.

In 1619, *John Munk* was ſent thither with two Ships: coming to Cape *Farewell* at 60 Deg. 30 Min. they met with ſuch ſudden change of weather, that one day all their Tackle was frozen, ſo that they could not handle it; and the next day they were forced to work in their Shirts, by reaſon of the exceſſive heats. The South part of *Hudſon*'s *Bay* he call'd *The New Sea*; and that towards *Greenland*, *Chriſtian*'s *Sea*: He wintered at 63 Deg. 20 Min. which he call'd *Munk*'s *Winter-Haven*, and the Country *New Denmark*. They endured a great deal of miſery there: ſo that of 62 Perſons there were ſcarce enough left to bring home the Pinnace.

Greenlanders in *Denmark*

The *Greenlanders* brought into *Denmark*, were by the King's Orders well entertain'd, with Milk, Butter, Cheeſe, Fleſh, and Fiſh; theſe they would eat raw, but no Bread, nor Wine or Brandy, but drunk Train-Oil. But they turn'd ſo melancholly (out of deſire to their native Country) that they could not be brought either to learn the *Daniſh* Language, nor the Principles of Chriſtian Religion; three of them were ſent in 1606, with ſome *Daniſh* Ships, to their native Country, but two dy'd by the way, and the third was brought back, they not daring to land, for fear of the Natives. Afterwards ſome of them endeavour'd to make their eſcape in their little Boats, but being retrieved, dy'd for grief: Two others living at *Koldingen*, the Governour employ'd them in Pearl-fiſhing in the Winter, ſo that the cold kill'd one of them, and the other dy'd of Melancholly, as did all the reſt.

The nature of the Country.

The Country is generally Mountainous, covered all the Year with Snow, but more in the South than in the North Parts: Wood there is ſcarce any, except a few Buſhes, and fewer Herbs. Their chief ſubſiſtance is upon fiſhing; for they know nothing of ſowing and planting, tho' the Soil betwixt the Mountains be fertile enough. The North Parts remain undiſcover'd: thoſe on the South ſide conſiſt of divers Iſlands, which queſtionleſs occaſion theſe various and ſtrong Currents, miſcall'd Whirlpools by *Ivor Booty*. The Country ſeems to be healthful enough; but it has been obſerved, that the Veneral Diſeaſe grows worſe, and becomes incurable.

Beaſts.

Of Beaſts, none have been found in this Country of late, but Bears, Foxes, (many of them white) Raindeer, and Dogs; of theſe laſt they have two ſorts, the biggeſt they uſe for their Sleds: They ſay, that the Pizzles of theſe Foxes and Dogs are of Bone.

Fiſhes and Fowls.

The Sea affords them Whales, Seals, and Unicorns, (beſides other fiſh) the laſt of which are valued only for their Horns or Teeth, which grow in the Snout: It is ſtrong, and difficult to be taken, unleſs caſt aſhoar by the Tide, or entangled among the Weeds. Of Fowls this Country affords great plenty and variety, which the Natives catch with Springs and Snares ingeniouſly contrived, chiefly for their Skin and Feathers ſake, which being thick, they dreſs, and make Garments of them, like Furs, wearing the Feathers outward in the Summer-time, and inward in the Winter: Two or three of our Men have kill'd with their Guns 1500 of them in one day. They ſaw alſo many *Baſs-geeſe* here, ſuch as breed in the *Baſs*, a famous Rocky Iſland near *Edingburgh*.

The North Light.

In thoſe Parts appears in the North, about the time of the *New Moon*, a certain Pillar or Beam of Fire, which darting its Rays every way, moves from place to place, and not only enlightens *Greenland*, but alſo *Iſland* and *Norway*, and ſometimes more diſtant Countries, leaving a Miſt behind it, nor does it ceaſe till 'tis obſcurated by the Sun-beams. This Country is queſtionleſs inhabited by divers Nations, different in their Manners, Habit, and Language: Thoſe brought home by *James Hall*, were very different from thoſe carried thence by *Lindenaw*. The ancient *Norwegians* poſſeſs'd only a ſmall part of it, ſeveral Nations inhabiting there at the ſame time. Our late Diſcoverers found a Country at 66 Deg. 50 Min. which the Natives call'd *Secanunga*, govern'd by a great King ſtiled *Cachico*.

The Inhabitants.

The Inhabitants are, generally ſpeaking, of a ripe Olive Colour (ſome alſo black) of a mean Stature, with black Hairs, flat Noſes, and thick Lips. Their Women ſtain their Faces with blew and black Streaks. They are active, or rather nimble, and ſtrong, rather deſperate than courageous, thieviſh, treacherous and revengeful; for they would ſteal before the Mariners Faces, and kill them, after they had been well entertain'd by them; but are very affectionate to one another, and their Country. They delight much in Muſick, and would keep time well enough with their Voice, Hands and Feet. Their Divine Worſhip ſeems to be directed to the Sun; tho' *John Munk*, and ſome others, did alſo find Images of Devils, Horns, Claws, Cloven-feet, &c. as alſo ſome Altars, with many Deer, Fox, and Dogs Bones upon them. They ſeem'd alſo to be addicted to enchantments.

ir Houſes Caves.

In the Winter they come from the Sea-ſhoar to the Valleys, where they have their little Villages, conſiſting of Caves, round like an Oven, made cloſe to one another, at the Foot of a Mountain: their Doors are to the South, and they draw off the Water that falls from the Hills by Trenches. Before the Doors they have a kind of Porch neatly made of the Ribs of Whales, and covered with Seals Skins. One part of the Floor is higher than the reſt; This they ſtrow with Moſs to ſleep upon. In the Summer or Fiſhing-time they live in Tents, covered with Skins. The things moſt valued among them, are Knives, Needles, Looking-glaſſes, &c. for which they will truck their Bows, Arrows, Boats, nay, even their Cloaths, but never their Wives and Children.

Cloaths.

Their Cloaths are either of Birds Skins, mentioned before; or of the Seals, which they uſe moſt in fiſhing, as being not ſo apt to wet thro': they ſow them very ſtrong together, with Sinews of Beaſts, and Needles made of Fiſh-bones.

Boats.

But the greateſt Art they ſhew in the Structure of their Boats or Canoes: Theſe are made of Whale-bone of an Inch thick, and broad, reaching in a long row from Prow to Poop, ſtrongly ſow'd together with Sinews, and covered with Seals Skins: They are from 10 to 20 Foot long, and two broad, ſharp at both ends like a Weaver's Shuttle. In the middle only are certain Ribs to keep the Sides aſunder, and to make the hole wherein the Rower ſits, being about the bigneſs of the middle of a Man, made in the Deck of the Boat of the ſame Materials: In this he ſits ſtretching out his Feet forward into the Cavity, and ſtopping the Remnants of the hole with his upper Garment, ſo that together with the Frocks being cloſely ty'd to his wriſts, and his Caponet on his Collar, he is proof againſt taking the leaſt wet, tho' the Boat ſhould overturn. Theſe Boats they manage with one Oar, about ſix Foot long, with a Paddle of ſix Inches broad at each end: This they uſe with ſo much dexterity and activity, that one of our Boats with ten Oars can't out-row them. They have alſo larger Boats of 30 or 40 Foot long, with ten and more Seats for Rowers. Theſe they uſe for carriage of their Tents, Utenſils, and Fiſhes they have caught.

Fiſhing.

They fiſh commonly with long and ſtrong barbed Darts, at the other end whereof, they faſten Bladders, with an intention to make the Fiſh after he is ſtruck, to ſpend himſelf with ſtrugling to get under water.

Freezeland or Frizeland.

Friſeland lies 60 Deg. more Weſt than any part of *Europe*, a ragged Mountainous Country, covered with Snow, and ſcarce acceſſible by reaſon of the Ice. The firſt Diſcovery of it is aſcrib'd to *Nicholas* and *Anthony Zani*, two *Venetian* Gentlemen Shipwrack'd there, who deſcribe the Inhabitants as a Civil, Chriſtian, and potent Nation, under the Government of one *Zichmai*, of which *Hackluit* has left us a *Romantick* Story: For thoſe of the Inhabitants, which ſome of our Mariners (touching accidentally there) ſaw, were in Features, manner of living, and all other Reſpects, like the other *Greenlanders*; and many of them were of Opinion, that it belonged to the Continent of *Greenland*. They found very good fiſhing upon the Coaſt, and in their Soundings brought up a ſort of pale Coral, and ſome ſmall Stones tranſparent like Cryſtal: They call'd it *Weſt England*, and one of the higheſt Mountains *Charing-Croſs*.

ENGLISH VOYAGES
TO
The *Eaſt*, *Weſt*, and *South* Parts
OF
AMERICA,

WITH
Their Land and Sea-Fights and Victories over the SPANIARDS:
ALSO
The many ſtrange and dangerous Adventures of ENGLISHMEN amongſt the AMERICANS.

LIB. V.

CHAP. I.

An Account of the ſeveral Voyages undertaken and perform'd by the Right Honourable George *Earl of* Cumberland, *in perſon, and at his own Charge, or by his Direction. Collected out of the Journals and Relations of ſeveral credible perſons, who bore a part in thoſe Expeditions.*

The Earl's Firſt Voyage.

1586. THE Fleet ſet out by this Noble Earl, for his firſt Voyage, conſiſted of three Ships and a Pinnace; the *Red Dragon* (Admiral) of 260 Tun and 130 Men, commanded by Captain *Robert Widrington*; the *Bark-Clifford*, (Vice-Admiral) of 130 Tun and 70 Men, Capt. *Chriſtopher Liſter* Commander (the ſame who was taken Priſoner at the famous Battel of *Alcazar* in *Barbary*, in which three Kings were kill'd); the *Roe* (Rear-Admiral) commanded by Capt. *Hawes*, and the *Dorothy* Pinnace, formerly belonging to Sir *Walter Rawleigh*.

Jun. A. D. 1586. Setting ſail from *Graveſend*, and directing their Courſe toward the *South* Seas, they fell with the Coaſt of *Barbary*, Sept. haling in with the Road of *Santa Cruz*, after which they anchor'd in *Rio del Oro*.

Rio del Oro. Searching up the River, they found it fourteen or fifteen leagues up as broad as at the mouth, which was Nov. ſome two leagues over. From hence they ſail'd to *Sierra Leona*, where they made no long ſtay, but having refreſh'd, went on for the Coaſt of *America*.

They fell in with the deſir'd Shore in 30 gr. 40' S. L. and had calm temperate Weather. A little ſhort of the *Rio del Plate* they had the fortune to take a ſmall *Portugueſe* Ship (tho' her Lading was only Negroes) from which they had an account of five Towns (each of ſeventy Houſholds or more) that were ſeated upon that River; *Buenos Aeres*, 50 leagues up the River, the reſt 40 or 50 leagues more above each other, of which *Tuccaman* the uppermoſt was 230 leagues from the entrance: This laſt place afforded ſtore of Corn, Cattle and Fruits, but neither Gold nor Silver, and conſequently no temptation to a Viſit there. 1586. Jan. Towns on the *Rio del Plate*.

They had the ſame Adventure very quickly repeated with another *Portugueſe* Ship, the only Riches of which (beſides *Slaves* and a few *Friers*, a ſort of Luggage which they had no mind to be cumber'd with) were Beads and Pictures, and other ſpiritual Trinkets, to the value of a thouſand Ducats; that is, they coſt ſo much, tho' not worth ſo much to the (leſs ſuperſtitious) Devotion of our *Engliſhmen*. This Furniture was deſign'd for a new Monaſtery, and was actually carrying thither at that time, when it unhappily fell into the hands of People that ſo little underſtood the true Worth and Excellency of it. A Prize of Beads and Pictures.

Apr. A.D. 1587.

Camana Road

Take the Portugal Ships, and land their Men.

After a Conſult had, they ſail'd from theſe parts to the Coaſt of *Braſile*, with which they fell in about 16 gr. Lat. and water'd firſt in the Road of *Camana*, and afterwards came to an anchor before the Town of *Baya*: Here they found a Fleet of *Portugal*, conſiſting of eight or nine Ships, four of the beſt of which they quickly forc'd the *Portugueſe* to relinquiſh, and tow'd them forth in ſpite of all the thunder of great and ſmall ſhot from the ſhore and the reſt of the Ships. They landed too, and got Relief from the ſhore, tho' the *Indian* and *Portugal* Troops were drawn up to oppoſe 'em. The leaſt of all the Prizes was 130 Tun, tho' the moſt they got by taking of them was ſome great Guns, and forty or fifty Buts of Wine.

A Prize of Sugar and Meal taken.

Sail for England, Sept.

Another *Portugueſe* Ship of 120 Tun, a little after this, (tho' ſhrewdly againſt her will) ſupplied them with a good ſtock of Meal and Sugar: And with theſe little Adventures did the Voyage ſoon come to a cloſe, for they never purſued it ſo far as the *South Seas*, the principal reaſon of which ſeems to be the uneaſineſs of ſome of the Company, their wearineſs of the Sea, and earneſt deſire to ſee their native Country again. And this they did after ſome loſſes of a Ship, Men, and Goods by Fire; all the reſt of the Fleet put in ſafely at *Plymouth* Harbour.

The Earl's Second Voyage.

The Commiſſion bore date Octob. 4 A. D. 1588.

AMongſt the many of the *Engliſh* Nobility that put themſelves on board Her Majeſties Fleet upon the approach of the *Spaniſh* Armada, the Earl of *Cumberland* was one, and one of the moſt forward and reſolute; and 'twas his good ſervice done there that gave occaſion to this ſecond Voyage: The Queen was ſo well pleas'd with what he had perform'd, that ſhe ſign'd him a Commiſſion to go forth again, and purſue his intended Voyage to the *Southern* parts, and for his greater honour and encouragement lent him one of her own Royal Fleet (the *Golden Lyon*) for his Admiral. This Ship the Earl victual'd and furniſh'd at his own charge, and ſet out attended with a conſiderable number of our *Engliſh* Gentlemen; but the Succeſs was not at all anſwerable to the Preparations, neither did the Earl this time put his Project in execution: The blame is laid principally at the Door of the Winds and Weather, which, after a great loſs of time, at laſt wholly diſabled them from purſuing their Voyage any further; neither were they any other ways recompenc'd for their Coſt and Trouble, than by one ſingle Prize, a Ship laden with Merchandize for *Spain*, which they took in the narrow Seas and ſent home.

His Third Voyage.

BUt the Earl, who was not to be hector'd out of his Reſolution and Deſign by noiſie *Winds* and *Storms*, procur'd Leave of Her Majeſty to make a third Attempt; and beſides that, he obtain'd alſo a Ship of the Royal Navy call'd *The Victory*; this, together with two ſmall ones more and a Carvel, compos'd the Fleet for the third Voyage: *The Victory* (Admiral) was commanded under his Lordſhip by Capt. *Lyſter*; the *Megg*, by Capt. *Will. Mounſon*, Vice-Admiral; the *Margaret*, by Capt. *Edward Careleſs*, Rear-Admiral, and the Carvel by Capt. *Pigeon*; the whole was furniſh'd with four hundred Mariners and Soldiers, and all at his Lordſhip's own expence.

June, A.D. 1589

French and Dutch Ships taken.

August.

1589.

Spaniſh Ships taken by the Engliſh Boats

They ſet ſail from *Plymouth*, and within a few days met with ſome *French Ships* laden with Fiſh from *Newfoundland*, two of which (together with the *Margaret*, which could not bear the Sea) were ſent for *England*. Their next Encounter was with a Fleet of *Dutch*, who exchang'd ſome few Shot with them, and then yielded both themſelves and all their Effects on board into their hands: This Action being over, they ſail'd for the *Azores*. Being within view of St. *Michael*, they put out *Spaniſh* Colours, the better to facilitate the execution of the Plot which was form'd againſt the Ships in the Road; there were four of 'em in all, and his Lordſhip reſolv'd that very night to cut their Cables and bring them all off, which he accordingly perform'd before the *Spaniards* were any way ſenſible of their danger. But tho' they were thus ſurpriz'd that they leap'd a good number of them into the Sea, and by that means with a great deal of noiſe and outcry alarm'd the Town, and put them into a poſture of defence, they made ſeveral random ſhots at the Earl's Boat in the dark, but they all miſs'd him, and he carried off his Prize. They were laden chiefly with Wines and Oyl; but another which the Pinnace took had, beſides thirty Tun of *Madera* Wines, good ſtore of Woollen Cloth, Silk and Taffata's.

Notice being given that the *Spaniſh* Carracks were at *Tercera*, (a good Booty, and worth looking after) they came up into the Road of *Fyall*, where they found indeed a parcel of Ships at anchor, but the main Prize was gone ſome days before. It was a ſtrange thing to ſee here at how ill and poor a rate theſe *Spaniſh* Ships defended themſelves, and how eaſily they ſuffer'd themſelves to be made a Prey of: A few *Engliſh* Boats attack'd a Veſſel of 250 Tun, and became Maſters of her; nay, tho' ſhe was ſupported by the great Guns of the Caſtle, which play'd upon the Boats all the time as well as her own, yet ſhe could not preſerve her liberty, but was carried away with a deal of Triumph. The ſame Boats alſo went afterwards into the Road, under the very Noſes of the *Spaniards*, and brought out a parcel of ſmall Ships come from *Guinney*, laden with Elephants Teeth, Grain, Cocao's, and Goatskins, the moſt of which were ſent away for *England*.

Town of Fyall taken.

His Lordſhip having miſs'd the Carracks, reſolv'd upon another Prize, which was the Town of *Fyall* it ſelf, and here the *Engliſh* were put to very little coſt and trouble for the getting this into their hands, for the *Spaniards* all ran away, both out of the Town and Fort too; they did not ſtand to make any diſpute or oppoſition, but let them come quietly and take poſſeſſion. The Religious Houſes and Churches were ranſom'd at 2000 Ducats, which being honeſtly paid, the Guard that was ſet upon them to preſerve them from damage as honeſtly quitted them again; beſides this, they took out of the Fort fifty eight pieces of Iron Ordnance. But they had the ill luck to miſs the rich *Spaniſh Weſt-India* Fleet, which they had juſt a ſight of as 'twas putting into *Angra* Haven at *Tercera*, a ſure and a ſafe ſhelter, ſo well guarded with a Fort and Caſtle, that they were not to be attempted at that time.

Spaniſh Prizes.

After this they ſail'd to St. *Michael's*, and thence to St. *Mary's*, where they took a Prize or two laden with Sugar from *Braſile*, theſe were ſent home for *England* with the *Megg*, while the Earl with the reſt held their Courſe for *Spain*. In the way they took two Prizes more, one of which was one of the *Weſt-India* Fleet that had before put into the Harbour of *Augra*; ſhe was a Ship of 400 Tun, and beſides Sugars, Cochinele, and other Commodities, had ſome ſtore of Silver too.

Sad Diſtreſs at Sea.

Now they made the beſt of their way home, and Capt. *Lyſter* was diſpatch'd beforehand with the rich *Indian* Prize, but he was wreck'd upon the Coaſt of *Cornwall*, and all the Company drown'd, except five or ſix. The Earl himſelf, with his Company, endur'd Miſeries far worſe than drowning, in a long and tedious want of freſh Water; their ſtock being ſpent, they came to Vinegar, and of that the allowance was but three ſpoonfuls a day to a man; there was nothing elſe remaining to quench their Thirſts but this, except the drops of Rain and Hail that fell from Heaven, and which they greedily catch'd in Napkins and Sheets ſpread out for that purpoſe; ſome there were that (not able to bear ſo extream a Drought) went to the great Ocean for relief, and drank themſelves to death with ſalt Water.

In all theſe Extremities the Earl maintain'd his own equal Temper and good preſence of Mind, tho' he avoided no part of the Diſtreſs that others endur'd, but ſhar'd throughout the whole of it equally with the pooreſt Seaman. However, at laſt all theſe Difficulties were overcome, an *Engliſh Ship* brought him a ſeaſonable Relief, which laſted till he came to *Ireland*, and there a good Refreſhment prepar'd them all for a more comfortable Voyage to *England*.

His Fourth Voyage, A. D. 1591.

THE Fleet fitted out for this Voyage conſiſted of five Ships; the *Garland*, Admiral, (one of Her Majeſties) of 600 Tun; the *Sampſon*, Vice-Admiral, (a Ship of the Earl's) of 260 Tun; the *Golden Noble*, Rear-Admiral; the *Allegarta*, and a Pinnace call'd the *Diſcovery*.

The Adventures of this Voyage were ſo unfortunate, that it was at an end very quickly after it had a beginning; in ſhort, it gives us an account of no memorable Tranſaction either by Sea or Land; we only hear of the taking of two rich *Spaniſh* Ships, which were alſo ſoon after retaken by them, and ſeveral of the *Engliſh* Priſoners into the bargain.

Theſe

1591.

Theſe Misfortunes oblig'd the Earl to a ſpeedy return for *England*, where he quickly began to make preparation for more lucky Adventures.

His Fifth Voyage, A. D. 1592.

IN the next Voyage his Lordſhip made uſe of none of Her Majeſties Ships, as he had done before, but hir'd of the Merchants a ſubſtantial Ship call'd the *Tyger*, of 600 Tun, which together with the *Sampſon* and the *Golden Noble*, and two ſmall Ships more, were all that went out at this time.

The Earl returns for *London*, and ſubſtitutes Capt. *Norton*.

He intended to have commanded himſelf in perſon this Expedition, but being ſo croſs'd with Winds that three months Proviſions were ſpent in Harbours before they could get to the Weſtward of *Plymouth*, his Lordſhip having hereby loſt the main Deſign of his going, (which was the taking of the outward-bound *Spaniſh* Carracks) he transferr'd the chief command to Captain *Norton*, with Inſtructions to go for the *Azores*.

Chaſe the *Santa Cruze*, a Carrack.

Before they reach'd thoſe Iſlands, one Ship of the Fleet was oblig'd to return home, to deliver in a good *Portugueſe* Prize which ſhe had taken; the reſt water'd and refreſh'd at the *Azores*, and putting out to Sea again, they got ſight of the *Santa Cruze*, a rich *Portugal* Carrack, which, as ſoon as ſhe had ſight of them, made all the haſte imaginable for Port *Augra* in *Tercera*; but in her flight ſhe was met by another *Engliſh* Ship, which lay in ambuſcade before, and now popp'd out juſt croſs her way: In this diſtreſs, to avoid the *Engliſh* behind and the *Engliſh* on one ſide, ſhe was forc'd to alter her firſt courſe, and endeavour to recover the Road of *Lagwna*, on the South end of *Flores*. A Storm ſo diſtreſs'd our Ships that they could not come up to her that night, and conſequently occaſion'd their loſs of her and all the valuable Effects on board her, for by the next day the *Portugueſe* had landed as much of the Goods as was poſſible, and (to prevent her falling into the Enemy's hands) ſet her on fire; but they were ſo cunning, notwithſtanding their haſte, as to load all the great Ordnance of her, ſo that when the Fire came at 'em, they went off without the help of a Gunner: This was good ſport to the *Portugueſe*, but it did no great harm neither to the *Engliſh*. However, our Men, who with good reaſon concluded that the Prey, which was not to be taken on the Water, was to be found aſhore if they landed quickly, did ſo, tho' with prodigious difficulties, and made themſelves Maſters both of a good part of that and the Town likewiſe, which was by that time entirely forſaken of the Inhabitants.

The Carrack fired.

Town taken.

The *Madre de Dios* taken.

But there was another great Carrack, call'd the *Madre de Dios*, yet reſerv'd for them, which after a month or two's expectation and attendance fell into their hands. This Veſſel being large, well furniſh'd with Men, and richly laden, coſt them ſome pains and trouble before they could perfectly conquer her; both *Portugueſe* and *Engliſh* fought like Dragons, the one to defend, the other to obtain ſo great Riches: The *Engliſh* were like to be blown up too after the diſpute was over, being upon the hunt after Plunder, every man with his lighted Candle in his hand, for a Cabbin (in which a vaſt quantity of Powder was laid up) was ſet on fire, and if it had not been preſently extinguiſh'd by the great Induſtry and Courage of Capt. *Norton*, it had reach'd the dreadful heap and carried away both the Plunder and Plunderers together into the Air.

Diviſion of the Booty.

After all was ſecur'd and in their own hands, there was no ſmall contention about dividing the Spoil, for there were ſeveral other Ships in conſort with them in this action, and all pretended to a ſhare; but then theſe Ships being moſt of them Her Majeſties too, the Pretenſions were the ſtronger, and the Claim more undeniable. The Earl of *Cumberland*'s Part (in proportion to his Charges) muſt needs have been very conſiderable, perhaps a million or two, but then becauſe he did not act in perſon, and his Commiſſion had not provided for the caſe of his return, therefore the matter was determin'd ſo, that he ſhould ſtand to the Queen's Mercy and Bounty; ſo his Lordſhip came off with about 36000 *l.* and this not as a juſt Share, but free Gift and Favour; but how much he got by this Expedition is eaſie to be counted by them that know the Charge of ſetting out and maintaining a Fleet.

1593.

His Sixth Voyage, A. D. 1593.

THE Ships that went out now were, the *Golden Lyon*, Admiral; the *Bonadventure*, Vice-Admiral; the *Anthony*, of 120 Tun; the *Pilgrim*, of 100; and beſides theſe, the *Chaldon* and the *Diſcovery*.

Two French Ships.

His Lordſhip, who commanded in perſon this time, having taken two *French* Ships of very great value, was quickly call'd upon by an Armada of the *Spaniards* to ſtand upon his guard, and look to his own Fleet; for it muſt be noted, that the *French* and *Spaniards* being then united in a League together, as their Ships were treated both alike by ours wherever they met 'em, ſo they were mutually concern'd in each other's Loſſes, and accordingly endeavour'd to revenge 'em. This Armada lay about *Flores*, but the Earl, who knew their number and force to be vaſtly ſuperiour to his, kept out of their way, his Deſigns being no otherwiſe for fighting than as fighting was a means either to preſerve himſelf or take Prizes from the Enemy. But a deſperate Fit of Sickneſs forc'd his Lordſhip to return home, while the *Anthony*, the *Pilgrim*, and the *Diſcovery* proſecuted their Voyage to the *Weſt-Indies*; they ſhap'd their Courſe for the *Antilles*, and fell in with the Iſle of St. *Lucia*, where they refreſh'd a few days, and concluded upon ſeizing the Pearl-Fiſheries of *Margarita*.

Earl returns.

Fiſheries of *Margarita*.

Theſe Fiſheries contain about ſix or ſeven ſmall Villages, which they go to by turns, ſo that as the Trade fails in one place, they remove immediately to another; but the Pearls are always, for ſecurity ſake, carried every month to the Town of *Margarita*, which lies three leagues from the Water-ſide. Our Men kept out of ſight all day long, for fear of diſcovery, but at night landed and march'd to two of the Fiſheries, which were both empty, ſo that they had e'en loſt their labour if a *Spaniard* had not come thither by chance in a Boat, but ſeizing him, they made him their Guide to the other Fiſhery, where the Trade was driving at that inſtant: The two Captains march'd by land with 28 Men, and the Boats follow'd them upon the Water; and tho' this Army was ſo very ſmall, yet they did not ſcruple to divide themſelves into three ſeveral bodies, in order to make three ſeveral attacks at once. The *Spaniards* at firſt thought the Governour had put a trick upon 'em, and given a falſe Alarm to try their readineſs and courage, but quickly finding there was no jeſting in the buſineſs, but all was in good earneſt, they ran away in good earneſt too, and ſhelter'd themſelves in the Woods. The *Engliſh* took about 2000 *l.* worth of Pearl, beſides ſome other Pillage, and ſo breaking all the *Spaniards* Weapons they found there, march'd off without diſturbance to ſome place of repoſe for that night; in the morning they went on board the Fiſhing-boats, to eat the Oyſters the *Spaniards* had taken the night before, the Pearl in which (no doubt) paid them well for the trouble of opening.

Pillag'd by the *Engliſh*.

The Town ranſom'd.

After this Expedition they made away to their own Ships again, and then ſail'd up to the Town it ſelf, demanding Redemption-money of the *Spaniards* for their Houſes and Boats, which otherwiſe they threatned immediately to fire; ſo the buſineſs was ſoon made up, and they compounded for 2000 Ducats in Pearl.

Spaniards give notice.

Theſe Loſſes were irrecoverable, and all the kindneſs the *Spaniards* could now do themſelves was to prevent the like for the future, for which purpoſe they ſent about Intelligence from one place to another, giving notice of the *Engliſh*, and warning all the Inhabitants to be in a poſture ready to receive 'em when they came.

This News went ſo faſt about, and alarm'd the People to that degree, that ours were mightily fruſtrated in their Deſigns upon ſeveral other places: Thus at *Cumana* they found 'em upon their guard, and coaſting along *Terra Firma*, at *Rio del Aache* the *Spaniards* were not only in expectation of them, but had upon that ſcore ſent away all their beſt Goods to the Mountains. Being therefore diſappointed in this manner, they ſail'd to *Hiſpaniola*, Cape *Tuberone*, St. *Nicholas* Bay, Fort St. *Plat*, &c. and from thence to *Mona*, and ſo to the Iſle *Savona*.

Savona Iſle.

This Iſland is very low, and deſtitute of all Springs of Water, but towards the Sea 'tis all a very fine ſmall Sand; this ſerves inſtead of a Filtre to the Sea-Water, for by paſſing thro' it all the Salt is ſtrein'd off and left behind, and the Water comes forth upon the ſurface a clear and well-taſted Fluid.

Not above twenty paces from the Waſh of the Sea they dig holes in the Sand, and fixing therein a Hogſhead (the Head of which is knock'd out) the Water thus transform'd riſes up into it, and that in quantities ſo con-

1593. ſiderable too, that it may be ſaid, tho' that Iſland has no Spring or Fountain, yet it does not want good Water.

The River of *Socko*. From hence they ſail'd to the River of *Socko*, about five leagues Eaſtward of S. *Domingo*; and having ſail'd a matter of four leagues up the River, they ſurpriz'd one night ſome of the *Spaniards* great Farm-houſes, for the ranſom of which they had good ſtore of Beeves, *Caſſavi* and other Fruits.

Farm-houſes. Theſe Houſes are places where the poor Slaves keep the great Men's Cattle, make their *Caſſavi* Bread, dreſs their Ginger and Fruits, and do all the Offices of Husbandry. It's obſerv'd, that no Beef, tho' ever ſo good, will keep in theſe parts above 24 hours, unleſs it be firſt ſalted and then dried in the Sun. They cut it into Sides, like
Way of preſerving their Beef. Bacon, leaving nothing of a Bone in it, nor any piece of Fleſh thicker than a Man's Hand; it muſt be firſt ſearch'd with a Knife, then rubb'd over with Salt, and having remain'd ſo twelve hours, it muſt be expos'd to the Sun, and then four hot days drying will preſerve it ſufficiently. Our *Engliſh* laid ſeveral of theſe rich Farms under Contribution, as they did alſo a great Sugar-place upon the River *Marracana*.

From theſe parts they ſail'd to St. *Domingo*, *Jamaica*, and *Cuba*, at either of which places little or nothing was perform'd. At *Cuba* they parted, the *Pilgrim* going from thence directly for *England*, and the *Anthony* and the Frigate to the Bay of *Honduras*: Theſe two had the luck to meet with ſeven *Spaniſh* Ships in the Road of *Porto Cavallo*, the leaſt of which was 180 Tun; they fought with them a day and a night, the reſult of which was, that the *Spaniards* quitted their Ships, (which were now grown too hot to hold them) and in their Boats got to the ſhore:
Spaniſh Ships burnt. By the Admiral's order alſo the Rudders were carried aſhore, that if they were taken they might not ſail away with 'em; ſo that 'twas neceſſary either that the *Spaniards* ſhould redeem 'em, or the *Engliſh* burn 'em; and they refuſing to do the former, our Men did the latter to all of 'em except the Admiral, which they brought home laden with the beſt Goods pick'd out of all the reſt. They threw all the Ordnance overboard, (two or three Braſs Guns only excepted) in hopes ſome *Engliſh* might be the better for 'em afterwards. Tho' this Action took them up ſome time, yet they made ſhift to get home the next day after the *Pilgrim*'s arrival.

The Seventh, Eighth, Ninth, Tenth Voyage, A. D. 1594. 1595. 1596.

THE Accounts of theſe Voyages being very ſhort, and the Adventures related in them likewiſe of no very great importance, we ſhall throw them all together into one general Account, in which the Reader ſhall find whatſoever material paſſages they contain.

The Fleet of the ſeventh Voyage conſiſted of the *Royal Exchange*, (Admiral) of 250 Tun, commanded by Capt. *George Cave*; the *Mayflower*, of 250, (Vice-Admiral) commanded by Capt. *William Anthony*; the *Sampſon*, (Rear-Admiral) by Capt. *Nicholas Dainton*; and beſides theſe, a Carvel and a Pinnace.

The great Action perform'd at this time was, their fight with, and almoſt ruining of, the beſt Carracks belonging to the King of *Spain*; the one was of 2000, and the other of 1500 Tun burthen, and the former not a little weighty neither in Pearl, Jewels, Silks, Druggs, and the like: Had they taken this Prize, they might have gone home contented, without looking after any other, but the Attempt did not ſucceed ſo far as that came to; the *Spaniards* indeed loſt their Treaſure, but the *Engliſh* did not get it; the Ship was conquer'd, but the Victors could not lead her away in triumph, in that they ſet her
Carrack fir'd. on fire, and brought her to the laſt extremity, while the deſperate Defendants threw themſelves and their Treaſure overboard; ſome of the chief ſtript themſelves of their rich Chains and Jewels, and as naked as ever they were born, adventur'd to ſwim towards the *Engliſh* Ships for Quarter, but of all them there were but two Men of
Diſtreſs of the *Spaniards* Quality, which were brought into *England*, and afterwards ranſom'd: And the truth on't is, they did not take the right courſe to have favour ſhew'd 'em, for in order to that they ſhould have ſwam with ſome of their Pearl and Jewels at leaſt about 'em, the Seamen would have been careful of ſuch precious Lives, and have ſeen that they ſhould not have gone to the bottom, if there had been any way poſſible to keep them above water. 1596.
The whole number thus loſt and deſtroy'd amounted to Numbers loſt eleven hundred Men, abating the two only before mention'd; our loſs (beſides ſome common Soldiers) was, the Vice-Admiral kill'd outright, and the Admiral himſelf mortally wounded.

In the three following Voyages the chief Ships employ'd by the Earl of *Cumberland* were, the *Scourge*, of 900 Tun, newly built by himſelf; the *Aſcenſion*, of 300; and the *Dread-nothing*, a Ship of the Queens. Here was no Prize taken worth the mentioning, except a *Spaniſh* Ship laden with Sugars, and three *Dutch* Ships with Wheat, Copper and other matters for the King of *Spain*'s ſervice alſo. Some Encounters there were with the *Spaniſh* Ships too, but ſuch as ended in not much leſs loſs and diſadvantage to us than to them.

The Eleventh Voyage, A. D. 1596. *March.*

THIS Voyage is the moſt conſiderable of any we find perform'd by the Earl, whether we conſider the Contents and Tranſactions of it, or the number of the Ships that compos'd his Fleet; there went out at this time in all no leſs than twenty ſail, ſeveral of which were his Lordſhip's own Ships, and the reſt furniſh'd chiefly at his charge: There was beſides a noble train of Commanders and other Gentlemen, the principal of whom (next to the Earl, who commanded in perſon) was Sir *John Barkley*, his Lieutenant-General; as for the reſt, we ſhall not trouble the Reader with the particular Names either of Men or Ships, unleſs ſome extraordinary Action in which they ſignaliz'd themſelves, lay us under an obligation of ſo doing.

They had not been at Sea long before they had an account of five Carracks that were ſpeedily to ſet ſail, and thoſe ſo very rich, that none ever went to the *Indies* richer than they; but theſe were not all neither, for twenty five Ships for *Braſile* were alſo in company with them. Our Fleet had no ſooner conſulted upon this matter, and caſt in what order they would lie, and how they would attack and fight the *Spaniards*, but comes another ungrateful Story that knocks all theſe great Deſigns and Preparations in the head, and diſcharges them from any farther trouble of conſulting about that affair; for the *Spaniards* had notice of the Earl's being abroad with a good Fleet, nay, more than that, ſome of their Spies had ſeen it, and were ſure on't; for the firſt Report having given them the alarm, they diſpatch'd Carvels of Advice every where up and down, who never left ſearching till they had found what they look'd for.

And now the Earl was not to expect the Carracks out at Sea, but rather to find 'em lock'd up in ſome ſure Port, where 'twould be next to impoſſible for him to attempt them; and this was the caſe, for (to put all out of doubt by ocular demonſtration, as the *Spaniards* did) he himſelf ſaw 'em riding in the Bay of *Wiers*, within the command of the Caſtle of St. *Julian*, which had above a hundred pieces of Ordnance to bid an Adverſary welcome that ſhould be bold enough to come thither to receive it; beſides, the Wind being ever ſcant for coming out of the Bay again, (if a man did venture in) and for the moſt part hanging much Northerly too, it would be impoſſible in coming out to avoid ſailing cloſe by their Platforms: This was the reaſon that the Earl ſpent no longer time in attending upon the *Spaniards* in thoſe parts, but ſet ſail with his whole Fleet immediately for the *South Cape*.

Having made the *Canaries*, they came up to the Iſland *Lancerota*, (one of the ſix great ones) and anchor'd in the Road which bears E. S. E. of the Iſland. Here notice was given, both by *Engliſh* and *Spaniards*, of a certain Marqueſs who commanded both in this and the next Iſland *Forleventura*, to whom it would be worth while to make a viſit; he was prodigiouſly rich, and Lorded it in theſe Iſlands like an abſolute Soveraign. The Earl himſelf was ſick, but five or ſix hundred good Soldiers (appointed for this ſervice) were landed, under the command of Sir *J. Barkley*.

They met with no other diſturbance as they march'd along than what the Natives gave 'em ſometimes, out of their lurking holes and other places of advantage; if any ſtraggled from the reſt of the Company, thoſe ſly Mountaineers would be ſure to aſſault them with their Launces, but then there was no purſuing of them to any purpoſe, for they would run like Bucks, and a man might as ſoon hope to overtake one as the other.

The

Enter the Town.

The Town was at leaſt ten miles from the place of their landing, ſo that the People had time to run away by that time they came, and it ſeems enough too to carry away every thing that was in it but the Houſes, for they left nothing elſe, except a little Cheeſe and ſome Wine: This Wine was extraordinary good, and the Soldiers (who found it ſo) were extraordinarily drunk, to that degree, that had an Enemy been ready to have taken the advantage of the Debauch, the beſt part of 'em might have been knock'd in the head before they were ſober again; but the *Spaniards* (who did not leave that Wine for a Decoy) were far enough out of the way, the *Engliſh* had time enough to recover their Wits, and go look ſomewhere elſe for Plunder; the rich Marqueſs was the Prize they chiefly aim'd at, but there was no doubt but he was ſenſible of their deſign, and would not ſit ſtill at home to be catch'd; and accordingly the Party that was ſent to his Caſtle upon that ſcore had not the pleaſure of ſeeing his Lordſhip, he was not to be ſpoken with there at that time; and it ſeems all his Guards and Servants were of the ſame mind too, for tho' there were near two hundred of them, yet as ſoon as ever our Men were in ſight they all ran away without ſpeaking a word or firing a Gun.

Marqueſs got away.

But the more effectually to diſcover the Bravery of theſe Guards, and the noble Temper of their Hearts, or at leaſt to ſhew what good reaſon they had to run away, we muſt know that the Caſtle was built of ſtrong ſquare Stone, flank'd and fortified moſt advantageouſly, and defended with no ſmall number of Braſs Guns; beſides this, there were abundance of great Stones laid about in places of advantage, to knock out the Brains of the Aſſailants, and the Entrance was rais'd ſo high above the level of the Ground, that 'twas impoſſible for a man ever to get in without the help of a very long Ladder. The moſt experienc'd Commanders that ſaw it declar'd it as their Opinion, That twenty Men might with eaſe have maintain'd it againſt five hundred, only by ſhutting their Door and pulling in the Ladder.

The Caſtle, its ſtrength.

Now 'tis very apparent that theſe men had a prudent laudable care of their Lives in deſerting a place of ſo much danger and ſo expos'd as this: As for thoſe that think any thing to the prejudice of their Reputation and Courage, one may ask them whether they underſtand the Sin of a man's being acceſſary to his own End.

Deſcription of the Town.

The Town conſiſted of ſomething more than a hundred Houſes, very rudely built, for the moſt part of one ſtory, their Roofs flat and ſloaping to throw off the Rain; they were cover'd with Canes and Straw laid upon a few Rafters, and over all a Stratum of Mudd or Dirt, which being hardned by the Sun, was Showre proof.

There was but one Church in it, and that old and tatter'd; it was all one undivided Room, without any thing of a Chancel, or place diſtinguiſh'd from the reſt, only an Altar with its Appurtenances ſtood at one end. There were no Seats for the People, except the Stone Benches that went along the ſides; but to make amends for that, there was this piece of Curioſity obſervable in the Building, that it had juſt as many Windows as Doors, for Doors and Windows were all one, and the Light and the People both came in the ſame way. Of all the Edifices of note, the Friers Convent was prettieſt and moſt convenient; it had fine Gardens and Waters about it, and was every way much ſuperiour even to the Marqueſs's Caſtle it ſelf.

The People.

Their Arms.

The Inhabitants of the Iſland are a ſtrong able-bodied People, very tall, and for ſwiftneſs in running not much ſhort of the wild Beaſts themſelves. Their Arms are only Launces and Stones; when a man preſents a Gun at them, juſt as the Cock is pull'd they fall flat upon the Ground, and when they have heard the report they ſtart up again, and firſt throw their Stones, then their Launces, and ſo run away. Their Senſe is as dull as their Complexion, and their Religion as bad as either; our Men report they found abundance of Pope's Bulls and Pardons in their Houſes, which is enough to prove 'em to be both ignorant and ſuperſtitious.

The Iſland.

Products.

The Iſland it ſelf is ſomething oblong, ſtretching it ſelf out to the N. E. and S. W. 'Tis rather bigger than the *Iſle of Wight*, and is parted in two by a ridge of Mountains, as *Italy* is by the *Apennines*. Theſe Hills are barren, affording nothing but bare Food to the Sheep and Goats that live upon 'em; but the Valleys are ſomething better, for tho' they appear ſandy and dry, yet they yield extream good Wheat and Barley.

The principal Beaſts here are Sheep, Goats, and Aſſes, ſome Kine, a few Camels, but feweſt Horſes, and thoſe of no great ſize.

They have two Harveſts in a Year, one before the middle of *April*, and another about *Michaelmas*. And this is in ſhort an account of the moſt remarkable matters relating to this Iſland and People.

Our People having here had no great ſucceſs, went to enquire after it ſomewhere elſe; and the Deſign being fix'd (for many good Reaſons) for *Dominica*, they ſet ſail thitherwards.

High Hills

In this paſſage they obſerv'd (coming very near the ſhore) the high Hills about *Santa Cruz*, one of which (they tell us) has the fame of mounting higher into the Air than that celebrated one of the *Azores*; the top of it was then cover'd with Snow, when at the bottom the heat was as violent as 'tis in *England* at *Midſummer*. The Iſle (tho' to the Sea a very high Land) was full of fruitful Plains and Vineyards, out of which the King of *Spain* draws every Year 28000 Butts of rich Sack, as 'tis commonly reported: But 'tis pretty ſure, that tho' it be not ſo fine a champion Country as the *Grand Canarie*, yet it is richer in ſome reſpects, of which this is no ſmall Proof, that the King ſeems to be more choice of this than the other, maintaining a far greater Force to defend this than that.

St. Cruz

Stinking Rains.

After they had paſs'd the Tropick, and had the Sun over their Heads, (which they diſcover'd by the loſs of their *Meridian Shadows*) they were perſecuted with guſts of noiſom ſtinking Rain, which fell for a long time together; it brought a ſtench of Sulphur along with it, which was extreamly offenſive to the whole Fleet, but eſpecially to them that were in the Cabins, as for the reſt upon the Decks, they eſcap'd much better: The farther they went from the Sun, the leſs they had of theſe ill-ſcented Rains; they had, 'tis true, wet enough afterwards, but they had it without that hogo of Brimſtone which pierc'd their Noſes before; and indeed this was all the hurt it did 'em, it bred no Diſtempers amongſt 'em, nor made any man ſick, tho' there might have been reaſon enough to expect ſome ill conſequences of that kind to have broke out in the Fleet.

Indians glad to receive the *Engliſh*.

When they were come pretty near the ſhore of *Dominica*, abundance of the *Indians* came out in their Canoes to ſee what they were. Theſe People were at firſt ſuſpicious of their being *French* or *Spaniards*, but being aſſur'd they were *Engliſh*, preſently came on board them and offer'd Pines, Plantans, Potatoes, and other of their Country Commodities, for any Trifles they would exchange for ſuch things. They were moſt of 'em ſtrong well-proportion'd Men, ſharp and ſenſible in their dealings, their Bodies painted over with red, which they were mighty careful to keep on; 'twas for this reaſon that all their Canoes had Skreens againſt the Rain, ſome made of Wicker, others only of broad Leaves; they were afraid of having their Paint waſh'd off, and therefore they took care to defend themſelves in this manner: Thoſe Canoes are commonly of the breadth of one Tree, and ſome of 'em long enough for eight or nine Men to ſit in a row. Their Oars are made in the form of a Battledore, except only that their Palms are much longer than they are broad, growing into a ſharp point with a riſing in the midſt of 'em for a good way; the Shanks of them are every where equally big, and have a croſs Stick at top almoſt like a Crutch.

Canoes and Oars.

A fine Bay.

A Hot Bath.

At the N. W. ſide of the Iſland there's a delicate Bay, large enough to receive a very mighty Fleet; and hard by a Rivers-ſide is a Hot Bath, which diſcharges it ſelf into that River, as the River does it ſelf (within a Stone's caſt) into the Sea. This Bath is as hot as the *Croſs* or *King's Bath* in the City of that Name in our own Country, and 'tis as uſeful too it ſeems to ſick Perſons, for here all the diſeas'd of the Fleet found their Remedy.

A Woody Country.

This Iſland of *Dominica* lies North-weſt; and South-eaſt 'tis bleſs'd with a fat rich Soil, comparable to the beſt Garden-mould in *England*; towards the Sea 'tis vaſtly mountainous, and thoſe Mountains ſo full of Trees that they are like a Wall of Defence to the Country: The Valleys too are very woody, inſomuch that 'tis a wonder how they do to find a Paſſage thro' them; but 'tis not improbable that the Natives leave theſe Outskirts of their Country thus wild and rude on purpoſe for their own ſecurity.

The King.

One of the Captains went up a River with a ſmall Guard to one of the Towns of theſe *Indians*; this Town, as little as 'twas, had a King in it, and him dreſs'd ſomething better too than the moſt part of their wild Majeſties can be preſum'd to be; he had a fine Robe of crimſon Taffata on, a *Spaniſh* Rapier in his Hand, and the Effigies of a Lyon in Braſs hanging upon his Breaſt. As for his Queen and the Noblemens Wives, they ſaw none of them, but his Daughters he commanded into the Room, in Compliment to the Captain, and to dance with the *Engliſh* Gentlemen after Dinner was taken away. The other Women that appear'd were perfectly naked,

and

Cuſtoms of the Country.

and ſeemingly very much aſham'd of being ſo; their Modeſty told 'em they ought not to appear ſo before Men, and eſpecially Strangers, and ſuch as they ſaw very well cloth'd too, and therefore they were very buſie to hide as much of themſelves as was poſſible, when they came into the preſence.

The Cuſtom of this Country allows of *Polygamy*, but puniſhes *Adultery* with a ſevere Death; a Man muſt here have a great care how he enters into any ſort of dalliance with his Neighbour's Wife, for they are very jealous, and that Fire ſeldom is quench'd but by the Blood of him that kindled it. Tho' they have no Clothes, yet they are very fond of having them, and ſeem to ſet a great value upon 'em, and therefore won't ſtick to exchange any of their Commodities for an old Waſtcoat, a Cap, or a pair of Gloves. The Maids in this Country are not ſuffer'd to wear Garters till they are married, and then upon the Wedding-night they have a pair put on, ty'd exceeding hard and ſtrait; whatever the reaſon of this be, 'tis certain that neither Maids nor Wives do want Garters to keep their Stockings from falling down about their Heels. Men and Women wear their Hair of the ſame length, and cut in the ſame faſhion, and they bore their Ears and Lips alike. They have one common place for eating, where (all the Men at leaſt) dine together; the King himſelf ſits in the ſame Room with the reſt, only at the beſt end of it, and accompanied with three or four of the moſt conſiderable Perſons among them. Their Meats are the fine Fruits of the Country, their Bread *Caſſavi*, their Drink *Water*, or ſometimes made of the *Caſſavi*, but they make a better ſtill of their *Pines*, and the beſt of all of *Potatoes*, which is reſerv'd only for the King's Cup.

Deſire to learn the *Engliſh* Tongue.

Theſe People expreſs'd a mighty deſire to learn the *Engliſh* Tongue, and in order to get as many Words as they could, they would point to all the parts of their Bodies in order, and repeat the Names of the ſeveral parts in their own Language, and ſo make ſigns to have it told in *Engliſh*, and when this was once done, they would never reſt till they had the Word that was told them perfectly, or at leaſt perfectly right in their own apprehenſion. One of their greateſt Errours was, in making Diſſyllables of Monoſyllables, thus, for *Chin* they would ſay *Chin-ne*, for *Lip*, *Lip-pe*, and the like.

Virgin Iſlands.

Bird Iſland.

His Lordſhip with the Fleet ſet ſail from *Dominica* for the *Virgin Iſlands*. Theſe are a knot of little Iſlands wholly uninhabited, ſandy, barren, and craggy; amongſt them there is one call'd *The Bird Iſland*, and that from the incredible numbers of Birds found there: There needs no Snares nor other Artifices to take 'em, for a Man may catch with his Hands alone almoſt enough to ſerve a whole Fleet.

Dangerous paſſage thro' the *Virgin Iſlands*.

Here the Earl having landed and muſter'd all his Men, declar'd in a full Aſſembly his deſign of going to *Porto Rico*; and as there were two ways of going thither, either thro' theſe *Virgin Iſlands*, or thro' the *Paſſages*, ſo they concluded rather to take the latter Courſe than the former, as being both the more ſafe and the better known by the Seamen, tho' at the ſame time the other is much the nearer, and ſome of the Fleet had alſo gone it before with Sir *Francis Drake*; but (as was ſaid) this was the more dangerous way of the two, and his Lordſhip choſe rather to be the firſt that took *Porto Rico* than the ſecond that paſs'd the *Virgins*.

Being come without any trouble or danger to the deſired place, (the Iſland of *Porto Rico*) they landed near a thouſand Men, and march'd towards the Town, not leſs ignorant of the right way than they were deſirous to find it: They paſs'd over horrid Cliffs and Rocks, having only a Negro for their Guide, who, if he underſtood the right way, was yet ſo terribly frightned that he had not Sence enough left to tell 'em.

Difficulties the *Engliſh* met with in their march.

Between the Cliffs, on which they were drawn up, and the Iſland on which the Town ſtood, was a little Arm of the Sea not exceeding a Gunſhot in breadth; here the *Spaniards* fired upon 'em from a Fort hard by, tho' without doing any miſchief, but if they had they muſt have endur'd it, for there was no getting over, the Boats having not yet found any landing place thereabouts. At laſt, after a world of toil, they diſcover'd a Paſſage by which the two Iſlands communicated with one another, but 'twas a narrow hobbling Cawſey, which lead to a Drawbridge, and that Bridge was pull'd up; on the other Bank too there was a ſtrong Barricado, and a little beyond that a Fort with great Guns. The Cawſey was made ſo rugged for the purpoſe by the Enemies that our Men choſe rather to wade in the Water than to go there upon dry Ground. Several Pieces of Ordnance and good ſtore of Muſqueteers ſcour'd that paſſage too, ſo that it may ſafely be ſaid the Work was hot, and the Attempt arduous and difficult.

The Aſſault.

Notwithſtanding this the Soldiers preſs'd on, coming up to the very Gate of the Barricado, and with their Bills and Hatchets began to hew it; at the Ports and Coopholes too they were at the puſh of Pike with the *Spaniards*, and when they had broke their own, they ſupplied themſelves with others which they wreſted out of the Enemies hands; but the Tide came in ſo faſt, that if they fought before up to the Knees in Water, now they did up to the middle; and beſides, the Day-light advanc'd as faſt as the Tide, and had the *Spaniards* had the advantage of that all the time of the Engagement, 'twould have coſt the *Engliſh* much more Blood than it did; but it was Night, and ſo they ſhot by gueſs, and not by aim, which was very well for the Troops that came to make this bold aſſault.

Engliſh draw off.

Earl's danger.

Theſe things, together with the Soldiers wearineſs under the burden of the hard ſervice, made 'em retire: As for the Earl, he was carried off before extreamly ill, having fallen into the Sea off from the Cawſey, where (by the weight and incumbrance of his Armour) he was very near drowning. But the next attack was follow'd with better ſucceſs, and indeed becauſe the Deſign was better laid and more politickly carried on; for while a Party of Muſqueteers was employ'd to beat the Enemy from their Ordnance on one ſide, another of Shot and Pikes was ſet aſhore on the other ſide between the Fort and the Town; and the former play'd their parts ſo well, that the latter had a fair opportunity of landing without diſturbance: The iſſue of this was, that the *Spaniards*, after a briſk reſiſtance, were oblig'd to quit their Fort, and leave it to be poſſeſs'd by the *Engliſh*.

Firſt Fort taken.

Town deſerted.

Now their way was clear to the Town of *Porto Rico* it ſelf, and a woody narrow paſſage it was, fit for Ambuſcades and to be guarded by ſuch as don't care to fight in the open Field, but there were no *Spaniards* there to diſpute their march; neither was there any room for a Diſpute when they came to the Town it ſelf, for all the military Men had quitted it, and left only Women and feeble Old-age or (which is as bad) ſick and wounded to keep poſſeſſion. The Refuge the Soldiers had betaken themſelves to was a ſtrong Fort to the Seaward, call'd *Fort Mora*; this was now all their Hope and Confidence, and here they reſolv'd to defend themſelves with the utmoſt Conſtancy and Vigour: 'Tis very likely they intended to do ſo, but Famine and great Guns together (eſpecially when both are very importunate) do often make Men change their Minds in theſe caſes; and ſo 'twas here, for by that time the Ordnance had ſo prepar'd the Walls that the Sun began to ſhine thro' them, and the Soldiers Bellies (for want of Victuals) were grown troubleſom and clamorous, they had quite loſt thoſe ſtiff Reſolutions of maintaining the Fort to the laſt extremity, and were become tractable and ready to yield. First they accepted of a Truce, then a Parley, next they propos'd their own Terms, and laſtly ſubmitted to thoſe offer'd 'em by the *Engliſh*; the ſum of 'em was, *That upon condition of a ſpeedy Surrender, all their Lives ſhould be ſpar'd, the Officers and Soldiers ſhould carry off their portable Arms, and the Earl ſhould provide them a paſſage from the Iſland.* Accordingly the Governour and all his Company (to the number of four hundred) came out, and deliver'd the Keys to his Lordſhip, who immediately went in and erected his own Colours and Sir *John Barkley*'s upon the two Points of the Fort.

Fort *Mora* ſurrenders.

The ſtrength of *Porto Rico*.

This Fort to the Seaward was exceeding ſtrong, and furniſh'd with very brave Ordnance, and thoſe mounted as advantageouſly as could be deſir'd; it's impoſſible that any Ship ſhould paſs that Point to the Sea, if the Fort don't grant her paſſage; and then riding without the Harbour is very dangerous too, ſo that it had all the command upon the Sea imaginable. Beſides this, in the Weſt and by South part of the Town there was a very ſtrong Caſtle, full of all ſorts of Ammunition; and between this and Fort *Mora* another hardy Fortification, that coaſts along the Sea, and beats the Harbour; ſo that conſidering all things, it may well be admir'd how a place of ſuch ſtrength as *Porto Rico* was, fell ſo eaſily into the hands of the *Engliſh*. They loſt two Men, and no more, but one would have expected that the Guns of two or three Forts ſhould have made a larger Bill of Mortality for that Action.

City deſcrib'd.

The Town of *Porto Rico* is fair and well built, having ſeveral large handſom Streets, and Houſes built after the *Spaniſh* manner, ſtrong and neat, and of two ſtories only; 'tis larger than all *Portſmouth* within the Fortifications, and to the ſight much more agreeable. It has a fine Monaſtery and Cathedral, that might be ſaid to be handſom (tho' not like ours in *England*) were it not for the diſgraceful Windows, which are of Canvaſs inſtead of Glaſs; but indeed there is not a bit of Glaſs in all the City, and therefore wherever there ſhould be Windows they have either little wooden Doors or this Canvaſs *Medium*, which is ſomething the more tranſparent and pervious of the two; the only difference is, that the former, when ſhut, make dark night in a Houſe, and the others a ſort of a *Crepuſculum*, which is melancholy enough of conſcience, tho' better too than midnight darkneſs.

Breezes.

Serenas.

The violent heats at this place are very happily qualified by a fine cool breeze, that begins at eight in the morning, and blows on till four or five in the Afternoon; from ſix till the breeze riſes 'tis ſultry hot, and from the time it ends till midnight is the worſt of all the 24 hours. 'Tis reckon'd dangerous and unhealthy being abroad at any of theſe ſeaſons, becauſe of the *Serena's* (a ſort of malignant Dews) that fall and often do miſchief to them that are wet by 'em; they are call'd *Serena's*, becauſe they always fall when the air is calm and ſtill, and without any diſturbance from the breezes.

The Situation of *Porto Rico* is very delightful, for it ſtands upon the brow of an eaſie Hill, and is encompaſs'd very near on three parts by the Sea. The Soil is light and ſandy; the Climate, tho' hot, is otherwiſe reputed healthy (at leaſt to the Natives of it); 'tis true, the Experience of our *Engliſh* did pretty conſiderably confute the pretended Character of its healthineſs, (as we ſhall afterwards ſee) but they were Strangers, and not us'd to the Climate; thoſe that always breath'd that Air were ſtrong and vigorous at the years that Nature ordinarily begins to droop and die away.

Deſcription of the little Iſland whereon the City ſtands.

All the reſt of the little Iſland upon which the City ſtands (which is at leaſt half a league in length) is alſo a very pleaſant fertile ſpot; 'tis ſo full of green, that one may term it one entire Wood; the Trees complain of the want of artful care and dreſſing, yet 'tis hard to find any that languiſh ſo far under the neglect, as to withhold its meaſure of Fruit. In theſe Woods a Botaniſt might walk with pleaſure, and ſee great Varieties before him; Oxen and other Animals may be turn'd in here, and will come forth as fat as Butter to their Owners. But notwithſtanding, there are ſome pieces of Ground that are encloſ'd and carefully dreſt, raiſ'd into Hillocks like our Hop-gardens, and every one of thoſe laden with ſome Fruit or other of the Country.

The beſt Limons and Oranges that can be ſeen almoſt, grow without any manner of coſt or attendance; and then in and about the Town are great ſtore of Cocao-Nuts, which, beſides their excellent Fruit, are an Ornament and a delightful Shade to it.

In this little Iſland there's not any River or Spring of Water, but every Houſe in the City has a large Well, (and ſome two) and theſe are fill'd by the Rain, which is both frequent and plentiful in thoſe parts.

Commodities.

Gold Mines.

The moſt eminent and known Commodities are *Ginger*, *Sugar*, and *Hides*; 'tis certain that there are Gold Mines too, but they are neglected, the Treaſure is kept faſt lock'd up in the bowels of the Earth, and none attempts to dig open thoſe Coffers: The *Spaniards* muſt needs know a very good reaſon for this, ſince there's no queſtion to be made but the Gold of this Country is as amiable and charming a thing as that which comes from the rich Mines of *Peru*: They don't uſe to deſpiſe this Metal at ſuch a rate, and their not attempting to get it here, is a certain proof that 'tis either becauſe they cannot or dare not.

Main Iſland.

Now we muſt paſs over from this little Iſland where the City ſtands, to the great and main Iſland of *Porto Rico*, and make our Obſervations there alſo.

This Iſland lies Eaſt and Weſt, its figure oblong, the length about thirty ſix leagues, and the breadth twenty, and almoſt every where the ſame. At the Weſt end the two Corners do jut out ſo far as to make a goodly Bay betwixt 'em, into which a large River would diſcharge it ſelf, but cannot, being hinder'd by the Sand which the Sea throws up in the mouth of the River.

The Rivers.

The moſt remarkable Rivers are *Toa* and *Baiamond*, both which run into the City-Harbour; the former is much the bigger, and falls more with the Weſt of the City, the latter with the South-weſt part of the ſame. *Toa* riſes out of a Mountain call'd *Guiamo*, on the South ſide of the main Iſland, and about fifteen or ſixteen leagues from the Town to the Eaſtward; from this Mountain it runs Northward in one great ſtream to the Mountain *Carvas*, and there it parts it ſelf into two Rivers, the one of which runs to *Luiſa*, a Town ſix leagues to the Eaſtward of *Porto Rico*, and the other (as before ſaid) to *Porto Rico* it ſelf, where it mingles with the ſalt Water in the Harbour. *Baiamond* has its riſe betwixt the diviſion of the two ſtreams of *Toa*, from whence running a ſort of a North-eaſterly courſe, it carries it ſelf to *Porto Rico* Harbour. Beſides theſe, there are Rivers and Rivulets, Springs and Fountains, without name or number, only this is to be obſerv'd, that moſt of thoſe that run Northerly have the names of the Towns and Villages that are ſituated by 'em; for beſides *Coama* River, that riſes in the County of *Coama* and runs into the South Sea, and beſides that on which St. *German* (otherwiſe call'd *Salamanca*) is ſituated, towards the Weſt end of the Iſland near Cape *Rexo*; beſides theſe, I ſay, all the others of any note run to the Leeward of the Iſland, and fall into the Northern Sea: As, firſt and next to *Porto Rico* to the Weſtward you have the River (and Town) of *Sabuco*, next to it *Guiamo*, then the *Recibo*, betwixt which and the *Languada* is another River whoſe name our Relaters could not tell: This River *Languada* (which alſo gives name to the Weſtern end of the Iſland, where Sir *Francis Drake* water'd) is next to the Bay choak'd with Sand, of which mention was made before. In this ſame Bay, at the North-weſt point, is the River *Gawaraba*, which the violence of the Sea has made unfit for Navigation; ſo that the paſſage to St. *Domingo* and other Leeward parts of the *Weſt-Indies* is moſt commonly from the *Languada*, that is when the People of that Weſtern end of the Iſland have any buſineſs that way.

Gold to be found in the Rivers of *Porto Rico*.

Now all theſe Rivers in general are very rich in Gold, and a man may ordinarily find it there as ſoon as he looks for it; and therefore one of the *Spaniards* plainly told the Earl of *Cumberland*, that he could not thruſt a Spade into any of thoſe Rivers, but he would fetch out Gold; and Experience put the truth of this Report out of doubt, for when a parcel of the Gravel was taken up, after waſhing away the Sand and Duſt, there were Gold-grains left behind, and a good quantity too in proportion to the Gravel.

The Soil.

The Soil of this Iſland is a fat black Mould, and at two foot deep you have a Stratum of reddiſh Clay, which is an infallible mark by which our *Engliſh* Graſiers know their battle and feeding Grounds. The Graſs and Herbage is every where exceeding rank and high, wanting only good ſtore of Mouths to overcome that luxuriancy, and reduce it to that degree of fineneſs moſt commended with us in *England*.

The Iſland has all over a pleaſant variety of Plains, Valleys, and Hills, amongſt which latter there is a very high one call'd the *Loquilla*, which (they ſay) is enrich'd with Gold Mines: Moſt of 'em indeed have the ſame character with the Rivers, namely, to yield this noble Metal; a happy Country for a covetous Man, who may here, either by Land or Water, meet with the ſatisfaction of his deſires.

Beſides the large Plains upon which the Flocks and Herds do roam about, (with ſuch an uncontroul'd liberty that they do almoſt grow wild) there's abundance of fine champion Ground taken up with their *Stanſies* and *Ingenio's*, that is, their Ginger and Sugar Plantations.

Ingenio's and Stanſies.

The *Ingenio's* are commonly upon ſome River, or near ſome marſhy wateriſh places, becauſe the Sugar-canes proſper beſt in a Ground of that nature; and not only for that reaſon, but alſo becauſe they have occaſion for Water for the uſe of their Mills, tho' in many of their Mills they uſe no force for the turning of 'em, but only that of Men and Horſes. The *Stanſies* are generally in the more inward parts of the Country, and yet they deſire a convenient nearneſs to ſome River or other, upon account of the more eaſie tranſportation of the Ginger to *Porto Rico*, from whence they diſpatch that and other Commodities for foreign Countries.

Animals.

Beeves, great plenty of 'em.

Amongſt the Animals ſerviceable to human life which this Iſland affords, there is of none ſo mighty a plenty as of Beeves; the numbers of them are almoſt incredible, and 'tis affirm'd for a truth by the Natives, that one rich *Spaniard* alone, for his ſhare, could ſhew 12000 head of this ſort of Cattle. This was in the Weſterly parts of the Iſland too, which are reckon'd far unfitter for feeding than the Eaſterly; and if the worſt and pooreſt Ground be able to produce and maintain at that rate, what then is the richeſt able to do? Upon this ſcore 'tis alſo ſaid that they value the Hides of theſe Creatures far more than the Meat it ſelf, and therefore they won't be angry with any man that kills for his own neceſſity, provided he has but ſo much honeſty as to bring the Hides home to the right owner: The Hides indeed are one of the grand Commodities of the Iſland, and conſidering that they have ſuch vaſt numbers of Cattle, and alſo that they are ſo very large and fair as they are, 'tis eaſie to imagin that they make good ſound profit this way. The very Kine themſelves are (as to all their dimenſions) comparable to our *Engliſh* Oxen.

1596.

Horſes.

But the Horſes of this Country are as much worſe than ours as their Beeves are better; they have neither the graceful aſpect, the noble ſtature, nor the eaſie motion of ours; they are all a parcel of dull heavy trotters, fit only for thoſe vulgar hackney uſes to which they are generally put.

Sheep and Goats.

The Sheep and Goats are not very numerous, tho' there are Flocks of the one and Herds of the other ſort to be ſeen up and down; 'tis not that the Iſland does not afford 'em a ſufficient maintenance, but there is another reaſon, particularly relating to the Sheep, why there are ſo few of them; the buſineſs is, that there are vaſt troops of wild Dogs that live in the Woods, and when their Livelihood fails 'em there, they ſally out upon the Flocks of Sheep, and ſupply their wants that way. What they generally live upon are, the Crabs that are found in thoſe Woods in great numbers, and have their Holes or Berries there as Coneys have: Some of thoſe Crabs are black, and very ugly to look on, others of a much brighter colour, and theſe they ſay are good meat enough, tho' the Dogs make no diſtinction between black and white, but devour all they light on.

And then when Crabs grow ſcarce, or they weary of that ſort of Food, they go a Mutton-hunting, as was ſaid before; and thus between the Woods and the Plains they make a ſhift to pick up a Livelihood. As for the Goats, they live more ſecure and quiet than the Sheep; they keep upon the Cliffs of the Rocks and the tops of high Hills, far enough out of the way of theſe ravenous Curs.

They tell us further, that when the City of *Porto Rico* was deſerted by the *Spaniards* all the Dogs of that place quitted it too, and might be ſeen going in whole droves together into the Woods in the day-time; perhaps they expected no mercy at the hands of their new Maſters, and that thoſe that had driven away their old ones would certainly give them no Meat, and ſo took this courſe to provide for themſelves in the Woods, where they were ſure not to ſtarve as long as the generation of Crabs laſted; and by this means they would grow wild and ravenous too by degrees, loſe all the breeding and civil qualities of the Town, and conform themſelves to the rude manners of the reſt of their Kindred that were planted there before.

Fowl.

The Iſland abounds alſo with excellent Hogs, the Pork made of which is ſaid to be as fine and ſweet as any in the World. Hares and Coneys there ſeem to be but few of, but to make up for that Defect, the abundance of Poultry, as Cocks, Hens, Guinney-hens, Turkies, &c. may very reaſonably be alledg'd. Pigeons are in few places ſo good and ſo plentiful as here; and not to mention other places, there are two or three little Iſles juſt by *Porto Rico*, near the mouth of the River *Toa*, where a Boat may go in a Morning or an Evening and take preſently nine, ten, or twelve dozen.

Parats and Paraketo's are here (both for numbers and the little account that is made of 'em) as Crows and Jackdaws are in *England*, a man may ſee 'em in whole flocks together, and 'tis only ſome very extraordinary one that happens to be valued at a higher rate than one of thoſe very vulgar Birds before mention'd is with us.

Fruits.

Pines.

The Province is ſomething larger to deſcribe the Vegetable Productions of the Iſland than the Animals of it: Potatoes are very common amongſt them; their Pines are in ſhape like a Pine-apple, but not at all in taſte, nor to the Hand that feels 'em, for that which encloſes it is ſo ſoft that it may eaſily be ſqueez'd to pieces. The Fruit is very apt to mellow, and conſequently will not keep long; 'tis of a very delicious taſte, and muſt be eaten moderately; ſome of 'em are at leaſt a quarter of a yard long, and proportionably thick; the Vegetable that bears it is ſomething like an Artichoke.

Mammeis.

The *Mammen* are a Fruit of a dark-ruſſet colour, the Rind of it very thick, which being pull'd off, diſcover a yellow well-taſted Pulp ſomething like a Carrot, but much better; within this there lie two or three great, rugged, ill-ſhap'd Stones, which whether they have Kernels in 'em or no, is not told us.

Guiavas.

The *Guiavas* are as big as a Peach, and in the outſide not much unlike, but within vaſtly different, and more like a Gooſeberry, only the Seeds of this Pulp are not ſo green as thoſe of the Gooſeberry, but inclining rather to a red.

Papaies.

The *Papaies* are a Fruit like an Apple, but of a wateriſh unpleaſing taſte.

Plums.

Their black and white *Plums* have much bigger Stones and much leſs Meat than ours in *England*, but they have a good Medicinal Quality attending 'em, which is to help the *Flux*, and this alſo the *Guiavas* and *Papeies* have in common with them.

1596.

Wild Grapes.

The *wild Grapes* are as big as a good Muſquet Bullet, but they have ſo large a Stone, that the eatable part is very inconſiderable; but this is as improperly call'd a *Stone* as the Fruit it ſelf is call'd a *Grape*, for as the latter has little reaſon to be call'd ſo, except only upon the account of its growing in cluſters as Grapes do (and many other Fruits beſides them) ſo the former deſerves the name of a *Stone*, more for its lying encloſ'd with the meat of the Fruit than its hardneſs, denſity, or any other ſuch reſemblance. On the other hand 'tis ſo ſoft, that it may be ſqueez'd together with one's Finger without difficulty; and within it lies a Kernel of a bitteriſh unpleaſant taſte, whereas the Cortex it ſelf is of a very good and grateful one.

Plantans, Cocao's, Palmeto's.

There's no need of deſcribing their *Plantans*, *Cocao's*, and *Palmeto's*, which are known well enough from the deſcriptions given of theſe Fruits and their reſpective Trees, in the accounts of other Countries.

Beſides theſe, the Iſland yields *Figgs*, *Pomegranates*, *Muskmelons*, *Pomecitrons*, *Limes* and *Oranges* in vaſt plenty; the *Oranges* are extreamly fair, and well-taſted, but the *Pomecitrons* grow to that bigneſs, that to report 'em as great as ſome have ſaid 'em to be, would perhaps be to expoſe them and their Teſtimony to Cenſure.

Pepper.

They have *Pepper* alſo amongſt 'em, much hotter and ſtronger than the black Pepper commonly us'd with us; 'tis ſmall, and betwixt a *white* and *yellow* colour, encloſ'd in a little Bag, which is ſometimes very round, and ſometimes ſhoots out long and picked. If one ſurveys any of theſe Trees, one may ſee the pleaſing variety of *Buds*, *green* and *ripe Fruit*, and many times *Seed*, all at the ſame time.

Caſſavie, of which they make Bread.

The Vegetables that ſerve the Inhabitants with Materials for the main Staff of Life (their Bread) are the *Caſſavie*, *Mais*, and *Rice*. *Caſſavie* is the Root of a ſmall Tree ſomething like an overgrown *Hyſſop-buſh*, only the Leaves of the *Caſſavie* are not ſo broad, tho' they ſtand much thicker and cloſer together. This Root is very full of Juice, which muſt be carefully preſt out before the remaining part is fit to make Bread; the *Spaniards* generally eſteem it a ſort of Poyſon, tho' the Experience of ſome of our *Engliſhmen* (who miſtaking thoſe Roots for *Potatoes*, eat 'em without any ſuch preparation, and that without any ill conſequences) be a ſufficient refutation of that Opinion. The *Caſſavie* Bread is extream white, they don't knead it into Loaves, but roul it out into Cakes of a moderate thickneſs.

Mais.

Rice.

The Bread made of the *Mais* is much finer than the former, and commonly us'd by the better ſort of People. Of this Grain there are two ſorts, a ſmaller, not unlike *Rice* in bigneſs and taſte, and the greater ſort, very like the *Guiney Wheat*; it grows upon a knotted Stalk with large ſcatter'd Leaves like a Reed, riſing up a fathom and a half in height, and at the very top ſhoots out the Grain.

The Iſland would bear (without queſtion) other ſorts of Grain, if the Inhabitants would be at the trouble of Tillage and Sowing; nay, one of the rich *Spaniards* did make the Experiment, and had a noble Crop; but they won't take care for Bread themſelves, when Nature has taken that care for 'em, and furniſh'd 'em with Materials ready to their hands.

As for the Drinks they uſe, they are but of two ſorts beſides common Water, and theſe only or chiefly us'd by the *Spaniards* too, the former of which is made of Moloſſes and Spices together, and the latter (which the beſt People drink) of high Spices alone. All the Wines they have are brought from other Countries, for out of ſome point of Policy or other they are not ſuffer'd to plant or dreſs Vineyards themſelves.

Senſitive Plant.

Amongſt all the reſt of the Vegetables of this Country, the *Senſitive Plant* is not to be forgotten: 'Tis a very low contemptible thing to look upon, very near creeps upon the ground, and ſeldom lifts up it ſelf above the height of a hand from it: The *Phænomenon* (of a ſtrange contraction, and ſhrinking up it ſelf) which this Plant preſents to the Eye of him that touches it, is known well enough; we need only ſay farther of it, that 'tis a very common one in the Iſland of *Porto Rico*, ſince the Plant it ſelf grows in ſo many places as it does.

Having thus run over the Deſcription of this place, we muſt return back to our *Engliſh*, whom we ſaw in the ſecure and quiet poſſeſſion of it, and whoſe Affairs we are yet a little farther to enquire into.

The Earl of *Cumberland* had fully determin'd to keep this Iſland and City of *Porto Rico* in his hands, which he had ſo fortunately taken, for he look'd on it as the main Key of the *Indies*, and that which would let him into all the Treaſures of that rich part of the World: And this

Deſign did not only pleaſe his Lordſhip himſelf, but was highly agreeable alſo to all the *Engliſh* there under his command, inſomuch that thoſe look'd upon themſelves to be very ſignally favour'd whoſe Names were enroll'd in the Liſt of them that were appointed to ſtay: But a new and unexpected Scene appearing, quite broke all theſe meaſures; for a violent Flux carried off ſo many of our Men, that the number left could not be ſufficient both for manning the Fleet home and keeping the place too. They came aſhore at firſt above a thouſand in number, but now they were ſo reduc'd by this Diſtemper, that they could hardly reckon half ſo many; and then the Diſcouragement was ſo great, that thoſe that ſhould ſtay behind could look upon themſelves no other than as Sacrifices to the ſame furious Diſtemper, that had ſwept away ſo many of their Companions. Upon all theſe accounts the Earl reſolv'd not to ſtay here, but yet was willing to bring the *Spaniards* (if poſſible) to ſome Terms for the ranſom of their Iſland and City before he went: And this they made ſeveral Pretenſions to do, and came to ſome Treaties about it, but in fine they appear'd to deal very coldly and indifferently in the matter, and to have ſome other treacherous Deſigns on foot.

Sickneſs at *Porto Rico.*

The Earl finding this, and having alſo ſome other Game in his Eye, (the purſuit after which would not ſuffer him to loſe any more time) ſet ſail himſelf from *Porto*, leaving Sir *John Barkley* there, as well with the better half of the Fleet as full Power and Commiſſion to do all things in his abſence. How long this latter Perſon ſtaid after the Earl was gone, is not certain; as alſo neither what concluſion was made of that Affair between the *Spaniards* and them; but this is certain, that after a moſt prodigious Storm, (in which both the Fleets were very near overwhelm'd) Sir *John*'s Ships came up with the Earl's at the Iſland of *Flores*.

The Earl departs.

This fierce Storm had been preceded by a Calm every whit as wonderful; it continued without intermiſſion for the ſpace of thirteen days, and the Air violently hot and ſultry all the while: But that which was moſt conſiderable was, that all the time of this Calm the Sea ran monſtrouſly high, and during the whole Voyage they had not ſeen greater Seas rais'd by a boiſterous Wind, than now they ſaw without any Wind at all.

Strange Calm and Storm.

From Iſland *Flores* (without any remarkable Adventure) they proceeded in their Voyage for *England*.

And this is the laſt of the Voyages perform'd by this Honourable Perſon, at leaſt that we have an account of. He was a man of admirable Abilities both in Civil and Military Affairs; he knew how to fight, and as well how to govern, and had Virtues capable of rendring him equally illuſtrious both in War and Peace. He was ſo excellent a Perſon, that it can hardly be ſaid what was wanting *in* him; but yet there was a very conſiderable thing wanting *to* him, namely, a ſteady gale of good Fortune: Had his Succeſſes been anſwerable to his Merit and Abilities, or but in ſome tolerable proportion to his fair Projects and Contrivances, his Character had been glorious to a degree that not many of our own Nation have exceeded. But this muſt be ſaid of him (tho' without the leaſt imputation of blame imaginable) that for the moſt part his Deſigns were better laid than executed; he had not the good Luck he had a juſt Title to, nor did he come off in his Enterprizes ſo well rewarded as he deſerv'd to be: Conſidering the vaſt Expences he was at in building, hiring, and furniſhing of Ships, perhaps his Voyages did not encreaſe his Eſtate; and 'tis obſervable particularly, that the Booty brought off from this *Porto Rico* Expedition was only ſome quantities of Hides, Ginger and Sugar, eighty pieces of Ordnance, and about a thouſand Ducatoons-worth of Pearl, which was a Prize that accidentally came into their hands.

CHAP. II.

The Relation of the Adventures of Peter Carder, *his Dangers at Sea, and Difficulties at Land upon the Continent of* America, *as well amongſt the Savages as* Spaniards.

The Author one of Sir *Fran. Drake's* Company.

THIS Perſon was one of thoſe who went along with Sir *Francis Drake*, in his ſo celebrated Voyage round the World; he did not finiſh that Voyage with him, being ſeparated from the reſt of the Company by an Accident, which gave occaſion to theſe his following Adventures.

'Twas about or pretty near the *Magellanick Straits* that our Author, with ſeven more, were commanded by Admiral *Drake* to attend (in a ſmall Pinnace) the return of one of the Ships which was gone out of ſight of the reſt; and 'twas in this expectation that bad Weather, coming ſuddenly upon them, drove 'em ſo uncertainly about, that they quite loſt the opportunity of recovering their Ship again: They were certainly very ill provided for ſuch a Diſaſter, for beſides that they had no Nautical Furniture, no Inſtrument, Chart nor Compaſs to guide themſelves by, they had not Proviſions for above one day, and that term of time expir'd, they muſt be ſure to pinch if ſome better luck did not bring 'em to a place where they might be ſupplied. However, after they had beat thus about for a matter of two days, they happily recover'd the Shore, where they reliev'd themſelves with Muſcles, Oyſters and Crabs, and ſome wild Roots in the Woods.

Loſe their Ship.

Come to the *Magellanick Straits.*

When they had ſtaid here a while, they return'd back to the *Magellanick Straits*, where they ſtaid long enough alſo to lay in a ſmall ſtock of Eatables and freſh Water, and then ſail'd away to *Pengwin Iſland*, to furniſh themſelves with ſome of thoſe Fowl which the Iſland affords ſo plentifully, and from whence it has its Name.

Port *Julian.*

Iſland of Seals.

From thence they ſhap'd their Courſe for Port S. *Julian*, and then coaſting the Land ſome hundreds of leagues beyond the River of *Plate*, they found an Iſland three leagues from the Main very full of Seals; of theſe they took a good number, and found the young ones roaſted a very grateful meat.

Having paſs'd over the River of *Plate* to the North ſide, they put into a ſmall River, and landing ſix of their Men, they went up into the Woods, while the other two ſtaid behind to look to the Boat.

The Natives aſſault and wound 'em.

Theſe Men thus traverſing the Woods for Victuals, had the hard fortune to light upon ſixty or ſeventy of the Natives, who, as ſoon as they ſaw 'em, ſent their Arrows very fiercely amongſt 'em, wounded all the ſix very grievouſly, carried off four Priſoners, and purſu'd the other two to the Pinnace, from whence, by the help of the others that remain'd there, they were with difficulty repel'd; but, in ſhort, they left ſuch effects of their Fury behind 'em, that of the four Survivers two died of their Wounds, and only *Carder* with one more was left to go thro' the remaining courſe of their Misfortunes.

The miſery of the two *Engliſhmen.*

They were now in this deſolate ſtate upon a little Iſland ſome three leagues off from the place where theſe Miſeries firſt came upon 'em, and that which added no ſmall aggravation to all the reſt was, that now they loſt their Pinnace too, which the foul Weather daſh'd upon the Rocks, ſo that they look'd upon themſelves as Priſoners here without hope of redemption. They liv'd two months in this place, feeding only upon ſmall Eels and Crabs which they got out of the Sand, and a ſort of Fruit reſembling an Orange, growing upon a very high Tree with a Leaf ſomething like an Aſpen-leaf. As for Water they could find none, after a diligent ſearch thro' the whole Iſland, ſo that they were forc'd to drink their own Urine, which they choſe rather than the other ſort of ſalt Water, which the neighbouring Ocean would plentifully have ſupplied them with.

Such Extremities as theſe being not longer to be endur'd, their Invention (ſharpned by the urging violence of 'em) ſet it ſelf on work to find means of deliverance; and here being miſerably ſtreightned for want of Tools and Materials too, they could accompliſh nothing farther than the making of a ſorry thing that was to ſerve them for a Boat, and might be call'd ſo upon the account of its deſign'd uſe, tho' not for any other reſemblances; 'twas a Plank of about ten foot long, which the Sea had ſome

1596.

way or other brought up to 'em; to this they bound ſome other pieces of Wood with Withes and Branches of Trees, and having furniſh'd it with a little ſtock of Proviſion, and two long Poles inſtead of Oars, they invok'd the aſſiſtance of Providence and put out to Sea. It was but three leagues between the little Iſland where they were and the main Land, but with this pitiful Tackling they made ſo little way, and row'd ſo badly, that it was three days and two nights before they reach'd it.

They get to the Main.

The firſt Comfort they met with upon their coming aſhore was a Rivulet of very ſweet and pleaſant Water; this was the Entertainment they had ſo long deſir'd and ſo miſerably wanted in the deſolate Iſland, and therefore having it thus luckily preſented to 'em at firſt daſh, their Appetites were violently excited by it: *Carder*, tho' he was as thirſty as the other, yet govern'd his Appetite with Prudence and drank moderately, at the ſame time adviſing his Companion to do the like, but he, ſpurr'd on by his raging Thirſt, neglected that good Counſel, and drank ſo exceſſively, that within half an hour after he gave his Friend the extream trouble of ſeeing him die before his face. Now *Carder* had nothing to do but to bury him, and ſhift for himſelf in this lonely circumſtance as well as he could: 'Twas a comfort to him that he had ſome Arms with him, which notwithſtanding were no more than a Sword and a Target, and thus accoutred he march'd along the ſhore towards *Braſile*.

One dies.

The other meets the *Indians*.

He had gone no long Journey before he met a troop of Savages arm'd with *Bows* and *Arrows*, and a ſort of *Tabrets* inſtead of *Drums*; they went dancing before him about a Muſquet-ſhot off, and then ſtopt and hung up a piece of Cotton Network upon a Stick about ſeven foot high, after which they danc'd on to the ſame diſtance as before. When *Carder* came up to this mark, he took it in his hands and look'd upon it, and ſo hung it in its place again; and then it was that the *Indians* (who all this time carefully obſerv'd his motions) beckon'd and call'd him to advance up to 'em: With what heart the poor man did this, may eaſily be imagin'd; however, they receiv'd him in a much more friendly manner than he expected, and having taken him into their company, they continued dancing along till they came to the place where they intended to repoſe for that night: This was by the ſide of a River; here they faſtned their Hanging-beds to the Trees, and made Fires, as well for ſecurity from wild Beaſts as from the cold Damps and Vapours of the Night; after this they brought out the Proviſion, and having given the *Engliſhman* a portion with them, they left him to his reſt.

They uſe him kindly.

The next morning they beſtirr'd themſelves very early, and having taken down their Beds from the Trees and pack'd them up, they began to march, and continued it that day for twenty miles, which brought 'em to their deſir'd Journeys-end, the Town where the King then reſided.

Their Town, and his Entertainment there.
